Design information	Design information is the information provided to the detailer and fabricator by the architects and consulting engineers for a project. For some projects the design information may only be provided by an engineer. The design information will usually be in the form of design drawings or sketches but may also be via material lists, written instructions and computer files
Other ancillary steel structures	Other ancillary structures as defined in this unit are steel constructions that are not part of the structural framework or exterior of a building or part of the structural support for plant and which could be part of a steel construction detailing contract. Examples include: • crane rails and connections

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• lift guide rails • cages • steel tankage rolled plates • chimney flumes • exhaust pipe flumes • pipe supports • conveyor structures
Direction marks	Direction marks are indicated on the shop drawings and on the beam or girder by the words 'North' or 'West' as applicable. Industry standard practice is to determine the placement of these marks by viewing and numbering the beams and girders from the bottom or right hand edge of the floor plan. Variations from this practice may occur on specific projects and should be noted on the erection plan.
Work environment	Detailing may be undertaken in a variety of work environments including commercial, home office or fabrication or construction enterprise. Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper based and electronic instructions.

MSATMINS301A Inspect a range of simple measures

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to apply National Test Procedures to determine whether simple measures are suitable for trade use. The unit also involves auditing the performance of verifiers who have previously tested and marked simple measures for trade use.

Application of the Unit

Application of the unit	This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of simple measures as part of their allocated duties. Simple measures such as trade masses, length measures and volume measures are used in a wide variety of commerce including retail, hospitality, pharmaceuticals and laboratory services. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare for inspection	1.1. Identify and evaluate the type of simple measure to be inspected 1.2. Access and review any history of previous inspections at trader's premises 1.3. Access and correctly interpret appropriate documentation required for the inspection 1.4. Identify and access test equipment, products and consumables required for the inspection 1.5. Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures 1.6. Store and transport test equipment in accordance with organisational procedures and industry best practice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.7. Identify workplace health and safety issues relevant to the inspection
2. Initiate inspection	2.1. Identify the site contoller, explain the purpose of the inspection and produce formal identification, if required 2.2. Identify relevant site health and safety issues and implement appropriate control strategies 2.3. Conduct a preliminary evaluation of the site's trading practices and prioritise activities to maximise inspection outcomes 2.4. Identify trade measuring instruments and plan inspection to minimise disruption to the public and trader
3. Evaluate simple measure performance	3.1. Evaluate whether the operating environment will impact on simple measure performance 3.2. Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary 3.3. Identify the maximum permissible errors for the simple measure from the legislative requirements 3.4. Use test equipment safely in accordance with applicable legislation and organisational procedures 3.5. Check simple measure for compliance with the appropriate Certificates of Approval 3.6. Inspect the simple measure in accordance with relevant National Test Procedure and appropriate National Measurement Institute policy 3.7. Evaluate results against prescribed performance criteria and determine if the simple measure is suitable for trade use in accordance with legislative requirements
4. Conduct a verifier performance audit	4.1. Identify the scope of the verifier audit 4.2. Identify the expected outcomes of the verifier audit 4.3. Assess the verifier's performance against the expected outcome 4.4. Analyse any variances from the expected outcomes to identify any isolated or systemic problem
5. Analyse and report inspection results	5.1. Analyse inspection data for unacceptable performance trends 5.2. Display the inspection result on the simple measure in accordance with legislative requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	5.3. Use test reports to present inspection results in the required format 5.4. Complete inspection documentation in accordance with legislative requirements and organisational procedures 5.5. Communicate inspection results within the specified time and in accordance with organisational guidelines 5.6. Recommend follow-up actions as appropriate
6. Act on non-compliance	6.1. Select applicable enforcement action for the non-compliance in accordance with legislative requirements, organisational policy and procedures 6.2. Inform traders of non-compliances and consequences of failing to have them corrected 6.3. Implement enforcement action in accordance with legislative requirements, organisational policy and procedures 6.4. Maintain the rights of the trader at all times

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accessing, interpreting and applying a range of documents for the inspection of simple measures including:
  - national measurement legislation
  - routine National Test Procedures
  - Certificates of Approval
  - National Measurement Institute inspection policy
  - Australian Standards
- accessing and interpreting Certificates of Verification for a limited range of reference standards
- use routine communication and negotiation skills to:
  - explain the purpose of inspection
  - inform traders of non-compliances and consequences of failing to rectify them
  - explain procedures and inspection outcomes to traders, verifiers and managers
- accessing, transporting, setting up, validating, using and maintaining a limited

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
range of test equipment and reference standards • identifying and evaluating environmental impacts on performance of a range of simple measures • conducting tests and recording results with close attention to detail and accuracy • performing calculations involving fractions, decimals, ratios, proportions and percentages • using scientific notation, correct units and the correct number of significant figures • analysing performance results over a single or limited range of operating conditions • identifying non-compliances with national measurement legislation relating to simple measure or verifier performance and initiate appropriate enforcement action including warning, infringement notice, undertaking, injunction and prosecution • identifying potential trading practice non-compliance with national measurement legislation and initiating an appropriate inspection strategy • planning routine tasks • developing/implementing an efficient inspection strategy that has a limited impact on others • demonstrating professionalism and maintaining the rights of the trader at all times • solving routine/expected problems • working safely
Required knowledge

• general chemical and physical principles and concepts including:
  • weight, mass, gravity and density
  • temperature effects and coefficients of expansion
• basic knowledge of the operating procedures across a limited range of environments including laboratories, retail and manufacturing
• knowledge of metrological terms and terminology specific to simple measures such as:
  • maximum permissible errors
  • traceability
  • error of measurement
  • error of indication
• national measurement legislation applicable to simple measures
• detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:
  • purpose of test
  • test conditions and possible environmental impacts on performance of simple measure
  • key preparation/measurement steps in test method
  • calculation steps to give results in appropriate units and precision

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• maximum permissible errors for simple measures under inspection • procedures for completing inspection documentation • organisational policy and procedures for inspecting simple measures

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for any class of simple measures listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures • identify and use suitable reference standards • evaluate and adjust the impact of the operating environment on the performance of simple measures • analyse test results to determine the simple measure's suitability for verification (trade use) • identify the scope of a verifier performance audit and assess results with expected outcomes • audit the performance of verifiers of simple measures • identify and implement additional inspection strategies for non-instrument related breaches of national measurement legislation • recognise and act on non-compliance • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMREF301A Use and maintain reference standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	Resources may include: • simple measures, test equipment and reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for simple measures • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions • review of inspection reports and verifier performance audit reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to verify the performance of simple measures in accordance with legislative and organisational procedures • observation of the candidate conducting an inspection. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. An inspector makes an unannounced visit to a manufacturer's premises that packages turpentine, linseed oil, kerosene and methylated spirits. His/her visit identifies that a 5L verified conical measure is being used for trade to check the volume of pre-packaged articles. He/she visually inspects the measure for compliance with the relevant Certificate of Approval and checks the existing certifying marks. The verifier notices that the volume measure is dented. He/she then tests the accuracy of the measure using a suitable 5L reference standard and finds it to be outside the maximum permissible error. He/she notifies the manager of this

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	non-compliance and advises that any further use of this measure will result in enforcement action. On returning to their office, the inspector reports the need to inspect the premises and market place for inaccurate pre-packaged items manufactured by the company.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standards • Certificates of Verification • Certificates of Approval for simple measures • test procedures for verifying simple measures • organisational test reports • organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures and material safety data sheets (MSDS) • equipment manuals and warranty, supplier catalogues, and handbooks • National Measurement Institute policy • Australian Standards
Certificates of Approval	Certificates of Approval may include: • any Certificate issued by the Chief Metrologist under Regulation 60 of the National Measurement Regulations approving the pattern of a simple measure as being suitable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	for trade
Test equipment	Test equipment may include: • reference standards of measurement • equipment other than reference standards of measurement such as weighing instruments, strikes and funnels
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Test Procedures for simple measures	National Test Procedures for simple measures may include: • length measures • alcoholic beverage measures • lubricating oil measures • graduated measures • pharmaceutical measures • trade masses • any other test procedure prescribed by the National Measurement Institute
OHS and environmental management requirements	OHS and environmental management requirements refers to: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environment impacts may include: • vibration • wind

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• heat • dust • electromagnetic interference • out of level
Records	Records may include: • test reports • safety procedures • a history of equipment calibration and test results
Simple measures	Inspectors may be required to test and mark any of the classes of simple measures from the following list. Simple measures may include: • length measures • alcoholic beverage measures • lubricating oil measures • graduated measures • pharmaceutical measures • trade masses • any other simple measure prescribed by the National Measurement Institute

MSATMINS302A Inspect a range of simple measuring instruments

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to apply National Test Procedures to determine whether a range of simple measuring instruments are suitable for trade use. The unit also involves auditing the performance of verifiers who have previously tested and marked simple measuring instruments for trade use.

Application of the Unit

Application of the unit	This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of simple measuring instruments as part of their allocated duties. Simple measuring instruments are used in a very wide range of commerce. For example, dip sticks are used to measure bulk petroleum products and beverages, dimensional measuring instruments are used to measure the cubic measurements of packages for freight and length/area instruments are used to accurately measure a wide range of articles sold by reference to those measurements. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare for inspection	1.1. Identify and evaluate the type of instrument to be inspected 1.2. Access and review any history of previous inspections at trader's premises 1.3. Access and correctly interpret appropriate documentation required for the inspection 1.4. Identify and access test equipment, products and consumables required for the inspection 1.5. Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.6. Store and transport test equipment in accordance with organisational procedures and industry best practice 1.7. Identify workplace health and safety issues relevant to the inspection
2. Initiate inspection	2.1. Identify the site contoller, explain the purpose of the inspection and produce formal identification, if required 2.2. Identify relevant site health and safety issues and implement appropriate control strategies 2.3. Conduct a preliminary evaluation of the site's trading practices and prioritise activities to maximise inspection outcomes 2.4. Identify trade measuring instruments and plan inspection to minimise disruption to the public and trader 2.5. Identify locations for product return or disposal, if applicable
3. Evaluate simple measuring instrument performance	3.1. Evaluate whether the operating environment will impact on the instrument performance 3.2. Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary 3.3. Identify the maximum permissible errors for the instrument from the legislative requirements 3.4. Use test equipment safely in accordance with applicable legislation and organisational procedures 3.5. Check instrument for compliance with the appropriate Certificates of Approval 3.6. Inspect the instrument in accordance with relevant National Test Procedure and appropriate National Measurement Institute policy 3.7. Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
4. Conduct a verifier performance audit	4.1. Identify the scope of the verifier audit 4.2. Identify the expected outcomes of the verifier audit 4.3. Assess the verifier's performance against the expected outcome 4.4. Analyse any variances from the expected outcomes to identify isolated or systemic problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
5. Analyse and report inspection results	5.1. Analyse inspection data for unacceptable performance trends 5.2. Display the inspection result on the instrument in accordance with legislative requirements 5.3. Use test reports to present inspection results in the required format 5.4. Complete inspection documentation in accordance with legislative requirements and organisational procedures 5.5. Communicate inspection results within the specified time and in accordance with organisational guidelines 5.6. Recommend follow-up actions as appropriate.
6. Act on non-compliance	6.1. Select applicable enforcement action for the non-compliance in accordance with legislative requirements, organisational policy and procedures 6.2. Inform traders of non-compliances and consequences of failing to have them corrected 6.3. Implement enforcement action in accordance with legislative requirements, organisational policy and procedures 6.4. Maintain the rights of the trader at all times

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accessing, interpreting and applying a range of documents for the inspection of simple measuring instruments including:
  - national measurement legislation
  - routine National Test Procedures
  - Certificates of Approval
  - National Measurement Institute inspection policy
  - Australian Standards
- accessing and interpreting Certificates of Verification for a limitedrange of reference standards
- use routine communication and negotiation skills to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- explain the purpose of inspection
- inform traders of non-compliances and consequences of failing to rectify them
- explain procedures and inspection outcomes to traders, verifiers and managers
- accessing, transporting, setting up, validating, using and maintaining a limited range of test equipment and reference standards
- identifying and evaluating environmental impacts on performance of a range of simple measuring instruments
- conducting tests and recording results with close attention to detail and accuracy
- performing calculations involving fractions, decimals, ratios, proportions and percentages
- using correct units and the correct number of significant figures
- analysing performance results over a single or limited range of operating conditions
- identifying non-compliances with national measurement legislation relating to instrument or verifier performance and initiate appropriate enforcement action including warning, infringement notice, undertaking, injunction and prosecution
- identifying potential trading practice non-compliance with national measurement legislation and initiating an appropriate inspection strategy
- planning routine tasks
- developing/implementing an efficient inspection strategy that has a limited impact on others
- demonstrating professionalism and maintaining the rights of the trader at all times
- solving routine/expected problems
- working safely

Required knowledge

- general chemical and physical principles and concepts including:
  - weight, mass, gravity and density
  - temperature effects and coefficients of expansion
- basic knowledge of the operating procedures across a limited range of environments including laboratories, retail, industrial and farming
- knowledge of metrological terms and terminology specific to simple measuring instruments such as maximum permissible errors and traceability
- national measurement legislation applicable to simple measuring instruments
- detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:
  - purpose of test
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method
  - calculation steps to give results in appropriate units and precision

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• maximum permissible errors for simple measuring instruments under inspection • procedures for completing inspection documentation • organisational policy and procedures for inspecting simple measuring instruments

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for any class of simple measuring instruments listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures • identify and use suitable reference standards • evaluate and adjust the impact of the operating environment on the performance of the instrument • analyse test results to determine the instrument's suitability for verification (trade use) • identify the scope of a verifier performance audit and assess results with expected outcomes • audit the performance of verifiers of simple measuring instruments • identify and implement additional inspection strategies for non-instrument related breaches of national measurement legislation • recognise and act on non-compliance • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• MSATMREF301A Use and maintain reference standards. Resources may include: • simple measuring instruments, test equipment and reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for instruments • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions • review of inspection reports and verifier performance audit reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to verify the performance of instruments in accordance with legislative and organisational procedures • observation of the candidate conducting an inspection. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. An inspector has been allocated the task of verifying an area measuring instrument at a tannery. In preparation for his/her visit, the inspector accesses the organisation's database to establish the instrument type, site contact details and any previous history for the instrument or trader. The inspector assembles the test equipment required for the inspection. All reference standards are inspected for damage and validity against their certificate prior to them being stowed with the other equipment safely in the vehicle. On arrival at the tannery, the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	inspector introduces him/herself to the manager and explains the purpose of the visit and the process involved. During this discussion, the inspector explains that he/she will inspect the area measuring instrument for compliance with its Certificate of Approval, assess the operating environment for factors that may impact on its performance and conduct visual and performance tests in accordance with the National Test Procedure. If the instrument complies with these requirements it will be marked as being acceptable for trade use. During the subsequent inspection, the area instrument is found to have a capacity greater than what is stated in the Certificate of Approval and the instrument's performance exceeds the maximum permissible error stated in the national measurement regulations. Consequently, the inspector removes the previous verification mark from the instrument and issues the trader with a warning that the instrument cannot be used for trade until it has been corrected and verified again. Before leaving the premises, the inspector provides the trader with some options for rectifying the non-compliances and gives the manager an opportunity to ask any questions about trade measurement activities.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Prescribed performance criteria for instruments	Prescribed performance criteria for instruments may include: • design is in accordance with the appropriate Certificates of Approval • performance meets the criteria described in the Certificates of Approval, National Test Procedure, legislation and National Measurement Institute policy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • Certificates of Verification • Certificates of Approval for simple measuring instruments • test procedures for verifying simple measuring instruments • organisational test reports • organisational procedures • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures and material safety data sheets (MSDS) • equipment manuals and warranty, supplier catalogues and handbooks • National Measurement Institute policy • Australian Standards
Certificates of Approval	Certificates of Approval may include: • the Certificate issued under national measurement legislation approving the pattern of a simple measuring instrument as being suitable for trade
Enforcement action	Enforcement action may include: • formal warnings • infringement notice • formal undertaking • injunction • prosecution
Test equipment	Test equipment may include: • reference standards of measurement • equipment other than reference standards of measurement e.g. weighing instrument, funnels, manifolds, hoses, water meters, roman levels, tramells and beakers
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	OHS legislation
National Measurement Institute policy	National Measurement Institute policy may include: • test procedure variations between a verification, in-service or audit inspection • bulletin • instruction • determination
National Test Procedures for simple measuring instruments	National Test Procedures for simple measuring instruments may include those for: • beverage measuring instruments • protein measuring instruments • length measuring instruments • area measuring instruments • dimensional measuring instruments • vehicle tanks • milk tanks • any other test procedure prescribed by the National Measurement Institute
OHS and environmental management requirements	OHS and environmental management requirements refer to: • all operations must comply with enterprise occupational health safety and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environmental impacts may include: • vibration • humidity • temperature • dust

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• electromagnetic interference • out of level
Records	Records may include: • test reports • audit reports • safety procedures • a history of equipment calibration and test results
Simple measuring instruments	Inspectors may be required to test and mark any of the classes of instruments from the following list. Simple measuring instruments may include: • beverage measuring instruments • protein measuring instruments • length measuring instruments • area measuring instruments • dimensional measuring instruments • vehicle tanks • milk tanks • any other instrument prescribed by the National Measurement Institute
Trading practices	Trading practices may include: • methods used for the sale of goods • advertising • using measuring instruments • position of measuring instruments • environmental factors • suitability of instrument • over-pricing • incorrect measurement
Verification	Verification refers to: • the inspection of an instrument for the purpose of determining if the instrument meets the legislative requirements for trade use

MSATMINS401A Inspect a range of weighing instruments

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to apply National Test Procedures to determine whether a non-automatic weighing instrument (<3 tonne) or catchweigher is suitable for trade and then mark it accordingly. It also involves auditing the performance of verifiers who have previously tested and marked limited weighing instruments for use.

Application of the Unit

Application of the unit	This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of limited weighing instruments as part of their allocated duties. For example, electronic weighing instruments are used to measure a wide range of products at the point of sale, as an order or as a pre-packaged article. The range of environments where these instruments is almost limitless. Some examples of these environments includes pharmaceutical laboratories, supermarkets, fresh food retailers, packing houses, chemical/petroleum industry, construction, mining and other extractive industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

ELEMENT	PERFORMANCE CRITERIA
	organisational procedures 1.6. Store and transport test equipment in accordance with organisational procedures and industry best practice 1.7. Identify workplace health and safety issues relevant to the inspection
2. Initiate inspection	2.1. Identify the site contoller, explain the purpose of the inspection and produce formal identification, if required 2.2. Identify relevant site health and safety issues and implement appropriate control strategies 2.3. Conduct a preliminary evaluation of the site's trading practices and prioritise activities to maximise inspection outcomes. 2.4. Identify trade measuring instruments and plan inspection to minimise disruption to the public and trader
3. Evaluate weighing instrument performance	3.1. Evaluate whether the operating environment will impact on the instrument performance 3.2. Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary 3.3. Identify the maximum permissible errors for the instrument from the legislative requirements 3.4. Use test equipment safely in accordance with applicable legislation and organisational procedures 3.5. Check instrument for compliance with the appropriate Certificates of Approval 3.6. Inspect the instrument in accordance with relevant National Test Procedure and appropriate National Measurement Institute policy 3.7. Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
4. Conduct a verifier performance audit	4.1. Identify the scope of the verifier audit 4.2. Identify the expected outcomes of the verifier audit 4.3. Assess the verifier's performance against the expected outcome 4.4. Analyse any variances from the expected outcomes to identify isolated or systemic problems
5. Analyse and report	5.1. Analyse inspection data for unacceptable

ELEMENT	PERFORMANCE CRITERIA
inspection results	performance trends 5.2. Display the inspection result on the instrument in accordance with legislative requirements 5.3. Use test reports to present inspection results in the required format 5.4. Complete inspection documentation in accordance with legislative requirements and organisational procedures 5.5. Communicate inspection results within the specified time and in accordance with organisational guidelines 5.6. Recommend follow-up actions as appropriate.
6. Act on non-compliance	6.1. Select applicable enforcement action for the non-compliance in accordance with legislative requirements, organisational policy and procedures 6.2. Inform traders of non-compliances and consequences of failing to have them corrected 6.3. Implement enforcement action in accordance with legislative requirements, organisational policy and procedures 6.4. Maintain the rights of the trader at all times

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

• accessing, interpreting and applying a range of documents for the inspection of weighing instruments including:
  • national measurement legislation
  • routine National Test Procedures
  • Certificates of Approval
  • National Measurement Institute inspection policy
  • national and international design rules
  • pattern approval documents
• accessing and interpreting Certificates of Verification for a range of reference standards
• performing inspections over durations of up to one day in routine environments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- using advanced communication and negotiation skills to:
  - explain the purpose of inspection
  - inform traders of non-compliances and consequences of failing to rectify them
  - access external equipment and resources to complete the inspection
  - explain inspection procedures and outcomes to traders, verifiers and managers
- accessing, transporting, setting up, validating, using and maintaining a range of test equipment and reference standards
- identifying and evaluating environmental impacts on performance of a range of weighing instruments
- conducting tests and recording results with close attention to detail and accuracy
- performing calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures
  - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
- analysing performance results over a number of operating conditions
- identifying non-compliances with national measurement legislation relating to instrument or verifier performance and initiate appropriate enforcement action including warning, infringement notice, undertaking, injunction and prosecution
- identifying potential trading practice non-compliance with national measurement legislation and initiating an appropriate inspection strategy
- planning routine tasks
- developing/implementing an efficient inspection strategy that has a limited impact on traders, the public, employees and suppliers
- demonstrating professionalism and maintaining the rights of the trader at all times
- solving routine/expected problems
- working safely which may include applying basic first aid, confined space entry and working with heavy machinery

Required knowledge

- general chemical and physical principles and concepts including weight, mass and gravity
- knowledge of the operating procedures across a range of environments including laboratories, retail, manufacturing, industrial, mining, construction, medical, chemical, petroleum, farming and abattoirs
- knowledge of metrological terms and terminology specific to weighing instruments such as maximum permissible errors, traceability, uncertainty, maximum permissible difference, eccentricity, repeatability, error of measurement, error of indication and linearisation
- national measurement legislation applicable to weighing instruments
- detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• purpose of test • test conditions and possible environmental impacts on performance of the instrument • key preparation/measurement steps in test method • calculation steps to give results in appropriate units and precision • maximum permissible errors for weighing instruments under inspection • procedures for completing inspection documentation • organisational policy and procedures for verifying weighing instruments • safety principles and procedures relevant to instruments and test environment • basic first aid and site safety induction if required

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for any class of weighing instrument listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures • identify and use suitable reference standards • evaluate and adjust the impact of the operating environment on the performance of the instrument • analyse test results to determine the instrument's suitability for verification (trade use) • identify the scope of a verifier performance audit and assess results with expected outcomes • audit the performance of verifiers of weighing instruments • identify and implement additional inspection strategies for non-instrument related breaches of national measurement legislation • recognise and act on non-compliance • maintain the security and confidentiality of data in accordance with organisational and regulatory

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMREF301A Use and maintain reference standards. Resources may include: • limited weighing instruments, test equipment and reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for instruments • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions • review of inspection reports and verifier performance audit reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to verify the performance of instruments in accordance with legislative and organisational procedures • observation of the candidate conducting an inspection. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. An inspector has been allocated a task of verifying a digital weighing instrument at a butcher's premises. In

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	preparation for this visit, the inspector accesses the organisation's database to establish the type of instrument to be tested and any previous history of the instrument or trader. The equipment required for this inspection is identified, accessed and stowed in the vehicle securely and safely. Particular attention is made to ensure the integrity of the reference standards is maintained and that they are still current according to their verification certificate. On arrival at the butcher's premises, the inspector introduces him/herself to the manager and explains the purpose of the visit and the process involved. During this discussion the inspector explains that he/she will inspect the instrument for compliance with its Certificate of Approval, assess the instrument's operating environment for factors that may impact on its performance and conduct the visual and performance tests in accordance with the National Test Procedure. If it complies with these requirements, he/she will mark the instrument as being acceptable for trade use and complete all the required inspection documentation. During the inspection the inspector finds that the instrument has a tare capacity greater than that stated in the Certificate of Approval and the weighing performance of the instrument exceeds the maximum permissible error stated in the national measurement regulations. As a result, the inspector removes the previous verification mark from the instrument and issues the butcher a warning that the instrument cannot be used for trade until it has been corrected and verified again. Before leaving the premises, the inspector examines a sample of prepacked articles and the trading practices used by the trader for compliance with trade measurement legislation.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
regional contexts) may also be included.	
Prescribed performance criteria for instruments	Prescribed performance criteria for instruments may include: • design is in accordance with the appropriate Certificates of Approval • performance meets the criteria described in the Certificates of Approval, National Test Procedure and legislation
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standards • Certificates of Verification • Certificates of Approval for limited weighing instruments • test procedures for verifying limited weighing instruments • organisational test reports • organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures and material safety data sheets (MSDS) • equipment manuals and warranty, supplier catalogues and handbooks
Certificates of Approval	Certificates of Approval may include: • any Certificate issued by the Chief Metrologist under Regulation 60 of the National Measurement Regulations approving the pattern of a limited weighing instrument as being suitable for trade
Enforcement action	Enforcement action may include: • formal warnings • infringement notice • formal undertaking • injunction • prosecution

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Test equipment	Test equipment may include: • reference standards of measurement
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Measurement Institute policy	National Measurement Institute policy may include: • test procedure variations between a verification, in-service or audit inspection • bulletin • instruction • determination
National Test Procedures for limited weighing instruments	National Test Procedures for limited weighing instruments may include: • non-automatic weighing machines tested without substitution loads • automatic Class Y(a) Catchweighers • automatic Class Y(b) Catchweighers • any other test procedure prescribed by the National Measurement Institute
OHS and environmental management requirements	OHS and environmental management requirements refers to: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environmental impacts may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• vibration • wind • heat • dust • electromagnetic interference • out of level
Records	Records may include: • test reports • safety procedures • a history of equipment calibration and test results
Weighing instruments	Inspectors may be required to test and mark classes of instruments from the following list. Weighing instruments may include: • non-automatic weighing machines tested without substitution loads • automatic Class Y(a) Catchweighers • automatic Class Y(b) Catchweighers • any other test procedure prescribed by the National Measurement Institute

MSATMINS402A Inspect a range of liquid measuring instruments using volume measures

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to apply National Test Procedures to determine whether a liquid measuring instrument using volume measures is suitable for trade and then mark it accordingly. It also involves auditing the performance of verifiers who have previously tested and marked liquid measuring instruments for use.

Application of the Unit

Application of the unit	This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of liquid measuring instruments tested using a volume measure as part of their allocated duties. Liquid measuring instruments are used in a very wide range of commerce. For example, petrol bowsers measure fuel at the point of sale and flowmeters are used to measure bulk commodities such as milk, chemicals and petroleum products during production and distribution. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare for inspection	1.1. Identify and evaluate the type of instrument to be inspected 1.2. Access and review any history of previous inspections at trader's premises 1.3. Access and correctly interpret appropriate documentation required for the inspection 1.4. Identify and access test equipment, products and consumables required for the inspection 1.5. Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures 1.6. Store and transport test equipment in accordance with organisational procedures and industry best practice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.7. Identify workplace health and safety issues relevant to the inspection
2. Initiate inspection	2.1. Identify the site contoller, explain the purpose of the inspection and produce formal identification, if required 2.2. Identify relevant site health and safety issues and implement appropriate control strategies 2.3. Conduct a preliminary evaluation of the site's trading practices and prioritise activities to maximise inspection outcomes 2.4. Identify trade measuring instruments and plan inspection to minimise disruption to the public and trader
3. Evaluate liquid measuring instrument performance	3.1. Evaluate whether the operating environment will impact on the instrument performance 3.2. Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary 3.3. Identify the maximum permissible errors for the instrument from the legislative requirements 3.4. Use test equipment safely in accordance with applicable legislation and organisational procedures 3.5. Check instrument for compliance with the appropriate Certificates of Approval 3.6. Inspect the instrument in accordance with relevant National Test Procedure and appropriate National Measurement Institute policy 3.7. Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
4. Conduct a verifier performance audit	4.1. Identify the scope of the verifier audit 4.2. Identify the expected outcomes of the verifier audit 4.3. Assess the verifier's performance against the expected outcome 4.4. Analyse any variances from the expected outcomes to identify isolated or systemic problems
5. Analyse and report inspection results	5.1. Analyse inspection data for unacceptable performance trends 5.2. Display the inspection result on the instrument in accordance with legislative requirements 5.3. Use test reports to present inspection results in the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	required format 5.4. Complete inspection documentation in accordance with legislative requirements and organisational procedures 5.5. Communicate inspection results within the specified time and in accordance with organisational guidelines 5.6. Recommend follow-up actions as appropriate
6. Act on non-compliance	6.1. Select applicable enforcement action for the non-compliance in accordance with legislative requirements, organisational policy and procedures 6.2. Inform traders of non-compliances and consequences of failing to have them corrected 6.3. Implement enforcement action in accordance with legislative requirements, organisational policy and procedures 6.4. Maintain the rights of the trader at all times

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accessing, interpreting and applying a range of documents for the inspection of liquid measuring instruments including:
  - national measurement legislation
  - intermediate National Test Procedures
  - Certificates of Approval
  - National Measurement Institute inspection policy
  - Australian Standards
  - industry codes of practice
  - correction tables for volume, density and pressure for a range of liquids
  - national and international design rules
  - pattern approval documents
- accessing and interpreting Certificates of Verification for a range of reference standards
- performing inspections over extended durations in non-routine and hazardous environments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- using advanced communication and negotiation skills to:
  - explain purpose of the verification
  - inform traders of non-compliances and consequences of failing to rectify
  - access external equipment and resources to complete the verification
  - explain verification procedures and outcomes to traders, verifiers and managers
- accessing, transporting, setting up, validating, using and maintaining a broad range of test equipment and reference standards
- identifying and evaluating environmental factors that may impact on performance of liquid measuring instruments
- organising large equipment to be dispatched ahead of verification visit
- conducting tests and recording results with close attention to detail and accuracy
- performing calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - evaluation of formulae containing powers, exponents and logarithms functions
  - use of scientific notation, correct units, correct number of significant figures
  - calculation of uncertainties
  - preparation and interpretation of linear, semi-log and log-log graphs
  - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
  - determination of regression line equations, correlation coefficients
  - preparation and interpretation of more complex control charts and frequency distribution plots
- analysing performance results over a broad range of operating conditions
- identifying non-compliances with national measurement legislation relating to instrument or verifier performance and initiate appropriate enforcement action including warning, infringement notice, undertaking, injunction and prosecution
- identifying potential trading practice non-compliance with national measurement legislation and initiating an appropriate inspection strategy
- planning complex tasks
- developing/implementing an efficient verification strategy that minimises disruption to traders, the public, technicians, employees, colleagues and suppliers
- demonstrating professionalism and maintaining the rights of the trader at all times
- solving unexpected problems and non-routine issues
- working safely which may include applying basic first aid, confined space entry, working with hazardous materials, working safely in hazardous environments, working with heavy machinery, Australian Institute of Petroleum (AIP) cold work clearance permit, safety induction and working at heights

Required knowledge

- general chemical and physical principles and concepts including:
  - physical states (solid, liquid gas), weight, mass, gravity and density

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- pressure, pressure differential, backpressure and head pressure
- fluid flow
- flashpoint, boiling point and ice point
- viscosity
- temperature effects and coefficients of expansion

- basic knowledge of the design, application and function of components used in liquid measuring instruments
- knowledge of the operating procedures across a range of environments including laboratories, retail, commercial, office, manufacturing, industrial, mining, construction, medical, chemical and petroleum
- knowledge of metrological terms and terminology specific to liquid measuring instruments such as:
  - maximum permissible errors, maximum permissible difference and maximum permissible variation
  - traceability
  - repeatability
  - uncertainty, error of measurement and error of indication
  - meter creep
  - hose dilation
  - temperature correction
  - linearisation
  - gas elimination
- national measurement legislation applicable to liquid measuring instruments
- detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:
  - purpose of test
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for liquid measuring instruments under inspection
- procedures for completing inspection documentation
- organisational policy and procedures for inspecting instruments
- safety principles and procedures relevant to instruments
- basic first aid and site safety induction if required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for any class of liquid measuring instrument listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures • identify and use suitable reference standards • evaluate and adjust the impact of the operating environment on the performance of the instrument • analyse test results to determine the instrument's suitability for verification (trade use) • identify the scope of a verifier performance audit and assess results with expected outcomes • audit the performance of verifiers of liquid measuring instruments • identify and implement additional inspection strategies for non-instrument related breaches of national measurement legislation • recognise and act on non-compliance • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMREF301A Use and maintain reference standards. Resources may include: • liquid measuring instruments using volume measures, test equipment and reference standards • safety equipment • computer and relevant software and/or organisation information management system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• Certificates of Approval for instruments • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions • review of inspection reports and verifier performance audit reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to verify the performance of instruments in accordance with legislative and organisational procedures • observation of the candidate conducting an inspection. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. An inspector arrives unannounced at a medium size service station to check the performance of a number of fuel dispensers. After introducing him/herself to the site manager, the inspector explains the purpose of the visit and asks for the location of the fuel return points. The inspector performs a safety check, completes an AIP form, places safety barriers around the work area and then prepares the test equipment and reference standards. There are seven fuel dispensers with a total of 38 hoses. The inspector tests a selection of dispensers visually. The National Test Procedure requires the inspector to dispense fuel into 15L reference measures and then return the fuel to storage. Approximately 90 litres are dispensed per hose. The inspector finds a number of non-compliances on site. Two hoses are dispensing fuel outside the allowable maximum permissible error, one dispenser has a faulty segment in its display and the lights are not working, the diesel dispenser failed the air

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	elimination test and three hoses are badly worn. The inspector removes the verification mark from all non-compliant dispensers. While testing the fuel dispenser, the inspector notices a number of items displayed for sale outside the office. On closer inspection, some of the pre-packaged items are found not to be marked with a measurement statement. The inspector meets with the site manager to inform him of the non-compliant dispensers. He/she advises the manager not to use any unmarked dispensers, explains how they can be rectified and issues non- compliance notices. They also discuss the non-compliant pre-packaged articles. The inspector takes details for further action, completes the AIP form and fuel usage report and then departs.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Prescribed performance criteria for instruments	Prescribed performance criteria for instruments may include: • design is in accordance with the appropriate Certificates of Approval • performance meets the criteria described in the Certificates of Approval, National Test Procedure and legislation
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standards • Certificates of Verification • Certificates of Approval for liquid measuring

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	instruments • test procedures for verifying liquid measuring instruments • organisational test reports • organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures and material safety data sheets (MSDS) • equipment manuals and warranty, supplier catalogues and handbooks
Certificates of Approval	Certificates of Approval may include: • any Certificate issued by the Chief Metrologist under Regulation 60 of the National Measurement Regulations approving the pattern of a liquid measuring instrument as being suitable for trade
Enforcement action	Enforcement action may include: • formal warnings • infringement notice • formal undertaking • injunction • prosecution
Test equipment	Test equipment may include: • reference standards of measurement • equipment other than reference standards of measurement such as pumps, funnels and hoses
Legislation	Legislation may include • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Measurement Institute policy	National Measurement Institute policy may include: • test procedure variations between a verification, in-service or audit inspection • bulletin • instruction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• determination
National Test Procedures for liquid measuring instruments	National Test Procedures for liquid measuring instruments may include: • fuel dispensers other than LPG dispensers • bulk flowmetering systems for liquid hydrocarbons other than LPG tested using a volume measure • milk flowmeters tested using a volume measure • any other test procedure prescribed by the National Measurement Institute
OHS and environmental management requirements	OHS and environmental management requirements refer to: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environmental impacts may include: • vibration • wind • heat • dust • electromagnetic interference • out of level
Records	Records may include: • test reports • AIP form • safety procedures • a history of equipment calibration and test results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Liquid measuring instruments	Inspectors may be required to test and mark any of the classes of instruments from the following list. Liquid measuring instruments may include: • fuel dispensers other than LPG dispensers • bulk flowmetering systems for liquid hydrocarbons other than LPG tested using a volume measure • milk flowmeters tested using a volume measure • or any other liquid measuring instrument prescribed by the National Measurement Institute

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare for inspection	1.1. Identify and evaluate the type of trading practices to be inspected 1.2. Access and review any history of previous inspections at trader's premises 1.3. Access and correctly interpret appropriate documentation required for the inspection 1.4. Identify and access test equipment, investigation equipment and consumables required for the inspection 1.5. Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures 1.6. Store and transport test equipment in accordance with organisational procedures and industry best practice 1.7. Identify workplace health and safety issues relevant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	to the inspection
2. Conduct a trial purchase	2.1. Observe and assess visible trading practices prior to entry into the premises 2.2. Identify scope and expected outcomes of the trial purchase 2.3. On entry to the premises, evaluate trading practices and where applicable modify trial purchase strategy to maximise inspection outcomes 2.4. Conduct trial purchase while observing the measurement process and staff actions 2.5. Assess trader's performance against expected outcomes 2.6. Analyse any variances from the expected outcomes and identify isolated or systemic issues related to the trial purchase
3. Initiate inspection	3.1. Identify the site contoller, explain the purpose of the inspection and produce formal identification, if required 3.2. Identify site workplace health and safety issues and implement appropriate control strategies 3.3. Conduct a preliminary evaluation of the site's trade measurement activities and prioritise inspection to maximise outcomes 3.4. Identify measuring instruments being used for trade 3.5. Identify site's trading practice activities and plan inspection to minimise disruption to the public and trader
4. Examine measurement related advertising for compliance	4.1. Identify the articles which are required to be sold by specific measurement or in terms of a measurement at base conditions 4.2. Inspect and evaluate measurement related advertising used by the trader 4.3. Identify any non-compliances with legislative requirements
5. Examine trade measuring instrument operation	5.1. Inspect measuring instrument operating environment and determine instrument suitability for purpose 5.2. Evaluate measuring instrument operation against legislative requirements, organisational policy and procedures 5.3. Modify the operating environment or implement alternative arrangements to ensure reliable test

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	conditions, as necessary 5.4. Identify the maximum permissible errors for the instrument from the legislative requirements 5.5. Use test equipment safely in accordance with applicable legislation and organisational procedures 5.6. Check instrument for compliance with the appropriate Certificates of Approval 5.7. Inspect the instrument in accordance with relevant National Test Procedure and appropriate National Measurement Institute policy 5.8. Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
6. Validate the measurement of articles	6.1. Identify articles sold by reference to measurement 6.2. Examine the process used by the trader for measuring an article 6.3. Evaluate the trader's measurement procedure 6.4. Measure an article in accordance with the appropriate National Test Procedure, organisational policy and procedures
7. Analyse and report inspection results	7.1. Analyse inspection data for unacceptable trends 7.2. Use test reports to present inspection results in the required format 7.3. Complete inspection documentation in accordance with legislative requirements and organisational procedures 7.4. Communicate inspection results within the specified time and in accordance with organisational guidelines 7.5. Recommend follow-up actions as appropriate
8. Act on non-compliance	8.1. Record and collect evidence of any identified non-compliance in accordance with legislative requirements, organisational policy and procedures 8.2. Select applicable enforcement action for the non-compliance in accordance with legislative requirements, organisational policy and procedures 8.3. Inform trader of non-compliances and the consequences of failing to have them corrected 8.4. Implement enforcement action in accordance with legislative requirements, organisational policy and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	8.5. Maintain the rights of the trader at all times

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accessing, interpreting and applying a range of documents for the inspection of trading practices including:
  - national measurement legislation
  - National Test Procedures
  - National Measurement Institute inspection policy
- accessing and interpreting Certificates of Verification for a range of reference standards
- performing inspections over a wide range of environments
- using advanced communication and negotiation skills to:
  - explain the purpose of inspection
  - inform traders of non-compliances and consequences of failing to rectify them
  - access external equipment and resources to complete the inspection
  - explain inspection procedures and outcomes to tradersand managers
- accessing, transporting, setting up, validating, using and maintaining a range of test equipment and reference standards
- identifying and evaluating environmental impacts on performance of a range of measuring instruments
- identifying and evaluating impacts of trader procedures on the measurement of articles
- conducting tests and recording results with close attention to detail and accuracy
- performing calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures
  - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
- identifying non-compliances with national measurement legislation relating to trading practices and initiate appropriate enforcement action including warning, infringement notice, undertaking, injunction and prosecution
- identifying potential measuring instrument non-compliance with national measurement legislation and initiating an appropriate inspection strategy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• planning routine tasks • developing/implementing an efficient inspection strategy that has a limited impact on traders, the public, employees and suppliers • demonstrating professionalism and maintaining the rights of the trader at all times • solving routine/expected problems • working safely which may include applying basic first aid
Required knowledge

• general physical principles and concepts including weight, mass, gravity, volume, length and area
• knowledge of the operating procedures across a range of retail environments and some industrial and petroleum environments
• knowledge of metrological terms and terminology such as maximum permissible errors, traceability and uncertainty
• national measurement legislation applicable to trading practices and measuring instruments
• detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:
  • purpose of test
  • test conditions and possible environmental impacts on performance of the instrument
  • key preparation/measurement steps in test method
  • calculation steps to give results in appropriate units and precision
  • maximum permissible errors for measuring instruments under inspection
• procedures for completing inspection documentation
• organisational policy and procedures for inspecting trading practices
• safety principles and procedures relevant to instruments and test environment
• basic first aid and site safety induction if required

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard while inspecting any of the trading practices listed in the Range

EVIDENCE GUIDE	
	Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures • identify and use suitable reference standards • evaluate and adjust the impact of the operating environment on the performance of the instrument • analyse test results to determine the instrument's suitability for verification (trade use) • identify and implement additional inspection strategies for non-trading practice related breaches of national measurement legislation • recognise and act on non-compliance • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMINS404A Inspect a range of pre-packaged products • MSATMINS301A Inspect a range of simple measures • MSATMINS302A Inspect a range of simple measuring instruments • MSATMINS401A Inspect a range of weighing instruments • MSATMINS402A Inspect a range of liquid measuring instruments using volume measures. Resources may include: • measuring instruments, test equipment and reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for instruments • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	procedures, trader obligations and remedial actions • review of inspection reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to inspect trading practices in accordance with legislative and organisational procedures • observation of the candidate conducting a trading practice inspection. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. An inspector is allocated a file to investigate a consumer complaint alleging that a butcher is over charging on purchases of meat. During preparation for the inspection, the inspector notices that the trader was recently issued with an infringement notice for a similar offence. On arrival at the premises, the inspector observes the trading practices visible from outside the premises and develops a trial purchase plan. On entry, the inspector inspects the shop layout, staff actions, operation of the scales, advertising and the method of selling meat. He/she observes some cuts of meat are not being advertised and sold by weight as required by national measurement legislation and eye fillet is being advertised for sale at a price per 100 g without a reference to its price per kilogram. The inspector modifies the purchase plan to include an additional purchase of meat not apparently being sold by weight. The inspector conducts the trial purchase of two separate cuts of meat. The first cut of meat is weighed on a scale that indicates 0.050 kg without anything on the weigh platter. The second cut is being sold for a set price per item. After paying for the meat, the inspector identifies the site controller, introduces him/herself, explains a trial purchase had been completed and the process for the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	remainder of the inspection. The inspector weighs the first cut of meat on the same scale used by the butcher during the trial purchase. Before weighing the meat, he/she resets the scale to zero and finds the meat weighs 0.050 kg less than the weight he/she was charged for. The pre-packaged products being offered for sale are found to be correct weight and correctly marked as required by legislation. The inspector records notes of the trial purchase in his/her notebook, then tests the accuracy of the weighing instruments and notes that the scales had been verified last month. Before leaving the premises, the inspector informs the site controller of the non-compliances: i.e. selling an article with a short fall, using a weighing instrument incorrectly, selling meat other than by reference to its weight and not advertising meat for sale at a price per kilogram. He/she outlines the resulting enforcement actions and consequences for failing to correct the non-compliances. On returning to the office, the inspector disposes of the trial purchase, files his/her notes and photographs as evidence of the non-compliance and reports the inspection outcomes in accordance with organisational policy and procedures.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standards • Certificates of Verification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• measuring instrument Certificates of Approval • test procedures for measuring instruments • organisational test reports • organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures material safety data sheets • equipment manuals and warranty, supplier catalogues and handbooks
Certificates of Approval	Certificates of Approval may include: • any Certificate issued by the Chief Metrologist under Regulation 60 of the National Measurement Regulations approving the pattern of a limited weighing instrument as being suitable for trade
Enforcement action	Enforcement action may include: • formal warnings • infringement notice • formal undertaking • injunction • prosecution
Test equipment	Test equipment may include: • reference standards of measurement • weighing instruments • trolleys • cameras • video and audio recorders
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Measurement Institute policy	• National Measurement Institute policy may include: • test procedure variations between a verification, in-service or audit inspection • bulletin • instruction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• determination • policy documents
National Test Procedures	National Test Procedures may include: • measuring instrument test procedures • article measurement procedures • any other test procedure prescribed by the National Measurement Institute
OHS and environmental management requirements	OHS and environmental management requirements refer to: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environmental impacts may include: • vibration • wind • heat • dust • electromagnetic interference • out of level • liquid being measured
Records	Records may include: • test reports • safety procedures • a history of equipment calibration and test results
Trading practices	Trading practices may include: • how a measuring instrument is used • position of measuring instruments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• measurement advertising • how the measurement of an article is determined • the type of measurement used to sell an article • the base conditions at which the measurement of an article is determined

MSATMINS404A Inspect a range of pre-packaged products

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the inspection of pre-packaged products by inspectors to determine whether the marking and measurement requirements of the packaged article comply with national measurement legislation.

Application of the Unit

Application of the unit	This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of pre-packaged products as part of their allocated duties. Compliance with national legislation governing pre-packaged products applies to the accuracy of the labelling information and contents of all items parcelled for sale in all industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare for inspection	1.1. Identify and evaluate the type of pre-packaged products to be inspected 1.2. Access and review any history of previous inspections at trader's premises 1.3. Access and correctly interpret appropriate documentation required for the inspection 1.4. Identify and access test equipment, investigation equipment and consumables required for the inspection 1.5. Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures 1.6. Store and transport test equipment in accordance with organisational procedures and industry best

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	practice 1.7. Identify workplace health and safety issues relevant to the inspection
2. Initiate inspection	2.1. Identify the site contoller, explain the purpose of the inspection and produce formal identification, if required 2.2. Identify site workplace health and safety issues and implement appropriate control strategies 2.3. Conduct a preliminary evaluation of the site's trade measurement activities and prioritise inspection to maximise outcomes 2.4. Identify the range of pre-packaged products at the premises and plan the inspection to achieve maximum outcomes while minimising disruption to the public and trader
3. Inspect packaged article markings	3.1. Identify generic trade measurement marking requirements for pre-packaged products 3.2. Identify specific trade measurement marking requirements related to the pre-packaged product selected for inspection 3.3. Assess measurement, unit pricing and packer identification markings on pre-packaged products for compliance with legislative requirements
4. Measure the net contents of pre-packaged products	4.1. Identify and access National Test Procedure appropriate for measuring the product 4.2. Select pre-packaged products for measurement in accordance with marketplace intelligence, legislative requirements, organisational policy and procedures 4.3. Identify, access and apply product handling and disposal requirements in accordance with workplace, health and safety and environmental requiements 4.4. Select specialised equipment, reference standards and measuring devices in accordance with organisational policy and procedures 4.5. Measure pre-packaged product in accordance with the appropriate National Test Procedure, organisational policy and procedures 4.6. Evaluate results against prescribed performance criteria and determine if the net contents of the individual pre-packaged products and inspection lot meet legislative requirements
5. Evaluate trader's	5.1. Examine the process used by the trader to measure a

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
measurement process	pre-packaged product 5.2. Evaluate the effectiveness of the trader's measurement procedure, methodology and test frequency against inspection outcomes 5.3. Inspect measuring instrument operating environment and assess suitability for purpose 5.4. Evaluate measuring instrument operation against legislative requirements, organisational policy and procedures 5.5. Modify the operating environment or implement alternative arrangements to ensure reliable operating conditions for the measuring instrument as necessary 5.6. Identify the maximum permissible errors for the instrument from the legislative requirements 5.7. Inspect measuring instruments in accordance with relevant National Test Procedure, organisational policy and procedures
6. Analyse and report inspection results	6.1. Analyse inspection data for unacceptable trends 6.2. Use test reports to present inspection results in the required format 6.3. Complete inspection documentation in accordance with legislative requirements and organisational procedures 6.4. Communicate inspection results within the specified time and in accordance with organisational guidelines 6.5. Recommend follow-up actions as appropriate
7. Act on non-compliance	7.1. Record and collect evidence of any identified non-compliance in accordance with legislative requirements, organisational policy and procedures 7.2. Select applicable enforcement action for the non-compliance in accordance with legislative requirements, organisational policy and procedures 7.3. Inform traders of non-compliances and consequences of failing to have them corrected 7.4. Implement enforcement action in accordance with legislative requirements, organisational policy and procedures 7.5. Maintain the rights of the trader at all times

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accessing, interpreting and applying a range of documents for the inspection of pre-packaged products including:
  - national measurement legislation
  - National Test Procedures
  - National Measurement Institute inspection policy
- accessing and interpreting Certificates of Verification for a range of reference standards
- performing inspections over durations exceeding one day in non-routine environments
- using advanced communication and negotiation skills to:
  - explain the purpose of inspection
  - inform traders of non-compliances and consequences of failing to rectify them
  - access external equipment and resources to complete the inspection
  - explain inspection procedures and outcomes to traders, verifiers and managers
- accessing, transporting, setting up, validating, using and maintaining a range of test equipment and reference standards
- identifying and evaluating environmental impacts on performance of a range of measuring instruments
- identifying and evaluating impacts of trader procedures on the measurement of pre-packaged products
- evaluating pre-packaged product markings for compliance with legislative requirements
- conducting tests and recording results with close attention to detail and accuracy
- performing calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures
  - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
- identifying non-compliances with national measurement legislation relating to trading practices and measuring instruments
- initiating appropriate enforcement action for non-compliances including warning, infringement notice, undertaking, injunction and prosecution
- planning routine tasks
- developing/implementing an efficient inspection strategy that has a limited impact on traders, the public, employees and suppliers
- demonstrating professionalism and maintaining the rights of the trader at all times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• solving routine/expected problems • working safely which may include applying basic first aid
Required knowledge

• general physical principles and concepts including weight, mass, gravity, volume, length, area and displacement
• knowledge of the operating procedures across a range of environments including laboratories, retail, manufacturing, industrial, chemical, petroleum, farming, abattoirs and food processsing
• knowledge of metrological terms and terminology such as maximum permissible errors, traceability, uncertainty, inspection lot, deficiency and shortfall
• national measurement legislation applicable to pre-packaged products and measuring instruments
• detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:
  • purpose of test
  • test conditions and possible environmental impacts on performance of the instrument
  • key preparation/measurement steps in test method
  • calculation steps to give results in appropriate units and precision
  • maximum permissible errors for weighing instruments under inspection
• procedures for completing inspection documentation
• organisational policy and procedures for inspecting pre-packaged products
• safety principles and procedures relevant to instruments and test environment
• basic first aid and site safety induction if required

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for a wide range of pre-packaged products.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• identify and use suitable reference standards • evaluate and adjust the impact of the operating environment on the performance of the instrument • analyse test results to determine the instrument's suitability for verification (trade use) • inspect markings and net contents of pre-packaged articles • identify and implement additional inspection strategies for pre-packaged product related breaches of national measurement legislation • recognise and act on non-compliance • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMINS403AA Inspect a range of trading practices • MSATMINS301A Inspect a range of simple measures • MSATMINS302A Inspect a range of simple measuring instruments • MSATMINS401A Inspect a range of weighing instruments • MSATMINS402A Inspect a range of liquid measuring instruments using volume measures. Resources may include: • measuring instruments, test equipment and reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for instruments • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant procedures, trader obligations and remedial actions • review of inspection reports prepared by the

EVIDENCE GUIDE	
	candidate • feedback from supervisors and peers regarding the candidate's ability to inspect pre-packaged products in accordance with legislative and organisational procedures • observation of the candidate inspecting pre-packaged products. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. An inspector is allocated a routine inspection at a factory which packs milk. When reviewing the trader's inspection history, the inspector notices that the trader was issued with an infringement notice 12 months ago for packing 2 L bottles of milk that had an average 4.5% shortfall.On arrival at the premises, the inspector enters the main office and explains the purpose of the visit. While waiting for the site controller to arrive, the inspector assesses the business registration documents on public display and notes they coincide with the pre-inspection documentation he/she retrieved earlier. When the site controller arrives, the inspector explains the purpose of the visit.The site controller provides a site induction and highlights the local workplace health and safety requirements. The inspector then outlines an inspection strategy that will minimise disruption to the trader and suppliers and satisfy the factory's health and hygiene requirements. The inspector collects the necessary equipment and documentation from his/her vehicle and validates the test equipment before proceeding with the inspection. Given the trader's history, he/she selects an inspection lot of 12 pre-packaged 2 L bottles of milk. On close examination, the inspector finds that the measurement and packer identification markings on this product do not comply with legislative requirements because the 2 L print height

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	is too small.He/she then measures the volume of milk in each bottle and finds an average shortfall of 75 ml or 3.75%. The inspector conducts a detailed investigation of the trader's milk packaging process, measuring instruments, measurement procedure, and their methodology and frequency of measurement tests. He/she finds that the milk density used for setting volumetric fillers is incorrect and causing the shortfall. Before leaving the premises, the inspector informs the site controller of the non-compliances: i.e. packing pre-packaged products with an average shortfall which exceeded the prescribed performance criteria and a measurement marking print height smaller than the prescribed criteria. He/she outlines the resulting enforcement actions and consequences for failing to correct the non-compliances. On returning to the office, the inspector files his/her notes, test reports and photographs as evidence of the non-compliance and reports the inspection outcomes in accordance with organisational policy and procedures.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standards • Certificates of Verification • measuring instrument Certificates of Approval • test procedures for inspecting pre-packaged products and measuring instruments • organisational test reports

MSATMINS501A Inspect a range of complex measuring instruments

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to apply National Test Procedures to determine whether a complex measuring instrument is suitable for trade use. It involves the ability to perform lengthy calculations to assess instrument performance and conduct tests that may require coordination of a range of resources over long durations in hazardous environments. This unit also involves auditing the performance of verifiers who have previously tested and marked instruments for use.

Application of the Unit

Application of the unit	This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a range of complex measuring instruments as part of their allocated duties. Complex measuring instruments are used in a wide range of heavy industries. For example, automatic rail weighbridges, belt weighers, totalising hoppers and liquid petroleum gas (LPG) flow meters are used throughout the mining, road/rail freight and petroleum/gas industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare for inspection	1.1. Identify and evaluate the type of instrument to be inspected 1.2. Access and correctly interpret documentation required for the inspection 1.3. Identify and access test equipment, products and consumables required for the inspection 1.4. Ensure test equipment is suitable for its purpose in accordance with applicable legislation and organisational procedures 1.5. Store and transport equipment in accordance with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	organisational procedures and industry best practice 1.6. Access and evaluate any previous test results for the trader 1.7. Identify workplace health and safety issues relevant to the inspection 1.8. Develop an inspection strategy to maximise resources and minimise time required for complex tests
2. Liaise with the trader to schedule complex tests	2.1. Discuss inspection arrangements with site controller where applicable 2.2. Identify relevant local workplace, health and safety issues and implement appropriate control strategies 2.3. Discuss the inspection strategy with the trader to minimise its impact on the trader's normal operations 2.4. Arrange site clearances and suitable scheduling for tests 2.5. Negotiate access to trader's equipment, materials and support personnel required for testing to be available on site 2.6. Arrange for any equipment to be provided by the trader, if required, by the National Test Procedure
3. Initiate inspection	3.1. Identify the site contoller, explain/review the purpose of the inspection and, if required, produce formal identification 3.2. Review inspection strategy to ensure there is minimal disruption to the public and/or trader 3.3. Communicate inspection strategy to all personnel involved 3.4. Identify locations for product return or disposal if applicable 3.5. Evaluate the impacts of the operating environment on the instrument performance or test results and, where applicable, implement corrective actions 3.6. Identify operational factors impacting on instrument performance or test result and, where applicable, implement corrective actions
4. Evaluate complex measuring instrument performance	4.1. Identify the maximum permissible errors for the instrument from the legislative requirements 4.2. Manage and review resources to maintain inspection timelines 4.3. Provide effective communication to ensure relevant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	personnel are informed of variations to the inspection strategy and inspection progress 4.4. Check instrument for compliance with the appropriate Certificates of Approval 4.5. Inspect the instrument in accordance with relevant National Test Procedure and appropriate National Measurement Institute policy
5. Analyse inspection results	5.1. Perform specified calculations to determine a performance result for the instrument with appropriate accuracy, precision and significant figures 5.2. Use graphical and statistical analysis to determine unknowns as necessary 5.3. Ensure calculations are consistent with estimations and reasonable expectations 5.4. Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
6. Conduct a verifier performance audit	6.1. Identify the scope of the verifier audit 6.2. Identify the expected outcomes of the verifier audit 6.3. Assess the verifier's performance against the expected outcome 6.4. Analyse any variances from the expected outcomes to identify any isolated or systemic problems
7. Report inspection results	7.1. Display the inspection result on the instrument in accordance with legislative requirements 7.2. Use test reports to present inspection results in the required format 7.3. Complete inspection documentation in accordance with legislative requirements and organisational procedures 7.4. Communicate inspection results within the specified time and in accordance with organisational guidelines 7.5. Recommend follow-up actions as appropriate.
8. Act on non-compliance	8.1. Select applicable enforcement action for the non-compliance in accordance with legislative requirements, organisational policy and procedures 8.2. Inform traders of non-compliances and consequences of failing to have them corrected 8.3. Implement enforcement action in accordance with legislative requirements, organisational policy and

ELEMENT	PERFORMANCE CRITERIA
	procedures 8.4. Maintain the rights of the trader at all times

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills

• accessing, interpreting and applying a range of documents for the inspection of complex measuring instruments including:
  • national measurement legislation
  • intermediate National Test Procedures
  • Certificates of Approval
  • National Measurement Institute inspection policy
  • Australian Standards
  • industry codes of practice
  • correction tables for volume, density and pressure for a range of liquids
  • national and international design rules
  • pattern approval documents
• accessing and interpreting Certificates of Verification for a wide range of reference standards
• performing inspection over extended durations up to five days in non-routine and hazardous environments
• using advanced communication and negotiation skills to:
  • explain purpose of the inspection
  • inform traders of non-compliances and consequences of failing to rectify
  • access external equipment and resources to complete the inspection
• explain inspection procedures and outcomes to traders, verifiers and managers
• accessing, transporting, setting up, validating, using and maintaining a broad range of test equipment and reference standards
• identifying and evaluating environmental factors that may impact on performance of complex measuring instruments
• organising large equipment to be dispatched ahead of inspection visit
• conducting lengthy tests and recording results with close attention to detail and accuracy
• performing complex calculations involving:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- fractions, decimals, ratios, proportions and percentages
- evaluation of formulae containing powers, exponents and logarithms functions
- use of scientific notation, correct units and correct number of significant figures
- calculation of uncertainties
- preparation and interpretation of linear, semi-log and log-log graphs
- interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
- determination of regression line equations and correlation coefficients
- preparation and interpretation of more complex control charts and frequency distribution plots

- analysing performance results over a broad range of operating conditions
- identifying non-compliances with national measurement legislation relating to instrument or verifier performance and initiate appropriate enforcement action including warning, infringement notice, undertaking, injunction and prosecution
- identifying potential trading practice non-compliance with national measurement legislation and initiating an appropriate inspection strategy
- planning complex tasks
- developing/implementing an efficient inspection strategy that minimises disruption to traders, the public, technicians, contractors, employees, colleagues and suppliers
- demonstrating professionalism and maintaining the rights of the trader at all times
- solving unexpected problems and non-routine issues
- working safely which may include applying basic first aid, confined space entry, working with hazardous materials, working safely in hazardous environments, working with heavy machinery, Australian Institute of Petroleum (AIP) cold work clearance permit, safety induction, working at heights and biosecurity issues

Required knowledge

- general chemical and physical principles and concepts including:
  - physical states (solid, liquid gas), weight, mass, gravity and density
  - pressure, pressure differential, backpressure and head pressure
  - fluid flow
  - flashpoint, boiling point and ice point
  - viscosity
  - temperature effects and coefficients of expansion
- basic knowledge of the design, application and function of components used in complex measuring instruments
- knowledge of the operating procedures across a range of environments including laboratories, retail, commercial, office, manufacturing, industrial, mining, construction, medical, chemical, petroleum, farming and abattoirs
- knowledge of metrological terms and terminology specific to complex measuring instruments such as:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• maximum permissible errors, maximum permissible difference and maximum permissible variation • traceability • repeatability • uncertainty, error of measurement and error of indication • meter creep • hose dilation • temperature correction • linearisation • gas elimination • national measurement legislation applicable to complex measuring instruments • detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including: • purpose of test • test conditions and possible environmental impacts on performance of the instrument • key preparation/measurement steps in test method • calculation steps to give results in appropriate units and precision • maximum permissible errors for complex measuring instruments under inspection • procedures for completing inspection documentation • organisational policy and procedures for inspecting instruments • safety principles and procedures relevant to instruments • basic first aid and site safety induction if required

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for any class of complex instrument listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate	Assessors should ensure that candidates can:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
competency in this unit	• identify, access and apply test procedures • identify and use suitable reference standards • evaluate and adjust the impact of the operating environment on the performance of the instrument • analyse test results to determine the instrument's suitability for verification (trade use) • identify the scope of a verifier performance audit and assess results with expected outcomes • audit the performance of verifiers of complex measuring instruments • identify and implement additional inspection strategies for non-instrument related breaches of national measurement legislation • recognise and act on non-compliance • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMREF301A Use and maintain reference standards. Resources may include: • access to a complex instrument, test equipment and reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for the instrument • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions • review of inspection reports and verifier performance audit reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to inspect the performance of instruments in accordance with legislative and organisational procedures

EVIDENCE GUIDE	
	• observation of the candidate conducting an inspection. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. An inspector has been given the task of inspecting a bulk flowmetering system at an oil company distribution terminal. In preparation, the inspector evaluates the instrument nominated for inspection, identifies and accesses appropriate documentation for the inspection, identifies and accesses equipment, evaluates previous inspection data and develops an inspection strategy.The inspector visits the terminal to discuss the proposed inspection strategy with the site controller. During this discussion, the inspector discovers that access to the instrument has been restricted and modifications will have to be made to the area surrounding the instrument. The site controller engages a contractor to make the necessary modifications and agrees on an inspection strategy that will minimise disruption to terminal operations. On completion of the modifications, the inspector returns to the terminal to inspect the bulk flowmetering system. The site controller has arranged for all the resources identified at the inspection strategy meeting to be available. Prior to commencing any testing, the inspector holds a meeting with all personnel involved in the inspection and describes the inspection strategy. A fitter who will be operating the instrument identifies a problem and offers a solution. The inspector agrees and adjusts the inspection strategy accordingly.At the completion of the testing, the inspector uses the recorded data in combination with a variety of data derived from correction tables and complex mathematical formulae to determine performance result for the instrument.These results confirm the instrument's performance is outside

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	the acceptable maximum permissible errors. The inspector informs the site controller of the outcome and issues a formal warning explaining that the instrument cannot be used for trade until it has been corrected and verified by a licensed verifier.During a follow up visit, the inspector confirms the instrument has been repaired and verifies it.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Prescribed performance criteria for instruments	Prescribed performance criteria for instruments may include: • design is in accordance with the appropriate Certificates of Approval • performance meets the criteria described in the Certificates of Approval, National Test Procedure and legislation
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standards • Certificates of Verification • Certificates of Approval for complex instruments • test procedures for verifying complex instruments • organisational test reports • organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	regulations, guidelines and procedures material data safety sheets • equipment manuals and warranty, supplier catalogues and handbooks
Certificates of Approval	Certificates of Approval may include: • any Certificate issued under the National Measurement Regulations approving the pattern of a complex measuring instrument as being suitable for trade
Enforcement action	Enforcement action may include: • formal warnings • infringement notice • formal undertaking • injunction • prosecution
Test equipment	Test equipment may include: • reference standards of measurement • equipment other than reference standards of measurement such as weighing instruments, pumping units, control instruments, two way communication, hoses, fittings, rail wagons, trains and tankers • LPG cylinders
Legislation may include	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Measurement Institute policy	National Measurement Institute policy may include: • test procedure variations between a verification, in-service or audit inspection • bulletin • instruction • determination
National Test Procedures for complex instruments	National Test Procedures for complex instruments may include: • non-automatic weighing machines >3 tonne • LPG dispensers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• bulk LPG flowmetering systems • flowmetering systems tested using the master meter or gravimetric methods • automatic rail weighbridges • continuous totalising automatic weighing instruments (belt weighers) • totalising hopper weighing instruments • any other test procedure prescribed by the National Measurement Institute
OHS and environmental management requirements	OHS and environmental management requirements refer to: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environmental impacts may include: • vibration • wind • heat • dust • electromagnetic interference • out of level
Specified calculations	Specified calculations may include: • calculations involving fractions, decimals, ratios, proportions and percentages • evaluation of formulae containing powers, exponents and logarithms functions • use of scientific notation, correct units and correct number of significant figures • calculation of uncertainties • preparation and interpretation of linear,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	semi-log and log-log graphs • calculation and interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation • determination of regression line equations and correlation coefficients • preparation and interpretation of more complex control charts and frequency distribution plots
Records	Records may include: • test reports • safety procedures • a history of equipment calibration and test results
Complex instruments	Inspectors may be required to test and mark any of the classes of instruments from the following list. Complex instruments may include: • non-automatic weighing machines >3 tonne • LPG dispensers • LPG bulk flowmetering systems • flowmetering systems tested using master meter or gravimetric methods • automatic rail weighbridges • continuous totalising automatic weighing instruments (belt weighers) • totalising hoppers weighing instruments • any other complex measuring instrument prescribed by the National Measurement Institute

MSATMREF301A Use and maintain reference standards

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to select and use appropriate reference standards of measurement in accordance with standard procedures and industry best practice. It also involves storing and transporting reference standards correctly and maintaining their integrity during all trade measurement activities.

Application of the Unit

Application of the unit	This unit of competency is applicable to: • trade measurement inspectors appointed under national measurement legislation who may use reference standards of measurement for inspecting a range of pre-packaged products, trading practices or measuring instruments as part of their allocated duties • verifiers who operate under a servicing licence to install and/or repair, test and mark specific classes of trade measuring instruments. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Maintain reference standard integrity	1.1. Identify environmental issues that may impact on reference standard integrity and implement appropriate control strategies 1.2. Store, transport and handle reference standards in accordance with organisational procedures and industry best practice 1.3. Quarantine and report damaged or compromised reference standards in accordance with organisational procedures 1.4. Plan and organise reference standard maintenance and calibration in accordance with legislative requirements and organisational procedures 1.5. Update maintenance and calibration records in accordance with organisational procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.6. Ensure that personnel assisting with the activity use correct handling procedures for reference standards
2. Select appropriate reference standards	2.1. Identify the scope and expected outcomes of the planned activity 2.2. Identify and access reference standards appropriate to the activity 2.3. Evaluate reference standard limitations associated with the activity and operating environment 2.4. Validate reference standard suitability against the activity scope and expected outcomes in accordance with legislative requirements and organisational policy and procedures
3. Use reference standards	3.1. Review the expected outcomes for the activity 3.2. Access and interpret reference standard Certificates of Verification and measurement reports 3.3. Condition the reference standard as required to produce consistent and accurate measurements 3.4. Identify, interpret and apply reference standard corrections as required 3.5. Assess the results of the activity against the prescribed performance criteria 3.6. Analyse any variances from the expected outcomes to identify any isolated or systemic problems linked to the reference standard or its use
4. Maintain a safe work environment	4.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other personnel 4.2. Identify relevant local workplace, health and safety issues and implement appropriate control strategies 4.3. Handle reference standards safely in accordance with applicable legislation and organisational procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- using correct documentation to obtain information about tolerances for reference standards
- identifying suitable reference standardsfor the planned activity
- accessing documented operating procedures for reference standards and test equipment
- using reference standards and test equipment in accordance with specified procedures
- calibrating/maintaining reference standards and test equipment
- maintaining accuracy and currency of maintenance register for reference standards
- identifying and recording/reporting malfunction of, or damage to, reference standards or test equipment
- interpreting Certificates of Verification in relation to the use of reference standards
- using graphs and tables within Certificates of Verification
- accessing and interpreting Certificates of Verification for a range of reference standards
- using a wide range of reference standards over a wide range of environments
- using advanced communication and negotiation skills to:
  - explain the purpose of the trade measurement activity
  - access external equipment and resources to complete the activity
  - explain procedures and expected outcomes of the activity to tradersand managers
- accessing, transporting, setting up, validating, using and maintaining a range of test equipment and reference standards
- identifying and evaluating environmental impacts on a wide range of reference standards
- performing calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures
  - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
- organising large reference standards to be dispatched ahead of visit to trader's premises
- planning routine tasks
- demonstrating professionalism and maintaining the rights of the trader at all times
- solving routine/expected problems
- working safely which may include applying basic first aid, confined space entry and working with heavy machinery

Required knowledge

- general physical principles and concepts including weight, mass, gravity, density, volume, length and area

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- Australian legal units of measurement
- organisations involved in legal metrology in Australia
- hierarchy of reference standards in relation to legal metrology
- purpose of Certificates of Verification issued under the national measurement legislation
- metrological terms such as: maximum permissible errors, maximum permissible variations, traceability, uncertainty
- information in graphs and tables within Certificates
- application of different classes of reference standards used to inspect/verify trade measurement instruments
- transport/storage specifications and procedures for test/specialised equipment and reference standards
- variations from transport/storage specifications and procedures requiring appropriate approval
- maintenance and calibration procedures for reference standards used in job role
- maintenance required for test equipment when manufacturer's requirements are unavailable
- actions to be taken where legal traceability can not be confirmed
- actions to be taken if reference standards and test equipment are found to be defective
- procedures for recording and reporting faults
- maintenance requirements for reference standards and test equipment
- knowledge of the operating procedures across a range of environments such as laboratories, retail, commercial, office, manufacturing, industrial, mining, construction, medical, chemical, petroleum, farming and abattoirs
- detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:
  - purpose of test
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for instruments under test
- workplace, health and safety requirements relating to personnel, reference standards, measuring instruments and test equipment
- basic first aid and site safety induction if required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard using reference standards relevant to job role.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply relevant test procedures • select and use suitable reference standards • maintain the integrity of reference standards during their transport, storage and use • determine whether reference standards are defective • validate the suitability of reference standards for activities relevant to job role • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with the following units: • MSATM units dealing with the inspection or verification of trade measurement instruments and inspection of trading practices and pre-packaged products. Resources may include: • reference standards • computer and relevant software and/or organisation information management system • Certificates of Verification • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant procedures, trader obligations and remedial actions • review of maintenance records prepared or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	maintained by the candidate • feedback from supervisors and peers regarding the candidate's ability to use and maintain reference standards in accordance with legislative and organisation's procedures • observation of the candidate using and maintaining reference standards to complete trade measurement activities. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. **An inspector** is allocated a routine inspection of a hardware store. In preparation, the inspector locates the trader's file and notes that the company sells a variety of items by measurement using scales, rulers and volume measures. Using the organisation's checklist for inspecting this type of business, he/she identifies the reference standards and documentation required for the inspection. He/she confirms that the selected reference standards are suitable for the intended purpose, are currently verified and are not damaged before stowing them safely in his/her vehicle for transport to the hardware store. On arrival, the inspector meets the site controller and initiates the inspection in accordance with the organisation's standard procedures. The inspector collects the reference standards, test equipment and documentation from the vehicle. The standards include: masses to test a weighing instrument, a volume measure to test a 5 L measure for selling kerosene, a measure of length to test packages of rope, a density bottle to determine the density of turpentine for checking packages and a thermometer to measure the temperature of the density bottle and make appropriate temperature corrections. Before using the reference standards, the inspector confirms the expected outcomes for each activity, reviews the Certificates of Verification and conditions the volume reference standards as required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	After each activity, the inspector assesses the results against the prescribed performance criteria and analyses any variances from the expected outcomes to identify any problems that may be linked to the reference standard or its use. At the end of the visit, the inspector cleans the reference standards, returns them to the vehicle and re-stows them safely to maintain their integrity. On returning to the office, the inspector books the masses into the measurement standards laboratory for calibration as their Certificate of Verification is due to expire in 22 days. **A verifier** is contacted by a local service station to repair and verify two of their fuel dispensers that had been recently rejected for trade use by an inspector. Before proceeding to the service station, the verifier asks the trader some questions and establishes that one fuel dispenser has a flow rate of <60 L/min and another has a flow rate >60 L/min. The verifier consults the National Test Procedure for fuel dispensers and identifies that he/she needs both a 15 L and 200 L volume reference standard to complete this work. In preparation for the visit, the verifier checks whether the reference standards are suitable, they have a current Verification Certificate and are not damaged. This examination reveals that the Certificate for the 200 L reference standard he/she intends to use has expired. He/she immediately books the measure into the measurement standards laboratory for calibration and arranges for a replacement measure with a current Certificate. Before travelling to the service station, the verifier stores the reference standards in the vehicle in accordance with standard operating procedures. On arrival, the verifier takes the time to introduce him/herself to the site controller, complete a site safety induction and outline a test strategy that is both safe and will cause minimal disruption to the trader. The verifier collects the reference standards, test equipment and documentation from the vehicle. Before using the volume measures, he/she reviews their respective Certificates of Verification and notes that there are different drainage requirements for each measure. After repairing the fuel dispensers, the verifier tests the fuel dispensers in accordance with the appropriate National Test Procedure. He/she makes sure to use the volume reference standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	in a manner that is consistent with the requirements set out in the Certificate of Verification and the organisation's procedures to maintain the integrity of the measurements. After completing the repairs and testing, the verifier cleans the reference standards and re-stows them in the vehicle.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standard Certificates of Verification • test procedures for inspecting measuring instruments, pre-packaged products and trading practices • organisational test reports • organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures material data safety sheets • equipment manuals and warranty, supplier catalogues and handbooks
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Measurement Institute	National Measurement Institute policy may

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Install and repair simple measures	1.1. Access and correctly interpret information for installing or repairing simple measures 1.2. Select required components, tools and equipment in accordance with manufacturer/component supplier specifications 1.3. Perform installation or repair in accordance with legislation, industry codes of practice and organisational guidelines 1.4. Avoid damage to simple measures during installation or repair
2. Prepare for verification	2.1. Identify and evaluate the type of simple measure to be verified 2.2. Access and correctly interpret documentation required for the verification 2.3. Identify and access test equipment, products and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	consumables required for the verification 2.4. Liaise with the trader to provide the items required on site 2.5. Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures 2.6. Store and transport test equipment in accordance with organisational procedures and industry best practice 2.7. Identify relevant local workplace health and safety issues and implement appropriate control strategies
3. Evaluate simple measure performance	3.1. Evaluate whether the operating environment will impact on the performance of the simple measure 3.2. Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary 3.3. Identify the maximum permissible errors for the simple measure from the legislative requirements 3.4. Use test equipment safely in accordance with applicable legislation and organisational procedures 3.5. Check simple measure for compliance with the appropriate Certificates of Approval 3.6. Inspect simple measure in accordance with relevant National Test Procedure and appropriate National Measurement Institute policy 3.7. Evaluate results against prescribed performance criteria and determine if the simple measure is suitable for trade use in accordance with legislative requirements
4. Report verification results	4.1. Display the verification result on the simple measure in accordance with legislative requirements 4.2. Use test reports to present verification results in the required format 4.3. Complete verification documentation in accordance with legislative requirements and organisational procedures 4.4. Communicate results within the specified time and in accordance with organisational guidelines
5. Model and encourage compliance with statutory	5.1. Apply organisation's procedures and practices to meet licensing authority's requirements 5.2. Clarify any issues about licensing requirements with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
requirements	the licensing authority as they arise 5.3. Review work and seek feedback from others to confirm continuing compliance with licensing requirements 5.4. Identify implications of non-compliance with licensing requirements 5.5. Identify inadequacies in trader's procedures and practices which may contribute to non-compliance with licensing requirements and/or national measurement legislation 5.6. Explain inadequacies and possible remedial actions to trader
6. Maintain statutory records	6.1. Keep accurate and complete records in accordance with licensing requirements 6.2. Ensure authorisation, training and relevant licences are current in accordance with organisational and licensing requirements 6.3. Inform the licensing administering authority of changes to personal information as required by statute

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- diagnosing faults in simple measures
- installing and repairing simple measures
- accessing, interpreting and applying a range of documents for the verification of simple measures:
  - national measurement legislation
  - routine National Test Procedures
  - Certificates of Approval
  - National Measurement Institute verification policy
  - Australian Standards
- accessing and interpreting Certificates of Verification for a limited range of reference standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- using routine communication and negotiation skills to:
  - explain the purpose of verification
  - inform traders of non-compliances and consequences of failing to rectify them
  - explain verification procedures and outcomes to traders and managers
- accessing, transporting, setting up, validating, using and maintaining a limited range of test equipment and reference standards
- identifying and evaluating environmental impacts on performance of a range of simple measuring instruments
- conducting tests and recording results with close attention to detail and accuracy
- performing calculations involving fractions, decimals, ratios, proportions and percentages
- using correct units and the correct number of significant figures
- analysing performance results over a single or limited range of operating conditions
- planning routine tasks
- developing/implementing an efficient verification strategy that has a limited impact on others
- demonstrating professionalism and maintaining the rights of the trader at all times
- solving routine/expected problems
- working safely

Required knowledge

- design and functions of components used in simple measures
- licensing requirements for a verifier including:
  - quality management system
  - licence conditions
  - maintenance of statutory records
- general chemical and physic principles and concepts including:
  - weight, mass, gravity and density
  - temperature effects and coefficients of expansion
- basic knowledge of the operating procedures across a limited range of environments including laboratories, retail and manufacturing
- knowledge of metrological terms and terminology specific to simple measuring instruments such as:
  - maximum permissible errors
  - traceability, error of measurement
  - error of indication
- national measurement legislation applicable to simple measures
- detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• purpose of test • test conditions and possible environmental impacts on performance of simple measure • key preparation/measurement steps in test method • calculation steps to give results in appropriate units and precision • maximum permissible errors for simple measures under test • procedures for completing verification documentation • organisational policy and procedures for verifying simple measures

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for one class of simple measures listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures • identify and use suitable reference standards • install and repair simple measures to meet statutory requirements • evaluate and adjust the impact of the operating environment on the performance of simple measures • analyse test results to determine the simple measure's suitability for verification (trade use) • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMREF301A Use and maintain reference standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	Resources may include: • simple measures, test equipment and reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for simple measures • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant procedures and remedial actions • review of verification reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to verify the performance of simple measures in accordance with legislative and organisational procedures. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. Following an invitation from the trader, a verifier arrives at a millinery shop to verify a one metre rule set in the counter. After introducing him/herself, the verifier outlines the verification procedure and relevant certified reference standard. He/she visually inspects the rule to ensure that it complies with the relevant Certificate of Approval. He/she then conducts the required comparisons between the one metre rule and certified standard in accordance with the National Measurement Institute National Test Procedure. The verifier decides that the measure can be verified and marks the rule with the appropriate certification mark. He/she prepares the Certificate of Verification and presents it to the trader along with an invoice for the work undertaken. On the way out, the verifier notices another rule set into another

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	counter. After examining it, he/she decides that the rule does not comply with the Certificate of Approval and advises the trader that it cannot be used for trade.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Prescribed performance criteria for simple measures	Prescribed performance criteria for simple measures may include: • design is in accordance with the appropriate Certificates of Approval • performance meets the criteria described in the Certificates of Approval, National Test Procedure and legislation
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standards • Certificates of Verification • Certificates of Approval for simple measures • test procedures for verifying simple measures • organisational test reports • organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures and material safety data sheets (MSDS) • equipment manuals and warranty, supplier catalogues and handbooks • National Measurement Institute policy • Australian Standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Certificates of Approval	Certificates of Approval may include: • any Certificate issued by the Chief Metrologist under Regulation 60 of the National Measurement Regulations approving the pattern of a simple measure as being suitable for trade
Equipment	Equipment may include: • reference standards of measurement • equipment other than reference standards of measurement such as weighing instruments, strikes and funnels
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Test Procedures for simple measures	National Test Procedures for simple measures may include: • length measures • alcoholic beverage measures • lubricating oil measures • graduated measures • pharmaceutical measures • trade masses • any other test procedure prescribed by the National Measurement Institute
OHS and environmental management requirements	OHS and environmental management requirements refers to: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and

MSATMVER302A Verify a simple measuring instrument

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to apply National Test Procedures to determine whether a simple measuring instrument is suitable for trade and then mark it accordingly. It also involves the installation and/or repair of simple measuring instruments.

