Unit Descriptor

Unit descriptor	This competency covers making (or taking) readings/measurements in a variety of sites and locations, using common types of plant instrumentation. It also covers recording measurement results in a prescribed format, according to procedures and with the appropriate level of detail included in all reports.

Application of the Unit

Application of the unit	In a typical scenario an operator patrols the plant taking a range of readings to complete logs and check on the operation of the plant. The operator needs to interpret the display on the instrument and record the appropriate reading. As part of this process, they check that the instrument is within calibration (where appropriate) and make a judgement as to whether the reading is 'reasonable' or whether some action needs to be taken.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to controlling hazards in work area.	1.1. Identify hazards in work area 1.2. Take appropriate action to control risks according to procedures.
2. Identify appropriate measuring device readings.	2.1. Explain the need for calibration and where appropriate, confirm the calibration of the measuring device 2.2. Select appropriate units on the measuring device 2.3. Select appropriate scale(s) on the measuring device.
3. Perform measurements.	3.1. Identify the range of results that could be obtained 3.2. Identify and take account of relevant external factors 3.3. Perform measurements using appropriate techniques 3.4. Identify measurements outside the range of expected results 3.5. Take action on measurements outside expected range according to procedures.
4. Record results	4.1. Record readings accurately in the appropriate format 4.2. Record the results to the appropriate level of detail.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
• efficient and effective operation of plant/equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• hazard analysis • completing plant records • communication • problem solving.
Required knowledge
• basic units of measurement • measuring devices, including gauges, dip-sticks, thermometers and the like • graphs and scales • workplace Standard Operating Procedures (SOPs) related to this competency • typical problems with measuring equipment applicable to this competency • procedures for reporting or dealing with typical equipment problems and threats to safety.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise situations requiring action and then in implementing appropriate corrective action. While it is not expected that the operator will understand the full implications of readings outside the normal range, there should be awareness of the safety implications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	and the appropriate priority for response for such readings. Consistent performance should be demonstrated. In particular look to see that: • readings which are out of range or unusual/unexpected signs of problems or potential problems with the equipment/processes are recognised • appropriate action is taken in a timely manner • hazards are recognised and appropriate action is taken to control risks arising from such hazards. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus, with a walk-through forming part of the response. The assessment activities should include responding to a range of problems.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. It may be appropriate to assess this unit concurrently with units related to HSE.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit applies to reading process instrumentation in any plant or related situation. Readings may need to be made at heights, in wet or restricted conditions, or close to hot or moving equipment.

Dials and indicators	Typical dials and indicators include (select relevant items):
	• analogue dials, such as:
	  • pressure gauge
	  • rev counter
	  • temperature dial
	• digital readouts, such as:
	  • pH meter
	  • temperature probe
	  • ammeter
	  • flow meter
	  • weigh scales.

Calibration checks	Calibration checks could include: • checking the date that the next calibration is required, eg weigh scale, pressure gauge • using a calibration button on the instrument, eg zero button on an ammeter, calibration button on an electronic meter.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria

PMAOPS280B Interpret process plant schematics

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the interpretation of process plant schematics for a range of operations uses. It includes a wide range of schematics.

Application of the Unit

Application of the unit	In a typical scenario, an operator needs to undertake an activity on the plant, or related to the plant and uses a schematic as an aid in interpreting the plant and/or the plant systems or as an aid to explaining the plant/plant systems to another person (who may be another operator, technical specialist, member of management, maintenance worker or contractor). The operator would: • find relevant information from the schematic • mark up a schematic for their own use or the use of another person • sketch a schematic, using relevant symbols, as part of an explanation to another person or as an *aide memoir* for themselves This competency covers all general and common symbols and also includes those specific to the relevant plant which is the operator's area of responsibility. It includes those conventions which are applied by their place of work.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Relate schematic to plant.	1.1. Match items on schematic with items in plant 1.2. Determine relevant pipe and flange schedules 1.3. Identify sizes and types of minor equipment 1.4. Locate relevant instrument tapping points and control points 1.5. Identify direction of flow on schematic and in plant.
2. Identify points required to prepare plant.	2.1. Locate isolation and blanking points for any item of the relevant schematic 2.2. Identify drain/vent/purge points for any item on the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	relevant schematic 2.3. Identify trip system elements 2.4. Use schematic to check/develop work lists.
3. Describe the process with a schematic.	3.1. Use a schematic as the basis of a description of the process 3.2. Describe the process using a manual schematic 3.3. Walk through process identifying all plant items in process order 3.4. Identify key conditions/variables from a relevant schematic.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: • interpretation of symbols and other drawing elements • communication • problem solving
Required knowledge
Competence includes an understanding of process plant schematics and their application to the actual plant and process. In particular it includes a knowledge of: • symbols used on schematics by that organisation • schematic conventions, eg with particular reference to crossing and branching lines • indications of equipment/pipe specifications • indications of process conditions/limits • cause and effect interpretation as relevant

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to apply schematics to plant/process based situations. Consistent performance should be demonstrated. In particular look to see that: • critical process/plant features can be identified from a schematic • main process features can be described using a schematic.
Context of and specific resources for assessment	Assessment will require access to a plant over an extended period of time, or a suitable method of gathering evidence of ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	

Items	Items on schematic/in plant includes:
	• all major plant items such as:
	  • vessels,
	  • columns,
	  • reactors
	  • heat exchangers
	• minor plant items

Context	Schematics have various names and includes: • P&IDs (piping and instrumentation diagrams) • PFDs (process flow diagrams) • PEFs (Process Engineering Flow) • cause and effect diagrams/matrix Unless qualified in the unit, 'schematic' means a formally drawn, authorized schematic and may be hard copy or electronic.
Symbols	Symbols and conventions used in the schematics for the relevant plant area should be used. They may be Australian Standards symbols, the organisation's standard symbols or some other standard system:
Minor equipment	Minor equipment includes that equipment commonly described by size and type and includes: • pumps • valves • strainers • filters • instrumentation (local and remote) It typically would not include items such as vessels, columns, reactors or heat exchangers which would be major plant items.
Plant preparation	Plant preparation entails all that activity which may be required to render the plant safe for non-operational work (which is typically maintenance but may be other work) and includes: • isolations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• blank/spade/spectacle blind, breakout spool locations • draining • purging • blanketing • venting • ventilating • locating plant, equipment and services - above ground • locating below ground (or otherwise obscured) pipeline and services.

Key conditions	Key conditions includes:
	• normal range of process conditions such as
	  • level
	  • pressure
	  • flow
	  • temperature
	• alarm conditions/values
	• trip, ESD values

Work lists	Work lists may include: • punch list • tag numbers • spade/blind lists • similar lists
Manual schematic	Manual schematic may include: • a hand drawn sketch of the part of the process of interest • a mark up of a formally drawn schematic Schematics may be hard copy or electronic.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• reporting problems outside area of responsibility to designated person.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS350B Match and adjust colour

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the use of colour matching samples in comparing the colour of a product to the standard and then recommending adjustments to be made to bring the colour into the acceptable range.

Application of the Unit

Application of the unit	In a typical scenario, a technician prepares a colour sample, compares it to the standard and then recommends adjustments (if required) in order to bring the product's colour within the acceptable range. This may be done using a 'colour computer' or by eye. The adjustments would be by making additions to the batch to bring it into range without overshooting. The 'standard' might be for a product being manufactured or for a new product being developed. The ability to recommend adjustments is the critical element of this unit as this requires a significant understanding of colour. The technician would: • prepare a colour sample • analyse the colour sample and compare it to the standard • recommend adjustments to bring the batch into colour specification. Generally the technician would work alone while colour matching, but must be capable of communicating effectively with the relevant operating personnel.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare colour sample.	1.1. Identify required sample properties 1.2. Select appropriate sample preparation method 1.3. Identify required sample preparation conditions 1.4. Adjust and control sample preparation conditions 1.5. Prepare colour sample.
2. Compare colour sample to standard.	2.1. Identify light conditions for comparison 2.2. Compare colour sample to standard using 'colour computer' as required 2.3. Compare colour sample to standard by eye as required 2.4. Reconcile data from each comparison if appropriate.
3. Recommend adjustments to batch.	3.1. Estimate the colourant additions needed to bring batch to standard 3.2. Recommend additions to relevant personnel as appropriate 3.3. Recommend additional mixing/processing requirements to procedure 3.4. Repeat sample preparation, colour matching and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	adjustment until correct colour is obtained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
This competency requires the skills of: • discrimination • analysis • interpolation and extrapolation of data
Required knowledge

Competence includes an understanding of colour and how the pigments used interact with the process to develop the required colour in the final product. In particular it includes the ability to:
• recognise hue, value and chroma (or colour/tone, lightness/shade and saturation) differences
• describe the effect of a change of light conditions on the appearance of the colour for the pigment combination used as relevant to the product
• recognise colourant addition and colourant dispersion differences
• make judgements based on:
  • perceptibility
  • acceptability/tolerance
  • grade 1, 2 or 3 match as required by specification
• describe the impact of opacity on colour as relevant to the product

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • estimates of required adjustments are consistent with the colour match data • adjustments are made cautiously and without overshooting • adjustments are made efficiently with a minimum number of adjustments to bring the batch into specification. These aspects may be assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the

EVIDENCE GUIDE	
	past incident history of the plant.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit of competency includes the use of items of equipment required for colour sample preparation and colour matching. Sample properties may include: • surface finish • gloss • thickness • opacity • substrate properties.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	Sample preparation methods may include: • draw down • spraying • brushing. • moulding • casting • milling • pressing. Sample preparation conditions may include: • temperature • drying rate • time • pressure • volume. Colourants may include: • pigments • masterbatches • tinters.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS402A Respond to abnormal process situations

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit applies an in depth knowledge of process and plant to the recognition and solving of more complex/less obvious process/plant/ technical problems.

Application of the Unit

Application of the unit	In a typical scenario, a senior technician or para-professional investigates a plant unit/part of the process which is not performing as well as it has/as expected. They methodically investigate this technical problem, come to a conclusion as to the cause and then initiate appropriate corrective action. The corrective action may well be beyond the scope of competency and responsibility of the person to implement. This unit applies to problems which are not solvable by direct observation and require systematic investigation: • damage to/wear of tower trays • internal leaks of heat exchangers • collapse of/channelling in tower/column/vessel packing The technician would: • clarify the problem • analyse problem cause(s) • recommend a solution to the problem. Generally the technician would work alone for this unit, although the ability to communicate with all internal and external stakeholders is vital.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	*MSAPMSUP390A*	*Use structured problem solving tools*

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Recognise there is a problem.	1.1. Compare current performance with expected/historic performance 1.2. Identify plant/process areas with poor performance 1.3. Check the impact of routine adjustments to improve performance 1.4. Identify problems not solved by the routine solutions.
2. Define the problem.	2.1. Apply problem isolation techniques to isolate problem to a small part of the plant/process 2.2. Quantify the effect of the problem in operational terms 2.3. Postulate possible causes of the problem 2.4. Identify types of evidence for each possible cause 2.5. Investigate problem to accumulate evidence of cause type 2.6. Analyse data to confirm cause of problem 2.7. Determine the level of severity of the problem, priority of any required action.
3. Develop solution.	3.1. Discuss possible solutions to cause with relevant people 3.2. Determine whether a quick fix is needed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.3. Arrange for implementation of quick fix if required 3.4. Check effectiveness of quick fix and take appropriate action 3.5. Agree required solution with appropriate people 3.6. Arrange for required solution to be undertaken in appropriate time frame 3.7. Follow items initiated through until final resolution has occurred 3.8. Check effectiveness of solution and take appropriate action 3.9. Complete reports to procedure.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
This unit requires skills of: • analysis • problem solving • negotiation • communication • basic mathematics
Required knowledge
Competence includes a deep understanding of: • plant equipment, its characteristics and limitations • impact of variations in plant/process and the distinctive signs of each variation • process chemistry, physics and biochemistry as relevant, eg to the extent of writing chemical equations and identifying factors controlling reaction rate and yield or equivalent • problem isolation techniques • problem analysis techniques • organisation approval processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include a range of problems, problem causes and environments. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual problems and should include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to define and analyse the problem as well as deal with the stakeholders. The stakeholders should be satisfied with the solution, as well as the solution being technically sound. Consistent performance should be demonstrated. In particular look to see that: • different types of problems can be analysed and resolved • different types of stakeholders can be satisfied • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken. These aspects may be best assessed using a range of scenarios/case studies/what-ifs. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past history and similar sources.
Context of and specific resources for	Assessment will require a suitable method of

PMAOPS405B Operate complex control systems

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the operation of a complex control panel. These controllers use a large number of control loops and a broad range of control algorithms. The panel will control entire plant areas and multiple products/ process streams. It will typically be located off plant in a control room and will require managing multiple complex tasks.

Application of the Unit

Application of the unit	In a typical scenario an operations technician uses a complex process control system to operate and monitor an entire plant area consisting of several plant units/systems. This control system would typically be an advanced control system and may include operation of simpler control systems as part of its operation. This panel technician/central control room operator has an overall responsibility for the operation of all units of equipment within the entire plant area and may include optimization of the area using the control system. As such they often also take a lead role as part of the operating team. Competencies required by this role other than panel competencies as such are not covered by this unit. The operations technician would: • monitor and operate equipment in the entire plant area • solve process problems related to the plant area • liaise with other plant areas as necessary • use the advanced control features of the control system Generally the operations technician would be part of a team during start up, shut down and normal operating conditions and would be expected to be capable of demonstrating competence in all parts of this unit. He/she would be taking a leading role in liaising and cooperating with other members of the team. Typically the panel operator will liaise with other 'outside operators', however this unit does not preclude the situation where the panel operator may also undertake 'outside' functions.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use operator interface.	1.1. Use keyboards, track ball and monitor and/or stand alone controllers to access control system/panel 1.2. Monitor the process using the operator interfaces 1.3. Select appropriate controller modes 1.4. Access historical data and information 1.5. Acknowledge messages and alarms 1.6. Access advanced control features as appropriate
2. Access control information.	2.1. Obtain relevant data and information from the control system by applying systems knowledge 2.2. Identify the status of individual pieces of equipment from the control panel and use information to identify

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	potential faults 2.3. Minimise fluctuations and variations in process through the interpretation of existing trends and control schematics 2.4. Determine the overall operating effectiveness of the plant area related to the required targets for the area 2.5. Record process variations/irregularities to procedures.
3. Control process variations and monitor operations.	3.1. Use historical data to assist the identification of problems 3.2. Process available information to identify potential faults 3.3. Undertake required set point/output changes to meet plant area and process requirements 3.4. Adjust production in response to test results and control panel information 3.5. Monitor key process and environmental variables and take appropriate action 3.6. Adjust controller settings in accordance with procedures 3.7. Use advanced control features as appropriate 3.8. Optimise entire plant area in accordance with guidelines 3.9. Undertake calibration operations as appropriate 3.10. Coordinate with stakeholders external to the plant area as appropriate 3.11. Record adjustments and variations to specifications/schedules 3.12. Communicate to appropriate personnel as required.
4. Facilitate planned and unplanned process start-ups and shut-downs.	4.1. Select and apply procedures to planned startup and shutdown processes 4.2. Select and apply procedures to unplanned shutdown processes 4.3. Implement all required emergency responses 4.4. Communicate necessary information to all personnel affected by events 4.5. Log all required information.
5. Respond to alarms or out of specification conditions.	5.1. Identify system(s) affected by the alarm or condition 5.2. Interpret alarms and prioritise actions to be taken

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	5.3. Respond to the alarm or incident by following procedures 5.4. Deal with any out of specification material in accordance with procedures 5.5. Communicate the problem/solution to appropriate personnel 5.6. Record the information as required 5.7. Provide details of the alarm and action taken to the next shift at change over 5.8. Follow the incident up see that appropriate action has been taken.
6. Control hazards.	6.1. Identify hazards in the production/processing work area 6.2. Assess the risks arising from those hazards 6.3. Implement measures to control risks in line with procedures and duty of care
7. Resolve other problems within scope of responsibility.	7.1. Identify possible problems in equipment, control systems or process 7.2. Determine problems needing action 7.3. Determine possible fault causes 7.4. Rectify problem using appropriate solution within area of responsibility 7.5. Follow initiated items through until final resolution has occurred 7.6. Report problems outside area of responsibility to designated person.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence includes the ability to distinguish between causes of problems/alarms/fault indications such as: • instrument failure/malfunction • electrical failure/malfunction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- mechanical failure/malfunction
- equipment design deficiencies
- product parameters (temperature, flows, pressure and levels)
- process control system malfunction
- power/utility failures
- software problems
- multitasking.