Application of the Unit

Application of the unit	This unit of competency is applicable to verifiers who operate under a licence to test and mark a specific class of simple measuring instruments. Simple measuring instruments are used in a very wide range of commerce. For example, dip sticks are used to measure bulk petroleum products and beverages, dimensional measuring instruments are used to determine cubic measurements of packages for freight and length/area instruments are used to measure a wide range of articles sold by reference to those measurements. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Install and repair simple measuring instruments	1.1. Access and correctly interpret information for installing or repairing instruments 1.2. Select required components, tools and equipment in accordance with manufacturer/component supplier specifications 1.3. Perform installation or repair in accordance with legislation, industry codes of practice and organisational guidelines 1.4. Avoid instrument damage during installation or repair
2. Prepare for verification	2.1. Identify and evaluate the type of instrument to be verified 2.2. Access and correctly interpret documentation required for the verification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Identify and access test equipment, products and consumables required for the verification 2.4. Liaise with the trader to provide the items required on site 2.5. Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures 2.6. Store and transport test equipment in accordance with organisational procedures and industry best practice 2.7. Identify relevant local workplace health and safety issues and implement appropriate control strategies
3. Evaluate simple measuring instrument performance	3.1. Evaluate whether the operating environment will impact on the instrument performance 3.2. Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary 3.3. Identify the maximum permissible errors for the instrument from the legislative requirements 3.4. Use test equipment safely in accordance with applicable legislation and organisational procedures 3.5. Check instrument for compliance with the appropriate Certificates of Approval 3.6. Inspect the instrument in accordance with relevant National Test Procedure and appropriate National Measurement Institute policy 3.7. Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
4. Report verification results	4.1. Display the verification result on the instrument in accordance with legislative requirements 4.2. Use test reports to present verification results in the required format 4.3. Complete verification documentation in accordance with legislative requirements and organisational procedures 4.4. Communicate results within the specified time and in accordance with organisational guidelines
5. Model and encourage compliance with statutory	5.1. Apply organisation's procedures and practices to meet licensing authority's requirements 5.2. Clarify any issues about licensing requirements with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
requirements	the licensing authority as they arise 5.3. Review work and seek feedback from others to confirm continuing compliance with licensing requirements 5.4. Identify implications of non-compliance with licensing requirements 5.5. Identify inadequacies in trader's procedures and practices which may contribute to non-compliance with licensing requirements and/or national measurement legislation 5.6. Explain inadequacies and possible remedial actions to trader
6. Maintain statutory records	6.1. Keep accurate and complete records in accordance with licensing requirements 6.2. Ensure authorisation, training and relevant licences are current in accordance with organisational and licensing requirements 6.3. Inform the licensing administering authority of changes to personal information as required by statute

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

• diagnosing faults in simple measuring instruments
• installing and repairing measuring instruments with a basic design
• accessing, interpreting and applying a range of documents for the verification of simple measuring instruments including:
  • national measurement legislation
  • routine National Test Procedures
  • Certificates of Approval
  • National Measurement Institute verification policy
  • Australian Standards
• accessing and interpreting Certificates of Verification for a limited range of reference standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- using routine communication and negotiation skills to:
  - explain the purpose of verification
  - inform traders of non-compliances and consequences of failing to rectify them
  - explain verification procedures and outcomes to tradersand managers
- accessing, transporting, setting up, validating, using and maintaining a limited range of test equipment and reference standards
- identifying and evaluating environmental impacts on performance of a range of simple measuring instruments
- conducting tests and recording results with close attention to detail and accuracy
- performing calculations involving fractions, decimals, ratios, proportions and percentages
- using correct units and the correct number of significant figures
- analysing performance results over a single or limited range of operating conditions
- planning routine tasks
- developing/implement an efficient verification strategy that has a limited impact on others
- demonstrating professionalism and maintaining the rights of the trader at all times
- solving routine/expected problems
- working safely

Required knowledge

- design, major components and functions for relevant simple measuring instruments
- licensing requirements for a verifier including:
  - quality management system
  - licence conditions
  - maintenance of statutory records
- general chemical and physical principles and concepts including:
  - weight, mass, gravity and density
  - temperature effects and coefficients of expansion
- basic knowledge of the operating procedures across a limited range of environments includinglaboratories, retail, industrial and farming
- knowledge of metrological terms and terminology specific to simple measuring instruments such as maximum permissible errors and traceability
- national measurement legislation applicable to simple measuring instruments
- detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:
  - purpose of test
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• calculation steps to give results in appropriate units and precision • maximum permissible errors for simple measuring instruments under test • procedures for completing verification documentation • organisational policy and procedures for verifying simple measuring instruments

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for one class of simple measuring instruments listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures • identify and use suitable reference standards • install and repair measuring instruments to meet statutory requirements • evaluate and adjust the impact of the operating environment on the performance of the instrument • analyse test results to determine the instrument's suitability for verification (trade use) • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMREF301A Use and maintain reference standards. Resources may include: • simple measuring instruments, test equipment and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for simple measuring instruments • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant procedures and remedial actions • review of verification reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to verify the performance of instruments in accordance with legislative and organisational procedures. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. A local hotel tests their spirit measuring instruments once a month to ensure they comply with the relevant trade measurement legislation. These tests reveal two of the remote storage spirit measuring instruments are giving short measure to their customers. The publican contacts a verifier, explains the situation and asks if he/she can repair them today. When the verifier asks the publican if he is still using the instruments, he responds 'yes'. The verifier advises the publican that he should immediately stop using the two instruments to avoid being fined for using an incorrect instrument by national Trade Measurement.The verifier arrives that afternoon and discusses the problem in more detail with the publican. During this discussion, the verifier explains what he/she will be doing and confirms that he will maintain the highest standards of hygiene when working with the spirits.The verifier conducts a preliminary test on the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	incorrect instruments and confirms the publican's results. After making adjustments to rectify their inaccuracy, the verifier assesses the instruments design against the Certificate of Approval and completes a full test in accordance with the nationally recognised National Test Procedures. As all results are now within the maximum permissible errors, the verifier marks the instruments with a certification mark and completes a certification form. Before leaving the hotel, the verifier explains to the publican that he/she has completed the work and is now leaving the hotel. The verifier submits the relevant forms to national Trade Measurement within the specified 14 days.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Prescribed performance criteria for **instruments**	Prescribed performance criteria for instruments may include: • design is in accordance with the appropriate Certificates of Approval • performance meets the criteria described in the Certificates of Approval, National Test Procedure and legislation
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • Certificates of Verification • Certificates of Approval for simple measuring instruments • test procedures for verifying simple measuring instruments • organisational test reports

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures and material safety data sheets (MSDS) • equipment manuals and warranty, supplier catalogues and handbooks • National Measurement Institute policy • Australian Standards
Certificates of Approval	Certificates of Approval may include: • the Certificate issued under national measurement legislation approving the pattern of a simple measuring instrument as being suitable for trade
Test equipment	Test equipment may include: • reference standards of measurement • equipment other than reference standards of measurement such as weighing instruments, strikes, funnels, water meters, beakers, roman levels, tramells and pocket length comparator
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Measurement Institute policy	National Measurement Institute policy may include: • accepted test procedure variations • bulletin • instruction • determination
National Test Procedures for simple measuring instruments	National Test Procedures for simple measuring instruments may include: • beverage measuring instruments • protein measuring instruments • length measuring instruments • area measuring instruments • dimensional measuring instruments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• vehicle tanks • milk tanks • any other test procedure prescribed by the National Measurement Institute
OHS and environmental management requirements	OHS and environmental management requirements refer to: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environmental impacts may include: • vibration • temperature • humidity • dust • electromagnetic interference • level
Records	Records may include: • test reports • safety procedures • a history of equipment calibration and test results
Simple measuring instruments	Verifiers may be licensed to test and mark specific classes of instruments from the following list. Simple measuring instruments may include: • beverage measuring instruments • protein measuring instruments • length measuring instruments • area measuring instruments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• dimensional measuring instruments • vehicle tanks • milk tanks • any other instruments prescribed by the National Measurement Institute

MSATMVER401A Verify a limited weighing instrument

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to apply National Test Procedures to determine whether a non-automatic weighing instrument (<3 tonne) or catchweigher is suitable for trade and then mark it accordingly. It also involves the installation and/or repair of weighing instruments.

Application of the Unit

Application of the unit	This unit of competency is applicable to verifiers who operate under a licence to test and mark specific classes of weighing instruments. They may also undertake sales, installation and/or repair of a limited class of weighing instruments. Weighing instruments are used in a very wide range of commerce. For example, electronic weighing instruments are used to measure a wide range of products at the point of sale, as an order or as a pre-packaged article. The range of environments where these instruments is almost limitless. Some examples of these environments includes pharmaceutical laboratories, supermarkets, fresh food retailers, packing houses, chemical/petroleum industry, contruction, mining and other extractive industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Install and repair weighing instruments	1.1. Access and correctly interpret information for installing or repairing instruments 1.2. Select required components, tools and equipment in accordance with manufacturer/component supplier specifications 1.3. Perform installation or repair in accordance with legislation, industry codes of practice and organisational guidelines 1.4. Avoid instrument damage during installation or repair

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Prepare for verification	2.1. Identify and evaluate the type of instrument to be verified 2.2. Access and correctly interpret documentation required for the verification 2.3. Identify and access test equipment, products and consumables required for the verification 2.4. Liaise with the trader to provide the items required on site 2.5. Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures 2.6. Store and transport test equipment in accordance with organisational procedures and industry best practice 2.7. Identify relevant local workplace health and safety issues and implement appropriate control strategies
3. Evaluate weighing instrument performance	3.1. Evaluate whether the operating environment will impact on the instrument performance 3.2. Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary 3.3. Identify the maximum permissible errors for the instrument from the legislative requirements 3.4. Use test equipment safely in accordance with applicable legislation and organisational procedures 3.5. Check instrument for compliance with the appropriate Certificates of Approval 3.6. Inspect the instrument in accordance with relevant National Test Procedure and appropriate National Measurement Institute policy 3.7. Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
4. Report verification results	4.1. Display the verification result on the instrument in accordance with legislative requirements 4.2. Use test reports to present verification results in the required format 4.3. Complete verification documentation in accordance with legislative requirements and organisational procedures 4.4. Communicate results within the specified time and in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	accordance with organisational guidelines
5. Model and encourage compliance with statutory requirements	5.1. Apply organisation's procedures and practices to meet licensing authority's requirements 5.2. Clarify any issues about licensing requirements with the licensing authority as they arise 5.3. Review work and seek feedback from others to confirm continuing compliance with licensing requirements 5.4. Identify implications of non-compliance with licensing requirements 5.5. Identify inadequacies in trader's procedures and practices which may contribute to non-compliance with licensing requirements and/or national measurement legislation 5.6. Explain inadequacies and possible remedial actions to trader
6. Maintain statutory records	6.1. Keep accurate and complete records in accordance with licensing requirements 6.2. Ensure authorisation, training and relevant licences are current in accordance with organisational and licensing requirements 6.3. Inform the licensing administering authority of changes to personal information as required by statute

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

• diagnosing faults in weighing instruments
• installing and repairing weighing instruments with a basic design
• accessing, interpreting and applying a range of documents for the verification of weighing instruments including:
  • national measurement legislation
  • routine National Test Procedures
  • Certificates of Approval

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- National Measurement Institute verification policy
- national and international design rules
- pattern approval documents
- accessing and interpreting Certificates of Verification for a limited range of reference standards
- performing verifications over durations of up to one day in routine environments
- using advanced communication and negotiation skills to:
  - explain the purpose of verification
  - inform traders of non-compliances and consequences of failing to rectify them
  - explain verification procedures and outcomes to traders and managers
- accessing, transporting, setting up, validating, using and maintaining a limited range of test equipment and reference standards
- identifying and evaluating environmental impacts on performance of a range of weighing instruments
- conducting tests and recording results with close attention to detail and accuracy
- performing calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures
  - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
- analysing performance results over a number of operating conditions
- planning routine tasks
- developing/implementing an efficient verification strategy that has a limited impact on traders, the public, employees and suppliers
- demonstrating professionalism and maintaining the rights of the trader at all times
- solving routine/expected problems
- working safely which may include applying basic first aid, confined space entry and working with heavy machinery

Required knowledge

- design, major components and functions for weighing instruments
- licensing requirements for a verifier including:
  - quality management system
  - licence conditions
  - maintenance of statutory records
- general chemical and physical principles and concepts including weight, mass and gravity
- knowledge of the operating procedures across a range of environments including laboratories, retail, manufacturing, industrial, mining, construction, medical, chemical, petroleum, farming and abattoirs
- knowledge of metrological terms and terminology specific to weighing instruments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

such as maximum permissible errors, traceability, uncertainty, maximum permissible difference, eccentricity, repeatability, error of measurement, error of indication and linearisation
• national measurement legislation applicable to weighing instruments
• detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:
  • purpose of test
  • test conditions and possible environmental impacts on performance of the instrument
  • key preparation/measurement steps in test method
  • calculation steps to give results in appropriate units and precision
  • maximum permissible errors for weighing instruments under inspection
• procedures for completing verification documentation
• organisational policy and procedures for verifying weighing instruments
• safety principles and procedures relevant to instruments and test environment
• basic first aid and site safety induction if required

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for one class of weighing instrument listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures • identify and use suitable reference standards • install and repair weighing instruments to meet statutory requirements • evaluate and adjust the impact of the operating environment on the performance of the instrument • analyse test results to determine the instrument's suitability for verification (trade use) • maintain the security and confidentiality of data in accordance with organisational and regulatory

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMREF301A Use and maintain reference standards. Resources may include: • limited weighing instruments, test equipment and reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for instruments • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant procedures and remedial actions • review of verification reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to verify the performance of weighing instruments in accordance with legislative and organisational procedures. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. A retail butcher uses a digital weighing instrument to sell meat with a gross retail cost of $500,000 annually and where the price per kilogram ranges from 5.99/kg to $68/kg. As the profit margin of the butcher's business depends on the product received and sold, the butcher contracts a scale repair company to test his buying and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	selling scales for accuracy.The scale repairer arrives at the butcher's premises with a trolley load of equipment. After their introductions, the butcher enquires as to what all the gear on the trolley is for. The repairer explains that it is all part of the equipment needed to satisfy the licensing requirements of national Trade Measurement. The repairer advises that for this job he needs masses which have a suitable capacity and accuracy for the scale, that have been tested and are still within their expiry period. Not only does he need 15kg for the capacity of the instrument but also smaller masses down to 0.2g to test the scale correctly according to the National Test Procedures that he has brought with him. To keep up to date with new scales, he also has a laptop with internet access to download the latest Certificate of Approval for the instrument from the National Measurement Institute website. Regardless of how accurate the scale is, it can't be used for trade (i.e. buying or selling) unless it is approved for trade use by the National Measurement Institute. He also has the paper work required by national Trade Measurement to issue depending on whether the instrument complies and can be certified or not. Finally, he explains that he has tools in case the scales need adjustment if they are outside the maximum permissible errors set down by the National Measurement Institute. The scale repairer inspects the scales for compliance with the Certificates of Approval and tests them. He finds the selling scale is approved for trade use but is incorrect and the buying scale, while weighing correctly, is not approved.The repairer fixes the selling scale, marks it with a certification mark and issues a certification form. The buyingscale cannot be certified because it is not an approved type and the repairer issues a notice of non-compliance advising the butcher that it can no longer be used for trade. Before leaving the butcher shop, the repairer completes his paper work and submits it to national Trade Measurement within the specified 14 days.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Prescribed performance criteria for instruments	Prescribed performance criteria for instruments may include: • design is in accordance with the appropriate Certificates of Approval • performance meets the criteria described in the Certificates of Approval, National Test Procedure and legislation
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standards • Certificates of Verification • Certificates of Approval for limited weighing instruments • test procedures for verifying limited weighing instruments • organisational test reports • organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures material data safety sheets • equipment manuals and warranty, supplier catalogues and handbooks
Certificates of Approval	Certificates of Approval may include: • any Certificate issued by the Chief Metrologist under Regulation 60 of the National Measurement Regulations approving the pattern of a limited weighing instrument as being suitable for trade
Test equipment	Test equipment may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• reference standards of measurement
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Measurement Institute policy	National Measurement Institute policy may include: • accepted test procedure variations • bulletin • instruction • determination
National Test Procedures for weighing instruments	National Test Procedures for weighing instruments may include those for: • non-automatic weighing machines • automatic Class Y(a) Catchweighers • automatic Class Y(b) Catchweighers • any other test procedure prescribed by the National Measurement Institute
OHS and environmental management requirements	OHS and environmental management requirements refer to: • all operations must comply with enterprise occupational health safety and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environmental impacts may include: • vibration • wind • humidity • heat

MSATMVER402A Verify a liquid measuring instrument using volume measures

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to apply National Test Procedures to determine whether a liquid measuring instrument using volume measures is suitable for trade and then mark it accordingly. It also involves the installation and/or repair of liquid measuring instruments.

Application of the Unit

Application of the unit	This unit of competency is applicable to verifiers who operate under a licence to test and mark specific classes of liquid measuring instruments tested using a volume measure only. They may also undertake sales, installation and/or repair of liquid measuring instruments. Liquid measuring instruments are used in a very wide range of commerce. For example, petrol bowsers measure fuel at the point of sale and flowmeters are used to measure bulk commodities such as milk, chemicals and petroleum products during production and distribution. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Install and repair liquid measuring instruments	1.1. Access and correctly interpret information for installing or repairing instruments 1.2. Select required components, tools and equipment in accordance with manufacturer/component supplier specifications 1.3. Perform installation or repair in accordance with legislation, industry codes of practice and organisational guidelines 1.4. Avoid instrument damage during installation or repair
2. Prepare for verification	2.1. Identify and evaluate the type of instrument to be verified 2.2. Access and correctly interpret documentation required for the verification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Identify and access test equipment, products and consumables required for the verification 2.4. Liaise with the trader to provide the items required on site 2.5. Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures 2.6. Store and transport test equipment in accordance with organisational procedures and industry best practice 2.7. Identify relevant local workplace health and safety issues and implement appropriate control strategies
3. Evaluate liquid measuring instrument performance	3.1. Evaluate whether the operating environment will impact on the instrument performance 3.2. Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary 3.3. Identify the maximum permissible errors for the instrument from the legislative requirements 3.4. Use test equipment safely in accordance with applicable legislation and organisational procedures 3.5. Check instrument for compliance with the appropriate Certificates of Approval 3.6. Inspect the instrument in accordance with relevant National Test Procedure and appropriate National Measurement Institute policy 3.7. Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
4. Report verification results	4.1. Display the verification result on the instrument in accordance with legislative requirements 4.2. Use test reports to present verification results in the required format 4.3. Complete verification documentation in accordance with legislative requirements and organisational procedures 4.4. Communicate results within the specified time and in accordance with organisational guidelines
5. Model and encourage compliance with statutory	5.1. Apply organisation's procedures and practices to meet licensing authority's requirements 5.2. Clarify any issues about licensing requirements with

requirements	the licensing authority as they arise 5.3. Review work and seek feedback from others to confirm continuing compliance with licensing requirements 5.4. Identify implications of non-compliance with licensing requirements 5.5. Identify inadequacies in trader's procedures and practices which may contribute to non-compliance with licensing requirements and/or national measurement legislation 5.6. Explain inadequacies and possible remedial actions to trader
6. Maintain statutory records	6.1. Keep accurate and complete records in accordance with licensing requirements 6.2. Ensure authorisation, training and relevant licences are current in accordance with organisational and licensing requirements 6.3. Inform the licensing administering authority of changes to personal information as required by statute

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- diagnosing faults in liquid measuring instruments
- installing and repairingliquid measuring instruments with a basic design
- accessing, interpreting and applying a range of documents for the verification of liquid measuring instruments including:
  - national measurement legislation
  - intermediate National Test Procedures
  - Certificates of Approval
  - National Measurement Institute inspection policy
  - Australian Standards
  - industry codes of practice
  - correction tables for volume, density and pressure for a range of liquids

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- national and international design rules
- pattern approval documents
- performing verification tests over extended durations in non-routine and hazardous environments
- accessing and interpreting Certificates of Verification for a range of reference standards
- using advanced communication and negotiation skills to:
  - explain purpose of the verification
  - inform traders of non-compliances and consequences of failing to rectify
  - access external equipment and resources to complete the verification
  - explain verification procedures and outcomes to tradersand managers
- accessing, transporting, setting up, validating, using and maintaining a broad range of test equipment and reference standards
- identifying and evaluating environmental factors that may impact on performance of liquid measuring instruments
- organising large equipment to be dispatched ahead of verification visit
- conducting tests and recording results with close attention to detail and accuracy
- performing calculationsinvolving:
  - fractions, decimals, ratios, proportions and percentages
  - evaluation of formulae containing powers, exponents and logarithms functions
  - use of scientific notation, correct units and correct number of significant figures
  - calculation of uncertainties
  - preparation and interpretation of linear, semi-log and log-log graphs
  - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
  - determination of regression line equations and correlation coefficients
  - preparation and interpretation of more complex control charts and frequency distribution plots
- planning complex tasks
- developing/implementing an efficient verification strategy that minimises disruption to traders, the public, technicians, employees, colleagues and suppliers
- demonstrating professionalism and maintaining the rights of the trader at all times
- solving unexpected problems and non-routine issues
- working safely which may include applying basic first aid, confined space entry, working with hazardous materials, working safely in hazardous environments, working with heavy machinery, Australian Institute of Petroleum (AIP) cold work clearance permit, safety induction and working at heights

Required knowledge

- design, major components and functions of liquid measuring instruments
- licensing requirements for a verifier including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- quality management system
- licence conditions
- maintenance of statutory records
- general chemical and physical principles and concepts including:
  - physical states (solid, liquid gas)
  - weight, mass, gravity and density
  - pressure, pressure differential, backpressure and head pressure
  - fluid flow
  - flashpoint, boiling point and ice point
  - viscosity
  - temperature effects and coefficients of expansion
- knowledge of the operating procedures across a range of environments including laboratories, retail, commercial, office, manufacturing, industrial, mining, construction, medical, chemical and petroleum
- knowledge of metrological terms and terminology specific to liquid measuring instruments such as:
  - maximum permissible errors, maximum permissible difference and maximum permissible variation
  - traceability
  - repeatability
  - uncertainty, error of measurement and error of indication
  - meter creep
  - hose dilation
  - temperature correction
  - linearisation
  - gas elimination
- national measurement legislation applicable to liquid measuring instruments
- detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:
  - purpose of test
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for liquid measuring instruments under inspection
- procedures for completing verification documentation
- organisational policy and procedures for verifying instruments
- safety principles and procedures relevant to instruments
- basic first aid and site safety induction if required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for one class of liquid measuring instrument listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures • identify and use suitable reference standards • install and repair liquid measuring instruments to meet statutory requirements • evaluate and adjust the impact of the operating environment on the performance of the instrument • analyse test results to determine the instrument's suitability for verification (trade use) • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMREF301AUse and maintain reference standards. Resources may include: • liquid measuring instruments using volume measures, test equipment and reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for instruments • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• questions to assess understanding of relevant procedures and remedial actions • review of verification reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to verify the performance of instruments in accordance with legislative and organisational procedures. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. A service station operator of a large company owned site requests a servicing company to visit their site as he has noticed that one fuel dispenser has a faulty display and the service station appears to have inconsistent dip reading. The verifier arrives and introduces himself and informs the owner that under their contract all fuel dispensers are due for checking. The verifier completes a safety check, AIP clearance form and asks about the location of the fuel return points. The verifier then blocks the lane next to the fuel dispenser, puts safety signs, barricades and test measures in place and ensures that the work area is safe.The verifier repairs the faulty display and proceeds to test the fuel dispenser. He visually checks the fuel dispenser against the Certificate of Approval and checks for any leaks noting any discrepancies on a verification report form. He then tests the fuel dispenser as per the National Test Procedures noting results on the test report and returning dispensed fuel to the storage tanks in a safe manner. The verifier finds the fuel dispenser is outside the maximum permissible error and adjusts the dispenser. After repeating the National Test Procedure, he finds the dispenser is within the maximum permissible error and then seals and marks the dispenser with his mark. The verifier then tests the other fuel dispensers on-site.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	Some require adjustment before being verified and marked. Another dispenser is within the maximum permissible error and does not require adjustment. One dispenser cannot be adjusted within the maximum permissible error and the verifier removes the mark. After all dispensers are tested, the verifier completes the verification forms, fuel usage form and AIP form. The verifier informs the site manager that one dispenser cannot be used as it is non-compliant and issues a non-compliancy form. The site manager locks the dispenser until repairs can be made. The remaining forms are given to the site manager and the verifier departs.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Prescribed performance criteria for instruments	Prescribed performance criteria for instruments may include: • design is in accordance with the appropriate Certificates of Approval • performance meets the criteria described in the Certificates of Approval, National Test Procedure and legislation
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standards • Certificates of Verification • Certificates of Approval for liquid measuring instruments • test procedures for verifying liquid measuring instruments • organisational test reports

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures and material safety data sheets (MSDS) • equipment manuals and warranty, supplier catalogues and handbooks
Certificates of Approval	Certificates of Approval may include: • any Certificate issued by the Chief Metrologist under Regulation 60 of the National Measurement Regulations approving the pattern of a liquid measuring instrument as being suitable for trade
Test equipment	Test equipment may include: • reference standards of measurement • equipment other than reference standards of measurement such as pumps, funnels and hoses
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Measurement Institute policy	National Measurement Institute policy may include: • accepted test procedure variations • bulletin • instruction • determination
National Test Procedures for liquid measuring instruments	National Test Procedures for liquid measuring instruments may include: • fuel dispensers other than LPG dispensers • bulk flowmetering systems for liquid hydrocarbons other than LPG tested using a volume measure • milk flowmeters tested using a volume measure • any other test procedure prescribed by the National Measurement Institute

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
OHS and environmental management requirements	OHS and environmental management requirements refer to: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environmental impacts may include: • vibration • wind • heat • dust • electromagnetic interference • out of level
Records	Records may include: • test reports • safety procedures • a history of equipment calibration and test results
Liquid measuring instruments may include:	Verifiers may be licensed to test and mark specific classes of instruments from the following list. Liquid measuring instruments may include: • fuel dispensers other than LPG dispensers • bulk flowmetering systems for liquid hydrocarbons other than LPG tested using a volume measure • milk flowmeters tested using a volume measure • any other liquid measuring instrument prescribed by the National Measurement Institute

MSATMVER403A Verify inspector's class reference standards

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to calibrate reference standards to the inspector's class level in accordance with standard calibration procedures. These procedures specify all associated reference standards, equipment and methods to be used and the required parameters, quantities and ranges to be tested, including the criteria for validation or rejection. Standard calibration procedures are sometimes complex and lengthy but must be carried out in a methodical and standard manner. Personnel are not permitted to deviate from explicit instructions in any manner, nor modify the procedure, nor substitute alternative equipment.

Application of the Unit

Application of the unit	This unit of competency is applicable to laboratory and calibration technicians who carry out testing and/or calibrations using standard calibration methods in National Association of Testing Authorities (NATA) accredited laboratories. They work under limited supervision and their results are interpreted and checked by the laboratory supervisor, quality officer or designated signatory. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section This competency in practice'.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Receive and schedule inspector's class reference standards for calibration	1.1. Identify the level of verification required by the client 1.2. Evaluate and implement appropriate strategies where the standard's suitability for purpose does not meet client expectations 1.3. Enter details for the inspector's class reference standard into the organisation's information management system and apply appropriate tracking mechanisms 1.4. Process 'urgent' calibration requests according to the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	organisation's policy and procedures 1.5. Maintain confidentiality of all client and organisation data and information 1.6. Ensure that information provided to clients is accurate, relevant and authorised for release 1.7. Deal with customers politely, efficiently and in accordance with organisational policy and procedures
2. Prepare for calibration	2.1. Identify and access the appropriate procedure for the calibration in accordance with organisational policy and procedures 2.2. Identify possible sources of measurement error during calibration and implement appropriate control strategies 2.3. Condition inspector's class reference standards and high order reference standards in accordance with calibration and organisational procedures where applicable 2.4. Identify hazards and use the specified personal protective equipment, safety equipment and procedures 2.5. Evaluate the suitability of high order reference standards and measuring equipment selected for the calibration against the organisation's specification requirements and calibration procedure 2.6. Document calibration status, report out-of-calibration test equipment/high order reference standards and quarantine where required
3. Perform calibration	3.1. Assess the design and appearance of an inspector's class reference standard against prescribed stadards 3.2. Perform calibration without variance according to the documented procedure to ensure repeatability of measurement 3.3. Confirm readings are the result of a valid measurement and record data as required 3.4. Adjust inspector's class reference standard if applicable
4. Analyse and report calibration results	4.1. Estimate and document uncertainty of measurement in accordance with organisation's policy and procedures, if required 4.2. Identify prescribed performance criteria for the inspector's class reference standard and evaluate against calibration results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	4.3. Analyse calibration results to confirm they are within the maximum permissible variation and uncertainty for the scope of calibration 4.4. Analyse any variances from the performance criteria to identify isolated or systemic problems with the inspector's class reference standards or calibration procedure 4.5. Record the results of each test/calibration accurately, unambiguously and objectively
5. Finalise calibration	5.1. Attach calibration labels, equipment stickers, quality control tags and tamper resistant seals as required by the organisation's procedures 5.2. Prepare and submit to the laboratory supervisor a final report on the calibration detailing procedure, traceability, results and all other required information 5.3. Store test equipment/high order reference standards and calibration records in accordance with organisational policy and procedures 5.4. Identify and report unserviceable equipment or high order reference standards to the laboratory supervisor 5.5. Clean equipment and high order reference standards in accordance with organisational policy and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accessing, interpreting and applying a range of documents for the verification of reference standards including:
  - national measurement legislation
  - National Measurement Institute laboratory operating procedures
  - National Measurement Institute monographs
- accessing and interpreting Certificates of Verification for a range of higher order reference standards
- maintaining very close attention to procedures, accuracy and precision of measurement to ensure integrity of test/calibration results (especially during

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

lengthy tests)
• examining each calibration step critically to ensure repeatability and validity of data
• selecting, setting up, validating, using and maintaining a range of balances and reference standards
• operatingtest equipment correctly and safely
• applying all relevant procedures and regulatory requirements to ensure the quality and integrity of the services or data provided
• conducting tests and recording results with close attention to detail and accuracy
• performing calculations involving:
  • fractions, decimals, ratios, proportions and percentages
  • scientific notation, correct units and the correct number of significant figures
  • interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
• recognising problems or departures in systems and documentation and initiating actions to prevent or minimise them
• preparing test/calibration documentation that is accurate and complies with requirements
• recognising and reporting opportunities for improvements to procedures
• planning routine tasks
• solving routine/expected problems
• working safely which may include applying basic first aid

Required knowledge
• understanding of the purpose of metrology and calibration, including common terminology, concepts, principles, procedures and applications • detailed knowledge of specific metrology terms and principles such as uncertainty, maximum permissible variations, traceability and legal requirements for traceability • NATA's and the National Measurement Institute's role in the measurement and testing system in Australia, measurement standards laboratories • requirements for the competence of testing and calibration laboratories (for example, AS ISO/IEC 17025) as they affect job role and responsibilities • national measurement legislation applicable to verification of inspector's class reference standards • selection and application of appropriate test methods and calibration procedures • hierarchy and appropriate selection of reference instruments • detailed knowledge of calibration procedures (equipment, measurement steps, test conditions, environmental impacts, calculations, uncertainty treatment) to give results in appropriate accuracy, precision and units • use of calibration and correction charts • methods for statistical analysis (means, ranges, standard deviations) and estimation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
of uncertainty of measurement (may include the use of software) • non-conformance/non-compliance procedures and protocols associated with equipment, reference material and calibration procedures • troubleshooting procedures for equipment and test methods • handling, transport, storage and operation of reference and working standards • laboratory environmental control requirements • organisation's policy and procedures for verifying inspector's class reference standards • lines of communication, reporting procedures and legislative requirements • relevant health, safety and environmental requirements safety principles and procedures relevant test environment, basic first aid and site safety induction if required

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for any inspector's class reference standards listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply calibration procedures • identify and use high order reference standards of measurement • evaluate and adjust the impact of the operating environment on the results of the calibration • identify the scope of a calibration and compare results with expected outcomes • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	This unit of competency may be assessed with: • MSATMREF301A Use and maintain reference standards. Resources may include: • reference standards, balances, weighing instruments and test equipment • computer and relevant software and/or organisation information management system • National Measurement Institute laboratory operating procedures • relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant metrology/calibration terms, principles and procedures • review of calibration reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to verify inspector's class reference standards in accordance with legislative and organisational procedures • observation of the candidate calibrating inspector's class reference standards. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. A customer delivers a 200 L Inspectors Class 1 Volume measure for calibration. Personnel in the laboratory's item reception area log the job and the laboratory supervisor assigns it to a calibration technician. He/she reads the work order and retrieves the approved calibration procedure. The procedure requires the measure to be tested gravimetrically. The technician accesses and validates the test equipment and high order

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	reference standards. The density of the town water supply is determined using a verified hydrometer. The measure is visually inspected for defects and contamination. The volume of the measure is determined three times by filling the measure with town water to the capacity mark, recording the temperature of the water and recording the mass of water. This data is used, in conjunction with the town water density (determined previously) and thermal appropriate expansion/buoyancy corrections, to calculate the actual volume of the measure. The technician notes that some values are outside the allowable tolerance and adjustments will have to be made. He/she takes another set of readings after making the necessary adjustments and records them on the report. The technician applies the required calibration marks to the measure, updates the database, produces a test report and places the item in the despatch area for inspection by the supervisor. The supervisor visually inspects the item and checks the calibration data on the report. The job has taken four hours to complete.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • high order reference standard Certificates of Verification • test methods, calibration procedures and monographs (validated and authorised) • organisational test reports • organisational procedures e.g. company quality assurance manual

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• National Measurement Institute laboratory operating procedures • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures • equipment manuals and warranty, supplier catalogues and handbooks • quality manuals, equipment and operating/technical manuals • enterprise recording and reporting procedures and standard operating procedures (SOPs)
Hazards	Hazards may include: • electric shock • disturbance or interruption of services • manual handling of heavy equipment boxes
Safety procedures	Safety procedures may include: • use of personal protective equipment, such as hearing protection, gloves, safety glasses and coveralls • ensuring access to service shut-off points • regular cleaning of equipment and work areas
Inspectors Class Reference standards	Inspectors Class Reference standards may include: • inspector's class of reference standards as defined in the National Measurement Regulations
Operating procedures	Operating procedures may include: • manufacturers' specifications • industry guidelines • Australian standards • procedures and guidelines based on national measurement legislation
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
OHS and environmental management requirements	OHS and environmental management requirements refer to: • all operations must comply with enterprise

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	OHS and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environmental impacts may include: • vibration • wind • heat • dust • electromagnetic interference • out of level • liquid being measured
Records	Records may include: • test reports • safety procedures • a history of equipment calibration and test results
Standard calibrations	Standard calibrations may involve testing and/or calibrating the following equipment and reference materials using standard methods and procedures: • common types of test equipment such as balances, calipers, masses, micrometers, tape measures, rules, temperature (digital) indicating systems, thermometers, timing devices, weighing instruments and volume measures

MSATMVER501A Verify a complex measuring instrument

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to apply National Test Procedures to determine whether a complex measuring instrument is suitable for trade use. It involves the ability to install/repair instruments, perform lengthy calculations to assess instrument performance and conduct tests that may require coordination of a range of resources over long durations in hazardous environments.

Application of the Unit

Application of the unit	This unit of competency is applicable to verifiers who operate under a licence to test and mark a specific class of complex measuring instruments. Complex measuring instruments are used in a wide range of heavy industries. For example, automatic rail weighbridges, belt weighers, totalising hoppers and liquid petroleum gas (LPG) flow meters are used throughout the mining, road/rail freight and petroleum/gas industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Install and repair a complex measuring instrument	1.1. Plan installation/repair strategy to ensure minimal disruption to the public and/or trader 1.2. Access and correctly interpret information for installing or repairing instrument 1.3. Select required components, tools and equipment in accordance with manufacturer/component supplier specifications 1.4. Perform installation or repair in accordance with legislation, industry codes of practice and organisational guidelines 1.5. Avoid instrument damage during installation or repair 1.6. Perform a pre-verification test to validate instrument performance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Prepare for verification	2.1. Identify and evaluate the type of instrument to be verified 2.2. Access and correctly interpret documentation required for the verification 2.3. Identify and access test equipment, products and consumables required for the verification 2.4. Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures 2.5. Store and transport test equipment in accordance with organisational procedures and industry best practice 2.6. Develop a verification strategy to maximise resources and minimise time required for complex tests
3. Liaise with the trader to schedule complex tests	3.1. Discuss testing arrangements with site controller where applicable 3.2. Identify relevant local workplace, health and safety issues and implement appropriate control strategies 3.3. Discuss the verification strategy with the trader to minimise its impact on the trader's normal operations 3.4. Arrange site clearances and suitable scheduling for tests 3.5. Negotiate access to trader's equipment, materials and support personnel required for testing to be available on site 3.6. Arrange for any equipment to be provided by the trader, if required, by the National Test Procedure
4. Initiate verification	4.1. Identify the site contoller and explain/review the purpose of the verification 4.2. Review verification strategy to ensure there is minimal disruption to the public and/or trader 4.3. Communicate verification strategy to personnel supporting the verification 4.4. Identify locations for product return or disposal, if applicable 4.5. Evaluate the impacts of the operating environment on the instrument performance or test results and implement corrective actions as necessary 4.6. Identify operational factors impacting on instrument performance or test result and implement corrective

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	actions as necessary
5. Evaluate complex measuring instrument performance	5.1. Identify the maximum permissible errors for the instrument from the legislative requirements 5.2. Manage and review resources to maintain verification timelines 5.3. Provide effective communication to ensure relevant personnel are informed of variations to the verification strategy and verification progress 5.4. Check instrument for compliance with the appropriate Certificates of Approval 5.5. Test the instrument in accordance with relevant National Test Procedure and appropriate National Measurement Institute Policy
6. Analyse verification results	6.1. Perform specified calculations to determine a performance result for the instrument with appropriate accuracy, precision and significant figures 6.2. Use graphical and statistical analysis to determine unknowns as necessary 6.3. Ensure calculations are consistent with estimations and reasonable expectations 6.4. Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
7. Model and encourage compliance with statutory requirements	7.1. Apply organisation's procedures and practices to meet licensing requirements 7.2. Clarify any uncertainty about licensing requirements with licensing authority as they arise 7.3. Review work and seek feedback from others to confirm continuing compliance with licensing requirements 7.4. Identify implications of non-compliance with licensing requirements 7.5. Raise inadequacies in organisation's procedures and practices which may contribute to non-compliance with licensing requirements 7.6. Identify and communicate inadequacies with trader's procedures and practices which may contribute to non-compliance with national measurement legislation
8. Report verification	8.1. Display the verification result on the instrument in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
results	accordance with legislative requirements 8.2. Use test reports to present verification results in the required format 8.3. Complete verification documentation in accordance with legislative requirements and organisational procedures 8.4. Communicate results within the specified time and in accordance with organisational guidelines
9. Maintain statutory records	9.1. Keep accurate and complete records in accordance with licensing requirements 9.2. Ensure authorisation, training and relevant licences are current in accordance with organisational and licensing requirements 9.3. Inform the licensing administering authority of changes to personal information as required by statute

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- diagnosing faults in complex measuring instruments
- installing and repairing measuring instruments with a complex design
- installing/upgrading software
- accessing, interpreting and applying a range of documents for the verification of complex measuring instruments including:
  - national measurement legislation
  - intermediate National Test Procedures
  - Certificates of Approval
  - National Measurement Institute inspection policy
  - Australian Standards
  - industry codes of practice
  - correction tables for volume, density and pressure for a range of liquids
  - national and international design rules
  - pattern approval documents
- performing verification tests over extended durations up to five days in non-routine

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

and hazardous environments
• accessing and interpreting Certificates of Verification for a wide range of reference standards
• using advanced communication and negotiation skills to:
  • explain purpose of the verification
  • inform traders of non-compliances and consequences of failing to rectify
  • access external equipment and resources to complete the verification
  • explain verification procedures and outcomes to traders and managers
• accessing, transporting, setting up, validating, using and maintaining a broad range of test equipment and reference standards
• organising large equipment to be dispatched ahead of verification visit
• identifying and evaluating environmental factors that may impact on performance of complex measuring instruments
• conducting lengthy tests and recording results with close attention to detail and accuracy
• performing calculations involving:
  • fractions, decimals, ratios, proportions and percentages
  • evaluation of formulae containing powers, exponents and logarithms functions
  • use of scientific notation, correct units and correct number of significant figures
  • calculation of uncertainties
  • preparation and interpretation of linear, semi-log and log-log graphs
  • interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
  • determination of regression line equations and correlation coefficients
  • preparation and interpretation of more complex control charts and frequency distribution plots
• analysing performance results over a broad range of operating conditions
• planning complex tasks
• developing/implementing an efficient verification strategy that minimises disruption to traders, the public, technicians, employees, colleagues and suppliers
• demonstrating professionalism and maintaining the rights of the trader at all times
• solving unexpected problems and non-routine issues
• working safely which may include applying basic first aid, confined space entry, working with hazardous materials, working safely in hazardous environments, working with heavy machinery, Australian Institute of Petroleum (AIP) cold work clearance permit, safety induction, working at heights and biosecurity issues

Required knowledge
• the design, major components and functions of relevant complex measuring instruments • licensing requirements for a verifier including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- quality management system
- licence conditions
- maintenance of statutory records
- general chemical and physical principles and concepts including:
  - physical states (solid, liquid gas)
  - weight, mass, gravity and density
  - pressure, pressure differential, backpressure and head pressure
  - fluid flow
  - flashpoint, boiling point and ice point
  - viscosity
  - temperature effects and coefficients of expansion
- knowledge of the operating procedures across a range of environments including laboratories, retail, commercial, office, manufacturing, industrial, mining, construction, medical, chemical and petroleum
- knowledge of metrological terms and terminology specific to complex measuring instruments such as:
  - maximum permissible errors, maximum permissible difference and maximum permissible variation
  - traceability
  - repeatability
  - uncertainty, error of measurement and error of indication
  - meter creep
  - hose dilation
  - temperature correction
  - linearisation
  - gas elimination
- national measurement legislation applicable to complex measuring instruments
- detailed knowledge of National Test Procedures and operating procedures for equipment and reference standards used in job role including:
  - purpose of test
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for complex measuring instruments under inspection
- procedures for completing verification documentation
- organisational policy and procedures for verifying instruments
- safety principles and procedures relevant to instruments and test environment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• basic first aid and site safety induction if required

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Competency must be demonstrated in the ability to perform consistently at the required standard for one class of complex instrument listed in the Range Statement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • identify, access and apply test procedures • identify and use suitable reference standards • install and repair measuring instruments to meet statutory requirements • evaluate and adjust the impact of the operating environment on the performance of the instrument • analyse test results to determine the instrument's suitability for verification (trade use) • maintain the security and confidentiality of data in accordance with organisational and regulatory requirements • report results in the required formats and expected timeframe.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • MSATMREF301A Use and maintain reference standards. Resources may include: • access to a complexmeasuring instrument, test equipment and reference standards • computer and relevant software and/or organisation information management system • Certificates of Approval for the instrument

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• relevant legislative and organisational procedures.
Method of assessment	The following assessment methods are suggested: • questions to assess understanding of relevant complex test procedures and remedial actions • review of verification reports prepared by the candidate • feedback from supervisors and peers regarding the candidate's ability to verify the performance of instruments in accordance with legislative and organisational procedures. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. A licensed verifier has been engaged by a large coal mine to verify a new belt weigher installation for trade use. In preparation, the verifier visits the site and considers how to complete the verification. He/she visually inspects the belt weigher and is satisfied that it complies with the Certificate of Approval. However, he/she determines that the 30 tonne hopper weigher which has been installed as a control instrument for the sole purpose of testing the belt weigher cannot be tested with 1 tonne masses due to access restrictions. The verifier discusses these issues with the local trade measurement inspector who offers two solutions. The inspector suggests testing the restricted access hopper weigher with 20 kg masses using the substitution method to reduce the number of test masses required or negotiating with the coal washing facility next door to use their 60 tonne weighbridge as the control instrument. The verifier considers the options and decides in the interests of workplace health and safety that the best option is to use the weighbridge next door. After considerable negotiation with the weighbridge owner, arrangements are made to test the weighbridge and make it available for the belt weigher test on Monday and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	Tuesday of the following week. The trader organises to have 5000 tonnes of coal, a front end loader and three transfer vehicles available for the test. The verifier arranges with another organisation to have 20 tonnes of certified test masses delivered to the coal wash facility on Monday so he/she can test the weighbridge. On Monday, the verifier tests the weighbridge in accordance with the national uniform test procedures and confirms that it is suitable for use as the control instrument. Testing of the belt weigher commences in accordance with the national uniform test procedure and progresses well on the Monday. On Tuesday, the verifier arrives on site to find the tail drum on the conveyor belt has seized making it impossible to continue testing. As these repairs will take two days to repair, the test is terminated and rescheduled with all parties to be in two weeks. Two weeks later the weighbridge is again retested and found to be suitable as a control instrument. The belt weigher is tested fully in accordance with the National Test Procedures and found to be correct. The verifier marks the belt weigher with a verification mark, completes all the paper work including test reports and submits them to national Trade Measurement with 14 days.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Prescribed performance criteria for instruments	Prescribed performance criteria for instruments may include: • design is in accordance with the appropriate Certificates of Approval • performance meets the criteria described in the Certificates of Approval, National Test Procedure and legislation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Appropriate documentation	Where reference is made to documentation, it is expected the latest version will be used. Appropriate documentation may include: • reference standards • Certificates of Verification • Certificates of Approval for complex instruments • test procedures for verifying complex instruments • organisational test reports • organisational procedures e.g. company quality assurance manual • National Measurement Act • occupational health and safety (OHS) regulations, guidelines and procedures and material safety data sheets (MSDS) • equipment manuals and warranty, supplier catalogues and handbooks
Certificates of Approval	Certificates of Approval may include: • any Certificate issued by the Chief Metrologist under Regulation 60 of the National Measurement Regulations approving the pattern of a complex instrument as being suitable for trade
Test equipment	Test equipment may include: • reference standards of measurement • equipment other than reference standards of measurement such as weighing instruments, pumping units, control instruments, two way communication, hoses, fittings, rail wagons, trains and tankers • LPG cylinders
Legislation	Legislation may include: • national measurement legislation • applicable Commonwealth, state and territory OHS legislation
National Measurement Institute policy	National Measurement Institute policy may include: • accepted test procedure variations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• bulletin • instruction • determination
National Test Procedures for complex instruments	National Test Procedures for complex instruments may include • non-automatic weighing machines >3 tonne • LPG dispensers • LPG bulk flowmetering systems • flowmetering systems tested using master meter or gravimetric methods • automatic rail weighbridges • continuous totalising automatic weighing instruments (belt weighers) • totalising hoppers weighing instruments • any other test procedure prescribed by the National Measurement Institute
OHS and environmental management requirements	OHS and environmental management requirements refer to: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or Federal legislation. These requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health
Operating environmental impacts	Operating environmental impacts may include: • vibration • wind • heat • dust • electromagnetic interference
Specified calculations	Specified calculations may include: • calculations involving fractions, decimals,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	ratios, proportions and percentages • evaluation of formulae containing powers, exponents and logarithms functions • use of scientific notation, correct units and correct number of significant figures • calculation of uncertainties • preparation and interpretation of linear, semi-log and log-log graphs • calculation and interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation • determination of regression line equations and correlation coefficients • preparation and interpretation of more complex control charts and frequency distribution plots
Records	Records may include: • test reports • safety procedures • a history of equipment calibration and test results
Complex instruments	Verifiers may be licensed to test and mark specific classes of instruments from the following list. Complex instruments may include: • non-automatic weighing machines >3 tonne • LPG dispensers • LPG bulk flowmetering systems • flowmetering systems tested using master meter or gravimetric methods • automatic rail weighbridges • continuous totalising automatic weighing instruments (belt weighers) • totalising hoppers weighing instruments • any other complex measuring instrument prescribed by the National Measurement Institute

AURAAA4002 Determine retail rates for work

Modification History

Release	Comment
Release 1	Replaces AURA454516A Determine retail rates for work Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit of competency covers the competence to calculate fixed and variable costs to determine retail rates for jobs performed. It also involves calculating the effects of discount on overall profitability. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	This unit is applicable to the administration and repair sectors of the automotive industry. It includes: • work undertaken in-house • work involving subcontracting • costing of purchased parts for sale.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine fixed costs	1.1. Identify components of fixed costs 1.2. Use historical records and business knowledge to estimate fixed costs for next period 1.3. Calculate administrative and business operation overhead costs 1.4. Allocate proportion of fixed cost to be included in labour rate
2. Determine labour rate	2.1. Identify cost components of labour rate 2.2. Using historical records identify average chargeable hours of each category of staff 2.3. Calculate subcontractor cost component of jobs 2.4. Calculate applicable hourly retail rate for labour, including provision for fixed costs
3. Determine variable cost	3.1. Identify components of variable cost for job 3.2. Estimate and record materials required for the job 3.3. Use accounting records and details of job undertaken to calculate variable cost
4. Determine retail price of goods for resale	4.1. Research local market price for items 4.2. Estimate turnover volume of items 4.3. Calculate margins and mark-ups for each category of goods 4.4. Calculate effect of various discounts, loss leaders and specials on items based on retail price, volume and overall

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	business flow-on 4.5. Calculate effect of high pricing strategy on some items 4.6. Monitor effects of price changes on business levels and profitability

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• collect, organise and understand information related to determining retail rates • communicate ideas and information to establish appropriate retail rates for work • plan and organise activities to comply with requirements for determining business retail rates • work with others and in a team to allocate charges • use mathematical ideas and techniques to support the business operation • solve problems to establish business • use workplace technology to optimise performance
Required knowledge
• basic mathematical concepts, addition, subtraction, percentages and fractions

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Calculate cost for a range of retail service and repair jobs, including fixed, variable and component pricing. • Determine effect of price changes on overall business profitability. • Gathering cost estimates from external service

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	providers and documenting quotations.
Context of and specific resources for assessment	• Accounts payable and cash disbursement records, payroll records, equipment cost and asset register, pricing impact charts, stock turnover records, calculator or computer.
Method of assessment	Practical assessments: • determine hourly charge-out rate for classes of labour using proportion of fixed, variable and labour cost • determine on-cost for parts and components • determine effect of change in price on business profitability.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Calculations	Calculation will include: • overheads may be calculated for a specific job or be a constant component based on historical records and projections • overheads will include accommodation costs, utilities, depreciation, insurance, licence and other business charges • labour costs will include on-costs, such as leave provision, superannuation, training and workers' compensation • chargeable hours/productive hours based on total hours worked less acknowledged non-chargeable hours
Work requirements	Work requirements may include: • written and verbal communication • sourcing and costing parts and consumables • estimating costs • documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• specific requirements
External service providers	External service providers may be: • other departments • specialist businesses
Resources	Resources may include: • enterprise stationery, telephone and appropriate forms/business documents • repair order and job cards • component price lists • accounting records • purchasing records • computer, calculator and software • standard repair times
Information/documents	Sources of information/documents may include: • manufacturer/component supplier specifications • enterprise operating procedures • customer requirements • state/territory/industry Workplace Health and Safety (WHS) legislation • industry/workplace codes of practice

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish contact with customer	1.1. A welcoming customer environment is maintained 1.2. Customer is greeted warmly according to enterprise policies and procedures 1.3. An effective service environment is created through verbal and non-verbal presentation according to enterprise policies and procedures
2. Clarify specific needs of a customer	2.1. Customer needs are determined through questioning and active listening 2.2. Customer needs are accurately assessed against the products/services of the enterprise 2.3. Customer details are documented clearly and accurately in required format
3. Provide information and advice	3.1. Features and benefits of products/services provided by the enterprise are described/recommended to meet customer needs 3.2. Information to satisfy customer needs is provided 3.3. Alternative sources of information/advice are discussed with the customer 3.4. Alternatives are followed up
4. Follow up customer needs	4.1. Further information is dispatched to customer 4.2. Gaps in available information are identified and referred to relevant persons for action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to specific needs of customers being identified
- operational skills and techniques in questioning/listening, resolving conflict, following set routines and procedures, handling difficult or abusive customers and greeting/farewelling techniques
- literacy skills in regard to message-taking in person or by telephone and completing written or computer documents of customer details
- plan and organise activities for implementation of a customer service plan
- work with others and in a team by team members with specific skills being sought to meet customer needs
- use mathematical ideas and techniques for customer timeframes being identified and followed
- establish diagnostic processes in which a logical approach to issues is followed
- use workplace technology related to technical skills in operating enterprise telephone systems and other communication equipment

Required knowledge

General knowledge of

- enterprise policies and procedures in regard to:
  - customer service
  - dealing with difficult customers
  - allocated duties/responsibilities
- the range of enterprise merchandise and services, location of telephone extensions and departments/sections
- legislation and statutory requirements, including consumer law, trade practices and fair trading legislation
- industry/workplace codes of practice in relation to customer service

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • consistently applying enterprise policies and procedures and industry codes of practice in regard to customer service • providing a quality service environment by treating customers in a courteous and professional manner through all stages of the procedure • using effective questioning/active listening and observation skills to identify customer needs • communicating effectively with others involved in or affected by the work.

Context of and specific resources for assessment	• This unit may be assessed in conjunction with other units that form part of the job role or function.
	• Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment.
	• Evidence is best gathered using the products, processes and procedures of the individual workplace as the means by which the candidate achieves industry competencies.
	• The following should be made available:
	  • a workplace or simulated workplace
	  • documentation, such as enterprise policy and procedure manuals relating to customer service, enterprise telephone directory, legislation and codes of practice
	  • a range of customers with different requirements (real or simulated)
	  • a communication system or a range of communication equipment
	  • enterprise products/services, features and benefits
	  • a qualified workplace assessor.

Method of assessment	It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons, subject to agreed authentication arrangements.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Business types	Enterprise may vary in size, type and location, and in the range of merchandise and services provided and in delivery policies
Customers	Customers may be regular or new and may have routine or special requests. They may include persons from a range of social, cultural or ethnic backgrounds and have physical and intellectual abilities. Regardless, all customers are made feel welcome, valued and, at the end of the process, satisfied. Customer contact may be face-to-face, by telephone or electronic means or in writing
Customer service	Customer service may include: • all enterprise activities, internal and external customers and follow-up in event of delays in service provision
Customer needs	Customer needs may require information regarding: • products or services available, quality of products or services, complementary products or services, enterprise facilities and services, and the location of specific items
Staff	Staff may be full-time, part-time or casual and vary in terms of training, product knowledge and in staffing levels. Staff may be operating in routine or busy trading conditions
Information/documents	Information/documents may include: • enterprise policies and procedures relating to customer service, equipment and product manufacturer/component supplier specifications, enterprise operating procedures, industry/workplace codes of practice and customer requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm customer requirements	1.1. Questioning and active listening techniques are used to clarify customer needs 1.2. Customer requirements are elicited professionally, courteously, with tact and without presumptions 1.3. Customer requirements are fed back accurately and concisely to the customer for confirmation 1.4. Customer requirements are documented accurately in language that can be understood by the customer and by staff 1.5. Customer requirements are documented in accordance with industry, legal and/or enterprise standards and procedures 1.6. Customer acknowledgement and confirmation of the documented requirements are obtained
2. Advise customer of available options	2.1. Viable options to customer needs are generated by the employee 2.2. Viable options that conform to industry, legal and/or enterprise policies and procedures are generated by the employee 2.3. Suppliers are contacted to research options 2.4. Options are explained and discussed with the customer to facilitate customer understanding 2.5. Supporting information is made available to the customer, to facilitate customer understanding 2.6. Benefits and approximate costs of each option are explained

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	to the customer to facilitate informed decision making
3. Inform customer of costs	3.1. Customer is provided with estimated costs and timeframes of selected option 3.2. Costs and timeframes are communicated verbally or in writing, in accordance with enterprise standards and procedures 3.3. Sale or service conditions are explained to customer
4. Agree action plan with customer	4.1. Customer's preferred option, including agreed delivery timeframe, is detailed in action plan 4.2. Agreed action plan is documented 4.3. Customer commitment to agreed action plan is gained, in accordance with enterprise requirements 4.4. Assistance with paperwork requiring completion by customer is provided 4.5. Customer feedback is sought on services provided

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to collating and analysing customer requirements and information
- communication skills in relation to dealing with customers, difficult customers and managing conflict and negotiation
- literacy skills in regard to message taking in person or by telephone and completing written or computer documents of customer requirements and action plans
- plan and organise activities to select and follow processes/procedures to ensure desired outcome
- work with others and in a team by requesting and using information/assistance from colleagues
- use mathematical ideas and techniques to include numerical skills in relation to calculating/modelling various financial and/or insurance arrangements
- establish diagnostic processes which include operational skills and techniques in customer service and problem-solving skills
- use workplace technology related to technical skills in operating enterprise telephone systems and other communication equipment

Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Knowledge of:
• industry/enterprise policies and procedures in regard to:
  • customer service
  • customer requirements/needs documentation
  • allocated duties/responsibilities
• the range of enterprise merchandise and services, location of departments/sections and telephone extensions of departments/sections, suppliers, finance and insurance
• legislation and statutory requirements, including workplace health and safety (WHS), consumer law, trade practices and fair trading legislation
• industry/workplace codes of practice in relation to customer service

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Ensure maintenance of customer database	1.1. Evidence of maintenance of customer documents is sought regularly from staff responsible to ensure vital data is kept on existing and potential customers 1.2. Customer data is maintained to ensure database relevance and currency 1.3. Information on customers and sales and service history is gathered for analysis
2. Establish needs of customer	2.1. Customer needs are regularly monitored through formal and informal communication channels 2.2. Current products and services are assessed against customer needs to determine the ability of the enterprise to meet customer needs 2.3. Trends in customer service needs are documented and reported to appropriate persons periodically for planning purposes
3. Ensure appropriate treatment of customer	3.1. Service standards are reviewed regularly against outcomes to ensure required standards are met 3.2. Staff are trained to provide customer service to an appropriate standard to ensure consistent treatment of customers 3.3. Work activities of staff are reviewed regularly to ensure customer requirements are met 3.4. Business operations are reviewed to ensure they meet current and projected customer requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.5. Staff are actively involved in providing information to improve customer service operations and activities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to collating and analysing customer information to identify needs
- communicate ideas and information to conduct information sessions for staff
- plan and organise activities concerning information for database entries
- work with others and in a team by involving staff in improvements to customer service
- use mathematical ideas and techniques to plan database cells and size
- establish diagnostic processes which identify and recommend improvements to customer service
- use workplace technology related to use of customer database

Required knowledge

Knowledge of:

- enterprise policies and procedures in regard to:
  - customer service
  - maintenance of customer databases
  - dealing with difficult customers
  - allocated duties/responsibilities
- the range of enterprise merchandise and services, location of departments/sections and telephone extensions of departments/sections
- legislation and statutory requirements, including workplace health and safety (WHS) , consumer law, trade practices and fair trading legislation
- industry/workplace codes of practice in relation to customer service

Evidence Guide

EVIDENCE GUIDE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • maintaining relevant and current customer databases in accordance with enterprise policies and procedures • monitoring, reviewing and assessing customer needs and trends • ensuring appropriate treatment of customers. This unit may be assessed in conjunction with other units that form part of the job role or function.

Context of and specific resources for assessment	• Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment.
	• Evidence is best gathered using the products, processes and procedures of the individual workplace as the means by which the candidate achieves industry competencies.
	• The following should be made available:
	  • a workplace or simulated workplace
	  • documentation, such as enterprise policy and procedure manuals relating to customer service, enterprise telephone directory, legislation and codes of practice
	  • computer, database software, customer information and enterprise policies and procedures
	  • a range of customers with different requirements (real or simulated)
	  • a communication system or a range of communication equipment
	  • real or simulated customer database
	  • a qualified workplace assessor.

Method of assessment	It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons, subject to agreed authentication arrangements.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Enterprises	Enterprises may vary in size, type and location, range of merchandise and services provided and delivery policies
Customers	Customers may: • be regular or new • have routine or special requests • be from a range of social, cultural or ethnic backgrounds and physical and intellectual abilities Regardless, all customers are made feel welcome, valued and, at the end of the process, satisfied. Customer contact may be: • face to face, by telephone, or electronic means or in writing
Customer service	Customer service may include all enterprise activities, internal and external customers and follow-up in event of delays in service provision
Staff	Staff may be: • full-time, part-time or casual and vary in terms of training, product knowledge and staffing levels • operating in routine or busy trading conditions
Customer needs	Customer needs may include: • information regarding available products or services, quality of products or services, complementary products or services, enterprise facilities and services or the location of specific items
Customer databases	Customer databases may include: • information on customer name, contact details, purchase history details of products or services, information requests, special needs and customer 'rating' by enterprise
Policies and procedures	Policies and procedures may include: • enterprise policies and procedures relating to customer service, equipment and product manufacturer/component supplier specifications, enterprise operating procedures, legislative and

AURAFA2004 Solve routine problems in an automotive workplace

Modification History

Release	Comment
Release 1	Replaces AURC252327A Identify, clarify and resolve problems Performance Criteria updated to reflect the automotive workplace

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes required to identify and clarify the nature of routine problems commonly encountered in an automotive workplace as they relate to automotive vehicle repair. It involves deciding on the best solution, implementing and evaluating solutions and assisting others to identify and resolve problems. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Application of the Unit

Application of the unit	Work applies to the process implemented when addressing a problem in relation to vehicle or equipment repair. This unit has application throughout all sectors of the automotive industry and can be applied to resource, equipment, job function, workplace environment or process related problems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and clarify nature of the problem	1.1. Signs of ***problems*** are identified or anticipated 1.2. ***Information and evidence*** is gathered from a variety of sources 1.3. Detailed analysis of the information is prepared, listing all options 1.4. Relevant and irrelevant components of the problem are distinguished within the available timeframe
2. Determine criteria for optimal solution and implement solution	2.1. Range of possible ***solution methods*** are defined 2.2. Options and strategies are identified or devised 2.3. Strengths and weaknesses of each option and strategy are considered against determined criteria 2.4. The optimal solution is determined 2.5. An implementation strategy is prepared and presented to designated persons for approval 2.6. The chosen solution is implemented within available timeframe
3. Evaluate and report on effectiveness of solutions and outcomes	3.1. Criteria are established to determine if chosen solutions resolve the problem 3.2. The chosen solution is evaluated against the determined

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	criteria 3.3. Follow-up procedures are implemented by investigating things that have gone wrong and developing ***contingency arrangements*** 3.4. The effectiveness of the solution is reported to the workgroup or designated persons
4. Assist others to identify, clarify and resolve problems in the workplace	4.1. Others are assisted to anticipate or identify the indicators of a problem 4.2. Others are assisted to investigate the problem 4.3. Others are assisted to devise and evaluate alternative options and strategies 4.4. Others are assisted to implement the chosen solution

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to communicate ideas and information relating to reading and understanding workplace documents
- initiative and enterprise to identify sources of information, assistance and expert knowledge to assist with problem solving
- literacy skills to:
  - understand written workplace procedures and documents
  - read and follow information in written instructions, specifications, standard operating procedures, charts and other applicable reference documents
- numeracy skills to use mathematical ideas and techniques where required for solution options
- planning and organising skills to plan and organise activities for a plan of action developed to solve problems
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - adopt strategic approaches to routine problem solving
  - establish diagnostic processes that use basic analytical and problem-solving skills relating to identifying, evaluating and resolving work-related problems
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
- self-management skills to:
  - select and use appropriate written materials, processes and procedures
  - recognise limitations and seek timely advice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• teamwork skills to work with others and in a team by using basic communication and teamwork skills to assist others to solve problems • technical skills to collect, organise and understand information relating to collating information to define problems • technology skills to use workplace technology for research and to report on effectiveness
Required knowledge
• workplace policies and work procedures in relation to problem identification and problem solving • problem identification, evaluation and reporting procedures • problem identification, evaluation and reporting practices and strategies

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge. A person who demonstrates competency in this unit must be able to: • communicate effectively with others involved in or affected by the work • identify indicators of problems or potential problems • gather and evaluate information relating to the problem • devise solutions • implement solutions as they relate to mechanical or electrical faults or problems in an automotive workplace.
Context of and specific resources for assessment	Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Assessment is to occur: • using standard workplace practices and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• following safety requirements • applying environmental constraints. Assessment is to comply with relevant: • regulatory requirements • Australian standards • industry codes of practice. The following resources must be made available for the assessment of this unit: • workplace location or simulated workplace • documentation, such as workplace or sample policies and procedures, vehicle workshop or repair manuals related to work procedures and problem solving • vehicles with mechanical or electrical faults or problems requiring resolution.
Method of assessment	Assessment must satisfy the endorsed Assessment Guidelines of this Training Package. Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge. Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application. Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients. Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the

RANGE STATEMENT	
performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Problems may include:	• problems relating to normal work activities within the responsibility of the individual or workgroup • problems that arise relating to additional or non-standard work activities • problems caused by internal or external changes in work conditions or the environment.
Information and evidence may include:	• equipment or product manufacturer and component supplier specifications • workplace policies and procedures • customer requirements • repair quotations • legislation and regulations • industry and workplace codes of practice.
Solution methods may include:	• personal problem solving • mathematical problem solving • root cause analysis • brainstorming • lateral thinking • trial and error • substitution.
Contingency arrangements may include:	• technical evaluation • physical evaluation • formulating or revising plans • strategy development • evaluating procedures • time management • cpmmunication strategies.

AURAFA5007 Develop and document specifications and procedures

Modification History

Release	Comment
Release 1	Replaces AURT577620A Develop and document specifications and procedures Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit covers the competence to analyse requirements and to develop and document technical specifications and procedures providing concise and unambiguous direction and guidance for workplace activities. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	This unit covers the work involved in the research for and writing of specifications and procedures for the workplace. Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem-solving skills. Work may involve individual and team related activities and will normally relate to the standard forms of activity performed in the enterprise and industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify requirements	1.1. Information required for technical specifications and procedures is identified and assembled. 1.2. Specifications and procedures requirements and formats are established and confirmed, where necessary. 1.3. Requirements for information entry, storage, output and quality of document production are identified in accordance with enterprise procedures. 1.4. Specifications and procedures document design is appropriate for efficient entry of information and satisfies appearance and presentation requirements for the purpose of the document. 1.5. Range of functions incorporated in the document design reflects the nominated requirements.
2. Prepare specifications	2.1. Technical information for use in the specification is collected, tested and validated or confirmed before use. 2.2. Authoritative sources and references are identified and used in the preparation and presentation of the specification. 2.3. Specifications are written in a format, to ensure requirements can be met.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4. Specifications are written in a manner that is clear and understood in the workplace. 2.5. Specification documentation satisfies enterprise and industry standards.
3. Prepare technical procedures	3.1. Activities and tasks are identified, analysed and documented. 3.2. Activities and tasks are sequenced and logically grouped. 3.3. Procedures are documented to enterprise and industry standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand technical information related to the specifications and procedures, testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to ensure the completeness, clarity and comprehension of the specifications and procedures by the target audience.
- plan and organise to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to incorporate measurements, calibration and test requirements into specifications and procedures.
- establish processes which anticipate and allow for risks, cater for both direct and indirect causes, avoid or minimise reworking and avoid wastage in the preparation and content of procedures.
- use the workplace technology related to document preparation, including calculators and measuring devices, computing systems and information management systems.

Required knowledge

- technical writing and presentation techniques.
- enterprise (or equivalent) technical procedure formats, content rules, preparation and management techniques.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Locate, interpret and apply information.
	• Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment.
	• Identify and itemise steps and stages in procedures.
	• Complete a significant operational procedure, incorporating safety obligations, and covering:
	  • a full analysis of the topic area
	  • a step-by-step operational procedure
	  • supporting documents to the procedure.
	• Complete or review and update a specification for a significant system or sub-system covering:
	  • system/sub-system description
	  • components
	  • materials
	  • construction
	  • circuitry
	  • related information sources
	  • legal, regulatory or intellectual property law requirements.
	• Modify products to cater for variations in workplace cultures and environment.
	• Work effectively with others.

Context of, and specific resources for assessment	Assessment may occur on the job or in a workplace simulated facility. Access to systems requiring specification, activities requiring procedural coverage, related, technical information and a work environment.
Method of assessment	Assessment of this unit of competence is most likely to be project related and require portfolios or other forms of indirect evidence of process. Direct evidence will include certification of compliance of the final outcome/product or authorisation for use by a competent authority. Assessment must confirm the inference that competence is able not

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	only to be satisfied under the particular circumstances, but is able to be transferred to other projects. Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Specifications	Specifications are technical criteria for an object, item, system or sub-system describing the components, materials, construction, circuitry and associated legal, regulatory or intellectual property issues.
Procedures	Procedures contain detailed descriptions of the tasks, activities, sequences, materials, tooling, rules and safety requirements leading or guiding an individual through an authorised work practice.
Function	The function is undertaken in accordance with established enterprise procedures and practices may include requirements recommended by manufacturer.
Unit context	• WHS requirements include legislation, safety management systems, hazardous substances and dangerous goods codes and safe operating procedures. • Work is carried out in accordance with legislative obligations, environmental legislation, health regulations, authorised handling procedures and organisation insurance requirements.
Workplace environment	Specifications and procedures may be used in established workshops or under external site conditions.
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
Information and procedures	• Workplace procedures relating to the use of tooling and equipment. • Workplace procedures relating to reporting and communication.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Manufacturer/component supplier specifications and application procedures for testing equipment and materials. • Manufacturer/component supplier specifications, schematics and operational procedures related to systems. • Australian Design Rules. • Vehicle industry regulations. • Vehicle industry publications related to emerging system technology and technology changes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate the nature of the new technology	1.1. Training/information sessions are attended, to gain a full understanding of new technology 1.2. Technical sources are consulted to gain a full understanding of new technology 1.3. New technologies are analysed to determine their importance and value to the enterprise 1.4. Impact of new technologies on existing processes is analysed 1.5. Information about additional materials and equipment required to adopt the technology is communicated to staff
2. Modify existing work processes and procedures	2.1. Processes are modified to incorporate new technologies 2.2. Impact on workflow and productivity is minimised through effective planning and communication with staff 2.3. Staff are provided with training/information in the use of new technologies

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required skills
• collect, organise and understand information related to adapting work processes to new technologies • communicate ideas and information to supervisors related to adapting work processes to new technologies • plan and organise activities adapting work processes to new technologies • work with others and in a team by seeing and conveying information related to the planning, sequencing and completion of the task • use mathematical ideas and techniques to count and measure • establish diagnostic processes which adapts work processes to new technologies • use the workplace technology related to adapting work processes to new technologies
Required knowledge
Knowledge of: • enterprise existing activity, processes and procedures relevant to application • cost-benefit analysis principles • analytical skills, processes and procedures • planning, communication and management skills, processes and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • investigating the nature of new technologies and modifying existing work processes and procedures to incorporate new technologies into the workplace.
Context of and specific resources for assessment	• Underpinning knowledge and skills may be assessed on or off the job. • Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	workplace conditions is acceptable. • Prescribed outcome must be able to be achieved without direct supervision. • The following should be made available: • technical information, hand tooling, specialised tooling and equipment.
Method of assessment	Practical assessments: • research and adapt a process to a previously unknown technology • train staff in use of a new technology • compare costs and benefits of a current process and one which incorporates a new technology • make a recommendation as to whether a given technology should be introduced to the workplace, taking into consideration the value to the enterprise of the change • plan and implement the introduction of a new technology into the workplace, with provision to minimise the impact on workflow and productivity.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Methods	Methods include: • analysis of existing work practices • planning • communication • research
Processes which may be modified	Processes which may be modified could include: • work/repair sequence • WHS practices • administration and/or documentation • stock control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
New technologies	New technologies which could be incorporated into the workplace include: • new equipment or tooling, base materials or automotive systems
Unit context	Workplace example: • a body repair involving a multi-layer paint system is encountered for the first time in the workshop. The technician contacts the paint supplier to gather information on the paint system. Other persons might also need to be contacted to gain an understanding of how to effect the repair, such as the paint manufacturer or industry contacts who may have encountered such a paint system before and/or employer bodies. Because normal 'blending' is not possible, alternative methods for colour matching need to be determined after gathering information
Information/documents	Information/documents may include: • manufacturer/component supplier specifications • technical journals, including workshop • manuals, tune-up manuals • enterprise operating procedures • customer requirements • industry codes of practice • legislation
WHS requirements	WHS requirements may include: • state/territory WHS legislation • award provisions

AURALA3001 Determine legal aspects of an automotive service and repair contract

Modification History

Release	Comment
Release 1	Replaces AURA354616A Determine legal aspects of an automotive service and repair contract Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit of competency covers the competence to act within legal and ethical boundaries in dealing with customers and implement measures to avoid disputes and resolve those that do occur. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	This unit of competency applies to the legal and ethical operation in retail, service and repair. Methods include: • written and verbal communication • researching requirements • monitoring performance against requirements • ensuring currency of requirements • documentation.

Licensing/Regulatory Information

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Comply with service and repair contract and agreement legislation	1.1. Identify and comply with the rights and legal obligations of parties involved in a valid service and repair contract 1.2. Identify and comply with the legal liabilities of a repairer who performs service or repair work without a valid contract 1.3. Prepare draft documents that would form a valid contract for service and repair work in the automotive industry 1.4. Implement procedures to advise customers of the nature of the contract they are entering into requesting service and repair work to be undertaken 1.5. Implement procedures for staff to follow to ensure valid contracts are in place for all stages of work undertaken 1.6. Implement procedures to minimise liability or customer claims in relationship to bailment 1.7. Identify which regulatory bodies have authority to inspect the premises and the procedures for this to occur
2. Establish warranties in accordance with legal requirements and company policy	2.1. Ensure customer statutory rights have been protected 2.2. Ensure warranty documents have regard for fair trading principles 2.3. Ensure warranty interpretation is in accordance with company policy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Enforce contract in accordance with legal requirements and company policy	3.1. Develop company policy on payment terms for services rendered 3.2. Identify and observe different forms of liens and their applicability of the automotive industry 3.3. Identify and observe the legal rights and obligations of an automotive business in respect of the disposal or sale of uncollected vehicles or goods 3.4. Outline the legal procedure that should be followed for recovery of payment when a customer is in default of payment
4. Dispute resolution in the automotive industry	4.1. Implement procedures to minimise disputes with customers 4.2. Maintain necessary records to support positions in disputes with customers 4.3. Identify external sources of assistance in dispute resolution 4.4. Monitor customer disputes and resolutions to implement procedures for avoidance strategies

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to legal and ethical business dealings
- communicate ideas and information to customers and supervisors related to legal and ethical business dealings
- plan and organise activities related to legal and ethical business dealings
- work with others and in a team by observing and conveying information related to planning, sequencing and completion of the task
- use mathematical ideas and techniques to count and measure
- establish and utilise processes that identify appropriate methods related to legal and ethical business dealings
- use workplace technology related to legal and ethical business dealings

Required knowledge

- legal and ethical requirements related to contracts
- warranty rights and responsibilities of suppliers and repairers
- components of a valid contract

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• written communication and report writing skills procedures • oral communication skills procedures • assessing vehicle damage and recommended repair methods • dispute resolution techniques

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer the competence to changing circumstances and to respond to unusual situations in critical aspects of: • establishment and revision of model customer contracts • implementation procedures to avoid or deal with customer disputes • maintenance of customer records • identification of key components of a valid service and repair contract • establishment of an appropriate paper trail and records to verify actions taken in a dispute situation.
Context of and specific resources for assessment	• Underpinning knowledge may be assessed on or off the job. • Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. Assessment must take place in the workplace. • The prescribed outcome must be able to be achieved without direct supervision.
Method of assessment	

Range Statement

RANGE STATEMENT

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain physical appearance of the workplace	1.1. Cleanliness and tidiness of the workplace is maintained in accordance with industry and/or enterprise standards of workplace health and safety (WHS) 1.2. Workplace is free of rubbish and waste in accordance with industry, WHS and enterprise requirements 1.3. Standards of cleanliness are communicated to staff in accordance with enterprise procedures 1.4. Customer reception area is maintained to enterprise standards 1.5. Defined areas for specific tasks are created and maintained to enterprise requirements 1.6. Facilities and equipment maintenance is planned and regularly carried out 1.7. Enterprise image and signage is displayed consistently throughout the organisation
2. Maintain enterprise dress and grooming standards	2.1. Expectations regarding dress and grooming are communicated to staff on a regular basis 2.2. Standards are updated as needs arise according to enterprise requirements 2.3. Dress and grooming of staff are monitored to ensure standards are met 2.4. Breaches of standards are identified and corrected
3. Implement waste disposal processes	3.1. Waste disposal is monitored to ensure compliance with environmental, WHS, industry and enterprise requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.2. Recycling opportunities are identified and implemented in accordance with environmental legislative, industry and enterprise standards 3.3. Environment Protection Authority documents are maintained
4. Promote products and services provided by the business	4.1. Promotional activities are implemented as planned according to enterprise policies and industry and legal requirements 4.2. Products/services are sold to highest quality level according to enterprise policies, manufacturer/component supplier specifications, industry and legal requirements 4.3. Sales promotions/campaigns are actively supported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to enterprise expectations
- communicate ideas and information to ensure staff are advised of enterprise requirements
- plan and organise activities for waste disposal processes
- work with others and in a team by using a team approach to maintain workplace appearance
- use mathematical ideas and techniques to budgets associated with sales campaigns
- establish diagnostic processes to resolve environmental issues
- use the workplace technology related to promote products and services

Required knowledge

Knowledge of:

- WHS requirements within the state/territory of operation
- industry and enterprise standards and requirements regarding physical appearance of the workplace, dress and grooming
- industry and enterprise standards regarding waste disposal processes
- enterprise standards regarding promotion of services and products
- environmental protection authority regulations and guidelines
- advertising codes and requirements for ethical advertising practices
- legal obligations and requirements

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • maintaining staff dress and grooming standards • maintaining the physical appearance of the workplace • implementing waste disposal processes • promoting business products and services.

Context of and specific resources for assessment	• The underpinning knowledge and skills may be assessed on or off the job.
	• The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
	• The prescribed outcome must be able to be achieved without direct supervision.
	• The following should be made available:
	  • a workplace or simulated workplace
	  • enterprise or equivalent policy and procedures
	  • enterprise stationery, forms/business documents
	  • a qualified workplace assessor.

Method of assessment	Practical assessments: • address staff breaches of dress and grooming standards • complete Environmental Protection Authority (EPA) paperwork • maintain the physical appearance of the worksite • maintain enterprise dress and grooming standard • implement waste disposal processes • promote products and services provided by the business.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Methods	Methods include: • written and verbal communication
Defined areas for specific tasks	Defined areas for specific tasks may include: • lunchrooms • work areas for specific tasks (e.g. paint, electrical, transmission and wheel alignment) • warehouse areas • office/administration areas • workshop bays
Waste	Waste may include: • materials • products • parts • consumables
Corrective actions	Corrective action to breaches of dress and grooming standards may include: • individual or group staff counselling, notices or memos
Standard clothing	Standard clothing may include: • overalls • shirts • jacket • trousers • work safety or waterproof footwear • ear plugs/muffs • safety goggles • other personal protection equipment
Information/documents	Information/documents may include: • enterprise operating procedures • product manufacturer/component supplier specifications • customer requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• industry/workplace codes of practice
WHS requirements	WHS requirements may include: • state/territory industry WHS legislation • award provisions

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Examine the nature of the issue	1.1. Ascertain all facts relating to the issue 1.2. Use effective communication to understand customer feelings and opinions 1.3. Determine enterprise and/or supplier policies relating to the issue
2. Exercise judgement to resolve the issue	2.1. Determine implications of the issue for the customer and organisation 2.2. Analyse and negotiate options for resolution with the customer in accordance with legislative requirements and enterprise policies 2.3. Refer matters for which a solution cannot be negotiated to management
3. Document issue and outcome	3.1. Report outcome of the issue to management 3.2. Incorporate issue and outcome into customer feedback system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: • technical skills to the level required to use workplace technology to manage, resolve and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
record customer issue • communication skills to the level required to listen effectively to a customer complaint, negotiate effectively to resolve the issue and communicate effectively with the supervisor and other workers, and to relate to people from a range of social, cultural and ethnic backgrounds, and of varying physical and mental abilities • literacy skills to the level required to identify and understand information related to the issue, the enterprise procedures to resolve issues, and to prepare a report on the issue and outcome • numeracy skills to the level required to undertake any calculations related to the complex issue management • problem-solving skills to the level required to undertake diagnostic processes that lead to a solution to the complex customer complaint • team skills to the level required to seek advice from others to lead to a solution to the complex customer issues
Required knowledge
Required knowledge includes: • negotiation and problem-solving strategies • industry codes of conduct • applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS), personal safety and environment, relevant to resolving complex customer complaints • organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to resolving complex customer complaints

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • observe safety procedures and requirements • communicate effectively with others involved in or affected by the work • select methods and techniques which are appropriate to the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	circumstances • understand and follow enterprise procedures to resolve customer complaints • use a planned approach to resolve the complaint • determine the facts and implications of the issue for both the customer and the organisation • resolve the customer complaint to the satisfaction of both the customer and the enterprise • document the resolved issue according to workplace procedures.

Context of and specific resources for assessment	• The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
	• Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
	• Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
	• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
	• The following resources should be made available:
	  • details of a range of complex customer complaints
	  • workplace procedures related to customer service
	  • legislation and codes of practice
	  • computer hardware and software, calculators and general office equipment.

Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge. • Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Competence in this unit may be assessed in conjunction with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	other functional units which together form part of the holistic work role.
Guidance information for assessment	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Complex issues	Complex issues may include: • cost issues • warranty issues • policy matters • commercial decisions taken • code of practice adherence • work standards • time taken or time expected to repair • selection of parts
Options for resolution	Options for resolution may include: • rework • reduced fee for work completed/agreed • additional services for free/reduced fee • referrals to other suppliers
Workplace procedures	Workplace procedures may include: • customers issue resolution process and procedures • industry and workplace codes of practice • product manufacturer and component supplier specifications • industry and workplace codes of practice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Legislative requirements	Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include: • award and enterprise agreements • industrial relations • Australian standards • Australian Design Rules • confidentiality and privacy • WHS • the environment • equal opportunity • anti-discrimination • duty of care
WHS requirements	WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include: • personal protective equipment and clothing • safety equipment • first aid equipment • hazard and risk control • elimination of hazardous materials and substances • manual handling, including shifting, lifting and carrying • emergency procedures • road rules • safe driving policy
Environmental requirements	Environmental requirements may include: • waste management • noise • dust • clean-up management
Organisational policies and procedures	Organisational policies and procedures may include: • quality policies and procedures, including Australian standards • WHS, sustainability, environment, equal

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to the setting of budgets and targets	1.1. Information for budgets and targets is collected within agreed timeframes 1.2. Budget and targets are set to achieve required levels of financial and business performance 1.3. Hourly rate is calculated based on business costs and margins, according to enterprise requirements 1.4. Expenditure requirements are agreed with appropriate persons, and provision is made in targets 1.5. Provision for unplanned costs is included in annual budget
2. Manage income and expenses	2.1. Expenditure and income for jobs is monitored on a regular basis 2.2. Financial information on jobs is collected on a regular basis and compared to budget 2.3. Corrective action for budget discrepancies is implemented 2.4. Invoices are prepared within timeframes according to industry and/or enterprise standards 2.5. Performance against budgets is monitored on a regular basis, and options for corrective action are discussed with management 2.6. Assistance is provided in the resolution of disputed accounts according to industry and/or enterprise standards and procedures for dispute resolution
3. Contribute to planning of business promotions	3.1. Promotional strategies are regularly reviewed with management

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.2. Adjustments to promotional strategies are discussed and agreed with management 3.3. New stock and/or display equipment required to support promotions is identified and arranged in a timely fashion 3.4. Displays are arranged to enhance enterprise image

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to contributing to business improvement
- communicate ideas and information to customers and supervisors related to contributing to business improvement
- plan and organise activities related to contributing to business improvement
- work with others and in a team by seeing and conveying information related to the planning, sequencing and completion of the task
- use mathematical ideas and techniques to count and measure
- establish diagnostic processes which identify methods related to contributing to business improvement
- use the workplace technology related to contributing to business improvement

Required knowledge

Knowledge of:

- accounting principles
- how to set a budget
- hourly rate components, based on general industry models/formulas
- responses to a range of budget and target situations in the workplace
- marketing concepts and principles

Evidence Guide

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • contributing to the budget process, managing expenses in order to maintain levels of profitability within the specific area of responsibility, and contributing to the planning of business promotions.
Context of and specific resources for assessment	• Underpinning knowledge and skills may be assessed on or off the job. • Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable. • Prescribed outcome must be able to be achieved without direct supervision. • The following should be made available: • enterprise stationery, telephone, forms/business documents.
Method of assessment	Practical assessments: • calculate and review hourly rate, based on supplied business costs and margins • discuss current budget status, based on provided data • achieve department budgets • discuss strategy for treatment of debtors and bad debts • prepare analysis of current enterprise/department promotional strategies and recommendations for adjustments.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Methods	Methods include: • written and verbal communication • planning
Budgets and targets	Budgets and targets may be for: • finances • sales • stock throughput • work won
Financial information	Financial information may include: • hourly rate components • expenditure on jobs, at hourly rate • income from jobs, at hourly rate • supplier invoices • stock documents
Unplanned costs	Unplanned costs may include: • accident • burglary/loss • damage
Business or department income	Business or department income may be sourced from: • retail labour sales • component sales • accessories and other items • margins on sublet jobs • government employment incentives
Business costs and margins	Business costs and margins may include: • general expenses • fixed expenses • on costs • rework component • profit margins
Corrective action	Corrective action in response to budget discrepancies may include: • reassessing budget • reducing costs • changing procedures
Business promotions	Business promotions may relate to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• regular advertising • special campaigns
Displays	Displays may include: • stock and other merchandise • enterprise signage • promotional and advertising material
Information/documents	Information/documents may include: • enterprise operating procedures • product manufacturer/component supplier specifications • customer requirements • industry/workplace codes of practice
WHS requirements	WHS requirements may include: • state/territory WHS legislation • award provisions

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- technical skills to the level required to use the internet and other workplace technology related to preparing a vehicle repair quotation
- communication skills to the level required to verify costs with others, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds, and of varying physical and mental abilities
- literacy skills to the level required to undertake costing research and to document and report findings
- numeracy skills to the level required to estimate and calculate labour, materials and on-costs and to validate work costs
- problem-solving skills to the level required to anticipate costing problems and to avoid reworking, wastage, and planning and scheduling problems
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

Required knowledge

Required knowledge includes:

- methods and processes for identifying, apportioning, summarising and validating total costs for work
- components of labour costs
- current assessing and quoting methodologies
- commercial approaches to warehousing and physical distribution and costing
- manufacturer and component supplier specifications and manuals, including costing catalogues
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS), personal safety and environment, relevant to calculating vehicle repairs
- organisational policies and procedures, including quality requirements, reporting and recording procedures, related to calculating vehicle repair costs

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • observe safety procedures and requirements • communicating effectively with others involved in or affected by the work • select appropriate methods and techniques • interpret proposals, specifications and instructions for the work • obtain information relevant to the determination of costs • calculate and cost accurately the quantities of parts and materials, the amount of labour and time required to complete the work and overheads for a range of vehicle repair quotes • document the process and outcomes in accordance with enterprise practice.

Context of and specific resources for assessment	• The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
	• Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
	• Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
	• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
	• The following resources should be made available:
	  • vehicles requiring repair that can be used for quotations
	  • appropriate worksite and costing details
	  • manufacturer and component costs, labour rates, commercial and industry information
	  • Repair Times manuals
	  • equipment, including calculators, computer, internet and software
	  • enterprise procedures.

Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Guidance information for assessment	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Quotation	Quotation may include: • customer details • vehicle details • work to be performed • details of costs, including labour • legible and accurate documentation using the enterprise-approved format
Overhead costs	Overhead costs may include: • rental and leasing costs • utilities • non-production resources • depreciation of plant and equipment • warehousing margins

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• warehousing costs • insurance and other costs incurred by doing business • material/supply costs, including catalogues, contracts, standing agreements, market rates and warehousing margins
Information/documents	Information/documents may include: • Motor Vehicle Insurance and Repair Industry Code of Conduct • verbal, written and graphical instructions • parts listing prices and catalogues • inventory systems • material safety data sheets (MSDS) • diagrams or sketches • safe work procedures for inspection of vehicles for saleable components • engineer's design specifications and instructions • workplace specifications and requirements • instructions issued by authorised enterprise or external persons • Australian standards • current driver's licence
Legislative requirements	Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include: • award and enterprise agreements • industrial relations • Australian standards • Australian Design Rules • confidentiality and privacy • WHS • the environment • equal opportunity • anti-discrimination • duty of care
WHS requirements	WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include: • personal protective equipment and clothing • safety equipment • first aid equipment • hazard and risk control • elimination of hazardous materials and substances

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• manual handling, including shifting, lifting and carrying • emergency procedures • road rules • safe driving policy
Environmental requirements	Environmental requirements may include: • waste management • noise • dust • clean-up management
Organisational policies and procedures	Organisational policies and procedures may include: • financial management policies and procedures • cost and apportioning overheads policies and procedures • labour employment costs, including awards and contracts • quality policies and procedures, including Australian standards • WHS, sustainability, environment, equal opportunity and anti-discrimination • manufacturer specifications and industry codes of practice • safe work procedures • reporting and recording procedures

AURATA3005 Estimate complex jobs

Modification History

Release	Comment
Release 1	Replaces AURC365722A Estimate complex jobs Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit of competency covers the competence required to estimate the time requirements for complex jobs, source requirements, gather cost estimates from external service providers and document quotations. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	This unit of competency applies to retail, service and repair complex estimation work within the repair sector of the automotive industry. Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment. Competence may be demonstrated in a workplace environment or simulated workplace.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Estimate time requirements for jobs	1.1. Time estimates for job requirements are calculated based on warranty times, staff estimates, standard service/repair times, specifications, and subcontracted timeframes 1.2. Service/repair times are estimated and compared to documented estimate to ensure repair job is viable 1.3. Turn-around times for work completed by subcontractor are incorporated into total time estimates
2. Source parts	2.1. Viability of replacement compared to repair is ascertained to meet quality standards and legal requirements 2.2. Part requirements are determined to ensure cost constraints are met 2.3. Parts and consumables required for the job are ordered 2.4. Parts are sourced externally when internal stock is not available to meet customer requirements
3. Identify subcontract testing and/or service/ repair work costs for incorporation into the total estimated cost	3.1. Estimate is documented 3.2. Service/repair requirements, procedures and costs are documented in a logical order 3.3. Service/repair requirements are documented in detail 3.4. Estimate is relevant to the identified service/repair

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	requirements 3.5. Potential variations are noted on the estimate
4. Estimate total job costs	4.1. External service providers are given a clear outline of the work and time requirements of the job 4.2. Job cost estimate is documented and agreed with external service providers 4.3. Parts and consumables are costed according to industry and/or enterprise pricing standards 4.4. Supplementary estimate is prepared, to gain authorisation from owner for additional service/repairs 4.5. Final estimate is documented 4.6. Authorisation is gained from customer to commence work and/or undertake supplementary work
5. Report estimations to customer	5.1. Report of findings is completed in the enterprise-approved format 5.2. Customer is advised of the estimation 5.3. Job card is completed and delivered to appropriate persons

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- analytical skills required for the identification and analysis of technical information
- plain English literacy and communication skills in relation to dealing with customers and team members
- questioning and active listening skills for example when obtaining information from customers
- oral communication skills sufficient to convey information and concepts to customers
- as applied to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interacting effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques such as number and space and techniques, e.g. estimation and approximation, for practical purposes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• apply problem-solving strategies in purposeful ways, both in situations where the problem and the desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome • combine the physical and sensory skills needed to operate equipment with understanding of scientific and technological principles needed to explore and adapt systems
Required knowledge
Knowledge of: • WHS regulations/requirements, equipment, material and personal safety requirements • principles of estimating and job costing • enterprise quality procedures • work organisation and planning processes • contract law • sale-contracting principles • written communication and report writing skills procedures relevant to application • oral communication skills procedures relevant to application

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • estimating in accordance with workplace requirements • estimation is carried out to manufacturer/component supplier requirements • estimation of the work completed within workplace timeframes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• report presented to customer is in compliance with workplace requirements.

Context of and specific resources for assessment	• This unit will normally need to be assessed as a discrete entity. Performance may involve the application of a range of contributory competencies.
	• Assessment of this unit must be completed on the job or in a simulated work environment which reflects a range of quality processes and procedures.
	• The prescribed outcome must be able to be achieved without direct supervision.
	• The competence should be assessed within the context of the qualification being sought.
	• The following should be made available:
	  • a workplace or simulated workplace
	  • enterprise stationery, telephone and forms/business documents
	  • repair order, job cards and quotes/estimates
	  • computer and software, calculator
	  • hand tooling, workshop equipment
	  • access to information

Method of assessment	It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. Evidence of being able to: • access, interpret and apply service information • identify estimating and job costing procedures • accurately estimating time required for a job involving sublet work and/or a mix of service/repair disciplines (e.g. mechanical, electrical and body) • estimate on a wide variety of jobs, including non-routine jobs • justify a repair job deemed to be 'viable' from a cost perspective • justify a replacement/repair decision according to quality standards and legal requirements • use service tooling and equipment • observe safety procedures and requirements • provide customer service • prepare service reports • communicate with customers orally and in writing • maintain workplace documents.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Variables	Variables may include: • jobs involving subcontracted work • jobs involving a mix of vocations (e.g. mechanical, body and electrical) • non-routine jobs
Methods	Methods include: • written and verbal communication • sourcing of parts • estimating costs • documentation
Legislative requirements	Legislative requirements may include: • state/territory WHS legislation, manufacturer/component supplier specifications and safe operating procedures • environmental requirements, manual handling procedures and insurance requirements
Information/documents	Information/documents may include: • manufacturer/component supplier specifications • enterprise operating procedures • customer requirements • industry/workplace codes of practice

AURETB3001 Repair electric braking systems

Modification History

Release	Comment
Release 1	Replaces AURE311666A Repair electric braking systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit covers the competence required to repair electric braking systems and associated components as fitted to vans and trailers. This unit of competency also applies to electric braking controllers fitted to vehicles and plant and equipment. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	The unit includes identification and confirmation of work requirement, preparation for work, testing of systems and identification of faults/causes, the repair and retesting of systems and associated electric braking system components and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, processes and equipment 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal safety needs, are observed throughout the work 1.4. Equipment and tooling are identified and checked for safe and effective operation 1.5. Procedures are determined to minimise task time
2. Test systems/ components and identify faults	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Tests are carried out to determine faults using tooling and techniques 2.3. Tests are completed without causing damage to any component or system 2.4. Faults are identified and preferred repair action determined 2.5. Tests are carried out according to industry regulations/ guidelines, WHS legislation, statutory legislation and enterprise procedures/policies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Repair electric braking systems and/or associated components	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Necessary repairs, component replacement and adjustments are carried out using tooling, techniques and materials 3.3. Electric braking system and/or associated component repair is completed without causing damage to any component or system 3.4. Retests are carried out to ensure correct and safe electric braking system service operation 3.5. Repairs/removal, replacement and adjustments are carried out according to industry regulations/guidelines WHS legislation, statutory legislation and enterprise/procedures policies 3.6. Workplace and equipment records are completed in accordance with workplace requirements
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap is removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements 4.5. Maintenance is completed in accordance with manufacturer/component supplier specifications and workplace procedures 4.6. Tooling and equipment is maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for testing and repairing of electric braking systems
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
reporting of work outcomes and problems • plan and organise activities, including preparation and layout of work site and the obtaining of equipment and materials to avoid any backtracking or workflow interruptions • work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity • use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks • establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage • use workplace technology related to the repair of electrical braking systems, including the use of specialist tooling and measuring equipment, computerised technology, communication devices and the reporting/recording of results
Required knowledge
A working knowledge of: • WHS regulations/requirements, equipment, material and personal safety requirements • operating principles of electric braking systems • construction and operation of electric braking systems/components relevant to application • types and layout of service/repair manuals (hard copy and electronic) • pre-repair testing and fault identification procedures • repair, removal, replacement and adjustment procedures • post-repair testing procedures • work organisation and planning processes • enterprise quality processes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • observing safety procedures and requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • testing a range of electric braking systems • identifying faults and determining repair requirements • repairing a range of electric braking systems to workplace and manufacturer/component supplier requirements • retesting electric braking systems prior to returning to service • completing workplace/equipment documentation.
Context of, and specific resources for assessment	Application of competence is to be assessed in the workplace or simulated automotive site. Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints. Assessment is to comply with regulatory requirements, including Australian Standards. The following resources should be made available: • workplace location or simulated workplace • materials relevant to the repair of electric braking systems • equipment, hand and power tooling appropriate to the repair of electric braking systems • activities covering the mandatory task requirements • specifications and work instructions.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry RS&R Training Package • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and must reinforce the integration of key competencies • Assessment may be applied under project related conditions and require evidence of process • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by

EVIDENCE GUIDE	
	customers, team leaders/members or other persons subject to agreed authentication arrangements • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Electric braking systems	Electric braking systems may be in light vehicles and plant and equipment fitted with electric van/trailer braking controllers or trailers fitted with electric brakes
Repair methods	Repair methods are to include: • visual, aural and functional assessment (including damage and corrosion) • testing under operating conditions • electrical/electronic testing • removal, dismantling, reassembly and refitting • repair and/or replacement of system components • road testing/retesting prior to placing back into service
WHS requirements	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: • protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and procedures
Safe operating procedures	Safe operating procedures may include, but are not limited to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
Emergency procedures	Emergency procedures related to this unit are to include, but may not be limited to: • emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
Environmental requirements	Environmental requirements are to include, but are not limited to: • waste management, noise, dust and clean-up management
Quality requirements	Quality requirements are to include, but are not limited to: • regulations, including Australian Standards, company quality policy and standards and enterprise operations and procedures
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State and local authorities administering the applicable acts, regulations and codes of practice
Tooling and equipment	Tooling and equipment may include: • hand tooling, vehicle lifting equipment and testing equipment, including multimeters, power tooling, air tooling, specialist tooling for removal/adjustment and brake decelerometer
Materials	Materials may include: • spare parts, lubricants, fluids and cleaning materials
Communications	Communications are to include, but are not limited to: • verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to the repair of electric braking systems • regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules • engineer's design specifications and instructions • organisation work specifications and requirements

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify finance/leasing options and documentation	1.1. Finance/leasing option is identified to meet specific needs of customer, including affordability and payment structure 1.2. A finance/leasing provider is identified
2. Apply finance/leasing documentation	2.1. Contracts and finance/leasing documents are completed and agreed/signed by customer 2.2. Legal requirements are identified and observed
3. Identify insurance policies and documentation	3.1. Type of insurance policy for customer is identified taking into account customer's requirements and insurance document and vehicle type and age 3.2. Insurance provider is chosen according to policy price, customer requirements and enterprise policies and procedures
4. Apply insurance documentation	4.1. Insurance contract/policy documentation is completed and agreed/signed by customer 4.2. Legal requirements are identified and observed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
• collect, organise and understand information related to information from different insurance providers is collated • communicate ideas and information presented to the customer • plan and organise activities to obtain information for customers • work with others and in a team by consulting experienced/ specialised staff • use mathematical ideas and techniques to ensure variations in cover and cost are presented to the customer • establish diagnostic processes for recommendations made on information supplied by the customer • use workplace technology related to business technology to document insurance and finance information
Required knowledge
Knowledge of: • industry documents and how to maintain them • various types of finance/lease agreements • written communication • oral communication skills • various types of insurance policies • legal requirements

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment

	critical aspects of: • correctly identifies and satisfies customer finance/ leasing and insurance requirements and completing documentation • interpreting and conveying workplace information • maintenance of workplace documents.

Context of and specific resources for assessment	• The underpinning knowledge and skills may be assessed on or off the job.
	• The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
	• The prescribed outcome must be achieved without direct supervision.
	• The following should be made available:
	  • a workplace or simulated workplace
	  • finance and leasing agreements
	  • insurance policies
	  • documents and stationery
	  • computer, calculator and general office equipment
	  • a qualified workplace assessor.

Method of assessment	Practical assessments: • maintain industry documents • convey information both orally and in writing • access, interpret and apply finance/lease agreements • access, interpret and apply insurance policies • complete finance/leasing and insurance documentation.
Guidance information for assessment

AURETR2010 Fabricate, test and repair wiring harnesses and looms

Modification History

Release	Comment
Release 1	ReplacesAURE220140A Manufacture and repair wiring harness/looms Performance Criteria and Range Statement updated to reflect technologies

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes required to fabricate wiring harnesses and looms, check their continuity to specification or drawing, test for functionality, and decide preferred repair action. It also includes the removal, replacement and labelling of wiring harness and loom assemblies that are an integral part of a vehicle's electrical system. The unit also involves identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	Work applies to wiring harnesses and looms fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments. Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. ***Workplace instructions*** are used to determine ***job requirements*** 1.2. ***Workplace health and safety (WHS) requirements*** are observed throughout the work 1.3. ***Procedures and information*** are sourced and interpreted 1.4. ***Tools and equipment*** are identified for effective fabrication, testing and repair methods
2. Check and test wiring harness and loom assembly	2.1. ***Wiring harness and looms*** are visually checked to establish the extent of damage 2.2. ***Options for diagnosing faults*** are used, using appropriate tools and diagnostic techniques 2.3. Components or systems are checked without causing damage to components or systems as a result of ***inappropriate testing procedures*** 2.4. ***Faults*** are identified and preferred repair action is determined

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3. Remove, replace and label wiring harness and loom	3.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications 3.2. Wiring harness and loom are labelled and removed using tools and techniques 3.3. Associated components are labelled, removed and tagged for storage 3.4. Repaired and fabricated harness and loom are correctly refitted to vehicle and reconnected according to manufacturer and component supplier specifications 3.5. Removal, replacement and labelling are completed according to industry regulations and guidelines, and WHS and workplace policies and procedures, and without causing damage to components or systems
4. Repair wiring harness and loom	4.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications 4.2. ***Repair options*** are carried out using tools, diagnostic techniques and materials 4.3. Repairs are carried out according to industry regulations and guidelines, and WHS and workplace policies and procedures
5. Fabricate wiring harness and loom	5.1. Electrical circuit wiring diagrams are accessed and interpreted from manufacturer and component supplier specifications 5.2. Harness and loom are fabricated to approved specifications using tools and contemporary fabrication techniques and materials 5.3. ***Post-repair testing*** of the harness and loom is conducted and results are documented according to workplace policies and procedures
6. Clean up work area and maintain equipment	6.1. Workplace documents are completed according to site requirements 6.2. Material that can be reused is collected and stored 6.3. Waste and scrap are removed following workplace procedures 6.4. Tools, equipment and work area are cleaned, inspected for serviceable condition, and maintained according to workplace procedures 6.5. Faulty equipment is identified, tagged and isolated according to workplace procedures 6.6. Operator maintenance is completed according to manufacturer and component supplier specifications and site procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - recognise a workplace problem or potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to repairing vehicle wiring systems, including:
  - specialist tools and equipment
  - electrical measuring equipment
- technology skills to:
  - operate a range of electrical diagnostic test equipment
  - use technology to collect, analyse and provide information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - codes of practice
  - personal protection needs
- wiring harness and loom fabrication techniques
- procedures for removing and replacing wiring harness and looms
- soldering procedures and techniques
- cable types and sizes and current carrying capacity
- various types of wiring systems found in vehicles, including:
  - basic wiring
  - twisted pair
  - shielded wiring
  - databus networks
- techniques for reading and interpreting technical information, wiring diagrams and graphic symbols
- diagnostic and testing procedures, including:
  - testing procedures for wiring harnesses and looms, including resistance and voltage drop and circuit performance checks
  - analysis of system operation using basic electrical test equipment and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
    - water and moisture ingress
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge. A person who demonstrates competency in this unit must be able to: • observe safety procedures and requirements • select methods and techniques appropriate to the circumstances • complete preparatory activity in a systematic manner • select and use appropriate materials for fabricating, testing and repairing wiring harnesses and looms • test wiring of harnesses and looms and locate potential faults • remove and replace wiring harnesses and looms • test and repair wiring harnesses and looms to manufacturer specification • perform electrical connections, including crimping and soldering to manufacturer specification • perform a terminal retention check following replacement of terminals in a wiring connector • fabricate wiring harnesses.
Context of, and specific resources for assessment	Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Assessment is to occur: • using standard workplace practices and procedures • following safety requirements • applying environmental constraints. Assessment is to comply with relevant: • regulatory requirements • Australian standards • industry codes of practice. The following resources must be made available for the assessment of this unit: • workplace location or simulated workplace • material relevant to the fabrication and repair of wiring harnesses and looms • equipment, and hand and power tools appropriate to fabricating, testing and repairing wiring harnesses and looms • specifications and work instructions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Method of assessment	Assessment must satisfy the endorsed Assessment Guidelines of this Training Package. Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge. Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application. Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients. Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Workplace instructions may include:	• electronic or hard copy instructions • verbal instructions • written instructions.
Job requirements may include:	• diagnosis and repair methods, processes and equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Workplace health and safety requirements may include:	• personal protective clothing and equipment • hazards associated with high voltage ignition systems • safe use of tools and equipment • safe handling of material • use of fire-fighting equipment • workplace safety policies and procedures • workplace first aid equipment • hazard control, including control of hazardous materials and toxic substances.
Procedures and information may include:	• verbal, written and graphical instructions • signage • work schedules, plans and specifications • work bulletins and memos • material safety data sheets • diagrams and sketches • regulatory and legislative requirements relating to automotive industry • Australian Design Rules • engineer's design specifications and instructions • workplace work specifications and requirements • instructions issued by authorised workplace or external persons • Australian standards • vehicle service requirements and repair manuals.
Tools and equipment may include:	• hand tools • testing equipment, including multimeters and ohmmeters • insulation testers • crimping tools • soldering iron • heat-gun or blower • wire and cabling of various colours and sizes • heat shrink sleeving and flexible conduit • terminals and connectors • electrical tape.

Wiring harness and looms may include:	• basic single wiring, for example:
	  • tailer harness
	  • driving lights harness
	• complex multi-wiring with varying wire gauges
	• CAN-bus network wiring, including:
	  • twisted pair
	  • shielded wiring.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Options for diagnosing faults may include:	• continuity testing • insulation testing • isolation of faults • visual inspection and evaluation of components.

Inappropriate testing procedures may include:	• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes:
	  • back probing terminals and connectors and fuse holders with inappropriate test probes
	  • probing terminal and connectors with inappropriate test probes
	  • pushing sharp probes and objects into wiring insulation.

Faults may include:	• open circuits • short circuits • damaged insulation • frayed wires • burnt wiring • water and moisture ingress • connector damage • terminal damage • diagnosis trouble codes (DTC) being set.

Repair options may include:	• pre- and post-repair testing
	• identifying and testing components
	• diagnosing and determining faults
	• component repair procedures, including:
	  • removal, replacement and adjustment procedures
	  • dismantle, repair, reassembly and adjustment procedures
	• electrical measurements
	• peak voltage testing
	• visual and functional assessments, including for damage and wear.

Post-repair testing may include:	• validating effectiveness of the repair action • confirming that reported fault has been rectified • confirming that no other faults are present as a result of the repair action.

AURETR2012 Test and repair basic electrical circuits

Modification History

Release	Comment
Release 1	Replaces AURE218708A Carry out repairs to single electrical circuits Performance Criteria and Range Statement updated to reflect technologies

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes required to test and carry out repairs to basic electrical circuits in an automotive retail, service or repair environment. The unit also involves identifying and confirming work requirements, preparing for work, identifying faults and potential causes, repairing and replacing basic circuit components, and completing work finalisation processes, including clean-up and documentation. It includes replacing fuses, circuit breakers, lamps, switches, terminals and connectors; and basic wiring repairs. It includes the following fault types: open circuits, short circuits and high resistance circuits to power, signal and ground paths. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	Work applies to testing and repairing basic electrical circuits in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments. It applies to circuits in an automotive retail, service or repair environment. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment within the scope of this unit.

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. ***Workplace instructions*** are used to determine ***job requirements*** 1.2. ***Workplace health and safety (WHS) requirements*** are observed throughout the work 1.3. ***Procedures and information*** are sourced and interpreted 1.4. ***Tools and equipment*** are identified for effective testing and repair procedures
2. Test basic electrical circuits and identify faults	2.1. ***Basic electrical circuits*** are visually checked to establish the extent of failure or damage, applying knowledge of electrical fundamentals 2.2. ***Options for diagnosing faults*** are identified and used, using appropriate tools and diagnostic techniques 2.3. Inspection and testing are undertaken without causing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	damage to components or systems as a result of ***inappropriate testing procedures*** 2.4. ***Faults*** are identified from test results and causes of faults are determined 2.5. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Complete repairs to basic electrical circuits	3.1. ***Repair options*** are analysed and those most appropriate are selected 3.2. Appropriate tools, repair techniques and materials are selected and prepared 3.3. Repairs and component replacements and adjustments are carried out without causing damage, according to workplace procedures and manufacturer and component supplier specifications 3.4. ***Post-repair testing*** is conducted and results are documented according to workplace procedures
4. Prepare vehicle and equipment for delivery to customer after repair is completed	4.1. Final inspection is made to ensure work is to workplace expectations 4.2. Vehicle is cleaned to workplace expectations and presented ready for use 4.3. Workplace documentation is processed according to workplace procedures
5. Clean up work area and maintain equipment	5.1. Material that can be reused is collected and stored 5.2. Waste and scrap are removed following workplace procedures 5.3. Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures 5.4. Faulty equipment is identified, tagged and isolated according to workplace procedures 5.5. Operator maintenance is completed according to manufacturer and component supplier specifications and site procedures 5.6. Tools and equipment are maintained according to workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to apply learning when testing and repairing basic electrical circuits
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document work performed
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
- planning and organising skills to ensure tasks are completed within an acceptable time frame
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technical skills to use workplace technology and tools to test and repair basic electrical circuits and components in vehicles, including:
  - specialist tools and equipment
  - electrical measuring equipment
- technology skills to:
  - operate a range of electrical diagnostic test equipment
  - use technology to collect, analyse and provide information

Required knowledge

- WHS regulations, requirements, equipment and material relating to testing and repairing electrical circuits, including personal safety requirements
- electrical principles, including:
  - current, voltage, resistance and power
  - series circuits
  - parallel circuits
  - series and parallel circuits
  - Ohm’s law
- basic electrical circuit components, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• cable types and sizes and current carrying capacity • circuit protection devices • switches • relays • automotive globes • techniques for reading and interpreting technical information, including circuit types, diagrams and symbols • types and operation of electrical testing equipment, including: • digital multimeters • test lights and probes • electrical measuring and testing procedures, including: • resistance and voltage drop tests • open and short circuit tests • inspecting for component moisture ingress and connector damage • repair procedures of electrical circuits, including: • wire soldering procedures • terminal crimping • removal and replacement procedures for basic electrical components

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge. A person who demonstrates competency in this unit must be able to: • observe safety procedures and requirements • select methods and techniques appropriate to the circumstances • complete preparatory activity in a systematic manner • read and interpret circuit wiring diagrams

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• test basic electrical circuits to determine short, open and high resistance between power, signal and ground paths • demonstrate understanding of the principle of current flow in a simple circuit and voltage drop across a resistive load • test and repair basic wiring harnesses and looms to manufacturer specifications • perform electrical connections, including crimping and soldering to manufacturer specification • perform a terminal retention check following replacement of terminals in a wiring connector • accurately interpret test results • present vehicle and equipment in a condition that complies with workplace requirements.
Context of, and specific resources for assessment	Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Assessment is to occur: • using standard workplace practices and procedures • following safety requirements • applying environmental constraints. Assessment is to comply with relevant: • regulatory requirements • Australian standards • industry codes of practice. The following resources must be made available for the assessment of this unit: • workplace location or simulated workplace • material relevant to testing and repairing basic electrical circuits and components • equipment, and hand and power tools appropriate to testing and repairing basic electrical circuits and components • specifications and work instructions.
Method of assessment	Assessment must satisfy the endorsed Assessment Guidelines of this Training Package. Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge. Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	correct interpretation and application. Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients. Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Workplace instructions may include:	• electronic or hard copy instructions • verbal instructions • written instructions.
Job requirements may include:	• testing and repair methods, processes and equipment.
Workplace health and safety requirements may include:	• personal protective clothing and equipment • hazards associated with high voltage ignition systems • safe use of tools and equipment • safe handling of material • use of fire-fighting equipment • workplace safety policies and procedures • workplace first aid equipment • hazard control, including control of hazardous materials and toxic substances • identifying hazards associated with soldering processes • identifying hazards associated with working with vehicle supplementary restraint systems (SRS).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Procedures and information may include:	• verbal, written and graphical instructions • signage • work schedules, plans and specifications • work bulletins and memos • material safety data sheets • diagrams and sketches • regulatory and legislative requirements relating to automotive industry • Australian Design Rules • engineer's design specifications and instructions • workplace work specifications and requirements • instructions issued by authorised workplace or external persons • Australian standards • vehicle service requirements and repair manuals.
Tools and equipment may include:	• hand tools • digital multimeters • test lights and probes • insulation testers • crimping tools • soldering iron • heat-gun or blower • wire and cabling of various colours and sizes • heat shrink sleeving and flexible conduit • terminals and connectors • electrical tape.
Basic electrical circuits may include:	• basic single wire circuits (non CAN-bus networked circuits) • door ajar switch interior courtesy light • battery B+ to fuse panel • accessory B+ to lighter or accessory socket • heated rear demister • interior lighting • exterior lighting • rear brake lighting • wiper and washer • electric engine cooling fan.
Options for diagnosing faults may include:	• verification of fault • continuity testing • insulation testing • isolation of faults • replacement of blown fuses

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• replacement of blown globes and lamps • replacement of damaged terminals and connectors • visual inspection and evaluation of components.

Inappropriate testing procedures may include:	• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes:
	  • back probing terminals and connectors and fuse holders with inappropriate test probes
	  • probing terminal and connectors with inappropriate test probes
	  • pushing sharp probes and objects into wiring insulation.

Faults may include:	• open circuits • high resistance circuits • short circuits • damaged insulation • frayed wires • burnt wiring • water and moisture ingress • connector damage • terminal damage • diagnosis trouble codes (DTC) being set.

Repair options may include:	• pre- and post-repair testing
	• identifying and testing components
	• diagnosing and determining faults
	• component repair procedures, including:
	  • removal, replacement and adjustment procedures
	  • dismantle, repair, reassembly and adjustment procedures
	• electrical measurements
	• visual and functional assessments, including for damage and wear.

Post-repair testing may include:	• validating the effectiveness of the repair action • confirming that reported fault has been rectified • confirming that no other faults are present as a result of the repair action.

AURETR2015 Inspect and service batteries

Modification History

Release	Comment
Release 1	Replaces AURE218670A Service, maintain or replace batteries Performance Criteria and Range Statement updated to reflect technologies

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes required to inspect and service batteries. The unit involves identifying and confirming work requirements, preparing for work, testing batteries, analysing test results, servicing and maintaining batteries, and completing work finalisation processes, including clean-up and documentation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Application of the Unit

Application of the unit	Work applies to light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments. Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Licensing/Regulatory Information

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect battery	1.1. Nature and scope of work requirements are identified and confirmed 1.2. ***Workplace health and safety (WHS) requirements***, including state and territory regulatory requirements, and ***personal protective equipment (PPE)*** needs, are observed throughout the work 1.3. ***Safe operating procedures*** and information are sourced 1.4. Technical requirements necessary for inspection are sourced, and tools, ***equipment*** and ***materials*** are identified and prepared
2. Test battery	2.1. Test methods are implemented according to workplace procedures and manufacturer and component supplier specifications 2.2. Test results are compared with manufacturer and component supplier specifications 2.3. Results are documented with evidence, and supporting information is recorded 2.4. Test results and findings are communicated to the appropriate workshop personnel for replacement or repair action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Carry out service and maintenance to battery	3.1. ***Service and maintenance methods*** are carried out according to workplace procedures and manufacturer and component supplier specifications 3.2. Electrolyte levels are checked and topped up where appropriate according to service and maintenance methods 3.3. Battery terminals and connection to vehicle wiring are inspected 3.4. Condition is reported to persons responsible for repair action 3.5. Batteries and terminals are cleaned according to service and maintenance methods
4. Prepare vehicle and equipment for delivery to customer after service is completed	4.1. Final inspection is made to ensure work is to workplace expectations 4.2. Vehicle is cleaned to workplace expectations and presented ready for use 4.3. Workplace documentation is processed according to workplace procedures
5. Clean up work area and maintain equipment	5.1. Work schedule and job card documentation are completed 5.2. Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures 5.3. Faulty equipment is identified, tagged and isolated according to workplace procedures 5.4. Tools and equipment are maintained according to workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - follow verbal and written instructions
  - communicate basic information relating to battery safety
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - participate in self-improvement activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- recognise a workplace problem or potential problem
- literacy skills to:
  - read and interpret technical information relating to recognising and reporting unsafe situations
  - read, understand and follow battery inspection and maintenance information
  - read, understand and follow information on standard operating procedures and repair guidelines
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired battery performance
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities that implement standard workplace procedures
- problem-solving skills to refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - locate and identify appropriate tools and equipment
  - locate technical information
  - recognise limitations and seek timely advice
- teamwork skills to:
  - work with others and in a team by cooperating with team members
  - work with diverse individuals and groups
- technical skills to:
  - select tools and equipment appropriate to inspecting, servicing and maintaining batteries in light and heavy vehicles, mobile plant and mining vehicles
  - use battery servicing and testing tools and equipment safely
  - maintain tools and equipment using appropriate techniques and standard operating procedures
- technology skills to use workplace technology to:
  - assist with work practices
  - inspect, service and maintain battery storage systems, including use of specialist tools, measuring equipment and communication devices
  - report and document inspection and servicing results

Required knowledge

- WHS and environmental regulations, requirements, equipment, material and personal safety requirements to ensure batteries are maintained, handled and disposed of in an environmentally sustainable manner
- battery service and maintenance procedures
- battery testing methods
- dangers of working with battery testing equipment
- operating principles and layout of vehicle battery storage systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• original equipment manufacturer (OEM) specific procedures for inspecting maintenance-free batteries • workplace quality procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge. A person who demonstrates competency in this unit must be able to: • observe safety procedures and requirements • select methods and techniques appropriate to the circumstances • complete preparatory activity in a systematic manner • inspect, service and maintain battery storage systems in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments according to manufacturer and component supplier and site requirements • inspect, service and maintain at least three different types of batteries according to manufacturer and site requirements • complete workplace documents.
Context of, and specific resources for assessment	Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Assessment is to occur: • using standard workplace practices and procedures • following safety requirements • applying environmental constraints. Assessment is to comply with relevant:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• regulatory requirements • Australian standards • industry codes of practice. The following resources must be made available for the assessment of this unit: • workplace location or simulated workplace that best reflects a light or heavy vehicle service facility or environment • material relevant to inspecting, servicing and maintaining battery storage systems • equipment, and hand and power tools appropriate to servicing and maintaining batteries • specifications and work instructions.
Method of assessment	Assessment must satisfy the endorsed Assessment Guidelines of this Training Package. Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge. Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application. Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients. Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Workplace health and safety requirements may include:	• personal protective clothing and equipment • safe use of tools and equipment • safe handling of potentially hazardous material and substances • use of fire-fighting equipment • first aid training and response • control of hazards and hazardous materials.
Personal protective equipment may include:	• safety glasses • protective clothing • gloves.
Safe operating procedures may include:	• conducting operational risk assessment • treatments associated with vehicle movement • toxic substances • electrical safety • machinery movement and operation • manual and mechanical lifting and shifting • procedures for working in proximity to others and site visitors.
Tools and equipment may include:	• hand tools • load testing devices • hydrometer • multimeter.
Materials may include:	• battery consumables • cleaning materials.
Service and maintenance methods may include:	• inspecting battery and leads • inspecting battery securing system • cleaning battery and battery compartments • topping battery fluid • testing battery with a hydrometer.

AURSAA2001 Process customer complaints

Modification History

Release	Comment
Release 1	Replaces AURS252290A Process customer complaints Unit code updated to meet policy requirements Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit of competency covers the competence to deal with customer complaints in a manner satisfying the customer but complies with enterprise policies and procedures. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	Every action or output has a customer and therefore customers may be internal work colleagues or external to the enterprise.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Clarify the nature of complaint	1.1. Details of the complaint are established 1.2. Summary of the complaint is documented accurately 1.3. Any inconvenience to the customer is acknowledged and an apology is made
2. Identify options for complaint resolution	2.1. Options for resolving the complaint are identified 2.2. Complaint is referred to designated officer if resolution is not possible
3. Act to resolve complaint	3.1. Optimal solution is negotiated with customer 3.2. Chosen solution is implemented within agreed timeframe 3.3. Necessary documentation is finalised 3.4. Effectiveness of solution and related outcomes is evaluated 3.5. Any necessary changes to enterprise procedures are identified and passed on to appropriate persons for action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to:
- technical literacy and interpretive skills to interpret and discern facts related to the customer complaint
- basic research and analytical skills to investigate and identify factors which caused/contributed to the complaint
- communicate ideas and information
- plain English literacy and communication skills in relation to dealing with customers and their complaints
- questioning and active listening skills, for example when obtaining factual information from excitable customers
- plan and organise activities to plan an approach to identify and resolve a complaint
- work with others and in a team by involving a designated officer if solution is not possible
- use mathematical ideas and techniques when options/solutions are costed
- establish diagnostic processes including basic conflict resolution skills for handling difficult or abusive customers, and greeting/farewelling techniques
- use workplace technology related to use of business technology to make changes to enterprise procedures

Required knowledge

- general knowledge of range of enterprise merchandise and services, location of departments/sections and telephone extensions of departments/sections
- general operational knowledge of industry/workplace codes of practice in relation to customer service
- basic working knowledge of legislation and statutory requirements, including consumer law, trade practices and fair trading legislation
- working knowledge of enterprise policies and procedures in regard to:
  - customer service
  - dealing with difficult customers
  - allocated duties/responsibilities
- working knowledge of enterprise complaints handling procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of: • accurately clarifying the nature and extent of complaint • identifying options for complaint resolution • resolving complaint to customer satisfaction • contributing to avoidance of further complaints • communicating effectively with others involved in or affected by the work.

Context of, and specific resources for assessment	• Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment covering a range of customer types
	• The following are required:
	  • a workplace or simulated workplace
	  • enterprise or equivalent policy and procedures relating to customer service and complaint handling processes
	  • enterprise or equivalent instructions related to legal implications of customer relations and complaints
	  • a range of customers with complaints (real or simulated)
	  • a qualified workplace assessor.

Method of assessment	• This unit may be assessed in conjunction with other units forming part of the job role or function • It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Guidance information for

EVIDENCE GUIDE	
assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Complaints	Complaints may include: • matters related to personal interaction with customers, incorrect products, faulty products, charging/costing policy, delivery system failures, installation deficiencies and service delays
Customers	Customers may be regular or new and may have routine or special requests. They may include persons from a range of social, cultural or ethnic backgrounds and physical and intellectual abilities. Regardless, customers are made feel welcome, valued and, at end of the process, satisfied. Customer contact may be face to face, by telephone, by electronic means or in writing
Customer service	Customer service may include: • enterprise activities, internal and external customers and follow-up in event of delays in service provision
Customer needs	Customer needs may include: • information regarding products or services available, quality of products or services, complementary products or services, enterprise facilities and services and location of specific items
Staff	Staff may be:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• full-time, part-time or casual and vary in terms of staff training, product knowledge and in staffing levels (e.g. staff shortages) • operating in routine or busy trading conditions
Enterprise	Enterprises may vary in size, type and location, in range of merchandise and services provided and in delivery policies
Communication	Communications may be: • verbal, written, by telephone, by electronic or other available means
Record keeping	Accurate records of information are completed and may be stored manually, electronically or by other means
Resources	Resources may include: • enterprise or equivalent policy and procedures relating to customer service and complaint handling processes • enterprise or equivalent instructions related to legal implications of customer relations and complaints • a range of customers with complaints (real or simulated)
Information/documents	Sources of information/documents may include: • enterprise policies and procedures relating to customer service, equipment and product manufacturer/component supplier specifications, enterprise operating procedures, industry/workplace codes of practice, customer requirements

AURSBA3002 Apply automotive parts interpretation process

Modification History

Release	Comment
Release 1	Replaces AURS338103A Apply automotive parts interpretation process Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit of competency covers the competence to identify uncommon or unusual automotive parts based on evidence from customers and/or other sources which may include catalogue numbers, samples and verbal, written or graphic descriptions of parts or their purpose. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	The parts or vehicle may not be in common use and therefore research and/or interpretation may be required to identify and satisfy customer requirements.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the part and its end use	1.1. Customer is made to feel welcome and valued 1.2. Available information on required part is gathered, documented and confirmed with customer 1.3. End use or host for the part, i.e. vehicle/unit assembly or vehicle/unit assembly options, is established from an analysis of available information
2. Identify and record details of the part	2.1. The parts cataloguing system to host vehicle/unit is identified and accessed 2.2. Part is matched accurately with cataloguing information by accessing and using the catalogue system, its aids and user guides 2.3. Expert advice is sought from provider/supplier to clarify imprecise identification outcomes 2.4. Details of identity of the part are documented and processed
3. Part is supplied or ordered for customer	3.1. Customer accepts process used 3.2. Part is supplied or ordered if not in stock 3.3. Customer records are updated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to technical literacy and interpretive skills sufficient to access keywords and phrases and to interpret schematics and technical drawings
- communicate ideas and information
- questioning and active listening skills, for example when eliciting information on product and end use issues
- plain English literacy and communication skills in relation to dealing with customer and providers/suppliers
- plan and organise activities when planning a logical approach to identify part/product
- work with others and in a team by seeking assistance from team members
- use mathematical ideas and techniques to estimate quantities if part/product is to be ordered
- establish diagnostic processes including problem-solving and analytical skills for a range of unpredictable circumstances, for example, clarifying a general need and researching through parts catalogue systems to correctly identify part or technically acceptable options. This may involve recognition of pathways addressing country of origin, historic or period-based terminology/language variations
- use workplace technology related to computing skills in relation to accessing and interpretation of computer-based parts catalogue systems

Required knowledge

- general knowledge of current and historic automotive terminology
- general knowledge of main automotive systems and assemblies and their functions
- general knowledge of historic background to the parts system
- general knowledge of range of manual and computerised parts catalogue systems in common usage throughout industry
- detailed knowledge of the parts catalogue systems, both brand specific and general options, used by enterprise
- general knowledge of legal issues associated with supply and use of non-conforming parts/components/accessories
- broad knowledge of workplace health and safety (WHS) in relation to customer safety and ergonomics of computer workstations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of: • eliciting sufficient information from the customer and/or other sources to enable a confirmed identification of vehicle or unit the part is intended • identifying and locating parts catalogue systems associated with required vehicle/unit • using parts catalogues and equivalent documentation, both hard copy and electronic, to trace and identify specific brand parts • using parts catalogues and equivalent documentation, both hard copy and electronic medium, to trace and identify general or optional parts/products.

Context of, and specific resources for assessment	• Assessment is to cover both manual and computer-aided/ based parts catalogue systems
	• Assessment of this unit must be completed on the job or in a simulated work environment reflecting a range of parts identification requirements in terms of available information, customer types and complexity of parts tracking.
	• Assessment must cover both specified brand and general parts and is to occur in an environment where competing demands of a number of customers are evident
	• The following are required:
	  • a workplace or simulated workplace
	  • customers and requests for parts information
	  • parts cataloguing systems (both computerised and manual)
	  • a qualified workplace assessor.

Method of assessment	• It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover varying

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	circumstances. • Customers, team leaders/members or other appropriate persons, subject to agreed authentication arrangements, may provide evidence of performance • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role • This unit should be assessed in conjunction with other units within context of the candidate's job role or function.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Automotive parts	Automotive parts may include: • automotive parts, components and accessories specific to vehicle type or are for general use by industry. They will generally be for older, rare or specialised vehicles
Customers	Customers include both external and internal customers who may be technically qualified to describe parts, or technical novices requiring detailed support. Regardless, customers are made feel welcome, valued and, at end of the process, satisfied
Vehicle/unit identity options	An examination of a sample of required part or customer vehicle may be necessary to clarify situation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Solution	Solution is not necessarily apparent where hybrid vehicles/units are concerned and a range of options may need to be identified and pursued
Legislative requirements	Legislative requirements include: • state/territory legislation related to WHS and Australian Design Rules
Communications	Communications with customer/user may be: • face to face, by telephone or by other electronic means
Recording of information	Recording of information provided by customer may need to be used when customer is no longer present and therefore an accurate record of information needs to be completed, retained and recovered when needed
Resources	Resources may include: • hard copies of catalogues, databases and access to internet
Parts information	Parts information may include: • manufacturer/component supplier specifications and technical documentation, enterprise procedures and documentation, enterprise or industry comparative specifications, diagrams, sketches, verbal descriptions and physical and visual evidence This may range from an accurate catalogue number or reference to a generalised description of purpose by a customer who has little technical knowledge or expertise
Information gathering techniques	• Customer may require active assistance and questioning to fully describe requirement in terms of vehicle/unit model, date of manufacture, purpose and appearance of the part and other tracking information • Customer may be seeking an inappropriate solution to a technical problem and if sufficient doubt exists, may require referral to a service provider
Parts cataloguing systems	Parts cataloguing systems may be:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• hard copy (book-fast, loose-leaf) micro-fiche/micro-film, stand-alone computer or networked/on-line computer-supported services Depending on age of required part, any or all of above systems may need to be accessed
Catalogue system aids and user guides	Catalogue system aids and user guides may include: • written instructions within the system, guides in the form of diagrams, flow charts and process schematics, menus and prompts and one to three dimensional system/component diagrams, models and graphics
Provider/supplier information	Provider/supplier information is not always required, but should be sought or accessed where incorrect identification of parts may result in legal liability, customer dissatisfaction and/or alienation

Release 1	Replaces AURS238127A Identify and select automotive parts and products Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit of competency covers the competence required to identify automotive parts and products based on evidence from customers and/or other sources which may include catalogue numbers or samples of parts/products or their purpose. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	It requires application of both manual and computer based catalogue or equivalent systems. Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the part/product and its end use	1.1. Customer is made to feel welcome and valued 1.2. Available information on the required part/product is gathered, documented and confirmed with customer 1.3. End use or host for the part/product, i.e. vehicle/unit assembly or vehicle/unit assembly options, is established from an analysis of available information
2. Identify details of the part/product	2.1. The parts/product cataloguing system is identified and accessed 2.2. Part/product is matched accurately with cataloguing information by accessing and using the catalogue system 2.3. Details of identity of the part/product are documented and processed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Part/product is supplied or ordered for customer	3.1. Customer accepts process used 3.2. Part/product is supplied or ordered if not in stock 3.3. Customer records are updated

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customer and team members
- apply questioning and active listening skills, for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons, including product specialists, both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems, to systematically develop solutions to avoid or minimise reworking and to avoid wasting customer time
- use mathematical ideas and techniques to correctly calculate material requirements, estimate and calculate costs and establish quality checks
- use workplace technology related to customer services, including use of measuring equipment, computerised technology, use of communication devices and reporting/ documenting of results

Required knowledge

A working knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• workplace health and safety (WHS) in relation to customer safety and ergonomics of computer workstations • common automotive terminology • the main automotive systems and assemblies and their functions • the parts/product catalogue systems, both brand-specific and general options, used by enterprise • the legal issues associated with the supply and use of non-conforming parts/components/accessories • enterprise quality processes • work organisation and planning processes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of: • eliciting sufficient information from the customer and/or other sources to enable a confirmed identification of vehicle or unit the part/product intended • accessing the parts/products catalogue systems associated with required vehicle/unit • using both manual and computer-based parts/products catalogues and equivalent documentation to trace and identify common specific brand parts/products • communicating effectively with others involved in or affected by the work.
Context of, and specific resources for assessment	• Application of competence is to be assessed in the workplace or simulated worksite. • Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints. • Assessment is to comply with regulatory requirements, including Australian standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	

	• The following resources should be made available:
	  • workplace location or simulated workplace
	  • information and material identifying and selecting automotive parts and products
	  • equipment identifying and selecting automotive parts and products
	  • activities covering task requirements
	  • specifications and work instructions.

Method of assessment	• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies. • Assessment may be applied under project related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT	
conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Automotive part/product	Automotive part/product may include: • automotive parts, components and accessories specific to vehicle type or are for use by industry, and refinishing and treatment products
Customers	Customers include both external and internal customers who may be technically qualified to describe parts/products, or technical novices requiring detailed support. Regardless, customers are made feel welcome, valued and, at end of the process, satisfied
Part/product information	Part/product information may include: • manufacturer/component supplier specifications and technical documentation, enterprise procedures and documentation, enterprise or industry specifications, diagrams, sketches, verbal descriptions and physical and visual evidence
Information gathering techniques	Customer may require active assistance and questioning to fully describe requirement in terms of common vehicle/unit model, date of manufacture, purpose and appearance of product and other tracking information
Recording of information	Information provided by customer may need to be used when customer is no longer present and therefore an accurate record of information needs to be completed, retained and recovered when needed
Parts/products cataloguing systems	Parts/products cataloguing systems may be hard-copy (book-fast, loose-leaf), stand-alone computer or networked/online computer-supported services
Provider/supplier information	Provider/supplier information is not always required, but should be sought or accessed where incorrect identification of the part/product may result in legal liability, customer dissatisfaction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	and/or alienation
WHS requirements	WHS is to be in accordance with legislation/regulations/ codes of practice and enterprise safety policies and procedures, and may include: • protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire-fighting equipment, enterprise first-aid, hazard control and hazardous materials and substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
Safe operating procedures	Safe operating procedures are to include, but are not limited to: • conduct of operational risk assessment and treatments associated with customer safety and working in proximity to others and site visitors
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to: • enterprise first aid requirements and site evacuation
Environmental requirements	Environmental requirements are to include, but are not limited to: • pollution and clean-up management
Quality requirements	Quality requirements are to include, but are not limited to: • regulations, including Australian standards, enterprise quality policy, standards, operations and procedures
Legislative requirements	Statutory/regulatory authorities may include: • federal, state/territory and local authorities administering acts, regulations and codes of practice
Communications	Communications are to include, but are not

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	limited to: • verbal and visual instructions and may include site specific instructions, telephones and pagers
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions, signage, product specifications, catalogues, equipment manuals, databases, internet, material safety data sheets (MSDS) and graphical instructions • safe work procedures related to site and customer safety • regulatory/legislative requirements pertaining to commercial and retail operations and facilities • organisational work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian standards

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maximise and maintain presentation of vehicle/ products for sale	1.1. Vehicle/product is clean and prepared to maximise market appeal in accordance with enterprise policies and procedures 1.2. Vehicle/product is placed in correct position to maximise presentation 1.3. Vehicle/product condition is monitored and action taken where necessary to maintain maximum market appeal
2. Maximise presentation of sales area	2.1. Presentation area is defined from floor plan in accordance with enterprise policies and procedures 2.2. Minimum vehicle/product numbers/types are determined and presented 2.3. Display areas are clean, tidy and safe 2.4. Correct handling, storage and display techniques are adopted according to vehicle/product types, enterprise and industry practices
3. Review acceptance of presentation of stock and sales area	3.1. Feedback from customers is sought 3.2. Customer feedback is collated and analysed 3.3. Action is taken

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
• collect, analyse and understand information related to feedback from customers • communicate ideas and information to draft presentation to management for support • plan and organise activities to design presentation area • work with others and in a team by involving other members of sales team in design and maintenance • use mathematical ideas and techniques to develop roster to maintain area • establish diagnostic processes for which design is both practical and safe • use workplace technology related to process feedback
Required knowledge
• enterprise policies and procedures • enterprise sales presentation area and floor plan arrangements • vehicle/product preparation and presentation techniques • vehicle/product models/types

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of: • presenting vehicle/products in a manner to maximise market appeal • maintaining suitable sales presentation area • communicating effectively with others involved in or affected by the work.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	

Context of, and specific resources for assessment	• Underpinning knowledge and skills may be assessed on or off the job
	• The following are required:
	  • vehicle/products for sale
	  • suitable presentation area
	  • sales material (e.g. brochures, pamphlets, banners, flags, stands, ramps, turntables)
	  • a qualified workplace assessor.

Method of assessment	• Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
	• Prescribed outcome must be able to be achieved without direct supervision.
	• Practical assessments:
	  • present vehicle/products to maximise market appeal
	  • maintain maximum merchandising effect of sales presentation area.
	• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

Guidance information for assessment

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Demonstrate product knowledge	1.1. Knowledge of use and application of products and services is demonstrated 1.2. Experienced sales staff or product information guide are consulted to increase product knowledge
2. Approach customer	2.1. Timing of customer approach is determined and applied 2.2. Effective sales approach is identified and applied 2.3. Positive impression is conveyed to arouse customer interest 2.4. Knowledge of customer buying behaviour is demonstrated 2.5. Customer is focused on specific merchandise
3. Customer response	3.1. Questioning techniques are applied to determine customer buying motives 3.2. Listening skills are used to determine customer requirements 3.3. Non-verbal communication cues are interpreted and clarified 3.4. Customers are identified by name where possible

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
4. Apply product knowledge	4.1. Customer needs are matched to products and services 4.2. Knowledge of product features and benefits are communicated clearly to customers 4.3. Product use and safety requirements are described to customers 4.4. Customers are referred to product specialist 4.5. Routine customer questions about merchandise, e.g. price, price reductions, quality and usage, are answered accurately and honestly or referred to more experienced sales staff
5. Gather information	5.1. Customer objections are identified and accepted 5.2. Objections are categorised into price, time and merchandise characteristics 5.3. Solutions are offered according to store policy 5.4. Problem solving is applied to overcome customer objections
6. Close sale	6.1. Customer buying signals are monitored, identified and responded to 6.2. Customer is encouraged to make purchase decision 6.3. Method of closing sale is selected and applied 6.4. Legislative and legal sales requirements/procedures are followed
7. Maximise sales opportunities	7.1. Opportunities for making additional sales are recognised and applied 7.2. Customer is advised of complementary products or services according to identified needs 7.3. Personal sales outcomes are reviewed to maximise future sales

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• collect, organise and understand information related to questioning customers to

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Handle cash transactions	1.1. Cash is received and counted 1.2. Correct balance is determined, taking price, invoices, discounts, etc. into account, and correct change is given 1.3. Irregularities are noted and referred to appropriate persons for resolution 1.4. Cash is stored according to enterprise policies and procedures 1.5. Receipts are issued and transaction documented according to enterprise policies and procedures
2. Handle credit/funds transfer card transactions	2.1. Correct documentation and equipment for particular credit/funds transfer card is identified and accessed 2.2. Credit/funds transfer card recording device is identified and accessed 2.3. Recording device is operated according to provider procedures and taking into account enterprise credit limits 2.4. Irregularities are noted and referred to appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	persons for resolution 2.5. Receipts are issued and transaction documented according to enterprise policies and procedures
3. Handle cheque transactions	3.1. Cheques are received and examined for correctness (amount, dates and signature) 3.2. Irregularities are noted and referred to appropriate persons for resolution 3.3. Cheques are stored according to enterprise policies and procedures 3.4. Receipts are issued and transaction documented according to enterprise policies and procedures
4. Carry out invoicing procedures	4.1. Calculations are performed to produce accurate customer invoices 4.2. Documentation is completed to ensure accuracy of content 4.3. Invoices are distributed to appropriate persons/section for certification prior to being dispatched 4.4. Verified invoices are dispatched within designated time limits 4.5. Invoices are copied and filed for auditing purposes according to enterprise policies and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to collation of cheques for processing
- communicate ideas and information on irregularities in cash balancing to appropriate persons
- plan and organise activities for the development of invoices
- work with others and in a team with office persons to develop invoices
- use mathematical ideas and techniques to count cash
- establish diagnostic processes which re-count cash and credit transactions to balance books

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• use workplace technology related to record sales
Required knowledge
• money handling security methods • personal safety requirements • applicable legislation • GST information • equipment safety requirements • enterprise transaction policies • cash/credit/funds transfer systems

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Unit Descriptor

Unit descriptor	This unit of competency covers the competence required to make best use of time available, use specific sales techniques, and follow procedures for product delivery and customer follow-up. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	This unit of competence applies to the following and should be contextualised to the qualification it is being applied: • retail, service and repair.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Present and demonstrate product to customer	1.1. Product is presented to customer to maximise its features and market appeal in relation to customer perceived needs 1.2. Product features, fittings, controls and accessories are shown and talked through with customer and operated where necessary 1.3. Customer is offered a test operation
2. Obtain customer agreement to purchase product	2.1. Price for product is negotiated and agreed 2.2. Sale is made using closing technique according to automotive industry/enterprise policies and procedures 2.3. Sale is made in accordance with legal requirements
3. Perform product delivery and customer follow-up procedures	3.1. Product is delivered to customer in accordance with manufacturer/component supplier specification and industry/enterprise policies and procedures 3.2. Customer satisfaction is determined, remedial action is taken where necessary to maximise repeat business possibilities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
4. Use prospecting methods to locate potential market	4.1. Potential customers are identified by follow-up of enterprise records of existing/past customers, service area customers, industry contacts and advertising strategies 4.2. Plans are developed to contact potential customers

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to collect and interpret technical information
- communicate ideas and information to convey information to the customer
- plan and organise activities for sales demonstration
- work with others and in a team by consulting with experienced staff
- use mathematical ideas and techniques to include customer limitations of price and time in recommendations
- establish diagnostic processes which have legal requirements included in recommendations
- use workplace technology related to record sales

Required knowledge

- selling procedures
- communication skills (oral and written)
- communication techniques
- product information
- company policies and procedures
- stock presentation techniques
- industry legal requirements
- finance, leasing and insurance contracts/policies

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of: • selling products to satisfy customer needs • use of sales techniques • communicating effectively with others involved in or affected by the work.

Context of, and specific resources for assessment	• Underpinning knowledge and skills may be assessed on or off the job
	• The following are required:
	  • a workplace or simulated workplace
	  • sales manuals, time management guides, enterprise/ industry guidelines and office equipment (e.g. computer, typewriter, telephone and fax)
	  • sales videos, sales brochures
	  • enterprise-based sales recording systems
	  • various products retailed via automotive industry
	  • a qualified workplace assessor.

Method of assessment	• Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment in simulated workplace conditions is acceptable
	• Prescribed outcome must be able to be achieved without direct supervision
	• Practical assessments:
	  • sell product(s) to satisfy customer needs in accordance with enterprise policies and procedures
	  • use specific sales techniques
	  • convey information both orally and in writing
	  • access, interpret and apply sales information
	  • apply time management techniques
	• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

EVIDENCE GUIDE	
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Methods	Methods include: • demonstration to customer using sales techniques applied to product sold for or through automotive industry • verbal, written, practical • customers may be face to face or by telephone/ electronic media
Workplace health and safety (WHS) requirements	WHS requirements may include: • state/territory/industry WHS requirements
Resources	Resources may include: • sales manuals, time management guides, enterprise/industry guidelines, office equipment (e.g. computer, typewriter, telephone and fax) • sales videos, sales brochures • enterprise-based sales recording systems • various products retailed via automotive industry
Information/documents	Sources of information/documents may include: • enterprise operating procedures • product manufacturer/component supplier specifications • customer requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Promote products and services to customers	1.1. Explanations/demonstrations, where applicable, are conducted professionally 1.2. Product benefits and relevance of product to customer needs are highlighted during demonstration 1.3. Selling techniques are employed based on accepted and industry standards, legal requirements and enterprise policy
2. Establish on-sell opportunities	2.1. Customer interest areas and needs are identified 2.2. On-sell opportunities are assessed through knowledge of customer needs and interests, and enterprise products and services 2.3. Explanations are aligned to customer interest areas and needs 2.4. Customer needs for complementary products or services are determined
3. Recommend complementary products or services	3.1. Complementary products or services of benefit to customer are identified 3.2. Benefits of product or service are discussed with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
to customers	customer 3.3. Cost estimates are prepared and documented

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• collect, organise and understand information related to customer information when collected and analysed for on-selling • communicate ideas and information when features and benefits are explained to customers • plan and organise activities when promotions are planned and organised • work with others and in a team by seeking involvement of team members • use mathematical ideas and techniques when cost estimates are prepared for promotions • establish diagnostic processes having cost and time limitations when considered in recommendations • use workplace technology related to business technology used to prepare cost estimates
Required knowledge
• workplace health and safety (WHS) • oral and written communication skills for application • buyer behaviour • selling procedures/techniques • product and service promotional procedures for application • legislation/regulations/guidelines applicable to the industry sector • advertising codes of practice

Evidence Guide

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of: • promoting products and services to customers and establishing on-selling opportunities • communicating effectively with others involved in or affected by the work.

Context of, and specific resources for assessment	• Underpinning knowledge and skills may be assessed on or off the job
	• The following are required:
	  • products for sale
	  • suitable presentation area
	  • sales material (e.g. brochures, pamphlets, banners, flags, stands, ramps, turntables)
	  • a qualified workplace assessor.

Method of assessment	• Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable
	• Prescribed outcome must be able to be achieved without direct supervision
	• Practical assessments:
	  • behave professionally in a manner appropriate to the situation and customer needs
	  • demonstrate a range of products in a professional manner
	  • apply promotional sales techniques to a range of sales situations and customer needs
	• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

Range Statement

RANGE STATEMENT

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Promotion	Promotion may include: • planned sales presentation, territory management and account management
Selling	Selling may include: • face to face, telephone, direct mail and internet
Sales	Sales may include: • individual customers • organisational customers • new products • second-hand products
Professional explanations/ demonstrations	Professional explanations/demonstrations may include: • parts • products • services
Customer needs	Customer needs may include: • time limitations • cost limitations • value for money • quality of work/product • after-sales service
Industry standards	Industry standards for selling products and services include those relating to: • fair trade • consumer protection • ethical behaviour • WHS requirements • legislative requirements • credit legislation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Complementary products/services	Complementary products/services may include: • accessories • additional service/repair work • additional vehicle features
WHS requirements	WHS requirements may include: • state/territory/industry WHS requirements
Resources may include	Resources may include: • enterprise stationery, telephone, merchandising kit and pricing policy
Information/documents	Sources of information/documents may include: • enterprise operating procedures • product manufacturer/component supplier specifications • customer requirements • industry/workplace codes of practice

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify legislation and documentation to sell product(s)	1.1. Legislation to sell product(s) is correctly identified and accessed where necessary 1.2. Product documentation and manuals are identified and available for customers
2. Apply legislation to sell product(s)	2.1. Product(s) are sold in accordance with identified legal requirements, including duty of care 2.2. Customer transaction is handled in accordance with consumer legislation
3. Record necessary information on product sales documentation	3.1. Correct product sales documentation is identified and accessed in accordance with enterprise policies and procedures 3.2. Required information is clearly and accurately provided to complete legal requirements for correct documentation 3.3. Customer is requested to sign acknowledgement of information provided, such as operation instructions for product, safety requirements and supply of manual for product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
• collect, organise and understand information related to legislative requirements • communicate ideas and information to explain safety and operation issues for products • plan and organise activities to demonstrate safe operation of products • work with others and in a team by consulting with experienced staff • use mathematical ideas and techniques to have cost and time limitations included in demonstrations • establish diagnostic processes recommending safe operating procedures • use workplace technology related to the demonstration of safe operation of products
Required knowledge
• product sales legislation • enterprise sales documentation procedures and policies

Evidence Guide

EVIDENCE GUIDE

AURTNA5001 Estimate and calculate costs to repair, maintain or modify a vehicle

Modification History

Release	Comment
Release 1	Replaces AURT577727B Estimate and calculate costs to repair, maintain or modify a vehicle Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

Unit Descriptor

Unit descriptor	This unit of competency describes the skills and knowledge required to estimate and calculate the costs to repair, maintain or modify a vehicle taking into account materials, labour and overhead costs. It requires the ability to estimate and calculate costs, analyse information, and report and document the costs. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Application of the Unit

Application of the unit	This unit applies to individuals who estimate and calculate the cost to repair, maintain or modify a vehicle in the vehicle repair and vehicle loss assessing industries. This calculation would normally be undertaken by the owner of the business as it incorporates materials, labour and overhead costs. Vehicles may include light vehicles, heavy vehicles, agricultural and plant equipment, recreational boats, recreational vehicles and motorcycles.

Licensing/Regulatory Information

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information	1.1. Clarify the particular service required 1.2. Obtain and analyse details of the proposed service requirements 1.3. Obtain labour unit cost projections 1.4. Obtain and analyse logistic support contracts, supply agreements or equivalent 1.5. Obtain details of any proposed warehousing and physical distribution systems and related cost factors 1.6. Document and store information ready for retrieval and application
2. Estimate materials and labour	2.1. Estimate cost of repair time 2.2. Estimate labour requirements for direct services and related operations 2.3. Estimate cost of subcontractor work 2.4. Estimate type and cost of parts and materials according to industry and enterprise pricing standards 2.5. Document final estimate
3. Determine and	3.1. Determine components contributing to overhead

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
calculate overheads	costs 3.2. Calculate overhead costs to be attributed to the work in accordance with commercial and enterprise procedures
4. Calculate costs	4.1. Cost repair time in accordance with enterprise procedures 4.2. Cost direct labour costs and subcontractor work 4.3. Cost parts and materials 4.4. Calculate total job cost, including overheads and mark-up percentages in accordance with enterprise procedures 4.5. Calculate total service cost 4.6. Note potential quotation variations 4.7. Record cost calculations
5. Document and verify details	5.1. Document details of costs and charges in accordance with enterprise procedures 5.2. Verify costs, calculations and other details with relevant enterprise person 5.3. Document and file details for future reference and in accordance with enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: • technical skills to the level required to use internet and other workplace technology related to calculating work costs • communication skills to the level required to verify costs with others, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities • literacy skills to the level required to undertake costing research, and to document and report findings • numeracy skills to the level required to estimate and calculate labour, materials and on-costs and to validate work costs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• problem-solving skills to the level required to anticipate costing problems and to avoid reworking, wastage, and planning and scheduling problems • team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity
Required knowledge
Required knowledge includes: • methods and processes for identifying, apportioning, summarising and validating total costs for work • components of labour costs • current assessing and quoting methodologies • commercial approaches to warehousing and physical distribution and costing • manufacturer and component supplier specifications and manuals, including costing catalogues • applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS), personal safety and environment, relevant to calculating vehicle repair, maintenance and modification costs • organisational policies and procedures, including quality requirements, reporting and recording procedures, related to calculating vehicle repair, maintenance and modification costs

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Critical aspects of evidence	Assessors must be satisfied that the candidate can competently and consistently: • observe safety procedures and requirements • communicate effectively with others involved in or affected by the work • select appropriate methods and techniques • interpret proposals, specifications and instructions for the work • obtain information relevant to the determination of costs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• calculate and cost accurately the quantities of parts and materials, the amount of labour and time required to complete the work, and overheads for a range of vehicle repair, maintenance and modification quotes • document the process and outcomes in accordance with enterprise practice.

Context of assessment	• The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
	• Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
	• Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
	• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
	• The following resources should be made available:
	  • vehicles requiring repair that can be used for quotations
	  • appropriate worksite and costing details
	  • manufacturer and component costs, labour rates, commercial and industry information
	  • Repair Times manuals
	  • equipment, including calculators, computer and software
	  • internet access
	  • enterprise procedures.

Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge. • Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Specific resource requirements for this unit	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Service requirements	Service requirements may include: • specialised work • subcontracting • replacement parts • repair timeframe
Overhead costs	Overhead costs may include: • rental and leasing costs • utilities • non-production resources • depreciation of plant and equipment • warehousing margins • warehousing costs • insurance and other costs incurred by doing business • material/supply costs, including catalogues, contracts, standing agreements, market rates and warehousing margins
Information/documents	Information/documents may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Motor Vehicle Insurance and Repair Industry Code of Conduct • verbal, written and graphical instructions • parts listing prices and catalogues • inventory systems • material safety data sheets (MSDS) • diagrams or sketches • safe work procedures for inspection of vehicles for saleable components • engineer's design specifications and instructions • workplace specifications and requirements • instructions issued by authorised enterprise or external persons • Australian standards • current driver's licence
Legislative requirements	Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include: • award and enterprise agreements • industrial relations • Australian standards • Australian Design Rules • confidentiality and privacy • WHS • the environment • equal opportunity • anti-discrimination • duty of care
WHS requirements	WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include: • personal protective equipment and clothing • safety equipment • first aid equipment • hazard and risk control • elimination of hazardous materials and substances

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• manual handling, including shifting, lifting and carrying • emergency procedures • road rules • safe driving policy
Environmental requirements	Environmental requirements may include: • waste management • noise • dust • clean-up management
Organisational policies and procedures	Organisational policies and procedures may include: • financial management • cost and apportioning overheads • labour employment costs, including awards and contracts • quality policies and procedures, including Australian standards • WHS, sustainability, environment, equal opportunity and anti-discrimination • manufacturer specifications and industry codes of practice • safe work procedures • reporting and recording procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake a vehicle safety inspection	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for inspection are sourced and support equipment is identified and prepared
2. Complete vehicle	2.1. Correct information is accessed and interpreted from

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
inspection	appropriate sources to enable inspection to conform to standards and procedures 2.2. Vehicle inspection is carried out using approved methods and equipment, according to specifications and tolerances relative to the vehicle 2.3. Inspection is completed without causing damage to any component or system 2.4. Vehicle components are compared to manufacturer/ component supplier specifications
3. Report findings	3.1. Vehicle inspection report is completed in approved format 3.2. Vehicle system tolerances outside vehicle manufacturer/ component supplier specifications are highlighted and drawn to the attention of customer and/or reported 3.3. Records relating to vehicle safety inspections are processed in accordance with company policy 3.4. Inspection is completed within enterprise guidelines 3.5. Inspections are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
4. Prepare vehicle for customer delivery	4.1. Inspection documentation is completed 4.2. Final inspection is made to ensure safety features are in place 4.3. Vehicle is presented to workplace expectations 4.4. Job card is completed and delivered to appropriate persons

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures • apply analytical skills for identification and analysis of technical information • apply plain English literacy and communication skills in relation to dealing with customers and team members

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• apply questioning and active listening skills for example when obtaining information from customers • apply oral communication skills sufficient to convey information and concepts to customers • apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance • interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal • establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage • use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks • use workplace technology related to vehicle safety/ roadworthy inspections, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results
Required knowledge
A working knowledge of: • WHS regulations/requirements, equipment, material and personal safety requirements • Australian Design Rules • vehicle/component inspection procedures • inspection checklists • enterprise quality procedures • work organisation and planning processes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to	It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to

EVIDENCE GUIDE	
demonstrate competency in this unit	respond to unusual circumstances in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • conducting inspection in accordance with regulatory and/or workplace requirements • interpreting condition of the components compared with manufacturer/component supplier specifications • inspection of vehicle and its associated components within workplace timeframes • completing the written inspection report • vehicle presentation to customer in compliance with workplace requirements
Context of, and specific resources for assessment	Application of competence is to be assessed in the workplace or simulated worksite Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints Assessment is to comply with regulatory requirements, including Australian Standards The following resources should be made available: • workplace location or simulated workplace • material relevant to vehicle safety/roadworthy inspections • equipment, hand and power tooling appropriate to vehicle safety/roadworthy inspections • activities covering mandatory task requirements • specifications and work instructions
Method of assessment	Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies Assessment may be applied under project related conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	and require evidence of process Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Methods	Methods include conducting a vehicle inspection by vehicle manufacturer/component supplier, State/Territory legislation, industry practices and/or customer requirements
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
Emergency procedures	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
Environmental requirements	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
Tooling and equipment	Tooling and equipment may include hand or hand-held power tooling, ramps, hoists, pits, measuring equipment, specialist tooling for removal and testing equipment, including meters and gauges
Materials	Materials may include vehicle protection and cleaning materials
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to vehicle safety/roadworthy inspections • regulatory/legislative requirements pertaining to vehicle safety • engineer's design specifications and instructions • organisation work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian Standards

AURTTB2001 Inspect and service braking systems

Modification History

Release	Comment
Release 1	Replaces AURT210170A Inspect and service braking systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit covers the competence required to inspect and service braking systems and/or associated components, including pneumatic over hydraulic, air, hand and parking brake systems in an automotive retail, service and/or repair context. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	This unit of competency refers to braking systems associated with automotive retail, service and repair and should be contextualised to the level of qualification to which it is being applied: • light vehicle, heavy vehicle, motorcycle or trailer or outdoor power equipment. The unit includes identification and confirmation of work requirement, preparation for work, conduct of brake system wear analysis, servicing of braking systems and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	and contributing to a productive team environment within the scope of this unit. This includes an understanding of the level of work to be performed.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. **Prepare to undertake braking system inspection**	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.4. Methods appropriate to the circumstances are selected and prepared in accordance with standard operating procedures 1.5. Resources required for inspection of braking systems are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with braking systems are observed
2. **Conduct braking system wear analysis**	2.1. Braking system analysis is implemented in accordance with road safety legislation, workplace procedures and manufacturer/component supplier specifications 2.2. Brake wear measurement results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is processed in accordance with workplace procedures
3. **Prepare to service braking system and/or associated components**	3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 3.2. Procedures and information required are identified and sourced 3.3. Resources required for servicing braking systems are identified and support equipment is identified and prepared
4. **Carry out servicing of braking systems and/or associated components**	4.1. Servicing is implemented in accordance with workplace procedures and manufacturer/component supplier specifications 4.2. Adjustments made during the servicing are in accordance with manufacturer/component supplier specifications
5. **Prepare equipment for use or storage**	5.1. Servicing schedule documentation is completed 5.2. Final inspection is made to ensure protective features are in place 5.3. Final inspection is made to ensure work is to workplace expectations 5.4. Equipment is cleaned for use or storage to workplace expectations 5.5. Job card is processed in accordance with workplace

ELEMENT	PERFORMANCE CRITERIA
	procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures • apply analytical skills required for identification and analysis of technical information • apply plain English literacy and communication skills in relation to dealing with customers and team members • apply questioning and active listening skills for example when obtaining information from customers • apply oral communication skills sufficient to convey information and concepts to customers • apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance • interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal • establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage • use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks • use workplace technology related to the inspection and servicing of braking systems, including the use of servicing tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/ documenting of results
Required knowledge
A working knowledge of: • WHS and environmental regulations/requirements, equipment, material and personal safety requirements • dangers of working with braking systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• operating principles of braking systems, components and their relationship to each other • types and layout of service/repair manuals (hard copy and electronic) • analysis procedures • servicing procedures • enterprise quality procedures • work organisation and planning processes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • conducting the inspection in accordance with workplace and manufacturer/component supplier requirements • accurately interpreting wear analysis results • completing service of braking systems in accordance with workplace and manufacturer/component supplier requirements • completing service of braking systems and associated components within workplace timeframes • equipment is presented to customer in compliance with workplace requirements
Context of, and specific resources for assessment	Application of competence is to be assessed in the workplace or simulated worksite Assessment is to occur using standard and authorised work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	practices, safety requirements and environmental constraints Assessment is to comply with regulatory requirements, including Australian Standards The following resources should be made available: • workplace location or simulated workplace • material relevant to the inspection and servicing of braking systems • equipment, hand and power tooling appropriate to the inspection and servicing of braking systems • activities covering mandatory task requirements • specifications and work instructions
Method of assessment	Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies Assessment may be applied under project related conditions and require evidence of process Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Braking systems	Types of braking systems may include: • hydraulic • mechanical • pneumatic
System components	System components may include: • disc pads • master cylinders • brake shoes • brake callipers • brake hoses • brake actuators • mechanical devices • valves
Methods	Methods are to include: • visual, aural and functional assessments (including damage, corrosion, fluid leaks, wear) • measurements of pedal travel, free-play, disc runout, disc thickness, drum wear and pad/lining thickness
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulations/codes of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	practice and workplace policies and practices
Safe operating procedures	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, hazardous substances, machinery movement and operation, manual lifting and shifting, working in proximity to others and site visitors
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, operating safely in the event of fires, enterprise first aid requirements and site evacuation
Environmental requirements	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
Tooling and equipment	Tooling and equipment may include hand tooling, gauges (including dial, verniers and micrometers), bleeding and brake testing devices, dust extraction equipment and grease guns
Materials	Materials may include lubricants, fluids, minor spare parts and cleaning materials
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to the inspection and servicing of braking systems • regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules • engineer's design specifications and instructions • organisation work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian Standards

AURTTJ2002 Remove and refit wheel hubs and associated brake components

Modification History

Release	Comment
Release 1	Replaces AURT217865A Remove and refit wheel hubs and associated brake components Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit covers the competence to remove and refit wheel hubs and associated brake components necessary during the rectification of faults in steering and suspension systems. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	The unit applies to all types of wheel hubs and brake systems fitted to light vehicles, including 4WD vehicles and light commercial vehicles. Work involves removing and refitting various brake system components necessary to carry out required rectification procedures for steering and suspension systems. Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. **Prepare for work**	1.1. Nature and scope of work requirements are identified and confirmed 1.2. Information required for the work is accessed from manufacturer/component supplier specifications and interpreted 1.3. WHS policies and procedures are observed throughout the work processes 1.4. Components, tooling and equipment required for the work are identified, selected and prepared in accordance with site procedures 1.5. Wheel hub and brake components to be removed and refitted are identified and prepared in accordance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	with manufacturer/component supplier and site procedures
2. **Remove wheel hubs and associated brake components**	2.1. System components are removed using hand tooling and specialist equipment without causing damage and are stored in an appropriate location 2.2. Identified component faults are reported to the customer and discussed for further instructions
3. **Refit and adjust wheel hubs and associated brake components**	3.1. Removed components are examined for serviceability prior to commencing the refitting procedures 3.2. Serviceable components are refitted according to manufacturer/component supplier specifications and instructions 3.3. Fluids and lubricants required during the refitting procedures are used in accordance with WHS and manufacturer/component supplier specifications 3.4. Refitted components are adjusted according to manufacturer/component supplier specifications
4. **Prepare wheel hub and brake components for use**	4.1. Work schedule documentation is completed 4.2. Final inspection is made to ensure work is to workplace expectations 4.3. Job card is processed in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures • apply analytical skills required for identification and analysis of technical information • apply plain English literacy and communication skills in relation to dealing with customers and team members • apply questioning and active listening skills for example when obtaining information from customers • apply oral communication skills sufficient to convey information and concepts to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
customers • apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance • interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal • establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage • use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks • use workplace technology related to removal and refitting of wheel hubs and associated brake components, including the use of measuring equipment, specialist tooling, computerised technology, and communication devices and the reporting/documenting of results
Required knowledge
A working knowledge of: • WHS regulations/requirements, equipment, material and personal safety requirements • dangers of working with raised vehicles • principles of hydraulic brake system operation • brake bleeding methods • methods of using and applying lubricants and sealants • methods of fitting gaskets and circlips • types of wheel bearings and their adjustment methods • dismantling, assembling and adjusting procedures • types and layout of service/repair manuals (hard copy and electronic) • accessing/recording information from a computer

Evidence Guide

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
System components	System components may include: • brake drums • brake shoes • disc brake calipers • wheel cylinders • disc pads • disc rotors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• wheel hubs • wheel bearings • ABS rotors and sensors
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
Environmental requirements	Environmental requirements are to include, but are not limited to waste management, noise, dust and clean-up management
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Tooling and equipment	Tooling and equipment may include: • hand and power tooling • lifting equipment and support stands • dial indicators • torque wrenches • brake spring removing tool • brake bleeding equipment • wheel bearing removing tools • wheel bearing grease • brake fluid
Communications	Communications are to include, but are not limited to verbal and visual instructions, and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to the removal, fitting and adjustment of wheel hub and brake components • regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules • engineer's design specifications and instructions • organisation work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian Standards

AURTTY3001 Repair chassis, frame and associated components

Modification History

Release	Comment
Release 1	Replaces AURV328366A Repair chassis/frame and associated components Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit covers the competence required to inspect/replace, repair and align chassis/frame and/or components applicable to vehicles with separate frame construction. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	The unit includes identification and confirmation of work requirement, preparation for work, the inspection, repair, replacement and alignment of chassis/frame and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine the job requirements, including method, materials and equipment. 1.2. Job specifications are read and interpreted. 1.3. WHS requirements, including dust and fume collection, breathing apparatus, eye and ear personal protection needs are observed throughout the work. 1.4. Material for repair is selected. 1.5. Equipment and tooling are identified and checked for safe and effective operation. 1.6. Procedures are determined to minimise waste material. 1.7. Procedures are identified for maximising energy efficiency while completing the job.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Inspect to determine repairs	2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 2.2. Written inspection report is prepared during inspection. 2.3. Inspection is completed without causing damage to any component or system. 2.4. Inspection activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies. 2.5. Results of inspection are documented/processed in accordance with enterprise requirements.
3. Replace or repair chassis/frame and associated components	3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 3.2. Repair and replacement of chassis/frame and associated components are carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances relative to the vehicle. 3.3. Replacement and repairs to components are achieved without causing damage to any component or system. 3.4. Workplace documentation is completed and dealt with relevant to replacement or repair outcomes. 3.5. All repair activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.
4. Align chassis/frame components	4.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 4.2. Alignment of chassis/frame and associated components is carried out in accordance with vehicle manufacturer/ component supplier specifications and tolerances relative to the vehicle. 4.3. Alignment is achieved without causing damage to any component or system. 4.4. Workplace documentation is completed and dealt with relevant to chassis alignment outcomes. 4.5. All repair activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.
5. Clear up work area and maintain equipment	5.1. Material that can be reused is collected and stored. 5.2. Waste and scrap is removed following workplace and environmental procedure. 5.3. Equipment and work area are cleaned and inspected

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	for serviceable condition in accordance with workplace procedures. 5.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements. 5.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 5.6. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for repair of chassis/frame and associated components
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to repair of chassis/frame and associated components, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/recording of results

Required knowledge

A working knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• WHS regulations/requirements, equipment, material and personal safety requirements • manufacturer/component supplier/company policies • technical information • inspection and measuring procedures • repair/replacement procedures • alignment procedures • welding techniques • manual handling techniques • work organisation and planning processes • enterprise quality processes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • inspecting, replacing/repairing and aligning of a range of chassis/frame components to workplace and manufacturer/component supplier requirements • completing workplace/equipment documentation.
Context of, and specific resources for assessment	Application of competence is to be assessed in the workplace or simulated worksite. Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints. Assessment is to comply with regulatory requirements,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	including Australian Standards. The following resources should be made available: • workplace location or simulated workplace • materials relevant to repair of chassis/frame and associated components • equipment, hand and power tooling appropriate to repair of chassis/frame and associated components • activities covering mandatory task requirements • specifications and work instructions.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies. • Assessment may be applied under project related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Chassis/frame and associated components	Chassis/frame and associated components include chassis, body, wheels, body panels, accessories and body frames.
Repair methods	Repair methods are to include: • visual, aural and functional assessments (including damage, wear and breakage) • application of the principles, angles and geometry of vehicle wheel and chassis alignment • measuring • welding and framing.
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
Environmental requirements	Environmental requirements are to include but are

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	not limited to waste management, noise, dust and clean-up management.
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
Tooling and equipment	Tooling and equipment may include hand tooling, power tooling, measuring equipment, pressing equipment, heating equipment, welding equipment which may include arc, oxy acetylene, MIG, TIG, chassis aligning equipment, specialist tooling for removal/alignment, lifting equipment and wheel alignment equipment.
Materials	Materials may include welding consumables, spare parts and cleaning materials.
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to repair of chassis/frame and associated components • regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules • engineer's design specifications and instructions • organisation work specifications and

Required Skills and Knowledge

Evidence Guide

The Evidence guide identifies critical aspects, knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Critical aspects of evidence	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: observing safety procedures and requirements communicating effectively with others involved in or affected by the work selecting methods and techniques appropriate to the circumstances completing preparatory activity in a systematic manner
Critical aspects of evidence (continued)	accurately interpreting vehicle body repair quotation determining repair requirements, including repair procedures, component/part purchases and sublet work requirements estimating repair timelines
Relationship to other units	Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role
Underpinning knowledge	A working knowledge of: OH&S regulations/requirements, equipment, material and personal safety requirements reading and interpretation skills vehicle body repair estimate/quotation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	methods planning and work coordination procedures work activity timeframe estimation procedures vehicle body repair methods and procedures work organisation and planning processes enterprise quality processes
Specific key competencies, **underpinning and employability skills required to achieve the performance criteria**	These include a number of processes that are learned throughout work and life, which are required in most jobs. Some of these are covered by the national key competencies, although others may be added. The details below highlight how these competencies are to be applied in the attainment of this unit. Application of the key competencies in this unit are to satisfy the nominated level in which: Level 1 - relates to working effectively within set conditions and processes; Level 2 - relates to management or facilitation of conditions or processes; and Level 3 - relates to design, development and evaluation of conditions or process. How will the candidate apply the following key competency in this unit? The candidate will need to:
Collect, analyse and organise information	Collect, organise and understand information related to work orders, plans and safety procedures for reading and interpreting vehicle body repair estimation/quotations (Level 2)
Communicate ideas and information	Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	(Level 1)
Plan and organise activities	Plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage (Level 1)
Work with others and in a team	Work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity (Level 1)
Solve problems	Establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage (Level 1)
Use mathematical ideas and techniques	Use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks (Level 1)
Use technology	Use workplace technology related to interpreting and using repair quotations, including the use of measuring equipment, computerised technology and communication devices and the reporting/recording of results (Level 1)
Context of assessment	Application of competence is to be assessed in the workplace or simulated worksite Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints Assessment is to comply with regulatory requirements, including Australian Standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Method of assessment	Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies Assessment may be applied under project related conditions and require evidence of process Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements
Specific resource requirements for this unit	The following resources should be made available: workplace location or simulated workplace materials relevant to interpreting and using repair quotations equipment and tooling appropriate to interpreting and using repair quotations activities covering mandatory task requirements specifications and work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Unit scope	Methods are to include: reading and interpreting repair quotation consultation with customer/qualified persons determining repair requirements, including repair procedures, component/part purchases and sublet work requirements estimating repair timelines accurate recording of repair procedures
Unit context	Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment Work is carried out in accordance with award provisions
Safety (**OH**&**S**)	OH&S requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices Emergency procedures related to this unit are to include, but are not limited to extinguishing fires, enterprise first aid requirements and worksite evacuation
Environmental requirements	Environmental requirements are to include but are not limited to clean-up management

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
Tooling and equipment	Tooling and equipment may include computer software/ hardware, general office equipment, communication equipment
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information	Information sources may include, but are not limited to verbal or written and graphical instructions, work bulletins, memos, material safety data sheets, diagrams or sketches Regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules Organisation work specifications and requirements Instructions issued by authorised enterprise or external persons

AURVTG3011 Install side windows

Modification History

Release	Comment
Release 1	Replaces AURV334031A Install side windows Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit covers the competence required to fabricate templates, mark out and cut panels, prepare cut edges and install side windows. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	The unit includes identification and confirmation of work requirement, preparation for work, fabrication and use of templates, marking out and cutting of panels/trim, preparation of cut edges, installation of windows and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, materials and equipment. 1.2. Job specifications are read and interpreted. 1.3. WHS requirements, including dust and fume collection, breathing apparatus and eye and ear personal protection needs are observed throughout the work. 1.4. Material for installation is selected. 1.5. Equipment and tooling are identified and checked for safe and effective operation. 1.6. Procedures are determined to minimise waste material. 1.7. Procedures are identified for maximising energy efficiency while completing the job.
2. Measure, mark out and fabricate template	2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 2.2. Suitable materials are selected and template is

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	fabricated to shape and size. 2.3. Templates are completed without causing damage to any component or system. 2.4. Fabricating and measuring activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.
3. Mark out, cut panels/trim and prepare cut edges	3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 3.2. Template is used to mark out areas to be cut. 3.3. Panels/trim are cut using approved methods and equipment in accordance with specifications. 3.4. Panels/trim are prepared in readiness for installing window. 3.5. Panels are reinforced to comply with manufacturer/ component supplier requirements. 3.6. Work is completed without causing damage to any component or system. 3.7. Marking out, cutting and preparation activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.
4. Install window	4.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 4.2. Window is installed to specification. 4.3. Installed window is checked for operation and leak tested. 4.4. Installation is achieved without causing damage to any component or system. 4.5. All installation and checking is performed according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.
5. Clean up work area and maintain equipment	5.1. Material that can be reused is collected and stored. 5.2. Waste and scrap are removed following workplace and environmental procedures. 5.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 5.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements. 5.5. Operator maintenance is completed in accordance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	with manufacturer/component supplier specifications and worksite procedures. 5.6. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• collect, organise and understand information related to work orders, plans and safety procedures for installing windows • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems • plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage • work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity • establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage • use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks • use workplace technology related to installation of side windows, including the use of specialist tooling, measuring equipment and communication devices and the reporting/ recording of results
Required knowledge
A working knowledge of: • WHS regulations/requirements, equipment, material and personal safety requirements • enterprise/manufacturer/component supplier policies • technical information • marking out procedures • measuring procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• cutting procedures (panels and trim) • window installation procedures • panel reinforcing methods • work organisation and planning processes • enterprise quality processes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • applying vehicle protection methods • preparing and installing a range of side windows with a minimum of one requiring panel reinforcement • completing workplace records.
Context of, and specific resources for assessment	Application of competence is to be assessed in the workplace or simulated worksite. Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints. Assessment is to comply with regulatory requirements, including Australian Standards. The following resources should be made available: • workplace location or simulated workplace • materials relevant to installation of side windows • equipment, hand and power tooling appropriate to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	installation of side windows • activities covering mandatory task requirements • specifications and work instructions.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies. • Assessment may be applied under project related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Installation methods	Installation methods are to include measuring, marking out, cutting, preparing cut edges, reinforcing cut panels, installing side windows, leak testing installed side window and sealing, testing operation and cleaning.
Side windows	Side windows may be installed in vehicles, trailers, outdoor equipment, caravans, agricultural equipment and recreational boating.
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
Environmental requirements	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	procedures.
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
Tooling and equipment	Tooling and equipment may include hand tooling, power tooling, measuring equipment, marking out equipment, cutting equipment, vehicle protection equipment and templates.
Materials	Materials may include template materials, rubber sections, adhesives and cleaning materials.
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to installation of side windows • regulatory/legislative requirements pertaining to working with glass • engineer's design specifications and instructions • organisation work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian Standards.

AURVTN2005 Remove and fit protector mouldings, transfers and decals

Modification History

Release	Comment
Release 1	Replaces AURV226965A Remove and replace/fit protector mouldings, transfers and decals Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to remove and replace/fit protector mouldings, transfers and decals. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	The unit includes identification and confirmation of work requirements, preparation for work, removal, replacement and refitting of protector mouldings, transfers and decals, and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, material and equipment. 1.2. Job specifications are read and interpreted. 1.3. Workplace health and safety (WHS) requirements, including personal protection needs are observed throughout the work. 1.4. Material for the work is selected. 1.5. Equipment and tooling are identified and checked for safe and effective operation. 1.6. Procedures are determined to minimise waste material. 1.7. Procedures are identified for maximising energy efficiency while completing the job.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Remove protector mouldings, transfers and decals	2.1. Information is accessed and interpreted from manufacturer/component supplier specifications. 2.2. Work is completed without causing damage to component, system or protector mouldings, transfers and decals. 2.3. Removal activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.
3. Prepare for replacement/ fitting of protector mouldings, transfers and decals	3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 3.2. Protector mouldings, transfers and decals to be fitted are within specifications for dimensions, material and functional capability. 3.3. Adhesives are selected according to the product manufacturer/component supplier specification for type, method, application and thickness. 3.4. Work is completed without causing damage to component, system or protector mouldings or transfers and decals. 3.5. Reusable moulds, decals and attachment clips/components are inspected and cleaned in preparation for refitting.
4. Replace/fit protector mouldings, transfers and decals	4.1. Information is accessed and interpreted from manufacturer/component supplier specifications. 4.2. Protector mouldings, transfers and decals are replaced and fitted using approved methods, material and equipment. 4.3. Adhesives are applied according to the product manufacturer/component supplier specifications for type, method, application and thickness. 4.4. Work is completed without causing damage to component, system or protector mouldings, transfers and decals. 4.5. Replacement/refitting activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.
5. Clean up work area and maintain equipment	5.1. Material that can be reused is collected and stored 5.2. Waste and scrap is removed following workplace and environmental procedures. 5.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	workplace procedures. 5.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements. 5.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 5.6. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for removing and replacing/fitting protector mouldings, transfers and decals
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removal and replacement/ refitting of protector mouldings, transfers and decals, including use of specialist tooling, measuring equipment and communication devices and the reporting/documenting of results

Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge includes: • WHS regulations/requirements, equipment, material and personal safety requirements • types of mouldings, transfers and decals • methods for fitting mouldings, transfers and decals • fastening methods (adhesives and mechanical methods) • use of tooling and equipment • removal procedures • replacement/fitting procedures and preparation • work organisation and planning processes • enterprise quality processes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • completing removal and replacement operations covering a minimum of three components, including: • a double-sided tape moulding, and • an anti-scruff or door frame tape • replacing/refitting protector mouldings, transfers and decals.
Context of, and specific resources for assessment	• The following resources should be made available: • workplace location or simulated workplace • material relevant to the removal and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	replacement/fitting of protector mouldings, transfers and decals • equipment, hand and power tooling appropriate to the removal and replacement/fitting of protector mouldings, transfers and decals • activities covering mandatory task requirements • specifications and work instructions.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the Automotive Industry Retail, Service and Repair Training Package. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies. • Assessment may be applied under project-related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Specific requirements	Specific requirements are to: • remove, replace/fit protector mouldings, transfers and decals, including door frame decals and anti-scuff protectors
Methods	Methods are to include: • adhesive bonding and mechanical fastening
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include: • protective clothing and equipment • use of tooling and equipment • workplace environment and safety • handling of material • use of firefighting equipment • enterprise first aid • hazard control and hazardous material and substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
Safe operating procedures	Safe operating procedures are to include, but are not limited to: • operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to: • emergency shutdown and stopping of equipment • extinguishing fires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• enterprise first aid requirements • worksite evacuation
Environmental requirements	Environmental requirements are to include, but are not limited to: • waste management, noise, dust and clean-up management
Quality requirements	Quality requirements are to include, but are not limited to: • regulations, including Australian standards • internal company quality policies and standards • enterprise operations and procedures
Statutory/regulatory authorities	Statutory/regulatory authorities may include: • federal, state/territory and local authorities administering Acts, regulations and codes of practice
Tooling and equipment	Tooling and equipment may include: • hand tooling, adhesive equipment, measuring equipment and specialist tooling for removal
Materials	Materials may include: • adhesives and cleaning materials
Communications	Communications are to include, but are not limited to: • verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches • safe work procedures related to the removal and replacement/refitting of protector mouldings, transfers and decals • regulatory/legislative requirements pertaining to automotive industry, including Australian

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	Design Rules • engineer's design specifications and instructions • organisation work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian standards

AURVTN4032 Determine vehicle damage and recommended repair procedures

Modification History

Release	Comment
Release 1	Replaces AURV465116A Determine vehicle damage and recommended repair procedures Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit identifies the competence required to inspect a vehicle for damage and recommend repair action. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	The unit includes identification and confirmation of work requirement, preparation for work, inspection, determination of repair requirements, preparation of a written report, including repair recommendations and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine the job requirements, including job sheets and inspection procedures. 1.2. Job specifications are read and interpreted. 1.3. WHS requirements, including personal protection needs, are observed throughout the work. 1.4. Vehicle to be inspected is identified. 1.5. Procedures are determined to minimise inspection time.
2. Inspect vehicle to determine cause and extent of damage	2.1. Inspection is carried out according to industry regulations/ guidelines, WHS legislation, and enterprise procedures/ policies. 2.2. Repair methods that conform to vehicle manufacturer/ component supplier, insurance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	company, enterprise and statutory guidelines are identified and recommended. 2.3. Inspection is completed without causing damage to workplace, property or vehicle.
3. Prepare a written damage repair report	3.1. Written damage inspection report is prepared with sufficient information to enable preparation of repair quotation, including repair options. 3.2. Damage inspection report is appropriate to type of damage sustained. 3.3. Damage report refers to repair requirements identified, including in-house and sublet requirements. 3.4. Damage report is prepared and presented according to industry and enterprise guidelines/requirements.
4. Clean up work area and maintain equipment	4.1. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 4.2. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures. 4.3. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 4.4. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• collect, organise and understand information related to work orders, plans and safety procedures for determining vehicle damage and recommending repair procedures • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems • plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
interruptions or wastage • work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity • use mathematical ideas and techniques to complete tests, measurements and assessment of unit/component serviceability required for the work • use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and components) • use workplace technology related to recommending repair procedures, including the use of measuring equipment, computerised technology and communication devices and the reporting/recording of results
Required knowledge
A working knowledge of: • WHS regulations/requirements, equipment, material and personal safety requirements • industry records and how to maintain them • written communications and report writing • vehicle inspection, damage assessment and test procedures • vehicle inspection procedures • industry standards • work organisation and planning processes • enterprise quality processes.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	circumstances • completing preparatory activity in a systematic manner • for a range of vehicles: • assessing damage accurately without damage or injury to tooling, equipment and persons • recommending repair action • preparing a written repair report.
Context of, and specific resources for assessment	Application of competence is to be assessed in the workplace or simulated worksite, Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints, Assessment is to comply with regulatory requirements, including Australian Standards. The following resources should be made available: • workplace location or simulated workplace • materials relevant to vehicle inspection procedures • equipment, hand and power tooling appropriate to vehicle inspection procedures • activities covering mandatory task requirements • specifications and work instructions.
Method of assessment	Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package, Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge, Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies, Assessment may be applied under project related conditions and require evidence of process, Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances, It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements,

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Methods	Methods are to include: • inspection • measurement • partial dismantling • completion of written report.
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method and material type. 1.2. Job specifications are read and interpreted. 1.3. Workplace health and safety (WHS) requirements, including personal protection needs, are observed throughout the work. 1.4. Materials are selected and inspected for quality. 1.5. Hand, power tooling and safety equipment are identified and checked for operation. 1.6. Procedures are determined to minimise waste material. 1.7. Procedures are identified for maximising energy efficiency while completing the job.
2. Prepare equipment	2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 2.2. Preparation is carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Prepare and apply materials	3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 3.2. Preparation and application of materials is carried out in accordance with manufacturer/component supplier specifications. 3.3. Preparation and application of materials is carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/ policies.
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored. 4.2. Waste and scrap is removed following workplace procedure. 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures. 4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 4.6. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: • collect, organise and understand information related to work orders, plans and safety procedures for the preparation and use of equipment and material for paint touch-up techniques • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems • plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity • use mathematical ideas and techniques to use equipment and mix material required for the work • establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage • use workplace technology related to the preparation and use of equipment and material for paint touch-up techniques, including the use of specialised tooling and equipment, measuring equipment and communication devices and the reporting/documenting of results
Required knowledge
Required knowledge includes: • WHS regulations/requirements, equipment, material and personal safety requirements • environmental protection requirements/material disposal and storage • material safety data sheets • industry code of practice • the types, applications and preparation processes for paints • paint mixing procedures • spraying equipment procedures • equipment/material safety requirements • hand painting procedures, including rolling • application procedures • work organisation and planning processes • enterprise quality procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
unit	to respond to unusual situations in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • preparing a range of equipment • preparing a range of materials • the completion of touch-up painting for a range of circumstances, including the use of spray equipment and brushes • applying a range of touch-up materials.

Context of, and specific resources for assessment	• Application of competence is to be assessed in the workplace or simulated worksite.
	• Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
	• Assessment is to comply with regulatory requirements, including Australian standards.
	• The following resources should be made available:
	  • workplace location or simulated workplace
	  • material relevant to the preparation and use of equipment and material for paint touch-up techniques
	  • equipment, hand and power tooling appropriate to the preparation and use of equipment and material for paint touch-up techniques
	  • activities covering mandatory task requirements
	  • specifications and work instructions.

Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies. • Assessment may be applied under project-related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the

EVIDENCE GUIDE	
	particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Application systems and equipment	Application systems and equipment are to include: • spray gun techniques • drying techniques • paint mixing • paint rolling • paint straining • paint thinning • paint matching • buffing and polishing
Materials	Materials are to include: • oil-based paints • water-based paints • synthetic paints • vinyl paints, • undercoats • lacquers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• enamels • paint thinners and paint reducers
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include: • protective clothing and equipment • use of tooling and equipment • workplace environment and safety • handling of material • use of firefighting equipment • enterprise first aid • hazard control and hazardous material and substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
Safe operating procedures	Safe operating procedures are to include, but are not limited to: • operational risk assessment and treatments associated with toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to: • emergency shutdown and stopping of equipment • extinguishing fires • enterprise first aid requirements • worksite evacuation
Environmental requirements	Environmental requirements are to include, but are not limited to: • waste management, noise, dust and clean-up management
Quality requirements	Quality requirements are to include, but are not limited to:

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine the job requirements, including job sheets, quality and quantity of materials. 1.2. Job specifications are read and interpreted. 1.3. WHS requirements, including personal protection needs, are observed throughout the work. 1.4. Materials are selected and inspected for quality. 1.5. Hand, power tooling and safety equipment are identified and checked for safe use. 1.6. Procedures are determined to minimise waste material. 1.7. Procedures are identified for maximising energy efficiency while completing the job.
2. Carry out repair procedures	2.1. Information is accessed and interpreted from manufacturer/component supplier specifications. 2.2. Items to be repaired are identified.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Methods of repair are identified. 2.4. Equipment, tooling and materials are prepared for use. 2.5. Repair procedures are carried out following enterprise procedures. 2.6. Repair procedures are completed without causing damage to equipment or machinery. 2.7. All activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies. 2.8. Repairs are checked to specification and workplace/ equipment records are completed to worksite requirements.
3. Clean up work area and maintain equipment	3.1. Material that can be reused is collected and stored. 3.2. Waste and scrap is removed following workplace procedure. 3.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 3.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures. 3.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 3.6. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures • apply analytical skills required for identification and analysis of technical information • apply plain English literacy and communication skills in relation to dealing with customers and team members

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• apply questioning and active listening skills for example when obtaining information from customers • apply oral communication skills sufficient to convey information and concepts to customers • apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance • interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal • establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage • use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks • use workplace technology related to repair of composite material components, including the use of specialist tooling, measuring equipment and communication devices and the reporting/recording of results
Required knowledge
A working knowledge of: • WHS regulations/requirements, equipment, material and personal safety requirements • environmental requirements • measuring procedures • technical information • types of composite materials (including fibreglass) and their application • repair procedures • manufacturer/component supplier/company policies • manual handling techniques • work organisation and planning processes • enterprise quality processes

Evidence Guide

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • completing repair procedures to a range of components to enterprise and manufacturer/component supplier requirements • completing repair procedures without damage to tooling, equipment and persons • completing repair procedures within enterprise timeframes • completing workplace/equipment records.
Context of, and specific resources for assessment	Application of competence is to be assessed in the workplace or simulated worksite. Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints. Assessment is to comply with regulatory requirements, including Australian Standards. The following resources should be made available: • workplace location or simulated workplace • materials relevant to repair of composite material components • equipment, hand and power tooling appropriate to repair of composite material components • activities covering mandatory task requirements • specifications and work instructions.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must be by direct observation of tasks, with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	questioning on underpinning knowledge and it must also reinforce the integration of key competencies. • Assessment may be applied under project related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Composite materials	Composite materials may include fibreglass, carbon fibre and Kevlar.
Methods	Methods are to include both hand and machine operations, mixing and application.
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
Environmental requirements	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
Tooling and equipment	Tooling and equipment may include hand tooling, power tooling, specialist tooling for composite material work, mixers, moulds, jigs and measuring equipment.
Materials	Materials may include fibreglass, carbon fibre, Kevlar and cleaning materials.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to repair of composite material components • regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules • engineer's design specifications and instructions • organisation work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian Standards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for fabrication work	1.1. Information for work is accessed from manufacturer/ component supplier specifications and interpreted. 1.2. WHS requirements, including personal protection needs, are observed throughout the work. 1.3. Materials are selected and inspected for quality. 1.4. Components, tooling and equipment for fabrication are identified, selected and prepared in accordance with worksite procedures. 1.5. Procedures are determined to minimise waste material. 1.6. Procedures are identified for maximising energy efficiency while completing the job.
2. Measure, mark out and cut canvas products	2.1. Information for measuring, marking out and cutting is interpreted and followed. 2.2. Measurements are accessed from manufacturer/component supplier specifications and/or directly measured fitting requirements. 2.3. Marking out and cutting are carried out and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	completed in accordance with work plan and specifications. 2.4. Measurements, marking out and cutting are checked for conformity to specifications in accordance with worksite procedures.
3. Make up/assemble canvas products	3.1. Information for following production process is accessed from manufacturer/component supplier specifications, interpreted and followed. 3.2. Make up/assembly of canvas products is carried out and completed in accordance with work plan and specifications. 3.3. Damage to equipment or machinery is avoided. 3.4. Production is checked for conformity to specifications in accordance with worksite procedures.
4. Install canvas products	4.1. Information for installing is interpreted and applied. 4.2. Installing is carried out to enterprise and/or manufacturer/ component supplier specifications. 4.3. Installing is carried out without damage to equipment.
5. Clean up work area and maintain equipment	5.1. Material that can be reused is collected and stored. 5.2. Waste and scrap is removed following workplace procedures. 5.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 5.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures. 5.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 5.6. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required skills
• collect, organise and understand information related to work orders, plans and safety procedures for fabricating and installing canvas products • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems • plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage • work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity • use mathematical ideas and techniques to complete measurements and estimate material requirements for the work • use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material • use workplace technology related to accessing, interpreting and applying technical information and using tooling and equipment, and fabricating and installing canvas products
Required knowledge
A working knowledge of: • WHS regulations/requirements and personal safety requirements • equipment safety requirements • types, characteristics and applications of canvas • adhesives/glues/material safety data sheets information • job planning and drawing • production methods and procedures, including measuring, marking out, cutting and make up/assembly of canvas products • installation processes and techniques • technical information • enterprise quality procedures • work organisation and planning processes

ELEMENT	PERFORMANCE CRITERIA
determine frame requirements	requirements is interpreted and followed. 2.2. Measurements are accessed from manufacturer/component supplier specifications and/or from directly measured fitting requirements. 2.3. Frame dimensions are confirmed against job/customer requirements.
3. Select frame materials and attachments/joiners	3.1. Information for selection of materials and attachments/ joiners is interpreted and followed. 3.2. Materials type and size are selected according to frame dimension, in-service environment and customer requirements. 3.3. Attachment methods and materials are selected according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.
4. Cut materials, fit frame attachments/joiners and assemble frame	4.1. Information for cutting materials, fitting of attachments/ joiners and assembly is interpreted and followed. 4.2. Tooling and equipment are used for cutting and fitting attachments/joiners. 4.3. Cutting, attachment/joiner fitting and assembly is carried out and completed in accordance with work plan and specifications. 4.4. Component lengths, fittings and frame assembly dimensions are checked for conformity to specifications in accordance with worksite procedures. 4.5. All cutting, fitting and assembly operations are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.
5. Fit fabricated frame structure	5.1. Fitting is completed without causing damage to equipment, component/system or machinery. 5.2. Information for fitting fabricated frame is interpreted and followed. 5.3. Frame fitting is carried out and completed in accordance with work plan and specifications. 5.4. Production is checked for conformity to specifications in accordance with worksite procedures.
6. Install and fasten frame structure	6.1. Information for installation and fastening is interpreted and followed. 6.2. Installation and fastening processes and methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	are accessed from manufacturer/component supplier specifications and/or determined from existing fitting. 6.3. Installation and fastenings are checked for conformity to manufacturer/component supplier specifications and vehicle operational requirements.
7. Clean up work area and maintain equipment	7.1. Material that can be reused is collected and stored. 7.2. Waste and scrap is removed following workplace procedure. 7.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 7.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures. 7.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 7.6. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• collect, organise and understand information related to work orders, plans and safety procedures for fabricating and installing frame structures • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems • plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage • work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity • use mathematical ideas and techniques to complete measurements and estimate material requirements for work • establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
reworking and avoid wastage • use workplace technology related to fabrication and installation of frame structures, including the use of measuring equipment, computerised technology and communication devices and the reporting/recording of results
Required knowledge
A working knowledge of: • WHS regulations/requirements and personal safety requirements • technical information • equipment safety requirements/operation of tube bending and wire swaging equipment • types of frames, fittings and fasteners • frame positioning and fixing methods and procedures • types of frame materials and their application • production methods and procedures, including frame design, material and hardware selection, measuring, cutting and assembly/fitting up • enterprise quality procedures • work organisation and planning processes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for fabricating and installing canopies and curtains
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to complete measurements and estimate material requirements for the work
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- use workplace technology related to fabrication and installation of canopies and curtains, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the reporting/recording of results

Required knowledge

A working knowledge of:

- WHS regulations/requirements and personal safety requirements
- equipment safety requirements
- technical information types of canopy and curtain materials and their application
- adhesives/glues/material safety data sheets information
- sewing procedures, including seams, binding and pockets
- production methods and procedures, including planning, measuring, trade drawing, marking out, cutting and making up/assembling
- fitting and fastening/attachment methods, processes, procedures and applications
- enterprise quality procedures
- work organisation and planning processes

Evidence Guide

EVIDENCE GUIDE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • fabricating canopies and curtains/following production processes • measuring, marking out, cutting and making up/ assembling canopies and curtains • fitting and fixing a range of canopies and curtains • completing post-activity housekeeping.
Context of, and specific resources for assessment	Application of competence is to be assessed in the workplace or simulated worksite. Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints. Assessment is to comply with regulatory requirements, including Australian Standards. The following resources should be made available: • workplace location or simulated workplace • materials relevant to fabrication and installation of canopies and curtains • equipment, hand and power tooling appropriate to fabrication and installation of canopies and curtains • activities covering mandatory task requirements • specifications and work instructions.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies. • Assessment may be applied under project related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
Environmental requirements	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
Tooling and equipment	Tooling and equipment may include hand tooling, power tooling, air tooling, specialist tooling, sewing machines, needles, cutting equipment (scissors, knives), measuring and marking out equipment, (straight edge, tape, square, chalk).
Materials	Materials may include adhesives, glues, bow sets, fasteners, thread, vinyl, fabric, canvas, plastic products and binding roll.
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to fabrication and installation of canopies and curtains • regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules • engineer's design specifications and instructions • organisation work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian Standards.

BSBCUS501C Manage quality customer service

Modification History

Release	Comments
Release 1	New release of this Qualification released with *version 6 of BSB07* Business *Services Training Package*. Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop strategies to manage organisational systems that ensure products and services are delivered and maintained to standards agreed by the organisation.

Operators may have staff involved in delivering customer service and are responsible for the quality of their work. In many instances the work will occur within the organisation's policies and procedures framework. At this level, the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies, will be required.

Application of the Unit

Many managers are involved in ensuring that products and services are delivered and maintained to standards agreed by the organisation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

1. Plan to meet internal and external customer requirements	1.1 Investigate, identify, assess, and include the needs of ***customers*** in planning processes 1.2 Ensure plans achieve the ***quality***, time and cost specifications agreed with customers
2. Ensure delivery of quality products and services	2.1 Deliver ***products and services*** to customer specifications within organisation's business plan 2.2 Monitor team performance to consistently meet the organisation's quality and delivery standards 2.3 Assist colleagues to overcome difficulty in meeting customer service standards
3. Monitor, adjust and review customer service	3.1 Develop and use ***strategies*** to monitor progress in achieving product and/or service targets and standards 3.2 Develop and use strategies to obtain customer feedback to improve the provision of products and services 3.3. Develop, procure and use ***resources*** effectively to provide quality products and services to customers 3.4 Make decisions to overcome problems and to adapt customer services, products and service delivery in consultation with appropriate individuals and groups 3.5 Manage records, reports and recommendations within the organisation's systems and processes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to:
  - coach and mentor staff and colleagues
  - monitor and advise on customer service strategies
- literacy skills to:
  - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
  - prepare general information and papers according to target audience
  - read and understand a variety of texts
- problem-solving skills to:
  - deal with customer enquiries or complaints
  - deal with complex and non-routine difficulties
- technology skills to select and use technology appropriate to a task
- self-management skills to:
  - comply with policies and procedures
  - consistently evaluate and monitor own performance
  - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - Australian consumer law
  - ethical principles
  - codes of practice
  - privacy laws
  - financial legislation
  - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs
- techniques for solving complaints including the principles and techniques involved in the management and organisation of:
  - customer behaviour
  - customer needs research
  - customer relations
  - ongoing product and/or service quality

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- problem identification and resolution
- quality customer service delivery
- record keeping and management methods
- strategies for monitoring, managing and introducing ways to improve customer service relationships
- strategies to obtain customer feedback.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • plans, policies or procedures for delivering quality customer service • demonstrated techniques in solving complex customer complaints and system problems that lead to poor customer service • knowledge of techniques for solving complaints.
Context of and specific resources for assessment	Assessment must ensure: • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • assessment of written reports • demonstration of techniques • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of performance in role plays • evaluation of leadership, supervision, coaching and mentoring used to assist colleagues to overcome difficulty in meeting customer service standards • review of strategies developed and used to monitor progress in achieving product and/or service targets and standards • review of records, reports and recommendations about managing customer service.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Customers may be:	• Board members • clients, purchasers of services • co-workers, peers and fellow frontline managers • members of the general public who make contact with the organisation, such as prospective purchasers of services • potential funding bodies • supervisors • suppliers of goods and services and contractors providing goods and services.
Quality may refer to:	• characteristics of a product, system, service or process that meet the requirements of customers and interested parties.
Products and services may include:	• either products or services • goods • ideas • infrastructure • private or public sets of benefits.
Strategies may refer to:	• databases and other controls to record and compare data over time • electronic feedback mechanisms using intranet, internet and email • feedback forms and other devices to enable communication from customers • long-term or short-term plans for monitoring achievement and evaluating effectiveness • policies and procedures • questionnaires, survey and interviews • training and development activities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Resources may include:	• buildings/facilities • equipment • finance • information • people • power/energy • technology • time.

BSBFIM501A Manage budgets and financial plans

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to undertake financial management within a work team in an organisation. This includes planning and implementing financial management approaches, supporting team members whose role involves aspects of financial operations, monitoring and controlling finances, and reviewing and evaluating effectiveness of financial management processes in line with the financial objectives of the work team and the organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit

Application of the unit	This unit addresses the requirement for managers to ensure that financial resources are used effectively. This is done by ensuring access to budget/s and ongoing monitoring expenditure against the budget/s. The unit applies to managers working in small and large business environments and not for profit organisations.

Licensing/Regulatory Information

ELEMENT	PERFORMANCE CRITERIA
	work team
3. Monitor and control finances	3.1. Implement ***processes*** to monitor actual expenditure and to control costs across the work team 3.2. Monitor expenditure and costs on an agreed cyclical basis to identify cost variations and expenditure overruns 3.3. Implement, monitor and modify contingency plans as required to maintain financial objectives 3.4. ***Report*** on budget and expenditure in accordance with organisational protocols
4. Review and evaluate financial management processes	4.1. Collect and collate for analysis, ***data and information on the effectiveness of financial management processes*** within the work team 4.2. Analyse data and information on the effectiveness of financial management processes within the work team and identify, document and recommend any improvements to existing processes 4.3. Implement and monitor agreed improvements in line with financial objectives of the work team and the organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- numeracy skills to read and understand a budget and to update a budget
- technology skills to use software associated with financial record keeping.

Required knowledge

- basic accounting principles
- organisational requirements related to financial management
- relevant legislation and current requirements of the Australian Taxation Office, including GST
- requirements for organisational record keeping and auditing
- principles and techniques involved in:
  - budgeting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• cash flows • electronic spreadsheets • GST • ledgers and financial statements • profit and loss statements.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • financial skills required to work with and interpret budgets, ageing summaries, cash flow, petty cash, GST, and profit and loss statements • knowledge of the record keeping requirements for the ATO and for auditing purposes.
Context of and specific resources for assessment	Assessment must ensure: • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • assessment of written reports indicating broad knowledge of managing budgets and managing financial resources in the organisation • demonstration of techniques using financial record keeping software • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • oral or written questioning to assess knowledge of requirements for organisational record keeping and auditing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• review of contingency plans • review of identification of cost variations and expenditure overruns • evaluation of documentation reportingon budget and expenditure • review of documentation identifying and recommending improvements to financial management processes.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example: • other units from the Diploma of Management.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Budget/financial plans may include:	• cash flow projections • long-term budgets/plans • operational plans • short-term budgets/plans • spreadsheet-based financial projections • targets or key performance indicators for production, productivity, wastage, sales, income and expenditure
Relevant personnel may include:	• financial managers, accountants or financial controllers • supervisors, other frontline managers
Contingency plans may include:	• contracting out or outsourcing human resources and other functions or tasks • diversification of outcomes • finding cheaper or lower quality raw materials and consumables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• increasing sales or production • recycling and re-using • rental, hire purchase or alternative means of procurement of required materials, equipment and stock • restructuring of organisation to reduce labour costs • risk identification, assessment and management processes • seeking further funding • strategies for reducing costs, wastage, stock or consumables • succession planning
Support may include:	• access to specialist advice • documentation of procedures • help desk or identified experts within the organisation • information briefings or sessions • intranet-based information • training including mentoring, coaching and shadowing
Required roles may include:	• arranging for use of corporate credit cards • banking • debt collection • ensuring security, accuracy and currency of financial operations • invoicing clients, customers and consumers • maintaining journals, ledgers and other record keeping systems • maintaining petty cash system • purchasing and procurement • wages and salaries payments and record keeping
Resources and systems may include:	• hardware and software • human, physical or financial resources • record keeping systems (electronic and paper-based) • specialist advice or support

Processes to monitor actual expenditure and to control costs across the work team include:	• reporting of:
	  • assets
	  • consumables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• equipment • expenditure • income • stock • wastage
Reporting may include data from:	• bank statements • credit card statements • financial reports • invoices and receipts • ledgers and journals • logs • petty cash records • spreadsheet-based records
Data and information on the effectiveness of financial management processes may include records (paper-based and electronic) related to:	• bank account records • cash flow data • contracts • credit card receipts • employee timesheets • files of paid purchase and service invoices • income and expenditure • insurance reports • invoices • job costings • petty cash receipts • quotations • taxation records • wages/salaries books

ELEMENT	PERFORMANCE CRITERIA
	2.3. Monitor integration and alignment with data and information systems 2.4. Collect information on achievement of ***performance measures*** 2.5. Manage contingencies such as system failure or technical difficulties by accessing technical specialist help as required
3. Review use of information or knowledge management system	3.1. Analyse effectiveness of system and report on strengths and limitations of the system 3.2. Review business and operational plan and determine how effectively the system is contributing to intended outcomes 3.3. Make recommendations for improvement to system, policy or work practices

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical and problem-solving skills to ensure the system is working in accordance with organisational expectations and to deal with contingencies
- technology skills to work with and manage the use of the information or knowledge management system.

Required knowledge

- legislation, codes of practice and national standards, for example:
  - privacy and confidentiality legislation
  - freedom of information legislation
  - AS 5037:2005 Knowledge management - A guide
- organisational policies and procedures, for example:
  - records management
  - information management
  - customer service
  - commercial confidentiality
- organisational operations, and existing data and information systems.

BSBMGT403A Implement continuous improvement

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to implement the organisation's continuous improvement systems and processes. Particular emphasis is on using systems and strategies to actively encourage the team to participate in the process, monitoring and reviewing performance, and identifying opportunities for further improvements. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit

Application of the unit	Frontline managers have an active role in implementing the continuous improvement process to achieve the organisation's objectives. Their position, closely associated with the creation and delivery of products and services, means that they have an important role in influencing the ongoing development of the organisation. At this level, work will normally be carried out within routine and non routine methods and procedures, which require planning and evaluation, and leadership and guidance of others.

Licensing/Regulatory Information

BSBMGT502B Manage people performance

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to manage the performance of staff who report to them directly. Development of key result areas and key performance indicators and standards, coupled with regular and timely coaching and feedback, provide the basis for performance management. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit

Application of the unit	This unit applies to all managers and team leaders who manage people. It covers work allocation and the methods to review performance, reward excellence and provide feedback where there is a need for improvement. The unit makes the link between performance management and performance development, and reinforces both functions as a key requirement for effective managers. This is a unit that all managers/prospective managers who have responsibility for other employees should strongly consider undertaking.

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Allocate work	1.1. Consult relevant groups and individuals on work to be allocated and resources available 1.2. Develop work plans in accordance with operational plans 1.3. Allocate work in a way that is efficient, cost effective and outcome focussed 1.4. Confirm ***performance standards***, ***Code of Conduct*** and work outputs with relevant teams and individuals 1.5. Develop and agree ***performance indicators*** with relevant staff prior to commencement of work 1.6. Conduct ***risk analysis*** in accordance with the organisational risk management plan and legal requirements
2. Assess performance	2.1. Design ***performance management*** and review processes to ensure consistency with organisational

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	objectives and policies 2.2. Train participants in the performance management and review process 2.3. Conduct performance management in accordance with organisational protocols and time lines 2.4. Monitor and evaluate performance on a continuous basis
3. Provide feedback	3.1. Provide informal feedback to staff on a regular basis 3.2. Advise relevant people where there is poor performance and take necessary actions 3.3. Provide on-the-job coaching when necessary to improve performance and to confirm ***excellence in performance*** 3.4. Document performance in accordance with the organisational performance management system 3.5. Conduct formal structured feedback sessions as necessary and in accordance with organisational policy
4. Manage follow up	4.1. Write and agree performance improvement and development plans in accordance with organisational policies 4.2. Seek assistance from human resources specialists where appropriate 4.3. Reinforce excellence in performance through recognition and continuous feedback 4.4. Monitor and coach individuals with poor performance 4.5. Provide support services where necessary 4.6. Counsel individuals who continue to perform below expectations and implement the disciplinary process if necessary 4.7. ***Terminate*** staff in accordance with legal and organisational requirements where serious misconduct occurs or ongoing poor-performance continues

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
• communication skills to articulate expected standards of performance, to provide effective feedback and to coach staff who need development • risk management skills to analyse, identify and develop mitigation strategies for identified risks • planning and organisation skills to ensure a planned and objective approach to the performance management system.
Required knowledge
• relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination • relevant awards and certified agreements • performance measurement systems utilised within the organisation • unlawful dismissal rules and due process • staff development options and information.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • documented performance indicators and a critical description and analysis of performance management system from the workplace • techniques in providing feedback and coaching for improvement in performance • knowledge of relevant awards and certified agreements.
Context of and specific resources for assessment	Assessment must ensure: • access to appropriate documentation and resources normally used in the workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • analysis of responses to case studies and scenarios • assessment of written reports • demonstration of techniques in providing feedback and coaching • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of work plans, performance indicators, risk analysis,performance management and review processes, performance improvement and development plans.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example: • other management units.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Performance standards mean:	• level of performance sought from an individual or group which may be expressed either quantitatively or qualitatively
Code of Conduct means:	• agreed (or decreed) set of rules relating to employee behaviour/conduct with other employees or an agreed (or decreed) set of rules relating to employee behaviour/conduct with other employees or customers
Performance indicators mean:	• measures against which performance outcomes are gauged

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Risk analysis means:	• determination of the likelihood of a negative event preventing the organisation meeting its objectives and the likely consequences of such an event on organisational performance
Performance management means:	• in accordance with relevant industrial agreements • process or set of processes for establishing a shared understanding of what an individual or group is to achieve, and managing and developing individuals in a way which increases the probability it will be achieved in both the short- and long-term
Excellence in performance means:	• regularly and consistently exceeding the performance targets established while meeting the organisation's performance standards
Termination means:	• cessation of the contract of employment between an employer and an employee, at the initiative of the employer within relevant industrial agreements

BSBWRK510A Manage employee relations

Modification History

Release	Comments
Release 1	This version first released with *BSB07 Business Services Training Package Version 8.0*. Replaces BSBWRK509A Manage industrial relations.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage employee and industrial relations matters in an organisation. It involves using a range of specialised technical and managerial techniques to plan, carry out and evaluate own work and/or the work of a team.

It includes planning and policy development for employee relations as well as negotiation, conflict management, dispute resolution and managing industrial relations.

Application of the Unit

This unit applies to those responsible for working across an organisation to ensure that there is a policy infrastructure that ensures legislative compliance and clarifies issues.

It applies to those who respond to industrial conflict and grievances, with a well-established, sound theoretical knowledge base in human resources management and industrial relations. They may or may not have responsibility for supervising the work of others but are authorised to oversee industrial relations in the organisation. However they will have knowledge of current industrial relations trends and legislation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

1. Develop employee and industrial relations policies and plans	1.1 Analyse strategic plans and operational plans to determine ***long-term employee relations objectives***
	1.2 Analyse existing employee relations performance in relation to workforce objectives
	1.3 Evaluate options in terms of cost-benefit, risk-analysis and current legislative requirements
	1.4 Work with the management team to develop industrial relations policies and plans
	1.5 Identify the skills and knowledge needed by management and the workforce to effectively implement these strategies and policies
2. Implement employee relations policies and plans	2.1 Develop an ***implementation plan*** and contingency plan for the employee relations policies and strategies
	2.2 Make arrangements for training and development for identified needs to support the employee relations plan
	2.3 Undertake ***associated employee relations activities*** to reach agreement on changes required by policies or implementation plan
	2.4 Ensure procedures for addressing grievances and conflict are properly documented
	2.5 Communicate key issues about procedures for addressing grievances and conflict
	2.6 Review employee relations policies and plans to establish whether they are meeting their intended outcomes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3. Manage negotiations to resolve conflict	3.1 Train individuals in ***conflict-management techniques and procedures***
	3.2 Identify and where possible alleviate or eliminate sources of conflict or grievance according to legal requirements
	3.3 Check documentation and other information sources to clarify issues in dispute
	3.4 Obtain expert or specialist advice and/or refer to precedents, if required
	3.5 Determine desired negotiation outcomes, negotiation strategy and negotiation timeframes
	3.6 Advocate the organisation's position in negotiation to obtain agreement
	3.7 Document and if necessary ***certify*** the agreed outcomes with the relevant jurisdiction
	3.8 Implement agreements
	3.9 Take remedial action where groups or individuals fail to abide by agreements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to advocate, consult, negotiate and mediate conflict
- innovation and problem-solving skills to manage sensitive and important issues
- planning and time-management skills to:
  - meet critical deadlines
  - sequence tasks
  - prepare submissions
  - present cases.

Required knowledge

- enterprise and workplace bargaining processes
- key entities in the Australian industrial relations system, including courts and tribunals, trade unions and employer bodies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relevant industrial, workplace health and safety, equal employment opportunity and anti-discrimination legislation in federal, state and territory jurisdictions.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • demonstrate understanding of current Australian industrial relations system and relevant legislation • document strategies and procedures for dealing with grievances and disputes • apply negotiation and conflict-resolution techniques.
Context of and specific resources for assessment	Assessment must ensure: • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • analysis of responses to case studies and scenarios • assessment of reports on industrial issues • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • observation of demonstrated techniques in negotiation and case presentation • observation of presentations • oral or written questioning to assess knowledge of industrial relations legislation • review of documentation outlining long-term industrial relations objectives • review of implementation plan and contingency plan • evaluation of documentation communicating key issues about procedures for addressing grievances and conflict.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example: • other units from the Diploma of Human Resource Management.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Long-term employee relations objectives may relate to:	• effective management of grievances, conflict situations and dispute-resolution procedures • employee commitment • employee satisfaction • job design • negotiation outcomes • organisational culture • relations with unions and other peak bodies • restructuring • salary, remuneration, benefits and bonuses • workforce planning • workplace reform.
Implementation plan may include:	• documented objectives, methodology and timeframe • project plan
Associated employee relations activities may include:	• clarifying terms and conditions of employment of those persons affected • consulting with employee representatives, including unions and elected staff representatives • ensuring the legality of proposed strategies, policies and initiatives • referring to employer representatives for advice and support.
Conflict-management techniques and procedures may include:	• controlling difficult situations using legal remedies • dispute-resolution procedures • negotiating and bargaining.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Certify refers to:	• Australian Workplace Agreements • workplace collective agreements.

FDFOP2005A Work in a socially diverse environment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to work in a socially diverse environment, including the development and application of cultural awareness required to interact effectively with people from diverse backgrounds.

Application of the Unit

Application of the unit	This unit is based on the tourism and hospitality unit THHCOR2A Work in a socially diverse environment and the transport and distribution unit TDTG701A Work in a socially diverse environment. This unit involves the application of communication principles and problem solving techniques to facilitate work in a socially diverse environment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Communicate with people from diverse backgrounds	1.1. People from all cultural groups are valued and treated with respect and sensitivity 1.2. Verbal and non-verbal communication takes account of cultural differences 1.3. Where language barriers exist, efforts are made to communicate through use of gestures or simple words in the other persons' language 1.4. Assistance from colleagues, specialist resources or outside organisations is obtained when required
2. Respond to cross-cultural misunderstandings	2.1. Issues which may cause conflict or misunderstanding in the workplace are identified 2.2. Difficulties are addressed with the appropriate people in the workplace 2.3. When difficulties or misunderstandings occur, possible cultural differences are considered 2.4. Efforts are made to resolve the misunderstanding, taking account of cultural considerations 2.5. Issues and problems that cannot be resolved are referred as required for follow up

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Ability to: • identify and recognise cultural differences in the workplace • apply understanding of cultural difference to communicate effectively to achieve work requirements, including selecting appropriate communication style to suit audience • identify and respond to cross-cultural misunderstandings • use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
Required knowledge
Knowledge of: • principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to company and employee rights and responsibilities in the workplace • recognition of the different cultural groups in the workplace • understanding of the basis of cultural difference, including behaviour or practices that can cause offence, and related strategies for interacting in ways that are culturally sensitive • communication strategies and styles appropriate to diverse audiences related to the workplace

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: • identify responsibilities according to the principles of anti-discrimination legislation • treat people from other cultures with respect and sensitivity • make efforts to communicate and understand others using verbal and non-verbal techniques • seek assistance when required to facilitate understanding • treat cross-cultural misunderstandings with sensitivity and act to resolve the matter with respect.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: • advice on legal rights and responsibilities relating to anti-discrimination and EEO • related company policies and procedures • opportunities to interact with others using typical workplace communication processes.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Policies and procedures	Work is carried out according to company policies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements
Legislative requirements	Legislative requirements are typically reflected in procedures and specifications. Legislation includes: • anti-discrimination • EEO
People from diverse backgrounds	People from diverse backgrounds may include: • any person involved in or related to the work process, such as work colleagues, managers and external personnel
Cultural differences	Cultural difference may include but is not limited to: • race • special needs • disabilities • gender • marital status • sexual preference • age
Examples of cultural differences	Examples of cultural differences may include but are not limited to: • language spoken and related communication style • levels of formality/informality • personal grooming • family obligations • recognised holidays • customs • work ethic • product preferences
Outside organisations	Outside organisations may include but are not limited to: • interpretative services • diplomatic services • local cultural organisations • appropriate government agencies

FNSORG501A Develop and manage a budget

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to collect and analyse information and apply sound accounting principles to the development and ongoing management of a budget for a small organisation or section of a large organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit

Application of the unit	This unit may apply to job roles dealing with budgetary control in a range of organisations.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for and collect information for a budget	1.1. ***Areas*** for which the ***budget*** is being prepared are determined and confirmed with appropriate personnel, and ***data*** required for development of the budget are identified, accessed and analysed 1.2. ***Budget parameters*** are determined with estimates based on research, consultation and negotiating with appropriate personnel 1.3. ***Relevant colleagues*** are provided with the opportunity to contribute to the budget planning process
2. Develop budget	2.1. Budget is drafted based on analysis of all available information in accordance with organisation policy 2.2. ***Income and expenditure*** estimates are identified and supported by reliable information and the draft budget circulated for comment
3. Finalise budget and allocate resources	3.1. Modifications to the budget are agreed and incorporated as required and a final budget provided to the appropriate personnel 3.2. Personnel affected by the budget are informed and its application to the area in which they work in terms of limits and goals, financial management and reporting responsibilities clarified 3.3. Priorities within the budget are agreed and resources allocated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
4. Monitor and control budget	4.1. Actual income and expenditure are checked against budget at regular intervals with budget reports prepared and presented to appropriate personnel 4.2. Deviations and response to the deviations are identified and appropriate action taken with appropriate personnel advised on budget status
5. Complete financial and statistical reports	5.1. All required ***financial and statistical reports*** are completed accurately within designated timelines 5.2. Recommendations about future financial planning are made as appropriate 5.3. Reports are clearly presented and checked for accuracy and provided to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- well-developed communication skills to:
  - establish budget requirements, using questioning and active listening as required
  - liaise with others, share information, listen and understand
  - use language and concepts appropriate to cultural differences
- research and analysis skills to access, interpret and manage budget information
- problem solving skills to address budget development and management issues
- judgement skills for forming recommendations in operational situations
- numeracy and IT skills such as:
  - calculating budget data
  - accessing and using appropriate software such as accounting systems, spreadsheets and databases
- literacy skills for:
  - reading and interpreting documentation from a variety of sources and recording, gathering and consolidating information
  - drafting reports and maintaining records
- organisational skills, including the ability to plan and sequence work

Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• basic accounting and financial industry terminology • basic accounting techniques • budgeting techniques and tools • organisation and industry policies and procedures

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • collect and accurately interpret relevant data to develop a budget • consult effectively and negotiate outcomes with others on budgetary issues • accurately complete financial and statistical reports related to budgeting.
Context of and specific resources for assessment	Assessment must ensure: • competency is demonstrated in the context of the financial services work environment and conditions specified in the range statement either in a relevant workplace or a closely simulated work environment • access to and the use of a range of common office equipment, technology, software and consumables • access to an integrated financial software system and data.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples, in combination, are appropriate for this unit: • evaluating an integrated activity which combines the elements of competency for the unit or a cluster of related units of competency • verbal or written questioning on underpinning knowledge and skills • setting and reviewing business simulations or scenarios • evaluating samples of work

	• accessing and validating third party reports.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Areas may include:	• an entire organisation • section of an organisation • particular project or other activity.

Budget will normally:	• refer to an expenditure budget but may also include:
	  • an income budget
	  • sales budget
	  • resource allocation and use budget.

Data will include, but is not restricted to, information relating to:	• business plans • historical data • human resource plans • sales and marketing plans.
Budget parameters include:	• availability of finance • organisation policy and directives • sales forecasts • timelines.
Relevant colleagues include:	• all stakeholders who may be expected to need to approve the budget and key stakeholders who will be required to implement the budget.

Income and expenditure includes:	• monetary and financial income and expenditure but may also include:
	  • resources
	  • materials
	  • products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• people or hours.
Financial and statistical reports include:	• reports which may be required for: • regulatory compliance • to meet organisation procedure and policy requirements • to give useful information to a relevant person.

LMTCL2001B Use a sewing machine

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to use a single sewing machine to align and sew work pieces.

Application of the Unit

Application of the Unit

The unit applies to sewing work using a plain lockstitch machine, zigzag sewing machine or a three thread overlocker to sew straight seams or join flat pieces of stable fabric together.

Sewing techniques may include those where the positioning of the work is controlled by guide bars, sensor lights or other such guiding devices or where there is uncomplicated feeding of the fabric.

Work is conducted according to defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control, and recycling

This unit requires the application of skills associated with planning and organising to use a sewing machine. Problem solving skills are required to ensure machine is functioning properly and identify any

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

performance problems. Communication skills are used to refer to and complete required documentation and report any quality issues. Self management skills are used to ensure safe use of technology and conformance of own work to quality standards.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare work pieces	1.1 Work pieces are received and ***checked***, and any follow-up action is determined. 1.2 Work pieces are laid out in sequence.
2 Prepare for machine use	2.1 Workbench and seating are set up according to ***OHS practices***. 2.2 ***Machines*** are cleaned and checked. 2.3 Records are maintained. 2.4 Machines are ***set up*** and ***adjusted*** according to specifications for work. 2.5 Worn or damaged parts are identified and reported or replaced according to manufacturer specifications.
3 Identify poor machine	3.1 Tension faults are identified. 3.2 Poor thread performance or incorrect thread selection is

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
performance	identified. 3.3 Incorrect foot or needle for sewing is identified. 3.4 Impact of poor machine performance on sewing is identified.
4 Sew work pieces	4.1 Machine is used for ***sewing operations***. 4.2 Pieces are sewn according to product requirements and quality standards. 4.3 Machine is used according to requirements for speed of work. 4.4 Machine speed and work handling are controlled according to type of operations, fabrics and product type. 4.5 OHS practices are followed in operation of machine. 4.6 Action is taken according to OHS practices to prevent accidents and to eliminate risks to personal safety.
5 Assess quality of sewn pieces	5.1 Quality standards are identified. 5.2 Sewn pieces are inspected against quality standards. 5.3 Any faults or pieces that do not meet quality standards are identified and reported. 5.4 Results of quality inspection are recorded. 5.5 Production records or packing slips are completed as required. 5.6 Work is directed to next operation or packing section.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Demonstrates knowledge of:

- garment assembly processes and machines where the positioning of the work may be controlled by guide bars, sensor lights or other such guiding devices or where there is uncomplicated feeding of the fabric
- techniques in using and maintaining a three thread overlocker, zigzag or plain lockstitch sewing machine
- characteristics of stable woven and knitted fabrics and threads such as cotton drill, calico, double knit, rugby knit, poplin
- quality standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This describes the essential skills and knowledge and their level, required for this unit.

- handle, receive and assemble work pieces
- consistently achieve quality and production output requirements
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

Demonstrates skills and knowledge to:

- check work against ticket information or specification sheets
- prepare workstation and work before commencing sewing operations
- apply sewing techniques over a limited range of operations
- operate at least one type of machine for operations where the positioning of the work may be controlled by guide bars, sensor lights or other such guiding devices or where there is uncomplicated feeding of the fabric
- apply OHS practices in work operations
- maintain accurate records

Consistency in performance

Consistently applies skills and knowledge when:

- organising work
- completing tasks according to instructions
- working systematically with attention to detail
- identifying improvements and avoiding damage
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents
- assessing operational readiness of equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

	• recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Checked may include	• checking that the work pieces match ticket information • checking that relevant previous operations such as pressing and cutting have been successfully completed
OHS practices	OHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may relate to: • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• housekeeping • reporting accidents and incidents • environmental practices
Machines must include one of the following	• plain lockstitch machine • three thread overlocker • zigzag sewing machine
Set-up includes	• ensuring correct thread, needle size and type, needle guard, tension setting and attachments
Adjusted may include	• checking and replacing worn or damaged needles and attachments (feet)
Sewing operations may include	• aligning and sewing straight seams or joining flat pieces of stable fabric together, for example top stitch, edge stitch, open seams, closed seams, lapped seams

LMTCL2003B Identify fibres and fabrics

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to identify fibres and fabrics commonly used in the construction of garments and accessories.

Application of the Unit

Application of the Unit

The unit applies to identifying a wide range of fibres and fabrics used in the clothing industry. Fibres include natural and synthetic, and fabrics include knitted, woven and non-woven.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control, and recycling

This unit requires the application of skills associated with problem solving to identify types and characteristics of fibres and fabrics. Learning and self management skills are required to apply knowledge of fibres and fabrics and communication skills are used to explain and describe information about fabric properties.

Pre-Requisites

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify fibres and fabrics	1.1 ***Fibres*** used in clothing industry are identified. 1.2 ***Methods*** of identifying fibres are identified. 1.3 ***Fabrics*** used in clothing industry are identified. 1.4 Generic and trade names for fibres and fabrics are identified.
2 Describe fabric construction processes	2.1 Fibres used in construction of a variety of fabrics are identified. 2.2 ***Construction processes*** of fabrics are described.
3 Describe qualities of fabrics	3.1 ***Physical qualities*** of fabrics are described. 3.2 ***Visual qualities*** of fabrics are described.
4 Determine uses of fabrics	4.1 Common uses of fabrics are identified. 4.2 Fabrics used in workplace are identified.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Demonstrates knowledge of:

- information sources on fibre and fabric identification
- fabrics used in the workplace
- quality standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- identify features of fibres and fabrics
- access information as required
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

Demonstrates skills and knowledge to:

- identify fibres and fabrics
- identify fabric construction processes
- identify fabric qualities
- identify fabric uses within TCF industry

Consistency in performance

Consistently applies skills and knowledge when:

- organising work
- completing tasks according to instructions
- working systematically with attention to detail

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

	• identifying improvements and avoiding damage • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Fibres may include:	• natural fibres such as cotton, wool, silk, linen • synthetic fibres such as polyamide, polyester, acrylic, lycra, rayon, acetate
Methods may include:	• labelling • visual • handle • acetone • burn test

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Fabrics may include:	• natural and synthetic single yarn fabrics and blends • knitted fabrics including weft knits and warp knits • woven fabrics including plain, twill, satin, dobby, jacquard and pile • non-woven fabrics such as felts, nets, braids, bonded and composite • emerging smart fabrics
Construction processes may include:	• spinning • knitting • weaving • blending • fusing • bonding • finishing
Physical qualities include:	• firmness • softness • handle • weight • grain • gauge • drape • porosity • covering power • count • light penetration
Visual qualities include:	• colours • textures • patterns • right side/wrong side
Fabric characteristics may include:	• bias • stretch • fraying • feel • handle • shrinkage
OHS practices	OHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may relate to: • manual handling techniques • standard operating procedures • personal protective equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

LMTCL2006B Press work

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to press work as part of the garment production process.

Application of the Unit

Application of the Unit

The unit applies to pressing of work as part of the garment production process where the position and handling of work are under the control of the operator and operator skills may contribute to the final appearance and finish of the work.

Work to be pressed may include stable woven and knitted natural and synthetic fabrics.

Work is conducted according to defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control, and recycling

This unit requires the application of skills associated with planning and organising to press work. Problem solving skills are required to ensure work conforms to requirements and identify any pressing

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare workstation	1.1 Work area is set up according to ***OHS practices***.
	1.2 ***Pressing equipment*** is cleaned and checked.
	1.3 ***Routine minor maintenance*** is performed.
	1.4 Work is laid out in correct proximity and sequence.
2 Press work	2.1 Work is collected or received and quality checked, and any follow-up action determined.
	2.2 Faults, spots and marks are identified and appropriate action taken.
	2.3 Appropriate attachments are selected and used.
	2.4 Pressing is sequenced.
	2.5 Work is positioned on pressing equipment according to product requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.6 Heat, steam, vacuum, pressure and time are applied according to product requirements and fabric specifications.
	2.7 Work is pressed.
	2.8 Equipment and work handling are controlled for variations in work type and construction and pressing requirements.
	2.9 OHS practices are followed.
	2.10 Action is taken according to workplace practices to prevent accidents and to eliminate risks to personal safety.
3 Despatch pressed work	3.1 Pressed work is inspected and compared against workplace pressing standards.
	3.2 Results of inspection of work are recorded.
	3.3 Subsequent action to either reject or correct faulty work is ***reported and recorded***.
	3.4 Preventative action taken to avoid any recurrence of faulty work is recorded.
	3.5 Pressed work is either passed to next operation, hung or packed and directed to required despatch area, despatch storage or packing sections.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Demonstrates knowledge of:

- pressing requirements and characteristics of typical fabrics and other materials used in garment assembly such as woven cottons, denim, single knits, tricot, gabardine, cotton drill, calico, double knit, rugby knit, poplin
- sewing techniques such as pleats, tucks, gathers, darts, hems and how pressing impacts on the finish
- quality standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- consistently achieve quality and production output requirements
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This describes the essential skills and knowledge and their level, required for this unit.

- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence	Demonstrates skills and knowledge to: • check work against work specification or pressing instructions • prepare pressing equipment and work before commencing pressing operations • apply pressing techniques in operations • apply OHS practices in work operations • maintain accurate records
Consistency in performance	Consistently applies skills and knowledge when: • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.

LMTCL2007B Lay up, mark and cut uncomplicated fabrics and lays

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to lay up, mark and cut uncomplicated fabrics and lays.

Application of the Unit

Application of the Unit

The unit applies to situations where single garments or only a couple of layers of fabric are be cut. The marker may be developed directly on the fabric lay or planned separately and applied. Patterns are likely to have uncomplicated shaping and few pieces such as T-shirts, straight or A-line skirts, shift dresses, tracksuits, section crowns, brims, tips, side bands, berets.

Work involves some discretion, initiative and judgement.

Manual or computer aided techniques may be used.

Work is conducted according to defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal,

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare workstation	1.1 Workstation, cutting table and seating are set up according to ***OHS practices*** and specifications for work.
	1.2 ***Cutting equipment*** is cleaned, checked and servicing assessed according to manufacturer instructions.
	1.3 Cutting table is prepared to suit correct lay length.
	1.4 ***Lay-up and marking equipment*** is set up and prepared for use.
2 Lay-up fabric	2.1 Lay-up instructions are interpreted.
	2.2 ***Fabric*** is collected and checked.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3 Fabric width and quality are checked with lay-up instructions.
	2.4 Fabric is laid up and fabric tension adjusted to match fabric performance.
	2.5 Fabric is checked for faults and required action taken to cut out faults or other appropriate techniques.
3 Draft lay marker	3.1 Cutting order is interpreted for marking requirements such as fabric type, width, quantity and garment sizes.
	3.2 Required pattern pieces are collected and checked manually or by computer.
	3.3 Pattern pieces are manipulated and positioned manually on paper or by computer for most efficient fabric use.
	3.4 Lay marker is drawn up manually or by computer.
	3.5 Lay-up instructions are prepared according to requirements.
4 Copy marker	4.1 Marker is checked against requirements.
	4.2 Marker is copied either manually or by computer.
5 Position marker	5.1 Marker is placed on lay.
	5.2 Marker and lay alignment are checked and appropriate action taken according to job specifications
6 Cut work	6.1 Lay is cut using cutting equipment according to requirements for operation.
	6.2 Cut work is inspected, any faults identified and appropriate action taken to ensure cut pieces meet required quality standards.
	6.3 Preventative action is taken to avoid any recurrence of defective pieces, and is recorded.
	6.4 Performance of cutting equipment is regularly checked for signs of faulty operation, including evidence from inspection of cut pieces, and any required action is taken.
	6.5 OHS practices are followed.
	6.6 Action is taken according to OHS practices to prevent accidents and to eliminate risks to personal safety.
7 Complete work	7.1 Cut work is directed to next operation and work area is cleaned and prepared for next job.
	7.2 Master copy of lay marker is stored in filing drawer or computer as appropriate.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Demonstrates knowledge of:

- characteristics of fabrics and other materials used in garment assembly such as woven fabrics (poplin, drill, flannelette) and knitted fabrics (rugby knit, double knit)
- fabric faults
- pattern identification
- computer operations involved in marker-making, copying and storage
- quality standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- draft markers using either manual or computer techniques
- handle, receive and assemble garments
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

Demonstrates skills and knowledge to:

- check work against work specification or cutting order
- set up manual or computer drafting equipment before commencement of marker-making operations
- make markers involving patterns, uncomplicated fabrics and lays, using manual or computer techniques
- prepare cutting table and work before commencing cutting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

	operations • use cutting techniques • use lay-up techniques • apply workplace OHS practices in work operations • maintain accurate records

LMTCL2008B Finish garment production

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to finish completed work in the production of garments or other associated articles.

Application of the Unit

Application of the Unit

The unit applies to finishing operations on garments and other related articles. Finishing operations may include hand or machine tasks such as attaching buttons, cutting loose threads, ironing on transfers, fasteners, attaching tickets and, labels and hemming.

Work performed may require some decision making within defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control, and recycling

This unit requires the application of skills associated with planning and organising to finish garment production. Problem solving skills are required to ensure work conforms to requirements and identify any production problems. Communication skills are used to refer to

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Demonstrates knowledge of:

- characteristics of typical fabrics and other materials used in garment production
- quality standards and practices
- correct sequencing of components
- required finishing procedures
- industry and product processes and equipment
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- set up safe work area
- complete finishing operations
- report and address faults appropriately
- receive, document and transfer information
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

LMTGN2008B Coordinate work of team or section

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to coordinate work of a team or section.

Application of the Unit

Application of the Unit

The unit applies to coordination and monitoring of the work of a team or section.

Work requires discretion, initiative and judgement on the job in own work. Work may be conducted in a variety of environments, such as operational workplace activities, restricted space, and hazardous, controlled or exposed conditions.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

Team work and communication skills are central to this unit to ensure team performance meets production and organisational requirements. This unit also requires planning and organising skills and an ability to apply problem solving strategies to identify and

Pre-Requisites

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and coordinate work schedules	1.1 Tasks, jobs and work priorities are confirmed with supervisor or manager. 1.2 Tasks are assigned to team, section and individuals. 1.3 Priority of tasks is communicated to team, section or individuals. 1.4 Materials are organised to meet work requirements.
2 Monitor performance and quality	2.1 Required work standard is communicated to team, section or individuals to ensure understanding of task requirements. 2.2 Standard of performance, including quality standards, of team, section or individuals, is monitored to ensure achievement of outcomes and is reported. 2.3 Instruction and support are provided, as required, in order to achieve standards and outcomes. 2.4 Proposals for improvements to work processes, efficiency and organisation are communicated and reported to ***appropriate personnel***.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3 Monitor application of OHS	3.1 Implementation of OHS and environmental standards and procedures are monitored to achieve safety standards and requirements in the workplace. 3.2 Proposals for prevention or correction of problems are identified and communicated and reported to appropriate personnel, according to ***OHS practices***.
4 Communicate with work team, section, individuals	4.1 All information affecting work, including OHS and quality standards is explained logically in an easily understood manner to individuals and teams, as required. 4.2 Feedback from team, section members and individuals is sought to assist in effective operation of team or section.
5 Report work of team or section	5.1 Reports and documentation on team or section performance and outcomes are provided to line supervisor and management, as required. 5.2 Team or section performance and outcomes, which impact on operations of other sections, are communicated effectively and promptly, as required, to appropriate personnel.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- production and workflow system in the team
- factors and constraints that impact on effective workflow
- effective work methods to achieve production objectives and timelines
- methods for monitoring and coordinating the use of resources
- quality assurance standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- prioritise resources (machines, staff, materials and production processes)
- allocate work to team or section members
- identify and report problems with workflow
- maintain and update monitoring procedures
- analyse and record results according to workplace practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

Demonstrates skills and knowledge to:

- organise work tasks, work processes and staff
- meet efficiency standards
- advise appropriate ways of correcting non-compliance and inefficiencies
- apply techniques to monitor work
- apply OHS practices in work operations
- maintain accurate records

Consistency in performance

Consistently applies skills and knowledge when:

- organising work
- completing tasks according to instructions
- working systematically with attention to detail
- identifying improvements and avoiding damage
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents
- assessing operational readiness of equipment
- recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions

Resource implications

Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Appropriate personnel may include:	• line supervisor or manager • team or section leaders • supervisors or managers in other sections • technical specialists
OHS practices	OHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may relate to: • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • environmental practices

LMTGN4002A Participate in product engineering

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to participate in product engineering in a textiles, clothing and footwear (TCF) enterprise.

Application of the Unit

Application of the Unit This unit applies to participating in product engineering in a TCF workplace where judgement may be required in planning and selecting appropriate processes or procedures for self and others. Work may be conducted in a variety of environments, including operational workplace activities, restricted space, hazardous, controlled or exposed conditions.

TCF production areas may include:

- textile production
- clothing production
- footwear production
- early stage wool processing
- cotton ginning
- leather production
- millinery
- canvas and sails production
- laundry operations
- dry cleaning operations

Product engineering may occur in relation to repetitive production runs, short runs and quick changes and can relate to fabrics, fibres, yarns, design varieties, weaves, dyes, finishes, etc.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

The unit is applied according to OHS and workplace practices of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

enterprise, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team/section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with communication to interpret production specifications, calculate costs, maintain records and prepare reports. Initiative and enterprise, planning and organising and problem solving are required to examine production options and determine required variations to specifications, processes and schedules. This unit also requires an ability to learn and apply new information. Self management skills are used to ensure work meets quality and work standards.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
1 Identify and confirm specifications	1.1 Sample material or product is examined to confirm structure 1.2 Detail of structure or composition is documented, where required, to assist in production planning
2 Identify options for production	2.1 Evaluation of material or product structure is conducted to identify options for production 2.2 Options are assessed to determine most effective and efficient ***method of production***, ensuring highest quality and yield from raw materials, and ease of production 2.3 Options and recommendations are documented in accordance with workplace practices and ***OHS practices***
3 Identify potential machine or production changes	3.1 Existing resources, machines, production techniques and scheduling arrangements are examined in relation to the production requirements 3.2 Any potential requirements for change are identified and documented in accordance with workplace practices
4 Prepare ***cost*** estimates	4.1 Material requirements and economic batch sizes are identified 4.2 Labour hours, times and other statistics required are identified and estimates made 4.3 Available machine hours are determined and estimates made, where required 4.4 Overall costs are estimated and documented in accordance with workplace practices
5 Maintain records	5.1 Production planning records are maintained and reports prepared, where necessary, in accordance with workplace practices

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- machines and their capabilities
- quality assurance processes; production processes and software
- products produced by the workplace and material or fabric structure (techniques)
- work and workplace organisation systems
- safety and environmental aspects of relevant workplace activities
- OHS practices, including hazard identification and control measures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- quality practices
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- determine structure and composition of material or product
- make calculations, interpret and use data from various sources
- read, interpret and follow information on work specifications, standard operating procedures and work instructions and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry our work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

Demonstratesskills and knowledge to:

- confirm specifications
- assess options for method of production
- establish potential machine and production changes
- estimate costs
- apply OHS practices in production operations
- maintain accurate records

Consistency in performance

Consistentlyapplies skills and knowledge when:

- organising work
- completing tasks
- identifying improvements
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents
- assessing operational readiness of equipment used and work processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

	• recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions • completing work systematically with attention to detail without damage to goods and equipment
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent Assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Method of production may include:	• JIT • VAM • quick response • quality circles, • team processes • benchmarking
Cost estimating may include:	• written bill of labour, order of work or plant sample
OHS practices	OHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- manual handling techniques
- standard operating procedures
- personal protective equipment
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other OHS practices relevant to the job and enterprise

LMTGN4016A Contribute to the development of products or processes

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to contribute to developing products or processes within the workplace.

Application of the Unit

Application of the Unit

This unit applies to activities contributing to development of products or processes within the enterprise. It includes conducting trials to establish conformance to requirements. Judgement may be required in planning and selecting appropriate processes or procedures for self and others.