An ability to communicate with other work groups and personnel during the operation and monitoring of this panel is considered to be an essential element of this unit of competency.

Required knowledge

The knowledge referred to in the Evidence Guide for this unit includes:

- advanced control features
- interactions between control loops
- interactions between plant units within the entire plant
- the architecture and location of the process/production equipment
- specific plant process operations
- interactions between plant items/processes
- product specifications and tolerances
- systems operating parameters
- system integrity limits
- process control philosophies and strategies
- emergency shutdown procedures
- process specific physics, chemistry and mathematics
- relevant chemistry of the process to the level of writing chemical equations and identifying and manipulating factors controlling rate of reaction and yield (or equivalent physics for a physical process/biochemistry for a biochemical process) - chemistry to include both intended products and interfering reactions (eg salts, hydrates)
- basic science of upstream and downstream processes
- interactions between plant area and other value stream members
- impact of external factors, eg variations in weather, feed etc
- complex process drawings, eg P&ID, PFD, cause and effect
- basis of control for the plant/s
- instrumentation and control systems including feed forward, feed back and open control
- instrumentation and control system components (eg relevant primary sensing devices, final control elements, transducers/transmitters)
- control loops (including PID control, set points, controlled variable, indicated variable)
- interaction between multiple control loops (including cascade control)
- impacts of changing controller settings and the limits within which changes can be made
- effective communication techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• organisation procedures • UPS and its applications and use.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations, which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios, role plays and 3D virtual reality interactive systems. In the case of evacuation training or of training for competencies practiced in life threatening situations, simulation may be used for the bulk of the training. This unit of competency requires an application of the knowledge contained in the use of the process control system and its integral equipment, to the level needed to maintain control and recognise and resolve problems. This can be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate responses. The emphasis should be on the ability to stay out of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of equipment/processes needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations, which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require access to a process control system over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork, communication and leadership units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicized wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit of competency includes all such items of equipment and unit operations which form part of the control system. For your control room this may include (select relevant items): • process control systems (eg Distributed Control Systems) • use of multiple control systems • personal computers • printers • fire and gas detection/protection systems • emergency shutdown systems • communications systems. Typical problems for your plant may include: • operating without advanced control features • loss of power/utilities • analysing failure modes • variation/loss of feed • unstable control of pressure, temperature level and flows • control equipment failure • process plant trips • change in atmospheric conditions (rain, temperature, wind, lightning) • emergency situations.
Alarms or abnormal conditions	Alarms or other abnormal conditions includes: • emergency, including emergency shut down • partial or complete controller failure.
Other problems	Other problems includes: • problem solving control functions
Appropriate action	Appropriate action includes: • determining problems needing action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS410B Monitor remote production facilities

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	In a typical scenario, a technician in a central location looks after the operation of a remote production facility. This may be achieved by using ground based or satellite communications systems. The competency covers the operation and management of remote plants, treatment stations or satellite locations.

Application of the Unit

Application of the unit	Typically these stations may include: • wellheads • separation facilities • utility systems • remote pumping and compression stations • remote plants • fire and gas safety systems and associated piping and instrumentation. The operations technician would: • identify and rectify operational problems • conduct well testing • conduct critical function testing. Control of a remote production facility may require operation and process monitoring via a remote control system. Generally the operations technician would operate independently and be expected to be capable of performing all parts of this unit. However they may be part of a team during critical inspections or maintenance operations. At all times they would be liaising and cooperating with other members of the team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	1.1. Identify work requirements 1.2. Identify and control hazards 1.3. Coordinate with appropriate personnel
2. Conduct product separation.	2.1. Centralise and prepare well products for initial multi-phase separation, storage and distribution as determined by the required production targets and objectives 2.2. Use multi-phase high and low pressure separation, utilising heat and chemical treatments, to effectively separate the product 2.3. Monitor the separation process via control room operation to ensure all product flows, pressures and temperatures are maintained within correct operating parameters 2.4. Operate and monitor all required utility services to assist in the separation process.
3. Recover and measure product.	3.1. Transfer treated waste water from the separation process for further treatment as required prior to re-injection or disposal 3.2. Ensure that all available product is recovered and all waste water

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	is made safe for further use or disposal within environmental limits 3.3. Measure and sample produced gas as required 3.4. Measure collected product to determine the level of available stocks for further transfer and for accounting purposes 3.5. Take appropriate action.
4. Transfer product.	4.1. Check transfer process equipment required to ensure it is working within agreed operating parameters 4.2. Transfer product to a processing facility for further treatment and enhancement 4.3. Monitor transfers and take appropriate action 4.4. Log and record all product transfers and communicate as required 4.5. Distribute data collected to appropriate personnel.
5. Isolate and de-isolate plant.	5.1. Isolate plant 5.2. Make safe for required work 5.3. Check plant is ready to be returned to service 5.4. Prepare plant for return to service.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence includes the ability to isolate the causes of problems to an item of equipment within the compressor system and to be able to distinguish between causes of problems/alarm/fault indications such as: • product contamination • instrument failure/wrong reading • electrical failure • mechanical failure • operational problems • pressure losses and leakage.
Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
The knowledge referred to in the Evidence Guide for this unit includes: • all items on a schematic of the remote system and the function of each • nature/condition of materials entering and leaving each stage of the process • changes which have occurred in that stage and why they have occurred • methods of changing production rates and the advantages and disadvantages of each • effect of specific climatic and environmental factors • water testing and gas break through testing techniques • storage and transfer techniques related to the transport of oil, gas or water. • principles of operation of plant/equipment • physics and chemistry relevant to the process unit and the fluids involved • process parameters and limits, eg temperature, pressure, flow, pH • duty of care obligations • hierarchy of control • communication protocols, eg radio, phone, computer, paper, permissions/authorities • routine problems, faults and their resolution • relevant alarms and actions • plant process idiosyncrasies • correct methods of starting, stopping, operating and controlling plant • corrective action appropriate to the problem cause • function and troubleshooting of major components and their problems • types and causes of problems within operator's scope of skill level and responsibility.

PMAOPS411B Manage plant shutdown and restart

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the co-ordination of the shutdown and restarting of a production process in a safe and efficient manner due to a planned or an unplanned shutdown or emergency situation. It does not apply to individual plant operators shutting down individual production units or following directions during a shutdown, as this is included in the normal unit of competency for operating that production unit.

Application of the Unit

Application of the unit	In a typical scenario, a complex and integrated plant (usually but not necessarily large and continuous) needs to be shut down for some reason. Shutting down is a complex process and is more than the simple turning off of a switch. This competency would typically be exercised by the leading plant technician on a shift. This unit requires the exercise of discretion as the plant technician's responses are governed by the cause of the shutdown and the plant's responses to that. They are required to adapt normal practice, within the overall guidelines, to the current situation to obtain the best outcome. This competency requires the coordination of all personnel involved in the shutdown to ensure it happens in as orderly a fashion as possible and that the plant is left in the best condition possible for a quick restart. The person exercising this competency needs to balance the varying requirements to ensure the shutdown occurs with maximum safety to personnel, plant, the environment and the business's productivity (in that order).

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage shutdown sequence.	1.1. Check and verify safety systems to ensure that the unit has been made safe 1.2. Identify the reason for, or cause of the shutdown by troubleshooting the system and by utilising all available data and information systems 1.3. Obtain confirmation of the identified shutdown from field based operators to verify both the nature and the reliability of the shutdown 1.4. Rectify or initiate procedures to rectify the fault or shutdown cause through either repair of the operational fault or readjustment before returning the system to start-up status.
2. Conduct start-up process.	2.1. Satisfy all start-up permissives prior to start- up process being commenced 2.2. Conduct start-up according to procedures and in a safe and efficient manner, ensuring a return to steady state operation is achieved.
3. Document shutdown and	3.1. Complete all logs and workplace documentation relating to the shutdown/start-up process, ensuring all details, actions and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
start-up process.	responses are accurately recorded 3.2. Record any further ongoing production problems and report to appropriate persons or authority.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence includes: • efficient and effective planning of shut down/start up • hazard analysis • completing plant records • communication • problem solving
Required knowledge
Demonstration of competence in this unit must include knowledge of the following: • principles of operation of plant/equipment • physics and chemistry relevant to the process unit and the materials processed • process parameters and limits, eg temperature, pressure, flow, pH • duty of care obligations • hierarchy of control • communication protocols, eg radio, phone, computer, paper, permissions/authorities • routine problems, faults and their resolution • relevant alarms and actions • plant process idiosyncrasies • all items on a schematic of the plant item and the function of each • correct methods of starting, stopping, operating and controlling process • corrective action appropriate to the problem cause • function and troubleshooting of major components and their problems • types and causes of problems within operator's scope of skill level and responsibility. • architecture of the process/production systems • the plant • product specifications and tolerances • systems operating parameters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• process control philosophies and strategies • the process • emergency shutdown procedures • physics, chemistry and mathematics relevant to the process • outside process knowledge and equipment operation as is relevant to the practical operation of equipment at that job level.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of equipment/processes needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. In a major hazard facility, it may be appropriate to assess this unit concurrently with: • *MSAPMOHS200A Work safely*. The person undertaking this competency is expected to be able to work under and manage situations of high pressure, in order to ensure the safe and efficient management of the control room production process and the safety of plant employees.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	Causes of shutdown may be: • planned, eg for maintenance or other planned work • unplanned, eg in response to a plant upset or equipment failure • emergency, eg in response to an automatic shutdown sequence or plant trip. The shutdown may be: • shutdown 'to cold', eg complete plant shutdown and purging of all process materials from equipment • short shutdown to allow minor work 'warm shutdown', eg partial shutdown, with retention of some or all of process materials • managing a plant trip and restart 'hot shutdown', eg short duration shutdown in response to a plant upset or trip This competency also includes: • coordinating the shift team • implementing emergency procedures • using the permit to work system (for repairs required). • This competency may apply to: • panel technicians • outside technicians • technicians seconded to a shut down role • other relevant personnel All operations are performed according to procedures.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS450B Solve colour problems

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit applies a knowledge of colour to solving colour problems both for external customers and in the plant (ie colour is/appears to be wrong).

Application of the Unit

Application of the unit	In a typical scenario, a technician receives a complaint arising from either an external customer or an internal customer, such as a production manager or team leader. The complaint concerns colour which is not as the complainant expected it to be. The technician gathers the appropriate data, then makes an analysis as to the cause of the problem and makes recommendations as to how this problem might be rectified. The complaints may include: • the colour as made does not match the standard • the colour as provided does not match the standard • the colour initially appeared correct, but is now unsatisfactory. The technician would: • clarify the problem • analyse problem cause(s) • recommend a solution to the problem. Generally the technician would work alone for this unit, although the ability to communicate with all internal and external customers and stakeholders (simply referred to as 'customers') is vital.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist customer to articulate problem.	1.1. Clarify customer perception of problem 1.2. Assess opportunities for a targeted response to meet customer needs 1.3. Identify the rights and responsibilities of the customer and effectively communicate these to the customer 1.4. Clarify the history of the problem 1.5. Define problem and complete records.
2. Analyse possible problem cause(s).	2.1. Examine the colour of the object/surface and: 2.2. compare to standard to determine if colour faulty 2.3. determine potential causes if colour faulty 2.4. Analyse history of problem for potential causes 2.5. Question customer to clarify issues revealed by examination 2.6. Take samples and arrange for tests as appropriate 2.7. Determine range of possible causes consistent with data available 2.8. Determine most likely cause(s) of defined and observed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	problem.
3. Satisfy customer needs.	3.1. Determine appropriate strategies and activities to resolve problem 3.2. Negotiate proposed solution with customers and other relevant parties 3.3. Identify potential areas of difficulty in customer service delivery and take appropriate actions to address them 3.4. Follow items initiated through until final resolution has occurred 3.5. Meet customer needs within the scope of area of responsibility 3.6. Report problems outside area of responsibility to designated person 3.7. Follow procedures where a decision is made to terminate a service 3.8. Complete reports to procedure.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
This competency requires the following skills: • communication • interrogation • observation • analysis
Required knowledge
Competence includes an understanding of colour and the interaction of colour components during processing and in application. A knowledge of the impact of weathering/aging on colour as appropriate to the product is also required. In particular it includes the ability to: • distinguish between colour variations caused by materials or processing errors • distinguish between colour variations caused by faulty surface preparation or application • interrogate customers to obtain all relevant information, but in a manner which is pleasing to the customer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• explain the causes of colour variation in a manner which will be understood and accepted by the customer • describe the causes and remedies of common problems such as those selected in the Range Statement.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment for this unit of competency will be using real or simulated colour problems. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include a range of colours, problem causes and environments. Simulation may be used for assessment of this unit of competency. Simulation should be based on the actual colour problems and should include the use of case studies/ scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what if scenarios.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to define and analyse the problem as well as deal with the customer. The customer should be satisfied with the solution, as well as the solution being technically sound. Consistent performance should be demonstrated. In particular look to see that: • different types of problems can be analysed and resolved • different types of customers can be satisfied • the range of possible causes can be identified and analysed and the most likely cause determined

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• appropriate action is taken. These aspects may be best assessed using a range of scenarios/case studies/what-ifs. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past history and similar sources.
Context of and specific resources for assessment	Assessment will require a suitable method of gathering evidence of colour problem solving ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit of competency includes colour problems both in the plant and within the customer site (ie it includes both internal and external customers). This may include (select relevant items): • batches during manufacture do not conform to colour specification • colour as supplied to customer does not conform

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• colour as applied to substrate does not conform • colour variation within the product • colour was initially satisfactory but has changed over time • other colour problem. Typical problem causes may include: • wrong colourant • wrong colourant amount • incorrect processing/mixing/dispersing • incorrect substrate preparation (eg of painted/printed surface) • incorrect application (eg of paint/ink) • incorrect colour measurement and testing • defect standard • process changes and variations.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS500A Optimise production systems

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the application of in depth knowledge of process and plant to the optimisation of complex operating production systems.

Application of the Unit

Application of the unit	In a typical scenario, a senior technician reviews the operation of a complex production system or whole production plant, with a view to improving the efficiency of operation of the process to improve the yield, utilization of services or production of waste. The operation will be thoroughly reviewed by gathering data on usage patterns, production rates, operational practices and conditions with a view to determining areas of improvements or possible gains in efficiency or reductions in variability. Optimization is often a multi-pass process whereby the process is modified, reviewed and modified again as required. The stimulus for optimization is usually not in response to a problem, but a desire to improve the performance of an operating process. The corrective action may well be beyond the scope of competency and responsibility of the senior technician to implement. Typical systems optimisations may include: • utilisation of services across a production facility • variability of product properties produced from a multi-line batch reaction process • variability of plant performance from shift to shift, day to day, week to week The senior technician would: • gather historical plant operating or product quality data • review the data for trends or dependencies • investigate cause and effect responses • recommend a solution to the problem. Generally the technician would work alone for this unit, although the ability to communicate with all internal and external stakeholders is vital.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify process or system for review.	1.1. Review process or plant performance to determine likely areas of improvement. 1.2. Gather data on the process or system design 1.3. Design the data collection system for the required data.
2. Collect and analyse data.	2.1. Collect or review available data from the process or plant 2.2. Analyse the data for trends or dependencies 2.3. Postulate possible cause and effect scenarios
3. Develop tests or trials.	3.1. Propose controlled tests or trials to review the plant or process patterns

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.2. Discuss possible solutions to cause with relevant people 3.3. Arrange for required tests or controls to be undertaken in appropriate time frame 3.4. Collect further data from tests or trials 3.5. Review plant or process data and compare with original data. 3.6. Prepare further tests or trials as required, or until possible solutions are developed.
4. Develop improvement solution	4.1. Agree required improvement solution with appropriate people 4.2. Arrange for required improvement solution to be undertaken in appropriate time frame 4.3. Follow items initiated through until final resolution has occurred 4.4. Check effectiveness of solution and take appropriate action 4.5. Complete reports to procedure.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
This unit requires skills of: • data collection and analysis • problem solving for multi-variable processes • negotiation • communication • basic mathematics
Required knowledge
Competence includes a deep understanding of: • plant equipment, its characteristics and limitations • impact of variations in plant/process and the distinctive signs of each variation • process chemistry, physics and biochemistry as relevant (eg to the extent of writing chemical equations and identifying factors controlling reaction rate and yield or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
equivalent, or determining mass or heat transfer rates for a process) • problem isolation techniques • problem analysis techniques • organisation approval processes

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include a range of problems, problem causes and environments. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual problems and should include the use of case studies/ scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to define and analyse the problem as well as deal with the stakeholders. The stakeholders should be satisfied with the solution, as well as the solution being technically sound. Consistent performance should be demonstrated. In particular look to see that: • different types of processes or plant units can be analysed and resolved • different types of stakeholders can be satisfied • the range of possible causes can be identified and

PMAOPS550B Develop a colour formulation

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the development of a new formulation, suitable for production, of a colour to match a sample/customer requirements. It includes both computer and visual colour matching and the adjustment of a computer suggested formulation to suit company conditions and standard materials/colourants.