Work may be conducted in restricted spaces or exposed conditions or controlled or open environments

Work responsibilities will vary in scope according to:

- size of the workplace
- range of designs or products
- specialisation in the workplace
- workplace quality standards

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

This unit is applied according to OHS and workplace practices of the enterprise, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

team/section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with planning and organising the development of products or process for production. This unit also requires an ability to work with others in the team to test and asses the quality and feasibility of designs and make adjustments or modifications to specifications. Initiative, enterprise and problem solving will be used to assist in feasibility studies and develop specifications. Learning skills will be used to gather and apply new information.

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
1 Interpret provisional specifications	1.1 Provisional specifications are identified
	1.2 Specifications are interpreted, in consultation with others, where required
2 Participate in feasibility studies	2.1 Requirements for feasibility study are identified, in conjunction with others, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
	2.2 Assistance is provided in studies to assess feasibility of design and development through sampling, trial run production, consideration of machine or equipment capabilities, availability of resources, required quality and cost
3 Assist in developing or engineering product	3.1 Product or process specifications are interpreted and preliminary specifications are developed from ***feasibility study***
	3.2 Specifications are used to develop or engineer the product
	3.3 Raw materials are checked or selected to meet requirements
	3.4 Machine or equipment or skill availability are determined against requirements
4 ***Conduct trials***	4.1 Requirements for trial are confirmed and clarified, where necessary, to establish procedures and parameters
	4.2 Organisation and liaison with production area occurs, where required
	4.3 Trials are assessed in accordance with the established procedures
5 Analyse and interpret results	5.1 Results of the trials are analysed to determine performance and acceptability for production
	5.2 Analysis is interpreted to determine performance and acceptability for production
6 Report results and maintain records	6.1 Reports are prepared
	6.2 Records are maintained, where required,

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- industry and product processes
- product and process development procedures
- machine or equipment, resource and skill capabilities within the workplace
- feasibility study procedures
- safety and environmental aspects of relevant workplace activities
- reporting processes
- OHS practices, including hazard identification and control measures
- quality practices
- workplace practices
- recording and reporting practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Demonstrates skills to:

- carry out sampling
- check and select raw materials
- interpret specifications
- establish availability of machines
- determine availability of required skills and personnel
- select, interpret and evaluate procedures or processes
- read, interpret and follow information on work specifications, , standard operating procedures and work instructions and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

Demonstrates skills and knowledge to:

- conduct feasibility studies
- interpret and develop specifications
- use specifications appropriately
- organise and conduct trials
- assess results of trials

Consistency in performance

Consistently applies skills and knowledge when:

- organising work
- completing tasks
- identifying improvements
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents
- assessing operational readiness of equipment used and work processes

LMTGN5004A Manage installation and commissioning of equipment and systems

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to manage the installation and commissioning of equipment and systems used in a textiles, clothing and footwear (TCF) workplace.

Application of the Unit

Application of the Unit This unit applies to the management of the installation and commissioning of equipment and systems used in a TCF workplace where significant judgement is required in planning, technical or supervisory activities related to operations or processes. The work may involve individual and team related activities, and can include liaison with specialist technicians or contractors. Work may be conducted in a large scale production or small business situation in a TCF sector

The unit may relate to on-shore or off-shore applications; it would include all local requirements and may include establishing a new production line.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit requires the application of skills associated with communication to interpret specifications and technical information and prepare work-plans, budgets and contracts relating to equipment and systems. Knowledge of the technology is required to make assessments about commissioning processes and report and document information. Planning and organising, initiative and enterprise and problem solving are required to coordinate, problem solve and monitor installation processes and achievement of performance targets.

Licensing/Regulatory Information

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare work plan and specification document	1.1 Items to be included in work plan and specification document are identified and confirmed 1.2 Work plan for installation and commissioning of ***equipment and systems*** is drawn up, including management and reporting procedures 1.3 Specification document is prepared according to workplace and/or manufacturer procedures
2 Coordinate and	2.1 Contract arrangements for the installation and commissioning of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
monitor contract arrangements	equipment/systems, including all legal, insurance and safety requirements, are coordinated in accordance with workplace and/or legislative procedures
	2.2 Contract arrangements are monitored to ensure compliance with requirements and variations dealt with according to agreed strategy
3 Manage schedules and budgets	3.1 Information is gathered to establish adherence to schedule and budget forecasts
	3.2 Deviation from performance targets is monitored and corrective action taken, if and where necessary
	3.3 Scheduling and budgeting processes are assessed to determine whether variations or alternative plans are indicated
4 Administer legal, environmental and OHS requirements	4.1 Legal, environmental and OHS requirements related to installation and commissioning of equipment/systems are defined
	4.2 Monitoring of the process is assessed to ensure compliance
5 Assess and report on work completion	5.1 Completed work is assessed to confirm all specifications have been incorporated
	5.2 Report on work completed is prepared in accordance with ***workplace practices***
6 Maintain records	6.1 Records are maintained of installation and commissioning activities in accordance with workplace practices

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level

Demonstrates knowledge of:

- appropriate installation and commissioning procedures
- OHS considerations and environmental factors
- contract requirements
- safety and environmental aspects of relevant enterprise activities
- workplace practices and reporting/recording processes
- relevant regulatory requirements and codes of practice
- relevant OHS legislation, regulatory requirements and codes of practice
- carry out work in accordance with OHS practices
- hazard identification and control measures associated with managing installation and commissioning of equipment and systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Demonstrates skills to:

- monitor contract arrangements, scheduling and budgets
- manage the application of technical skills by other personnel
- communicate effectively within the workplace, including liaising with other departments
- establish or interpret procedures, where required
- determine report requirements and present information in appropriate formats
- read, interpret and follow information on job instructions, specifications, standard operating procedures, patterns, charts, tickets, order forms and other applicable reference material
- sequence operations
- clarify and check task related information

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

Assessment must confirm appropriate knowledge and skills to:

- develop and prepare work plan and specification documents
- organise and monitor contract arrangements
- assess scheduling and budgeting procedures
- implement legal, environmental and OHS obligations/requirements
- ensure completed work meets specifications
- maintain accurate records

Consistency in performance

Applies underpinning knowledge and skills when:

- organising work
- managing activities and personnel
- completing tasks
- identifying improvements
- applying safety precautions relevant to the task
- assessing operational capability of specified equipment used and work processes
- shows evidence of application of relevant workplace practices including:
- hazard policies and procedures including codes of practice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

	• job procedures and work instructions • quality procedures (where existing) • waste, pollution and recycling management processes • action taken promptly, accidents and incidents reported in accordance with statutory requirements and workplace practices • recognises and adapts appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others • work completed systematically with attention to detail without damage to goods, equipment or personnel
Resource implications	• access to real or appropriately simulated situations involving the management of the installation and commissioning of equipment and systems used in a TCF context • this includes real or simulated work areas, materials, equipment, and information on work specifications, manufacturer's instructions, relevant safety procedures and regulations, quality standards, workplace practices and customer requirements
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment
Interdependent assessment	This unit does not necessarily need to be assessed in conjunction with other units and can be assessed independently

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements, organisation insurance requirements, OHS legislation, manual handling procedures and relevant health regulations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Equipment and systems may include:	• microprocessor or computer control • production and facility equipment used within the enterprise
Workplace practices may include:	• workplace practices relating to managing installation and commissioning of equipment and systems • conditions of service, legislation and industrial agreements including workplace agreements and awards and Federal or State/Territory legislation • standard work practices • reporting verbally or in writing • oral, written or visual communication • being responsible for the maintenance of own work quality and contributing to the quality improvement of team or section output, where necessary • safety, environmental, housekeeping and quality practices as specified by machine and equipment manufacturers, regulatory authorities and the organisation
Workplace OHS practices may include:	• use of personal protective wear and equipment • safe materials handling practices • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • storage of equipment • workstation housekeeping • cleaning of equipment • workers' compensation legislation

MEM03001B Perform manual production assembly

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers assembling components and/or sub-assemblies in a production environment and testing the components and/or sub-assemblies to ensure compliance with specifications.

Application of the Unit

Application of the unit	This unit applies to production-orientated assembly operations that are essentially manual in nature and do not require complex adjustments. This unit should not be selected when Unit MEM18055B (Dismantle, replace and assemble engineering components) has already been selected. Where the selection and use of tools is required as part of the assembly process, see Unit MEM18001C (Use hand tools) and Unit MEM18002B (Use power tools/hand held operations) as appropriate. **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Read and understand job sheets	1.1. Job sheets and instructions are understood and followed correctly.
2. Select assembly equipment and components	2.1. Assembly equipment is selected according to instructions or job sheets and used to standard operating procedures. 2.2. Components/sub-assemblies are obtained and arranged for assembly. 2.3. Equipment/tools are used in a safe manner.
3. Assemble components	3.1. Assembly is produced following correct sequence of operations, using selected equipment to standard operating procedures. 3.2. Production data is recorded/input to standard

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	operating procedures.
4. Perform tests	4.1. Assembly is tested/checked for compliance to job sheet requirements, following standard operating procedures as required.
5. Protect assembly from damage	5.1. Components and/or assemblies are handled and stored safely, in a manner least likely to cause damage.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • following job instructions and standard operating procedures • selecting and using assembly tools, components and sub-assemblies • entering routine and familiar information onto proformas and other standard workplace forms • following oral instruction
Required knowledge
Look for evidence that confirms knowledge of: • application and use of assembly tools and equipment • sequence in which the assemblies are to be performed • storage location of the component/sub-assemblies • required tests and checks • required action for non-conformance • potential damage through the use of inappropriate handling and/or unsafe storage procedures • use and application of personal protective equipment • safe work practices and procedures • hazards and control measures associated with manual production assembly

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to assemble components and/or sub-assemblies in a production environment and test the components and/or sub-assemblies to ensure compliance with specifications.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing manual production assembly or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Read and understand job sheets	1.1. Job sheets/instruction are correctly interpreted and followed.
2. Select and use sheet and plate assembly equipment	2.1. Assembly equipment is selected in accordance with instructions on job sheet. 2.2. Equipment is used in a safe manner according to standard operating procedures.
3. Assemble fabrications	3.1. Products to be assembled are verified against specifications. 3.2. Assembly is produced following correct sequence of operations. 3.3. Assemblies/fabrications are joined to specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	using specified joining techniques. 3.4. Assembly is tested/checked for compliance with job requirements using standard operating procedures.
4. Protect assembly from damage	4.1. Assemblies/fabrications are handled and stored according to standard operating procedures and in a safe manner least likely to cause damage.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading, interpreting and following written job sheets, instructions, standard operating procedures and other applicable reference documents • checking and clarifying routine familiar information • selecting and using specified assembly equipment and tools • following sequence of operations • joining the components/fabrications correctly and safely using appropriate techniques • testing and checking assembled products for compliance with specifications • handling and storing components, fabrications and/or assemblies • checking for conformance to specifications • following oral instructions
Required knowledge
Look for evidence that confirms knowledge of: • the importance of following the sequence of operations • application and function of assembly equipment • safety precautions and operating characteristics of assembly equipment and tools • application and limitations of different joining techniques • surface preparation and joining techniques • assembly tests/checks • safe handling and storage procedures applicable to components, fabrications and/or assemblies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• effects of inappropriate handling and storage procedures • hazards and control measures associated with sheet and plate assembly • use and application of personal protective equipment • safe work practices and procedures for sheet and plate assembly

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to assemble prefabricated/formed components using a variety of joining techniques. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge,s and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with sheet and plate assembly or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct

EVIDENCE GUIDE	
	observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Assembly equipment	Jigs, fixtures and other appropriate tools
Joining techniques	Seaming, bonding, riveting, welding etc.

MEM03004B Perform electronic/electrical assembly (production)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers identifying and assembling electronic/electrical components and testing assembled components for conformance to job sheets/specifications.

Application of the Unit

Application of the unit	This unit applies to assembly of electronic/electrical components or equipment to predetermined specifications and following predetermined procedures. This unit covers the use of automatic wave soldering machines. If soldering skills are required, then Unit MEM05001B (Perform manual soldering/desoldering - electrical/electronic components) or Unit MEM05002B (Perform high reliability soldering and desoldering) should be selected. If measurement skills are required, then Unit MEM12002B (Perform electrical/electronic measurement) should also be selected. Where the selection and use of tools is required as part of the assembly process, see Units MEM18001C (Use hand tools) and MEM18002B (Use power tools/hand held operations) as appropriate. **Band**: **A** **Unit Weight**: **8**

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Read and understand job sheets.	1.1. Job sheets and instructions are understood and followed correctly.
2. Select assembly equipment	2.1. Assembly equipment is selected and used in accordance with instructions or job sheets to standard operating procedures. 2.2. Equipment is used in a safe manner.
3. Identify electronic/electrical	3.1. Common name, appearance, colour of electronic

ELEMENT	PERFORMANCE CRITERIA
components	and electrical components are identified. 3.2. Polarity indicators are identified on components.
4. Assemble components	4.1. Correct components are selected by code/colour or other identification methods. 4.2. Components/devices are prepared for soldering or other termination methods. 4.3. Cables are connected to a variety of plug and socket combinations as required. 4.4. Components are safely handled and stored using appropriate anti-static handling procedures and techniques in accordance with standard operating procedures. 4.5. Assembly is produced following correct sequence of operations.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading, interpreting and following assembly job sheets, instructions and standard operating procedures • selecting appropriate tools and equipment • using tools and equipment • selecting electronic and electrical components by name, colour and appearance • preparing components/devices for soldering and termination • connecting cables to plugs/sockets • handling and storing components safely • applying anti-static handling procedures and techniques • checking work for conformance to specification • completing production records and reports • following oral instructions • using hand and power tools dedicated to the assembly process • identifying components by name, appearance and colour • entering routine and familiar information onto proforma and standard workplace

REQUIRED SKILLS AND KNOWLEDGE
forms
Required knowledge
Look for evidence that confirms knowledge of: • assembly equipment and its application • hazards associated with the misuse of tools and equipment • polarity indicators on common electronic and electrical components • consequences of connecting electronic and electrical components with incorrect polarity • termination methods • preparation requirements for components/devices to be soldered • preparation requirements for components/devices to be terminated using non-soldering techniques • connection requirements of a variety of plugs and sockets • anti-static procedures and techniques • safe handling and storage requirements of electrical and electronic components • consequences of not following the correct sequence of operations • specifications against which the assembly is to be checked/tested • test/check procedures • data recording requirements

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform electrical/electronic assembly (production).
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for	This unit may be assessed on the job, off the job or a

ELEMENT	PERFORMANCE CRITERIA
requirements	job sheets/instructions.
2. Select and use a range of hand tools and equipment	2.1. Hand tools and equipment for setting assembly stations are used in a safe manner, according to instructions, standard operating procedures and any legislative requirements.
3. Set assembly stations	3.1. Assembly stations are set up for a range of processes and operations according to defined procedures. 3.2. Safe work practices are observed and implemented. 3.3. Assembly stations are adjusted to specifications and operational requirements. 3.4. Assembly stations are tested for correct operation.
4. Maintain equipment	4.1. Routine maintenance is carried out to standard operating procedures. 4.2. Worn or damaged components are identified and changed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings for setting assembly stations • following oral instructions • testing and checking assembly station and outputs • identifying worn and/or damaged components
Required knowledge
Look for evidence that confirms knowledge of: • procedures to be followed in setting up assembly stations • safety hazards associated with the assembly station and/or its setting up • specifications applicable to the assembly station • effect of various adjustments that can be made to the assembly station

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• routine maintenance requirements • effect of worn or damaged components on the operational requirements and specifications of the assembly station • use and application of personal protective equipment • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to set, adjust and test assembly stations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. MEM05005B Carry out mechanical cutting

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers setting up and operating a range of mechanical cutting and holing equipment.

Application of the Unit

Application of the unit	This unit applies to sawing, shearing, cropping and/or holing and includes setting up and operating a range of equipment. Examples of machines that could be covered include guillotines, croppers, cold saws, band saws, automatic saws etc. Typical applications of this unit may include cutting for manufacture, production cutting and cutting of materials selected from stores in a maintenance environment. This unit does not cover hand or hand held power tools used for cutting e.g. circular saws, nibblers and side grinder. These skills are covered by Unit MEM18001C (Use hand tools) and Unit MEM18002B (Use power tools/hand held operations). This unit does not include the skills required for operational maintenance of the equipment used; these skills are covered by Unit MEM07001B (Perform operational maintenance of machines/equipment). For repair and welding of band saw blades where blade repair unit is not attached to the machine, refer to Unit MEM05013C (Perform manual production welding). **Band**: **A** **Unit Weight**: **2**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine job requirements	1.1. Job requirements and specifications are determined from job sheets and/or instructions. 1.2. Appropriate method/machine is selected to meet specifications. 1.3. Machine is loaded and adjusted for operation consistent with standard operating procedures.
2. Select/set up machine tooling	2.1. Tooling is selected to match job requirements. 2.2. Tooling is correctly installed using standard

ELEMENT	PERFORMANCE CRITERIA
	operating procedures. 2.3. Machine is set up and adjusted using standard operating procedures.
3. Operate mechanical cutting machine	3.1. Appropriate stops and guards are set and adjusted as required. 3.2. Material is secured and correctly positioned using measuring equipment as necessary. 3.3. Machine is started and stopped safely to standard operating procedures. 3.4. Machine is operated to cut/hole material to specifications using standard operating procedures.
4. Check material for conformance to specification	4.1. Material is checked against specification. Machine and/or tooling is adjusted as required and in process adjustments carried out as necessary. 4.2. Material is cut and/or holed to within workplace tolerances. 4.3. Material is used in most economical way. 4.4. Codes and standards are observed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • loading and adjusting cutting machines • selecting machines and tooling • installing cutting tool • setting up and adjusting cutting machine • securing and correctly positioning materials • cutting and holing materials • applying relevant codes and standards • reading and interpreting routine information on written job instructions, specifications and standard operating procedures • following oral instruction • measuring materials to specified workplace tolerances and within the machine

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
range • clarifying routine task-related information
Required knowledge
Look for evidence that confirms knowledge of: • the characteristics of cutting methods and machines • effect of materials on the machine tooling, tooling defects and adjustments • effect of adjustments on the dimensions of the cut material • applicable tolerances • methods of marking out materials to ensure minimum wastage • any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standard • use and application of personal protective equipment for mechanical cutting • safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Assemble/disassemble plant and equipment	1.1. Accessories and equipment are correctly selected and assembled for manual heating and thermal cutting.
2. Operate heating and thermal cutting equipment	2.1. Cutting process and/or procedure appropriate for material is selected. 2.2. All safety procedures are observed. 2.3. Equipment start-up procedures are followed correctly to standard operating procedures. 2.4. Equipment adjustments are made correctly using standard operating procedures. 2.5. Appropriate cutting allowances are made. 2.6. Material is used in the most economical way. 2.7. Defects are identified and corrective action is taken to standard operating procedures. 2.8. Material is heated and cut to specification.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.9. Shape/size/length is to accepted workplace standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • performing pre-start checks • safely starting equipment • following standard operating procedures • adjusting equipment to operating specifications • making cutting allowances • economising material and minimising wastage • identifying cutting defects and taking corrective action • heating and cutting materials to specifications • reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings • following oral instructions • performing measurements needed to meet the requirements of this unit • entering routine and familiar information onto proformas and standard workplace forms
Required knowledge
Look for evidence that confirms knowledge of: • cutting processes appropriate to various materials • heating and cutting specifications • procedures for heating and cutting • the tools, equipment and techniques for heating and cutting • assembling procedures for equipment and accessories • hazards and control measures associated with manual heating and thermal cutting • use and application of personal protective clothing and equipment • equipment pre-checks and operation • procedures for adjusting heating and cutting equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• cutting allowances and reasons for applying them • procedures for minimising waste material • reasons for minimising waste material • cutting defects and their causes • procedures for correcting cutting defects • tools, equipment and techniques required to correct cutting defects • use and application of personal protective equipment • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform manual heating and thermal cutting.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manual heating/thermal cutting or other units requiring the exercise of the skills and knowledge covered by this unit.

MEM05012C Perform routine manual metal arc welding

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers preparing the materials and carrying out routine manual metal arc welding (MMAW).

Application of the Unit

Application of the unit	This unit applies in a maintenance or manufacturing environment where the welding is not required to meet an Australian standard or equivalent. Fillet and butt welds would typically be performed on low carbon/mild steels. Where welding is required to AS 1554 General Purpose or equivalent codes, occupational health and safety regulations and/or licensing requirements, Unit MEM05015D (Weld using manual metal arc welding process) should be selected. **Band**: **A** **Unit Weight**: **2**

MEM05050B Perform routine gas metal arc welding

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers preparing materials and routine gas metal arc welding (GMAW).

Application of the Unit

Application of the unit	This unit applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard or equivalent. Fillet and butt welds would typically be performed on low carbon/mild steels. Where welding is required to meet Australian Standard 1554 General Purpose or equivalent codes, occupational health and safety regulations and/or licensing requirements, Unit MEM05017D (Weld using gas metal arc welding process) should be selected. **Band**: **A** **Unit Weight**: **2**

Licensing/Regulatory Information

Refer to Application of the Unit

Pre-Requisites

Prerequisite units

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. Locations of welds are identified in according to standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Settings and consumables are selected to suit application.
4. Perform routine welding using GMAW	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned to standard operating procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • preparing materials • setting up welding equipment • welding with GMAW • reading and interpreting routine information on written job instructions, specifications and standard operating procedures • following oral instruction • using measurement skills relating to joint preparation and routine GMAW
Required knowledge
Look for evidence that confirms knowledge of: • different current and voltage settings, gas flow rates wire diameters, wire feed speed and other variables to suit typical situations. • material and equipment preparation • properties and characteristics of materials and consumables • equipment and equipment settings • fuel gas properties and applications • post-welding treatments • weld characteristics • safe welding practices • use and application of personal protective equipment for routine GMAW

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must

EVIDENCE GUIDE	
	be able to perform routine gas metal arc welding (GMAW).
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing the materials and carrying out routine gas metal arc welding or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify properties of commonly used metals	1.1. Materials to be welded are identified. 1.2. Characteristics and properties of commonly used materials are identified. 1.3. Uses and purposes of commonly used materials are identified. 1.4. Basic metallurgical characteristics are considered.
2. Identify and provide for welding contingencies	2.1. Information relevant to welding processes is sourced as required. 2.2. Potential contingencies are identified and solutions are considered.
3. Identify appropriate welding processes	3.1. Welding processes are identified and selected to achieve specified outcomes with selected metals. 3.2. Effects of welding processes on materials are identified. 3.3. Distortion prevention measures are identified. 3.4. Alternative joining methods for job are identified and assessed for relevancy.
4. Identify cleaning and preparation requirements	4.1. Processes for cleaning and preparing metals are identified. 4.2. Role of contaminants in welding flaws is explained. 4.3. Safety requirements for chemicals and other

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Characteristics	Tensile strength, grade, heat resistance, density
Properties	Physical properties, flammable limits, melting point
Basic metallurgical characteristics	Alloys and grades of metals and different types of electrodes
Information	Steel suppliers handbooks, welding company materials, standard operating procedures, safety documentation

Welding processes	• Fusion:
	  • electric arc welding
	  • gas (oxy-fuel) welding
	  • thermit welding
	• Pressure welding processes:
	  • resistance welding
	  • fire or forge welding
	  • friction welding
	  • explosive welding
	• Low temperature processes:
	  • soldering
	  • brazing
	• Other:
	  • ultrasonic welding
	  • electron beam welding

Effects	Thermal expansion, heat affected zones, fume emissions, altered density, distortion
Distortion prevention measures	Heat treatments, consolidations
Processes for cleaning and weld preparation	Etching, grinding, arc gouging, thermal cutting, chemical additives, anti-corrosion treatments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Safety requirements	• Dry and ventilated areas • In accordance with workplace procedures • Location away from heat risks • Location away from incompatible substances • Requirements for hazardous substances • Adequate signage and labelling • Appropriate sealing • Routine inspections • Emergency procedures • Regulatory notification requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access and interpret OH&S information	1.1. OH&S information is obtained and interpreted. 1.2. Relevant OH&S legislation is identified. 1.3. Work related safety information is obtained and interpreted.
2. Identify risks associated with welding	2.1. Pollutants formed by welding processes are identified. 2.2. Occupational diseases and injuries which may be associated with welding are identified. 2.3. Factors associated with increased risk are identified. 2.4. Exposure levels for pollutants are identified. 2.5. Risks and potential health effects associated with specific metals are identified. 2.6. Risks and potential health effects associated with gases in welding are identified. 2.7. Other hazards of welding are identified.
3. Reduce risks associated with welding	3.1. Manual handling techniques are used. 3.2. Personal protective equipment is used correctly. 3.3. Procedures to control hazards are implemented. 3.4. Workplace safety procedures are implemented. 3.5. Workplace safety non-compliances are reported in accordance with workplace procedures.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine requirements of job	1.1. Job requirements are determined from engineering drawings, job sheet, or verbal instructions from metallurgist or supervisor.
2. Select heat treatment equipment	2.1. Appropriate equipment is selected for the required heat treatment.
3. Set up equipment	3.1. Equipment is set up according to standard operating procedures and manufacturers' instructions.
4. Work safely with hot metals	4.1. Safety clothing and personal protective equipment is used correctly according to standard operating procedures. 4.2. Emergency procedures are demonstrated according to approved safety instructions. 4.3. Safety signs and symbols are identified and understood. 4.4. Equipment is used according to specifications and

ELEMENT	PERFORMANCE CRITERIA
	standard operating procedures.
5. Heat treat material	5.1. Material is treated to achieve required result and may include preparation processes. 5.2. Material is piece or batch loaded and unloaded using equipment appropriate to the situation, according to standard operating procedures. 5.3. Correct temperature is maintained according to standard operating procedures.
6. Identify hazardous conditions	6.1. Hazards are identified and hazard control measures are implemented to maintain a safe work environment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- setting up and operating heat treatment equipment
- applying heat treatment
- safely loading furnace(s)

Required knowledge

Look for evidence that confirms knowledge of:

- work specifications
- material characteristics
- heat treatment applications, equipment and processes
- emergency procedures
- material preparation, quenching, preheating requirements
- material condition during heat treating process
- batch and/or piece loading of furnaces
- safe loading of furnaces
- hazards and control measures associated with heat treatment, including housekeeping
- use and application of personal protective equipment

MEM07001B Perform operational maintenance of machines/equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers carrying out programmed safety and maintenance checks on machines/equipment.

Application of the Unit

Application of the unit	This unit mainly applies in a manufacturing setting, where routine programmed operational maintenance to machines/equipment is required. It is not intended to be used where higher level maintenance activities are performed. Machines/equipment range includes manual, semi-automatic and automatic machines of a stand-alone continuous production or process nature. This unit should not be selected when any of the following are selected: Unit MEM18055B (Dismantle, replace and assemble engineering components), Unit MEM18006C (Repair and fit engineering components), Unit MEM07005C (Perform general machining). **Band**: **A** **Unit Weight**: **2**

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are understood and correctly followed.
2. Mount work holding fixtures/devices/tools	2.1. Machine is prepared to accept work holding fixtures/devices/tools. 2.2. Preset tooling is mounted as required into machine/equipment. 2.3. Work holding fixtures/devices are set on machine as required using standard operating procedures. 2.4. Tool offset or datum settings are identified/verified against job sheet using standard operating procedures. 2.5. Program is loaded, selected and verified in accordance with job instructions.
3. Conduct pre-start checks	3.1. Pre-start checks are undertaken to standard operating procedures. 3.2. Correct safety procedures are observed and all safety equipment is checked for correct operation.
4. Set machine	4.1. Machine is set/adjusted to meet operational requirements and specifications. 4.2. Production samples are checked for compliance with specifications using standard operating procedures.
5. Instruct machine operator	5.1. Operator is instructed, if necessary, ensuring that all safety procedures and devices are in place.
6. Replace worn/damaged tooling	6.1. Where appropriate, preset tools are replaced, tool offsets are adjusted or other corrective action is taken using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- mounting work holding fixtures/devices/tooling
- mounting preset tooling
- verifying tool offsets and/or datum settings against job sheets or instructions
- loading and verifying programs
- conducting pre-start checks
- following safety procedures
- checking safety features and safety equipment for correct operation
- performing numerical operations and calculations/formulae within the scope of this unit
- setting and adjusting machines
- measuring and verifying first-off samples
- instructing machine operators on the sequence of operations
- identifying worn or damaged tooling and taking appropriate corrective action

Required knowledge

Look for evidence that confirms knowledge of:

- work holding fixtures/devices/tools and preset tooling for different machines/processes
- procedures for mounting work holding fixtures/devices/tools
- location of work holding fixtures/devices/tools relative to the machine datum or zero
- reasons for establishing tool offsets
- the purpose of datum settings
- the source(s) of information on tool offsets and datum settings
- procedures to locate and load programs
- procedures for verifying loaded programs
- pre-start checks
- safety features of the machine/process
- the purpose and function of safety features and/or safety equipment
- machine/process setting procedures
- machine operating procedures
- adjustments that can be made to the machine/process
- the effect of adjustments on machine and operational specifications
- product or part specifications in relation to the machining process
- measuring devices for checking parts or products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• examples of worn or damaged tooling • the effects of worn or damaged tooling • the corrective action for worn or damaged tooling • hazards and control measures associated with numerical and computer controlled machines, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to set computer controlled machines/processes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with setting computer controlled machines/processes or other units requiring the exercise of the skills and knowledge covered by this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit Descriptor

Unit descriptor	This unit covers obtaining the job instruction, conducting the pre-start checks, and operating and monitoring the machine or process.

Application of the Unit

Application of the unit	This unit applies to a range of production operations or continuous processes. The work is performed in accordance with clear step-by-step instructions and procedures documented on job sheets or similar process instruction documents. Operational adjustments to the machine or process by the operator are made using external controls. Basic operation (excluding setting and tool adjustments) of CNC machines is covered by this unit. Where production packaging and labelling of the finished goods or product is required, Unit MEM11006B (Perform production packaging) should be considered. This unit should not be selected with any of the following units unless the skills of this unit are being applied to an additional and different type of machine and or process: Unit MEM04001B (Operate melting furnaces), Unit MEM04002B (Perform gravity die casting), Unit MEM04003B (Operate pressure die casting machine), Unit MEM04006B (Operate sand moulding and core making machines), Unit MEM06001B (Perform hand forging), Unit MEM06002B (Perform hammer forging), Unit MEM08001B (Perform wire, jig and barrel load/unload work), Unit MEM08004B (Finish work using wet, dry and vapour deposition methods), Unit MEM08008B (Operate and control surface finishing waste treatment process)

instructions	correctly.
2. Conduct pre-start checks	2.1. Pre-start checks are undertaken to standard operating procedure. 2.2. Safety procedures are observed and all safety equipment is checked for correct operation.
3. Operate machine/process	3.1. Machine/process is started up safely and correctly in accordance with standard operating procedures. 3.2. Machine/process is operated in accordance with job instructions or standard operating procedures. 3.3. Components/feed stock are loaded and maintained consistent with production requirements. 3.4. Machine/process output is unloaded safely to standard operating procedures, as required. 3.5. Machine/process output is handled and stored in a manner not likely to cause damage, as required. 3.6. Production data is recorded to standard operating procedures.
4. Monitor machine/process	4.1. Machine/process is monitored for safe and correct operation, deviations and faults are identified and reported in accordance with standard operating procedures. 4.2. Emergency procedures are understood and followed in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • following job sheets, standard operating procedures and other applicable workplace forms • manual handling • following oral instructions • entering routine and familiar information onto proformas and standard workplace forms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• orally reporting routine information • identifying deviations and faults in machine operation/process
Required knowledge
Look for evidence that confirms knowledge of: • pre-start checks • machine/process start-up and unloading procedures • component/feed stock levels to ensure continuous process • production recording and reporting requirements • types of product fault/deviations • consequences of improper handling and storing of finished work • procedures to be followed in emergency situations • use and application of personal protective equipment • safe work practices and procedures • hazards and control measures associated with operating and monitoring machine/process

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

controlled machine/process	and verified in accordance with job instructions. 3.2. Computer controlled machine is operated safely to product specifications using standard operating procedures. 3.3. Machine malfunctions are identified and reported. 3.4. Production samples are checked for compliance to specification using standard operating procedures.
4. Monitor machine/process	4.1. Tool wear is monitored and, where appropriate, preset tools are replaced, tool offsets are identified in computer controlled program and adjusted, or other corrective action is taken using standard operating procedures. 4.2. Product deviation from specification is reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- making pre-start checks
- checking safety equipment and guards for correct operation
- following safety procedures
- selecting and verifying the correct computer controlled program
- operating the computer controlled machine
- identifying and reporting machine malfunctions
- checking parts/products for conformance to specification
- monitoring the machine or process for signs of tool wear
- taking corrective action
- reporting part or product deviations from specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge
Look for evidence that confirms knowledge of: • pre-start checks • safety equipment and features associated with the machine/process • safety procedures associated with the machine/process • procedures for accessing computer controlled programs installed in the machine controller • procedures for verifying the correct computer controlled program • computer controlled machine operating procedures • typical machine malfunctions • procedures for reporting machine malfunctions • measuring instruments/techniques • examples of tool wear and the effect on product or part specifications • procedures to be followed once tool wear has been detected • replacing preset tools • adjustments to tool offsets • the effect of adjustments on part or product specifications • procedures for reporting product or part deviations • hazards and control measures associated with operating computer controlled machines/processes, including housekeeping • safe workplace practices and procedures

MEM08002C Pre-treat work for subsequent surface coating

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers pre-treating common ferrous and non-ferrous work.

Application of the Unit

Application of the unit	This unit applies to pre-treatment of common ferrous and non-ferrous work for finishing by a wide variety of processes, such as wet coating, powder coating, electroplating, anodising, electroless plating, electrophoretic coating and hot dip metallising. In the pre-treatment process, adjustments to apparatus/equipment/controls include temperature settings, current/voltage and solution compositions. This unit should not be selected if Unit MEM08003C (Perform electroplating operations) has already been selected. **Band**: **A** **Unit Weight**: **4**

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following routine and familiar information on standard operating procedures
- recognising common surface soils and conditions from given samples
- carrying out appropriate pre-treatment processes
- monitoring and maintaining the pre-treatment process parameters within specified limits
- following verbal instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics of common metals, alloys and non-metals and procedures and techniques for identifying them
- common surface soils and conditions
- procedures for identifying the type(s) of soil on surfaces to be finished
- simple tests that can be used to assist in identifying surface soils and conditions
- pre-treatment processes applicable to a range of materials, surface soils and conditions
- procedures for carrying out pre-treatment processes
- parameters and procedures for monitoring pre-treatment processes
- hazards and control measures associated with pre-treatment
- use and application of personal protective equipment
- safe work practices and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting quality assurance standards, test data other applicable reference documents
- liaising between the production section and the control laboratory
- checking and clarifying information
- using effective communication skills and terminology for conveying and discussing task-related information
- determining and recommending process changes
- using tests to calculate process parameters on the basis of test and production data collected
- using appropriate tests, testing equipment and techniques to test the surface coating for conformance with specification

Required knowledge

Look for evidence that confirms knowledge of:

- enterprise and industry quality assurance standards that apply to surface finish production and product quality
- the role of the control laboratory and procedures for liaising with internal/external control laboratories
- surface finish specifications
- characteristics of deviations of test/production data and their causes
- the procedures, calculations and formulae for determining process parameters
- the effect of varying process parameters on the specification of the surface finish
- surface coating tests and the procedures, equipment and techniques necessary to carry out those tests
- hazards and control measures within the scope of this unit
- use and application of personal protective equipment
- safe work practices and procedures
- manual handling techniques

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine job requirements	1.1. Surface preparation requirements are determined from job sheet, instructions or other predetermined specifications in accordance with standard operating procedures. 1.2. Where required, appropriate solvent and solvent application are selected to meet job specification. 1.3. Where required, appropriate mechanical equipment is selected to meet job specification. 1.4. Work site is prepared for surface cleaning activities.
2. Set up equipment	2.1. Appropriate equipment and any required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	consumables are assembled, set up and prepared correctly and safely in accordance with manufactures' specifications and standard operating procedures.
3. Prepare surfaces using solvents as required	3.1. Safe working environment for solvent use is established according to regulatory requirements and standard operating procedures. 3.2. Solvents are applied correctly. 3.3. Treated surface is neutralised and made safe to handle.
4. Prepare surfaces using mechanical means as required	4.1. Safe working environment for mechanical surface preparation is established according to regulatory requirements and standard operating procedures. 4.2. Surfaces are prepared using mechanical means. 4.3. Mechanical equipment is cleaned and checked for damage and operational faults, in accordance with standard operating procedures. 4.4. Equipment faults are recorded and reported in accordance with standard operating procedures.
5. Inspect prepared surface	5.1. Surface preparation is checked for cleanliness and conformance to specifications. 5.2. Faults or defects are rectified where required and recorded/reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • planning and sequencing operations • preparing surfaces using solvents as required • preparing surfaces using mechanical means • setting up equipment and consumables • meeting all safety requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• using solvents correctly • neutralising solvents • using mechanical equipment to prepare surface • maintaining mechanical equipment • recording and reporting of faults • inspecting prepared surface • rectifying work performed • checking for conformance to specifications • reading and interpreting routine information on written job instructions, specifications and standard operating procedures • following oral instructions • applying measurement skills needed to meet the requirements of this unit • entering routine and familiar information onto proformas and standard workplace forms
Required knowledge
Look for evidence that confirms knowledge of: • common surface contaminates, conditions • reasons for selecting solvents • mechanical equipment required • procedure for setting up equipment • specifications applying to the surface to be prepared • methods for neutralising solvents • tools, equipment, abrasives and other materials • procedures for maintaining/storing mechanical equipment • procedures for recording/reporting faulty equipment • procedures checking prepared surfaces • rectification techniques • use and application of personal protective equipment • safe work practices and procedures • relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to select the appropriate preparation process, select and set up the equipment, undertake mechanical preparation or application of solvents as required and inspect the finished surface. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with surface preparation using solvents and/or mechanical means, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for

assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Surface preparation	New surfaces and restoration work
Solvents	A range of cleaning chemicals including acids, chlorinated solvents and hydrocarbons
Solvent application methods	Spraying, wiping, brushing, vapour degreasing etc.
Mechanical equipment	Linishers, grinders, polishers, sanders, blast device, enclosures, air grinders etc.
Consumables	Emery cloth/belts, grinding/sanding disks, grinding accessories etc.

MEM08012B Prepare surfaces by abrasive blasting (basic)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing a basic level of skill in surface preparation by abrasive blasting.

Application of the Unit

Application of the unit	This unit applies to surface preparation/cleaning on both ferrous and non-ferrous masonry and cementatious materials/components. Reference is made to supplier information and specifications as well as accepted and appropriate Australian and international standards. The majority of work is in a team environment and uses predetermined procedures and standards for safety and quality with all work and work practices undertaken to regulatory and legislative requirements. **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions or other predetermined specifications in accordance with standard operating procedures. 1.2. Appropriate abrasive blasting process, equipment and blasting media are identified to meet job specification. 1.3. Work site is prepared for surface cleaning activities.
2. Set up equipment	2.1. Appropriate equipment and any required consumables are assembled, set up and prepared correctly and safely in accordance with manufactures' specifications and standard operating procedures. 2.2. Correct rust inhibitor for use in wet abrasive blast methods is selected where required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Pre-operational checks are carried out on equipment and faults and are rectified or reported for further action.
3. Prepare surfaces using abrasive blasting	3.1. Blasting equipment is operated in accordance with standard operating procedures. 3.2. Emergency shut-down procedures can be undertaken. 3.3. Work procedures are undertaken to appropriate environmental requirements. 3.4. Abrasive media disposal is carried out in accordance with standard operating procedures. 3.5. Blasting equipment is cleaned and disassembled and inspected in accordance with manufacturers' specifications and standard operating procedures. 3.6. Equipment faults are recorded and reported in accordance with standard operating procedures.
4. Inspect prepared surface	4.1. Surface preparation is assessed for cleanliness and conformance with specifications. 4.2. Faults or defects are rectified where required and inspection results are recorded and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • planning and sequencing operations • undertaking numerical operations within the scope of this unit • selecting blasting equipment and media • setting up equipment and consumables • selecting rust inhibitor • conducting pre-operational checks • preparing surfaces using abrasive blasting • disposing of abrasive media

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• maintaining blasting equipment • identifying, recording and reporting of faults • inspecting prepared surface • performing rectification work • checking for conformance to specifications
Required knowledge
Look for evidence that confirms knowledge of: • reason for selecting the chosen sequence of operations • blasting equipment and media required • equipment, consumables for various methods • importance of using an appropriate rust inhibitor • process for undertaking pre-operational checks • procedures or using abrasive blasting equipment • procedures for abrasive media disposal • procedures for maintaining and storing blasting equipment • recording/reporting procedures; faulty equipment • checking prepared surfaces • rectification techniques • safe work practices and procedures • hazards and control measures related to abrasive blasting

RANGE STATEMENT	
regional contexts) may also be included.	
Blasting processes	Surface preparation using propelled abrasives including water, air steam, grits and blasting mediums
Blasting media	Abrasives, shot, glass beads, sand, steel shot, garnet, and other mediums accepted by industry and all regulatory bodies
Rust inhibitor	A substance which, when added to a corrosive liquid in small amounts, reduces the rate of corrosion
Blasting equipment	Electric and diesel compressors, blast pots, blast rooms, centrifugal blast machines, water pressure washers to 35,000 kpa, air hoses and nozzles, and specified hand and power tools, etc.

ELEMENT	PERFORMANCE CRITERIA
	consumables are assembled, set up and prepared correctly and safely in accordance with manufacturers' specifications and standard operating procedures. 2.2. Correct rust inhibitor for use in wet abrasive blast methods is selected where required. 2.3. Pre-operational checks are carried out on equipment and faults and are rectified or reported for further action.
3. Inspect surface prior to cleaning	3.1. Work piece is inspected prior to cleaning in accordance with standard operating procedures. 3.2. Identified faults/defects requiring remedial or pre-treatment action are reported as required.
4. Prepare surfaces using abrasive blasting	4.1. Blasting equipment is operated in accordance with standard operating procedures. 4.2. Emergency shut-down procedures can be carried out. 4.3. Work procedures are undertaken to appropriate environmental requirements. 4.4. Abrasive media disposal is carried out in accordance with standard operating procedures. 4.5. Blasting equipment is cleaned and disassembled and inspected in accordance with manufacturers' specifications and standard operating procedures. 4.6. Equipment faults are recorded and reported in accordance with standard operating procedures.
5. Inspect prepared surface	5.1. Surface preparation is assessed for cleanliness and conformance with specifications. 5.2. Faults or defects are rectified where required and inspection results are recorded and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms skills in: • preparing and sequencing operational work plan • selecting blasting process and equipment • selecting appropriate blasting media • setting up equipment • undertaking surface inspection prior to cleaning • reading and interpreting routine information on written job instructions, specifications and standard operating procedures. • following verbal instructions • orally reporting routine information • identifying faults and defects • checking and clarifying task-related information • checking for conformance to specifications
Required knowledge
Look for evidence that confirms knowledge of: • calculations and numerical operations within the scope of this unit • blasting media features • equipment for the selected method • inspection procedures • procedures for using abrasive blasting equipment • procedures for abrasive media disposal • safe work practices and procedures • hazards and control measures associated with preparing surfaces by abrasive blasting, including housekeeping

MEM08014B Apply protective coatings (basic)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers spraying pre-treatments and protective coatings not limited to brush, roller and conventional spray equipment, at a basic level.

Application of the Unit

Application of the unit	This unit is designed to be used where a basic level of skill is required. It covers single and two-pack coatings not containing isocyanates. Work is undertaken autonomously or as part of a team environment using predetermined standards of safety, quality and operating procedures. Specific health and safety matters include interpretation of MSDS warnings, materials sensitivity, hazardous goods, breathable air and introduction of compressed air into the body. Specific understanding is required of given supplier information and product details. Reference is made to supplier information and specifications as well as accepted and appropriate Australian and international standards. Where isocyanates are present, Unit MEM08015B (Apply protective coatings [advanced]) should be selected. Where required, Unit MEM11004B (Undertake dogging) and Unit MEM11010B (Operate mobile load shifting equipment) should also be selected. **Band**: **A** **Unit Weight**: **4**

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions, drawings or visual inspection. 1.2. Required protective coating materials are identified according to job specification. 1.3. Required protective coating application equipment is

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	identified according to job requirements. 1.4. Work site is prepared for application of protective coating.
2. Work piece prepared for application of protective coating	2.1. Surface condition is inspected for readiness for application of protective coating according to specification. 2.2. Unsuitable work pieces/surfaces and fabrication defects are identified and appropriate remedial action or reporting is undertaken in accordance with standard operating procedures. 2.3. Components are masked where protective coating application is not specified. 2.4. Conditions for overspray are identified.
3. Equipment prepared for application of surface coating materials	3.1. Required plant and equipment basic operations are understood. 3.2. Routine maintenance is undertaken on plant and equipment in accordance with standard operating procedures. 3.3. Status/reports are recorded by proforma or orally in accordance with standard operating procedures. 3.4. Conventional coating application equipment is assembled in accordance with equipment requirements and standard operating procedures.
4. Apply single pack coatings	4.1. Coating product type, solvent, uses, mixing procedure, clean-up and safety requirements are identified as appropriate. 4.2. Correct method of determining wet film thickness in accordance with specified dry film is demonstrated. 4.3. Coating material is thinned to suit the application method and to achieve required film thickness. 4.4. Coating is applied using specified application method and standard operating procedures. 4.5. Coating schedules can be outlined for metal and non-metal materials. 4.6. Coating application and curing technique are monitored according to standard operating procedures.
5. Clean and store equipment	5.1. Conventional coating application equipment is cleaned, disassembled and inspected for damage. 5.2. Faulty equipment is recorded and reported to appropriate personnel in accordance with standard

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	operating procedures. 5.3. Coating application equipment is stored in accordance with standard operating procedures.
6. Inspect finish surface	6.1. Surface finish is assessed for profile size differences and uses. 6.2. Coating thickness is determined using appropriate instruments and results are compared with job specifications. 6.3. Total surface is inspected for conformance to specification in accordance with standard operating procedures. 6.4. Inspection results are recorded and reported in accordance with standard operating procedures.
7. Select and maintain personal protective equipment (PPE)	7.1. Appropriate personal protective equipment for coating application is selected according to job requirements and standard operating procedures. 7.2. Personal protective equipment is used appropriately in accordance with manufacturers' specifications and standard operating procedures. 7.3. Ancillary support attachments are identified and used. 7.4. Personal protective equipment is maintained in accordance with manufacturers' specification and standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining all relevant drawings, job sheets, specifications and instructions in accordance with workplace procedures • considering all relevant information and job requirements • preparing site with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- undertaking comprehensive inspection and considering specifications during inspection
- using standard workplace procedures to identify, select and apply the appropriate treatment or actions to rectify items with surface or fabrication defects
- identifying surface required as 'no paint areas' and protecting these using standard masking procedures and techniques
- undertaking precautions to prevent overspray in the workplace using standard procedures
- undertaking routine maintenance on plant and equipment in accordance with standard operating procedures
- preparing all required maintenance records/reports and details communicated
- assembling equipment in accordance with manufacturers' specifications and standard operating procedures
- identifying coating type and appropriate solvents and standard workplace procedures required for mixing processes, clean-up and safe handling
- using workplace procedures for determining the wet film thicknesses of a coating from the specified dry film thickness
- calculating required thickness in accordance with product volume solids
- applying standard operating procedures for thinning coating materials and applying the specified film thickness coating to a substrate
- applying protective coating to comply with an established standard using specified methods and standard operating procedures
- controlling coating application and curing techniques using standard operating procedures
- undertaking disassembly, cleaning and checking for functionality of spraying equipment and associated items in accordance with standard operating procedures
- using standard operating procedures to report on any damage or faulty parts and communicating with appropriate personnel
- following procedure for storage including any hazard reduction and/or protection of equipment and components
- checking surface condition of the work piece, including profile size properties and problems according to standard operating procedures and other acceptable standards
- determining thickness using mechanical, electronic or other appropriate instruments and testing results compared with job specifications, drawings etc.
- undertaking comprehensive inspection as required by standard operating procedures
- preparing all required inspection records/reports and details communicated
- selecting personal protective equipment suitable for applying protective coatings
- using appropriate personal protective equipment in workplace operations in accordance with standard procedures
- selecting the appropriate supports to use with personal protective equipment in standard operational practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- checking personal protective equipment items for serviceability in accordance with manufacturers' specifications
- recording and reporting faulty items to appropriate personnel using standard workplace procedures

Required knowledge

Look for evidence that confirms knowledge of:

- work to be undertaken and specifications applying to the work
- correct interpretation of all relevant information
- safety issues, adequate precautions, awareness of other site factors that could be affected by the work
- deviation from specified surface finish/condition
- standard workplace procedures for identifying unsuitable work items
- method of locating areas to be protected from coating process and masked
- the areas subject to overspray and requiring protection
- operation of plant and equipment using standard operating procedures
- standard operating procedures for plant and equipment maintenance
- the requirements for completion and processing of maintenance reports
- assembly specifications and procedures
- workplace procedures for identifying coating types and processing solvents, mixing and safe handling practices
- the workplace procedures for determining the wet film thickness of a coating from the specified dry film thickness
- calculations using a specified formulation
- standard operating procedure for thinning coating materials for use in applying the specified film thickness coating to a substrate
- standard operating procedures to apply protective coatings to comply with an established standard
- procedures for controlling coating application and curing techniques
- standard operating procedure for disassembly, cleaning and checking
- standard operating procedures for recording and reporting defective parts
- standard operating procedures for storage and protection of equipment
- standard operating procedures and other relevant standards for assessing the profile of the surface finish
- dry film thickness testing instruments
- standard operating procedures for surface inspection, including the extent and detail of inspection as required
- requirements for completion and processing of inspection reports
- standard procedure for identifying and selecting the required personal protective equipment
- the workplace standard procedure for the use of personal protective equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the use and selection of appropriate supports to use with personal protective equipment in standard operational practices • standard procedures and manufacturers' specifications for inspecting and maintaining personal protective equipment in the workplace • hazard and control measures associated with applying protective coatings (basic) including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply protective coatings (basic). Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying protective coatings (basic) or other units requiring the exercise of the skills and knowledge

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions or other specifications in accordance with standard operating procedures. 1.2. Appropriate coating system and material is selected to meet job specification. 1.3. Appropriate coating process and equipment is selected to meet job specification. 1.4. Work site is prepared for surface coating activities.
2. Work piece prepared for application of	2.1. Surface condition is inspected for readiness for application of protective coating according to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
protective coating	specification. 2.2. Unsuitable work pieces/surfaces and fabrication defects are identified and appropriate remedial action or reporting is undertaken in accordance with standard operating procedures. 2.3. Components are masked where protective coating application is not specified. 2.4. Conditions for overspray are identified.
3. Equipment is prepared for application of surface coating materials	3.1. Required plant and equipment basic operations are understood. 3.2. Routine maintenance is undertaken on plant and equipment in accordance with standard operating procedures. 3.3. Status/reports are recorded by proforma or orally in accordance with standard operating procedures. 3.4. Coating application equipment is assembled in accordance with equipment requirements and standard operating procedures. 3.5. Personal protective equipment is selected and maintained in accordance with manufacturers' specifications and standard operating procedures.
4. Apply coatings using conventional, airless and plural component equipment	4.1. Coating product type, solvent, uses, mixing procedure, clean-up and safety requirements are identified as appropriate. 4.2. Correct method of determining wet film thickness in accordance with specified dry film is demonstrated. 4.3. Coating material is thinned to suit the application method and to achieve required film thickness. 4.4. Coating is applied using specified application method and standard operating procedures. 4.5. Coating application and curing technique is monitored according to standard operating procedures.
5. Clean and store equipment	5.1. Coating application equipment is cleaned, disassembled and inspected for damage. 5.2. Faulty equipment is recorded and reported to appropriate personnel in accordance with standard operating procedures. 5.3. Coating application equipment is stored in accordance with standard operating procedures.
6. Inspect finished	6.1. Surface finish is assessed for profile size differences

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
surface	and uses. 6.2. Coating thickness is determined using appropriate instruments and results are compared with job specifications. 6.3. Total surface is inspected for conformance to specification in accordance with standard operating procedures. 6.4. Inspection results are recorded and reported in accordance with standard operating procedures.
7. Calculate, estimate and cost application of protective coating	7.1. Surface area of work piece, materials, labour and equipment are assessed. 7.2. Cost of materials, labour, handling and equipment are determined. 7.3. Results are recorded and reported as an estimate for the application of a protective coating system.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining all relevant drawings, job sheets, specifications and instructions in accordance with work place procedures • where appropriate, inspecting the surface(s) to be coated by the individual • selecting correct coating system and material for the job surface and use • selecting correct coating process and equipment for applying the selected coating material • preparing site with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required • using standard workplace procedures to identify, select and apply the appropriate treatment or actions to rectify items with surface or fabrication defects • identifying surfaces required as 'no paint areas' and protecting these using standard masking procedures and techniques • undertaking precautions to prevent overspray in the workplace using standard procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- undertaking routine maintenance on plant and equipment in accordance with standard operating procedures
- preparing all required maintenance records/reports and communicating details
- assembling equipment in accordance with manufacturers' specifications and standard operating procedures
- selecting appropriate personal protective equipment and maintaining this in accordance with job requirements, manufacturers' specifications, OH&S requirements and standard operating procedures
- inspecting work piece and identifying any faults in accordance with standard operating procedures
- using workplace procedures for determining the wet film thickness of a coating from the specified dry film thickness
- calculating required thickness in accordance with product volume solids
- applying standard operating procedures for thinning coating materials and applying the specified film thickness coating to a substrate
- applying protective coating to comply with an established standard using specified methods and standard operating procedures
- controlling coating application and curing techniques using standard operating procedures
- undertaking disassembly, cleaning and checking for functionality of spraying equipment and associated items in accordance with standard operating procedures
- using standard operating procedures to report on any damage or faulty parts and communicating with appropriate personnel
- following procedure for storage including any hazard reduction and/or protection of equipment and components
- checking surface condition of the work piece, including profile size properties and problems according to standard operating procedures and other acceptable standards
- determining thickness using mechanical, electronic or other appropriate instruments
- comparing test results with job specifications, drawings etc.
- undertaking inspection comprehensively as required by standard operating procedures
- preparing all required inspection records/reports and communicating details
- using appropriate inspection and assessment methods
- undertaking calculations in accordance with standard operating procedures and specifications
- recording and reporting calculated costs in accordance with standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- work to be undertaken
- specifications applying to the work
- appropriate coating system and material required to meet job specification
- features of the various types of coating materials, including drying and curing requirements
- selection procedures for coating material
- appropriate coating process and equipment required for surface coating to meet job specification
- application features of the various types of coating materials and methods
- selection procedures for coating process and equipment, including conventional, airless and plural component
- awareness of other site factors that could be affected by the work
- deviation from specified surface finish/condition
- standard workplace procedures for identifying unsuitable work items
- method of locating areas to be protected from coating process and masked
- the areas subject to overspray and requiring protection
- operation of plant and equipment using standard operating procedures
- standard operating procedures for routine maintenance of plant end equipment
- requirements for completion and processing maintenance reports
- procedure for selecting and maintaining personal protective equipment
- inspection procedure
- unsuitable work pieces in consideration of job specifications
- the workplace procedures for determining wet film thickness of a coating from the specified dry film thickness
- calculations using a specified formulation
- standard operating procedures for thinning coating materials for use in applying the specified film thickness coating to a substrate
- standard operating procedures to apply protective coatings to comply with an established standard
- the procedures for controlling coating application and curing techniques
- standard operating procedure for disassembly, cleaning and checking
- standard operating procedures for recording and reporting defective parts
- standard operating procedures for storage and protection of equipment
- standard operating procedures and other relevant standards for assessing the profile of the surface finish
- dry film thickness testing instruments
- standard operating procedures for surface inspection, including the extent and detail of inspection as required
- the requirements for completion and processing of inspection reports
- the standard methods and procedures for determining surface area of various shapes of materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• standard procedures for calculating costs • the standard operating procedures for recording and reporting calculated costs • hazard and control measures associated with applying protective coatings (advanced), including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply protective coatings (advanced). Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying protective coatings (advanced) or other units requiring the exercise of the skills and knowledge covered by this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply specific health and safety considerations to surface preparation	1.1. Products, hazardous materials and processes used in blaster cleaning and coating operations are identified. 1.2. Safety procedures appropriate to the work requirements are applied. 1.3. Unsafe working conditions are identified and reported to appropriate personnel.
2. Control by-products, materials and emissions	2.1. By-products, materials and emissions are contained using established procedures. 2.2. By-products, materials and emissions are monitored and directed to appropriate treatment or storage area. 2.3. Monitoring devices are checked for correct/continuous operation. 2.4. Status/reports are recorded and reported.
3. Dispose of by-product, materials and emissions	3.1. Waste treatment processes are applied in accordance with standard operating procedures. 3.2. Treatment processes are carried out in accordance with standard operating procedures and to meet relevant authority waste requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • collecting, storing and removing samples of by-products • monitoring and transferring by-product and emissions • checking monitoring devices • implementing waste treatment process • recording and reporting of all results • collecting, storing, removing and sampling by-products
Required knowledge
Required knowledge • Look for evidence that confirms knowledge of: • products, hazardous materials and processes within the scope of this unit • regulatory and legislative requirements relating to control of blast coating by-products, materials and emissions • procedures for collecting samples • by-product collection equipment operation methods • waste control monitoring equipment and procedures • waste treatment processes • requirements and procedures for recording and reporting process status reports • hazards and control measures associated with controlling blast coating by-products, materials and emissions • use and application of personal protective equipment • safe work practices and procedures

MEM09002B Interpret technical drawing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers interpreting technical drawing applying to any of the full range of engineering disciplines.

Application of the Unit

Application of the unit	Technical drawings may utilise perspective, exploded views or hidden view techniques. Drawings are provided to Australian Standard 1100 and/or Australian Standard 1102 and their equivalents from the full range of engineering disciplines. Standard symbols to Australian Standard 1100 and/or Australian Standard 1102 or equivalent are recognised in field of employment. Technical drawings may include symbol glossaries. Where any drawing, sketch, chart, diagram is only used as the technique for communication, then this unit does not apply: see Unit MEM12023A (perform engineering measurements) or Unit MEM16006A (Organise and communicate information). **Band**: **A** **Unit Weight**: **4**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Select correct technical drawing	1.1. Drawing is checked and validated against job requirements or equipment. 1.2. Drawing version is checked and validated.
2. Interpret technical drawing	2.1. Components, assemblies or objects are recognised as required. 2.2. Dimensions are identified as appropriate to field of employment. 2.3. Instructions are identified and followed as required. 2.4. Material requirements are identified as required. 2.5. Symbols are recognised in the drawing as appropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking the drawing against job requirements/related equipment in accordance with standard operating procedures
- confirming the drawing version as being current in accordance with standard operating procedures
- where appropriate, obtaining the current version of the drawing in accordance with standard operating procedures
- reading, interpreting information on the drawing, written job instructions, specifications, standard operating procedures, charts, lists and other applicable reference documents
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- application of AS1100.101 in accordance with standard operating procedures
- relationship between the views contained in the drawing
- objects represented in the drawing
- units of measurement used in the preparation of the drawing
- dimensions of the key features of the objects depicted in the drawing
- understanding of the instructions contained in the drawing
- the actions to be undertaken in response to those instructions
- the materials from which the object(s) are made
- any symbols used in the drawing as described in range statement
- hazard and control measures associated with interpreting technical drawings, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare assembly, layout and detail drafting	1.1. Drawings are prepared in plane orthogonal, isometric projection or equivalent including auxiliary views and sections to Australian Standard 1100. 1.2. Layout, assembly and component drawings are prepared from specification. 1.3. Drawings are dimensioned and labelled using supplied tolerances in accordance with Australian Standard 1100. 1.4. Drawings are produced to specification in accordance with standard operating procedures. 1.5. Standard symbols to Australian Standard 1100 or equivalent are used to specify requirements.
2. Determine component and/or material requirement	2.1. Components and/or materials are selected from supplier/manufacturers' catalogues using design specifications.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing drawings using appropriate projections and views in accordance with AS1100 or equivalent, see above note in the range statement
- producing layout, assembly and component drawings in conformance with specification
- inserting all relevant dimensions, tolerances and instructions in the drawing
- producing drawings to specification
- appropriately using standard symbols in accordance with AS1100 or equivalent in the drawings produced
- obtaining component specifications in accordance with work place procedures
- reading, interpreting and following information written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- appropriate projection for the drawing purpose
- reasons for selecting the chosen projection
- reasons for including auxiliary views in drawings
- requirements of AS1100 or equivalent with respect to dimensions, tolerances and labels
- procedures for producing component, layout and/or assembly drawings
- drawing specifications
- common symbols used in drawings to AS1100 or equivalent
- design specifications of the component
- appropriate components and materials from supplier/manufacturers' catalogues
- reasons for selecting the chosen components and/or materials
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare assembly, layout and detail drawing	1.1. Specification requirements are determined. 1.2. Engineering calculations are undertaken to determine all dimensions including limits and fits, surface texture, datum references and geometric tolerances where appropriate to ensure functional operation and suitability. 1.3. All drawings are produced to Australian Standard 1100 or equivalent.
2. Interpret specifications and select material, components and/or	2.1. Components, material and/or assemblies are selected from data sheets or manufacturers' catalogues to meet specifications.

ELEMENT	PERFORMANCE CRITERIA
assemblies	
3. Check drawings	3.1. Drawings are checked to ensure compliance with specifications. 3.2. Drawings are checked to ensure that assembly/fabrication is possible.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant work instructions and requirements
- producing all drawings in accordance with AS1100 or equivalent
- obtaining all relevant data sheets, catalogues, etc.
- checking drawings for conformance to specification
- checking drawings to ensure that assembly/fabrication is possible
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- specifications and/or requirements of the component, assembly or layout to be drawn
- functional operation of the component/assembly to be drawn
- surfaces which are to be in contact or separated
- appropriate type of fit for contacting surfaces
- reasons for selecting the chosen type of fit
- effect of surface finish on the performance/operation of surfaces
- appropriate datum points

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• all appropriate lineal, diametric and geometric tolerances • procedures for determining tolerances • requirements of AS1100 or equivalent for the drawing(s) to be produced • specifications of the components, materials and/or assemblies • appropriate components and materials from supplier/manufacturers' catalogues • reasons for selecting the chosen components and/or materials • procedures for checking and approving drawings • reasons for checking the drawings to ensure that manufacturing/assembly is possible, efficient and cost effective • drawing specifications • methods of manufacture/assembly/fabrication from the drawing(s) • unnecessary or inappropriate tolerances • hazards and control measures associated with performing advanced engineering detail drafting, including housekeeping • safe work practices and procedures

	unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing advanced engineering detail drafting or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Australian Standard 1100 or equivalent	Complete familiarity with AS 1100.101 or similar and its application is required in the respective field

MEM09009C Create 2D drawings using computer aided design system

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers preparing the CAD environment, creating 2D drawings, and producing output including linked bills of materials.

Application of the Unit

Application of the unit	This unit applies to the production of 2D drawings using a CAD system, linked bills of material, file management and associated customisation of installed software including the use of macros, menus and default settings; file formats may include IGES, DXF, HPGL. The unit applies to the fields of mechanical, electrical/electronic, fabrication, and fluid power. 2D drawings may be produced from 3D models created using computer aided design system. This unit covers CAD skills only. Where detail drafting skills are required, the following units should be considered: Unit MEM09004B (Perform electrical/electronic detail drafting), Unit MEM09005B (Perform basic engineering detail drafting), Unit MEM09006B (Perform advanced engineering detail drafting). **Band**: **B** **Unit Weight**: **8**

Pre-Requisites

Prerequisite units		
Path 1	MEM09002B	Interpret technical drawing
	MEM16008A	Interact with computing technology

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare CAD environment	1.1. System variables are customised to suit standard operating procedures. 1.2. Menus are customised to suit standard operating procedures. 1.3. Drawing defaults are customised to standard operating procedures. 1.4. Macros are developed to standard operating procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Create 2D drawings	2.1. Drawings are created using the full capability of the available software system. 2.2. Drawing entities are linked to database attributes to suit job requirements. 2.3. Detailed views are created using various scales to meet job requirements.
3. Produce output	3.1. Files are saved in various formats to standard operating procedures. 3.2. Linked entities are listed in a bill of materials format to meet job requirements. 3.3. Supplementary data is extracted from drawing to meet job requirements and may include area, lengths, angles and perimeters.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant manuals, instructions and operation procedures for the CAD software and hardware being used
- where appropriate, customising the relevant system variables to suit the applicable drafting standards/procedures
- where appropriate, customising menus to suit the applicable drafting standards/procedures
- where appropriate, customising the system defaults to suit the applicable drafting standards/procedures
- where appropriate, developing macros
- creating drawings using the appropriate drawing features of the software system
- where appropriate, linking drawing entities to database attributes
- producing detailed views of the object being drawn
- printing drawing files at the appropriate scale
- saving drawing files in the appropriate format
- producing bills of material from the drawing files/database
- extracting supplementary data from the drawing file to meet job requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- CAD software system
- system variables that can be customised
- procedures for customising identified system variables
- reasons for customising the system variables
- applicable drafting standards/procedures
- procedures for customising menus
- reasons for customising menus
- procedures for customising system defaults
- reasons for customising system defaults
- procedures for developing macros
- reasons for developing macros
- drawing features of the CAD software system
- reasons for using specialised software features
- procedures for linking drawing entities to database attributes
- appropriate drawing scales
- procedures for printing drawing files
- procedures for creating additional views of the object being drawn
- procedures for saving drawing files
- various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files
- procedures to produce bills of material
- procedures to extract data with respect to drawn shapes/features
- properties of shapes/sections/ features that can be extracted from the drawing file
- hazards and control measures associated with using computer aided design system, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to create 2D drawings using computer aided design system. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with creating 2D drawings using computer aided design system or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

MEM09011B Apply basic engineering design concepts

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers applying in situ design skills by personnel who are then responsible for the manufacture of the design outcome either individually or as part of a team.

Application of the Unit

Application of the unit	This unit includes the determination of requirements such as location, assembly or other parts of the manufacturing or engineering process and where the designer must consider the impact of the design on other equipment, process or personnel, for example safety aspects of the design. Design tasks undertaken include the application of design concepts to, for example, the fabrication and modification of structures, plant and equipment, and design of tooling and gauges, production control systems, fluid power layouts, electrical circuits etc. The unit applies to the fields of mechanical, production, electrical/electronic, fabrication, and fluid power. **Band**: **A** **Unit Weight**: **6**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine design requirements	1.1. Design requirement is established from job sheets, instructions or in consultation with appropriate people. 1.2. Design concepts are established and may include consideration of process, material, quantity, cost and outcome. 1.3. Where appropriate, codes, regulations and technical documentation are consulted to establish design limitations in accordance with standard operating procedures. 1.4. Sources of expert assistance are identified and used as required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Create design	2.1. Design meets end use requirement. 2.2. Design meets all legislative and regulatory requirements. 2.3. Design concept is verified in accordance with standard operating procedures. 2.4. Design outcome is produced as per job requirements and may include sketch, drawing, prototype, document, model or finished product.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant drawings, job sheets, instructions and specifications
- consulting, where appropriate, relevant personnel as to the design requirements
- inspecting, where appropriate, the object, plant or equipment to which engineering design concepts are to be applied
- determining, where appropriate, design limitations imposed by relevant codes, standards and regulations
- where appropriate, seeking assistance from relevant sources
- verifying the design concept.
- presenting the design object in a form appropriate to the job requirements
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- planning and sequencing operations
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

MEM09155A Prepare mechanical models for computer-aided engineering (CAE)

Modification History

Release 1 - New unit. Replaces MEM09151A but not equivalent

Unit Descriptor

This unit of competency covers the application of mechanical modelling techniques for computer-aided engineering (CAE) purposes. It includes model creation for purposes such as computer-aided manufacturing (CAM) and computer numerical control (CNC) applications, rapid prototyping and stress analysis, and as a basis for generating orthogonal drawings.

Application of the Unit

This unit applies to modelling of mechanical, maintenance and manufacturing engineering products, plant and system for CAE applications. It is suitable for people working in design drafting and those pursuing technical qualifications and careers at engineering technician level.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

MEM23109A Apply engineering mechanics principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential Performance criteria describe the performance needed

outcomes of a unit of competency. to demonstrate achievement of the element.

Elements and Performance Criteria

1	Identify model parameters	1.1	Identify the engineering context of computer modelling
		1.2	Identify sustainability issues related to required models
		1.3	Identify work health and safety (WHS) and regulatory requirements related to modelling processes and materials
		1.4	Identify the virtual or physical model parameters, form, function and features
		1.5	Identify required model generation processes, including any required graphics generation, post-processing and physical modelling
		1.6	Identify licensed technical and professional assistance for advice, as required
2	Develop model	2.1	Generate initial graphical model
		2.2	Undertake initial consultation on model with stakeholders and adjust, as required
		2.3	Prepare model for intended purpose
		2.4	Trial model for purpose and complete investigative analysis or produce physical model
		2.5	Evaluate model against design criteria with stakeholders and make adjustments, as required
		2.6	Engage appropriate licensed technical and professional assistance for advice, as required
3	Finalise modelling	3.1	Prepare final model
		3.2	Report and demonstrate results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.3 Provide documentation, instructions, models and files, as required

3.4 Obtain sign-off

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reviewing features, functions and context of engineering modelling, including imminent future developments
- comparing available software, functions and features
- communicating, participating and negotiating with:
  - stakeholders, team, cross-function support groups and experts
  - appropriate licensed technicians and professionals
- modelling using a comprehensive range of techniques, such as:
  - creating and manipulating 3-D entities
  - using library files and adaptations
  - accessing supplier catalogues and databases
- creating dimensioned orthographic projections from model
- extracting dimensional properties from model:
  - post-processing model for analysis or physical modelling
- finalising modelling by:
  - completing work
  - gaining approval and commissioning work
  - providing documentation and reports, as required
  - obtaining sign-off

Required knowledge

Required knowledge includes:

- advantages and disadvantages of CAM using modelling compared to traditional manufacturing methods
- implications to be taken into account when modelling (e.g. efficiency of production, generation of waste and life cycle considerations)
- typical mechanical components, assemblies and layouts suitable for modelling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- software functions and features
- model creation techniques, including:
  - using and manipulating coordinate systems
  - creating 3-D entities, ruled and revolved surfaces
  - creating solids, editing and combining solids
  - manipulating entities and solids
  - library files
  - manipulations of solids and library files
  - 3-D graphics from models, including rotated views and sections
  - dimensioned orthographic representations from models
- typical modelling processes, including:
  - computer modelling
  - post-processing
  - prototyping and model manufacture
- mathematical model analysis options, such as:
  - finite analysis of heat flows
  - finite analysis of stresses and deflections
- physical modelling options
- traditional, current and emerging modelling methods
- WHS and regulatory requirements, codes of practice, risk assessment and registration requirements relevant to modelling task
- job requirements that may create a need for licensed technical and professional services assistance
- modelling compared to traditional representation methods, including:
  - pen and pencil graphics compared to wire frame, surface and solid models
  - computer animations compared to transparent overlay mobiles to test clearances and motions
  - solid models compared to isometric representations
  - computer library files compared to the use of reference charts and catalogue information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to produce a variety of mechanical, manufacturing and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	maintenance-related models that are consistent with design information and relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • review features, functions and context of engineering modelling • compare available software, functions and features • communicate, participate and negotiate with stakeholders, team, cross-function support groups and experts, appropriate licensed technicians and professionals • model using a comprehensive range of techniques • create dimensioned orthographic projections from model • extract dimensional properties from model • post-process model for analysis or physical modelling • complete work, commission and gain approval, document and report, and obtain sign-off • identify future developments in modelling.
Context of and specific resources for assessment	• Assessment may occur on the job or in an appropriately simulated environment. Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and WHS practices. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Models	Models may be: • virtual, such as computer generated solids models • physical models developed from the virtual model data
Model purpose	Models covered by this unit include mechanical, maintenance and manufacturing engineering products, plant and system models. Examples of models include: • computer model of a cavity mould for finite analysis of heat flows • computer model of a container, vehicle or frame for finite analysis of stresses and deflections • physical models of components produced for form, fit or aesthetic purposes • physical models, such as a once-off vehicle body panel,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	produced ready and fit for purpose • physical models, such as a sintered metal moulds or die capable of producing a limited run of production components
Features, functions and context of engineering modelling	Features, functions and context of mechanical modelling include: • techniques used for mechanical modelling • sustainability implications of modelling • WHS and regulatory requirements related to modelling processes and materials • model parameters, form, function and features, virtual or physical • processes required which may include those for generating graphics, post-processing and physical modelling • required licensed technical and professional assistance
Post-processor	A post-processor or code generator converts programmed instructions generated by CAM software or CAD package into CNC program code to control a machine tool
Post-processing model for analysis or physical modelling	Examples of post-processing model for analysis or physical modelling include: • setting up model with physical properties, mesh and nodes for finite element analysis (FEA) • processing dimensional data to create 3-D code for CAM operations • post-processing to create CNC data files to control CNC devices, including mills, lathes, machining centres, lasers, ultrasonic cutters and routers • modelling for rapid prototyping
Rapid prototyping	A variety of rapid prototyping processes are available, including: • selective laser sintering (SLS) which uses thermoplastics and metal powders • fused deposition modelling (FDM) which uses thermoplastics and eutectic metals • steriolithography (SLS) which uses a photopolymer • laminated paper manufacturing (LPM) which uses paper

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• electron beam melting (EBM) which uses titanium alloys • 3-D printing (3-DP) which uses a variety of materials
Criteria for mechanical designs	Criteria for mechanical designs may include: • function • aesthetics • manufacturability and maintainability • marketability • sustainability • cost constraints • ergonomics, anthropometrics and physiology • facilities, plant and skills available • safety and risk
Mechanical components, assemblies and layouts	Mechanical assemblies may include: • chain drives, gear sets, pulley and belt drives • threads, fasteners and springs • shafts, keyways and splines • structural sections • machines, drives and transmissions • materials handling equipment, including belt conveyors, augers and pneumatic conveyors • guards, handrails and platforms • structures, vessels and tanks • fan, ventilation, air conditioning service and ducting • production process layouts

Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic dangers, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies, such as:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • other relevant regulations and standards • industry codes of practice • risk assessments • registration requirements • safe work practices
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular design task
Modelling and related software	Modelling and related software may include: • lumped parameter model • empirical, random data tested model • FEA software • model-based design

MEM09156A Prepare mechatronic models for computer-aided engineering (CAE)

Modification History

Release 1 - New unit. Replaces MEM09152A, but not equivalent.

Unit Descriptor

This unit of competency covers the application of techniques for mechatronic modelling for computer-aided engineering (CAE) purposes. It includes consideration of the CAE purposes for which the model is required, such as automated mechanisms, robots or system control and data acquisition (SCADA) environments, printed circuit board manufacture and assembly, and as a basis for generating orthogonal drawings.

Application of the Unit

This unit applies to modelling of mechatronic or automation systems and devices for CAE applications. It is suitable for people working in design drafting and those pursuing careers and qualifications in mechatronics, automated systems or systems maintenance at engineering technician level.

Prior or concurrently developed competence in graphics, workshop, electrical and electronic fundamentals, engineering science, mathematics and mechanical components, and manufacturing plant is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanics principles
MEM23111A	Select electrical equipment and components for engineering applications
MEM23112A	Investigate electrical and electronic controllers in engineering applications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Identify the model parameters	1.1	Investigate applications for modelling in mechatronics
		1.2	Identify work health and safety (WHS) and regulatory requirements related to modelling processes and materials
		1.3	Identify the virtual parameters, form, function and features
		1.4	Identify required model generation processes required, including graphics generation and post-processing
		1.5	Identify licensed technical and professional assistance for advice, as required
2	Develop model	2.1	Generate initial graphical model
		2.2	Undertake initial consultation on model with stakeholders and adjust, as required
		2.3	Prepare and trial model for intended purpose
		2.4	Evaluate model against design criteria in consultation with stakeholders and make adjustments to model, as required
		2.5	Engage appropriate licensed technical and professional assistance for advice, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Finalise model	3.1	Prepare final model
		3.2	Report and demonstrate results
		3.3	Provide documentation, instructions, models and files, as required
		3.4	Obtain sign-off

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- investigating the uses of mechatronic models
- reviewing features, functions and context of mechatronic modelling, including imminent future developments
- comparing available software, functions and features
- communicating, participating and negotiating with:
  - stakeholders, team, cross-function support groups and experts
  - appropriate licensed technicians and professionals
- modelling using a comprehensive range of techniques, such as:
  - creating and manipulating 3-D entities
  - using library files and adaptations
  - accessing supplier catalogues and databases
- creating dimensioned orthographic projections from model
- extracting dimensional properties from model
- post-processing model for analysis or physical modelling
- finalising modelling by:
  - completing work
  - gaining approval and commissioning work
  - providing documentation and reports, as required
  - obtaining sign-off

Required knowledge

Required knowledge includes:

- advantages and disadvantages of computer-aided manufacturing (CAM) using modelling

compared to traditional manufacturing methods
- implications to be taken into account when modelling (e.g. efficiency of production, generation of waste, life cycle considerations, and accessing supplier catalogues and databases)
- typical mechatronic components, assemblies and layouts suitable for modelling
- software functions and features
- model creation techniques, including:
  - using and manipulating coordinate systems
  - creating 3-D entities, ruled and revolved surfaces
  - creating solids, editing and combining solids
  - manipulating entities and solids
  - library files
  - manipulations of solids and library files
  - 3-D graphics from models, including rotated views and sections
  - dimensioned orthographic representations from models
- typical modelling processes, including:
  - computer modelling
  - post-processing
- virtual model options, including automated systems simulation of motions:
  - post-processing to create numeric control (NC) data files to computer numeric control (CNC) circuit board assembly or gantry robot assembly of boards
  - rapid prototyping options
  - finite element analysis (FEA) using software
- WHS and regulatory requirements, codes of practice, risk assessment and registration requirements, relevant to modelling task
- job requirements that may create a need for licensed technical and professional services
- modelling compared to traditional representation methods, including:
  - pen and pencil graphics compared to wire frame, surface and solid models
  - computer animations compared to transparent overlay mobiles to test clearances and motions
  - solid models compared to isometric representations
  - computer library files compared to the use of reference charts and catalogue information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to produce a variety of mechatronic-related models that are

	consistent with design information and relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate competently and consistently: • review features, functions and context of mechatronic modelling • compare available software, functions and features • communicate, participate and negotiate with stakeholders, team, cross-function support groups and experts, appropriate licensed technicians and professionals • model using a comprehensive range of techniques • create dimensioned orthographic projections from model • extract dimensional properties from model • post-process model for analysis or physical modelling • complete work, commission and gain approval, document and report, and obtain sign-off • identify future developments in modelling.
Context of and specific resources for assessment	• Assessment may occur on the job or in an appropriately simulated environment. Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and WHS practices. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Models	Models may be: • virtual, such as computer generated solids models • physical models developed from the virtual model data
Model purpose	Models covered by this unit include mechanical, maintenance and manufacturing engineering products, plant and system models. Examples of models include: • virtual robot model for motion simulation • automated process simulation • printed circuit board model for component fit or robot assembly
Features, functions and context of engineering modelling	Features, functions and context of mechanical modelling include: • techniques used for mechanical modelling • sustainability implications of modelling • WHS and regulatory requirements related to modelling processes and materials • model parameters, form, function and features, virtual or physical • processes required which may include those for generating

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	graphics, post-processing and physical modelling • required licensed technical and professional assistance
Post-processor	A post-processor or code generator converts programmed instructions generated by CAM software or computer-aided design (CAD) package into CNC program code to control a machine tool
Post-processing model for analysis or physical modelling	Examples of post-processing model for analysis or physical modelling include: • setting up robotic model for motion analysis • processing dimensional data to create 2-D or 3-D code for CAM operations, such as printed circuit board manufacture • post-processing to create NC data files to control NC devices, including mills, lathes, machining centres, lasers, ultrasonic cutters and routers • modelling for rapid prototyping
Rapid prototyping	A variety of rapid prototyping processes are available, including: • selective laser sintering (SLS) which uses thermoplastics and metal powders • fused deposition modelling (FDM) which uses thermoplastics and eutectic metals • steriolithography (SLS) which uses a photopolymer • laminated paper manufacturing (LPM) which uses paper • electron beam melting (EBM) which uses titanium alloys • 3-D printing (3-DP) which uses a variety of materials
Criteria for mechatronic designs	Criteria for mechatronic designs may include: • safety and risk • function • aesthetics • manufacturability and maintainability • marketability • sustainability • cost constraints • ergonomics, anthropometrics and physiology • facilities, plant and skills available

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Mechatronic components, assemblies and layouts	Mechatronic assemblies may include: • electrical motors and fluid power actuators • printed circuit boards • electrical, electronic and electro fluid controls • chain drives, gear sets, pulley and belt drives • structural sections • mechatronic assembly models, including robots,automated mechanisms and machines • materials handling equipment, including belt conveyors, augers and pneumatic conveyors • manufacturing plant and process layouts • manufactured product with embedded controller

Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic dangers, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies, such as:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano materials
	  • special processes, foundry, alloy welding, heat treatment, sealing and fastening

WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • other relevant regulations and standards • industry codes of practice • risk assessments • registration requirements • safe work practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular design task
Modelling and related software	Modelling and related software may include: • lumped parameter model • empirical, random data tested model • FEA software • model-based design

MEM09157A Perform mechanical engineering design drafting

Modification History

Release 1 New unit. Replaces MEM09141A but not equivalent.

Unit Descriptor

This unit of competency covers the preparation of design drawings or graphics used in the mechanical engineering, manufacturing engineering and related industry sectors. The unit includes working with a design brief or concept prepared by an engineer or other designer as well as the specification of items, functions, limits, fits, tolerances, and other engineering information required for the eventual production of fully detailed drawings. The unit requires the design drawing to be performed using appropriate computer-aided design (CAD) and other drafting techniques that include sketching, computer graphics and the application of drawing standards.

Application of the Unit

This unit applies to the undertaking of designated design tasks and the specification in design drawings and graphics of mechanical plant, products, projects, system changes or improvements in domestic, commercial, industrial, agricultural, medical, military or entertainment industries. For ease of reference the term ‘drawing’ is used in this unit.

The design drawing is normally undertaken at the direction of an engineer, scientist or other designer who will pass on a concept brief to the design draftsperson. The concept brief may be a sketch, hard copy plan or document, or a CAD generated file. The unit requires design drawings to be produced using appropriate CAD software. Depending on the task or project, production or supervision of hard copy drawings may also be required.

The unit also includes supervision of detailed drawing production and managing of requests for further information from detailed draftspersons.

This may require completion of appropriate engineering design or evaluation units from the MEM05 Metal and Engineering Training Package depending on the design drawing task and previous industrial experience.

This unit does not cover the production of detailed drawings (often known as shop drawings). Where detailed drawing skills are required the relevant MEM detailed drawing units should be selected.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Clarify the design drawing task	1.1	Receive design drawing brief and check completeness of information
		1.2	Confirm software and file formats to be used for design drawings with designer and detail draftspersons
		1.3	Determine stakeholders to be consulted in design drawing process
		1.4	Assess work health and safety (WHS), regulatory, sustainability or environmental issues relevant to design task
		1.5	Confirm design drawing brief and provide preliminary advice on feasibility
2	Produce mechanical or maintenance engineering-related drawings	2.1	Determine range of engineering drawings required
		2.2	Produce orthogonal drawings of mechanical components and assemblies to relevant standards using appropriate computer graphical techniques
		2.3	Produce 3-D images of mechanical components and assemblies to relevant standards using computer graphical techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.4	Determine and apply required dimensioning, tolerancing for limits and fits, surface finish and weld symbols, and other required graphical convention information appropriate to mechanical or maintenance engineering applications
		2.5	Seek technical and professional assistance or clarification of design information, as required.
		2.6	Confirm final range of design drawings to be produced with designer, detail draftspersons and other stakeholders
3	Provide final drawings files and documents	3.1	Submit final design drawings for sign-off by designer or specified authority
		3.2	Prepare CAD files for export to detailer
		3.3	Provide documentation, drawings, data files and clearances according to job requirements and enterprise drawing management system and procedures
4	Supervise production of detail drawings	4.1	Supervise production of detail drawings

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reviewing mechanical or maintenance engineering applications for required features, functions and context of engineering design drawings
- determining the range of design drawings required, including:
  - design drawings specified by designer and other requests (e.g. from clients and regulators)
  - models, views and sections required to indicate assembly, function, dimensions and materials
  - design drawings required to clearly indicate engineering design specifications to detailer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- using CAD systems, comparing and selecting available software, functions and features appropriate to the design drawing task
- developing orthographic, isometric and other 3-D graphical representations
- representing mechanical components and assemblies using sketching and computer graphics
- representing mechanical components and features using a comprehensive range of standard conventions and graphical techniques
- representing a range of mechanical assemblies using standard graphical representations
- selecting and applying design criteria to meet requirements of the design brief
- engaging appropriate licensed technical and professional assistance for advice, as required, and reporting results of review and the application of graphics techniques
- providing documentation, images and files according to job and enterprise procedures

Required knowledge

Required knowledge includes:

- application of the role of engineering design, design drawing and detail drawing in mechanical and maintenance engineering tasks and projects, such as:
  - design specifications
  - mechanical and maintenance procedures
  - technical specifications and descriptions
- availability and features of standards related to mechanical plant and devices, design, maintenance and alteration
- AS 1100 Technical drawing, and means of locating and referencing other relevant standards
- availability and features of standards related to mechanical plant and devices, design, maintenance and alteration
- application of relevant standard for mechanical designs
- methods of representing mechanical components and assemblies using sketching and computer graphics, including all relevant symbols, conventions, abbreviations, and so on
- current and traditional methods of documentation generation and control:
  - computer library files
  - reference charts and catalogue information
  - manual drawing
  - generation of orthogonal images from models
- worksite procedures for the processing and filing of graphics, specifications and operating and maintenance instructions/manuals
- WHS and regulatory requirements, codes of practice, risk assessment and registration requirements relevant to mechanical and maintenance applications

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to produce a variety of graphical representations of mechanical and maintenance-related assemblies and components that are consistent with design information and relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • select and apply design criteria to meet requirements of the deign brief • review features, functions and context of engineering drawings • develop orthographic, isometric and other 3-D graphical representations • represent mechanical components and assemblies using sketching and computer graphics • represent mechanical components and features using a comprehensive range of standard conventions and graphical techniques • represent a range of mechanical assemblies using standard graphical representations • recognise when to engage appropriate licensed technical and professional assistance for advice • provide documentation, images and files.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Designer	A designer is usually a professional engineer but may also be a scientist, engineering technologist, architect or other person with appropriate skills and knowledge for the design task. The term may also refer to situations where a team of designers are used to produce a design
Design drawing brief	The design drawing brief will be communicated to the design draftsperson and will include: • major and critical engineering specifications (e.g. dimensions, limits, fits, tolerances and materials) • required features and performance of equipment (e.g. volume, temperature and flow) • standards that must be adhered to • client requests • budget and project schedule

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• procedures to be followed for further clarifications
Design drawings	Design drawings is used in this unit to include all 3-D and 2-D files and hard copies produced as part of the design drawing process

Design criteria for mechanical designs	Criteria for mechanical designs may include:
	• function
	• aesthetics
	• manufacturability and maintainability
	• marketability
	• sustainability:
	  • social, economic and environmental
	  • material and energy resources
	• cost constraints
	• ergonomics, anthropometrics and physiology
	• facilities, plant and skills available
	• safety and risk

Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic dangers, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies, such as:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano materials
	  • special processes, foundry, alloy welding, heat treatment, sealing and fastening

WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements applying to electrical work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Mechanical assemblies	Mechanical assemblies may include: • machines, drives and transmissions • materials handling equipment (e.g. belt conveyors, augers and pneumatic conveyors) • guards, handrails and platforms • structures, vessels and tanks • fan, ventilation, air conditioning service and ducting • manufacturing plant and process layouts • manufactured products
Mechanical components and features represented by standard conventions and graphical techniques	Mechanical components and features represented by standard conventions and graphical techniques may include: • hole basis, shaft basis and keyway tolerances and fits • dimensions, tolerances for limits and fits • materials and surface finish • weld symbols • webs, cross-sections and cutting planes • chain drives, gear sets, pulley and belt drives • threads, fasteners and springs • shafts, keyways and splines • structural sections

Features, functions and context of engineering design drawing	Features, functions and context of engineering design drawing include:
	• uses of design drafting for purposes, such as:
	  • design specifications
	  • production specifications
	  • maintenance procedures
	  • technical specifications and descriptions
	• graphical representation techniques, including orthogonal, 2-D and 3-D modelling, isometric and mechanical perspective, dimensioning, limits and fits, welding and other standard symbols
	• role of WHS and regulatory requirements, codes of practice, ministerial directives, risk assessment and registration requirements
	• availability and features of a range of standards related to mechanical plant and devices, design, maintenance and alteration
	• typical criteria for mechanical designs
	• software developments
	• current graphical methods compared with traditional methods
	• emerging developments in graphics and related engineering

appropriate to the design task
- developing orthographic, isometric and other 3-D graphical representations
- representing mechatronic components and assemblies using sketching and computer graphics
- representing mechatronic components and features using a comprehensive range of standard conventions and graphical techniques
- representing a range of mechatronic assemblies using standard graphical representations
- selecting and applying design criteria to meet requirements of the design brief
- engaging appropriate licensed technical and professional assistance for advice, as required
- providing documentation, images and files according to job and enterprise procedures

Required knowledge

Required knowledge includes:

- application of the role of engineering design, design drafting and detail drafting in mechatronic tasks and projects, such as:
  - design specifications
  - mechatronic manufacture and maintenance procedures
  - technical specifications and descriptions
  - physical arrangement of mechanical, fluid, electrical and control elements
  - diagrammatic layouts of control circuits
  - actuator sequence and logical signal diagrams
- graphical representation techniques
- WHS and regulatory requirements, codes of practice, risk assessment and registration requirements relevant to mechatronic applications
- application of relevant standards for mechatronic design
- worksite procedures for the processing and filing of drafting, specifications and operating and maintenance instructions/manuals
- methods of representing mechatronic components and assemblies using sketching and computer graphics, including all relevant symbols, conventions, abbreviations, and so on
- current and traditional methods of documentation generation and control:
  - computer library files
  - reference charts and catalogue information
  - generation of orthogonal images from models
- manual drawing

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Overview of assessment	A person who demonstrates competency in this unit must be able to produce a variety of graphical representations of mechatronic-related assemblies and components that are consistent with design information and relevant standards and conventions.

MEM09204A Produce basic engineering detail drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to identify drawing requirements, preparing engineering drawings and an engineering parts list, and issuing the drawings. Drawings include 2-D drawings to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles.

Application of the Unit

This unit is suitable for those working within a drafting work environment where most specifications required for the drawing are already determined. Specifications may be obtained from design information, customer requirements, sketches and preliminary layouts. Drawings will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to AS 1100.101–1992 Technical drawing – General principles, from predetermined critical dimensions and specifications.

If a CAD system is used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

This unit applies to all engineering and manufacturing environments.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine drawing requirements	1.1	Check purpose, scope and information requirements for drawing
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Examine requirements for presentation of drawings
		1.5	Confirm communication requirements during project
2	Produce detail drawing	2.1	Prepare drawings in plane orthogonal, or equivalent
		2.2	Apply standard drawing conventions, including dimensions, required method of projection, and full notation
		2.3	Use drawing techniques according to work requirements
		2.4	Apply industry symbols and ensure presentation meets industry standard
3	Prepare engineering parts list	3.1	Identify components or parts and organise by component type and/or in accordance with organisation/customer requirements
		3.2	Prepare parts list in accordance with organisation/customer requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	Complete drawing task	4.1	Check and confirm dimensions, angles and proportions
		4.2	Ensure drawing is presented according to organisational requirements and contains all relevant and accurate information
		4.3	Issue and file drawing according to workplace procedure
		4.4	Evaluate work and identify areas for improvement
		4.5	Plot or print the final drawing to a standard scale

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions and specifications for drawing work
- obtaining all relevant job requirements, data/information and specifications necessary to produce the drawing in accordance with workplace procedures
- planning and sequencing operations
- checking and clarifying task-related information
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- applying spatial principles to achieve scale and proportion
- using drafting equipment appropriate to the drawing method chosen
- recording completed drawings and/or parts lists in accordance with standard operating procedures
- handling and storing the approved drawings and/or parts lists in accordance with standard operating procedures

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing
- quality assurance procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- principles of plane geometry:
  - geometric shapes
  - plane geometry
  - geometric construction
  - line types during construction
- drawing construction:
  - four centre method
  - ordinate method
  - sectioning isometric shapes
  - dimensions and notations
- requirements and purpose of the drawing to be produced
- requirements and purpose of the engineering parts list
- sources of relevant data/information
- timeframe for completion of drawings
- persons who can confirm drawing requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to use interpret and apply drawing specifications, and produce a complete drawing to AS 1100.101–1992 Technical drawing – General principles, using manual or CAD tools.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts. Specifically the candidate must be able to: • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • interpret work and design specifications and use reference material to obtain required information for drawing work • produce a detailed engineering drawing to AS 1100.101–1992 Technical drawing – General principles, and according to work requirements.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	manuals and reference materials.

Range Statement

Standard drawing conventions	Standard drawing conventions include: • use of correct sectioning technique • identification of cutting plane • accurate line types • appropriate view positions • use of correct symbols • use of correct dimensioning technique • provision of suitable number of views • use of correct scales • neat presentation

Drawing techniques	Drawing techniques may include:
	• orthogonal projection:
	  • first angle projection
	  • third angle projection
	  • projection symbol
	  • preferred system of projection in Australia
	  • number of views
	  • relationship of views
	• sheet format:
	  • borders and title blocks
	  • application of projection symbol
	  • drawing sheets and sizes
	  • lettering styles
	  • Australian Standards
	• dimensioning:
	  • unidirectional dimensioning
	  • aligned dimensioning
	  • projection and dimension lines
	  • arrow heads
	  • dimension placement
	• scale drawing:
	  • recommended scales
	  • reduction scales
	  • enlargement scales

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• multiple scales • dimensioning techniques of scale drawings • sectioning: • types of sections • required section views • placement of views • cutting planes • labelling of cutting planes and section views • general notes

MEM09205A Produce electrical schematic drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to produce electrical schematic drawings to comply with Australian Standard (AS) 1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or equivalent, using predetermined design specifications. The unit also covers the production of layout or block diagrams to show the physical arrangement of components.

Application of the Unit

This unit is suitable for those working within a drafting work environment. The unit applies to the production of schematic drawings to show electrical circuits and connections between devices, including power and signal connections. It includes the use of appropriate symbols and production of a matching reference list of circuit components. Types of electrical drawings or diagrams may include block, single line, interconnecting, wiring, circuit, telephonic and telegraphic or cable form diagrams, and notations.

Drawings may be carried out with or without the use of computer-aided design (CAD) systems and are completed to AS 1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or equivalent.

If CAD systems are to be used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Drawings are completed under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B	Interpret technical drawing
MEM09204A	Produce basic engineering detail drawings

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine schematic drawing requirements	1.1	Check purpose, scope and information requirements for drawing
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Identify and access organisational files, templates and symbols as required for work
2	Identify system requirements	2.1	Identify and apply relevant codes, standards and symbols used for electrical diagrams and drawings
		2.2	Identify function and purpose of circuit and its components and assemblies
		2.3	Identify environmental implications of inefficient systems and strategies for minimising impact
3	Prepare electrical drawings and diagrams	3.1	Lay out drawing in accordance with the sketches and specifications
		3.2	Prepare an electrical block diagram in accordance with Australian Standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.3	Draw cable run and riser diagrams from schedules
		3.4	Produce switchboard layout drawings
		3.5	Prepare single line and interconnecting electrical diagrams in accordance with Australian Standards
		3.6	Prepare wiring and circuit diagrams in accordance with Australian Standards
		3.7	Ensure drawing accurately reflects specifications, is presented according to organisational requirements and contains all relevant information, including correct line work, scales, notation and dimensioning
		3.8	Apply workplace occupational health and safety (OHS) and environmental procedures
4	Prepare materials list	4.1	Where required, select components and/or materials from supplier/manufacturer catalogues using predetermined specifications
		4.2	Produce a parts list in accordance with workplace procedures
		4.3	Store drawings and/or materials list according to workplace procedures
5	Consult appropriately with other disciplines	5.1	Verify the parameters of the brief and clarify specifications with appropriate personnel
		5.2	Identify and consult with support services
		5.3	Present and explain drawings at appropriate stages of the project

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions, relevant codes of practice and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

specifications for drawings work
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- using and maintaining drawing equipment
- applying spatial principles to achieve scale and proportion
- interpersonal skills to consult with other disciplines
- drafting skills
- applying symbols, schedules and legends to the drawing
- arranging the views in a logical manner and in accordance with AS 1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or equivalent
- correctly using line thickness and construction to identify parts
- using engineering and manufacturer catalogues, tables, standards and specifications
- drawing electrical/electronic schematics correctly and indicating the relative position of the components
- producing electrical/electronic drawings with all relevant specifications
- obtaining the circuit/component specifications
- planning and sequencing operations
- checking and clarifying task related information
- filing drawings according to workplace procedures

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- requirements of AS 1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or equivalent with respect to electrical/electronic schematics/drawings
- environmental and OHS issues associated with the tools and materials used for drawing
- quality assurance procedures
- company standards for CAD
- order of drawing process
- company checking procedures for drawings
- layout and presentation
- the standards applicable to the work to be undertaken
- the process of checking the completed drawing
- the process of storing paper drawings and electronic drawing files
- the International System of Units (SI)
- terminology associated with the preparation of electrical diagrams and drawings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- basic components used in electrical installations
- wiring types used in electrical installations
- functions of components, such as:
  - resistors
  - capacitors

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to interpret and apply drawing specifications in the production of electrical diagrams and drawings to Australian Standard AS1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or equivalent.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts. Specifically the candidate must be able to: • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • obtain required information for work and produce detailed electrical/electronic schematic drawings in accordance with AS1102.101–1989 Graphical symbols for electrotechnical documentation – General information and general index, or similar.
Context of and specific resources	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where

Range Statement

Available information	Available information may include: • construction documents • building and coordination information • work specifications • information for plant services equipment • industry codes, standards and regulations • catalogues and manuals • design brief
Components and assemblies	Components and assemblies may include: • resistors: fixed (composition and wire wound), variable (rheostats, potentiometers and trimmers),and non-linear (thermistors) • capacitors: fixed (ceramic, plastic and electrolytic), variable, magnetic, transformers, chokes, relays, contactors, rectifiers, smoothing filters, voltage regulators and feedback
Electrical layouts	Electrical layouts may include: • domestic lighting • domestic power • commercial • lighting schedule • power schedule • factory electrification • flame proofing • buzz bar systems • 3 phase • 240 V and 415 V
Cable runs	Cable runs may include: • racking • schedules
Riser diagrams	Riser diagrams may include: • multi-storey
Switchboards	Switchboards may include: • layouts • wiring schedules
Appropriate personnel	Appropriate personnel may include: • designer

MEM09210A Create 3-D solid models using computer-aided design (CAD) system

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit covers preparing the 3-D computer-aided drafting (CAD) environment, creating and modifying 3-D solid models, and producing output from the 3-D model.

Application of the Unit

This unit is suitable for those working within a drafting work environment and may be applied across a range of engineering disciplines. This unit applies to the production of 3-D solid models using CAD modelling software. Operations at this level include, but are not limited to, the creation and manipulation of entities, such as arcs, lines and primitives, such as spheres, cones, cylinders and boxes. It includes the use of region and solid modelling techniques, section views, and pre-drawn library files. Work also includes extraction of properties and application of basic rendering techniques.

This unit includes applications in CAD, computer graphics and animation, rapid prototyping, medical testing and visualisation of scientific research.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B	Interpret technical drawing
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine solid modelling requirements	1.1	Check purpose, scope and information requirements for modelling task
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Identify and apply relevant codes, standards and symbols relevant to work
		1.5	Consult appropriate personnel to ensure the work is coordinated effectively with others involved in the project
		1.6	Obtain and apply workplace occupational health and safety (OHS) and environmental procedures for work
2	Prepare 3-D environment	2.1	Apply workplace procedures to retrieve and manipulate required information and navigate computing technology
		2.2	Set up a 3-D environment on the screen to allow multiple viewing
		2.3	Create 3-D views on the screen by manipulating drawing planes and inserting 3-D geometric shapes
		2.4	Establish coordinate system and orientation according to job requirements
		2.5	Determine and exploit key features of solid modelling software package

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Produce output from 3-D model	3.1	Perform drawing for solid modelling
		3.2	Exploit features of modelling software to optimise productivity
		3.3	Extract physical properties to job requirement, including volume, mass and centre of gravity
		3.4	Apply rendering techniques
		3.5	Produce 3-D drawings incorporating section views with all necessary annotation
4	Complete CAD operations	4.1	Confirm model accurately reflects specifications, is presented according to work requirements and contains all relevant information
		4.2	Save and file drawing elements according to organisational procedure
		4.3	Evaluate work and identify areas for improvement
		4.4	Close applications, perform CAD housekeeping and maintain organisational filing system

Required Skills and Knowledge

Required skills

Required skills include:

- using computing technologies and navigating software
- obtaining relevant job instructions and specifications
- creating the appropriate entities in 3-D space
- manipulating the entities in 3-D space
- creating swept, extruded and revolved solids in 3-D space
- modifying, where appropriate, existing 3-D models
- saving drawing files in the appropriate format
- extracting the physical properties of shapes created in 3-D space from the drawing file to meet job requirements
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

reference documents
- checking and clarifying task-related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- creating intelligent models using parametric modelling
- producing composite models (composite regions and composite solids)
- producing sectioned models (cutting planes and cross hatching)
- using pre-drawn library files and primitives to produce a 3-D model
- extracting mass and area properties from solid model
- applying rendering techniques to a 3D model (rendering types and preferences, render lighting techniques, and views and scenes)
- using various materials and surface finish options
- producing hard copies of 3-D solid models
- saving 3-D models in various file formats for retrieval into other CAD application software
- producing orthogonal detail drawings of components on standard drawing sheets to a recognised drafting scale

Required knowledge

Required knowledge includes:

- purpose for which the 3-D model is to be developed
- appropriate coordinate system for the job
- reasons for selecting the chosen coordinate system
- orientation of the model with respect to the coordinate system
- number of views required to establish the model
- procedures for creating entities in 3-D space
- the entities that can be created/manipulated in 3-D space
- procedures for manipulating entities in 3-D space
- procedures for creating swept, extruded and revolved solids in 3-D space
- applications of swept, extruded and revolved solids
- procedures for modifying existing 3-D models
- rendering types and preferences, render lighting techniques, views and scenes
- procedures for saving drawing files
- the various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files
- procedures for extracting data with respect to the physical properties of shapes created in 3-D space
- the physical properties of shapes created in 3-D space that can be extracted from the drawing file
- hazard and control measures associated with using CAD system, including housekeeping
- safe work practices and procedures
- terminology associated with solid modelling (region modelling, solid modelling, and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

wire frame, as opposed to solids)
- region modelling techniques (creating a region primitive and editing regions)
- solid modelling techniques (creating solid primitives, editing solid primitives, and conversion from region to solid models)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to create 3-D models using CAD systems.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts. Specifically the candidate must be able to: • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • select and use 3-D CAD software to create solid models that meet design specifications.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with creating 3-D models using CAD systems or other units requiring the exercise of the skills and knowledge covered by this unit
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement

Solid modelling task	Solid modelling task may include: • terminology • region modelling • solid modelling • parametric modelling • composite models • section models • library files and 3-D primitives • other relevant software packages for the production of 3-D models • mass and area properties • rendering techniques • material finishes • production of hard copies • saving and retrieval of files of varying formats • consolidation (e.g. project work)
Rendering techniques	Rendering techniques may include: • rendering types and preferences • render lighting techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• views and scenes
Appropriate personnel	Appropriate personnel may include: • supervisor • leading hand • foreman • manager • site engineer • trainer • mentor • teacher • team member
OHS requirements	OHS requirements may include: • legislation • personal protective equipment • material safety management systems • hazardous substances and dangerous goods code • awards provisions • safe work practices
Environmental requirements	Environmental requirements may refer to: • liquid waste • solid waste • gas, fume, vapour, and smoke emissions, including fugitive emissions • excessive energy and water use • excessive noise
Resource requirements	Resource requirements may include: • computer software • stationary • software reference documentation • reference texts • consumables • computer • printing equipment

MEM09216A Interpret and produce curved 3-D shapes and patterns

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers producing and interpreting lines and plan drawings using manual or computer-aided design (CAD) or drafting techniques.

Application of the Unit

This unit applies to drawing and lofting principles relevant to procedures used to produce lines, plan drawings and loftings. Common applications of this unit are in marine vessel construction.

In a marine setting, tasks may be related to a variety of hull designs; section development, such as curved and raking transom; conical development and camber development methods. General arrangement plans may also be addressed to provide a greater drawing diversity.

All drawings/data should comply with industry requirements.

Straightforward take-offs from lofted drawings is covered by MEM12007D Mark off/out structural fabrications and shapes. Also, where transfer of lines to lofting floor or other surface is carried out, MEM12007D Mark off/out structural fabrications and shapes, should be selected in addition to this unit.

If a CAD system is used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine drawing/lofting requirements	1.1	Check purpose, scope and information requirements for task
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Identify and apply relevant codes, standards and symbols relevant to work
		1.5	Consult appropriate personnel to ensure the work is coordinated effectively with others involved in the project
		1.6	Obtain and apply workplace occupational health and safety (OHS) and environmental procedures for work
2	Apply drawing/lofting procedures	2.1	Apply workplace procedures to retrieve and apply required information
		2.2	Set up drawing equipment and accessories to suit job requirements
		2.3	Identify and apply drafting/lofting procedures to suit specified drawing requirements
		2.4	Record alterations required to offset measurements, as applicable
		2.5	Produce drawings/loftings that are consistent with work and industry requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Submit lines and plan drawings	3.1	Ensure work meets specifications and submit drawings according to workplace procedures
		3.2	Where applicable, supply altered offset measurements and relevant information related to drawing

Required Skills and Knowledge

Required skills

Required skills include:

- reading, interpreting and following information on written job instructions, specifications, client briefings, standard operating procedures, charts, lists, drawings and other applicable reference documents
- analysing and organising information, and planning and sequencing operations
- checking and clarifying task-related information
- checking for conformance to specifications
- measuring and performing computations, including geometric and numerical calculations/formulae within the scope of this unit
- drawing and sketching skills to create 3-D drawings
- applying spatial principles to achieve scale and proportion
- using and maintaining drawing equipment
- applying symbols, schedules and legends to the drawing
- presenting drawing according to industry standard, complete with all required information
- handling and storing drawings according to workplace practice

Required knowledge

Required knowledge includes:

- hazards and control measures associated with interpreting and producing curved 3-D shapes, including housekeeping
- safe work practices and procedures
- vessel design characteristics, including performance, stability and construction methods
- spatial concepts
- procedures used to produce lines, plan drawings and loftings
- drawing principles and conventions
- section development, such as curved and raking transom, conical development and camber development methods
- presentation requirements for completed work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to interpret and produce curved 3-D shapes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Specifically the candidate must be able to:

- work within typical site/teamwork structures and methods
- apply worksite communication procedures
- comply with organisational policies and procedures, including quality requirements
- participate in and supervise work meetings
- monitor and supervise progress of detail drafting work and provide support to team members as required
- comply with quality requirements
- use industry terminology
- apply appropriate safety procedures
- interpret and produce curved 3-D shapes and patterns.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and

MEM10002B Terminate and connect electrical wiring

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers terminating, disconnecting or reconnecting electrical wiring and circuits.

Application of the Unit

Application of the unit	This unit applies to the connection of wiring and includes termination and connection of all types of cords and cables, excluding specialist cables. All testing is undertaken on completed circuits where these are not connected to main supply, using appropriate methods such as continuity and resistance checks. Specifications are obtained from electrical/electronic circuit drawings and data sheets. Soldering/desoldering of electrical/electronic components may also require the selection of Unit MEM05001B (Perform manual soldering/desoldering - electrical/electronic components) or Unit MEM05002B (Perform high reliability soldering and desoldering) as applicable. This unit does not cover the competencies required for energising and testing of the circuit. If these skills are required, the competencies covered in Unit MEM10003B (Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.) must be satisfied. Termination and connection of specialist cables such as mineral insulated, steel wire, armoured cables etc., is covered in Unit MEM10011B (Terminate and connect specialist cables). **Band**: **A**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for electrical wiring termination and connection	1.1. All work is undertaken safely and to workplace procedures and State/Territory regulations and legislative requirements. 1.2. Materials are checked for correct specifications. 1.3. Preparation of work is undertaken or checked/inspected for correct location and specifications.
2. Connect electrical wiring	2.1. Terminations/connections are made to specifications, manufacturers' requirements and to safety and State/Territory regulations and legislative requirements. 2.2. All brackets, clamps, holders etc. are adjusted and fixed to specifications. 2.3. All cables, wires, conductors and connections etc. are marked/tagged and labelled to specification. 2.4. All completed wiring and connections are tested for compliance with specifications. 2.5. All reports and documentation are completed correctly to required specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking materials for conformance to specifications
- checking existing and new installation site for correct location and specification
- making terminations/connections to specification, manufacturer and regulatory requirements
- adjusting and fixing wiring supports
- marking, tagging and labelling cables, wires, conductors and connections to specification
- undertaking testing of wiring and connections for conformance to specification
- using language and literacy skills to complete short reports and required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
documentation • reading and interpreting routine information on written job instructions, specifications and standard operating procedures May include drawings • using measurements for checking connections and components
Required knowledge
Look for evidence that confirms knowledge of: • safety hazards associated with the termination and connection of electrical wiring • statutory and regulatory requirements associated with the termination and connection of electrical wiring • wiring support and/or protection requirements and specifications • relevant manufacturer requirements • specifications and methods for terminating different materials • wiring support techniques and alternatives • marking, tagging and labelling requirements for cables, wires, conductors and connections • tests for wiring and connections • data to be recorded/reported and the frequency of recording/reporting • requirements for approval to work • use and application of personal protective equipment for terminating and connecting electrical wiring

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to terminate and connect electrical wiring. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with terminating and connecting electrical wiring or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

RANGE STATEMENT	
situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
State/Territory regulations and legislative requirements	Applicable acts, regulations, codes of practice, Australian standards, International standards
Correct location and specifications	Cable trays, brackets, trenches
Electrical wiring	Wiring associated with power, lighting, control wiring, machinery, switchboards and other electrical apparatus
Terminations/connections	Utilisation of a range of methods including clamping, crimping, pin connection, soldered joints, plugs, sockets etc., clamping of cables and wires, sealing entry points where required

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to erect scaffold/equipment	1.1. Site plans, scaffolding/equipment designs and drawings to industry practices are interpreted as necessary. 1.2. Work area is inspected to identify hazards and appropriate prevention/control measures are implemented to avoid hazard. 1.3. All work is undertaken safely and to prescribed procedures.
2. Erect scaffold/equipment	2.1. Erection site is prepared to meet job requirements. 2.2. Necessary signage and barriers and third party protection measures are placed in appropriate position. 2.3. Appropriate scaffolding/equipment components are selected and inspected and damaged components are labelled and rejected. 2.4. Rejected components are repaired or sent for repair. 2.5. Scaffolding/equipment is erected to plan and in accordance with safe work practices, Australian standards, State and Territory legislative requirements and equipment manufacturers' requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.6. The completed scaffolding/equipment is checked for safety and operational requirements. 2.7. Site is left clear of all surplus components, equipment, tools and debris.
3. Inspect, repair and alter scaffold/equipment	3.1. The scaffolding/equipment is inspected for damage, corrosion and wear. 3.2. Any alteration or repair is carried out in accordance with safe work practices and legislative requirements. 3.3. Any inspection log is completed as required.
4. Dismantle scaffold/equipment	4.1. Work is undertaken safely and to prescribed procedure. 4.2. Scaffolding/equipment is inspected for damage, corrosion or wear and is noted for consideration in planning for dismantling. 4.3. Scaffolding/equipment is dismantled in accordance with site procedures, State and Territory legislative requirements and critical structural and safety requirements. 4.4. Site is cleaned and cleared of all tools, excess material and debris and left in a safe state.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard procedures. May include drawings for erecting scaffolding
- undertaking basic levelling and alignment
- interpreting instructions and legislative requirements
- using relevant hand tools and manual handling techniques
- assessing risk
- following oral instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• working safely and confidently at heights
Required knowledge
Look for evidence that confirms knowledge of: • erection and dismantling procedures as set out in relevant Australian standards • codes of practice, for example the Scaffolder's Guide, relevant acts and regulations • site specific requirements • safety procedures, safe work practices and procedures • use and application of personal protective equipment • hazards and control measures associated with erecting/dismantling scaffolding and equipment, including housekeeping • scaffolding techniques and equipment • limitations of equipment • materials handling, storage and environmentally friendly waste management

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to erect and dismantle scaffolding/equipment safely subject to legislative requirements. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Plan and coordinate erection of scaffold/equipment	1.1. Site plans, scaffolding/equipment designs and drawings to industry practices are interpreted as necessary. 1.2. Work area is inspected to identify hazards and appropriate prevention/control measures are implemented to avoid hazard. 1.3. All work is undertaken safely and to prescribed procedures. 1.4. Erection site is prepared to meet job and safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	requirements. 1.5. Necessary signage and barriers are placed in appropriate position. 1.6. Scaffolding/equipment erection is coordinated in accordance with acceptable safe work practices, Australian standards, State or Territory legislative requirements and equipment manufacturers' requirements. 1.7. Completed scaffolding/equipment is inspected for safety and compliance with design, operational and statutory requirements.
2. Coordinate alterations and repairs of scaffold/equipment	2.1. Scope of alteration/repair is confirmed and understood. 2.2. Existing scaffolding/equipment is inspected and alterations/repairs determined. 2.3. Materials, equipment and tools required for alterations are determined. 2.4. Existing or new load requirements are determined using load tables. 2.5. Alteration/repairs are coordinated in accordance with safety work practices, Australian standards and equipment manufacturers' requirements. 2.6. Alterations/repairs are inspected for safety and operational requirements. 2.7. Work completion is reported to appropriate personnel and recorded.
3. Inspect completed scaffold/equipment	3.1. The critical structural and safety areas of the scaffolding/equipment are inspected for damage, corrosion and wear. 3.2. Scaffolding/equipment and structure is checked against the type of scaffolding/equipment and structure specified in the plan. 3.3. Inspection log is completed. 3.4. Potential safety and design/structural hazards are reported for rectification.
4. Coordinate dismantling of scaffold/equipment	4.1. Work is coordinated safely and to standard operating procedure. 4.2. Scaffolding/equipment is removed from site in accordance with standard operating procedures and critical structural and safety requirements. 4.3. Site clearance is coordinated, and surplus material, equipment, tools and debris are removed and site left

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	in safe and operational state. 4.4. Work completion is reported to appropriate authority.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • levelling and alignment of scaffolding • interpreting instructions and legislative requirements • using basic hand tools • assessing risk • using manual handling techniques • cleaning up and site remediation • time management • determining personnel and equipment requirements • inspecting completed scaffolding with reference to structural integrity and design faults • locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation • planning, sequencing operations • checking and clarifying strategies • working safely and confidently at heights
Required knowledge
Look for evidence that confirms knowledge of: • erection and dismantling procedures as set in the Australian standards • codes of practice, for example the Scaffolder's Guide • site specific requirements • safety procedures • types of scaffolding systems • deck loadings • hazards; electrical, stability, mobile plant issues/requirements; falls protection measures; minimum gap requirements; safe access and egress

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• sequence of operations in erecting and dismantling the scaffolding • design and materials faults such as rust, wear and tear, stress • use and application of personal protective equipment • safe work practices and procedures • scaffolding techniques and equipment • limitations of equipment • materials handling, storage and environmentally friendly waste management

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to coordinate the erection, repair, maintenance and dismantling of all scaffolding applications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Unit Descriptor

Unit descriptor	This unit covers attaching slings to loads and moving loads using appropriate communication and signalling methods.

Application of the Unit

Application of the unit	This unit applies to the skills used when working with loads, selecting equipment and communicating with a crane driver in a workshop or on site. The scope of work is to demonstrate competence in the application of slinging techniques, selection and inspection of lifting gear, and direction of the crane/hoist operator in the movement of the load including when the load is out of view of the operator. This unit is not intended to apply to machine loading and simple straight lifts where knowledge of codes and signals is not required. **Band**: **A** **Unit Weight**: **4**

ELEMENT	**PERFORMANCE CRITERIA**
1. Attach lifting gear to loads	1.1. Potential hazards associated with the use of cranes and other load shifting equipment are identified and measures to eliminate or control these hazards are planned. 1.2. Site information is obtained as necessary. 1.3. All work is undertaken safely and to prescribed procedures. 1.4. Load is inspected and best lifting method determined. 1.5. Load shifting equipment is selected appropriate to load. 1.6. Lifting gear is inspected and damaged or worn items are labelled and rejected. 1.7. Where appropriate, safe working loads are calculated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	to Australian standards. 1.8. Lifting gear is attached to load in most appropriate and safe manner and to specifications where required.
2. Move loads	2.1. Load moving is performed to acceptable safe working practices, Australian standards, codes of practice and specifications. 2.2. Lifting gear is connected to load shifting equipment using safe and appropriate techniques. 2.3. Communication and signalling methods are used as appropriate to coordinate the load movement in a safe manner. 2.4. Load is grounded or put down in accordance with prescribed procedure, in a safe and stable manner. 2.5. All lifting gear is detached from load mover and load.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting lifting methods and load shifting equipment appropriate to the task
- attaching loads
- calculating safe working loads
- communicating with related personnel about the lift
- using of basic hand tools relating to lifts
- identifying hazards and assessing risk
- identifying damaged/worn lifting gear
- self management
- team work
- problem solving

Required knowledge

Look for evidence that confirms knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• Australian standards, codes of practice and specifications • lifting methods and lifting gear to suit various loads • dogging signals and communication methods • calculations relevant to lifting procedures • lifting methods • types and applications of load shifting equipment • hazards and control measures associated with dogging • use and application of personal protective equipment • safe work practices and procedures • licensing requirements • permit requirements • site/non-site personnel • manufacturers' specifications • enterprise procedures • workplace communication procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to calculate, sling, and arrange safe movement of a load. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the calculation and safe movement of loads or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Hazards	May include overhead power lines, trees, overhead service lines (such as steam, gas, water, telephone), underground services, uneven and/or unstable ground, allowable floor loading as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	appropriate, other workers and persons, surrounding buildings/vessels/structures equipment, hazardous materials, corrosive substances, barricades, inadequate lighting and radio interference
Load shifting equipment	May include overhead cranes, overhead gantry, forklift with approved lifting boom/jib, mobile cranes
Lifting method	Slings in an appropriate configuration
Lifting gear	Tags, slings, ropes, shackles, lifting clutches, snatch blocks, I bolts, spreader beams, chain blocks, chain shorteners and may include equalising sheaves, collared I bolts, turn buckles, rigging screws and lifting lugs
Calculations	Load and gear calculations
Safe working practices	• Inspection of the environment • Assessment of hazards • Personnel safety
Communication and signalling methods	• Signals are given both within sight and out of sight of equipment operators. • Signals include stop, raise, lower, slew, luff, extend and retract boom, using hands, verbal instructions and whistles
State or Territory legislative requirements	• Appropriate OH&S and acts and regulations • Australian standards and codes of practice and • NOHSC:1006 • AS1418

MEM11005B Pick and process order

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers receiving an order, picking an order, checking against documentation, placing in the correct area and completing enterprise documentation.

Application of the Unit

Application of the unit	This unit applies where the employee needs to exercise knowledge of the enterprise product range and the procedures, practices and standards for the storage and handling of a product. If materials handling equipment skills are needed, Unit MEM11010B (Operate mobile load shifting equipment) should be accessed. Simple handling of goods not requiring the ability to identify different products or to interact with inventory records and stock location systems is covered by Unit MEM11010B (Operate mobile load shifting equipment) or Unit MEM11011B (Undertake manual handling). **Band**: **A** **Unit Weight**: **4**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Receive order	1.1. Orders are received and checked for errors. 1.2. Product to be picked is identified.
2. Pick order	2.1. Materials handling equipment appropriate to products is selected and used, if required. 2.2. Products to be picked are located using standard operating procedures. 2.3. Order is picked accurately, either by manual handling or using materials handling equipment. 2.4. Product is handled according to storage and handling requirements identified in standard operating procedures/regulations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Finalise order picking	3.1. Picked order is checked against documentation. 3.2. Picked order is placed in correct area for consolidation. 3.3. Enterprise documentation is completed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading and interpreting routine information on written orders and standard operating procedures. May include simple drawings • using materials handling equipment in a warehouse • identifying dangerous goods • following oral instruction • entering routine and familiar information onto proformas and standard workplace forms
Required knowledge
Look for evidence that confirms knowledge of: • safe manual handling procedures • reasons for selecting materials handling equipment • safe storage and handling procedures for a range of products including dangerous goods • applicable Material Safety Data Sheets • applicable industry standards, national/Australian standards, NOHSC guidelines, State/Territory regulatory codes of practice/standards • use and application of personal protective equipment • safe work practices and procedures • hazards and control measures associated with picking and processing orders

MEM11006B Perform production packaging

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers packaging and labelling of finished goods for storage or transport.

Application of the Unit

Application of the unit	This unit typically applies in a production/process environment. It would normally involve packing of finished goods, including assemblies, sub-assemblies, individual or multiple components. This unit is not intended to apply in situations where simple interim packing, storage and/or stacking are undertaken in context of a production function. **Band**: **A** **Unit Weight**: **2**

MEM11010B Operate mobile load shifting equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers operating mobile load shifting equipment, including moving and placing loads.

Application of the Unit

Application of the unit	This unit applies to the general operation of mobile load shifting equipment, including planning the work, moving and placing loads, and shutting down and securing equipment after operation where knowledge of codes and signals is not required. The unit applies to moving loads in workshops and/or on site. This may include but is not limited to factories, wharfs, ships, warehouses, manufacturing plants, building sites, road construction, demolition sites, quarries and mine sites. If hand tools are required, Unit MEM08001B (Use hand tools) should also be selected. Awareness of licensing requirements - licenses may be required for mobile load shifting equipment in some jurisdictions. **Band**: **A** **Unit Weight**: **4**

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare to shift loads	1.1. Work area is inspected to identify hazards, and appropriate prevention/control measures are implemented to avoid hazards. 1.2. Routine pre-operational checks are undertaken in accordance with manufacturers' specifications and regulatory safety requirements. 1.3. Attachments and/or equipment are inspected.
2. Check controls and equipment	2.1. Pre-operational and post start-up equipment checks are carried out in accordance with manufacturers' specifications and/or operating manual. 2.2. Defects and damage are reported according to site procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Shift loads	3.1. The most appropriate load shifting device is selected to suit load and shifting requirements. 3.2. Load shifting device is operated within design specifications and safe working load in accordance with standard operating procedures. 3.3. Load is lifted, ensuring balance, vision of operation and protection of load. 3.4. The safe and efficient path of movement is selected and used. 3.5. Path of movement is checked and monitored for obstacles and hazards and safely are maintained.
4. Place loads	4.1. Loads are placed ensuring safety, stability, protection of material and avoidance of hazards on site.
5. Shut down equipment and secure site	5.1. Machinery is parked avoiding equipment hazards. 5.2. Shut-down is conducted in accordance with manufacturers' specification to isolate vehicles. 5.3. Post-operational check is completed in accordance with operational procedures. 5.4. Machinery is parked in accordance with standard operating procedures, avoiding site hazards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • interpreting and following routine information on standard operating procedures. May include simple drawings, tables and figures, written documents • performing routine safety, basic service and maintenance procedures • calculating load masses and safe working loads • selecting appropriate load shifting device • following oral instructions • safely operating load shifting devices and shifting loads • working with others • interpreting communication signals and instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• determining load masses and equipment requirements • determining mass of irregular shaped loads • demonstrating emergency operating procedures • communicating faults, malfunctions and workplace hazards, reports and maintenance of operational records
Required knowledge
Look for evidence that confirms knowledge of: • pre-operational checks • design specifications of load shifting device • load chart • licensing requirements • load protection • safe load placement • operational environment • appropriate permits • hazards and control measures associated with load shifting and equipment • use and application of personal protective equipment • safe work practices and procedures • workplace communication procedures • manufacturers' specifications

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to operate load sifting equipment to move and place loads.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

RANGE STATEMENT	
regional contexts) may also be included.	
Pre-operational checks	Battery, water, fuel, hazards warning lights, fluid or gas leaks, braking, movement of booms, visual checks of tyres, emergency devise/alarms, log books, operating motions, evidence of damage, excessive wear and tear, as determined by manufacturers' specifications and standard operating procedures
Attachments and/or equipment	Hooks, electromagnetic hook, buckets, slings, tag lines, buckets, trench, excavating, rock breakers, shackles, lifting lugs, fork arms
Post start-up	• Hazards warning systems, attachments, movements and control functions are smooth • Operating and emergency controls and safety devices are located, identified and tested • Communication signals are confirmed • Defects and damage are reported
Load shifting device	Front end loaders/back hoes, ride on forklifts and pallet trucks, bobcats, vehicle loading crane
Safe working load	Weight of load is assessed to ensure compliance with equipment load plate specifications
Standard operating procedures	Industry standards, production schedules, material safety data sheets, work notes and plans, product labels, manufacturers' specifications, operator manuals, enterprise policies and procedures, supervisors' oral and written instructions, current State/Territory occupational health and safety legislation, standards and codes of practice
Obstacles and hazards	• Overhead cables, personnel, obstacles (fixed and moveable), trenches, pits, uneven terrain, trees, underground services • Exposure to chemicals, dangerous or hazardous substances • Movements of equipment, goods, materials and vehicular traffic
Shut-down	• Post-operational equipment checks, motion locks and brakes are applied • Lifting equipment is checked • Defective equipment is identified, segregated

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lift materials manually	1.1. Material weight is determined correctly utilising most appropriate technique, and risks associated with lifting are assessed. 1.2. Lifting techniques are undertaken to National Occupational Health and Safety Commission (NOHSC) and standard operating procedures. Types of movement, methods, storage, height and position are considered.
2. Move/shift materials manually	2.1. Appropriate equipment is selected where required. 2.2. Material is placed safely and securely on moving equipment. 2.3. Material is relocated ensuring safety of personnel and security of material. 2.4. Material is unloaded from moving equipment and placed in a safe and secure manner.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • identifying relevant standards and lifting techniques • assessing weight of material • selecting lifting equipment • working and communicating in teams • assessing risks • planning • reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings • following oral instructions
Required knowledge
Look for evidence that confirms knowledge of: • manual handling techniques • hazards of incorrect procedures • NOHSC standards for manual handling • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to move loads manually using appropriate aids.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with moving loads manually or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Material weight	Material weight is determined using scales or interpreting signage
Lifting techniques	Individual or team lifting, use of appropriate lifting equipment
Appropriate equipment	Hand trolleys, wheelbarrows, motorised/hand pallet trucks (not sit on), scissor lifts, boom lifts, hand carts, dedicated production or process lifting equipment such as baskets, spreader bars, cradles or the like attached to lifting equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine purchasing requirements	1.1. Client, customer, user is consulted as necessary to determine purchasing requirements. 1.2. Material specifications are determined from orders, instructions and/or technical drawings. 1.3. Quantities, price limitations and delivery requirements are determined from orders, instructions.
2. Prepare purchase order/list	2.1. Purchase order/list is developed to standard operational procedure.
3. Purchase material	3.1. Standard operating procedures are followed. 3.2. Supplier/vendor is informed of requirements and specifications. 3.3. Purchasing schedules are adjusted where required to standard operating procedures. 3.4. Appropriate paperwork/contracts are exchanged to standard operating procedures. 3.5. Records/files are maintained accurately using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading, interpreting and following information on orders, instructions and/or technical drawings, standard operating procedures, purchasing schedules, orders, records, files and other applicable reference documents • planning and sequencing tasks • checking and clarifying information • entering and maintaining information on manual and electronic workplace documents • checking for conformance to specifications • communicating with client, customer, user, supplier/vendor • identifying purchasing specifications • calculating quantity, price and delivery requirements • selecting suppliers • maintaining purchase documentation
Required knowledge
Look for evidence that confirms knowledge of: • suppliers and available products • purchasing procedures • contract initiation and exchange procedures • safe work practices and procedures • hazards and control measures associated with purchasing materials

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEM11021B Perform advanced operation of load shifting equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers determining lifting and loading requirements, working within areas of restricted movement or conditions of restricted visibility, identifying loads that need special care, and operating forklifts in special traffic conditions.

Application of the Unit

Application of the unit	This unit applies to advanced forklift and load shifting skills above those required for general operation. To be credited with this unit it is expected that an employee would be competent in situations indicated by all elements and performance criteria. This unit is intended to cover load shifting applications where special-purpose equipment/accessories requiring advanced operational skills are required. This would include heavy, out of balance, awkward and irregular shaped loads traversing over rough, broken or uneven surfaces, high lift situations, extremes of climate. Awareness of licensing requirements: Licenses may be required for load shifting equipment in some jurisdictions **Band**: **A** **Unit Weight**: **2**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Licensing/Regulatory Information

Refer to Application of the Unit

Pre-Requisites

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine lifting and loading requirements	1.1. Load is identified and checked against safe working load and final position/location and/or relevant specifications or regulations. 1.2. Special handling requirements of load are identified, if applicable. 1.3. Load is lifted correctly and placed in final position/location to achieve specified balance of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	load.
2. Work in areas of restricted movement or conditions of restricted visibility	2.1. Load is collected and manoeuvred without damage to load or collision with obstacles according to standard operating procedures.
3. Identify and carry loads that require special care	3.1. Loads requiring special care are identified. 3.2. Loads are carried in accordance with special requirements of product according to standard operating procedures and/or regulations.
4. Operate forklifts in special traffic conditions	4.1. Forklifts are operated in areas of heavy traffic. 4.2. Forklifts are operated over difficult or uneven surfaces. 4.3. Forklifts are operated in areas shared with the general public, as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading/interpreting specifications, regulations, load charts and standard operating procedures, including simple drawings
- selecting appropriate load shifting device
- identifying safe working loads
- identifying/managing special conditions and equipment
- operating in a complex mobile plant environment
- communicating with personnel on movement/location
- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- pre-operational checks
- licensing requirements and appropriate permits
- load protection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• operational environment • methods and techniques for loads requiring special care • hazards and control measures associated with this unit • use and application of personal protective equipment • safe work practices and procedures

MEM11022B Operate fixed/moveable load shifting equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers conducting routine operation and safety checks of fixed/moveable load shifting equipment, picking up loads, shifting and placing loads.

Application of the Unit

Application of the unit	This unit applies to the operation of fixed/moveable load shifting equipment within the limits of manufacturers' recommended procedures and safe working loads. It applies to load shifting/lifting activities where knowledge of codes and signals is not required. When using dedicated lifting equipment or devices where decisions regarding loads and methods of attachment are not required, Unit MEM11011B (Undertake manual handling) should be selected. Awareness of licensing requirements - licenses may be required for fixed/moveable load shifting equipment in some jurisdictions. **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Refer to Application of the Unit

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Conduct routine operation and safety checks of load shifting equipment	1.1. Operational principles of fixed/moveable load shifting equipment are understood. 1.2. Routine pre-operational checks are undertaken in accordance with manufacturers' specifications and regulatory safety requirements. 1.3. Non-compliance with specifications is reported using standard operating procedures.
2. Pick up loads	2.1. Appropriate load shifting device is selected for the load and shifting requirements. 2.2. Load shifting device is operated within design specifications and safe working load. 2.3. Load is lifted/rolled, ensuring balance, vision of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	operation, safety of personnel and protection of load.
3. Shift loads	3.1. Where required, load is moved at an appropriate and safe speed using a safe and efficient path. 3.2. Path of movement is monitored for obstacles and hazards during shifting process.
4. Place loads	4.1. Loads are lowered at an appropriate and safe rate. 4.2. Loads are placed to ensure stability, protection of material and avoidance of hazards on site.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on instructions, specifications, load charts and standard operating procedures. May include simple drawings
- selecting and operating appropriate load shifting device
- communicating with others about movement of equipment
- checking and clarifying task-related information
- identifying the safe working load in relation to the capacity of the crane and lifting gear
- following oral instruction
- safely lifting, moving and placing loads

Required knowledge

Look for evidence that confirms knowledge of:

- operational principles of fixed/moveable load shifting equipment
- pre-operational checks
- loads and lifting attachments
- load chart and safe working loads (SWL)
- awareness of licensing requirements
- load protection
- operational environment
- appropriate permits

REQUIRED SKILLS AND KNOWLEDGE
• use and application of personal protective equipment • safe work practices and procedures • hazards and control measures associated with operating fixed/moveable load shifting equipment

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to operate fixed/moveable load shifting equipment to move and place loads.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating fixed/moveable load shifting equipment or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct

EVIDENCE GUIDE	
	should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using comparison and basic measuring devices or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Basic measuring devices	Linear measuring devices measuring to within 1mm graduation - may include rules, tapes and retractable tapes
Comparisons	Comparison of length, angle, size, temperature, pressure, weight, voltage, resistance and amperage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Comparison measuring devices	Go/no-go devices, thread angle and taper gauges, temperature gauges, pressure gauges, measuring gauges and overlay indicators, templates, digital devices and pre-set verniers and micrometers

MEM12002B Perform electrical/electronic measurement

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers selecting and using basic electro-measuring devices to check variables and the ability to maintain the devices.

Application of the Unit

Application of the unit	This unit applies to the measurement of voltage, current, resistance, power, frequency etc. on a.c. and d.c. circuits up to 1000 volts, using appropriate measuring devices and for a range of general applications. Measurement skills for specific applications and context are covered by other units. For simple measurement tasks such as reading of fixed devices, testing continuity, and tasks requiring the use of devices mounted in measuring jigs etc. Unit MEM12023A (Perform engineering measurements) and/or Unit MEM12001B (Use comparison and basic measuring devices) should be considered. If electrical/electronic measuring devices require the connection or disconnection of circuitry, the appropriate units should also be selected. In circumstances where the application of this unit or where legislation dictates, relevant units covering first aid and/or emergency procedures should also be considered. **Band**: **A** **Unit Weight**: **2**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Use electro-measuring devices to measure variables	1.1. Appropriate device or equipment and setting is selected to obtain required measurement. 1.2. Appropriate connections are made to obtain required measurement according to standard operating procedure. 1.3. Readings are obtained and interpreted correctly and conversion is made where necessary into the required units of measurement.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Maintain electro devices	2.1. Routine care and storage of devices is undertaken to manufacturer's specifications or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- setting and using electro-measuring devices
- obtaining and interpreting specified electrical measurements
- selecting appropriate measuring devices
- performing arithmetic operations required to convert measurements into appropriate units of measurement
- maintaining and storing electro-measuring devices
- reading and interpreting information on standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- terminology and concepts relating to electrical/electronic measurement
- the selection of different measuring devices for particular applications within the scope of this unit
- specifications of selected electro-measuring devices
- the application of the settings on each electro-measuring device
- the procedures for obtaining electrical/electronic measurements
- procedures for connecting electro-measuring devices to circuitry
- the correct scale for each setting on the electro-measuring device
- the scale factor to be applied to readings taken from the electro-measuring device
- the units applying to electrical and electronic measurements
- maintenance and storage requirements for a range of electro-measuring devices
- that devices can impact on the circuit condition
- relevant State/Territory or Commonwealth legislative and regulatory requirements, industry standards, NOHSC guidelines and code of practice
- hazards and control measures associated with electrical/electronic measurement
- safe work practices and procedures

REQUIRED SKILLS AND KNOWLEDGE
• use and application of personal protective equipment

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform electrical/electronic measurement.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with electrical/electronic measurement or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate

MEM12003B Perform precision mechanical measurement

Modification History

Editorial correction to unit application to include missing notes relating to dual band status.

Single band identifier removed to clarify dual status.

Unit Descriptor

Unit descriptor	This unit covers performing precision mechanical measurement by using precision measuring equipment, setting comparison measuring devices and maintaining precision equipment.

Application of the Unit

Application of the unit	The unit applies to precision and/or complex use of strip gauges, engineering squares, lasers, angle dekkors, sine bars, angle gauges, polygons, dividing heads, rotary tables, precision levels, micrometers, height gauges, hardness testers, and texture measuring equipment etc. Work is undertaken autonomously or as part of team environment. Work is undertaken in the field (in situ) or in a workshop/laboratory environment. This unit covers comprehensive measuring skills where judgement is required in the selection of the most appropriate techniques/devices and where results are interpreted/analysed. All specifications are obtained from engineering drawings and data sheets and/or manufacturers' instructions/data. All measurement/test procedures are undertaken to standard operating procedures or manufacturers' recommended procedures. **Band**: This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use precision measurement equipment	1.1. Appropriate precision equipment is selected to achieve specified outcome. 1.2. Correct and appropriate measuring techniques are

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	used for the measurement task. 1.3. Measurements are taken accurately to the finest graduation of instrument. 1.4. Readings and measurements are interpreted correctly and accurately.
2. Set comparative measuring devices	2.1. Measuring equipment is set to specifications using manufacturer guidelines or standard operating procedures and techniques.
3. Maintain precision equipment	3.1. Measuring equipment is adjusted and maintained to required accuracy, using manufacturer or standard operating procedures and techniques. 3.2. Equipment is stored to manufacturer specifications or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading and interpreting text and numerical information on manufacturer specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • selecting/using precision mechanical measuring devices • setting measuring devices to specification • obtaining specified mechanical measurements to the finest graduation of the device • measuring components to specified tolerances • reading and interpreting measurements • maintaining and adjusting precision mechanical measuring devices • storing precision mechanical measuring devices • undertaking calculations and numerical operations for measurement using precision mechanical measuring equipment
Required knowledge
Look for evidence that confirms knowledge of: • the appropriate precision mechanical measuring device for given measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
requirements • procedures to verify equipment being used has been recently calibrated • suitability of environmental conditions for the measurements being carried out • procedures/techniques for obtaining a range of mechanical measurements • the accuracy to which a range of precision mechanical measuring devices can be read • procedures for reading graduated mechanical measuring devices • units of measurement and numerical operations within the scope of this unit • procedures for setting precision mechanical measuring devices • specifications of the equipment to be set • tools and equipment for setting mechanical measuring devices • the adjustments that can be made to a range of precision mechanical measuring devices • procedures for adjusting and maintaining precision mechanical measuring devices • procedures for storing precision mechanical measuring devices • hazards and control measures associated with precision mechanical measurement, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform precision mechanical measurement. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where

MEM12005B Calibrate measuring equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers checking measuring equipment for correct operation, and validating/calibrating precision measuring equipment in accordance with predetermined procedures.

Application of the Unit

Application of the unit	This unit applies to the calibration skills used in the setting, adjustment, validation or verification of precision mechanical and/or electrical/electronic measuring instruments using reference standards in accordance with predetermined standard procedures. This may involve the use of electronic setting equipment and the selection or determination of an appropriate external standard in accordance with standard operating procedures. This unit is not meant to apply to simple zeroing, external adjustment or manual adjustment for size range e.g. micrometers etc; these skills are covered by Unit MEM12023A (Perform engineering measurements), Unit MEM12003B (Perform precision mechanical measurement) or Unit MEM12004B (Perform precision electrical/electronic measurement) as appropriate. There may be occasions when both pathways MEM12003B and MEM12002B will be required. Where additional electrical/electronic measurement skills are required, then Unit MEM12004B (Perform precision electrical/electronic measurement) should be considered. Competence in this unit does not require the level of skill that applies to calibration as defined in ISO 9000 and/or carried out by personnel accredited under ISO/IEC 17025/NATA certification or similar. Unit MEM15010B (Perform laboratory procedures) should be considered for this level of calibration.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	Where reference standards only are to be verified under laboratory conditions, then MEM15022B (Verify reference standards) should be considered. **Band**: **B** **Unit Weight**: **6**

	statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check equipment for correct operation	1.1. Appropriate checks are made of components, leads, fasteners, etc. for wear, loose connections or other faults.
2. Validate/calibrate precision measuring equipment	2.1. Calibration of precision measuring equipment is assessed to manufacturers' specifications and/or standard operating procedures. 2.2. Equipment is calibrated against appropriate physical standards using correct calibration devices, equipment, techniques using predetermined procedures. 2.3. Equipment is recommissioned in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting work requirements
- using appropriate tools and equipment to check measuring equipment for faults
- using appropriate techniques to check the calibration of the measuring equipment for conformance to specifications
- calibrating the measuring equipment against the appropriate physical standard
- recommissioning the measuring equipment
- using literacy and numeracy skills to enable correct completion of calibration records

Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms knowledge of: • measuring equipment specifications, operation, wearing parts, connections and components • checks that are to be made of the measuring equipment and the tools and equipment to be used when checking the measuring equipment • common fault(s) that may be found in the measuring equipment • effects of faults on the performance/accuracy of the measuring equipment • general knowledge of standards, legislative or regulatory requirements applicable to the measuring equipment and/or its calibration • standard operating procedures for calibrating the measuring equipment and the tools and equipment required to do so • standard operating procedures for commissioning the measuring equipment • calibration records to be kept/maintained in accordance with standard operating procedures • hazards and controls associated with calibrating measuring equipment

MEM12006C Mark off/out (general engineering)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit of competency covers marking off/out by transferring dimensions from engineering drawings, prints or plans to engineering items that are to be either manufactured or set up. Dimensions may be directly transferred or may require calculation from information on the drawings, prints or plans.

Application of the Unit

Application of the unit	This unit of competency applies to marking off/out techniques used for the transfer of dimensions from engineering drawings, prints or plans to items that are to be set up or manufactured, for example, engineering components, jigs and fixtures, castings, templates, dies and tooling. This unit has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade level skills in mark off/out in general engineering. Skills covered by this unit are generally applied in occupational and work situations associated with trade level fitting, machining and toolmaking work. Marking off/out is undertaken using appropriate tools and equipment and templates are produced as required. Marking off/out techniques may apply to a range of materials and shapes. The task may be performed in a workshop or in situ. This unit is not intended to cover the skills used in a simple transfer of a dimension or marking a location point associated with general engineering and maintenance functions. For these skills refer to MEM07005C Perform general machining, MEM18006C Repair and fit engineering components or MEM18014B Manufacture

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, job instructions and specifications are interpreted and understood 1.2. Appropriate methods and sequencing are selected consistent with proposed manufacturing process using standard operating procedures
2. Transfer dimension	2.1. All marking off/out is carried out to specifications using appropriate tools and equipment 2.2. Datum points are correctly established 2.3. Dimensions are transferred and correct and appropriate calculations are used where required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining job requirements
- transferring dimensions
- applying method and sequence of marking out
- making templates as required
- establishing datum points
- reading and interpreting routine information on written job instructions, specifications standard operating procedures and engineering drawings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• performing calculations using formulae • locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation • checking and clarifying strategies
Required knowledge
Required knowledge includes: • drawings, job instructions and specifications • procedures for marking off/out • tools, equipment and techniques related to the task • purpose of establishing datum points • method of determining/calculating dimensions • use and application of personal protective equipment • safe work practices and procedures • relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to mark off/out in a general engineering situation. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include: • examination of detailed drawings for marking out requirements and specifications including materials, measurements and tolerances, manufacturing methods, standards and code requirements • correct calculation of measurements not shown on

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	drawings • sequence of measuring and/or development is determined correctly • correctly establishing and marking datum points • measurements are accurately transferred to component, jig, fixture, casting, template, die or tooling • accurate production of templates.
Context of and specific resources for assessment	This unit has been developed to support training in and recognition of trade level competency in marking off/out general engineering items as applied to trade level fitting, machining and toolmaking work environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	Typically, persons engaged in Engineering Tradesperson - Mechanical work are required to apply their geometric development skills and techniques across a range of jobs and specifications. A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit. Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Guidance information for assessment	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with marking off/out general engineering items or other units requiring the exercise of the skills and knowledge covered by this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Marking off/out	Marking off/out may include engineering components, jigs and fixtures, castings, templates, dies and tooling
Tools and equipment	Tools and equipment may include: • marking out tables • surface tables • rotary tables • dividing heads • vee blocks • cylinder squares • sine bars • vernier height gauges • protractors • straight edge and set squares • hammers • scribers

This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • determining program parameters from written job instructions, specifications, charts, lists, drawings and other applicable reference documents • selecting the correct units for the job requirements • selecting suitable probes and determining probe configuration • determining and qualifying probe angles for each probe • creating multiple DCC alignment • integrating new and/or existing DCC sub-routines • constructing geometric features for the program • reviewing and editing program to specification • changing system wide operations to ensure the most efficient operation of the program • checking that the integrity of the system is maintained • archiving and backing up • outputting results output to printer, disc or other formats • planning and sequencing operations/processes • checking and clarifying information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- completing workplace documents and short reports
- checking for conformance to specifications
- undertaking calculations for determining program parameters and checking tolerances
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- following verbal instructions
- orally reporting information

Required knowledge

Look for evidence that confirms knowledge of:

- program specifications
- the procedure for producing the program
- the parameters for selecting attributes
- the reason for selecting multiple probes
- the procedure for determining multiple probe configuration
- the procedure for determining probe angles
- the qualification procedure
- the procedure for creating DCC alignment
- the critical differences between single and multiple DCC alignment
- problems due to integrating sub-routines
- advantages gained through integration of DCC sub-routines
- the procedure for constructing geometric features
- reasons for constructing features in the sequence followed
- the procedure for ensuring the dimensioning techniques comply with relevant standards
- the procedure for ensuring all notes/instructions are clear and logical
- the procedures and parameters for editing, archiving and backing up programs
- the effects of editing particular sections of the program
- the effects on other programs of changing software or hardware options
- the procedures for changing system-wide options
- the list of recipients or those with access rights to the programs
- the procedures for producing/storing results/reports
- the procedure for notifying personnel of completion of the program is explained
- techniques, tools and equipment to measure components
- hazards and control measures associated with advanced CMM programming, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform advanced programming of a coordinate measuring machine. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with advanced programming of a coordinate measuring machine or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any

Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

MEM12023A Perform engineering measurements

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing measurement skills requiring straightforward use of mechanical measuring devices and associated calculations.

Application of the Unit

Application of the unit	This unit covers straightforward measurement using devices which incorporate visual indications representing units of measurement. It applies to the use of measuring devices in a range of manufacturing, engineering and related environments. It includes, where required, adjustment of measuring devices through simple means and typically includes zeroing or scale adjustment. Measurements may be expressed in metric or imperial units. All measurements are undertaken to standard operating procedures. Electrical/electronic devices used are those not requiring the connection or disconnection of circuitry. Work is undertaken autonomously or part of team environment, in the field, work station or workshops. For straightforward use of comparison or pre-set measuring devices, Unit MEM12001B (Use comparison and basic measuring devices) should be accessed. **Band**: **A** **Unit Weight**: **5**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Select appropriate device or equipment	1.1. Measurement requirements are determined from specifications. 1.2. Appropriate device or equipment is selected according to standard operating procedures, to achieve required outcome.
2. Obtain measurements using a range of measuring devices	2.1. Correct and appropriate measuring technique is used. 2.2. Measurements are accurately obtained .

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Dimensions are determined or verified using basic calculations, where required.
3. Maintain measuring devices	3.1. Routine care and storage of devices is undertaken to manufacturers' specifications or standard operating procedures. 3.2. Routine adjustments to devices are made and checked.
4. Communicate measurements as required	4.1. Measurements are accurately recorded, where required. 4.2. Freehand sketch which depicts required information is prepared, as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting the appropriate measuring device for given measuring tasks
- using appropriate measuring technique
- reading all measurements taken accurately to the finest graduation of the selected measuring device
- handling and storing measuring devices in accordance with manufacturers' specifications or standard operating procedures
- verifying all measuring devices before use
- making, where appropriate, routine adjustments to measuring devices
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations involving addition, subtraction, multiplication, division, fractions and decimals within the scope of this unit
- preparing drawings as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge
Look for evidence that confirms knowledge of: • correct application of a range of measuring devices • correct and appropriate measuring technique for a range of measuring devices • addition, subtraction, multiplication, division, fractions, decimals to the scope required by this unit • procedures for handling and storing a range of measuring devices • procedures for adjusting and zeroing a range of measuring devices • methods of communicating measurements by drawings, as required • safe work practices and procedures

MEM12024A Perform computations

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers estimating approximate answers to arithmetical problems, carrying out basic calculations involving percentages and proportions, and determining simple ratios and averages. The unit includes producing and interpreting simple charts and graphs.

Application of the Unit

Application of the unit	This unit applies in manufacturing, engineering or related environments. It includes the application of the four rules of algebraic expressions, extracting information from drawings, diagrams, graphs and charts and producing simple charts and graphs. Data may be derived from readings taken or may be computer generated. Applications can include computations associated with pressure, volume, temperature, heat, speed, power, elasticity, density, mass, force etc. Calculations may be performed using pen and paper or on a calculator. **Band**: **A** **Unit Weight**: **3**

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine work requirement	1.1. Required outcomes are established from job instructions. 1.2. Data is obtained from relevant sources and interpreted correctly. 1.3. Required calculation method is determined to suit the application, including selection of relevant arithmetic operations and/or formulae. 1.4. Expected results are estimated, including rounding off, as appropriate.
2. Perform calculations	2.1. Calculation method is applied correctly. 2.2. Correct answer is obtained. 2.3. Answer is checked against estimation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Produce charts and graphs from given information	3.1. Data is transposed accurately to produce charts or graphs. 3.2. Charts or graphs accurately reflect data on which they are based.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing calculations involving whole numbers using all four basic rules
- performing calculations involving length, perimeter, area and volume
- checking calculated answers for accuracy
- rounding off estimated answers
- expressing information presented in fractional or decimal format as a percentage
- selecting appropriate formulae for the given application
- substituting the correct values for each term in the relevant formulae
- using appropriate mathematical operations
- performing calculations involving ratios or proportions
- determining required information from appropriate charts or graphs
- producing simple charts or graphs from given information or observations made
- selecting appropriate scales and using them in the production of charts and graphs
- marking appropriate limits clearly on the graph or chart
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- formula applicable to the determination of perimeter, area and volume of simple

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
geometric shapes • techniques for estimating approximate answers • reasons for using dimensions with the same units when calculating length, perimeter, area and volume • concepts of perimeter, area and volume • procedures for rounding off figures when estimating approximate answers • mixed numbers, decimals, fractions and whole numbers • concept of percentage • procedures to be followed in converting a decimal to a percentage • procedures for carrying out calculations involving fractions and using each of the four basic rules • procedures to be followed on converting a fraction to a percentage • sources of appropriate formulae • reasons for ensuring that the units of each term are consistent with the formulae selected • procedures for converting given units to those required for use in formulae • concepts of ratio and proportion • given ratios and proportions can be expressed in terms of whole numbers, fractions and decimal fractions • scales applicable to the axes of the graphs or charts • three types of charts and/or graphs used in the individual's field of work • where appropriate, upper and lower limits of acceptability applicable to data entered on a graph or chart • where appropriate, the trends indicated by the slope or gradient of a graph • where appropriate, the action to be taken when given trends occur or set limits are approached on graphs or charts • procedures for drawing 'lines of best fit' • the trends indicated by the graphs or charts drawn • hazards and control measures associated with performing computations, including housekeeping • safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Read and construct graphs from given or determined data	1.1. Complex information is extracted from graphical representation. 1.2. Data is analysed with respect to emerging trends. 1.3. Graphs are constructed as required from data and drawn with respect to scale and accepted method. 1.4. Significant features of graphical representation are understood such as limit lines, gradients (straight line graphs), intercepts, maximum and minimum values. 1.5. A wide variety of graphs are constructed as required including histograms, control charts, straight line graphs and parabolic graphs.
2. Perform basic statistical calculations	2.1. Mean, median and mode are calculated from given data. 2.2. Standard deviation is calculated. 2.3. Application of standard deviation and limits to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	process improvement techniques is understood.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining required information by interpreting data presented in graphical form • determining the trend(s) indicated by the data presented in graphical form • constructing graphs to scale • labelling the axes appropriately • selecting scales appropriate to the purpose for which the graph is intended • constructing histograms, control charts, straight line and parabolic graphs • determining for a given set of data the mean, median and mode • determining for a given set of data the standard deviation • reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • planning and sequencing operations • checking and clarifying task related information • checking for conformance to specifications • undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
Required knowledge
Look for evidence that confirms knowledge of: • characteristics of straight line, parabolic and hyperbolic curves • procedures for determining the slope/rate of change of a curve • the trend(s) indicated by changes in gradient of a graph • procedures for drawing the line of best fit for the coordinates plotted • standard form of equations relating to straight lines and parabolic curves • gradient, intercepts, maximum and minimum values and limit lines for straight line and parabolic curves • function of control charts • the meaning of the terms mean, median and mode

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the meaning of the term standard deviation • the significance of 1, 2 and 3 sigma limits • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to use graphical techniques and perform simple statistical computations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using graphical techniques and performing simple statistical computations or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct

MEM13001B Perform emergency first aid

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing basic emergency first aid, EAR (expired air resuscitation) and CPR (cardiopulmonary resuscitation).

Application of the Unit

Application of the unit	This unit applies to administration of basic emergency first aid treatment and the management of life threatening situations where an unconscious person requires expired air resuscitation (EAR) and cardiopulmonary resuscitation (CPR). This unit does not meet all of the requirements expected of designated First Aid Officers. The competencies required for situations involving isolation of persons from hazardous electrical situations are covered in Unit MEM18049C (Disconnect/reconnect fixed wired equipment up to 1000 volts a.c. and 1500 volts d.c.) and Unit MEM10003B (Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.). **Band**: **A** **Unit Weight**: **1**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Perform emergency first aid	1.1. Correct procedures for EAR (expired air resuscitation) and CPR (cardiopulmonary resuscitation) are demonstrated on a mannequin. 1.2. First aid treatment of injuries is carried out correctly. 1.3. Details of first aid administered are accurately recorded. 1.4. Understanding of relevant regulatory and legislative requirements is demonstrated.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and sequencing operations
- checking and clarifying task-related information
- performing EAR (expired air resuscitation) and CPR (cardiopulmonary resuscitation) on a mannequin
- simulated first aid treatment for the full range of injuries covered by the range statement
- reading, interpreting and following emergency first aid procedures and related documents
- entering information onto proformas and other relevant documents
- communicating effectively with injured persons, appropriate personnel and authorities

Required knowledge

Look for evidence that confirms knowledge of:

- applicable regulatory and legislative requirements
- use and application of any applicable personal protective equipment
- hazards and control measures associated with performing emergency first aid, including housekeeping
- instances where EAR and CPR should be performed
- procedures for preparing a person for the administration of EAR and CPR
- procedures for performing EAR and CPR on a child and an adult
- dangers and precautions to be taken when administering EAR and CPR
- emergency first aid procedures for injuries covered by the scope of this unit
- details to be recorded of first aid administered
- procedures and reasons for recording first aid administered
- relevant regulatory and legislative requirements with respect to emergency first aid
- the impact of regulatory/legislative requirements on the individual and others
- safe work practices and procedures

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply principles of OHS in a workplace	1.1. Basic OHS principles of hazard identification, risk assessment and control are described. 1.2. Understanding of OHS legislation as it is applied in the workplace is demonstrated.
2. Carry out safety audit	2.1. Regular safety audits in the area of responsibility are carried out in accordance with appropriate OHS standards.
3. Identify health and safety improvements	3.1. OHS issues and suggestions for improvements are made to OHS Representatives and Committees as appropriate. 3.2. On the basis of safety audits or as required, hazards are identified and recommendations for their control are made. 3.3. Contributions to safety improvements are made using standard operating procedures. 3.4. OHS training needs are identified.
4. Follow requirements of enterprise OHS program	4.1. Requirements of the OHS program are satisfied within the area of responsibility. This includes for example, accident investigation and emergency procedures.

- performing safety audits
- making safety improvements
- initiating OHS training
- meeting requirements of the OHS program and procedures in the individual's area(s) of responsibility
- reading and interpreting audit and safety-related documentation
- following audit and OHS procedures
- entering information onto audit reports and other relevant documents
- communicating effectively about OHS activities with workplace personnel

Required knowledge

Look for evidence that confirms knowledge of:

- principles of hazard identification, assessment and control as applied to the workplace
- procedures for hazard identification, assessment and control
- application of OHS legislation in the workplace
- procedures for conducting safety audits
- safety standards applicable to the individual's area(s) of responsibility
- the frequency at which safety audits should be conducted
- procedures for implementing OHS improvements
- the means of rectifying given or identified hazards
- reasons for selecting the chosen means of rectifying the hazard
- the authority to whom recommended OHS improvements are to be reported
- procedures for making safety improvements
- requirement for OHS training in the individual's area(s) of responsibility
- objectives of OHS training
- procedures for initiating OHS training
- accident investigation procedures
- emergency OHS procedures
- the role of the individual in carrying out accident investigations and emergency procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to undertake OHS activities in the workplace.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with undertaking occupational health and safety activities in the workplace or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

EVIDENCE GUIDE	
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	

Risk assessment	Risk assessment is a process that involves:
	• analysing the risk to identify influencing factors and the range of potential consequences
	• assessing:
	  • the effectiveness of existing controls
	  • the likelihood of each consequence considering exposure and hazard level
	• and combining these in some way to obtain a level of risk

MEM13003B Work safely with industrial chemicals and materials

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers using personal protective equipment (PPEs), identifying the particular hazards and emergency procedures, and observing safe working practices in that environment.

Application of the Unit

Application of the unit	This unit may be applied in a workplace in which materials and chemicals which are subject to codes and regulations are stored and used, for example, chemicals, solvents, dangerous materials, acids, noxious waste products etc. Evidence of competency is to encompass the satisfactory application of current State/Territory OHS legislation, standards and codes of practice, and the hierarchy of hazard control measures with elimination, substitution, isolation and engineering control measures being selected before safe work practices and PPEs. This unit describes the competencies which are beyond those safety requirements normally applied in the workplace as described in Unit MEM13014A (Apply principles of occupational health and safety in the work environment) or specifically described in individual units such as welding. **Band**: **A** **Unit Weight**: **2**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Use personal protective equipment	1.1. Correct and appropriate safety clothing including personal protective equipment is selected and used correctly based on information in relevant material safety data sheet (MSDS).
2. Identify emergency procedures	2.1. Emergency procedures and plan relevant to the particular work environment are documented, understood and demonstrated as laid down in approved safety instructions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Observe safe working practices	3.1. Hazardous areas and materials are identified and special handling procedures are identified and understood. 3.2. Permits to work (if necessary) are obtained. 3.3. All equipment and hazardous materials are used in accordance with relevant OHS legislation, manufacturers' instructions and standard operating procedures. 3.4. All site-specific safety policies, safety signs, symbols and labels are correctly identified and understood. 3.5. Material safety data sheets are understood and applied. 3.6. Safe manual handling procedures (including equipment) are used. 3.7. Decanted chemicals and storage is to State/Territory dangerous goods and OHS legislation and requirements. 3.8. Housekeeping duties are performed according to standard operating procedures to maintain a safe working environment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • undertaking risk assessment • communicating with others • performing proper manual handling techniques • interpreting safety signage, labelling and placarding
Required knowledge
Look for evidence that confirms knowledge of: • dangerous goods classification and labelling/placarding • testing, use and maintenance of PPE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• inherent hazardous properties of the chemicals to be used • interpretation of the relevant MSDS • basic fire fighting procedures • site-specific emergency plan procedures • chemical spill confinement procedures • dangerous occurrence (near miss) reporting procedures • hierarchy of control

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to work safely and efficiently with various chemicals.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with working safely with industrial chemicals and materials or other units requiring the exercise of the skills and knowledge covered by this unit.