Application of the Unit

Application of the unit	In a typical scenario, a technologist is given a colour sample, or colour description, and needs to develop a formulation. The formulation would be suitable for production by the company and produce a final product which meets the colour requirements of the customer. The development would include factory trials and modifications to the formulation. Typically the development will be of a new colour for an existing product of another colour. It may include the colour aspects (only) of developing a totally new product. This unit does not include the development of any aspect of the product other than its colour. The technologist would: • identify potential manufacturing problems associated with the colour formulation and propose/implement solutions • analyse the production trials from the standpoint of the desired colour and the impact of the colour requirements on the production process and make modifications to ensure a product of stable colour and suitable manufacturing process. Generally the technologist would be part of a team for the total development of a new product, but may develop the colour formulation for a new colour for an existing product independently. The technologist would liaise with relevant production and other personnel for production trials.

Pre-Requisites

Prerequisite units	*PMAOPS350B*	*Match and adjust colour*
	PMAOPS450B	*Solve colour problems*

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm design brief of new colour.	1.1. Communicate with customer and other key stakeholders and agree on: 1.1.1. colour/colour specification 1.1.2. surface finish/gloss 1.1.3. viewing conditions (lighting) 1.1.4. opacity 1.1.5. requirements for metameric/non-metameric match 1.1.6. other aesthetic requirements 1.2. Determine end use of product, eg interior, exterior, automotive 1.3. Develop and validate design brief to meet needs.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Determine initial colour formulation.	2.1. Analyse colour sample (where provided) using colour computer and/or eye and predict possible colour formulation 2.2. Compare predicted formulation with company/customer preferred colourants. 2.3. Adjust predicted formulation to use preferred colourants. 2.4. Check that the adjusted formulation complies with design brief.
3. Conduct small scale trials.	3.1. Make/arrange for small batch to adjusted formulation 3.2. Undertake trials to determine optimum processing conditions where relevant 3.3. Analyse colour of sample product and compare to design brief 3.4. Modify formulation and processing (where relevant) to have simplicity of manufacture and to meet brief.
4. Assess hazards.	4.1. Identify hazards arising from colour formulation and processing 4.2. Assess risks arising from those hazards 4.3. Determine appropriate action to control risks in accordance with hierarchy of control and duty of care 4.4. Take required action before proceeding to trial.
5. Trial new colour formulation through the process.	5.1. Design trial to procedure to deliver required information 5.2. Ensure OHS and environmental requirements are stringently observed 5.3. Coordinate the trialing of the new product 5.4. Interpret colour trial results and guide colour trial process 5.5. Adjust formulation, and if appropriate tune process, to optimise production of new colour.
6. Coordinate evaluation and testing.	6.1. Determine colour testing and evaluation regime required to meet end use requirements, including regulatory/industry code requirements 6.2. Arrange for testing and evaluation of trial colour 6.3. Interpret colour trial results 6.4. Modify formulation and conduct new trials as required 6.5. Determine final formulation and processing specifications.
7. Implement procedures for new colour.	7.1. Monitor initial production and adjust process, conditions and formulation to make the process a smooth operation 7.2. Ensure process specifications reflect the optimised operation developed 7.3. Ensure quality standards and procedures meet requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	of design brief 7.4. Ensure procedures are correct for the new colour 7.5. Ensure project records are complete and all required reports have been completed and submitted 7.6. Archive records according to procedure.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
This competency requires skills of: • communication • interrogation • observation • analysis
Required knowledge
Competence includes an understanding of colour, the interaction of colourants and the impacts of processing variables on the final colour of then product. In particular it includes the ability where relevant to: • interpret the 'flare path' on a tonal graph of tone vs time • choose the optimum grind/particle size for the required colour • balance gloss, opacity and tone • substitute colourants recommended from a 'computer match' for other colourants • make both metameric and non-metameric matches • determine the hazards arising from the colourants chosen • interpret weathering and other test data relevant to colour and the use of colour • describe the causes and remedies of common problems such as those selected in the Range Statement. Competence also includes the ability to isolate the causes of problems to an item of equipment within the compressor system and to be able to distinguish between causes of problems such as: • wrong colourant • wrong colourant amount • wrong grind time/particle size

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• wrong wetting/dispersing.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment for this unit of competency will be by developing colour formulations in a plant, laboratory or other relevant context. Assessment will occur over a range of situations which will include different design briefs. Simulation may be required for assessment of this unit of competency. Simulation should be based on actual colour formulation developments. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the predicting possible problems and determining actions required to avoid the difficulty. Consistent performance should be demonstrated. In particular look to see that: • predicted colour formulations are reasonable • adjustments to formulations are made based on a rational interpretation of the results and an understanding of colour and the process These aspects may be best assessed using a range of colour formulation development projects backed up by scenarios/case studies/what-ifs. These assessment activities should include a range of problems, including new, unusual and improbable situations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require a suitable method of gathering evidence of colour formulation ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit of competency covers the development of a new colour formulation 'from scratch', usually based on a provided colour sample. The formulation would normally use colourants already available within the company (preferred colourants), but does not preclude the use of colourants which are novel/new to the company. It may be applied to any industry sector requiring the development of a new colour formulation such as: • paint

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• ink • plastics • rubber • concrete products • glass products • clay/ceramic products.
Typical problems	Typical problems may include: • matching under different lighting conditions • variable surface finish/gloss level • non-metameric matching • process caused colour differences.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS600C Modify plant

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the process specification, selection or management of the equipment and supervision of the installation and commissioning of the modification to a plant.

Application of the Unit

Application of the unit	In a typical scenario, it has been identified that modifications need to be made to the plant, and equipment needs to be chosen to undertake these modifications. The identification of the need for modification is not part of this unit, and it may have arisen from any number of possible sources. This competency does not require the design of equipment (which would typically be an engineering role), but does require the process specification of the equipment and the matching of performance specifications of off-the-shelf and/or tendered equipment to the required specification. It also requires the selection of the most appropriate item. This competency assumes that the technician responsible for these modifications takes the overall responsibility for the modifications, but would work with the support of other company and external experts. This extends to the coordination of the installation of the modified equipment. This unit does not cover the optimisation of plant by modification of process, procedures or practice (*see MSAPMOPS400A Optimise process/plant area*) as it is to do with the modification of plant hardware. This unit does not cover work requiring special certification (eg registered structural engineer) but may include working with such people and providing process and product expertise.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm required outcomes from modification.	1.1. Communicate with relevant technical, operational and other key personnel, to determine operational and technical requirements of the plant modification. 1.2. Determine regulatory/industry code requirements 1.3. Obtain relevant drawings of existing plant 1.4. Develop modification brief, including relevant plant schematic sketch, to meet needs 1.5. Establish required performance measures to indicate success of project 1.6. Obtain 'sign off' on modification brief from all relevant persons.
2. Short list possible modifications to meet brief.	2.1. Investigate the range of available equipment/plant units 2.2. Determine relative advantages and disadvantages of each class of equipment/type of modification which may provide a solution

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Compile a shortlist of modification types/equipment classes which will best meet the modification brief 2.4. Discuss shortlist alternatives with relevant stakeholders and obtain 'sign off' for the chosen approach.
3. Select technically best equipment/unit/modification.	3.1. Complete technical specification for required modification incorporating feedback received 3.2. Compare specification with that of 'off the shelf' equipment where appropriate 3.3. Arrange for equipment suppliers to tender to the specification where necessary, following company procedures 3.4. Rank competing items by their compliance with the technical specification.
4. Compare hazard profile of possible modifications.	4.1. Organise a hazard analysis (eg HAZOP) for the modification according to company procedures 4.2. Ensure that all stakeholders are represented on the hazard analysis team 4.3. Brief the hazard analysis team on the modification and the alternatives under evaluation 4.4. Eliminate alternatives which do not meet hazard requirements 4.5. Rank remaining competing items by safety performance.
5. Make final choice of solution.	5.1. Evaluate competing items by their economic performance (eg, life, maintenance, running costs) and rank by total lifetime cost 5.2. Seek further information where necessary to allow a rational selection to be made 5.3. Choose the modification which meets all required minimum standards and will provide the best solution 5.4. Verify choice in discussion with production and engineering managers and other key stakeholders 5.5. Arrange for order to be placed, following company procedures.
6. Check and commission modification.	6.1. Undertake pre-commissioning activities 6.2. Complete safety acceptance documentation 6.3. Identify, record and report problems or non-conformances

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	6.4. Conduct trials/test runs 6.5. Record and report performance data 6.6. Bring the plant/plant systems/pipeline on line.
7. Complete modification.	7.1. Evaluate performance of modification 7.2. Make adjustments as required 7.3. Accept (or otherwise) the equipment/unit (and ensure payment flows) 7.4. Ensure plant procedures and training material updated 7.5. Ensure plant drawings and engineering specifications are updated 7.6. Complete all other required paperwork.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence includes the ability to read and interpret: • plant schematics (eg P&IDs, PFDs, instrument and process diagrams) • construction or layout drawings equipment designs, specifications and manufacturer data Discuss and negotiate with other appropriate personnel to agree necessary and desirable: • technical requirements • operations requirements • timelines • cost and other requirements
Required knowledge
Demonstration of competence in this unit must include knowledge of the following: • the operations of the plant and each major unit in it • the principles of operation of the equipment being investigated to the extent required to interpret technical specifications in a meaningful manner • the basics of plant economics and whole of life costing • hazard analysis principles (while it is beneficial, it is not expected that the candidate will

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
be able to undertake HAZOP (or similar) analyses but will understand basic principles and be able to interpret and use the outcomes) • typical hazards with the type of equipment being investigated • OHS legislative requirements related to plant including registration and documentation requirements related to modification of registered plant

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to specify the requirements and then select the best solution to meet the necessary and desirable requirements. In particular look to see that: • safety, technical and economic aspects are all considered

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• the decision made can be justified on those criteria • all key stakeholders are kept well informed and agree with the decisions • the modification, and particularly its timelines, are a good fit for the overall plant requirements • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. This will typically be assessed by a modification project on an operating plant. One complex project, or a number of simple projects, are required to demonstrate competence.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. It may be appropriate to assess this unit concurrently with: • *PMASUP410B Develop plant documentation* • *MSAPMOHS401A Assess risk*.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	The need for the modification may arise from a continuous improvement project, as a result of an analysis of plant performance or from any other source. The modification may require the selection of any number of items of equipment such as: • pumps • heat exchangers • mixers • separators • columns • reaction kettles. • Classes of equipment (see Element 2) means the selection between different members of an overall class such as: • heat exchangers - various types of shell and tube, plate etc • mixers - propellers, impellors, jet mixing etc • packed columns - rings, saddles etc • kettles - jacketed, coiled etc. Required minimum standards include: • OHS legislative requirements related to plant • industry and enterprise OHS standards • enterprise standards related to maintenance • output requirements • economic performance
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMASUP410B Develop plant documentation

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the development, establishment and evaluation of plant documentation in response to identified information requirements including the development of workplace documents for the introduction of new systems, processes, equipment and record keeping requirements. The competency unit applies to a wide range of plant documentation. This unit does not apply to the participation in reviewing workplace documentation, which is covered by *MSAPMSUP210A Process and record information*.

Application of the Unit

Application of the unit	Typically, the employee would: • investigate the need for new plant documentation • determine operating principles and best practice in consultation with others • draft plant documentation • validate and modify plant documentation in response to feedback • communicate changes and amendments.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify information need/deficiency.	1.1. Identify the need for documentation in accordance with company requirements 1.2. Evaluate current documentation where existent 1.3. Define information need/deficiency 1.4. Discuss information requirements with appropriate personnel.
2. Develop plant documentation.	2.1. Specify information need and set/prioritise objectives 2.2. Analyse existing documentation/records in accordance with specified requirements 2.3. Determine operating principles and best practice where required 2.4. Develop/amend documentation as a draft in accordance with specifications to standard format 2.5. Issue documentation to appropriate personnel for review 2.6. Edit documentation and amend in accordance with review requirements 2.7. Complete documentation to satisfy the initial identified need/deficiency.
3. Communicate changes to plant documentation.	3.1. Explain and communicate documentation to all relevant personnel 3.2. Distribute documentation to all appropriate personnel 3.3. Evaluate implementation of documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.4. Amend documents if required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence, sufficient to be able to develop and amend work place documentation, includes the ability to apply and explain: • enterprise information systems and work place documentation • enterprise quality and safety procedures • principles of policy and procedure development • principles of information/data management • importance of effective consultation in developing documentation • relevant equipment and operational processes.
Required knowledge
The knowledge referred to in the Evidence Guide for this unit includes: • organisation policies, standard procedures and work instructions and relevant regulatory requirements for the development of plant documentation • standard codes of practice relevant to developing plant documentation.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Assessment will typically use a plant documentation development project. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of satisfactory performance in this unit can be obtained by observation of performance and questioning to indicate understanding and knowledge of the Elements of the competency and Performance Criteria. Consistent performance should be demonstrated. In particular look to see that: • effective maintenance and evaluation of workplace documentation is carried out • effective research and consultation is undertaken to ensure the development of best practice documentation • feedback is provided on how to improve workplace documentation • completed documentation is user friendly, accurate and in accordance with the intended use/requirements • adequate documentation is produced, including documentation for the introduction of new systems, policies, equipment or processes • non routine problems in relation to plant documentation are recognised and appropriate solutions are presented • changes to workplace documentation is communicated in the appropriate manner. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency is typically performed by experienced operators, team leaders or supervisors who may be working individually or in a team environment.
Documentation	This competency includes the following indicative plant documentation: • operating procedures • work instructions • incident procedures • operating manuals • quality manuals and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• training program contents/materials • safety data sheets • job cards • maintenance logs • non-compliance reports • incidence and accident reports • permits • schematics/process flows/engineering drawings.
Information	Sources of information may include: • manufacturing specifications • product specifications • company policies and procedures • customer requirements • industry/work place codes of practice • State/industry OHS legislation and regulations • ISO and other industry standards and regulations • industry associations, networks and professional bodies.
Equipment	Items of equipment for this competency include: • computer equipment.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMASUP420B Minimise environmental impact of process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers minimising waste and environmental threats from a plant and/or a process. It covers all resources used and products made by the plant, and is performed by more experienced operators who might be expected to develop and implement improvements to processes within the plant. This unit may be performed individually or as part of a team. This competency also applies to capital projects, as well as improvements brought about by changes in work practices and procedures

Application of the Unit

Application of the unit	In this competency, an operator would develop practices or procedures for: • conserving resources • minimising pollution • minimising waste. This requires the operator to have a good understanding of the resources used by the plant, the nature and source of pollutants and the waste materials produced by the plant. It also requires the operator to understand the impact of using resources, and the effect pollutants and waste can have on the local environment. When developing a process or practice, the operator would identify which resource, pollutant or waste product that if reduced would give the most benefit. After developing procedures to conserve resources or minimise pollution/waste produced by the plant, the operator would then document the procedures to implement the changes.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop resource conservation practices and/or procedures.	1.1. Identify the nature of resources used in the plant/process 1.2. Determine the primary source of these resources 1.3. Describe the impact of the depletion of these resources on the environment and society 1.4. Determine which resource(s) will yield a greater benefit from their conservation 1.5. Develop methods to reduce the consumption of these resources 1.6. Complete required documentation to implement change
2. Develop pollution minimisation practices and/or procedures.	2.1. Identify the nature of pollutants produced by the plant/process 2.2. Determine the source(s) of these pollutants within the plant/process 2.3. Describe the impact of these pollutants on the environment and society 2.4. Determine which pollutant(s) will yield a

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	greater benefit from their reduction 2.5. Develop methods to reduce the production of this pollutant 2.6. Complete required documentation to implement change.
3. Develop waste minimisation practices and/or procedures.	3.1. Identify the nature of wastes produced by the plant/process 3.2. Determine the source(s) of these wastes within the plant/process 3.3. Describe the impact of these wastes on the environment and society 3.4. Determine which waste(s) will yield a greater benefit from their reduction 3.5. Develop methods to reduce the production of this waste 3.6. Complete required documentation to implement change.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence to also include the ability to apply and explain: • nature and severity of potential environmental hazards caused by the plant/process • sensitivity of local environment to these environmental threats • pathways of entry to the environment from the plant • regulatory requirements such as environment protection regulations, OHS, HAZCHEM, duty of care, dangerous goods • external licensing requirements such as EPA, water authorities, local councils • enterprise procedures and practices.
Required knowledge
Knowledge and understanding of the control of environmental incident process and the importance of critical parameters enough to minimise waste and environmental threats from a plant and/or a process within an organisation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Assessment of this unit may be best achieved with a suitable project. This will minimise possible impact on the environment caused by the process or some aspect of the process. Such a project may be regarded as adequate provided it meets all the Performance Criteria of at least one Element. It is not necessary to cover all elements. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • procedures are developed to reduce the consumption of resources, or to minimise pollution and/or waste products • appropriate documentation is completed to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	implement changes • the greatest yield is achieved by appropriate selection of type of resource usage, type of pollutant or waste product. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. Consider co-assessment with: • Competency units relevant to the type of process equipment. In a major hazard facility, it may be appropriate to assess this unit concurrently with OHS units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency is performed by more experienced operators and may be performed individually or as part of a team. It includes the following indicative functions: • examining plant records • examining operating procedures and practices • liaising with a range of internal people • modifying/updating standard operating procedures to 'lock in' any changes. Typical objectives will include: • minimisation of waste • maximisation of product yield from raw materials • reduction in volume of pollutants made • reduction in concentration/intensity of pollutants made • reduction in emissions. All operations are performed in accordance with standard procedures and policies.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMASUP432B Coordinate pipeline projects

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	In a typical scenario, the person is involved in the efficient coordination of projects on pipeline systems and facilities. Typical projects may include: • installation of new plant piping and equipment • pipeline repairs and modifications • upgrades of existing plant, piping and equipment • commissioning of pipelines and facilities • construction and upgrade of pipeline easements.

Application of the Unit

Application of the unit	The person would: • prepare scoping documents, specifications and/or tenders • manage the project through the construction and commissioning phases • liaise with other staff, contractors, and authorities as required • ensure that the project conforms with all of the necessary safety requirements. Generally the person would be part of a team during the whole project and would perform all parts of this unit. At all times they would be liaising and cooperating with other members of the team. This unit does not require the operation of a central control panel.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare project specification documents.	1.1. Analyse the proposed project to establish contract specifications 1.2. Conduct a documented hazard and risk assessment on the proposed project, identifying all potential hazards and risks 1.3. Draft specification documents stating the required work activity and health, safety and environmental requirements 1.4. Seek tenders for the specified works, review as per the relevant company procedure and appoint a winning tenderer.
2. Prepare project schedule and documentation.	2.1. Draft a project schedule to establish project timeframe, work activities and procurement of materials 2.2. Apply the job safety analysis process to specific project activities reflecting any health, safety and environmental issues identified in the project risk and hazard assessment 2.3. Write procedures and work instructions for project work activities from the outcome of the job safety analysis process.
3. Conduct induction training for project.	3.1. Discuss company/site specific procedures and health, safety and environmental requirements with contractors/employees

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	carrying out the specified works 3.2. Assess all persons who are inducted to ensure they understand the company/site procedures and health, safety and environmental requirements 3.3. Inspect all equipment and machinery utilised to carry out the works to ensure these comply with company/site requirements.
4. Monitor progress of project.	4.1. Purchase materials required for fabrication and installation on the project and inspect to ensure all items meet project specifications 4.2. Monitor project works to ensure activities are carried out to project specification and minimal impact occurs on existing operations and environment 4.3. Issue permits to work where project activities impact on existing pipeline operations 4.4. Amend and/or modify original specifications and communicate to all parties involved as per the relevant company procedure 4.5. Produce project reports updating project schedule progress, activities and health, safety and environmental issues, and discuss with all parties involved 4.6. Draft operations manuals and compile vendor data manuals to assist in the operation of the equipment/facility after project completion.
5. Complete and commission project.	5.1. Commission the project to ensure all work carried out meets project specifications and operational requirements 5.2. Restore the project site to meet environmental and operational requirements 5.3. Cancel permits to work and sign off at completion of works 5.4. Check all documentation, records and drawings pertaining to the project, verify for accuracy and hand over to the relevant operational department.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
The ability to coordinate project activities and report on project status would be considered as a critical component of this unit.
Required knowledge
Demonstrated working knowledge and application of company-specific work organisations and workflow would be highly regarded. Demonstrated knowledge of process and pipeline equipment is essential in underpinning a person's competency in this unit including: • architecture of pipeline systems and facilities • pipeline operations knowledge • pipeline system operating parameters • quality assurance systems and plans • emergency response plans and procedures.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment for this unit of competency will be using a pipeline project. Where it is not appropriate to use an actual pipeline project, then a simulated project may be used. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on an actual project and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of items needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely return to plan. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants
Context of and specific resources for assessment	Assessment will require access to a project over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork, OHS and communication units. Consider co-assessment with: • *PMASUP242B Monitor pipeline civil works* • *PMASUP241B Maintain pipeline easements*.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the

	work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context	This competency includes all of the interactions necessary to plan, implement and complete a pipeline project, including the following aspects:
	• Provision of legislative requirements and information:
	  • OHS laws and codes of practice
	  • guidelines for preparation and submission of safety cases
	  • pipeline licenses
	  • environmental statutes and standards.
	The use and operation of personal computers, other hardware mediums and associated software is required.

Authorities	Authorities may include: • Environmental Protection Authority (EPA) • Department of Primary Industry and Energy (DOPIE) • Departments of Minerals and Energy State and Territory • Worksafe.
Inspection and testing	Inspection and testing techniques may include: • hydrostatic testing • magnetic particle inspection • radiography • ultrasonic inspection • dye penetrant inspection.
Repair/modification	Repair/modification techniques may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
techniques	• hot tap and stoppling operations • welding and cutting operations.
Reports	Reports may include: • budget updates • hazard and incident reports • safety statistics report • project schedule progress report • materials and spares listings.
Australian standards	Applicable Australian standards may include: • AS 2885 • AS 4041 • AS 3000.
Plans and drawings	Plans and drawings may include: • pipeline alignment drawings • process and instrument drawings • workshop fabrication drawings.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMASUP440B Commission/recommission plant

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the commissioning of new plant/pipeline or the re-commissioning of significantly modified plant/pipeline. This unit does not cover startup of a plant/ pipeline after a shutdown, unless there have been major changes to the plant during the shutdown. For a normal startup use *PMAOPS411B Manage plant shutdown and restart*.

Application of the Unit

Application of the unit	In a typical scenario, a new plant/pipeline or a major plant/pipeline upgrade is to be commissioned/recommissioned with a leading plant technician taking a significant role. The technician is involved in the design of the plant/plant modifications and the planning of the startup. Being 'involved in' could mean participating in design meetings or HAZOPS or reviewing/checking the design for operability issues or checking the HAZOP outcomes. This does not preclude the inclusion of 'turnkey' type projects, provided the technician has had a role in the plant design, eg checking operability, suitability for local conditions. This competency includes all equipment associated with the new/modified plant. The technician would not normally have a 'hands on' operating role for all items of equipment, but may have a 'hands on' role for major items of equipment. More importantly, the technician will have an overall role and would be expected to have an understanding of the function of all items of equipment in the plant so that detailed directions can be given plant operators who are performing the 'hands on' role during the commissioning/recommissioning. This competency is typically performed by experienced technicians, likely to be the leaders of an operational team. This may include working in conjunction with a design team, or reviewing final design to ensure plant/ pipeline meets operational requirements and for the purpose of commissioning or recommissioning plant/pipelines. As commissioning is usually a team activity, the technician will take a lead technical role, rather than undertake all aspects on an individual basis.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to/review the design of plant/ equipment.	1.1. Apply process understanding to the design process 1.2. Identify the role and purpose of the plant and equipment 1.3. Ensure design meets the identified need 1.4. Identify process conditions and apply to hazard and operability studies 1.5. Undertake investigations following hazard studies 1.6. Record and report findings.
2. Take part in commissioning planning.	2.1. Ensure the work is coordinated effectively with others involved on the work site 2.2. Obtain materials necessary to complete the work and check against job requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Obtain tools and equipment necessary to carry out the work and check for correct operation and safety 2.4. Prepare plans to ensure that procedures are performed in the correct sequence 2.5. Obtain approvals where necessary from appropriate authorities.
3. Participate in acceptance of plant/ equipment.	3.1. Undertake pre-commissioning activities 3.2. Complete safety acceptance documentation 3.3. Identify, record and report problems or non-conformance 3.4. Conduct trials/test runs 3.5. Record and report performance data.
4. Commission system.	4.1. Bring the plant/plant systems/pipeline on line 4.2. Make and report adjustments 4.3. Prepare reports in accordance with legislative and company requirements to maintain the historical record.
5. Evaluate results and identify modifications.	5.1. Identify modifications and improvements required 5.2. Check specifications, procedures and training material match the final system/procedures 5.3. Complete documentation and report to appropriate personnel.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
• hazard analysis • completing plant records • communication • problem solving.
Required knowledge
Competence to include the ability to apply and explain: • HAZOP (or similar) study process and the interpretation of findings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

• results and impact of a HAZAN (or similar) study
• the process of hazard identification, risk assessment and control
• hierarchy of control
• sources of hazard information (such as Material Safety Data Sheets)
• principles of operation of equipment
• interpretation of design drawings, schematics and manuals
• physics and chemistry relevant to the plant and the materials processed or produced
• process parameters and limits, eg temperature, pressure, flow, pH
• duty of care obligations
• expected problems, faults and their resolution
• possible alarms and actions
• any known or expected plant process idiosyncrasies
• all items on a schematic of the plant and the function of each
• correct methods of starting, stopping, operating and controlling process
• corrective action appropriate to the problem cause
• function and troubleshooting of major components and their problems
• types and causes of problems to be expected
• principles of operation of instrumentation
• principles of basic control systems
• distinguish between the following problem sources, and their avoidance:
  • chemical
  • instrument
  • equipment (electrical/mechanical)
  • maintenance.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Simulation may be required to allow for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	of parts of this unit. It is possible that a simulation will be required to ensure that the technician is competent before taking a significant role in a commissioning activity. Commissioning is an infrequent and often frenetic activity and so it may not be practical or equitable to wait for an actual commissioning to occur to use this as the basis for assessment. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/ scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure commissioning stays on schedule • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. In a major hazard facility, it may be appropriate to assess this unit concurrently with relevant OHS units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Appropriate authorities	Appropriate authorities may include: • local councils • road authority • sewerage and stormwater authorities • providers of services such as electricity, water and telephones.
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Plant	Plant covers on or off shore plant, well heads and also transmission pipelines or similar.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Commissioning	Commissioning refers to the start-up of a new plant or plant unit and the associated equipment for the first time.
Commissioning/re-commissioning activities	Commissioning/recommissioning activities may include: • trial running of equipment • use of trial materials in plant • safe introduction of process materials to plant • producing product within specification • bringing plant to design rates • solving operational problems • disposal of waste generated in the start-up.
Documentation	Documentation may include: • operating procedures • OHS and environmental legislative requirements • manufacturer specifications • appropriate authority approvals • quality assurance inspection and test reports.
Health, safety and environment (HSE)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.
Plant/pipeline systems	Plant/pipeline systems may include: • pipes • valves • operating units • electrical and electronic components • PLCs/DCS control (programmable logic controllers, distributed control systems) or other plant controls • cathodic protection • pressure/flow/temperature etc regulation and meters.
Pre-commissioning	Pre-commissioning activities may include: • checking plant is built to design • ensuring plant is safe to operate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• ensuring plant area is clean and clear of debris • ensuring the plant internals are clean and clear of debris • functional checking of equipment and ancillaries.
Procedures	All operations are performed in accordance with standard operating procedures. Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.

Recommissioning	Recommissioning refers to the start-up of an existing plant following major modifications, rebuild or reconfiguration.
	This competency unit includes functions such as :
	• liaison with relevant personnel such as manufacturers, engineering personnel, designers, contractors and maintenance and other company personnel
	• participation in/reviewing of hazard studies, which may include:
	  • hazard and operability studies (HAZOP)
	  • hazard analysis studies (HAZAN)
	• participation in/reviewing of design or modification plans

Tools, **materials and equipment**	Tools, materials and equipment may include: • hand tools, including power operated • other power operated tools • plant • emergency equipment • electrical and electronic test equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• gas detectors • air compressor • water pump.

PMASUP441C Decommission plant

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the decommissioning of an existing plant/pipeline or major plant area, and its associated equipment. Decommissioning refers to the removal from service of plant/pipeline and equipment and its storage/'mothballing' or disposal. This unit does not cover the shutdown of a plant/pipeline - use *PMAOPS411B Manage plant shutdown and restart*.

Application of the Unit

Application of the unit	In a typical scenario, an existing plant/pipeline or major plant area, and its associated equipment, are planned to be taken out of service. The experienced technician organizes the systematic shutdown, cleaning out and preparation for safe 'moth-balling' all of the plant and equipment. This competency is typically performed by experienced technicians, likely to be the leaders of an operational team, usually working in conjunction with a decommissioning team, for the purpose of decommissioning plant/pipelines. As decommissioning is usually a team activity, the technician will take a lead technical role, rather than undertake all aspects on an individual basis. Much of the activity of successful decommissioning is in planning the activity and then supervising the work to ensure it is done safely and efficiently with no environmental damage. The technician may have no 'hands-on' role at all.

Licensing/Regulatory Information

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to decommissioning planning.	1.1. Apply process understanding to the planning process 1.2. Identify the role and purpose of the plant and equipment 1.3. Ensure the work is coordinated effectively with others involved on the work site 1.4. Identify process conditions and apply to hazard studies 1.5. Undertake investigations following on from hazard studies 1.6. Obtain materials necessary to complete the work and check against job requirements 1.7. Obtain tools and equipment necessary to carry out the work and check for correct operation and safety 1.8. Prepare plans to ensure that procedures are performed in the correct sequence 1.9. Obtain approvals where necessary from appropriate authorities to ensure decommissioning process proceeds in accordance with the plan. 1.10. Complete all appropriate documentation.
2. Isolate and decontaminate equipment/unit.	2.1. Interpret and apply decommissioning plan 2.2. Identify and use appropriate safety equipment and materials 2.3. Isolate and decontaminate equipment components as required 2.4. Dispose of contaminated materials or components as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	required 2.5. Complete required documentation.
3. Inspect, test and notify completion of work.	3.1. Select tools and equipment appropriate to the testing/ inspection requirements and utilise in accordance with manufacturer specifications and legislative requirements 3.2. Test/inspect in accordance with requirements 3.3. Ensure compliance with OHS legislative requirements for risk assessment prior to disposal 3.4. Ensure any required additional work is undertaken/initiated 3.5. Notify work completion.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Demonstrated knowledge and ability to: • plan the decommissioning process • arrange resources as required • coordinate own work and the work of others, including on-site contractors/operators • interpret and solve operational problems as they arise and take appropriate action • document the decommissioning and recommendations for safe storage/maintenance/disposal.
Required knowledge
Competence to include the ability to apply and explain: • chemistry of materials involved • principles of operation of the process • principles of operation of the equipment involved • all items on a schematic of the plant and the function of each • correct methods of, stopping plant items • function of major components • HAZOP study process and the interpretation of findings • results and impact of a HAZAN study • hazardous substances legislation • the process of hazard identification, risk assessment and control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• sources of hazard information (such as Material Safety Data Sheets) • safe disposal methods of materials and equipment • decontamination processes.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant/pipeline and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Simulation may be required to allow for assessment of parts of this unit. It is possible that a simulation will be required to ensure that the technician is competent before taking a significant role in a decommissioning activity. Decommissioning is an infrequent activity and so it may not be practical or equitable to wait for an actual decommissioning to occur to use this as the basis for assessment. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/ scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate, timely action is taken • obvious problems in related plant areas are recognised and an

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	appropriate contribution made to their solution These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require access to a plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required, as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. In a major hazard facility, it may be appropriate to assess this unit concurrently with relevant OHS units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency unit includes the functions of : • liaison with manufacturers, engineering personnel, designers, maintenance personnel • participation in hazard and operability studies (HAZOP) and hazard

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	

	analysis studies (HAZAN)
	• removal of plant and equipment from service, which may include:
	  • 'mothballing'
	  • storage
	  • disassembly
	  • demolition
	• decontamination of equipment
	• disposal of equipment and waste.
	This competency unit includes the understanding and application of:
	• OHS regulations especially those related to plant
	• codes of practice
	• disposal procedures and regulations.
	All operations are performed in accordance with standard operating procedures.

Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.

PMASUP445A Participate in HAZOP studies

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the principles and application for technicians in undertaking hazard and operability studies. It is a systematic method for examining complex facilities or processes to identify actual or potentially hazardous procedures and operations so that they may be eliminated or mitigated. HAZOP studies are performed by a multi disciplinary team that identifies the potential hazards and operating issues with the design, construction and commissioning of equipment and plant. This unit may also apply to other personnel with extensive plant knowledge who are involved in the study as team members.

Application of the Unit

Application of the unit	In a typical scenario an experienced operations technician would be a participant in a multi disciplinary team consisting of operators, engineers, safety and other personnel to review a change in plant, process or equipment to see if the change can cause unforeseen hazards or introduce unexpected operability problems and that the change meets the standards. The operations technician would: • review pipe and instrumentation diagrams • identify possible hazards or operability issues • contribute to the safe and productive operation of the plant • recommend amendments to improve safety and operability of the proposed change • review and amend procedures in relation to the change The operations technician would be an experienced operator of the plant under review and part of a HAZOP study team during all phases of the study, including at the initial concept stage, when the pipe and instrumental diagrams (PID) are available, during construction, installation and commissioning and during operation reviewing and amending procedures. He/she would be expected to be capable of demonstrating competence in all parts of this unit. He/she would be actively participating in all phases of the

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the principles of a HAZOP study	1.1. Explain the purpose of a HAZOP 1.2. Describe the key steps in undertaking a HAZOP study 1.3. Identify the tools used in a HAZOP study 1.4. Describe how key words assist in identifying problems 1.5. Explain how HAZOP studies are applied in the workplace
2. Participate in a HAZOP study	2.1. Identify the purpose and operation of the new/modified equipment/process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.2. Explain the normal operating conditions, method of operation and associated equipment and componentry of proposed change 2.3. Review relevant information to assist in the identification of possible problems 2.4. Process available information to identify potential hazards or operability issues 2.5. Identify potential hazards or operability issues and possible consequences utilising key words 2.6. Assess the risks arising from identified potential hazards or operability issues 2.7. Identify items needing further action 2.8. Review relevant operating and safety procedures 2.9. Recommend possible solutions to minimise risk of proposed change.
3. Complete delegated actions within scope of responsibility.	3.1. Perform delegated actions within area of responsibility 3.2. Follow initiated items through until final resolution has occurred 3.3. Identify problems needing further action 3.4. Determine possible fault causes within area of responsibility 3.5. Report outcomes to designated person.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
This competency includes the following skills: • analysis • communication • instrument failure/malfunction • electrical failure/malfunction • mechanical failure/malfunction • equipment design deficiencies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• product parameters (temperature, flows, pressure and levels) • process control system malfunction • power/utility failures. • An ability to operate the plant under review is considered to be an essential element of this unit of competency.
Required knowledge
The knowledge referred to in the evidence guide for this unit includes: • the architecture and location of the process/production equipment • specific plant process operations • interactions between plant items/processes • product specifications and tolerances • systems operating parameters • system integrity limits • process control philosophies and strategies • emergency shutdown procedures • process specific physics, chemistry and mathematics • basic science of upstream and downstream processes • impact of external factors (eg variations in weather, feed) • process drawings (eg P&ID, PFD, cause and effect) • basis of control for the plant/s • instrumentation and control systems, components and loops as they relate to the modification under review • impacts of changing process/production equipment settings and the limits within which changes can be made • organisation procedures • OHS, hazardous substances and environmental requirements • thorough knowledge of enterprise standard operating procedures, plant processes and equipment for area under review

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE	
Overview of assessment	The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. Simulation may be required to allow for timely assessment of parts of this unit of competency (eg elements 1-2). Simulation should be based on an actual HAZOP study relevant to the plant and may include the use of case studies/scenarios and role plays. This unit of competency requires an application of the knowledge contained in the use of the process control system and its integral equipment, to the level needed to maintain control and recognise and resolve problems. This can be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate responses. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • key words are utilised in the identification of potential hazards or operability issues • possible consequences are identified and explained • risks are assessed from identified potential hazards or operability issues • appropriate contribution is made to the identification of potential hazards and operability issues and risk assessment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations, which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require access to HAZOP tools and relevant plant documentation or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork, communication and leadership units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicized wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards AS61882, the latest version must be used.
Context	This unit of competency includes all relevant information and plant and equipment that might be required for the HAZOP study. This may

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	include (select relevant items): • provisional layouts • material safety data sheets • process drawings (eg P&ID, PFD, cause and effect) • plant model • equipment arrangement drawings • provisional operating instructions/procedures • plant operating procedures • logic diagrams • equipment reference manuals • hazardous area layouts • start up and shut down emergency procedures • access to plant and equipment. Typical HAZOP study for your plant may include: • purpose of new equipment/plant • how the design will cope with abnormal conditions • identification of potential hazards and operating issues.
Designated action	Designated action may include: review of plant operating procedures undertaking additional tasks from action list HAZOP report attendance at HAZOP review meetings recording results from additional tasks.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

	implement changes in the management of environmental records.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
• completing plant records • communication • problem solving.
Required knowledge

Knowledge and understanding of the control of environmental incident process and the importance of critical parameters enough to establish and review environmental management procedures within an organisation.
 	
Competence includes the ability to apply and explain:
• nature and severity of potential environmental hazards caused by the plant/process
• sensitivity of local environment to these environmental threats
• pathways of entry to the environment from the plant
• regulatory requirements such as:
• environment protection regulations
  • OHS
  • HAZCHEM
  • duty of care
  • dangerous goods
• external licensing requirements such as:
  • EPA
  • water authorities
  • local councils
  • enterprise procedures and practices.

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to apply plant and process knowledge to identify and analyse environmental hazards, and establish and review procedures for environmental management. Consistent performance should be demonstrated. In particular look to see that: • a holistic 'clean production' approach to waste minimisation is taken • potential effects on the environment are understood • terms initiated are followed through until final resolution has occurred • the process/plant is understood and proposals are capable of implementation • training needs are addressed • records are kept.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and extreme situations that may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities (eg HAZOP) and similar sources.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork units, communication units and units relevant to the process equipment. In a major hazard facility, it may be appropriate to assess this unit concurrently with relevant OHS units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	

Context	This competency covers process manufacturing plants which may involve workplace hazards such as:
	• chemicals and hazardous materials
	• gases and liquids under pressure
	• materials handling.
	This competency includes:
	• legislation, codes and national standards relevant to the workplace which may include:
	  • award and enterprise agreements and relevant industrial instruments
	  • relevant legislation from all levels of government that effects business operation, especially in regard to OHS, environmental issues and industrial relations
	  • relevant industry codes of practice
	• awareness of the environment and the effects on the environment of the organisation's:
	  • liquid waste
	  • solid waste
	  • gas/fume/vapour/smoke emissions, including fugitive emissions
	  • hazardous materials
	  • excessive energy and water use
	  • excessive noise
	and the workplace practices that can be used to minimise or prevent these effects.

Information	Information may include: • organisational policies and procedures • relevant environmental legislation/regulation requirements • licence conditions • environmental treaties, conventions and national policies and strategies • National Pollutant Inventory • State of the Environment reports • voluntary environmental agreements entered into with external organisations/authorities • continuous improvement policies and processes for the organisation.
Work group	Work group may include: • formal or unstructured groups

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• two or more people.
Proactive environmental management	Proactive environmental management may include: • resource conservation and efficiency • minimisation of waste • recycling • reduction in use of non-renewable resources • maximisation of product yield from raw materials • reduction in volume of pollutants made • reduction in concentration/intensity of pollutants made • reduction in emissions.
Approaches to proactive environmental management	Some approaches to proactive environmental management may include: • preventing and minimising the production of pollution, eg discharges to air, land and water, hazardous waste • improving housekeeping, eg using a broom instead of a hose, using old rags for cleaning instead of toxic cleaners or water • substituting materials, eg replacing toxic solvent based coatings with water based ones • changing processes, eg mechanical cleaning, re-design of products/ procedures so that materials are used more efficiently.
Environmental management policies	Environmental management policies must be appropriate to the scope and scale of the enterprise and may include: • environmental load reduction and waste minimisation • tenders for the provision of goods and services that specify environmentally preferred selection criteria • protection of land and habitat • environmentally sustainable work practices.
Typical functions	Typical functions may include: • examining plant records • examining operating procedures and practices • liaising with a range of internal people
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMASUP540B Analyse equipment performance

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the analysis of the performance, and performance verification, of existing equipment.

Application of the Unit

Application of the unit	In a typical scenario an experienced technician will set up and operate performance verification trials and then analyse the results to determine actual compared to theoretical performance of equipment and equipment components. It includes: • calculating the theoretical performance of an item of equipment • gathering data to determine the actual performance of the item of equipment • calculation of actual versus theoretical performance • making recommendations as to the appropriate action to be taken based on the performance verification results. This competency is typically performed by a senior technician who will take the lead in the data gathering phase and then analyses the data.

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine theoretical performance.	1.1. Identify item of plant or equipment to be analysed 1.2. Locate and interpret design specification 1.3. Identify process materials being processes/to be processed during verification trial 1.4. Determine process material properties under process conditions 1.5. Calculate theoretical performance of component(s) with that material under those conditions.
2. Conduct trial.	2.1. Design verification trial to be compatible with theoretical analysis 2.2. Determine measurements needed from trial to yield required data 2.3. Select equipment suitable to give required measurements 2.4. Arrange for verification trial with relevant process personnel 2.5. Set up required measurement equipment 2.6. Supervise trial and ensure trial conditions are appropriate 2.7. Collect trial data for analysis.
3. Verify performance of plant/equipment.	3.1. Compare theoretical with actual performance 3.2. Determine significance of variation between

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	theoretical and actual performance 3.3. Investigate any suspicious results and take appropriate action.
4. Recommend required action.	4.1. Determine appropriate action to bring performance to desired level 4.2. Initiate the corrective action in accordance with company procedures. 4.3. Determine measures to increase equipment productivity 4.4. Re-check performance after corrective action is implemented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence, for the practical completion of the job, includes the ability to: • calculate equipment and component performance from the design specification • determine equipment and design performance from practical trials • determine the 'limiting component' in the performance of an item of equipment or a process • determine possible performance of an item of equipment/process if practical improvements were made to the 'limiting item'.
Required knowledge
Knowledge and understanding of the materials, equipment and process sufficient to predict their interactions and their impacts on performance. Knowledge of the enterprise procedures and policies along with the ability to implement them within appropriate time constraints and in a manner relevant to the job. Knowledge of: • methods of identifying and calculating theoretical performance • ways of trialling, trial design and implementation • methods of data analysis to determine trial outcomes • methods of interpreting information deduced from trial data.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Assessment might typically be by an analysis project. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to carry out the analysis without undue disruption to the process. Consistent performance should be demonstrated. In particular look to see that: • trial design is appropriate • data taken during trial matches that required for the analysis • the analysis is carried out in a structured manner • recommended changes can be justified based on the comparison of trial and theoretical data.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of projects will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	In a major hazard facility, it may be appropriate to assess this unit concurrently with relevant OHS units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency unit includes the analysis of plant, equipment and equipment components. This competency applies to all work environments and sectors within the chemical, hydrocarbons and oil refining industry, but does require both a theoretical/ mathematical and a practical analysis of the process. The competency does not require a knowledge of industry sectors and materials other than that in which the technician works. It assumes an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally. Typical problems include: • worn equipment/components • validation of new equipment/components to design specification • performance analysis in order to upgrade process performance.
Health, safety and environment (HSE)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMBFIN201C Finish products and components

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers a range of processes subsequent to the actual making of the product which have been grouped together under the heading of 'finishing'. It applies to the finishing of products for customer use, and the finishing of components for use by a subsequent process or organisation which may then further process or assemble these components into a finished product, and similar activities. It applies across all sectors of the industry.

This competency is typically performed by personnel working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to production support or moulding operators who are required to apply knowledge of product quality standards, and product defect classification, and operate value adding secondary processing units such as trimming and assembly, and, other personnel who perform initial finishing processes to products after the production process. The key factors are the removal of waste/excess material from the product and preparing the product for either further processing or customer delivery. This includes:

- checking job sheets for work to be done
- following approved hazard minimisation procedures for any hazards connected with materials and process, using work instructions, labels and materials safety data sheets, and in accordance with occupational health and safety (OHS) legislative responsibilities
- inspecting the product for routine and non-routine finishing processes
- discussing finishing requirements with other workers
- applying finishing process to product
- inspecting finished product and sorting in accordance with job specifications
- identifying and taking action on routine product imperfections
- discussing non-routine product imperfections with designated person.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Establish requirements for the finishing process.	1.1 Identify work requirements from procedures 1.2 Assemble equipment and consumables for the finishing process. 1.3 Consult workplace procedures and materials safety data sheets to confirm the work planning process. 1.4 Ensure safety equipment is available and in sound condition. 1.5 Remove products from equipment if required using enterprise standard handling methods.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	1.6 Recognise end-of-product run.
2. Check quality of product.	2.1 Inspect product to identify routine and non-routine finishing requirements. 2.2 Identify significant finning, flash or other quality problems and report to appropriate person for investigation of mould/ die closure/alignment. 2.3 Check with appropriate personnel regarding modifications to finishing process. 2.4 Identify and process non-conforming products in accordance with workplace procedures.
3. Undertake the finishing operation.	3.1 Trim product as required. 3.2 Apply procedures to other finishing processes. 3.3 Undertake other secondary process operations required. 3.4 Follow waste and recycling procedures. 3.5 Inspect finished product and compare to specifications for suitability for further processing or for customer delivery. 3.6 Assemble finished products and sort in accordance with procedures. 3.7 Pack as required. 3.8 Record product data as required. 3.9 Clean up work area and perform housekeeping.
4. Identify and rectify routine product imperfections.	4.1 Identify the range of routine imperfections that can occur during the production process. 4.2 Determine and rectify routine product imperfections in accordance with procedures. 4.3 Ensure appropriate records and log books are maintained to meet procedures/work instructions. 4.4 Identify non-routine product imperfections and report to designated person.

Required Skills and Knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification product imperfections and techniques necessary to finish products for customer use.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability to:

- apply and/or explain, selection and application of appropriate processes, and selection of appropriate tools for the process
- locate, interpret and apply relevant information to the finishing process
- identify and safely handle products
- select and apply appropriate finishing process
- meet waste and recycling requirements

It is also necessary to demonstrate the ability to distinguish between causes of faults such as:

- product defects, eg flashing, distortions, stress marks, sinks, voids, short shots, poor colour distribution, moisture marks, gassing, burn marks
- inappropriateselection and use of finishing equipment/processes
- poor surface finish
- fining or shuts
- variations in section thickness.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg counting numbers of products and percentage of rejects.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to

- recognise potential situations requiring action implement appropriate action
- understand procedures.