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Personal protective equipment	Personal protective may include appropriate: • goggles/face shields • respirators • air supplied or self-contained helmets • safety boots, gloves and appropriate clothes/garments
Safe working practices	• Environment is inspected • Hazards (and chemical reactive hazards) are assessed and controlled using hierarchy of hazard control • Properly maintained PPE is available • Emergency management plan is documented/understood

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Work to be undertaken in safe 'thermal' environments and all possible ignition sources are to be identified and controlled
Storage	All storage containers (minor quantities and in consumer packages) are suitable for chemical exposure and are properly labelled and/or placarded. Chemical manifests are updated at completion of work activity
State or Territory legislative requirements	Appropriate OHS, dangerous goods acts and regulations, Australian standards, Australian Code for the Transport of Dangerous Goods by Road and Rail (ADGC), NOHSC codes of practice

MEM13004B Work safely with molten metals/glass

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers working safely with molten metals or glass including the appropriate using personal protective equipment (PPE), identifying and responding to emergency procedures, observing safe work practices, and identifying the hazardous conditions in a heavy engineering environment.

Application of the Unit

Application of the unit	This unit may be applied in all workplaces in which there is molten metal or molten glass, for example, in foundries, die casting operations, glass or molten glass operations, explosives manufacture. Evidence of competency is to encompass the satisfactory application of any current State/Territory OHS legislation, standards and codes of practice, and the hierarchy of hazard control measures with elimination, substitution, isolation and engineering control measures being selected before safe work practices and personal protective equipment. This competency is to be exhibited in accordance with all relevant OHS legislation. **Band**: **A** **Unit Weight**: **2**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify the need for the use of personal protective equipment	1.1. Appropriate personal protective equipment is identified and used correctly, as specified in standard operating procedures (SOP) and OHS information relating to the specific hazard(s).
2. Adhere to emergency procedures for working with molten metal and glass	2.1. Emergency equipment is located and used in accordance with workplace policies and procedures. 2.2. Responses to emergency procedures are demonstrated as detailed in approved safety procedures and instructions.
3. Identify, assess and control hazardous	3.1. Hazards are identified and reported and planning is undertaken to maintain a healthy and safe work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
conditions operating in a heavy engineering environment	environment. 3.2. Workplace procedures and work instructions for controlling risks are followed accurately.
4. Observe good OHS practices	4.1. Hazardous areas and materials associated with molten metal/glass are identified and potential risks are identified. 4.2. Safety signs and symbols are identified and understood. 4.3. Equipment (including personal protective equipment) is used according to specifications and standard operating procedures. 4.4. Personal protective equipment is inspected and maintained in good order and stored for reuse. 4.5. Hazardous items associated with task are identified and removed from hot material area if required and assessed and controlled. 4.6. Housekeeping duties are performed according to standard operating procedure to maintain a safe working environment and include the safe use, accessibility and maintenance of PPEs.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • using appropriate personal protective equipment • responding to emergency procedures (fires, accidents etc.) • handling hazardous materials and equipment within the scope of this unit • maintaining equipment • housekeeping • identifying and reporting hazardous conditions and taking actions to rectify hazards • interpreting text and numerical (e.g. quantities, units of measurement) information on material safety data sheets, safety signs, symbols and labels • using manual handling techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge
Look for evidence that confirms knowledge of: • hazards, hazardous areas and materials and hazard control measures associated with molten metal/glass • hierarchy of control • procedures relevant to raising OH&S issues • rights and responsibilities of workplace parties under OH&S acts, regulations, codes of practice etc. • designated personnel responsible for OH&S • applicable personal protective equipment • emergency procedures • safety signs, symbols and labels • procedures for correct inspection and service of equipment including personal protective equipment • routine maintenance procedures for equipment • workplace procedures for working in hazardous areas • the consequences of not maintaining a clean and safe working environment • specific hazards associated with the work environment/industry • safe manual handling procedures • location of emergency equipment including first aid facilities

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Implement OHS procedures for work site or section	1.1. Legislative requirements for the work section and work supervisor are identified. 1.2. Consultation mechanisms are established for the work section. 1.3. Personal Protective Equipment (PPE) is allocated to all staff as required. 1.4. Safety and housekeeping practices and procedures are established for the work site or section. 1.5. Tools and equipment are checked for suitability and serviceability. 1.6. Safety monitoring procedures are established. 1.7. Non-conformances with legislative requirements are

ELEMENT	PERFORMANCE CRITERIA
	assessed and addressed.
2. Assess risks in the work site or section	2.1. Hazards in the work site or section are identified. 2.2. Risks are assessed.
3. Apply risk management strategies for work section	3.1. Appropriate risk control measures are implemented. 3.2. Control measures are assessed for effectiveness in controlling the risk. 3.3. Hazards are monitored. 3.4. The need for expert advice to manage risks is determined. 3.5. Accident investigations are conducted as required to determine cause.
4. Supervise others in the implementation of OHS procedures in the work site or section	4.1. Communication on OHS matters is supervised. 4.2. OHS training needs are identified for the work section. 4.3. Workplace OHS training and communication activity is coordinated, evaluated and documented according to legislative requirements and organisational procedure. 4.4. Statutory OHS training requirements are coordinated and documented according to legislative requirements and organisational procedure.
5. Maintain records and statistics	5.1. Accident/incident records are maintained. 5.2. Records are analysed for trends, and particular problem areas are identified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • keeping records/minutes of discussions with consultative forums on OHS matters • scheduling meetings with the relevant consultative forums to discuss OHS matters • participating in consultative forums • communicating with staff regarding OHS matters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- identifying OHS training needs in the workplace
- supervising OHS training implementation
- interpreting and following information on OHS legislation, workplace practices and procedures, written job instructions, specifications, standard operating procedures, charts, lists, and other applicable reference documents
- keeping records for monitoring the effectiveness of work practices and procedures with respect to the safety of the working environment
- investigating accidents in accordance with standard workplace procedures
- obtaining results of safety audits in accordance with workplace procedures
- obtaining expertise external to the workplace to assist in the identification and control of workplace hazards
- maintaining accident and incident records in accordance with standard workplace procedures

Required knowledge

Look for evidence that confirms knowledge of:

- legislative requirements for the workplace and supervisory responsibilities
- procedures for initiating discussions with the relevant consultative forums
- relevant consultative forums
- the frequency of discussions to be held with the relevant consultative forums
- organisational OHS communication requirements
- OHS training practices, procedures and options available
- work practices and procedures developed in conjunction with the relevant consultative forums
- the effect of work practices and procedures on the safety of the working environment
- procedures for monitoring the success of the work practices and procedures developed
- variables to be recorded during the monitoring process
- sources of information on occupational health and safety issues
- procedures for conducting accident investigations
- the hierarchy of hazard control measures
- reasons for progressively implementing the hierarchy of control of hazards
- the likely causes of accidents investigated
- principles of hazard control
- the mechanisms for controlling hazards
- the areas of occupational health and safety for which the workplace lacks acknowledged expertise
- procedures for accessing expertise external to the workplace
- procedures for recording accidents and incidents
- the probable causes of trends or problem areas

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• hazards and control measures relevant for the work site or section, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to supervise occupational health and safety in an industrial work environment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with supervising occupational health and safety in an industrial work environment or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be

MEM13013B Work safely with ionizing radiation

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers working safely with ionizing radiation when performing radiographic testing in a range of industrial applications.

Application of the Unit

Application of the unit	This unit applies to safely working with ionizing radiation in open or closed sites: on fabrications, structures and components across a wide range of industries. It is a prerequisite to undertaking any other radiographic competency standards unit. The work can relate to scheduled and unscheduled maintenance activities, using general tools, specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operator instructions. All testing must be completed with particular attention to personal and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - must be subject to safe work habits must be stored and used in accordance with safe work practices. **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the hazards and effects of ionizing radiation in the workplace	1.1. The source of ionizing radiation is identified in accordance with relevant organisational policy and procedures. 1.2. Production of X-rays and gamma rays is explained in relation to radiographic testing activities. 1.3. Attenuation factors of ionizing radiation and the biological effects on living tissue are outlined. 1.4. The biological effects of radiation are identified.
2. Apply radiation safety procedures/plans	2.1. Appropriate ionizing radiation protective measures are employed in accordance with relevant organisational policy and procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.2. SI units of radiation are explained as per the National Health and Medical Research Council/ statutory requirements. 2.3. Exposure limits for personnel as laid down by the radiation authorities in Australia are stated and adhered to. 2.4. Minimum exposure rates/distances are determined from calculations and charts. 2.5. Ionizing radiation sources are operated in accordance with legislation, standards and/or organisational policy, procedures or guidelines.
3. Select and use radiation monitoring equipment	3.1. The tools and equipment necessary to monitor radiation are selected and used as required. 3.2. Techniques and system verification checks necessary to monitor radiation are selected and applied. 3.3. Safety breaches are documented and/or reported in accordance with organisational policy and procedures.
4. Respond to emergency situations	4.1. Procedures for dealing with both X-ray and gamma ray emergency situations are demonstrated.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • calculating and numerical operations within the scope of this unit • reading and interpreting charts, written job instructions, specifications, standard operating procedures, lists, drawings and other applicable reference documents • planning and sequencing operations • checking and clarifying task-related operations • checking for conformance to specifications • using monitoring equipment • calculating and monitoring radiation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- handling emergencies
- following safety requirements
- assessing risk

Required knowledge

Look for evidence that confirms knowledge of:

- properties of X-rays and gamma rays and principal radioactive sources used in industrial radiography
- attenuation factors
- known biological effects of radiation
- general principles of gas ionisation, photographic effect, luminescence
- use of film, film badges, ionisation chamber devices, quartz fibre, fluorescent, electronic devices accuracy limits (energy/range)
- different SI units of radiation including becquerel, sievert and gray
- exposure limits for personnel as laid down by the radiation authorities in Australia
- the three exposure reduction factors including: time, distance and shielding
- procedures for establishing safe working barriers
- relevant techniques and checks
- emergency procedures
- safety procedures including for:
  - types of X-ray equipment
  - types of isotope cameras
  - shielding materials
  - design and requirements for exposure areas
  - requirements for storage of radioisotopes
- emergency situations, causes and appropriate responses
- hazards and control measures associated with ionizing radiation, including housekeeping
- storage requirements of equipment and materials
- use and application of personal protective equipment
- safe workplace practices and procedures
- legal requirements including;
  - Australian/NSW regulations, code of practice (detail)
  - ICRP recommended limits for various persons and various parts of the body for short-term, long-term and accumulated exposure
  - background radiation
  - duties of RSO
  - requirements for transport
  - IATA regulations

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to safely work with ionizing radiation when performing radiographic testing.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with radiographic testing or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate

EVIDENCE GUIDE	
	must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Relevant organisational policy and procedures	• Legislation • Standard operating procedures (SOPs) • Australian or international standards • Risk assessments • Previous testing reports • Manufacturer specifications
Production of X-rays and gamma rays	• Atomic structure, protons, neutrons, electrons, atomic number, mass number, isotopes • Electromagnetic radiation wavelength, frequency, energy relationships, intensity • Construction and operation of X-ray tube anode, cathode, target • Gas and coolidge tubes • Glass and ceramic tubes • X-ray spectrum • Characteristic and continuous spectra effect of voltage and current on continuous spectra • Efficiency • Natural and artificial radioisotopes • Production of radioisotopes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Decay mechanisms, alpha, beta-, beta+, and gamma • Concept of half life, decay constants • Selection of gamma ray sources • Units definition of curie, becquerel, conversion of units, multiple units (e.g. GBq), nuclide chart
Biological effects of radiation	• Ionisation, absorption, scatter (Compton, Rayleigh, photo-electric, pair production) • Attenuation coefficient, absorption edges • Units roentgen, rad, coulomb/kg, gray conversions • Effects of varying doses on living tissue • Somatic effects, genetic effects, cell biology nucleus, cytoplasm • DNA, chromosome, mitosis; symptoms, effect of time, ICRP recommendations • Dose, dose equivalent, RBE, rem, seivert, conversions • Occupancy factor
Protective measures	• Personal protective equipment (PPE) including for risks other than ionizing radiation • Safety protocols of workplace (e.g. flame limitations in refineries) • Signage, barriers/guards • Limitations on operation of specific equipment/machines
Minimum exposure	• Time, distance, shielding effect of distance, inverse square law • Half and tenth value layers • Emergency procedures, company procedure codes

Unit Descriptor

Unit descriptor	This unit covers following occupational health and safety procedures in an engineering or similar work environment.

Application of the Unit

Application of the unit	This unit covers essential skills and knowledge that underpin all units within the Metal and Engineering Training Package. The unit applies to working in the engineering, manufacturing or similar industries. Competencies demonstrated would be associated with performance of duties and use of specialist skills. This unit and these standards do not cover the skills of emergency teams such as fire fighting, first aid officer etc. **Band**: **A** **Unit Weight**: There is no unit weighting for this unit.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Follow safe work practices	1.1. Work is carried out safely and in accordance with company policy and procedures and legislative requirements. 1.2. Housekeeping is undertaken in accordance with company procedures. 1.3. Responsibilities and duties of employees are understood and demonstrated in day-to-day actions. 1.4. Personal protective equipment is worn and stored according to company procedures. 1.5. All safety equipment and devices are used according to legislative requirements and company/manufacturers' procedures. 1.6. Safety signs/symbols are identified and followed as per instruction. 1.7. All manual handling is carried out in accordance with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	legal requirements, company procedures and National Occupational Health&Safety Commission guidelines. 1.8. Emergency equipment is identified and appropriate use is demonstrated.
2. Report workplace hazards and accidents	2.1. Actual and foreseeable workplace hazards are identified during course of work and reported to appropriate person according to standard operating procedures. 2.2. Accidents and incidents are reported according to workplace procedures
3. Follow emergency procedures	3.1. Appropriate personnel and emergency services and means of contacting them in the event of an incident can be identified. 3.2. Emergency and evacuation procedures are understood and carried out where required. 3.3. Company evacuation procedures are followed in case of an emergency.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • following safe working practices • maintaining a safe and clean condition workplace • carrying out workplace activities such as working safely, not endangering others, following company and legislative requirements, following procedures • selecting, wearing and storing appropriate personal protective equipment • using appropriate safety equipment and devices • carrying out work with the information given by safety signs and symbols • carrying out manual handling principles • using emergency equipment correctly • noting workplace hazards • contacting appropriate personnel and emergency services in the event of an accident

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• following emergency and evacuation procedures • communicating and interpreting information appropriate to OH&S within the scope of this unit • checking and clarifying task-related information • communicating with emergency personnel • checking for conformance to specifications
Required knowledge
Look for evidence that confirms knowledge of: • rights, responsibilities and duties of employees and employers • use of personal protective equipment • appropriate equipment and safety devices for particular workplace tasks • reasons for using safety equipment and devices • meaning and application of safety signs and symbols • procedures and limits for manual handling • location and use of emergency equipment • reasons for selecting a particular type of equipment • procedures for identifying and reporting hazards • persons or services to be contacted in the event of a range of accidents • reasons for use of standard procedures • standard procedures including those for emergencies and evacuation • hazards and housekeeping requirements associated with the work environment • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply principles of occupational health and safety in the work environment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying principles of occupational health and safety in the work environment or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised

RANGE STATEMENT	
wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Personal protective equipment	• Safety glasses • Face and head protection • Hard hats • Protective footwear • Protective clothing • Breathing apparatus • Ear protection • Gloves
Safety equipment and devices	• Safety harness • Screens, barriers and shielding • Extraction fans • Machine guards • Isolation devices

Safety signs/symbols	• Standard signage/symbols conforming to AS 1319-1994
	• Safety signs for the occupational environment, and any other applicable Australian Standards
	• Workplace-specific signage
	• Typical classes of relevant signs/symbols are:
	  • mandatory
	  • prohibition
	  • danger
	  • caution
	  • general safety
	  • safety information
	  • fire safety equipment

Manual handling	Posture, weight limits, bending, twisting

Hazards	For the purposes of this unit a hazard is defined as anything with the potential for injury or damage. Hazards may be:
	• physical:
	  • machinery
	  • hot metal
	  • electricity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	

	• fire
	• poor housekeeping:
	  • spills
	  • trip hazards such as congestion, clutter, waste build-up
	  • cleanliness
	• noise and vibration
	• extremes of temperature and humidity
	• condition/design of equipment
	• individual (behavioural):
	  • skylarking and foolishness
	  • substance abuse
	  • failure to follow procedures
	  • lack of training or experience
	  • carelessness
	  • poor personal health/hygiene
	  • using the wrong techniques/procedures
	  • ignoring safety rules and signs
	  • taking short cuts
	  • knowingly using unsafe equipment
	• environmental hazards:
	  • explosive materials
	  • flammable materials
	  • poor ventilation
	  • poor lighting
	  • dust
	  • fumes
	  • vapours
	  • gases
	  • liquids
	  • mineral fibres
	  • chemical spills
	  • pollutants
	  • other toxic or dangerous materials

Accidents and incidents	For the purposes of this unit an accident is defined as 'an unplanned and unexpected event which interrupts the normal course of activity. It may or may not result in damage or injury'. This definition

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	includes near misses. An incident is defined here as any other unexpected or extraordinary event not classed as an accident. Examples include: • burns • poisoning • broken limbs • eye accidents • other injuries • spills • explosions • falls • electrical accidents • breakdowns • damage to equipment or materials/product • incidents involving physical, individual or environmental hazards
Appropriate personnel	• Safety representative • Occupational health and safety officer • OHS committee member • First aid officer • Supervisor • Union representative
Emergency and evacuation procedures	Documented workplace emergency procedures

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify material requirements	1.1. Materials required are identified from appropriate documentation including type and quality. 1.2. Quantities required are estimated in accordance with standard operating procedures.
2. Schedule material delivery	2.1. Delivery requirements and dates are determined from production plans or job sequencing requirements. 2.2. Material supply is followed up and problems reported. 2.3. Material orders are processed in accordance with established organisational practice and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • communicating • planning • assessing • reading and interpreting engineering specifications • organising information • prioritising • entering routine and familiar information onto proformas and standard workplace forms
Required knowledge
Look for evidence that confirms knowledge of: • identification of material specifications from appropriate documentation • established organisational practice and procedures relating to estimating, ordering and follow up of materials • interpretation of production plans, or job sequencing requirements • safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify task requirements	1.1. Instructions and procedures are obtained, understood and where necessary clarified. 1.2. Relevant specifications for task outcomes are obtained, understood and where necessary clarified. 1.3. Task outcomes are identified. 1.4. Task requirements such as completion time and quality measures are identified.
2. Plan steps required to complete task	2.1. Based on instructions and specifications provided, the individual steps or activities required to undertake the task are understood and where necessary clarified. 2.2. Sequence of activities is identified.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Plan is checked to ensure it complies with specifications and task requirements.
3. Review plan	3.1. Effectiveness of plan is reviewed against specifications and task requirements. 3.2. If necessary, plan is revised to better meet specifications and task requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining instructions for tasks from correct source of information (job card, supervisor, work colleagues and others) • clarifying tasks and required outcomes with appropriate personnel where necessary • identifying relevant specifications from documentation, job cards, or other information source • preparing plans for tasks • sequencing activities • comparing planned steps against specifications and task requirements • communicating and interpreting information appropriate to the scope of this unit
Required knowledge
Look for evidence that confirms knowledge of: • correct sources of information for a particular task • procedures for obtaining instructions and clarification • specifications for the task • hazards and established control measures associated with the routine task, including housekeeping • safe work practices and procedures

MEM14005A Plan a complete activity

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers planning activities which, whilst following established procedures, may require a response and modification of procedures or choice of different procedures to deal with unforeseen developments.

Application of the Unit

Application of the unit	The unit covers the development of plans for individual complete activities and may include the use of planning techniques and tools. The activity may require prioritising of the individual plan components to facilitate the meeting of the objectives. Examples of activities to be planned may include: fault diagnosis and repair of an item of equipment, a modification of an established sequence of assembly tasks. However the activities may require a response and modification of procedures or a choice of different procedures to deal with unforeseen developments. Activities are normally performed by the individual undertaking the planned activity, and associated reports are completed as required. Planning will be related to familiar work tasks and environments and be performed to standard operating procedures. Where more extensive reporting requiring research and forming conclusions is required, refer to Unit 16.14 (Report technical information). **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify activity requirements	1.1. Activity outcomes and objectives are identified and clarified with appropriate persons. 1.2. Activity requirements, including resources, overall timeframe, quality requirements and criteria for acceptable completion are identified and clarified. 1.3. Relevant specifications and procedures are obtained

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	and clarified.
2. Plan process to complete activity	2.1. The individual components of the activity are identified and prioritised. 2.2. Planning tools and techniques are selected and used according to the needs of the activity. 2.3. The plan is checked for accuracy and conformance to instructions and requirements.
3. Modify plan	3.1. The plan is referred to and modified as necessary to overcome unforeseen difficulties or developments that occur as work progresses. 3.2. The results of the activity are reviewed against the plan, and possible future improvements to plan are identified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining, reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawing and other applicable reference documents
- preparing a plan including sequential steps that will enable the activity to be completed
- modifying the plan where appropriate, to take account of difficulties or developments that occur while following the prepared plan
- planning and sequencing activities
- checking and clarifying task-related information
- checking for conformance to specifications
- using numerical operations, geometry and calculations/formulae within the scope of this unit
- using planning techniques such as scheduling, time management, brainstorming, setting of goals and defined outcomes, prioritising, review and evaluation strategies

Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms knowledge of: • tasks to be performed • person/s who can clarify the objectives, requirements and specifications • specifications relevant to the tasks to be performed • outcomes to be achieved • timeframe for activity completion • quality requirements of the product or service • priority of each step in the plan • reasons for the relative priority of each step • modifications to the plan to overcome a range of unforeseen situations • hazards and control measures associated with planning the complete activity, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to plan a complete activity.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with planning a complete activity or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	

Requirements	• Formal or informal information about the task required, such as:
	  • timeframe
	  • quality requirements
	  • outcome and performance requirements
	  • job history
	  • checks and tests

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• special reporting requirements • tools and equipment • materials and parts • reference documents • Requirements and instructions are supplied verbally or in written form such as on job sheets. Instructions are carried out in accordance with established procedures
Specifications	Technical task related information conveyed verbally or as found in: • task lists • instructions • manufacturer manuals • diagrams and schematics • technical drawings and sketches • parts lists • computer records
Planning techniques and tools	Scheduling, time management, brainstorming, setting goals and defined outcomes, prioritising, review and evaluation strategies

MEM14085A Apply mechanical engineering analysis techniques

Modification History

Release 1 - New unit Replaces MEM14061A, but not equivalent.

Unit Descriptor

This unit of competency covers the skills needed to undertake a range of mechanical engineering-related analyses. The analyses may relate to design, fitness for purpose evaluations, installation and commissioning, and other mechanical engineering-related tasks. Documentation of the design process includes calculations, specifications, computer-aided design (CAD) files, risk analysis, sustainability and life cycle assessments.

Application of the Unit

This unit applies to mechanical engineering analyses undertaken as part of a mechanical design or mechanical assessment of plant, products, projects, system changes or improvements. It is suitable for people working as mechanical designers and draftspersons and those pursuing careers and qualifications in mechanical engineering or related disciplines. The work may be undertaken individually or as part of a team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanic principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential Performance criteria describe the performance needed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

outcomes of a unit of competency. to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate mechanical analysis context and need	1.1	Review the context and negotiate parameters of the mechanical design or task in consultation with stakeholders
		1.2	Identify relevant engineering scientific principles and required analysis techniques
		1.3	Investigate life cycle design and sustainability implications of mechanical design or existing plant or equipment
		1.4	Determine specification, documentation and graphical techniques required for analysis
		1.5	Confirm work health and safety (WHS) and regulatory requirements, codes of practice, standards, and risk management relevant to mechanical analysis task
		1.6	Determine available sources for any required technical and professional assistance
2	Apply mechanical analysis techniques	2.1	Plan, schedule and coordinate the analysis task
		2.2	Create adequate and accurate calculations, preliminary graphics and maintain analysis process records
		2.3	Evaluate multiple solutions against analysis criteria
		2.4	Apply systems thinking to problem solving and decision making
		2.5	Incorporate professional and technical assistance, as required
		2.6	Apply specification, documentation and graphical techniques modelling, mock-up or prototyping techniques, where required, to achieve or test solution

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Report results	3.1	Record results of analysis
		3.2	Provide documentation, such as calculations, specifications, diagrams, CAD files, mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating and negotiating with stakeholders and team
- determining or confirming relevance of mechanical engineering scientific principles and analysis techniques, including principles of:
  - mechanics
  - fluid power
  - fluid dynamics
  - thermodynamics
  - electrical fundamentals
  - engineering materials, properties and processes
- evaluating WHS and regulatory requirements, standards and codes of practice for relevance to analysis tasks
- evaluating multiple solutions against analysis criteria, risk, sustainability and cost factors
- applying life cycle design and sustainability parameters to analysis task
- planning, scheduling and coordinating the analysis task
- applying problem solving and decision making with systems thinking for contingencies and constraints and continuous improvement
- specifying, documenting and applying graphical techniques, including modelling
- undertaking or supervising mock-up or prototyping techniques, where required, to achieve solution
- creating and maintaining adequate and accurate calculations and analysis process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs

Required knowledge

Required knowledge includes:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- implications of life cycle design, fitness for purpose evaluation and sustainability for mechanical analysis process
- mechanical engineering-related analysis processes and techniques to investigate, synthesise and develop proposals, evaluate feasibility against analysis criteria, and review and revise in consultation with stakeholders and team or support functional group
- common model, mock-up and prototyping techniques relevant to mechanical engineering
- systems thinking, problem solving and decision making, and continuous improvement methods
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- sources of professional and technical assistance
- procedures for planning, scheduling and coordination of analysis
- hardware requirements of typical mechanical, fluid power, hydrodynamic and thermal applications
- engineering scientific principles required for design analysis:
  - mechanical
  - fluid power
  - fluid dynamics
  - thermodynamics
  - electrical fundamentals
  - engineering materials, properties and processes
- mechanical analysis calculation techniques
- software for product planning and analysis, such as CAD, stress analysis and mould design, and project management
- documentation and required information
- prototyping options, including mock-ups, physical and virtual modelling, and rapid prototyping

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply mechanical analysis techniques consistent with an analysis brief information, relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate	Assessors must be satisfied that the candidate can competently and consistently: • communicate, negotiate and review analysis brief and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

competency in this unit	specification requirements with stakeholders • determine or confirm relevant scientific principles and analysis techniques, WHS and regulatory requirements • evaluate multiple solutions • investigate life cycle analysis and sustainability • plan, schedule and coordinate the analysis task • solve problems and make decisions with systems thinking for contingencies and constraints and continuous improvement • define analysis, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques • create and maintain adequate and accurate calculations and analysis process records • report and document, results and processes.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information	Assessment processes and techniques must be culturally

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

for assessment	appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Mechanical engineering analysis	Mechanical engineering analysis may be required for a variety of reasons, including: • design of mechanical devices and plant • design or evaluation of significant modifications, process changes or improvements • sustainability issues relevant to plant, equipment or processes • static and dynamic analysis of loads, including the resulting stresses and deformations • fitness for purpose evaluation • installation and commissioning of plant and equipment
Planning processes	Planning processes may include: • establishing analysis parameters and criteria • contributing to the negotiation and advice process • preliminary planning, analysis investigations and costing • identifying analysis, development, prototyping activities and skills requirements • planning and scheduling analysis activities • improving, adjusting and rescheduling as required by emergency contingencies and constraints
Analysis process	Analysis as a systematic process includes: • establish analysis parameters and criteria • research, measurement, experimentation, and investigation • generating ideas • synthesis, problem solving and decision making, and addressing constraints • apply scientific principles, calculation and graphics, prototyping and mock-up techniques • evaluating solutions against analysis criteria • consultation, adjustments and agreement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• finalise analysis and sign-off
Analysis criteria	Analysis includes relevant technical criteria and may also include criteria relating to: • function • manufacturability and maintainability • marketability • sustainability • cost constraints • ergonomics and anthropometrics and physiology • facilities, plant and skills available • contingencies and constraints minimisation • safety and risk
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Life cycle analysis	Life cycle analysis can be used to improve sustainability of products and services. It may be applied to: • all aspects of manufacture of a single product • the entire operations of an organisation • a particular aspect of operations, such as environmental implications
Prototyping	Prototyping may include: • mock-ups • physical and virtual modelling with post-processing for computer numeric control (CNC) and rapid prototyping
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect outcomes. Systems should

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain

Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic danger, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies, such as:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano materials
	  • special processes, foundry, alloy welding, heat treatment, sealing and fastening

WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to the mechanical engineering analysis task

MEM14086A Apply mechatronic engineering analysis techniques

Modification History

Release 1 - New unit. Replaces MEM14062A, but not equivalent.

Unit Descriptor

This unit of competency covers the skills needed to undertake a range of mechatronic analyses. The analyses may relate to design or contribution to the design of mechatronic devices or automated plant or be for other purposes, including fitness for purpose evaluations, installation and commissioning, system changes or improvements or other mechatronic engineering-related tasks. It includes application of mechanical, fluid, electrical and controller design and analytical techniques.

Application of the Unit

This unit applies to mechatronic analyses undertaken as part of a mechatronic engineering design or assessment of automated plant or devices for projects, system changes or improvements.

It is suitable for people working as mechatronic or automated system designers and draftspersons and those pursuing careers and qualifications in mechatronic, automation, maintenance or manufacturing engineering. The work may be undertaken individually or as part of a team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23111A	Select electrical equipment and components for engineering applications
MEM23112A	Investigate electrical and electronic controllers in engineering applications
MEM14090A	Integrate mechatronic fundamentals into an engineering task

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate mechatronic analysis context and need	1.1	Review the context and negotiate parameters of the engineering design brief in consultation with stakeholders
		1.2	Identify relevant engineering scientific principles and required analysis techniques
		1.3	Investigate life cycle design and sustainability implications of mechatronic design or existing mechatronic systems, devices or equipment
		1.4	Determine specification, documentation and graphical techniques required for analysis
		1.5	Confirm work health and safety (WHS), regulatory requirements, codes of practice, standards, and risk management relevant to mechatronic analysis task
		1.6	Determine available sources for any required technical and professional assistance
2	Apply mechatronic analysis techniques	2.1	Plan, schedule and coordinate the analysis task
		2.2	Create adequate and accurate calculations, preliminary graphics and maintain design process records
		2.3	Evaluate multiple solutions against analysis criteria
		2.4	Integrate mechatronic techniques, hardware and software, including mechanical, fluid, electrical, electronic, controller and networking

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.5	Apply systems thinking, problem solving and decision making
		2.6	Incorporate professional and technical assistance, as required
		2.7	Apply specification, documentation and graphical techniques modelling, mock-up or prototyping techniques, where required, to achieve or test solution
3	Report results	3.1	Record results of analysis
		3.2	Provide documentation such as calculations, specifications, diagrams, computer-aided design (CAD) files, control circuits and controller programs, mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating and negotiating with stakeholders and team
- determining or confirming relevance of mechatronic scientific principles and analysis techniques, including principles of:
  - mechanical
  - fluid power
  - fluid dynamics
  - thermodynamics
  - electrical and electronic fundamentals
  - controller and system control and data acquisition (SCADA) or distributed control systems (DCS) programming
  - engineering materials, properties and processes
  - techniques for integration of mechanical, fluid, electrical, electronic, controller and networking elements
- evaluating relevance of WHS, and regulatory requirements, standards and codes of practice
- evaluating multiple solutions against design criteria, risk, sustainability and cost factors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- applying life cycle design and sustainability parameters to analysis task
- planning, scheduling and coordinating the mechatronic analysis task
- solving problems and making decisions with systems thinking approach for contingencies and constraints, and continuous improvement
- integration of hardware and software and mechatronic techniques, such as mechanical, fluid, electrical, electronic, controller and networking
- specifying, documenting and applying graphical techniques, including modelling
- undertaking or supervising mock-up or prototyping techniques, where required, to achieve solution
- creating and maintaining adequate and accurate calculations and analysis process records
- reporting and documenting, results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs

Required knowledge

Required knowledge includes:

- implications of life cycle design, fitness for purpose evaluation and sustainability for mechatronic analysis process
- mechatronic analysis processes and techniques to investigate, synthesise and develop proposals, evaluate feasibility against design criteria, and review and revise in consultation with stakeholders, team or support functional group
- common model, mock-up and prototyping techniques relevant to mechatronic engineering
- systems thinking, problem solving and decision making, and continuous improvement methods
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements with particular emphasis on automation safety requirements
- sources of professional and technical assistance
- procedures for planning, scheduling and coordination of analysis
- hardware requirements of typical mechatronic or automation applications
- engineering mechatronic scientific principles and techniques required for analysis tasks:
  - mechanical
  - fluid power
  - fluid dynamics
  - thermodynamics
  - electrical and electronic fundamentals
  - controller and SCADA or DCS programming
  - engineering materials, properties and processes
  - techniques for integration of mechanical, fluid, electrical, electronic, controller and networking elements
- mechatronic analysis calculations techniques
- software for product planning and design, such as CAD, circuit design, controller

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

programming and project management
- required documentation prototyping options, including mock-ups, physical and virtual modelling and rapid prototyping

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply mechatronic design techniques consistent with a design brief information, relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • communicate, negotiate and review design brief with stakeholders and team or support functional group • determine or confirm relevant scientific principles and analysis techniques, WHS and regulatory requirements • evaluate multiple solutions • investigate life cycle design and sustainability • plan, schedule and coordinate the design task • integrate mechatronic techniques, hardware and software • solve problems and make decisions with systems thinking for contingencies and constraints, and continuous improvement • define analysis, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques • create and maintain adequate and accurate calculations and design process records • report and document results and processes.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical

MEM14087A Apply manufactured product design techniques

Modification History

Release 1 - New unit. Replaces MEM14063A, but not equivalent.

Unit Descriptor

This unit of competency covers the application of engineering design techniques to manufactured products. It includes documentation of the design process, calculations, specifications, computer-aided design (CAD) files, risk analysis, sustainability and life cycle assessments.

Application of the Unit

This unit applies to where engineering and related skills and knowledge are required for the design of manufactured products or components. The unit applies to people working individually or as part of a team. It is suitable for individuals working alone as designers on simpler manufactured product and component design or as part of a design team consisting of other paraprofessional and professional engineering designers. The unit is also suitable for design draftspersons undertaking design tasks.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate manufactured product design requirements	1.1	Review product design brief
		1.2	Determine engineering and scientific principles and design techniques required for product design process
		1.3	Investigate life cycle design and sustainability implications of design requirement
		1.4	Determine required specification, documentation and graphical techniques to define design
		1.5	Confirm work health and safety (WHS) and other regulatory requirements
		1.6	Identify codes, standards and risk management requirements
		1.7	Investigate software requirements for product design process
2	Apply manufactured product design techniques	2.1	Plan, schedule and coordinate the design task
		2.2	Analyse available materials, components, manufacturing processes, tooling and suppliers against design requirements
		2.3	Create adequate and accurate calculations, preliminary graphics and maintain design process records
		2.4	Evaluate multiple solutions against design criteria, risk, failure mode, sustainability and cost
		2.5	Apply systems thinking, problem solving and decision making techniques in dealing with contingencies and constraints, continuous improvement and development of design options

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.6	Incorporate professional and technical assistance, as required
		2.7	Finalise specification and documentation, modelling, mock-up or prototyping
3	Report results	3.1	Record results of investigations, application and development of design
		3.2	Provide documentation, such as calculations, specifications, diagrams, CAD files, mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating and negotiating with stakeholders
- determining or confirming appropriate engineering and scientific principles for product or component design task
- determining sustainability, WHS, regulatory and risk management requirements
- evaluating multiple solutions for materials and components, manufacturing processes, tooling and component supply for product
- investigating life cycle and sustainability of a design
- evaluating requirement for technical and professional assistance
- planning, scheduling and coordinating a design task
- solving problems and making decisions with systems thinking for contingencies and constraints, and continuous improvement
- specifying and documenting designs, including applying graphical techniques, modelling, mock-up or prototyping techniques
- creating and maintaining adequate and accurate calculations and design process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs

Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required knowledge includes:

- sustainability implications of materials, product and processes, including consideration of life cycle analysis
- manufactured product design processes and techniques
- systems thinking, problem solving and decision making, and continuous improvement methods
- WHS and regulatory requirements, standards and risk assessment for design, and prototyping activities
- sources of professional and technical assistance procedures for planning, scheduling and coordination of design
- typical product design criteria
- design calculation techniques
- product planning and design software, such as for CAD, stress analysis and project management
- design process documentation, records and reports, including specifications and CAD graphics
- typical materials and components used in manufacturing
- tooling, plant and processes for particular products and materials
- characteristics of cast, forged, machined and sheet metal components, moulded and extruded plastic components, and components made from other materials or by other processes
- professional and technical assistance for product development

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply manufactured product design techniques consistent with a design brief, relevant standards and conventions. It includes working individually and as part of a team in accordance with organisational procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • communicate, negotiate and review design brief with stakeholders • determine or confirm scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements • evaluate multiple solutions, materials and components,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	manufacturing processes, tooling and component supply chain for product • investigate life cycle design and sustainability, technical and professional assistance required • plan, schedule and coordinate the design task • select design components using design process and scientific principles • solve problems and make decisions with systems thinking for contingencies and constraints and continuous improvement • define designs, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques • create and maintain adequate and accurate calculations and design process records • report and document results and processes.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Context of manufactured product design	The context for product design activity may include: • budget and market considerations • technological advantages/disadvantages of materials, equipment and suppliers • resources supply (e.g. materials, labour and skills) • sustainability issues relevant to design task (e.g. WHS, risk management, standards and codes of practice)
Planning processes	Planning processes may include: • establishing design parameters and design criteria • contributing to the negotiation and advice process • preliminary planning, design investigations and costing • identifying design, development, prototyping activities and skills requirements • planning and scheduling design activities • improving, adjusting and rescheduling as required by emergency contingencies and constraints
Design process	Designing as a systematic process includes: • establish design parameters and criteria • research, measurement, experimentation and investigation • generate ideas and develop proposals • synthesis, problem solving and decision making, and addressing constraints • apply scientific principles, calculation and graphics, prototyping and mock-up techniques • evaluate solutions against design criteria • review and revision of design in consultation with stakeholders • finalise design and sign-off

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Design criteria	Design criteria include: • function • aesthetics • manufacturability and maintainability • marketability • sustainability, including life cycle analysis • cost constraints on costs of design, development, tooling up, manufacture, marketing and distribution • ergonomics and anthropometrics and physiology • facilities, plant and skills available • safety and risk
Analysis	Analysis may include: • product and component performance requirements • assessment against manufacturing capability of organisation • failure mode effects and risk • static and dynamic analysis of loads • the stresses and deformations resulting • graphical and mathematical methods and software options • suitability of materials for purpose and manufacturing process
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Life cycle assessment	Life cycle analysis can be used to improve sustainability of products and services. It may be applied to: • all aspects of manufacture of a single product • the entire operations of an organisation • a particular aspect of operations, such as environmental implications
Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include: • technical support and advice relating to elements which have intrinsic dangers, such as:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • professional support for technologies, such as: • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • special processes, foundry, alloy welding, heat treatment, sealing and fastening
WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • industry codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to the design task
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
Product manufacturability	Design for manufacture includes consideration of manufacturing processes and plant, such as the use of group technologies. Manufacturability may be enhanced by concurrent product and process design.
Prototyping	Prototyping may include: • mock-ups, physical and virtual modelling with post-processing for computer numeric control (CNC) and rapid prototyping

MEM14088A Apply maintenance engineering techniques to equipment and component repairs and modifications

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills needed to apply maintenance engineering techniques to equipment or component modification or repair. It includes decision making on the need for repair, replacement or modification and design of any repair or modification. The unit covers maintenance techniques for repair and modification of mechanical, fluid and electrical plant, and facilities in accordance with procedures, work health and safety (WHS) and legislative requirements, and risk management procedures. Documentation of the repair or modification process includes calculations, specifications, computer-aided design (CAD) files, risk analysis, sustainability and life cycle assessments.

Application of the Unit

This unit applies to maintenance-related work where a technical evaluation must occur on whether to repair, replace or modify equipment or components and where engineering design techniques are applied where repair or modification is required. The unit applies across all engineering disciplines and would normally be selected in conjunction with appropriate technical units for the equipment or components being considered for maintenance.

The unit includes reviewing condition analysis and non-destructive test (NDT) reports. However, the conduct of condition analysis and NDT tests is covered by the relevant specialist technical units.

Where an organisation or whole of plant maintenance management systems is being reviewed or considered for change the unit MEM23125A Evaluate maintenance systems, should be selected.

The unit is suitable for people working at a technician level in maintenance-related design drafting or in maintenance-related supervision or management.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM14092A Integrate maintenance fundamentals into an engineering task

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate requirements of equipment or component maintenance task	1.1	Review the context and parameters of the maintenance task in consultation with stakeholders
		1.2	Review equipment or component original design and any subsequent modifications and repairs
		1.3	Review current performance specifications
		1.4	Determine engineering scientific principles and design techniques required for equipment or component maintenance
2	Investigate alternatives of repair, replacement or modification	2.1	Review preventative maintenance system requirements or defect/failure details to determine if replacement is required
		2.2	Review equipment or component condition analysis reports, including the results of any required NDT
		2.3	Review maintenance repair techniques and processes, standard parts, labour and skill requirements
		2.4	Consider life cycle design and sustainability implications of maintenance design and maintenance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			activities
		2.5	Determine specification, documentation and graphical techniques required to define designs
		2.6	Confirm WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements relevant to repair and modification design projects
		2.7	Assess the need for technical and professional assistance
		2.8	Consider software options for repair and modification design, such as computer-aided design (CAD), stress analysis and project management software
		2.9	Decide if repair, replacement or modification is appropriate and seek any necessary approvals
3	Apply repair and modification design techniques	3.1	Plan, schedule and coordinate the repair or modification design task
		3.2	Apply the design process and scientific principles to repair and modification design proposals
		3.3	Determine materials, components, maintenance processes, equipment and tools required to implement design
		3.4	Create adequate and accurate calculations, preliminary graphics and maintain design process records, including use of software, as appropriate
		3.5	Assess repair and modification designs against design criteria
		3.6	Apply systems thinking to problem solving and decision making techniques in dealing with contingencies and constraints for continuous improvement and development of design options
		3.7	Incorporate professional and technical assistance, as required
		3.8	Use specification, documentation and graphical techniques, modelling, mock-up or prototyping techniques, as appropriate, to define repair or modification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	Report results	4.1	Record results of investigations, application and development of repair and modification design
		4.2	Provide appropriate documentation, such as calculations, specifications, diagrams, CAD files, mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining or confirming scientific principles and maintenance design techniques, WHS and regulatory requirements, and design specification requirements required to meet maintenance brief
- evaluating multiple solutions, materials and components, maintenance repair processes and techniques, standard parts, skill requirements, equipment and tools
- investigating life cycle design and sustainability, technical and professional assistance alternatives for repair, replacement or improvement, and software options for maintenance planning and design
- planning, scheduling and coordinating the maintenance task
- applying design process and scientific principles to component and hardware selection and design proposals
- solving problems and making decisions with systems thinking for contingencies and constraints, and continuous improvement
- defining designs, specifying and documenting and applying graphical techniques, modelling, mock-up or prototyping techniques
- creating and maintaining adequate and accurate calculations and design process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs

Required knowledge

Required knowledge includes:

- sustainability implications of maintenance processes, materials and products, including consideration of life cycle analysis
- design processes and techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- concurrent engineering techniques, systems thinking, problem solving and decision making, and continuous improvement methods
- WHS Acts and regulations, codes of practice, standards, registration and risk assessment for design, maintenance and prototyping activities
- procedures for planning, scheduling and coordination of maintenance design
- typical maintenance criteria, such as:
  - strength and servicability of repairs compared to original
  - function and aesthetics
  - maintainability and manufacturability
  - preventative maintenance evaluatuion criteria, such as mean time between failure (MBTF) and failure mode effects analysis (FMEA)
  - required quality, cost and sustainability
- design calculations techniques
- typical maintenance design requirements of various industries
- typical repairs, parts, skills and maintenance processes
- hardware specifications and catalogues
- typical maintenance plant, equipment and tools
- plant condition and maintenance assessment techniques
- typical maintenance techniques and technologies for monitoring, preventative maintenance, online and breakdown maintenance, disassembly, repair, reassembly and recommission
- design calculations layout and documentation for design checking and maintenance records
- design process documentation and reports, including specifications and CAD graphics
- software for maintenance planning and repair and modification design, including CAD and stress analysis software
- software and systems, such as system control and data acquisition (SCADA) and distributed control systems (DCS) for maintenance control and information distribution
- developments in repair and modification design
- options for mock-up, modelling and prototyping

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply repair and modification techniques consistent with a

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	design brief information, relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • communicate, negotiate and review maintenance brief with stakeholders • determine or confirm scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements • evaluate multiple solutions • investigate life cycle design, sustainability, technical and professional assistance required, and maintenance alternatives for repairs and modifications • plan, schedule and coordinate the maintenance task • solve problems and make decisions with systems thinking for contingencies and constraints, and continuous improvement • define designs, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques • select components and hardware • create and maintain adequate and accurate calculations and design process records • report and document results and processes.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	(real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Maintenance repair and modification requirements	Maintenance repair and modification requirements may include: • scheduled maintenance required under the maintenance management system • unscheduled maintenance as a result of system/component failure • repairs to restore systems/components to operation • modifications to improve system/component reliability or maintainability • maintenance schedule change or equipment or component modification required because of a change in equipment performance requirements (e.g. changed production or product design) • competitive market pressure and ‘lean maintenance’ • changes in available maintenance technology • resources supply (e.g. materials, labour and skills) • introduction or changes to asset technologies (e.g. mechanical, fluid, electrical, electronic and system control) • sustainability relevant to repair and modification design tasks • WHS, risk and applicable standards and code requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Planning processes	Planning processes may include: • establishing maintenance parameters and design criteria • contributing to the negotiation and advice process • preliminary planning, investigations and costing • identifying design, development, prototyping activities and skills requirements • planning and scheduling design activities • improving, adjusting and rescheduling as required by emergency contingencies and constraints
Design process	Where equipment or component repair or modification design is required the design process includes: • establish design parameters and criteria • research, measurement, experimentation and investigation • generating ideas • synthesis, problem solving and decision making, and addressing constraints • apply scientific principles, calculation and graphics, prototyping and mock-up techniques if required • selection of components and hardware • evaluating solutions against design criteria • consultation, adjustments and agreement • finalise design and sign-off
Design criteria	Design criteria may include: • function and fit for purpose • aesthetics • manufacturability and maintainability • sustainability • cost constraints • ergonomics and anthropometrics and physiology • facilities, plant, services and skills available • WHS and risk
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Life cycle assessment	Life cycle analysis can be used to improve sustainability of repaired or modified equipment or components. It may be applied to all aspects of the repair or modification process

Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic dangers, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies, such as:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano materials
	  • special processes, foundry, alloy welding, heat treatment, sealing and fastening

WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements applying to electrical work
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular maintenance repair and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	modification design task
Prototyping	Prototyping may include: • mock-ups, physical and virtual modelling with post-processing for computer numeric control (CNC) and rapid prototyping
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain

MEM14089A Integrate mechanical fundamentals into an engineering task

Modification History

Release 1 - New unit. Replaces MEM14081A and MEM23071A, but not equivalent.

Unit Descriptor

This unit of competency covers the integration of mechanical fundamentals to achieve an engineering or related task. It includes identifying task parameters, personal and team functions, chain of responsibility and work health and safety (WHS) guidelines. It includes investigation of machines, mechanisms and mechanical systems, and mechanical fundamentals, such as mechanical methods and processes, workshop techniques, materials, scientific and mathematical principles and computer software. It requires completion of the task in cooperation with the team and documentation of the process and outcomes.

Application of the Unit

The unit applies to engineering or related projects requiring mechanical engineering skills and covers the identification, application and integration of mechanical fundamentals. It is suitable for people working as mechanical designers and draftspersons and those pursuing careers and qualifications in mechanical engineering.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanics principles

Employability Skills Information

This unit contains employability skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate scope of engineering task	1.1	Identify mechanical and related fundamentals to be integrated into engineering task
		1.2	Identify stakeholders to be consulted
		1.3	Confirm WHS, regulatory requirements, risk management and organisational procedures
		1.4	Review functions and features of machines, mechanisms and mechanical systems required by the task
		1.5	Review software techniques required for task analysis and graphics
2	Integrate mechanical fundamentals	2.1	Use systems thinking to address contingencies and constraints, problem solving and decision making, and continuous improvement to achieve integration task
		2.2	Integrate mechanical fundamentals to achieve task objectives
		2.3	Seek technical and professional assistance or clarification of design information, as required
3	Report results	3.1	Record results of investigation, evaluation and integration
		3.2	Provide documentation, such as diagrams and calculations, programs and files

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating, cooperating and negotiating with stakeholders
- identifying parameters and context, WHS and regulatory requirements, risk management and organisational procedures
- evaluating requirements, principles, techniques, and typical applications related to task
- selecting software for required analysis and graphics
- planning the task
- solving problems and making decisions using systems thinking and continuous improvement to address contingencies and constraints
- reporting and documenting results of investigation, evaluation and integration, diagrams and calculations
- reviewing sustainability implications, functions and features for the engineering task

Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, and risk minimisation and registration requirements
- mechanical and related fundamentals, including:
  - materials properties
  - mechanics
  - chemistry
  - thermodynamics
  - fluid mechanics
  - fluid power
  - electrical fundamentals
  - and may also include depending on the application:
    - light, sound and electromagnetic effects
- methods and processes for shaping, cutting, joining and coating of metal and other materials
- functions and features of machines, mechanisms and mechanical systems
- current options and tends in software, including system layout and simulation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to undertake investigation of an engineering task to determine the mechanical fundamentals required by the task and integrating them into a task plan and report the plan and any investigations undertaken.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • determine task parameters and context and identify and investigate required mechanical fundamentals • evaluate task requirements, principles, techniques, typical applications and software • plan the task • integrate mechanical fundamentals to achieve task objectives • communicate, cooperate and negotiate with stakeholders to achieve integration task • report and document results.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment must cover the integration of two or more mechanical fundamentals to achieve the engineering task.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Mechanical and related fundamentals	Mechanical and related fundamentals include fundamentals of: • materials properties • mechanics • chemistry • thermodynamics • fluid mechanics • fluid power • electrical fundamentals and may also include depending on the application: • light, sound and electromagnetic effects
Machines, mechanisms	Machines, mechanisms and mechanical systems may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

and mechanical systems	• piston and rotary displacement engines • liquid, gas and steam turbines • pumps and pumping systems • compressors and pneumatic distribution systems • hydraulic systems • fans and ducting systems • heating, ventilation, air conditioning and refrigeration (HVAC/R) systems • mechanical drive systems and transmissions • brakes and clutches • conveyors, elevators, cranes and materials handling plant • boilers and piping systems

Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic dangers, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies, such as:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano materials
	  • special processes, foundry, alloy welding, heat treatment, sealing and fastening

WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • codes of practice • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
Continuous improvement implementation	Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance. Improvement processes may include techniques, such as: • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Constraints and contingencies	Constraints and contingencies may include: • financial • organisation procedural or culture • physical constraints, such as limits to resources, limits to site access or logistical limitations
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer

MEM14090A Integrate mechatronic fundamentals into an engineering task

Modification History

Release 1 - New unit. Replaces MEM14082A and MEM23072A, but not equivalent.

Unit Descriptor

This unit of competency covers the integration of mechatronic fundamentals to achieve an engineering or related task. It includes identifying task parameters, personal and team functions, and work health and safety (WHS) requirements. It includes investigation of programmable machines, controllers and mechatronic devices, and automated systems and mechatronic fundamentals, including mechatronic methods and processes, workshop techniques, materials, scientific and mathematical principles and computer software. It requires completion of the task in cooperation with the team and documentation of the process and outcomes.

Application of the Unit

The unit applies to engineering or related projects requiring mechatronic engineering skills and covers the identification, application and integration of mechatronic fundamentals. It is suitable for people working as mechatronic or automation technicians and drafters and those pursuing careers and qualifications in mechatronic engineering.

Licensing/Regulatory Information

Not applicable.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate scope of engineering task	1.1	Identify mechatronic and related fundamentals to be integrated into engineering task
		1.2	Identify stakeholders to be consulted
		1.3	Review functions and features of machines, controllers, devices and automated systems requiring mechatronics
		1.4	Confirm WHS, regulatory requirements, risk management and organisational procedures
		1.5	Review software techniques required for task analysis and graphics
2	Integrate mechatronic fundamentals	2.1	Use systems thinking to address contingencies and constraints, problem solving and decision making, and continuous improvement to achieve integration task
		2.2	Integrate mechatronic fundamentals to achieve task objectives
		2.3	Seek technical and professional assistance or clarification of design information, as required
3	Report results	3.1	Record results of investigation, evaluation and integration
		3.2	Provide documentation, such as diagrams, calculations, programs and files

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating, cooperating and negotiating with stakeholders
- identifying task parameters and context, WHS and regulatory requirements, risk management and organisational procedures
- evaluating task requirements, including principles, techniques, machines, controllers and mechatronic devices, and typical automated systems
- selecting and using software for required analysis and graphics
- planning the task
- solving problems and making decisions using systems thinking and continuous improvement to address contingencies and constraints

reporting and documenting results of investigation, evaluation and integration, diagrams and calculations

- reviewing sustainability implications, functions and features for the engineering task

Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, and risk minimisation and registration requirements
- mechatronic fundamentals, including:
  - mathematics
  - materials properties
  - mechanics
  - electrical and electronic fundamentals

fundamentals of controller programming, interfacing and signal conditioning, and which depending on the application may also include:

- chemistry
- light, sound and electromagnetic effects
- thermodynamics and heating, ventilation and air conditioning (HVAC)
- fluid mechanics
- fluid power
- system control and data acquisition systems (SCADA) and distributed control systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

(DCS)
  - computing
  - graphics, including computer-aided design and drafting systems (CAD)
- methods and processes for shaping, cutting, joining and coating of metal and other materials
- functions and features of machines, controllers and mechatronic devices and automated systems
- current options and tends in software, including circuit and system layout and simulation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to undertake investigation of an engineering task to determine the mechatronic fundamentals required by the task and integrating them into a task plan and report the plan and any investigations undertaken.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • determine task parameters and context and identify and investigate required mechatronic fundamentals • evaluate task requirements, principles, techniques, typical applications and software • plan the task • integrate mechatronic fundamentals to achieve task objectives • communicate, cooperate and negotiate with stakeholders to achieve integration task • report and document results.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment must cover the integration of two or more mechatronic fundamentals to achieve the engineering task. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Appropriate licensed technical and professional	Appropriate licensed technical and professional assistance may

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

assistance	include:
	• technical support and advice relating to elements which have intrinsic dangers, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies may include:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano materials
	  • special processes, foundry, alloy welding, heat treatment, sealing and fastening

WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements applying to electrical work
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
Continuous improvement implementation	Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	Improvement processes may include techniques, such as: • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Constraints and contingencies	Constraints and contingencies may include: • financial • organisation procedural or culture • physical constraints, such as limits to resources, limits to site access or logistical limitations
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular engineering integration task
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer

MEM14091A Integrate manufacturing fundamentals into an engineering task

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the integration of manufacturing fundamentals to achieve an engineering or related task. It includes identifying task parameters, personal and team functions, and work health and safety (WHS) guidelines. It includes investigation of function and features of manufacturing plant, methods and processes and manufacturing fundamentals, including workshop techniques, materials, scientific and mathematical principles, and computer software.

Application of the Unit

The unit applies to engineering or related projects requiring manufacturing engineering skills and covers the identification, application and integration of manufacturing fundamentals. It is suitable for people working as manufacturing technicians and draftspersons and those pursuing manufacturing engineering or related technical qualifications and careers.

If applying the unit into an enterprise or context where knowledge and skills of lean manufacturing techniques is also required, relevant competitive systems and practices units should also be selected.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate scope of engineering task	1.1	Identify manufacturing engineering and related fundamentals to be integrated into engineering task
		1.2	Review current functions and features of manufacturing plant, methods and processes, including production control, process maintenance options, and continuous improvement and lean manufacturing-related systems and processes
		1.3	Identify stakeholders to be consulted
		1.4	Confirm WHS, regulatory requirements, risk management and organisational procedures
		1.5	Review software techniques required for task analysis and graphics
2	Integrate manufacturing fundamentals	2.1	Plan the task
		2.2	Communicate, cooperate and negotiate with stakeholders, as required
		2.3	Use systems thinking to address contingencies and constraints, problem solving and decision making, and continuous improvement to achieve integration task
		2.4	Integrate manufacturing fundamentals to achieve task objectives
		2.5	Seek technical and professional assistance or clarification of design information, as required
3	Report results	3.1	Record results of investigation, evaluation and integration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.2 Provide documentation, such as diagrams, graphics, flow charts and calculations

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating, cooperating and negotiating with stakeholders
- identifying task parameters and manufacturing context, WHS, regulatory requirements, risk management and organisational procedures
- evaluating manufacturing principles, systems, methods and processes, and production machinery, such as:
  - lean manufacturing
  - jobbing (individual lot manufacturing)
  - transfer lines
  - cellular manufacturing
  - typical manufacturing departments, such as logistics, warehouse, production, maintenance, scheduling, sales, marketing and administration
- selecting and using software and graphics for required analysis and graphics
- planning the task
- integrating manufacturing fundamentals to achieve task objectives
- solving problems and making decisions using systems thinking and continuous improvement to address contingencies and constraints
- reporting and documenting results of investigation, evaluation and integration, diagrams and calculations
- reviewing sustainability implications, functions and features for the engineering task

Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, and risk minimisation and registration requirements
- manufacturing methods, such as:
  - production control and flow
  - continuous improvement
  - lean techniques for quality, speed, quantity and reliability

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - manufacturing systems maintenance, such as total productive maintenance
  - jobbing, batch and mass systems
  - production lines and work cells, and batch and queue manufacturing
- functions and features of production machinery and systems related to the task
- general mechanical, electrical and mechatronic engineering fundamentals relevant to manufacturing, such as:
  - materials properties
  - mechanics
  - chemistry
  - thermodynamics
  - fluid mechanics
  - fluid power
  - electrical fundamentals
- current options and trends in software, including manufacturing process simulation software

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to undertake investigation of an engineering task to determine the manufacturing fundamentals required by the task and integrating them into a task plan and report the plan and any investigations undertaken.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • communicate, cooperate and negotiate with stakeholders to achieve manufacturing integration task • determine task parameters and context and identify and investigate required manufacturing fundamentals • identify relevant WHS, regulatory requirements, risk management and organisational procedures • integrate manufacturing fundamentals to achieve task objectives • report and document results.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic dangers, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies, such as:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano materials
	  • special processes, foundry, alloy welding, heat treatment, sealing and fastening

WHS, regulatory requirements and enterprise procedures	**WHS, regulatory requirements and enterprise procedures may include:** • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain.
Continuous improvement implementation	Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance. Improvement processes may include techniques, such as: • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Constraints and contingencies	Constraints and contingencies may include: • financial • organisation procedural or culture • physical constraints, such as limits to resources, limits to site access or logistical limitations
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Lean principles	Lean manufacturing uses cost, capacity and responsiveness, quality, reliability and waste minimisation as drivers of the process and measures for process improvement. Lean manufacturing is the response of many organisations to local, regional, national and global market competitiveness.

MEM14092A Integrate maintenance fundamentals into an engineering task

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the integration of maintenance fundamentals to achieve an engineering or related task. It includes identifying task parameters, personal and team functions, and work health and safety (WHS) requirements. It includes investigation of maintainable features of plant, facilities and services, and evaluation of related fundamentals of mathematics, scientific principles, workshop skills, materials and processes, and software required by the task. It requires completion of the task in cooperation with the team and documentation of the process and outcomes.

Application of the Unit

The unit applies to engineering and related tasks in a project or organisation and covers the identification, application and integration of maintenance fundamentals, including breakdown and preventative maintenance fundamentals. It is suitable for people working as maintenance technicians and draftspersons and those pursuing careers and qualifications in maintenance engineering.

This unit should be undertaken in conjunction with technical units relevant to the equipment and processes used in the organisation.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	**Investigate scope of engineering task**	1.1	Identify the breakdown and preventative maintenance and other related fundamentals to be integrated into engineering task
		1.2	Identify stakeholders to be consulted
		1.3	Confirm WHS, regulatory requirements, risk management and organisational procedures
		1.4	Identify maintainable features of plant, facilities and services affected by integration task
		1.5	Identify methods, processes and workshop techniques required by task
		1.6	Review sustainability implications for task
		1.7	Review software techniques required for task analysis and graphics
		1.8	Plan task to maximise performance and reliability and prevent future breakdowns
2	**Integrate maintenance fundamentals**	2.1	Use systems thinking to address contingencies and constraints, problem solving and decision making, and continuous improvement to achieve integration task
		2.2	Consult with stakeholders on timing and scope of integration task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	2.3	Integrate maintenance fundamentals to achieve task objectives
	2.4	Seek technical and professional assistance or clarification of design information, as required
3 Report results	3.1	Record results of investigation, evaluation and integration
	3.2	Provide documentation, such as diagrams, calculations, programs and files

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating, cooperating and negotiating with stakeholders
- identifying task parameters and context, WHS and regulatory requirements, risk management and organisational procedures
- evaluating task requirements, including principles, methods, processes and construction techniques, maintainable features of plant, facilities and services
- selecting and using software required for analysis and graphics
- evaluating maintenance-related task activities for effect on performance, reliability and prevention of failure
- solving problems and making decisions using systems thinking and continuous improvement to address contingencies and constraints

reporting and documenting results of investigation, evaluation and integration, diagrams and calculations

- reviewing sustainability implications, functions and features for the engineering task

Required knowledge

Required knowledge includes:

- maintenance and related fundamentals may include:
  - materials properties
  - maintenance methods and processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - mechanics
  - chemistry
  - thermodynamics
  - fluid mechanics
  - fluid power
  - electrical and electronic fundamentals
  - fundamentals of controller programming, interfacing and signal conditioning
  - computing
  - graphics, including computer-aided design (CAD)
  - workshop and maintenance equipment
- functions and maintainable features of plant, facilities and services
- maintenance methods and procedures:
  - breakdown maintenance
  - preventive maintenance
  - predictive maintenance (on-condition)
  - precision maintenance
  - proactive maintenance
  - reliability centred maintenance and modification
  - total productive maintenance
  - repair and replace methods and processes
- role and application of maintenance-related risk management procedures and analysis
- current options and tends in maintenance software
- typical software applications for engineering maintenance fundamentals

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to undertake investigation of an engineering task to determine the maintenance fundamentals required by the task and integrating them into a task plan and report the plan and any investigations undertaken.
Critical aspects for assessment and	Assessors must be satisfied that the candidate can

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

evidence required to demonstrate competency in this unit	competently and consistently: • communicate, cooperate and negotiate with stakeholders to achieve integration task • determine task parameters and context, chain of responsibility, WHS, regulatory requirements, risk management and organisational procedures • evaluate task requirements, principles, techniques, typical applications and software • plan the task • integrate maintenance fundamentals to achieve task objectives • report and document results.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities. •
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Integrate maintenance fundamentals	Integrate maintenance fundamentals refers to situations where maintenance skills and knowledge must be applied across more than one engineering, system or application area to achieve a task objective

Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic dangers, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies, may include:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano materials
	  • special processes, foundry, alloy welding, heat treatment,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	sealing and fastening
WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain.
Continuous improvement implementation	Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance. Improvement processes may include techniques, such as: • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Constraints and contingencies	Constraints and contingencies may include: • financial • organisation procedural or culture • physical constraints such as limits to resources, limits to site access or logistical limitations

Maintenance system data	Maintenance system data may include:
	• asset ID and plant warranties
	• standard repair schemes
	• modification data and configuration
	• procedural documents:
	  • monitoring and preventative maintenance schedules
	  • safe work methods statements
	  • material safety data sheets (MSDS)
	  • work permits
	• monitoring reports and system measurements
	• maintenance actions and costs
	• spares inventory control

Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular engineering integration task
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Take samples	1.1. Difference between population and sample is understood and various sampling schemes are applied in accordance with standard operating procedures.
2. Apply statistical process to monitor production	2.1. Concept of variation in terms of average and spread is understood. Data is used to produce relevant statistical information. 2.2. Data is interpreted accurately and information is presented to appropriate authority according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required skills
Look for evidence that confirms skills in: • reading, interpreting and following information on written job instructions, standard operating procedures, charts, lists, drawings and other applicable reference documents • applying statistical process control procedures in accordance with instructions to a given production process • obtaining data from samples including average, range and random or assignable causes • producing tally, run or control charts from sampling data • reporting information from sampling data • checking and clarifying task-related information • completing proformas and standard workplace forms
Required knowledge
Look for evidence that confirms knowledge of: • the difference between population and sample, and the concept of variation in terms of average and range, random and assignable causes • numerical operations and statistical calculations/formulae within the scope of this unit • statistical process control procedures, which may include Six Sigma etc. and the sampling procedures to be followed • the types of charts that can be produced to assist monitoring of products including run charts, tally charts, histograms, control charts • procedures for reporting sample data information • use and application of personal protective equipment • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	be able to perform basic statistical quality control.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic statistical quality control or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Sampling schemes	Agreed customer plans, Acceptable Quality Level (AQL) and Average Outgoing Quality Level (AOQL) plans, Shainin, Six Sigma etc.
Relevant statistical information	Average, range and process control data and the plotting of charts such as line graphs, run charts, tally charts, histograms, control charts, random and assignable causes etc.

Unit Descriptor

Unit descriptor	This unit covers working within a quality improvement system, either individually or in a team situation.

Application of the Unit

Application of the unit	This unit is applicable for any work within a quality improvement system in a manufacturing, engineering or related environment. The definition of customer is wide and applies to the next person or organisation receiving the product or service. Application may include quality inspection of own or other employee's work up to the level of the employee's technical competence. **Band**: **A** **Unit Weight**: **2**

Licensing/Regulatory Information

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Work within a quality system	1.1. Instructions and procedures are followed and duties are performed in accordance with requirements of quality improvement system. 1.2. Conformance to specifications is ensured. 1.3. Defects are detected and reported according to standard operating procedures. 1.4. Performance of operation or quality of product or service is monitored to ensure customer satisfaction.
2. Engage in quality improvement	2.1. Current performance is assessed. 2.2. Established performance measures are identified. 2.3. Specifications and standard operating procedures are identified. 2.4. Defects are detected and reported according to standard operating procedures. 2.5. Process improvement procedures are participated in. 2.6. The improvement of internal/external customer/supplier relationships is participated in. 2.7. Performance of operation or quality of product or service is monitored to ensure customer satisfaction.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job sheets, instructions, standard operating procedures and drawings
- checking and clarifying task-related information
- entering information onto workplace documents
- checking for conformance to specifications
- identifying duties of the individual within the quality improvement system
- identifying customers' requirements with respect to the operation or quality of the product or service
- reporting where appropriate, defects detected
- carrying out work in accordance with the process improvement procedures
- carrying out work in a manner consistent with the improvement of customer/supplier relationships
- performing numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- quality system terminology and concepts, e.g.
  - quality assurance - planning to meet customers' requirements
  - quality control - checks and procedures to ensure customer requirements are met
  - quality inspection - inspecting and testing products and services
  - total quality control - a company-wide approach that combines both quality assurance and quality control so that the customer is always satisfied
- commonly accepted meaning/s of the terms quality and quality system
- the reasons for following the requirements of the quality improvement system
- strategies and approaches for working within a quality system
- procedures to be followed in undertaking the work
- specifications to which the individual's work is to comply
- reasons for ensuring work conforms to specification
- benefits of good quality:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• quality products • reduced costs • customer confidence, satisfaction and loyalty • good reputation • job satisfaction • solving problems • increased competitiveness • keeping up with technology • costs and consequences of poor quality e.g. • lost customers • accidents • wastage • lost time • low morale • conflict • procedures for reporting defects • examples of common defects • quality improvement procedures • four steps of the quality cycle: plan, do, check, act • reasons for following process improvement procedures • examples of ways in which customer/supplier relationships can be improved • benefits of good customer/supplier relationship • hazards and control measures associated with applying quality procedures, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply quality systems.
Critical aspects for assessment and	Assessors must be satisfied that the candidate can

EVIDENCE GUIDE	
evidence required to demonstrate competency in this unit	competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying quality systems or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify areas for improvement and/or solve problems	1.1. Participation in team is used to select improvement tools and methods appropriate to the situation. 1.2. Teamwork is used to process improvement tools to identify improvements and/or solve problems.
2. Implement improvement strategy	2.1. Teamwork is used to implement improvement strategies as required in accordance with standard operating procedures. 2.2. In conjunction with work team, further action is recommended as required using standard operating procedures.
3. Monitor implementation of improvement	3.1. Performance is monitored for change, utilising feedback data.
4. Evaluate improvement	4.1. Analytical tools are used to evaluate improvement as required. 4.2. In conjunction with work team, further action is recommended where required using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- participating and communicating in a team setting
- identifying improvements and/or solving problems in a team setting
- implementing improvement strategies in a team setting
- recommending further action in accordance with standard operating procedures
- collecting and collating feedback data
- evaluating the improvement strategy implemented
- reading, interpreting information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- planning and sequencing tasks
- checking and clarifying information
- entering information onto workplace documents
- following verbal instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- roles and functions of self and team members
- team discussion and problem solving processes
- improvement tools and methods and their application
- procedures for using process improvement tools in the team environment
- improvement strategies
- procedures for implementing the improvement strategies
- the individual's role in implementing improvement strategies
- procedures for initiating further action
- the procedures for collecting and collating improvement feedback data
- the analytical tools and processes to evaluate the improvement strategy
- safe workplace practices

MEM15004B Perform inspection

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers inspecting products, keeping records and providing feedback on the conformance of product to specifications.

Application of the Unit

Application of the unit	This unit applies to basic inspection of completed or partly completed products produced by others. Inspection is carried out according to a site quality plan or specifications; it applies to a range of manufacturing enterprises; and requires application of a range of measuring equipment/devices/tools. Location and frequency of checks/tests and measurements are undertaken to standard operating procedures. In general, verification should be made as close as possible to the point of production of the feature or characteristic. Inspection may involve 'first piece inspection', fixed interval, sample etc. Depending on the inspection process, other technical units may need to be accessed, for example, appropriate measurement units. This unit is not intended to be applied to maintenance personnel carrying out their day-to-day activities, for example, fault finding, remedial and checking activities. These skills are covered by other units such as Unit MEM18006C (Repair and fit engineering components). This unit should not be selected for the purposes of non destructive testing, where Unit MEM24002B (Perform penetrant testing), Unit MEM24004B (Perform magnetic particle testing), Unit MEM24006B (Perform eddy current testing), Unit MEM24008B (Perform ultrasonic testing) or Unit MEM24010B (Perform radiographic testing) have already been selected.

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
1. Inspect products	1.1. Products are tested for conformance to specifications in accordance with standard operating procedures.
2. Keep records	2.1. Test status identification is made on conforming and non-conforming products and records are accurately kept using standard operating procedures.
3. Provide feedback	3.1. Products are tested/inspected/measured after rework or repair. 3.2. Deficiencies or deviations are reported according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, standard operating procedures and other applicable reference documents
- testing products for conformance to specifications in accordance with job instructions
- testing reworked/repaired products for conformance to specification, in accordance with job instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- the procedures as defined by job instructions to be used to check conformance to specifications
- the data to be recorded and the frequency of recording required
- the consequences of not keeping accurate records
- non-conformances of given products that can be removed by rework/repair in accordance with job instructions
- hazards and control measures associated with performing basic inspection activities
- use and application of personal protective equipment
- safe work practices and procedures

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Select inspection/test procedures	1.1. Appropriate methods of inspection are selected and implemented. 1.2. Inspection/test procedures are monitored to ensure desired outcomes.
2. Control inspection/test environment and equipment	2.1. Environmental conditions are monitored to ensure reliability of tests and results. 2.2. Equipment/instruments are checked for correct calibration. 2.3. Calibration of equipment/instruments is initiated or undertaken against appropriate standard as required. 2.4. Calibration records are maintained to standard operating procedure.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.5. If equipment/instruments are found to be out of calibration, validity of previous results is checked and reported according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading, interpreting and following information on standard operating procedures and other applicable reference documents • checking and clarifying task-related information • entering and maintaining information onto proformas and standard workplace forms and records • checking for conformance to specifications • using measurement equipment within the scope of this unit • measuring components to specified tolerances • implementing inspection method for the product/ process • monitoring inspection/test procedures to ensure desired outcomes are achieved • monitoring environmental conditions • checking calibration of measuring equipment • initiating calibration of measuring equipment • calibrating measuring equipment against the appropriate reference standard • detecting and reporting out of calibration equipment • applying units of measurement and numerical operations/calculations within the scope of this unit
Required knowledge
Look for evidence that confirms knowledge of: • a range of inspection methods and their application • the appropriate inspection method for the process/product • procedures for implementing inspection methods • the desired/target outcomes of the inspection/test procedures • reasons for discrepancies/trends • procedures for monitoring inspection/test procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the effects of environmental conditions on test equipment and the results • procedures for monitoring environmental conditions • the acceptable range of variations to environmental conditions • the correct operation of the measuring equipment • the specifications of the measuring equipment • procedures for checking the calibration of the measuring equipment • appropriate techniques, tools and equipment to measure components • units of measurement and numerical operations/calculations within the scope of this unit • codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration • procedures for initiating the calibration of measuring equipment • the physical reference standard against which the measuring equipment is to be calibrated • procedures for calibrating measuring instruments • tools and equipment required to calibrate measuring equipment • procedures for recording calibration details • the reasons for keeping calibration records • the procedures to be followed when measuring equipment is found to be out of calibration • the reasons for checking results from out of calibration measuring equipment • procedures for reporting out of calibration measuring equipment • hazards and control measures associated with inspection, including housekeeping • use and application of personal protective equipment • safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Conduct process capability studies	1.1. Procedure for conducting capability study is determined. 1.2. Instructions for personnel conducting trial run are prepared. 1.3. Data from trial run is analysed and the process capability is calculated. 1.4. Possible number of product defects from a particular process is estimated. 1.5. Optimum target mean to suit process capability data is determined. 1.6. Reports listing various options from process capability studies are prepared.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.7. Design specifications based on an analysis of data are recommended.
2. Set control limits	2.1. Control limits for sample/subgroup average, range and standard deviation are calculated. 2.2. Warning limits for subgroup average, range and standard deviation are calculated. 2.3. Course of action resulting from out of control situation is determined and documented to standard operating procedures.
3. Select sampling plans	3.1. Appropriate sampling plan to suit production schedule is selected and acceptable quality limits are determined, taking into account specified producer and consumer risks. 3.2. Sampling plan is documented including implementation strategy.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • collecting and collating data • analysing data, identifying solutions and developing recommendations • preparing reports listing the various options identified from the process capability study • determining process design specifications from process capability data • documenting sampling plan and implementation strategy
Required knowledge
Look for evidence that confirms knowledge of: • the process to be studied • the procedures for conducting process capability studies • the data used to calculate the process capability • the procedures for estimating the possible number of product defects • options for improving the process and benefits of each

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the procedures for determining the optimum target mean • the procedures for setting control limits • numerical operations and calculations/formulae for process capability, control limits and other outcomes within the scope of this unit • the procedures for setting warning limits • the concept of 'out of control' situations • the action to be taken when an 'out of control' situation is detected • the procedures for documenting 'out of control' situations • the acceptable level of quality • a variety of sampling plans and their application • the sampling plan to be applied to a given situation • the reasons for selecting the chosen plan • the acceptable quality limits • the risks associated with identifying acceptable quality limits for the producer and customer • the procedures for documenting and implementing sampling plans • hazards and control measures • use and application of personal protective equipment • safe work practices and procedures

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Construct control charts	1.1. The key product parameters to be controlled are determined. 1.2. Control charts/proformas including the determination of control limits from sample data are completed. 1.3. 1, 2 and 3 sigma limits are used to measure and describe population dispersion as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • constructing control charts, including determining control limits from sample data

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• identifying the key parameters to be controlled from a given specification • calculating the population dispersion for given data in terms of 1, 2 and 3 sigma limits
Required knowledge
Look for evidence that confirms knowledge of: • procedures for constructing control charts and determining control limits from sample data • population dispersion in terms of 1, 2 and 3 sigma limits • safe workplace practices

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform advanced statistical quality control. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	materials handling, recording and reporting associated with performing advanced statistical quality control or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Product parameters	Dimensions, weights, voltages, temperatures, speeds etc.
Control charts/proformas	Shewart Charts or charts for process average, range, or attributes etc.
Sample data	Periodic samples drawn from a trial run of the process

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Work under laboratory conditions	1.1. Independent tests are conducted under controlled conditions.
2. Perform calibration	2.1. Equipment is verified and calibrated to agreed quality standards. 2.2. Calibration status is safeguarded against unauthorised adjustment. 2.3. Accurate records are kept for reference purposes. 2.4. Test equipment is periodically recalled for adjustment, repair and re-calibration. 2.5. Documentary evidence is maintained, covering identification of equipment; frequency of re-calibration; calibration status and procedures for recall, handling and storage, adjustment, repair,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	calibration, installation and use. 2.6. Calibration to reference standards of known accuracy such as national or international standards is traced, or where these do not exist, is set to specifically developed criteria.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining, reading and interpreting relevant drawings, circuits, specifications, instructions and data in accordance with standard operating procedures • planning and sequencing operations • checking and clarifying task-related operations • using calculations and numerical operations within the scope of this unit • conducting independent tests under controlled conditions • checking measuring equipment for correct calibration against the agreed quality standards • safeguarding the calibration status of the equipment against unauthorised adjustment • completing and maintaining records of measuring equipment calibrated • recalling test equipment for adjustment, repair and re-calibration • using reference standards or specific criteria as the basis for calibration. • documenting test results • preparing reports on the tests carried out • conducting inspections, tests and audits in accordance with standard • using results of inspections, tests and audits to inform the design and service
Required knowledge
Look for evidence that confirms knowledge of: • the tests to be undertaken • the conditions under which the tests are to be undertaken • the testing procedures to be followed • the reasons for conducting tests under controlled conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the need for tests to be conducted independently • the quality standards against which the measuring equipment is to be calibrated • the correct operation of the measuring equipment • the specifications of the measuring equipment • the tools and equipment required to check the calibration of the measuring equipment • the procedures for checking the calibration of the measuring equipment • any codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration • the procedures for preventing unauthorised adjustment of equipment • the reasons for protecting equipment against unauthorised adjustment • the records to be kept with respect to the calibration of measuring equipment • the reasons for keeping accurate calibration records • the procedures for recalling test equipment for adjustment, repair and re-calibration • the frequency of test equipment recall • the reasons test equipment may be recalled • all relevant documentation relating to the calibration/re-calibration of test equipment • the procedures for completing the relevant documentation • sources of reference standards and procedures to be used in the absence of reference standards • the reports to be prepared/provided with respect to the test equipment being tested • the procedures for preparing/ providing reports on tests carried out on test equipment • the auditing processes to be applied to testing procedures • the use of information from the inspections, tests and audits conducted in the development of design and servicing of products/equipment • hazards and control measures associated with performing laboratory procedures, including housekeeping • safe work practices and procedures

Evidence Guide

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Tests	Tests will be conducted to a standard method and may be: • mechanical tests such as for hardness, tensile and impact • electrical tests such as for resistance, capacitance and inductance • semiconductor or other electronic tests
Calibration	Calibration refers to those calibrations which are conducted to a specified standard using equipment available in the workplace/laboratory. It may include the testing of known standard samples
Test equipment	May be mechanical, electrical or electronic or some combination
Documentary evidence	Documentary evidence of calibration will be sufficient to satisfy the needs the certifying body (e.g. NATA) or as otherwise specified in the calibration standard or in accordance with manufacturers' recommendation
Documented	Documentation of test/calibration results will conform to good laboratory practice and will allow for the verification of results and for a historical record of results such as might be required for verification of results, quality audits and legal inquiries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Liaise with external suppliers	1.1. The exact quality requirements are communicated to suppliers. 1.2. Quality assurance system is negotiated and agreed. 1.3. Verification method and systems and procedures for dispute settlement are established and agreed. 1.4. Recording system of procured products or services which ensures traceability is established.
2. Check for conformance to specifications	2.1. The requirements of all relevant documentation including contract specifications, drawings and purchase orders are obtained and understood. 2.2. The conformance of the procured product or service to all of the documented requirements is established.
3. Assess external suppliers	3.1. Assessment and evaluation of suppliers' capability and/or quality system are conducted. 3.2. Suppliers' goods or services are evaluated.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- communicating quality requirements to the supplier
- negotiating quality assurance system
- implementing system for recording and tracing products or services procured
- obtaining and interpreting relevant drawings, specifications, documentation etc.
- checking products/materials or services provided for conformance to documented requirements/ specifications
- assessing supplier capability to provide the required product/material or service
- evaluating supplier quality systems
- evaluating supplier goods or services
- using communication and conflict resolution

Required knowledge

Look for evidence that confirms knowledge of:

- the exact quality requirements of the product/material to be supplied
- the procedures to be followed to ensure the supplier understands the quality requirements
- the requirements of a quality assurance system to ensure the supplied product/material conforms to the quality requirements
- the procedures for negotiating agreements with suppliers
- the procedures for verifying that the agreed quality assurance system is being utilised by the supplier
- techniques for dispute resolution
- the procedures for recording procured products or services
- the means of tracing procured products or services
- the reasons for tracing procured products or services
- the specifications of the product/material to be supplied or service to be provided
- any variations from documented requirements/ specifications
- the procedures for assessing/evaluating a supplier's capability to supply the required product/material or service
- the procedures for evaluating a supplier's quality system
- the procedures for evaluating a supplier's goods or services
- any equipment and techniques required to carry out the evaluation procedures
- hazards and control measures within the scope of this unit
- use and application of personal protective equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to exercise external quality assurance. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with exercising external quality assurance or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not

ELEMENT	PERFORMANCE CRITERIA
	charts.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining and interpreting the specifications of the product or service to be provided • communicating effectively with suppliers and customers • recording data collected • calculating relevant statistical information from collected data • producing tally, run and control charts from collected data • using leadership skills • using analysis skills
Required knowledge
Look for evidence that confirms knowledge of: • specifications to be achieved in providing the service or producing the product • the team's supplier(s) and customer(s) • the possible effects of supplying products and/or services to customers that do not comply with specifications • the procedures to be followed in producing the product and/or supplying the service • the checks to be undertaken to ensure the product/service complies with specifications • the personnel responsible for the quality of the product/service provided • the actions to be taken when a non-conformance to specifications is detected and reasons for taking those actions • the procedures for recording data collected • the possible trends from the collected data • the actual trends indicated by given samples of data • the reasons for collecting data • the statistical information to be calculated • the use of statistics in interpreting production data

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the functions of tally, run or control charts in representing production data • the trends indicated by the statistical information calculated and/or the charts produced • the action to be taken in response to any trends identified • the reasons for taking proposed action • appropriate techniques, tools and equipment to measure machined components • hazards and control measures within the scope of this unit • use and application of personal protective equipment • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to maintain/supervise the application of quality procedures. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and conduct interviews	1.1. Interview is planned and initiated to achieve a specified purpose. 1.2. Suitable questions appropriate to the purpose are used. 1.3. Discretion and confidentiality are exercised where appropriate.
2. Participate in interviews	2.1. Appropriate preparation is undertaken. 2.2. Active listening skills are employed. 2.3. Self-presentation is applied appropriate to the purpose. 2.4. Questions are asked where appropriate. 2.5. Follow-up activities are clarified and reported in accordance with standard operating procedure.
3. Take part in negotiations	3.1. Language appropriate to the other party is used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.2. Own and others' needs/wants are stated and clarified. 3.3. The views of fellow employees, including own group or team, are represented to others. 3.4. The appropriate communication medium is selected. 3.5. Follow-up activities are clarified and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and formatting interviews
- developing open and closed interview questions to gain required information
- building rapport
- maintaining discretion and confidentiality
- preparing for interviews
- using active listening skills
- identifying interview goals
- identifying selection/assessment criteria
- clarifying follow-up activities
- reporting follow-up activities
- using appropriate language to the other party(s)
- clarifying needs/wants of others
- representing the views of fellow team or group members during negotiations
- selecting appropriate communication media during the negotiations

Required knowledge

Look for evidence that confirms knowledge of:

- the purpose of the interview
- the assessment criteria for the interview
- the procedures to be followed in planning and conducting the interview
- the detail/information to be obtained from the interview
- questions appropriate to the detail/information to be obtained

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• active listening techniques that can be applied in interview situations • the effect(s) of the individual's presentation during the interview upon the interview • the effect(s) of the timing of questions on the interviewee • the need to follow-up issues raised during the interview and negotiations • the procedures for reporting the outcomes of follow-up activities • the parties to be involved in the negotiations • the reasons for using appropriate language • the reasons for maintaining confidentiality • the reasons for clarifying the needs/wants of others • the needs/wants of the individual • the views of fellow team or group members • a range of communication media • the appropriate communication medium • safe workplace practices

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to conduct formal interviews and negotiations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment

EVIDENCE GUIDE	
	should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with conducting formal interviews and negotiations or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Preparation	• Identifying and inviting co-interviewers • Planning interview • Preparation of interview room • Accessing required documents and materials • Introductions and explanations
Active listening skills	• Appropriate body language

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Acknowledgements • Clarification questions • Appropriate responses
Communication medium	• Face-to-face meeting • Telephone • Email • Written • Advocacy

Unit Descriptor

Unit descriptor	This unit covers identifying a customer's relationship to the enterprise and the customer's requirements, acting on the customer's requirements, and promoting better customer service.