Consistent performance should be demonstrated. For example, look to see that:

- production standards are met consistently
- the importance of critical material properties and quantities to the finishing process is recognised
- safety procedures are followed.

Assessment method and context

Assessment will occur finishing industrial products and components and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

Method of assessment

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context:

This competency applies to personnel working either independently or as part of a work team.

Procedures:

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- electric and/or air powered routers, saws, drills, drivers and sanders knives, files and scrapers
- hand carts and trolleys
- hoists/jigs/lifting equipment not requiring any special permits or licences
- knives and knife sharpeners band saws, hand saws
- personal safety equipment such as gloves and goggles or face shields handling aids such as jigs and gantries.

Hazards:

Typical hazards include:

- manual handling hazards
- knife hazards
- humidity, air temperature, radiant heat
- stationary and moving machinery, parts and components.

Problems:

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- movement of jigs or fixtures
- power failures
- non-supply of materials
- broken cords
- damaged or inoperable equipment
- variations in materials
- temperature of product to be finished
- movement of inserts, reinforcements or fittings size of some products
- inappropriate selection and use of finishing equipment/processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- poor surface finish
- fining or shuts
- variations in section thickness.

Variables:

Key variables to be monitored include:

- finishing production rates
- degrees of finish
- preservation of identifying marks and trademarks
- ability to deal with material variations
- correct application of protective coatings
- waste collection and disposal
- conformance with frequency and quality of organisational reporting requirements.

PMBFIN205C Hand decorate products

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the hand decorating of products as part of the finishing process of products for customer use. It applies to all sectors of the industry.

This competency is typically performed by all operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who perform hand decorating techniques to products as part of the finishing process. The key factors are identifying appropriate materials, correct positioning, alignment and cleanliness.

It includes:

- checking job sheets for work to be done
- following approved hazard minimisation procedures for any hazards connected with materials and process, using work instructions, labels and materials safety data sheets, and in accordance with occupational health and safety (OHS) legislative responsibilities
- inspecting the product for routine and non-routine finishing processes discussing finishing requirements with other workers
- product surface cleanliness
- applying decorating materials to product
- inspecting finished product and sorting in accordance with job specifications
- identifying and rectifying routine product imperfections
- discussing non-routine product imperfections with designated person.

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	protective equipment, and plan order of work.
2. Prepare surfaces.	2.1 Inspect product surfaces for contamination or damage. 2.2 Identify and eliminate sources of contamination. 2.3 Prepare surfaces in accordance with manufacturer instructions and workplace requirements.
3. Hand decorate products.	3.1 Identify required decorations to meet job order requirements. 3.2 Ensure decorations are fit for use and return those damaged or unusable. 3.3 Apply decorations in the appropriate locations 3.4 Inspect finished product and compare specifications for suitability for further processing or for customer delivery 3.5 Assemble finished products and sort in accordance with procedures 3.6 Clean up work area and perform housekeeping.
4. Identify and rectify routine hand decorating problems.	4.1 Identify the range of routine problems that can occur during the hand decorating process 4.2 Determine and rectify routine hand decorating imperfections in accordance with procedures 4.3 Identify faults in equipment, tag unserviceable equipment and report to designated person 4.4 Ensure appropriate records and logbooks are maintained to meet procedures.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise problems that can occur during the hand decorating process.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competence includes the ability to:

- locate, interpret and apply relevant information to finishing process
- identify and safely handle products
- select and apply appropriate finishing process
- apply and/or explain: waste and recycling requirements; non-adherence of transfers, decals or stamps.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg counting numbers of products and percentage of rejects.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- understand the importance of critical material properties and quantities
- recognise potential situations requiring action and then implement appropriate action.

Consistent performance should be demonstrated. For example, look to see that:

- production standards are met consistently
- decorations are applied consistently and at an appropriate rate.

Assessment method and context

Assessment will occur decorating industrial products and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

  - on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing for the generation of evidence of the ability to respond to problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context:

This competency applies to all operators working either independently or as part of a work team.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include:

- original manufacturer instructions and guidelines for the use of the decorating equipment or product
- relevant procedures relating to safe working practices prescribed for the equipment or product
- local OHS legislation and/or regulations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- site-specific instructions based on production requirements.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand carts and trolleys
- hoists, jigs and gantries
- lifting equipment not requiring any special permits or licences
- adhesive application equipment
- relevant personal protective equipment.

Hazards:

Typical hazards include:

- manual handling hazards
- solvents and cleaning agents
- humidity, air temperature, radiant heat
- stationary and moving machinery, parts and components.

Problems:

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'.

Typical process and product problems may include:

- non-supply of product
- incorrect selection or supply of materials
- misalignment of decals, transfers or other decorative materials.
- variations in materials
- temperature of product to be finished
- contamination of surfaces
- decals/transfers or stamps not within specification or not fit for use.

Variables:

Key variables to be monitored include:

- positioning or location of decorative material
- consistency of application
- differing atmospheric conditions
- selection of appropriate decorative materials
-

PMBHAN103C Shift materials safely by hand

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the shifting of materials by hand in a safe manner. It applies to all sectors of the industry.

This competency is typically performed by all operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who move packages, loose goods, materials and products by lifting, pushing and pulling without injury to themselves or damage to the materials being moved. The key factors are planning and executing the move in a safe and efficient manner. It includes:

- identifying the type of material to be moved
- identifying the route to be used
- identifying and using the most appropriate piece of equipment
- following OHS State regulations to complete the operation.

This competency unit includes the use of manual handling aids such as handcarts. It does NOT include the use of powered equipment/aids or licensed load shifting equipment.

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Plan operations.	1.1 Correctly identify type and quantity of produce or material to be moved. 1.2 Identify the safest and most efficient and appropriate movement route.
2. Manually transfer products or materials.	2.1 Manually shift products or materials to and from production processes according to procedures and OHS State regulations. 2.2 Manually load specified products or materials at specific points during the manufacturing process, according to procedures and OHS State regulations.
3. Store, stack and/or relocate products or materials.	3.1 Manually stack products or materials according to procedures and OHS State regulations. 3.2 Manually store products or materials in correct locations. 3.3 Document and/or report material movements as required.

Required Skills and Knowledge

- This describes the essential skills and knowledge and their level required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge is required of good manual handling practice including organisation procedures and relevant State OHS regulations for manual handling and lift techniques sufficient to recognise potential problems and to take the appropriate action.
- Knowledge is required of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Language, **literacy and numeracy requirements**

- This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.
- Writing is required to the level of completing workplace forms.
- Basic numeracy is required (eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg).
-

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- It is essential that manual handling principles are applied and that the importance of safe manual handling techniques is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate action.
- It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to apply and/or explain:
- correct OHS procedures
- appropriate manual handling and lifting/moving techniques
- appropriate lifting/moving equipment
- relevant inventory systems.
- Competence includes the ability to be able to distinguish between jobs which:
- may be easily and safely done by a single person
- will require assistance from other people
- require manual handling equipment
- need mechanical lifting aids.
- Consistent performance should be demonstrated. For example, look to see that standard operating procedures and all safety procedures are adhered to

Assessment method and context

- A holistic approach should be taken to the assessment.
- Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

- This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry. It includes the operation of all relevant ancillary equipment.
- The processes covered by this unit include, but are not limited to:
- movement of materials
- stacking/storing/relocating of materials.
- Loads to be shifted may be, but are not limited to:
- irregularly shaped

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- packaged/unpackaged
- labelled/unlabelled.

Procedures

- All operations are performed in accordance with procedures.
- Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.
- All operations are performed in accordance with standard procedures and work instructions.

Tools and equipment

- This competency includes tools and equipment such as:
- hand carts
- self-propelled trolleys
- wheelbarrows
- block and tackle
- relevant personal protective equipment.

Hazards

- Typical hazards include:
- spills
- dusts/vapours
- hazardous materials
- manual handling hazards

Problems

- Typical problems include:
- load too heavy or large for safe, easy moving
- load in awkward position for safe, easy moving
- clash of work priorities
- correct equipment not available.
- Appropriate action for problems outside of area of responsibility may be reporting to an appropriate person.
- Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

PMBPREP205C Assemble materials and equipment for production

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the interpretation of product specifications, selection of required materials and equipment, organising delivery and confirmation of material/equipment delivery to the production area in preparation for production.

This competency is typically performed by operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who collect and prepare materials for the production process. The key factors are the delivery of the right material to the right place at the right time and ensuring there is no contamination of the materials.

It includes:

- checking job sheets for work requirements
- discussing work progress with other workers
- following approved hazard minimisation procedures for any hazards connected with materials and process, using work instructions, labels and materials safety data sheets, and in accordance with OHS legislative responsibilities
- collecting a range of materials and assembling them close to the start of the process and in the same sequence as the jobs are to be done
- moving the correct number of bags, drums, etc into the assembly area
- checking materials to ensure no contamination
- moving required materials into the right place by the right time.
-

	procedures, codes and practices. 3.3 Collect and organise materials in a manner that ensures storage compatibility. 3.4 Visually check materials according to enterprise requirements. 3.5 Collect holding sample according to enterprise requirements. 3.6 Record details of specification and sample as required.
4. Organise internal workplace delivery of materials/ equipment as required.	4.1 Organise placement of material to required locations using enterprise procedures. 4.2 Notify and confirm delivery as per enterprise requirements/procedures. 4.3 Follow workplace procedures as required by enterprise.
5. Store materials for production as required.	5.1 Identify storage requirements. 5.2 Check holding area conditions meet material requirements. 5.3 Store materials as required for production and to meet health and safety needs. 5.4 Complete required workplace documentation/ records.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, processes and material faults.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Knowledge of and skills in the assembling of materials and equipment sufficient for consistent production of quality products including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- basic units of measurements such as additions, subtractions, divisions, fractions, percentages
- dial, scale and digital read-outs
- materials safety data sheets
- a limited knowledge and application of polymer materials
- definitions of thermoplastics and thermosetting materials
- trade names of common plastic materials
- formulas of common plastics
- end use examples of plastics, by type and common family names
- hazard and safety precautions for common polymer family characteristics; dangerous goods Act, regulations, as relevant
- Hazchem requirements as relevant to the job
- safe working practices in handling polymers
- PPE equipment requirements
- impact of incorrect or faulty materials
- production workflow sequences and materials demand
- focus of operation of work systems and equipment
- correct selection and use of equipment, materials, processes and procedures;
- hazards of the materials and process and appropriate hazard control procedures.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, e.g. to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- get the right materials to the right place, in the right quantity and at the right time
- ensuring there is no contamination
- placing (storing) them at the correct location in a safe manner.

Consistent performance should be demonstrated. For example, look to see that production standards are met consistently.

Assessment method and context

Assessment will occur on using industrial materials and equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Context

This competency applies to operators working either independently or as part of a work team.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand carts and trolleys
- knives and other bag opening equipment
- hoists/lifting equipment not requiring any special permits or licences
- bung spanners and similar
- basic hand tools required for opening of material packaging
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills dusts/vapours
- slip and fall, particularly due to spilt granules
- temperature
- hazardous substances
- moving equipment
- manual handling hazards
- knife hazards.

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'. Typical process and product problems may include:

- equipment malfunction
- non-supply or incorrect supply of materials
- misreading labels or instructions
- variations in materials
- contamination of materials
- incorrect quantity of materials/additives.

Variables

Key variables to be monitored include:

- nature and type of materials
- nature and type of equipment
- power medium for equipment
- location of equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- material mass
- material handling equipment.
-

PMBPREP206C Prepare materials to formulae

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers preparing materials to formulae for production or product finishing.

Application of the Unit

Application of this unit

This competency applies to operators who assemble materials to formulae for production or production finishing. The key factors are identifying handling requirements for materials, preparing for the combination of ingredients and collecting and assembling ingredients. This competency is typically performed by operators working either independently or as part of a work team.

It includes:

- checking job sheets for work to be done and identifying the priority in which jobs/product will be made/completed
- following approved hazard minimisation procedures for any hazards connected with materials and process, using work instructions, labels and materials safety data sheets, and in accordance with occupational health and safety legislative responsibilities
- collecting a range of materials and assembling them close to the start of the process and in the same sequence as the jobs are to be done checking materials to ensure no contamination
- combining materials to a formulae
- moving required materials into the right place by the right time.
-

Licensing/Regulatory Information

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify requirements to handle materials.	1.1 Read and interpret specifications for materials and identify materials. 1.2 Identify units of measurement and matching measuring equipment. 1.3 Know the tolerances of measuring equipment and relate them to the impact of over/under measurement of ingredients on production process and quality. 1.4 Follow procedures to identify and control hazards. 1.5 Read workplace procedures and use them to plan work sequence.
2. Prepare for assembly of ingredients.	2.1 Calibrate or zero equipment for measurement and/or identify appropriate measurement scales. 2.2 Set up and fit required personal protection equipment and engineering controls.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	2.3 Assemble equipment for dealing with emergencies. 2.4 Check work area for cleanliness. 2.5 Identify sources of potential contamination and take steps to minimise/eliminate contamination risk.
3. Assemble ingredients.	3.1 Collect ingredients. 3.2 Weigh/measure ingredients according to procedure. 3.3 Follow appropriate workplace approved sequence for combination of materials. 3.4 Follow standard operating procedures and observe appropriate safety measures when conducting work. 3.5 Check for correctness of colour to standard. 3.6 Take action specified in procedures if materials/assembled ingredients do not appear to meet requirements. 3.7 Complete workplace records. 3.8 Store unused ingredients, and clean and store equipment.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability to:

- use measuring systems, scales and calculating devices
- observe storage and mixing requirements for materials to be mixed
- assess production workflow in relation to materials supply requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- recognise the focus of operation of work systems and equipment
- identify and correctly use equipment, processes and procedures
- plan own work, including predicting consequences and identifying improvements.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Numeracy is also required, e.g. to interpret specifications and measure accurately and perform simple addition and subtraction.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- use measuring scales and equipment
- locate, use, interpret and apply relevant formulae and information
- maintain workplace records for materials used and mixes produced
- identify and safely handle products and materials applying safety precautions appropriate to the task, including safe storage of materials.

Consistent performance should be demonstrated. For example, look to see that:

- critical material properties and quantities are known
- potential situations requiring action result in implementing appropriate action.

Assessment method and context

Assessment will occur using industrial materials and formulae and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment:

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to operators working either independently or as part of a work team.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- measurement equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- knives and other bag opening equipment
- hoists/lifting equipment not requiring any special permits or licences basic hand tools required for opening of material packaging
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills dusts/vapours
- hazardous materials
- manual handling hazards
- knife hazards.

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'. Typical process and product problems may include:

- inappropriate selection of raw materials
- contamination of raw materials
- incorrect formulae being selected
- combining inappropriate materials
- variations in materials
- contamination of materials.

Variables

Key variables to be monitored include

- mixtures and or proportions of materials to be used
- mixing techniques
- order of ingredient addition to the mixture
- atmospheric conditions
- cleanliness of the mixing area
- cleanliness of utensils.

PMBPREP301C Set up and prepare for production

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the set-up and preparation of materials and equipment for production in the plastics, rubber and cablemaking sectors. It applies to batch, one-off and non-standard production lots.

Application of the Unit

Application of this unit

This competency applies to advanced operators who set up and prepare for the production process. The key factors are checking equipment and materials for conformity to specification and working to a process plan. This competency is typically performed by experienced operators working either independently or as part of a work team.

It includes:

- selecting and checking equipment and materials against specifications
- identifying requirements for special tooling and set-up
- drafting a work process plan, including objectives and timeframe
- preparing tools, equipment and materials
- setting up, checking and adjusting the production process
- identifying and planning own work requirements from production requests
- identifying and minimising any hazards connected with materials and process from materials safety data sheets, labels and workplace procedures
- checking settings and adjustments of equipment
- checking materials for conformity to job requirements
- correcting materials, equipment or process variations and making appropriate adjustments
- completing logs and reports.
-

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Select equipment and materials.	1.1 Identify equipment and materials from job specification. 1.2 Check equipment and materials for conformity to specification. 1.3 Note any variances in materials (within materials supplier specifications) which may require variation in production process settings. 1.4 Identify requirements for special tooling and set up. 1.5 Note conformity deficiencies and report to appropriate personnel. 1.6 Identify production objectives and timelines.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	1.7 Clarify product specifications. 1.8 Draft work process plan, noting key quality characteristics, check points and activities where other personnel will be involved.
2. Prepare tools, equipment and materials.	2.1 Locate tools and equipment within workplace ensuring safety and operational checks are performed and equipment is appropriate for purpose. 2.2 Obtain materials specifications and confirm materials are at site for the commencement of production in accordance with established procedures. 2.3 Check materials are prepared to achieve product specification.
3. Set up and check production process.	3.1 Follow procedures for setup in accordance with workplace procedures, customer requirements and specifications. 3.2 Set machine control parameters in accordance with specifications. 3.3 Check work process plan and set up for conformity with identified workplace procedures and customer requirements. 3.4 Make any required adjustments to own work plan. 3.5 Obtain appropriate clearances for production to commence. 3.6 Check equipment for function and make provisional control settings. 3.7 Check performance of equipment and materials. 3.8 Adjust process settings and materials to ensure production outcomes are within quality specifications. 3.9 Make and store records of required adjustments within specification ranges in accordance with workplace procedures.

Required Skills and Knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Knowledge as a basis for solving processing and material problems including:

- products, materials and material characteristics
- behaviour of materials in relation to heat, pressure and time; quality requirements at each production stage
- function and operating principles of equipment, machine components and ancillary equipment
- impact of machine operating parameters on product quality and production output
- nature of mechanical, hydraulic, pneumatic, electrical and electronic principles which may effect machine operation and product development
- assessing operational capabilities of equipment
- predict materials behaviour
- adjust machine parameters
- assess production workflow in relation to focus of operation of work systems and equipment
- identify and correctly use equipment, processes and procedures
- plan own work including predicting consequences and identifying improvements
- interpret from production requests the correct selection and use of equipment, materials, processes and procedures
- maintain output and product quality using appropriate instruments, controls, test information and readings
- make adjustments to equipment operation to rectify variations in equipment operation or product quality
- check equipment for correct set-up to job specifications and implement adjustments or report deviations immediately
- start up equipment and make appropriate adjustments to bring process on line
- take samples when required and identify product out of specification
- safely shut down equipment in normal or abnormal circumstances
- identify and describe own role and role of others involved directly in the process
- identify factors which may affect product quality or production output and appropriate remedies
- identify when the operator is able to rectify faults and when assistance is required
- identify hazards of the materials and process
- implement appropriate procedures for hazard control
- use PPE, safely handle products and materials, read relevantsafety information and apply safety precautions appropriate to the task.

Language, literacy and numeracy requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Numeracy is also required, eg to determine quantities required for production run/batch.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- select, set up and adjust equipment
- arrange materials supply
- inspect results of checks for equipment and materials performance
- locate, interpret and apply relevant information
- maintain workplace records
- identify and handle products and materials safely, applying safety precautions appropriate to the task
- plan own work process within workplace procedures and explain the reasons for the steps in the process
- take appropriate action to observe equipment, materials and products for out of specification results, make adjustments and identify problems to be reported.

Consistent performance should be demonstrated. For example, look to see that:

- set-up conforms to organisation requirements
- production quality and output standards are met consistently
- problems are anticipated from process observations
- problems are efficiently resolved
- the process runs consistently and smoothly

Assessment method and context

Assessment will occur using industrial equipment and materials and will be undertaken in a work-like environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to experienced operators working either independently or as part of a work team.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This competency includes use of equipment and tools such as:

- hand carts and trolleys
- hoists/lifting equipment not requiring any special permits or licences
- relevant personal protective equipment.

Hazards

Typical hazards include:

- moving heavy equipment/materials items
- materials spills
- fumes/dusts/vapours
- hazardous materials in gaseous, liquid or solid form
- manual handling hazards

Problems

Anticipate and solve problems means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- power or equipment failures
- temperature variations
- variations in materials
- contamination of materials
- faulty functioning of equipment.

Variables

Key variables to be monitored include:

- variations in the timing of machine cycles
- atmospheric variations
- variations in the sequence of product availability
- variations in the quality of the raw materials.
-

PMBPREP303C Set up equipment for continuous operation

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers setting up equipment for a continuous production run. It applies to processes which are essentially continuous in nature, and standard production processes.

Application of the Unit

Application of this unit

This competency applies to advanced operators who set up equipment for continuous operation. The key factors are production requirements and setting up equipment to match requirements. This competency is typically performed by experienced operators working either independently or as part of a work team.

It includes:

- identifying production requirements and key stages of the process
- setting up equipment and components safely, accurately and in a way that allows production to flow and workers to move safely
- explaining processes to the operator if required
- producing a one-off sample
- observing process outcomes and using them to fine tune the process
- identifying and planning own work requirements from production requests
- identifying and minimising any hazards connected with materials and process from materials safety data sheets, labels and workplace procedures
- checking settings and adjustments of equipment
- checking materials for conformity to job requirements
- correcting materials, equipment or process variations and making appropriate adjustments
- discarding non-conforming products ensuring discarded materials are re-used where possible and waste and scrap is disposed of in accordance with workplace instructions
- solving routine and non-routine equipment and process problems, seeking guidance where necessary or appropriate
- completing logs and reports.
-

Elements and Performance Criteria Pre-Content

ELEMENT	**PERFORMANCE CRITERIA**
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Identify production requirements.	1.1 Read specifications and standard operating procedures for production run and equipment. 1.2 Identify materials required. 1.3 Note production control requirements for production and warm up time, pressure(s), speed(s), temperature(s) and product specifications. 1.4 Note key stages in the process for quality checks. 1.5 Identify equipment and components required. 1.6 Check assembly requirements for items of production

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	and downstream equipment or specialised componentry to ensure efficient work flow will occur.
2. Set up equipment	2.1 Check work area to ensure adequate space for the process. 2.2 Place equipment and components in required configuration. 2.3 Install guards, warning devices and cut-offs as required. 2.4 Check all connecting components and services for integrity and effectiveness. 2.5 Check dies/ moulds/jigs as required for suitability for production requirements. 2.6 Place standard operating procedures and quality procedures in appropriate work stations. 2.7 Check work area for operator ergonomic efficiency, access and egress requirements.
3. Explain process to operators when required	3.1 Explain particular requirements for machine adjustments, materials characteristics, quality specifications and key production stages to the operator. 3.2 Explain standard operating procedures and any particular OHS issues are identified. 3.3 Identify and explain appropriate contingency strategies for process faults, quality, OHS issues, materials supply or quality machine malfunctions. 3.4 Encourage operators to ask questions and clarify procedures.
4. Produce first-off production sample(s).	4.1 Start process following standard operating procedures. 4.2 Observe product quality through process and compare to standards. 4.3 Compare machine setting ranges to documented requirements. 4.4 Use observations of the process outcomes to fine tune the settings and other production variables. 4.5 Check final product for the required standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	4.6 Compare standard operating procedures with actual production run and note variances.
5. Fine tune the process.	5.1 Use information collected during trial to modify workplace documentation, including standard operating procedures, machine settings and process instructions. 5.2 Obtain appropriate advice and permission where variations are outside of quality or specification range. 5.3 Advise operators of variations to process and document as required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Knowledge as a basis for solving processing and material problems including:

- products, materials and material characteristics
- quality requirements at each production stage
- function and operating principles of equipment, machine components and ancillary equipment
- impact of machine speed, temperature, pressure, time during cycles on product quality and production output
- the hierarchy of control, including engineering controls
- impact of variations in raw materials and equipment operation in relation to final product
- changes to materials at various stages of production
- waste management and importance of non-conforming materials
- identify impact of mechanical, hydraulic, pneumatic and electrical/electronic principles of the production process
- distinguish particular requirements of products, materials, equipment and production process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- identify likely faults and remedies
- recognise focus of operation of work systems and equipment
- assess production workflow and the relationships with equipment, materials and product storage areas and workplace rosters and order systems
- identify and correctly use equipment, processes and procedures
- plan own work, including predicting consequences and identifying improvements
- interpret from production requests the correct selection and use of equipment, materials, processes and procedures
- maintain output and product quality using appropriate instruments, controls, test information and readings
- make adjustments to equipment operation to rectify variations in equipment operation or product quality
- start up equipment and make appropriate adjustments to bring process on line
- take samples when required and identify product out of specification
- safely shut down equipment in normal or abnormal circumstances
- identify factors which may affect product quality or production output and appropriate remedies
- identify hazards of the materials and process
- implement appropriate procedures for hazard control
- safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Numeracy is also required, eg to determine quantities required for a run.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify equipment and components by name and operating principles and function, and to locate, interpret and apply relevant information
- maintain workplace records, identify and safely handle products and materials applying safety precautions appropriate to the task
- identify critical materials properties and process characteristics in relation to the process requirements and the end product
- plan own work process within workplace procedures and explain the reasons for the steps in the process
- take appropriate action to observe equipment, materials and products for out of specification results, make adjustments and identify problems to be reported.

Consistent performance should be demonstrated. For example, look to see that:

- production quality and output standards are met consistently
- problems are anticipated from process observations
- problems are efficiently resolved
- the process runs consistently and smoothly.

Assessment method and context

Assessment will occur using industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to experienced operators working either independently or as part of a work team.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand carts and trolleys
- hoists/lifting equipment not requiring any special permits or licences
- basic hand tools required for opening of material packaging
- material loading equipment used for loading of raw materials
- relevant personal protective equipment.

Hazards

Typical hazards include:

- inadequate use of guards and warning signs
- manual handling hazards
- hazardous materials
- equipment operations.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- variations in materials
- faulty components
- machine malfunction
- variation in product
- contamination of materials
- processing problems.

Variables

Key variables to be monitored include:

- variations in the timing of machine cycles
- variations in the sequence of product availability
- variations in the quality of the raw materials
- product integrity and general conformance to specification/sample.
-

Unit Sector(s)

PMBPREP304C Set a die

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the removal, refitting and setting of dies in preparation for production. It applies typically to the moulding areas of the industry such as injection moulding, and blow moulding.

For setting dies for extrusion, cablemaking and blown film, use *PMBPREP305B Change extrusion die and calibration set-up*. For changing moulds for rotational moulding or thermoforming, use *PMBPROD282B Assemble mould*. For quick change of dies, use *MCMT220A Apply quick changeover procedures*.

This competency is typically performed by advanced operators or operators demonstrating some relevant theoretical knowledge and using a range of well-developed skills requiring some discretion and judgement.

Application of the Unit

Application of this unit

This competency applies to advanced operators or operators who set dies in preparation for the production process. The job involves the die change and the setting of moulding conditions or program for the new die, and can include nozzle change, die tooling changing, screw cleaning and connection of ancillary equipment. The key factors are the safe, precise and efficient removal of dies and the correct installation and setting ready for production. It includes:

- planning and preparing the change including informing others
- selecting dies, tools and parts that are required for the die changeover
- removing, cleaning and storing the existing dies
- accurately attaching the replacement die according to specification
- accurately setting the machine conditions for the new die
- checking the die and process for efficient operation and making appropriate adjustments.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

People being trained in this unit who do not have an appropriate production or trade background may require extra time allowance.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	**PERFORMANCE CRITERIA**
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Prepare to change dies.	1.1 Determine when changeover will be required, and plan requirements for die change. 1.2 Obtain dies and or cores and all parts and tools to match the production order. 1.3 Follow procedure for machine close-down and for informing relevant personnel. 1.4 Take last-off samples as required for die reports.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	1.5 Close down machine in accordance with procedures. 1.6 Prepare machine for changeover in accordance with procedures.
2. Change dies.	2.1 Plan removal process to ensure no damage to self, equipment or others. 2.2 Remove, clean and store die according to workplace procedures applying corrosion protection if required. 2.3 Attach replacement die ensuring that locating devices and marks are matched and securing devices are installed and tightened to specification.
3. Set dies.	3.1 Set machine conditions for new die. 3.2 Restart machine as per procedure. 3.3 Dry cycle machine and die according to enterprise procedures. 3.4 Check operation of die against product quality specifications. 3.5 Check the first off sample for compliance with required standards. 3.6 Fine tune settings and other production variables as required. 3.7 Note any equipment variances between actual production and documented set up conditions. 3.8 Complete workplace documentation and report to appropriate personnel.
4. Anticipate die setting problems.	4.1 Identify potential problems which may occur during the die changing and setting process. 4.2 Determine possible causes of these problems. 4.3 Identify most likely causes and prioritise appropriate actions. 4.4 Rectify problems using appropriate solutions within area of responsibility. 4.5 Recommend improvements in systems or procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence in this unit includes the ability for the practical completion of the job to apply and/or explain the:

- organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards
- construction of simple dies and their components, including fixed and removable cores, inserts, ejection systems, vents
- methods of connecting dies to machines, such as bolting to platens, slots etc.
- the function of each machine setting and the appropriate ranges of settings for a given die
- equipment and process sufficient to recognise conditions which may lead to out of specification production
- impact of incorrect or faulty fitting
- correct selection and use of equipment and procedures
- hazards of the removal and fitting process and appropriate hazard control procedures
- relevant information and workplace records
- safety precautions appropriate to the task.
- use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task.

It also requires skills in the safe, precise and efficient removal of simple dies and their correct installation and the ability to plan their own work, including predicting consequences and identifying improvements.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical production orders and die set-up information.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, eg to monitor and set displays, gauges and dials to correct values according to set-up sheet.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to change and set a die in a manner which will put the moulding machine back into full production of in specification product in standard time. In particular it is essential that the operator can:

- select, install and check the performance of dies and cores
- apply safety precautions appropriate to the task
- recognise potential situations requiring action and then implement appropriate action.

Consistent performance should be demonstrated. For example, look to see that:

- standards are met consistently
- problems are appropriately resolved.

Assessment method and context

Assessment will occur on equipment using simple dies and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate, industrial moulding machine requiring demonstration of die change and die setting procedures
- in a situation allowing the generation of evidence of the ability to perform die change and die setting procedures and to recognise and resolve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the setting and removal of simple dies. It does not include advanced and complex dies

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry which use moulding dies. It includes the operation of all relevant ancillary equipment.

Die

A former used to give the required shape to the product and used under pressure. Dies are typically used in the extrusion, injection, blow moulding and general rubber sectors. Dies used which are not subject to pressure are referred to as 'moulds' in this Training Package.

Simple die

A two plate die including any ejection system operating in the mould open axis, but excluding moulds with molten material retained within the mould between cycles. Products are simple, straight drawn items. Typical features may include: force, cavity, back plates, support plates, cold runner, sprue, nozzle seat, locating ring-tab, sub, fan, diaphragm and direct gating, ejector pins and sleeves, ejector plate and stripper plate, simple drilling for mould cooling.

Advanced die

A two or three plate die with one or more product forming components which move in a direction other than the mould open axis, and which are driven by the mould rather than external actuation. Excludes moulds which retain molten material within the mould between cycles. Typical features may include: sliding blocks or cores actuated by skew pins or cams; baffled, spiral, tube, and heat pipe cooling systems; rising cores; and internally actuated unscrewing systems.

Complex die

Dies which use at least one external power and control source to actuate product forming components, which move in a direction other than the mould open axis, and require sequencing with the mould operation. Includes moulds which retain molten material within the mould between cycles. Typical features may include: hot runners; insulated runners; externally actuated sliding blocks, cores, and unscrewing systems; safety interlocks.

Requirements

Requirements for the die change may include checking the die dimensions such as mould height and required ejector stroke to ensure it is compatible with the selected machine

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Setting

Setting of the machine conditions may include setting the mould height on the machine, the clamp force, the mould safety system, the ejector system, the mould opening and closing distances, speeds and forces and the injection unit.

These settings may be performed automatically, using an electronic storage device to load settings from a previous run of this product, or may be performed by manually setting controls individually.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This unit of competency includes use of equipment and tools such as:

- hand carts and trolleys
- hoists/lifting equipment not requiring any special permits or licences
- basic hand tools
- relevant personal protective equipment.

Hazards

Typical hazards include:

- hazardous materials
- manual handling hazards
- hot surfaces.

Anticipate problems

Anticipate problems includes taking a proactive approach to a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures, and endeavouring to learn from the problem so that it does not recur.