Application of the Unit

Application of the unit	This unit applies to the provision of comprehensive assistance to customers across a range of products and services. Situations covered would be beyond simple sales or enquiries and could include the taking of one-off or special orders requiring detailed descriptions, the handling of complaints referred for more detailed assistance than the initial point of contact, work as a designated liaison officer etc. Customers can be internal or external. Customer liaison can be undertaken through telephone, written, email or face-to-face contact. Typical applications of this unit would be found in warehouses, service and design departments. **Band**: **B** **Unit Weight**: **2**

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify customer relationship to enterprise	1.1. For repeat customers, formal customer identification details are obtained and checked, for example, by order, requisition or account number according to standard operating procedures. 1.2. Customer is identified as a new or repeat customer.
2. Identify customer requirements	2.1. Customer requirements are identified from order or other verbal or written communication. 2.2. The degree to which customer requirements can be met is clearly communicated including details such as price, delivery date, quantity or quality. 2.3. Alternatives are proposed for any inability to completely satisfy customer requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Action customer requirements	3.1. Appropriate action to implement customer requirements is undertaken, for example by filling or entering of order, corrective action to resolve complaints, or repair or service to customer equipment. 3.2. Customer requirements not able to be met immediately are recorded, and follow-up checks are undertaken according to standard operating procedures.
4. Promote better customer service	4.1. Methods of improving customer service are identified and reported.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications and other applicable reference documents
- obtaining and checking customer identification details
- establishing rapport with the customer
- dealing with difficult or unsatisfied customers
- checking and clarifying information
- identifying and communicating the degree to which customer requirements can be met
- identifying alternative products and/or services
- taking appropriate action to meet customer requirements
- recording customer requirements including those not able to be immediately met
- following up unmet customer requirements
- reporting/recommending methods of improving customer service
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the procedures for identifying customers and defining customer relationships • service provision procedures for new/repeat customers • procedures for identifying customer requirements • the price of the required product or service • the quantities of the product available • the quality and characteristics of the product or service • the delivery date/requirements of the product or service • the procedures for informing the customer of the degree to which the customer's requirements can be met • the reasons for informing the customer promptly of the ability/inability to meet the customer's requirements • alternative products and/or services that may meet the customer's requirements • the procedures for actioning customer orders • the procedures for recording and managing customer complaints • the procedures for initiating repairs and/or service to customer equipment • the procedures for managing organisational errors in service provision • principles and practices of effective customer service • record keeping requirements of customer service interactions and transactions • the procedures for following up on unmet customer requirements • the procedures for reporting/recommending improvement to customer service • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to provide advanced customer service.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for	This unit may be assessed on the job, off the job or a

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify team goals and processes	1.1. Team goals and requirements are identified. 1.2. Processes in place to assist in meeting team goals are identified. 1.3. Workflow and processes are described. 1.4. Roles and responsibilities of team members are identified. 1.5. Relationships within team and with other work areas are identified.
2. Communicate and cooperate with team members	2.1. Effective interpersonal skills are used to interact with team members and to contribute to activities and objectives. 2.2. Formal and informal forms of communication are used effectively to support team achievement. 2.3. Team members are assisted as required to ensure team achieves goals and requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4. Diversity is respected and valued in team functioning. 2.5. Views and opinions of other team members are understood and reflected accurately. 2.6. Workplace terminology is used correctly to assist communication.
3. Work as a team member	3.1. Tasks are performed in accordance with organisational and team requirements, specifications and workplace procedures. 3.2. Agreed reporting lines are followed using standard operating procedures.
4. Solve problems as a team member	4.1. Potential and real problems faced by team are identified. 4.2. Procedures for avoiding and managing problems are identified. 4.3. Problems are solved effectively and in a manner which supports team functioning.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- contributing to achievement of team goals
- communicating and cooperating with team members
- coordinating work effort with others
- applying effective interpersonal skills
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- solving problems

Required knowledge

Look for evidence that confirms knowledge of:

- effective interpersonal strategies and skills:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• effective listening • basic speaking skills • use of terminology and jargon • giving and receiving feedback • checking and clarifying task-related information • interpreting instructions • basic conflict resolution • selecting modes and methods of communication • identifying and resolving communication breakdowns and barriers • principles of effective communication • relationships and roles within team and with others • reporting relationships and procedures • own responsibilities with respect to products/services to be provided by team • skills and competencies of the individual and other employees performing interdependent activities • team goals, objectives and task requirements • sources of technical expertise/assistance • appropriate forms of communication • hazards and control measures associated with team activities, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to operate in a work-based team environment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating in a work-based team environment or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research information	1.1. Research requirements are identified and clarified with appropriate persons. 1.2. Sources of research data/information are identified and verified for currency and accuracy. 1.3. Information is compiled, recorded and stored using research techniques appropriate to the task requirements. 1.4. Information is sorted for relevance to research and analysis requirements. 1.5. Research is conducted within given timeframe, resource and quality constraints.
2. Analyse information	2.1. Scope, criteria and method for analysis are determined and verified, if necessary, with appropriate persons. 2.2. Information is accurately analysed according to established criteria. 2.3. Analysis is documented in an appropriate format according to workplace requirements.
3. Establish findings and conclusions	3.1. Findings are factual and accurately describe the results of the analysis 3.2. Conclusions are reached that are logical and based on objective analysis of available data.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.3. Research data, analysis, findings and conclusions are verified, if necessary, with appropriate persons.
4. Summarise and organise technical data	4.1. Information is recorded in suitable form according to workplace requirements. 4.2. Information is summarised and organised for ease of reference, using established communication principles. 4.3. Information is disseminated to others according to workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- questioning
- applying research techniques
- checking and clarifying information
- note-taking
- analysing information and data
- sorting and identifying relevant information/data
- establishing findings and conclusions based on analysis
- summarising and organising information and technical data
- preparing materials for dissemination to others
- planning and sequencing operations

Required knowledge

Look for evidence that confirms knowledge of:

- basic principles and methods of research and analysis
- effective communication principles with respect to research, analysis and organisation of technical data
- sources of research data/information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• use of internal/external databases • relevant personnel for consultation • relevant information/data • effect of variations in the information/data on the conclusions reached • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to research and analyse engineering information. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with researching and analysing engineering information or other units requiring the exercise of the skills and knowledge covered by this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Research requirements	Purpose, expected outcomes, scope and nature, timeframe, required resources
Sources of research data/information	• Surveys • Interview • Observation • Test results • Data records • Reference books and journals • Technical manuals • Job histories • Internal/external databases
Research techniques	• Surveying/scanning • Skimming

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Questioning • Note-taking • Summarising • Relationship diagrams • Tabling
Communication principles	• Avoidance of ambiguity, redundancy, verbosity, circumlocution etc. • Use of headings • Logical ordering • Summarising • Layout • Customising material to audience • Use of graphics and tables

MEM16010A Write reports

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers writing technical or non-technical reports that include some level of analysis and/or research.

Application of the Unit

Application of the unit	The term report is used to denote any required written communication that goes beyond a simple recording of facts (such as completion of a pro forma shift production schedule) and which is based on a level of analysis and/or research. Where reports include technical information or details, then the writer would have the required technical knowledge/capability. Conclusions and/or recommendations where required are based on prior research or analysis of data. The analysis and conclusions should be consistent with the level of skill and knowledge of an employee working at that level. Simple analysis and research would be required. If data research and analysis is necessary to produce information for the report, Unit MEM16009A (Research and analyse engineering information should also be selected). For preparation of simple technical reports, see unit MEM16014A (Report technical information). **Band**: **B** **Unit Weight**: **2**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify report requirements	1.1. Requirements for a written report are identified and confirmed with appropriate persons. 1.2. Information for the report is accessed according to workplace procedures. 1.3. Information is assessed for currency, accuracy and relevance for inclusion in the report.
2. Prepare and produce report	2.1. A structure and outline of the report are developed according to identified report requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.2. The report is written using terminology appropriate to the reader and established principles of report writing. 2.3. Findings and conclusions are based on factual analysis. 2.4. Recommendations, alternatives/suggestions are given, and supporting evidence supplied, where required. 2.5. Protocols, conventions and legal requirements related to acknowledgements and intellectual property are applied where necessary.
3. Finalise and distribute report	3.1. The report is checked for accuracy and edited as required. 3.2. The completed report is consistent with objectives and requirements. 3.3. The report is copied, distributed and stored according to instructions and workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • following instructions • checking and clarifying information • sorting information/data • assessing information/data for relevance • using terminology and language appropriate to the target audience • structuring and writing reports • applying principles of report writing • presenting findings and conclusions based on factual analysis • making recommendations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• managing own time • planning and sequencing information • reviewing and editing
Required knowledge
Look for evidence that confirms knowledge of: • principles of report writing • report types and purposes • structure, style and parts of a report • use of language and expression in reports • common pitfalls, such as ambiguity, truisms, tautology, verbosity, circumlocution etc. • report numbering systems • techniques for reviewing and editing • importance and benefits of preparing reports appropriate for the intended audience • referencing and the importance of acknowledging sources • safe work practices and procedures

MEM16011A Communicate with individuals and small groups

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers communicating effectively across a range of communication networks in the workplace. Communication levels include interpersonal (one-to-one), person-to-group, and mediated (e.g. telephone, letter, memo).

Application of the Unit

Application of the unit	This unit applies where an individual is required to undertake a broad range of communication activities within a manufacturing or engineering organisation. The person would regularly use a variety of communication channels and media to communicate with others. To satisfy this unit, the person would need to exercise skills in verbal and non-verbal communication, along with demonstrating an understanding of communication principles and processes. Applications include common workplace activities such as facilitating small group discussions and meetings, writing memos or letters, making telephone calls, counselling co-workers, resolving issues or routine conflicts, talks or speeches. This unit includes written communication by letter, short memorandum or report etc. If research and/or structured report writing is required, Unit MEM16009A (Write reports) and/or Unit MEM16009A (Research and analyse engineering information) should be selected. **Band**: This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Plan and prepare	1.1. Communication types and networks within the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
communication	enterprise are identified. 1.2. Enterprise conventions, policies and procedures are followed when planning and preparing communication activities. 1.3. Communication channels and codes appropriate to objectives, circumstances and receiver/s are selected. 1.4. Communication is planned and structured to promote the accurate transfer of meaning. 1.5. Communication setting and climate is established appropriate to purpose and content of message. 1.6. Required resources are prepared and or obtained.
2. Communicate effectively in interpersonal, mediated and group settings	2.1. Effective communication skills, strategies and principles are applied to a variety of communication events. 2.2. Verbal and non-verbal language is used appropriate to the topic, sensitivities and technical understanding of the person/s being addressed. 2.3. Individual differences are respected and considered. 2.4. Purpose and objectives of communication are adhered to. 2.5. Participation in communication is encouraged. 2.6. Conventions, rules, policies and procedures are followed.
3. Evaluate communication	3.1. Feedback regarding the effectiveness of the communication activity is obtained. 3.2. Outcomes are assessed against communication objectives and selected channels and codes. 3.3. Communication barriers are identified and strategies for overcoming them are identified and implemented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms skills in: • selecting and using various communication channels • coding and decoding verbal and non-verbal messages • giving and receiving feedback • identifying blockages, barriers and breakdowns in communication • applying principles of effective communication • applying speaking and listening skills to interpersonal and group situations • using writing skills to communicate technical and non-technical information using common verbal written channels • undertaking reading and comprehension of written workplace communications
Required knowledge
Look for evidence that confirms knowledge of: • communication process, stages and roles • communication types and networks • verbal and non-verbal channels - advantages and disadvantages • verbal and non-verbal codes - advantages and disadvantages • principles, strategies and conventions for interpersonal, mediated and group communication • communication skills for sender and receiver • communication blockages, barriers and breakdowns and strategies for overcoming them • individual differences between communicators and strategies for effective communication • establishing communication climate

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to communicate across a range of environments using different methods and techniques appropriate to the content and purpose of the communication. Competency

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Communication types	• Upward - examples: reporting, suggestions, grievances • Downward - examples: policy, procedure, job instruction, feedback, information • Horizontal - examples: task coordination, conflict resolution, discussion, problem solving, information sharing
Communication networks	• Hierarchies, patterns or clusters of personnel • Enterprise conventions, protocols and procedures for communication
Communication channels and codes	• Channels - defined here as the route a message takes through any of the three broad media: written verbal, spoken verbal and non-verbal • verbal channels involve visual and sound media. • non-verbal channels may involve visual, sound, touch, taste and smell and combinations of these • Codes - defined here as any system of language, symbols, signals, gestures etc. that gives mutual meaning to a message. Codes may be: • verbal (spoken or written language) • non-verbal e.g. symbols and emblems, body language
Effective communication skills, **strategies and principles**	• Questioning and clarifying • Speaking and conversation skills • Effective and active listening • Reading and comprehension skills • Giving and receiving feedback • Giving and interpreting verbal and non-verbal messages • Using the telephone and similar mediated channels

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Establishing communication climate • Basic conflict resolution • Seeking and acknowledging contribution • Agreeing on communication protocols • Clarifying the purpose of the communication activity • Principles and protocols for informal and formal meetings • Principles and protocols for speaking to a group • Group discussion strategies, principles and protocols • Interpersonal strategies and principles
Communication events	• Letters, memos, emails etc. • Telephone calls • Group talk • Meetings • Individual and group discussion • Task coordination • Information sharing
Individual differences	• Age, sex, ethnic origin, language • Status in the organisation • Level of expertise

MEM16012A Interpret technical specifications and manuals

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers identifying, accessing, interpreting and analysing technical information in an enterprise, including quality documentation, equipment manufacturer specifications, engineering data sheets and national standards. It also covers explaining and using the information, and identifying implications of changes to technical information.

Application of the Unit

Application of the unit	This unit goes beyond routine accessing and interpretation of technical information. This unit applies to the identification, access, interpretation and analysis of technical information to enable carrying out engineering or manufacturing activities. For routine accessing, organising and communication of information related to processes or tasks, MEM16006A Organise and communicate information should be regarded as sufficient. **Band**: **B** **Unit Weight**: **4**

Licensing/Regulatory Information

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify and locate technical information resources	1.1. Information needs are identified and confirmed with appropriate persons. 1.2. Workplace information resources are identified and their location is determined in the information system. 1.3. Appropriate technical information is obtained.
2. Access technical information	2.1. Relevant technical information is located using search techniques appropriate to the resource and information requirements. 2.2. Symbols, codes, legends, and abbreviations are interpreted correctly. 2.3. Technical information is accessed and relevant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	application is understood. 2.4. Clarification or further explanation of technical information is obtained, where required. 2.5. If applicable, the revision status of the technical information is verified to ensure current status.
3. Interpret and analyse technical information	3.1. Technical information/data appropriate to work requirements and/or application is checked for currency and authenticity. 3.2. Technical information is interpreted and analysed for use in given engineering or manufacturing applications. 3.3. Technical information is used according to the specific engineering or manufacturing application.
4. Explain and use information	4.1. Information and analyses is explained and distributed to appropriate personnel. 4.2. Information resources are used according to work requirements. 4.3. Where applicable, work is undertaken in accordance with acquired technical information.
5. Identify implications of changes to technical information	5.1. Technical information systems are monitored for changes. 5.2. Personnel affected by changes to internal or external specifications or other technical information are identified. 5.3. Means of distributing changed information are established. 5.4. Changes to technical information are documented according to enterprise procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • accessing, reading and following information on written job instructions,

MEM16013A Operate in a self-directed team

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers an individual effectively participating in a highly developed and self-directed team.

Application of the Unit

Application of the unit	This unit applies to participation in a formally established, developed or developing self-directed team. Examples are engineering production teams responsible for a product or process, maintenance teams and special-purpose project teams. Typically, team parameters, constraints and objectives would be determined by sources external to the team. The team would be responsible for all aspects of its designated function and members would have day-to-day responsibility for managing themselves and their work. Typical team tasks might include planning and scheduling activities, making production-related decisions and acting on problems. Where team parameters require adjustment as a result of team discussions or planning, then appropriate authorisation and approvals are established using standard operating procedures. Individual team participants would already be competent with technical aspects of team activities. This unit is intended to apply to participation within a formally established and recognised team. Where an individual works with others, such as within a section or department, unit MEM16007A (Work with others in a manufacturing, engineering or related environment) should be regarded as sufficient. This unit may be included in a Certificate II in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	Engineering - Production Technology or higher qualification. **Band**: This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V). **Unit Weight**: **2**

	with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify team function and composition	1.1. Team purpose and scope are identified and understood. 1.2. Team composition, including role of self and team members, is understood. 1.3. Established parameters, rules and team norms are identified and understood.
2. Participate in team planning	2.1. Significant contribution is made to planning the team activities, based on the individual's technical skills, knowledge and competence. 2.2. Contribution is made to the allocation and performance of team tasks.
3. Function effectively as a team member	3.1. Interaction with team members is in accordance with established rules, conventions and procedures. 3.2. Tasks and responsibilities are performed effectively and in accordance with team objectives. 3.3. Real or perceived issues are resolved by effective and appropriate contributions from team member. 3.4. Significant contribution is made to team performance, based on member's own technical skills and application of established principles and practices for effective teamwork.
4. Monitor and review team performance	4.1. The team member participates effectively in the planning and development of team review process. 4.2. Relevant performance data is collected and analysed on an individual and team basis using standard enterprise procedures and methodology. 4.3. Results are used to evaluate own and team performance against established performance indicators and to assist determination of improvement requirements. 4.4. Principles/techniques for effective team development are used to identify own/team improvement strategies.
5. Implement team performance	5.1. Performance improvement processes and strategies are implemented on an individual and collective basis

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
improvements	using standard enterprise procedures. 5.2. Individual and team performance improvements are evaluated using standard enterprise procedures. 5.3. Adjustments to improvement strategies are made in accordance with team requirements and standard enterprise procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying team goals and objectives
- participating in team planning - shared and individual
- allocating tasks and sequencing activities
- communicating and interacting effectively with team members
- solving problems individually and with others
- resolving conflict
- performing various team behavioural functions - task and maintenance focused
- making individual and joint decisions
- coordinating effort with others to achieve common objectives
- collecting team performance data
- reviewing performance against indicators
- identifying strategies to improve team performance
- implementing performance improvement processes
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task-related information
- checking for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- team objectives
- team targets/goals, performance indicators

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• team member roles - task and behavioural • team processes, rules and conventions • scope of work for which the team is responsible • methods for planning team activities • team member technical skills, knowledge and competence, relevant to the tasks being planned • the person(s) responsible for team planning • impact of planning decisions on other teams, personnel and/or resources • procedures for obtaining resources • structure, formation and operation of teams • characteristics of effective teams • strategies for effective team development/functioning • effective team communication • forms of team leadership and decision-making • strategies for resolving conflict • techniques for team problem-solving • issues that may affect team performance • the sources of data relevant team performance indicators • reasons for reviewing team performance • methods/procedures to evaluate team performance • where appropriate, source(s) of approval to change team performance parameters • processes/strategies for improving team performance • hazards and control measures associated with operating in a self-directed team environment, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to operate within a self-directed team. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating within a self-directed team or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Team	• A highly developed and cohesive work group in which the individuals have a common aim, and in which the jobs and skills of each member fit in with those of others • Team members manage day-to-day activities within operating parameters and constraints • The team is typically characterised by interdependent and complementary effort, high cohesion and culture, conjunctive tasks, effective use of team resources and a focus on continuous improvement • The team may have a single leader or shared leadership
Principles and practices for effective teamwork	Relating to: • goals • problem solving • resolving conflict • team leadership • team decision making • team rules and norms • team roles and behaviours • team maintenance

MEM17001B Assist in development and deliver training in the workplace

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit covers planning for and delivering on the job training, and reviewing the training program. Training, which may structured or informal, is delivered in a one-to-one or small group situation.

Application of the Unit

Application of the unit	Training is delivered in a one-to-one or small group situation. The training may be structured or informal and based on cooperation between trainer and other training personnel. Both underpinning knowledge and practical skills are covered by the training. Training may be applied to technical, induction, OHS or other areas. Normal supervision of an apprentice is covered by Unit MEM17003A (Assist in the provision of on the job training). This unit does not cover assessment. Assessor skills are covered in Unit MEM17002B (Conduct workplace assessment). **Band:** This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V). **Unit Weight**: **2**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Plan for delivery of on the job training	1.1. Objectives of training and competency to be achieved are identified. 1.2. Role in provision of training is clarified.
2. Deliver on the job training	2.1. Training objectives are explained to trainee. 2.2. Training is carried out using appropriate techniques: logical presentation; sound communication methods; explanation, demonstration; practice; feedback. 2.3. Trainee progress is monitored and constructive

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	feedback is provided to trainee.
3. Review training program	3.1. Training program is evaluated according to standard operating procedures. 3.2. Training data is recorded according to standard operating procedures. 3.3. Training is reported according to standard operating procedures. 3.4. Training is promoted according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • communicating effectively with the trainee • applying training techniques appropriate to the trainee and training requirements • giving feedback • monitoring and recording trainee progress • evaluating training program • recording training data • completing reports on training completed and training required • promoting training within the workplace
Required knowledge
Look for evidence that confirms knowledge of: • competencies to be achieved through the training • role of the trainer in the provision of training • training techniques to be used in delivering the training • reasons for selecting the chosen training techniques • procedures for recording trainee progress • reasons for providing positive feedback • procedures for evaluating training programs • reasons for evaluating training programs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• training records to be kept • procedures for recording training data • procedures for preparing training reports • procedures for promoting training in the workplace • reasons for promoting training in the workplace

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to assist in development and delivery of training in the workplace.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with assisting in the development and delivery of training in the workplace or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be

MEM17003A Assist in the provision of on the job training

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers assisting in the provision of on the job training to others while undertaking normal duties.

Application of the Unit

Application of the unit	This unit may involve the replacement of normal duties with training duties for limited periods of time. The individual would not be expected to be solely responsible for the assessment or reporting of a trainee's progress. Typical applications could include the provision of on the job guidance by a tradesperson to apprentices/trainees or by a production worker to other production workers/trainees. Where development of training programs is involved see Unit MEM17001B (Assist in development and deliver training in the workplace). **Band**: **A** **Unit Weight**: **2**

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine role of on the job training	1.1. Objectives of training and role of on the job training are identified in consultation with team leaders or other appropriate personnel.
2. Provide on the job training	2.1. Training is conducted using learning methods appropriate to the training objectives and learner. 2.2. Trainee progress is monitored and feedback is provided appropriate to the learning outcomes.
3. Report on trainee performance	3.1. Trainee's progress is reported according to standard operating procedure.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant information with respect to the training to be provided
- applying suitable training methods
- providing feedback to the trainee throughout the training process
- reporting on the trainee's progress
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- training to be delivered
- personnel to be consulted with respect to the training to be provided
- the individual's role in the provision of training
- objectives of the training
- the person(s) to be trained
- procedures to be followed when training individuals
- training location(s)
- tools, equipment, procedures, materials and resources
- training delivery methods, their applications, advantages and disadvantages
- feedback techniques
- reasons for monitoring trainee progress
- reporting procedures
- hazards and control measures associated with assisting in the provision of on the job training, including housekeeping
- safe work practices and procedures

MEM18001C Use hand tools

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers using a range of hand tools for a variety of general engineering applications.

Application of the Unit

Application of the unit	Applications may include hand tools used for adjusting, dismantling, assembling and finishing of items or components, and the finishing, cutting, scraping of metallic and non-metallic material to size and shape. This includes simple tapping and threading and routine maintenance of hand tools. This unit should not be selected if the hand tool is dedicated to a single operation or machine and if only a machine specific/customised tool is used. When using hand held power tools or power tools used for hand held operations, refer to Unit MEM18002B (Use power tools/hand held operations). **Band**: **A** **Unit Weight**: **2**

MEM18003C Use tools for precision work

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers using tools to manually produce work to precise dimensions and or finishes.

Application of the Unit

Application of the unit	Work is undertaken autonomously or in a team environment, using predetermined standards of quality, safety and workshop procedures. This unit involves using a variety of tools, instruments and power equipment to perform precision tasks on a range of metallic and non-metallic materials. As a guide, the types of precision work covered by this unit could include: • scraping machine beds to precise tolerances • broaching a tapered keyway • hand reaming the bore of a spigot or bush to a positive transition fit with shaft • core drilling (finishing) a blind locating hole to receive a mating pin • lapping a mechanical seal to fine finish • filing complex angles and mating edges • precision grinding using flex-drive attachment or similar Inspection and preventative maintenance of tools and equipment involves the visual checking of leads and connections, sharpening of cutting equipment and the repair of associated tools. Where precision measurement is required, Unit MEM12003B (Perform precision mechanical measurement) should also be selected. Where precision marking out is required, Unit

	statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Task requirements and specifications are determined and clarified with appropriate persons. 1.2. Processes/techniques are selected appropriate to task, specifications and material.
2. Prepare tools and tooling to produce precision outcome	2.1. Tools, accessories and consumables are selected appropriate to task, specifications and material. 2.2. Where applicable, cutting tool modifications required to produce outcome are determined using engineering principles. 2.3. Tools/tooling are prepared and modified as required.
3. Use tools to produce work to precise specifications	3.1. The work area is prepared and made safe. 3.2. The work piece is prepared and secured using appropriate method for selected operation/s. 3.3. Tools are used according to acceptable engineering principles, methods, applications and procedures to produce specified outcome to the required accuracy. 3.4. Tools and equipment are inspected for safe and proper working order before, during and after use. 3.5. Unserviceable tools/equipment are identified, repaired where appropriate, or marked for repair and/or disposal, according to prescribed procedure. 3.6. Tools are stored and maintained to ensure serviceability.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- obtaining and interpreting relevant drawings, specifications, instructions etc.
- preparing and making safe the work area(s) prior to the work being carried out
- using appropriate tools to produce the specified outcomes
- checking tools and equipment for safe and proper working order before, during and after use
- where appropriate, marking unsafe or faulty tools and equipment for repair
- where appropriate, repairing/maintaining unsafe or faulty tools
- checking condition of all tools and equipment for conformance to specifications and safe and proper operation prior to storage
- safely storing all tools and equipment in the appropriate location

Required knowledge

Look for evidence that confirms knowledge of:

- work to be undertaken
- specifications to be achieved
- appropriate tools, processes and equipment required to carry out the work to the required specifications
- reasons for selecting the chosen tools, processes and equipment
- hazards and control measures associated with using the selected tools, processes and equipment, including housekeeping
- safety procedures to be followed to ensure the safety of the individual and other personnel
- procedures for using the selected tools
- engineering principles to be applied during the use of the tools
- manufacturers' specifications of the tools and equipment selected
- safe and proper function of tools and equipment selected
- procedures for checking tools and equipment for correct and safe operation
- common faults and/or defects in tools and equipment used/selected
- procedures for marking unsafe or faulty tools and equipment for repair
- repairs/operational maintenance that can be made to the tools and equipment used/selected
- procedures for repairing/maintaining the tools and equipment used/selected
- procedures for checking tools and equipment prior to storage
- storage location of the tools and equipment used/selected
- procedures for storing tools and equipment used/selected

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to use tools to fashion or shape work to high levels of precision for dimension and or finish to specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using tools for precision work or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

EVIDENCE GUIDE	
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Processes	• Hand tools and hand held power tools are used to fashion or shape work to high levels of precision for dimension and or finish to specifications • Engineering techniques, methods and procedures may include cutting out, drilling, fitting, filing, reaming, lapping, broaching, burnishing, scraping, polishing, hand held grinding, chiselling
Precision outcomes	Specified tolerances, allowances, fits, finishes, alignments
Tools	Any tools or equipment required to achieve precision outcomes
Tool modifications	Tool shape, rake angle and clearance angles

MEM18006C Repair and fit engineering components

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit of competency covers mechanical repair and fitting trade skills including fault finding, repair of faulty components, manufacturing of new parts/components, and fitting mechanical engineering components into assemblies or sub-assemblies to specified measurements and tolerances and consistency with manufacturer's specification. Repair and fitting of engineering components is undertaken using mechanical engineering and maintenance principles, designated procedures, correct and appropriate tools/equipment, and safe working practices.

Application of the Unit

Application of the unit	This unit of competency applies to repair and fitting work undertaken by a tradesperson in a mechanical maintenance, service or workshop environment. Work is undertaken autonomously or as part of a team using predetermined standards of quality, safety and workshop procedures. Skills covered include determining the need for repair or replacement of parts and assemblies, and undertaking of repair, replacement, assembly and final fitting of items, sub-assemblies and assemblies. All specifications are interpreted from engineering drawings, detailed/technical sketches and associated data sheets. The unit includes the use of appropriate workshop practices. New components are manufactured as required to specifications. This unit has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade level skills in repair and fitting of engineering components. Skills covered by this unit are generally applied in occupational and work situations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	associated with trade level fitting and machining work. It may also apply to other mechanical trade occupational areas requiring high level repair and fit of engineering component skills. This unit has application in the MEM30205 Certificate III in Engineering - Mechanical qualification and other qualifications requiring a trade level of repair and fit skills. This unit does not address machining competencies and welding, if these are required, the appropriate units should also be accessed. Where additional or higher marking out skills are required, refer to MEM12006C Mark off/out (general engineering). The knowledge and skills associated with the installation, removal, repair or replacement of mechanical seals is covered by MEM18012B Perform installation and removal of mechanical seals. For high pressure fluid power seals, refer to MEM18020B Maintain hydraulic system components. **Band**: **A** **Unit Weight**: **6**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify scope of repair and/or fit required	1.1. Operational specifications for components are obtained from appropriate source and are interpreted and understood 1.2. Operation and condition of components are assessed against specifications 1.3. Faulty/worn components are identified 1.4. Causes of faults are determined using appropriate engineering principles, techniques, procedures, tools and equipment 1.5. Repair, replacement, adjustment or manufacture requirements are determined
2. Repair/replace faulty components	2.1. Where applicable, appropriate method of repair is determined 2.2. Where applicable, faulty components are repaired or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	adjusted to conform to specifications 2.3. Where applicable, replacement parts are selected from manufacturers' catalogues and assessed against specifications
3. Manufacture parts/components	3.1. Parts/component specifications are determined from appropriate source 3.2. Materials are selected to meet specification requirements 3.3. New components are produced in conformance to specifications using appropriate workshop practices 3.4. Completed components are inspected for compliance with dimensions 3.5. Where appropriate, component parts are marked for identification prior to assembly
4. Fit engineering components into assemblies or sub-assemblies	4.1. Fitting requirements and sequence of assembly are determined 4.2. Appropriate fitting principles and techniques are applied in the preparation and assembly of component parts using fastening equipment and methods which ensures conformance to specifications, operational performance, quality and safety 4.3. Using acceptable engineering practices, correct gland packing, jointing/gasket materials are selected and applied correctly in conformance to specifications and operational requirements 4.4. Correct lubrication requirements are determined by appropriate means and attended to where applicable 4.5. Final adjustments are performed on component assembly to meet operational specifications using acceptable engineering principles, fitting techniques and procedures
5. Check operation of repaired components/unit	5.1. Components/unit are checked under operational conditions for compliance to operational specifications using acceptable engineering principles to standard operating procedures 5.2. Out of specification modification/alterations are approved by appropriate authority and are recorded and documented to standard operating procedures 5.3. Final component assembly is commissioned and returned to service according to standard operating procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- obtaining operational specifications for the components
- assessing operation against specification and identifying faults
- checking components visually and dimensionally against the operational specifications using work site procedures
- checking repaired components visually and dimensionally for conformance to specifications
- adjusting components to achieve conformance to specifications where appropriate
- selecting replacement parts which conform to specifications
- preparing and assembling components using appropriate fitting techniques and principles
- where appropriate, applying gland packing, jointing or gasket materials, using acceptable engineering practices
- applying appropriate lubricants to the assembly using acceptable engineering practices, where required
- checking components for conformance to specification
- where required, adjusting components to achieve conformance to specifications
- where required, recording any approved modifications/alterations to work site procedures
- inspecting the final assembly and checking conformance to operational specifications
- where appropriate, returning the final assembly to service in accordance with work site procedures
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Required knowledge includes:

- tools and equipment to be used to dismantle the components
- consequences of having components that do not comply with operational

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
specifications • types of adjustment applicable to the components being repaired/fitted • appropriate methods of repair • features and/or dimensions upon which replacement parts are to be selected • process of identifying replacement parts from third party suppliers' catalogues • material properties required • manufacturing operations to be used in the production of new components • sequence of operations to be used in the production of new components • fitting requirements for assembling components • appropriate sequence of assembly tasks • purpose of using gland packing, jointing or gasket materials • reasons for selecting particular jointing or packing materials • applications of different types of lubricants • consequences of using inappropriate or no lubricant • the need to have approval for out of specification modifications • reasons for documenting out of specification modifications • return to service procedures • consequences of not following work site return to service procedures • hazard and control measures associated with repairing and fitting engineering components, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to repair and fit engineering components to specifications in both workshop and site environments. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	include: • obtaining manufacturer's and enterprise specifications for equipment, materials and components • checking components visually and dimensionally in the workplace including tolerances, allowances, clearances and limits • repairing and fitting components and assemblies in a workshop environment to required specifications • repairing and fitting components and assemblies in a production or other work site environment • manufacturing and fitting components including commissioning and return to service checking of component and equipment through first off production or other recognised return to service checking procedure • procedures for out of specification modification/alterations.
Context of and specific resources for assessment	This unit has been developed to support training in and recognition of trade level competency repair and fit of engineering components as applied to a trade level fitting and machining work environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	Typically, persons engaged in Engineering Tradesperson - Mechanical work are required to apply their repair and fit skills and techniques across a range of jobs and specifications. A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit. Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials
Guidance information for assessment	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with repair and fit of engineering components or other units requiring the exercise of the skills and knowledge covered by this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Manufacturers' catalogues	Manufacturers' catalogues may include any appropriate manufacturers' catalogues that contain replacement parts that conform with specifications and operational requirements
Appropriate workshop practices	Appropriate workshop practices may include: • drilling • scraping

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• filing • reaming • tapping • threading
Fitting principles and techniques	Fitting principles and techniques may include: • limits of tolerance • allowances and clearances • effects of wear, stress, temperature • types of fits - clearance transition interference • press fitting methods • force fits • shrink and freeze (expansion) fits • keyed fits • taper fits • lateral and radial forces • backlash • configuration and mating of parts • applied use of precision tools and measuring equipment • engineering components - shafts, single and multi-throw crankshafts, cams and journals, bearings and bearing surfaces, keys • squareness, roundness, concentricity, flatness, straightness, surface finish and angular correctness • datum and centrelines • tapping, reaming and broaching

MEM18010C Perform equipment condition monitoring and recording

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit covers undertaking condition monitoring.

Application of the Unit

Application of the unit	This unit applies where specialist monitoring activities are undertaken as part of a preventive maintenance or total productive maintenance plan or program. Work is undertaken autonomously or as part of a team environment. Monitoring is undertaken in workshop, laboratory or in situ environment; readings are undertaken to the accuracy of monitoring equipment limitations or to site specifications where applicable. Results are recorded/plotted to predetermined procedure and technique. All work and work procedures are undertaken to standard operating procedures and/or equipment manufacturers' recommendations. All work and work practices are undertaken to regulatory or legislative requirements. Where only routine maintenance checking and diagnostic skills are applied, other appropriate units should be accessed. **Band:** This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V). **Unit Weight**: **4**

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse condition monitoring results	1.1. Records/graphs/results of condition monitoring are examined and analysed and problem areas are identified. 1.2. Necessary calculations/computations are undertaken. 1.3. Appropriate reports/determinations of analyses are undertaken to prescribed site procedure.
2. Develop recommendations	2.1. Recommendations are developed based on previous history, results, specifications and legislative requirements. 2.2. Recommendations are reported to appropriate authority.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining results of condition monitoring of plant/equipment
- performing calculations to analyse condition monitoring data
- preparing reports based on the analysis of the condition monitoring data
- reporting recommendations to the appropriate authority
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- the operational specifications of the plant/equipment being monitored
- any trends and/or deviations from operational specifications
- numerical operations and calculations/formulae for data analysis within the scope of this unit
- the reasons for undertaking the identified calculations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the procedures for reporting the analysis of condition monitoring data • the previous history of the plant/equipment being monitored • any relevant legislative requirements • the operational specifications of the plant/equipment • the recommendations with respect to action to be taken • the reasons for the recommendations made • the expected effect of the recommendations on the operational performance of the plant/equipment • the procedures for reporting recommendations • the authority/person to whom the recommendations are to be made

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Assess wheel condition	1.1. Rim/tyre designs, constructions, codes, balancing, fastening principles and terminology are understood. 1.2. Fastening components are correctly assessed for damage and security. 1.3. Abnormal tyre wear is recognised and cause of fault is correctly determined. 1.4. Unsafe tyre and/or wheel condition is recognised and remedial action is determined.
2. Rectify and maintain wheel	2.1. Safety procedures associated with tyre/wheel removal, handling, inflation, assembly and disassembly and fastening are understood and adhered to. 2.2. Wheels/tyres are safely removed and replaced using standard procedures and appropriate tools/equipment. 2.3. Tools and equipment are correctly applied and used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4. Ballasting and/or inflation of tyres is performed safely and to specification. 2.5. Static/dynamic balancing of wheels is performed to specification. 2.6. Rim/tyre/tube faults are rectified to specifications, regulations or codes. 2.7. Rectification activities are accurately recorded. 2.8. Wheel bearings are correctly lubricated to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking task-related information
- checking for conformance to specification
- identifying damaged fastening components
- identifying abnormal tyre wear
- checking wheel fastening components for damage and security
- identifying corrective action to be taken for unsafe tyre and wheel condition
- removing and replacing wheels/tyres using appropriate tools and equipment
- using tools and equipment correctly and appropriately
- undertaking ballasting and/or inflation of tyres
- balancing wheels to specification
- identifying repairable rim, tyre and tube faults
- repairing faults in rims/tyres/tubes to specification
- recording work activities
- lubricating wheel bearings in accordance with specification

Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms knowledge of: • the design and construction of a variety of rims and tyres • the principles of fastening and balancing of wheels • the relevant codes and standards • the procedures for checking wheels for secure fastening • the reasons for checking fastening components for damage and security • the causes of abnormal tyre wear • examples and causes of unsafe tyre and wheel condition • the procedures for removing, handling, inflating, assembling/disassembling and fastening of tyres and wheels • the safety precautions to be taken when working with wheels and tyres • the tools, techniques and equipment required to carry out the above procedures • the procedures, tools, techniques and equipment for static and dynamic balancing of wheels • the reasons for selecting the chosen tools, techniques and equipment • the procedures, tools, techniques and equipment for repairing rim, tyre and tube faults • examples of unrepairable rim, tyre and tube faults • the procedures for recording repairs undertaken on rims, tyres and tubes • the procedures for lubricating wheel bearings • types of wheel bearing lubricant and their application • hazards and control measures associate with maintaining and rectifying wheels and tyres, including housekeeping • safe work practices and procedures

EVIDENCE GUIDE	
evidence required to demonstrate competency in this unit	competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with maintaining wheels and tyres, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different

MEM18045B Fault find/repair electrical equipment/components up to 250 volts single phase supply

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers locating and rectifying faults in equipment and components using up to 250 V single phase power where these are disconnected from the electrical supply.

Application of the Unit

Application of the unit	This unit covers the competencies required to locate and rectify faults in equipment and components using up to 250 V single phase power, where they are disconnected from their electrical supply. This would also typically cover plug-in appliances. Work is performed onsite. This unit also covers basic mechanical disconnection, dismantling and re-assembly of equipment components, enclosures, drives etc. This unit should not be selected if Unit MEM18046B (Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.) has been selected. When work involves disconnection and reconnection of fixed-wired equipment, Unit MEM18049C (Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.) must also be selected. **Band**: **A** **Unit Weight**: **4**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Locate fault	1.1. Equipment/*component* function is determined by reference to circuit diagrams, schematics, manual and/or consultation with technical adviser. 1.2. Where required, equipment is correctly isolated from power supply. 1.3. Where appropriate, built-in fault indicators and error codes are examined and correctly interpreted, and results are recorded to standard operating procedures. 1.4. Equipment/component is checked and tested using correct and *appropriate techniques*, procedures, tools and *test equipment*. 1.5. Check and test results are correctly interpreted and, where required, verified. 1.6. Equipment/component fault is identified and localised. 1.7. Equipment/component fault/s are correctly recorded to standard operating procedures.
2. Rectify faults	2.1. Using correct and appropriate techniques, procedures, tools and equipment, equipment/component/s are repaired, replaced or adjusted to specification or manufacturers' requirements. 2.2. Equipment/component is checked and tested using correct and appropriate techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications. 2.3. Where appropriate, rectifications report is recorded to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining circuit diagrams, specifications, schematics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- isolating electrical equipment/component from the power supply
- tagging and checking isolated electrical equipment/component
- locating and reading/recording built-in fault indicators
- checking and testing electrical equipment/component for correct operation
- verifying variations from specifications indicated by initial test results
- identifying and localising faults in electrical equipment/ components
- recording/reporting faults in the electrical equipment/components
- repairing, replacing or adjusting electrical equipment/components to specification
- referencing supplier catalogues
- confirming that the electrical equipment/components have been returned to specification
- recording rectification of the electrical equipment/ components

Required knowledge

Look for evidence that confirms knowledge of:

- operation and characteristics of active and passive components
- basic motor operation of various types
- function of the electrical equipment/component within the circuit
- hazards associated with the electrical equipment/component
- relevant regulatory requirements
- electrical equipment/component isolation procedures
- test equipment to be used to verify isolation of the electrical equipment/circuit
- errors indicated by built-in devices
- the procedures, tools, equipment and techniques to be used to test the operation of the electrical equipment/component
- reasons for selecting the chosen tools, equipment and techniques
- specifications of the electrical equipment/component
- variations between test results and specifications
- procedures for localising faults in electrical equipment/components
- procedures for recording/reporting faults in electrical equipment/components
- techniques/procedures for returning the electrical equipment/components to specification
- adjustments that can be made to electrical equipment/components
- procedures for confirming the electrical equipment/components have been returned to specification
- procedures for recording electrical equipment/component rectifications

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to fault find/repair electrical equipment/components up to 250 V single phase supply. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fault finding/repair of electrical equipment/components up to 250 V single phase supply, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. MEM18055B Dismantle, replace and assemble engineering components

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers dismantling and identifying faulty components, selecting replacements, and assembling engineering components into assemblies or sub-assemblies in accordance with standard operating procedures.

Application of the Unit

Application of the unit	This unit involves dismantling, checking, replacing and assembling engineering components in accordance with standard operating procedures. All specifications are interpreted from manufacturers' manuals, engineering drawings, detailed/technical sketches and associated data sheets. Tasks are undertaken utilising engineering principles, designated procedures, appropriate tools, equipment and safe workshop practices. Work is undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. Where fitting techniques and principles are required to assess component condition, and/or modify components to achieve precision fits, unit MEM18006C (Repair and fit engineering components) should also be selected. Where precision mechanical measurement is required, then Unit MEM12003B (Perform precision mechanical measurement) should also be selected. **Band**: **A** **Unit Weight**: **3**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Dismantle engineering	1.1. Engineering components are inspected and task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
components	requirements are analysed. 1.2. Appropriate tools and equipment are selected and component/s are prepared for dismantling. 1.3. Component is dismantled using standard operating procedures, tools and equipment. 1.4. Engineering components are clearly marked to aid reassembly.
2. Identify faulty components	2.1. Specifications for components are obtained from appropriate source and are interpreted and understood. 2.2. Damaged or faulty components are assessed against specifications according to standard operating procedures. 2.3. Faulty components are identified for repair, replacement or adjustment according to standard operating procedures.
3. Select replacement components	3.1. Where applicable, replacement and/or repaired parts are selected for reassembly according to standard operating procedures.
4. Assemble engineering components into assemblies or sub-assemblies	4.1. Appropriate techniques are applied in the preparation, assembly and adjustment of components using fastening equipment and methods which ensure conformance to specifications, operational performance, quality and safety of the completed assembly according to standard operating procedures. 4.2. Correct lubrication, packing, sealing materials are selected and applied correctly in conformance to job specifications. 4.3. Final component assembly is inspected, tested and adjusted as necessary for compliance with operational specifications and returned to use according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Look for evidence that confirms skills in:

- obtaining and interpreting all relevant instructions, standard operating procedures, drawings and specifications
- preparing component for dismantling
- dismantling components using appropriate techniques, tools and equipment
- marking component parts appropriately for identification purposes
- checking components visually and dimensionally for conformance to specification
- where appropriate, marking faulty parts for repair, replacement or adjustment
- selecting and confirming replacement parts to specifications
- obtaining and using all relevant supplier catalogues
- preparing and assembling components using appropriate techniques in accordance with standard operating procedures
- where appropriate, applying lubricants correctly to the assembly in accordance with specifications and standard operating procedures
- where appropriate, applying packing and/or sealing materials in accordance with specifications and standard operating procedures
- inspecting and checking the final assembly for conformance to specification
- where appropriate, returning the final assembly to use

Required knowledge

Look for evidence that confirms knowledge of:

- tasks to be performed in accordance with standard operating procedures
- procedures for dismantling the assembly
- tools and equipment to be used to dismantle the components
- procedures and required equipment for checking components for conformance to specification
- specifications of the components to be replaced
- features and/or dimensions upon which replacement parts are to be selected
- process of identifying replacement parts from "third party" suppliers' catalogues
- procedures for assembling components
- requirements of the assembly in terms of specifications, operational performance, quality and safety
- procedures for lubricating the assembly
- materials
- checks to be undertaken during inspection of the final assembly
- procedures for returning components/assemblies into use
- hazards and control measures associated with dismantling, replacing and assembling engineering components, including housekeeping

ELEMENT	PERFORMANCE CRITERIA
and document work instructions	with taskforce.
4. Perform hazard and risk analysis	4.1. Hazards and risks associated with project are analysed.
5. Monitor progress, respond appropriately	5.1. Progress is monitored and responded to in cooperation and consultation with stakeholders and taskforce.
6. Conclude engineering activities appropriately	6.1. Engineering activities are concluded in accordance with workplace and legislative requirements.
7. Evaluate career options and develop career development strategy	7.1. Career options are developed based on current engineering activities. 7.2. A portfolio or CV of current engineering activities that is also a framework for future engineering activities is developed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- research and evaluation
- review and maintenance of academic development, work experience, ethical practice, indemnity, negotiation, consultation and human relations with respect to the practice of engineering
- consultation with technical experts and specialists
- evaluation and ranking of engineering options for particular applications
- designing and planning documentation for particular applications
- documenting work instructions
- implementing occupational health and safety and environmental regulations, codes of practice and statutory requirements
- identifying and analysing hazards and risks
- monitoring and consultation with stakeholders and taskforce
- research and evaluation of engineering career options based on current engineering activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge
Look for evidence that confirms knowledge of: • political, social and environmental context and possible range of particular engineering activities • the effect of government policy on industrial education and training, immigration for industrial labour/ skills, globalisation, the quality movement, JIT and competitive or lean manufacturing on a range of applications using jobbing, batch, mass or continuous production • the significance, need for continual review and maintenance of academic development, work experience, ethical practice, indemnity, negotiation, consultation and human relations with respect to the practice of engineering • the significance and applicability of strategic industrial management, financial management, workteams, supervision and control, industrial relations, OHS&E, enterprise based agreements, chemical registers, noise abatement, industrial law to particular industrial applications and work environments • the application and affect of elements of engineering practice on particular engineering activities • methods for evaluation and ranking of engineering options including the use of decision making and problem solving tools (eg. Kepler Trebor method) • the significance of documented processes and outcomes performance measures in the context of client requirements, industrial, social, political and economic environments • documented work instructions in the context of the objectives of the engineering activity • negotiating principles • risk assessment tools such as "risk matrix' and "Monte Carlo" risk assessment • the significance of statutory requirements disaster management strategies • long term environmental and sustainability issues associated with the engineering activity • documentation and conclusion procedures • relevance of current engineering activities to future career options • the value of a portfolio in contributing to future career options in engineering

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Manage self	1.1. Manage own time and own processes in an engineering environment for planning and design purposes. 1.2. Manage learning opportunities in and outside the workplace. 1.3. Complete tasks / roles in a competent and timely manner.
2. Work effectively with team	2.1. Communicate effectively with others. 2.2. Recognise cultural diversity. 2.3. Use judgement and discretion as appropriate to the situation. 2.4. Work autonomously to procedures and guidelines. Develop and maintain trust and confidence of colleagues and clients/suppliers where appropriate. 2.5. Mentor others in specific areas of engineering focus.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	Accept appropriate responsibility.
3. Manage information	3.1. Locate and review relevant information on materials, products, processes or services including relevant legislation, codes and national standards. 3.2. Document processes and outcomes. Include OHS&E procedures.
4. Manage work priorities and resources	4.1. Prioritise competing demands to achieve personal, team and an organisation's goals and objectives. 4.2. Prepare, monitor and review work plans, programs and budgets. 4.3. Plan resource use to achieve targets.
5. Facilitate and capitalise on change and innovation	5.1. Work with others to introduce change. 5.2. Manage emerging challenges and opportunities.
6. Establish and maintain business relationships	6.1. Work in collaborative relationships with customers/suppliers. 6.2. Manage the procurement process.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- setting personal goals and plans
- completing allocated within time limits
- seeking feedback from internal and external sources
- providing clear and precise information to team members
- communicating in meetings
- using feedback to develop ways of improving performance
- accessing and using appropriate development opportunities
- team members are mentored in specific areas of engineering relevant to their work, where appropriate.
- obtaining all relevant legislation, statutory requirements and standards
- obtaining all relevant commercial documents

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- documenting the processes and outcomes
- processing and filing the masters and file copies of documents
- setting priorities
- using technology appropriately to manage work priorities and commitments
- work plans, programs and/or budgets are prepared in accordance with organisational procedures.
- monitoring, reviewing and modifying work plans, programs and/or budgets
- achieving targets by the effective and efficient use of resources
- introducing changes smoothly and with minimal disruption
- communicating changes to be implemented
- preparing plans for the implementation of authorised changes
- providing regular and complete progress reports to clients/stakeholders/suppliers/regulators
- procuring materials/supplies/services in accordance with organisational procedures

Required knowledge

Look for evidence that confirms knowledge of:

- techniques for ensuring that personal goals and plans reflect an organisation's plans and personal roles, responsibilities and accountabilities
- the way in which a person's performance acts as a role model for others
- ways in which personal goals are achieved and extended
- the importance and benefits of maintaining consistent personal performance
- the value of cultural diversity within the engineering team is recognised and the benefits
- internal and external sources of feedback on products, services and/or performance
- team members roles and responsibilities
- ways of gaining and using feedback to improve personal performance
- options for suitable professional development opportunities
- the role of mentor in the engineering team
- the mentoring process
- sources of relevant codes, standards, legislation and regulations
- the need and relevance for commercial information, including insurances and indemnities
- the procedures for documenting processes and outcomes
- the procedures for processing and filing master and file
- techniques for prioritising competing demands
- options for using various types of relevant technology and the ways they can be used efficiently and effectively to manage work priorities and commitments
- the procedures for preparing work plans, programs and budgets
- the authority responsible for authorising work plans, programs and budgets
- the procedures for modifying work plans, programs and/or budgets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• human and physical resources available • targets to be achieved • techniques for optimising resource utilisation • opportunities to introduce change • the benefits of the proposed change • the costs and risks associated with the proposed change • those affected by change • emerging challenges and opportunities in the area of engineering expertise • opportunities to implement change and innovation • reasons for implementing change and innovation • strategies for implementing change and innovation • customer needs • clients/stakeholders/suppliers/regulators and their business relationships • information required by clients/stakeholders/suppliers/ regulators • the suppliers of materials/services/components/ equipment, etc. • procurement procedures • the authority responsible for authorising the procurement of materials/supplies/services • commercial issues associated with the procurement process

assessment	combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with managing self in the engineering environment or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Engineering environment	Refers to a real or simulated environment dealing in engineering practices/functions/services.
Tasks/roles	Will be involved in self-directed application of knowledge - have substantial depth of knowledge in some areas and a range of skills for work tasks, roles and functions.
Cultural diversity	Refers to all aspects of diversity within the working environment such as gender, age, physical ability, sexual preference, ethnicity and culture.
Work autonomously	May work autonomously under broad guidance; may supervise others and may guide teams.
Appropriate responsibility	May have responsibility for planning and managing the work of others.
Relevant legislation codes and national standards	Refers to all the legislation that occurs in the work place such as equal employment opportunity legislation, occupational health and safety legislation and industrial relations legislation.
Document	Applies to the time frame of the design development. Agreed processes of documentation will be required and applied.
OHS&E	Occupational Health Safety and Environment recognizes that stakeholders in workplace activity include the workforce exposed to worksite conditions, materials and processes of the activity and the broader community exposed to environmental effects of the activity. Apply in accordance with organisational policies and statutory and regulatory requirements.

Unit Descriptor

Unit descriptor	This unit covers examining environmental issues and determine environmental strategies associated with engineering work.

Application of the Unit

Application of the unit	This unit applies to a variety of environmental management techniques, including taking inventory of existing environmental condition, documenting/reporting initial assessment, determine and document/report stakeholder's expectations for improvements on initial condition against possibilities for improvement; developing, evaluating&ranking strategies for sustainable development; implementing, monitoring&evaluating strategies; applying environmental management techniques to a new or existing product, process, system or service. This unit only has application in qualifications that are not points based. **Band**: **0** **Unit Weight**: **0**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine the existing environmental condition	1.1. Research, debate and report on case studies involving examination of environmental values. 1.2. Prepare an inventory of the existing environmental condition. 1.3. Record/report on the findings of the initial assessment.
2. Establish stakeholders' expectations	2.1. Determine expectations regarding each component of the environment. 2.2. Record and report on expectations for project/ operation integration.
3. Review existing	3.1. Determine variations between expectations and the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
environmental conditions against stakeholders' expectations	existing environmental conditions. 3.2. Establish the possibilities and options for improvement in the environment.
4. Develop and rank strategies to achieve sustainable development	4.1. Evaluates available options against assessment criteria to identify risks and priorities. 4.2. Develop an environmental report on strategies to implement the preferred options.
5. Implement strategies to achieve sustainable development	5.1. Implement strategies in consultation with appropriate stakeholders. 5.2. Collect and review data on implementation of strategies. 5.3. Evaluate progress and review strategies.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- undertaking debate on environmental values
- reporting on case studies involving examination of environmental values
- producing inventory of existing environmental conditions
- documenting the findings of the initial environmental assessment
- identifying stakeholders' environmental expectations
- integrating environmental expectations with the overall outcomes of the operation/project
- communicating expected outcomes to stakeholders
- documenting variations between expected and current environmental status
- implementing strategies for improving the environmental outcomes of the project/operation
- evaluating available options
- implementing selected sustainable development options
- developing environmental management plans
- monitoring the implementation of the environmental management plan
- collecting environmental data

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• reviewing and evaluating implementation strategies
Required knowledge
Look for evidence that confirms knowledge of: • environmental conditions of the workplace/process/ operation/procedure • the procedures for documenting environmental conditions • applicable environmental legislation and regulations • the legislative/regulatory reporting and recording requirements • the tests and testing procedures required to establish environmental conditions • stakeholders' views on specific options for environmental improvement • opportunities for integrating project/operation outcomes with environmental improvement options • variations between expected and current environmental status • options for improving the environmental status of the project/operation • the costs/benefits of the identified options • the concept of sustainable development • options for sustainable development • criteria for assessing the feasibility of available options • the risks and priorities associated with sustainable development • strategies to implement sustainable development options • the procedures for communicating sustainable development options to stakeholders • strategies to implement environmental development plans • the data necessary to evaluate the implementation of the environmental management plan • procedures for collecting and documenting environmental data • benchmarks against which implementation strategies can be evaluated

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to manage the environmental effects of engineering activities. Competency in this unit cannot be

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with managing the environmental effects of engineering activities or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Environmental values	Biophysical values eg. clean air, soil, water, biodiversity, ecosystem sustainability, sustaining the quality of natural and artificial environments, both indoor and outdoor Socio cultural values
Existing environmental conditions	Identification of environmental relations - mapping all the relations that will be used and affected by a particular activity in both space and time, analysing the resulting relational map for areas of intense impact, especially as a result of cumulative impacts; identification of physical, socio-cultural and economic conditions for life and for the existing or desired quality of life, identification of the socio-cultural values placed on the current environmental conditions; identification of both the negative and positive environmental impacts, the potential de-sustaining and sustaining aspects of the activity; identification of where engineering interventions and follow-up are possible
Environmental report	A description of the state of the environment, an assessment of the nature and consequence of impacts, identifiable trends, available and recommended actions, identification of responsibilities and potential change agents, cost of action; a critical review of the parameters of the environmental relations considered, the criteria by which they were evaluated, the process of developing responses and the achievement of the actions taken

MEM22012A Coordinate resources for an engineering project or operation

Modification History

Release 1 - New unit. Replaces MEM22003A, but not equivalent.

Unit Descriptor

This unit of competency covers the coordination of resources in accordance with operations or project plans and budgets formulated to meet business goals and strategic objectives.

Application of the Unit

This unit applies to engineering projects or operations that have a significant engineering component. It is suitable for people with responsibility for resources and those pursuing technical qualifications and careers at engineering technician level.

Prior or concurrently developed experience in mathematics, computer packages and file handling, engineering plant, facilities and services, materials, methods and processes is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

1	Contribute to operations or project planning and budgeting	1.1	Participate in policy and procedures development
		1.2	Review sustainability implications of resources, sourcing, processing, process waste, transport, distribution, life cycle and disposal
		1.3	Participate in planning for operations or project resourcing in the context of operations, project, strategic and business plans
		1.4	Participate in development of budgets
		1.5	Participate in development of performance indicators or parameters, monitoring and continuous improvement processes
		1.6	Participate in the development of resources information distribution and control systems, including the use of software systems
2	Evaluate supply chain relations	2.1	Identify supply value chain members and contribution to project or operation
		2.2	Assess supply agreements, quality and delivery parameters against performance indicators
		2.3	Employ value analysis of product or customer service costs
		2.4	Assess tender and contract documents for risk
		2.5	Assess supply chain communications for feedback on quality, supply chain efficiency and continuous improvement processes
3	Coordinate physical resources	3.1	Assess physical resource requirements and develop a resources distribution schedule consistent with the budget
		3.2	Coordinate efficient utilisation of physical resources
		3.3	Ensure compliance with work health and safety (WHS), regulatory and risk management requirements with particular emphasis on handling and use of resources

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	Contribute to project or operation human resources management	4.1	Identify labour and skills requirements based on assessment of timetable and project or operational requirements
		4.2	Program and communicate labour and skills to satisfy project or operational technical and budget requirements
		4.3	Organise labour and skill schedules to facilitate training
		4.4	Contribute to skills development and training arrangements
5	Contribute to budget development and control	5.1	Participate in developing budgets in the context of business and strategic operations or project plans
		5.2	Control delegated expenditure and cash flow
		5.3	Record resources utilisation and costs, including those for maintenance of assets
6	Supervise and review resources delivery	6.1	Apply systems thinking, constraints and contingency management, and continuous improvement techniques
		6.2	Monitor and review supply chain and coordinate continuous improvements
		6.3	Monitor physical and human resources and performance indicators and coordinate continuous improvement processes
		6.4	Monitor budget and coordinate response to threats
		6.5	Monitor sustainability and coordinate responses in accordance with sustainability policy and procedures
		6.6	Monitor information and resources control system and implement continuous improvement
		6.7	Employ software packages to achieve information handling, data processing, planning and control objectives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

7	Report and document resources coordination	7.1	Report in accordance with procedures
		7.2	Maintain documentation on planning, supply chain analysis, resources requirements analysis, budgets, delivery, continuous improvement and training, WHS and regulatory requirements, and risk assessment

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- participating and communicating with others
- negotiating and seeking consensus in support of strategic objectives
- evaluating:
  - supply chain, quality, delivery and capability
  - tender and contracting processes and documents
- coordinating physical and human resources
- coordinating and controlling resource budgets
- monitoring, reviewing and improving resources delivery
- planning for operations or project resourcing in the context of operations, project, strategic and business plans
- participating, cooperating and negotiating required for dealing with customers, contractors, designers and production management
- determining take off quantities for ‘bill of materials’ from drawings, specifications and contracts
- reporting and documenting objectives, key performance indicators, timetables and progress

Required knowledge

Required knowledge includes:

- typical sustainability implications for engineering projects or operations
- systems thinking, constraints and contingency management, and continuous improvement techniques
- procedures for preparing and monitoring project plans, business plans and budgets
- cost planning, cost-benefit analysis, life cycle costing, valuation and cost estimation procedures
- procedures for assessing implications of design on project implementation costs or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

manufacturability of product and maintainability of plant and process
- resources information distribution and control systems, including the use of enterprise resource planning (ERP) and materials resource planning (MRP) software
- planning and cost control software
- supply and value chain evaluation techniques, including contract, quality and delivery parameters
- engineering-related operating procedures associated with the use of resources
- financial impact of a variety of maintenance strategies on overall costs on typical tenders, contracts and law of contract provisions, relevant to engineering projects or operations
- ability to calculate quantities from drawings, specifications and contracts
- WHS requirements, including WHS Acts and regulations
- resources expenditure and cash flow control procedures
- procedures and requirements of financial records, including records of resources and costs for maintenance of assets

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to coordinate resources for an engineering project or operation within project plans and budgets. This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • participate, communicate, cooperate and negotiate strategic objectives, policy and procedures development • evaluate supply chain, quality, delivery, capability, tender and contracting processes and documents • coordinate and control physical and human resources and resource budgets • monitor, review and improve resources delivery • report and document resource planning and use.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Participate	Participation includes the requirement to communicate, cooperate, negotiate and work with others in accordance with the operations or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	project plans
Software packages	Software packages may include: • spreadsheets • databases • word processor • presentation • project management and cost control • system control and data acquisition (SCADA), MRPII, MRPIII and ERP
Value analysis	Value analysis is the determination of value-added, as defined by the ultimate customer at each step in the supply chain or production process or service provision. The value is often specified in contract documentation in terms of quality, cost, quantity and delivery schedule
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Continuous improvement implementation	Continuous improvement implementation may relate to: • plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance Improvement processes may include techniques, such as: • balanced scorecard • current and future state mapping

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Manage constraints and contingencies	Contingencies arising during operations or improvement projects are responded to in the context of constraints. Contingencies may threaten operations or improvement projects and planning for contingencies may be essential to maintain resources, skilled labour and schedules. Each contingency will have constraints on possible solutions. These may be: • financial, organisational, procedural or cultural constraints • physical constraints, such as limits to resources, limits to site access or logistical limitations
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer

MEM22013A Coordinate engineering projects

Modification History

Release 1 - New unit. Replaces MEM22004A, but not equivalent.

Unit Descriptor

This unit of competency covers the coordination of engineering projects within project plans and budgets. It includes monitoring and maintaining the project implementation plan, performance analysis and use of project management software.

Application of the Unit

This unit applies to people with significant coordination and facilitation responsibilities for engineering or related projects. The projects will usually have fixed term or purpose and involve specific engineering-related tasks, such as installation and commissioning of plant, design of equipment or major overhauls.

The coordination role covered by the unit includes monitoring of engineering and other technical performance parameters against the project plan as well as monitoring of other project parameters that impact on engineering and technical compliance of the project. These include finance, accounting, budgeting and control, resourcing, tenders, contracts, work health and safety (WHS), risk management, human resources, and legal and regulatory requirements.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

a unit of competency.	further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Review and confirm parameters of delegated project	1.1	Review designs, drawings, standards and established implementation plan and schedule to establish scope of the engineering project
		1.2	Review budget and control measures for delegated project
		1.3	Review project management structure, functional team relationships, communications and reporting lines
		1.4	Review materials, logistics and services procurement requirements
		1.5	Review the need for appropriate technical and professional assistance
		1.6	Review physical resources requirements
		1.7	Review human resources and skills development requirements
		1.8	Review compliance requirements for project, including WHS requirements, codes of practice, regulations, standards, legal and other regulatory requirements, and enterprise procedures
2	Coordinate implementation of delegated project	2.1	Assign and obtain team agreement to plans, communication arrangements, responsibilities, schedules and requirements
		2.2	Establish liaison arrangements with other functional groups
		2.3	Ensure efficient and documented arrangements for requests for further information (RFIs) from designers and other experts
		2.4	Confirm internal and external reporting requirements,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			including content, schedule and sign-off arrangements
		2.5	Confirm suppliers, contractors and delivery schedules, and any installation requirements
		2.6	Coordinate actions to overcome constraints and contingencies, including coordination with stakeholders and adjustments, if necessary, to plans and schedules
		2.7	Coordinate and monitor specialist and technical support services to meet schedules, budgets and performance requirements
		2.8	Maintain and monitor records of project tasks for accountability against objectives, schedule and budget
		2.9	Apply principles of continuous improvement to implementation
		2.10	Implement project management, resources control and budgeting software, when required
3	Report on outcomes	3.1	Record progress in accordance with procedures
		3.2	Supervise the completion of project, including sign-off and completion of required documentation of the project

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- coordinating technically complex engineering-related projects
- project management skills, including using resources control and budgeting software, as required
- reviewing, confirming and establishing parameters for project objectives, project plan, budget and scheduling related to tasks
- communicating, negotiating and reviewing with stakeholders throughout project duration
- coordinating and monitoring task schedules and resources; addressing contingencies and constraints, continuous improvement, problem solving and decision making; and adjusting short-term planning and rescheduling, as necessary

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- implementing systems thinking and concurrent engineering, as appropriate
- project planning and scheduling, including:
  - working within or establishing a project management structure
  - establishing functional team relationships, communications and reporting lines
  - ensuring compliance with business plans, financial objectives, budgets and customer brief
  - incorporating WHS and other regulatory requirements
- establishing accountabilities and responsibilities (including recording and reporting) for:
  - scheduling and implementation of project tasks
  - physical and financial resources and budget
  - the use of professional services and contractors
  - maintaining records of trades and industry contacts and sources of expert advice
  - records of procedures and regulatory compliance
  - personal and team skills development
  - maintaining task schedules, Gantt charts and other planning tools and resources
  - procedures for addressing contingencies and constraints, continuous improvement, problem solving and decision making, and adjusting short-term planning and rescheduling as necessary
  - organisational procedures for compliance with WHS, codes of practice, and other legislative requirements, environmental and social obligations, and ethical practice
  - risk management procedures

Required knowledge

Required knowledge includes:

- engineering and technology knowledge appropriate to the project
- context of project, including:
  - customer-supplier relationships
  - regulatory requirements and environment
  - materials resourcing and labour and skills supply arrangements
  - market and competitive environment
- human resources and skills development procedures and options for skill needs typical of engineering projects
- typical budget and control measures for engineering-related projects, including:
  - audit
  - tenders
  - contracts
  - schedules
  - budget categories and items:
    - personnel
    - materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - equipment procurement and maintenance
    - contractors
    - logistics
    - security
- requirements for and functions of technical documentation, graphics and specifications, meeting procedures, records and minute taking
- WHS Acts and regulations relevant to engineering projects
- risk management procedures, isolation and notification procedures in the event of irregularities or accident
- systems thinking, contingency and constraints management
- conflict resolution, problem solving and decision making

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to coordinate an engineering project This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • review, confirm and establish project objectives, plans and schedules • identify technical and engineering requirements of project from drawings, customer briefs, contracts and other appropriate sources • identify and manage stakeholders, including customers, suppliers, contractors and regulatory agencies • manage for contingencies and non-conformances • cooperate, communicate and negotiate effectively with stakeholders.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Personal responsibilities	Personal responsibilities within the project may be defined by: • role specification and delegations • workplace agreement or Award • negotiation with clients and/or supervisors • contracts • legal or regulatory obligations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• professional and ethical considerations • agreed operational or project requirements
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • environmental protection and planning law • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Stakeholders	Relevant stakeholders may include: • teams • contractors • support professionals and teams • technicians • functional groups • customers • suppliers
Records of project	Records of project may include: • tenders and contracts • schedules • personnel • resource allocations and financial management procedures • standard operating procedures, including maintenance procedures • WHS committee minutes and action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• risk management and mitigation • documentation and records of current safe work methods statements (SWMS), material safety data sheets (MSDS), work permits, standards and codes of practice • audits • meetings and communications • graphics and specifications

Continuous improvement implementation	Continuous improvement implementation may relate to:
	• plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance. It may include techniques, such as:
	  • balanced scorecard
	  • current and future state mapping
	  • measuring performance against benchmarks
	  • process improvement, problem solving and decision making
	  • data management, generation, recording, analysing, storing and use of software
	  • training for improvement systems participation
	  • technical training

Appropriate technical and professional assistance	Appropriate technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic dangers
	• professional and technical support for specific technologiesand equipment
	• professional services for:
	  • finance, accounts and tax
	  • insurance and legal,
	  • training and human resources

Constraints and contingencies	Constraints and contingencies may be: • financial, organisational, procedural or culture constraints • physical constraints, such as limits to resources, limits to site access or logistical limitations

MEM22014A Coordinate engineering-related manufacturing operations

Modification History

Release 1 - New unit. Replaces MEM22005A, but not equivalent.

Unit Descriptor

This unit of competency covers the skills and knowledge required to coordinate, monitor and maintain engineering-related manufacturing operations, including the coordination of purchasing, scheduling of materials and resources, achievement of budget with control of processes, physical resources, maintenance of operations and assets, performance analysis and process improvement, work health and safety (WHS) and risk management.

Application of the Unit

This unit applies to people with coordination and facilitation responsibilities for significant manufacturing operations.

Where the planning, scheduling and purchasing is done in an engineering or manufacturing organisation following lean principles, it is recommended that appropriate competitive systems and practices units of competency also be selected.

The unit applies where the coordination role involves application of engineering skills and knowledge to ensure safe, effective and efficient manufacturing and can include specific engineering-related tasks, such as installation and commissioning of plant, design of equipment and major overhauls.

The coordination role of the unit includes monitoring engineering and other technical performance parameters against the project plan as well as monitoring other project parameters that impact on engineering and technical compliance of the project. These include finance, accounting, budgeting and control, resourcing, tenders, contracts, WHS, risk management, human resources, and legal and regulatory requirements.

For coordination skills for time-defined engineering projects see unit MEM22013A Coordinate engineering projects.

Licensing/Regulatory Information

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM14091A	Integrate manufacturing fundamentals into an engineering task

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Develop the production plan	1.1	Coordinate development of, or obtain, demand forecast
		1.2	Participate in preparation of production plan in consultation with relevant stakeholders to meet quality, demand and delivery timelines within capacity and budget constraints
		1.3	Coordinate preparation of purchasing schedules
		1.4	Coordinate preparation of production schedules, including allowances for scheduled maintenance and any required shutdown periods
		1.5	Coordinate development of risk management and contingency procedures
		1.6	Review production plan with relevant stakeholders and adjust, as necessary
		1.7	Coordinate development of key performance indicators (KPIs) and monitoring procedures with relevant stakeholders
		1.8	Incorporate professional and technical assistance, as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			required
2	Coordinate the implementation of the production plan	2.1	Allocate responsibilities for purchasing and detailed scheduling, including communication of priorities and KPIs
		2.2	Coordinate materials and product flow and transfer operations to meet plan requirements, including buffer and emergency stocks, warehousing, stores and logistics
		2.3	Monitor quality and process control procedures
		2.4	Coordinate and monitor physical, human and financial resources, and budget to achieve production plan
		2.5	Review and monitor information and reporting procedures to stakeholders
		2.6	Address systems constraints and contingencies and adjust short-term planning and reschedule, as necessary
3	Monitor operational performance	3.1	Review actual indicators against KPIs
		3.2	Review manufacturing operations against production plan and other KPIs
		3.3	Participate in continuous improvement procedures, including lean operation principles and procedures, where implemented
		3.4	Monitor preventative and breakdown maintenance and review impact on operational performance
		3.5	Monitor implementation of risk management procedures during non-conformances and adjust, as required, in accordance with organisational procedures
		3.6	Report progress against production plan in accordance with procedures
		3.7	Provide documentation, data entry and analysis, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying equipment and process capacity from information supplied by designers and suppliers
- developing production schedule demand forecast from information supplied by customers, distributors, and sales and marketing departments
- preparing master production, schedule or project plan
- detailed operations planning, scheduling, production control and contingency measures that take into account:
  - facilities
  - services
  - plant and tooling
  - enterprise resource planning (ERP) software
  - process layout
  - use of automation
  - product manufacturability
  - asset maintainability
- preparing purchasing schedules and coordinating material supplies
- complying with WHS and regulations, codes of practice, standards and risk assessment
- coordinating manufacturing operation to be consistent with business plans and legal and regulatory requirements, and coordinating systems maintenance of manufacturing operation following improvement procedures
- use of software, such as ERP, system control data acquisition (SCADA) and spreadsheets, where installed
- coordinating manufacturing operations to schedule and priority
- maintaining quality and process control procedures
- coordinating problem solving and decision making, short-term planning and rescheduling to meet constraints and contingencies, as necessary
- maintaining records, reporting and documenting in accordance with procedures

Required knowledge

Required knowledge includes:

- manufacturing management systems
- forecasting, scheduling and production control procedures
- production systems, including assembly and process layouts, material and product flows, automation and control systems
- WHS requirements, codes of practice, regulations, standards, regulatory requirements, risk

management, current safe work methods statements (SWMS), material safety data sheets (MSDS) and work permits
- budgeting, costing and control measures
- quality and process control measures
- asset maintenance techniques and management options
- continuous improvement procedures
- problem solving and decision making, systems thinking, contingency and constraints management as applied to manufacturing
- requirements for and functions of technical documentation, graphics and specifications
- sustainability implications of manufacturing operations, products and processes, including social, environmental, resources and economic implications
- reporting and documenting procedures used in manufacturing, including role of standard operating procedures, engineering drawings and process control charts

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to coordinate, monitor and maintain an engineering-related manufacturing operation, including purchasing, scheduling of materials and resources and priorities. This includes working individually and as part of a team and recognising and complying with normal organisation control procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently:
	• prepare production or project plan in consultation with relevant stakeholders to meet WHS, quality, demand and delivery requirements within capacity and budget constraints
	• apply procedures to ensure compliance of manufacturing operations with WHS, environmental and other regulatory requirements
	• review and monitor facilities and services, including:
	  • plant, tooling and software
	  • process layout
	  • use of automation and automation safety
	  • product manufacturability and asset maintainability
	  • compliance requirements of WHS and regulations, codes of practice, standards, risk assessment and registration requirements for manufacturing plant.

Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