Typical die setting problems may include:

- lack of cleaning of die surface and cooling channels, leading to corrosion
- inadequate fitting of the dies to the platens, causing poor alignment or movement during production
- fine adjustments of die movements, to optimise production.

All operations are performed in accordance with procedures.

Variables

Key variables, and their causes, to be monitored include:

- time/effort required to set a die
- number of attempts to produce a first off within specification
- the need to reset/adjust a die during then production run.

PMBPREP305B Change extrusion die and setup

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the removal and refitting of dies, pins, sizing dies (calibrator), vacuum blocks and seals in preparation for production. This competency applies to extrusion, and similar, dies. For all other dies use PMBPREP304A Change equipment dies.

This competency is typically performed by advanced operators demonstrating some relevant theoretical knowledge and using a range of well-developed skills requiring some discretion and judgement.

Application of the Unit

Application of this unit

This competency applies to advanced operators who are responsible for changing setups to meet the production schedule for an extrusion line process. Setup changes means the work involving the extrusion die and sizing equipment only. The key factors are the safe and precise removal and installation.

The operator will:

- plan and prepare the change, including informing others selecting dies that match product/process specification removing, cleaning and storing the existing dies
- fit the replacement die according to specification testing the changeover and fine tuning as needed.
-

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Prepare to change dies or cores.	1.1 Plan process for closing down machinery and inform relevant personnel. 1.2 Take last-off samples as required for die reports. 1.3 Select dies or cores to match product/process specification. 1.4 Implement measures to control identified hazards in line with procedures and duty of care.
2. Shut down extruder.	2.1 Stop downstream equipment. 2.2 Stop feed, drop temperatures, stop vacuum pump and purge the extruder. 2.3 Activate isolating locks, disconnect power to heaters.
3. Change setup.	3.1 Remove, clean and store die according to workplace procedures. 3.2 Fit replacement die ensuring that locating devices and marks are matched and securing devices are installed and tightened to specification. 3.3 Remove and re-fit calibrator sleeve and seals as required. 3.4 Set heats according to pre-start procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
4. Restart and test-run the new setup.	4.1 Check operation of die against product quality 4.2 Compare machine setting ranges against documented requirements. 4.3 Check the first-off sample for required standards 4.4 Fine-tune settings and other production variables as required. 4.5 Note variances between standard operating procedures and actual production run. 4.6 Complete workplace documentation and report to appropriate personnel.
4. Anticipate and solve problems	4.1 Recognise a problem or a potential problem. 4.2 Determine problems needing priority action. 4.3 Refer problems outside area of responsibility to appropriate person, with possible causes. 4.4 Seek information and assistance as required to solve problems. 4.5 Solve problems within area of responsibility 4.6 Follow through items initiated until final resolution has occurred.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the extrusion process. Application of approved hazard control, safety procedures, the use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge as a basis for solving processing and material problems, including:

- impact of incorrect or faulty fitting
- production work-flow sequences

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- correct selection and use of equipment and procedures
- hazards of the removal and fitting process and appropriate hazard control procedures
- the performance of die and cores
- relevant information and workplace records
- safety precautions appropriate to the task.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- start up equipment and make appropriate adjustments to bring process on line
- take samples when required and identify product out of specification
- safely shut down equipment in normal or abnormal circumstances
- identify and describe own role and role of others involved directly in the process
- identify factors which may affect product quality or production output and appropriate remedies
- identify hazards of the materials and process
- implement appropriate procedures for hazard control
- use PPE
- safely handle products and materials
- read relevant safety information and apply safety precautions appropriate to the task.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators. Writing is required to the level of completing workplace forms and production reports.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, eg, to interpret and use dimensional and tolerance information relating to the die, design drawings and specifications.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

It is essential that competence is demonstrated in the ability to perform a die-change smoothly and methodically, which will put the extruder back into full production of in-specification product in standard time. In particular it is essential that the operator can:

- select, install and check the performance of die and cores
- locate, interpret and apply relevant information
- maintain workplace records
- identify and safely handle products and materials
- apply safety precautions appropriate to the task
- recognise potential situations requiring action and then implement appropriate action.

Consistent performance should be demonstrated. For example, look to see that production standards are met consistently.

Assessment method and context

It is preferred that assessment takes place on an industrial extruder in a work environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the selection and fitting of dies and cores.

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry which use extrusion type dies and cores. It includes the operation of all relevant ancillary equipment.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand carts and trolleys
- hoists/lifting equipment not requiring any special permits or licences basic hand tools
- hand tools
- relevant personal protective equipment.

Hazards

Typical hazards include:

- hazardous materials
- manual handling hazards
- hot surfaces.

Problems

Typical process and product problems may include:

- lack of cleaning leading to corrosion
- inadequate fitting
- fine adjustments to optimise production.

Variables

Key variables to be monitored include:

- fitting and adjustments to die
- adjustments to extruder settings
- quality of the product against product specifications.

PMBPROD221B Operate rotational moulding equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of equipment, including both rotating and 'rock and roll' modes, and the resolving of routine problems to procedure. It does not cover open flame equipment. (see *PMBPROD284B - Operate open flame moulding equipment*)

Application of the Unit

Application of this unit

This competency applies to operators who are required to undertake the routine operation of rotational moulding equipment. The key factors are the making of products to meet quality standards and workplace requirements. This competency is typically performed by operators working either independently or as part of a work team.

It includes:

- checking job sheets for work requirements
- following approved hazard minimisation procedures for any hazards connected with materials and process, using work instructions, labels and materials safety data sheets, and in accordance with OHS legislative responsibilities
- monitoring rotational moulding equipment operation and reporting process variations
- checking product for quality and conformity to specifications discarding non-conforming products ensuring discarded materials are reused where possible and waste and scrap is disposed of in accordance with workplace instructions
- identifying and taking action on routine process problems
- completing logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.
1. Check work requirements.	1.1 Identify work requirements from production plan or request. 1.2 Check product, materials and equipment meet requirements for job(s). 1.3 Recognise requirements which may not be in accordance with usual practice. 1.4 Ask questions of appropriate person to confirm unusual practice. 1.5 Ensure housekeeping is to requirements. 1.6 Identify hazards associated with the job and take appropriate action. 1.7 Perform other pre-operational checks in accordance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.
	with procedures.
2. Operate rotational moulding equipment to procedures.	2.1 Check process is operating within required limits. 2.2 Check product is in specification and to required quality standard. 2.3 Ensure product is consistently ready for next operation. 2.4 Maintain supply of material(s) as required. 2.5 Demould products and store as required 2.6 Complete logs and records as required. 2.7 Collect and segregate scrap, trim and other materials as required. 2.8 Keep equipment and work area clean. 2.9 Pause machine cycle and perform emergency stop, as required.
3. Respond to routine problems to procedures.	3.1 Recognise known faults that occur during the operation. 3.2 Identify and take action on causes of routine faults. 3.3 Log problems as required. 3.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Knowledge of and skills in the operation of rotational moulding equipment and main components sufficient for consistent production of quality products including:

- operation of rotational moulding equipment and components
- effects of shrinkage on material colour

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- production workflow sequences and materials demand
- reasons for checking process control panels and reporting readings which do not conform to the work instructions
- approved hazard control and safety procedures and the use of PPE in relation to handling materials
- equipment operation and cleanup
- potential effects of variations in raw materials and equipment operation in relation to quality of product
- waste management and importance of reusing non-conforming products wherever possible
- correct selection and use of equipment, materials, processes and procedures
- plan own work, including predicting consequences and identifying improvements
- monitor equipment operation and product quality
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the rotational moulding process
- identify factors which may affect product quality or production output and appropriate remedies
- use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task
- pause equipment, or shut down equipment in abnormal circumstances
- explain the effect of unauthorised or emergency shutdown in relation to safety and production requirements
- distinguish between possible causes of routine rotational moulding faults such as: incorrect quantity of materials; contaminated materials/additives; equipment faults; mould damage; temperature/time faults; rotation speed/motion problems; wrong raw materials/additives; incorrect quantity of materials/additives; machine failure.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- recognise the importance of material properties and qualities
- apply approved procedures
- take appropriate action to resolve faults or report faults to appropriate personnel
- explain and implement emergency shutdown procedures.

Consistent performance should be demonstrated. For example, look to see that:

- rotational moulding production standards are met consistently
- upstream and downstream communication is timely
- effective operating procedures and work instructions are read and interpreted correctly
- problems are identified and appropriate action is taken (ie the problem is fixed or reported)
- all safety procedures are followed.

Assessment method and context

Assessment will occur on industrial rotational moulding equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

  - on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to operators working either independently or as part of a work team.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand tools
- material loading equipment used for loading of raw materials
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills
- noise, light, energy sources
- humidity, air temperature, radiant heat, hot moulds
- hazardous substances
- stationary and moving machinery, parts and components
- manual handling hazards.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- equipment malfunction
- variations in temperature, pressure, rotation
- variations in materials or contamination of materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- mould damage
- routine rotational moulding faults
- machine malfunction
- mould/tooling problems
- variations in materials and/or contamination of materials.

Variables

Key variables to be monitored include

- procedures for removing, fitting and setting moulds
- materials used in the rotational moulding process
- process temperatures
- cleanliness
- characteristics of melt flow.

PMBPROD235C Use materials and process knowledge to complete work operations

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the application of materials and process knowledge to the operation of the equipment, processes, materials and end product, so that work procedures and quality requirements can be met. It applies to workers in any sector of the industry.

This competency is typically performed by all operators working either independently or as part of a work team.

This unit of competency may be designated for a stream - see the Range Statement.

Application of the Unit

Application of this unit

This competency applies to operators who maintain an overview of the production process, collect and prepare materials for the production process and observe and make judgements about the end product. The key factors are the delivery of the right material to the right place at the right time and ensuring there is no contamination of the materials.

It includes:

- checking job sheets for work to be done and identifying the priority in which jobs/ product will be made/completed
- discussing work progress with other workers planning which jobs have the higher priority
- utilising raw materials to produce products through a production process
- inspecting the products of the process and identifying routine production faults
- employing appropriate shutdown procedures.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Locate materials, equipment and workplace documentation for production process.	1.1 Follow workplace documentation requirements relating to production processes. 1.2 Identify and locate the range of materials used and their physical forms. 1.3 Acquire necessary equipment and tools and identify appropriate work checking procedures. 1.4 Identify and follow safety requirements for the materials and process to be employed.
2. Follow production process.	2.1 Follow procedures for the production process. 2.2 Identify those parts of the production process where extra care and attention is required. 2.3 Identify and apply the operating principles behind the equipment to be used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
3. Identify product features.	3.1 Inspect products for compliance with quality specifications. 3.2 Identify products in terms of end purpose and relationship to workplace production output and economic value. 3.3 Relate features of products to the production process.
4. Locate required equipment, materials and product storage.	4.1 Follow the correct workplace procedures and safety precautions for the storage of equipment, materials and products. 4.2 Identify and separate incompatible materials in accordance with workplace procedures and practices. 4.3 Ensure equipment is cleaned prior to return to storage. 4.4 Dispose of waste materials through approved means or product recycling.
5. Identify routine production and product faults.	5.1 Identify the causes of production faults and take appropriate restorative or reporting action. 5.2 Establish the basis for product faults and report or address (as appropriate) potential causes due to inappropriate production methods and materials quality.
6. Follow shutdown procedures	6.1 Differentiate between routine and emergency shutdown situations and procedures. 6.2 Demonstrate the procedures to be followed in an emergency shutdown of the process and the alert procedures that accompany that process. 6.3 Follow the appropriate procedures for routine shutdowns for breaks and other routine short term discontinuances. 6.4 Notify appropriate personnel of shutdowns and complete any workplace documentation.

Required Skills and Knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out-of-specification products, process problems and materials faults.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job toapply and/or explain:

- impact of incorrect or faulty materials
- types of products made with different processes
- the changes to raw materials during the process
- production workflow sequences and materials demand
- focus of operation of work systems and equipment
- correct selection and use of equipment, materials, processes and procedures
- hazards of the materials and process and appropriate hazard control procedures.

Competence also includes the ability to:

- recognise the importance of material properties and qualities recognise the importance of process conditions
- apply approved procedures
- take appropriate action to resolve faults or report faults to appropriate personnel
- explain and implement emergency shutdown procedures.

Consistent performance should be demonstrated. For example, look to see that:

- production standards are met consistently
- upstream and downstream communication is timely
- effective operating procedures and work instructions are read and interpreted correctly
- problems are identified and appropriate action is taken (ie the problem is fixed or reported)
- all safety procedures are followed.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- recognise the importance of material properties and qualities
- recognise the importance of process conditions
- apply approved procedures
- take appropriate action to resolve faults or report faults to appropriate personnel.
- explain and implement emergency shutdown procedures.

Consistent performance should be demonstrated. For example, look to see that:

- production standards are met consistently
- upstream and downstream communication is timely
- effective operating procedures and work instructions are read and interpreted correctly
- problems are identified and appropriate action is taken (ie the problem is fixed or reported)
- all safety procedures are followed.

Assessment method and context

Assessment will occur on industrial materials and processes and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by use of an appropriate, industrial materials and processes
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry.

This competency unit includes the use of manual handling aids such as handcarts. It does not include the use of powered equipment/aids.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- basic hand tools required for opening of material packaging
- hand carts and trolleys
- hoists/lifting equipment not requiring any special permits or licences rules or callipers
- relevant personal protective equipment inventory and workplace records systems.

Hazards

Typical hazards include:

- material spills
- fumes, dusts/vapours
- hazardous materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- manual handling hazards
- machinery hazards.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- variations in materials
- contamination of materials
- variations in equipment operations
- product faults
- equipment breakdowns.
-

PMBPROD236C Operate hand held air/power equipment for production processes

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of hand held air or power equipment to contribute to the production process and the assembly of materials and equipment in preparation for production.

Application of the Unit

Application of this unit

This competency applies to operators of hand held equipment used in the assembly and finishing of components as part of the production process. The key factors are the safe and effective utilisation of the equipment and conformance with workplace safety requirements. This competency is typically performed by all operators working either independently or as part of a work team.

It includes:

- checking the equipment for cleanliness and possible hazards, frayed cables or hoses, loose components or other difficulties
- following approved hazard minimisation procedures for any hazards connected with materials and process, using work instructions, labels and materials safety data sheets, and in accordance with occupational health and safety legislative responsibilities
- prioritising work and maintaining production throughput
- bringing together different components for assembly or disassembly
- drilling, grinding, cutting or otherwise dealing with products
- identifying and taking action on routine process problems
- completing logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify equipment and power requirements.	1.1 Match appropriate equipment for drilling, cutting and grinding to work applications. 1.2 Choose correct power and air sources, identifying and selecting correct voltage, amperage and air pressure. 1.3 Select correct lubrication and/or water separation equipment as required. 1.4 Inspect equipment for signs of damage or faults. 1.5 Select correct accessories in terms of suitability for purpose and operable condition.
2. Follow emergency shutdown procedures.	2.1 Identify the circumstances which would justify an emergency shutdown of equipment. 2.2 Identify appropriate switches and/or other shutoff

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	**PERFORMANCE CRITERIA** Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	apparatus. 2.3 Shut down equipment in an emergency. 2.4 Complete reporting required following an emergency shutdown.
3. Control hazards associated with using the equipment.	3.1 Identify potential hazards arising from power sources and/or compressed air. 3.2 Recognise process by-products which may cause damage to the operator, environment, products, raw materials, other equipment or personnel. 3.3 Follow procedures to control hazards.
4. Set up equipment according to procedures.	4.1 Check equipment settings, accessories and consumables for acceptable condition. 4.2 Check equipment for sharpness/wear as appropriate. 4.3 Use manufacturer or workplace instructions for equipment as the basis of work practices. 4.4 Correctly set-up equipment for the required production process. 4.5 Check equipment through the full operating range required for the task.
5. Use equipment for production processes.	5.1 Operate equipment within the parameters of the manufacturer or workplace instructions. 5.2 Use appropriate consumables including cooling and lubricating fluids where required. 5.3 Deal with dust, swarf, off cuts and other production by-products and waste.
6. Shut down equipment according to procedure.	6.1 Shut down equipment as required. 6.3 Dispose of any dust, swarf, off cuts and other production by-products and waste.
7. Store equipment appropriately.	7.1 Clean equipment prior to storage. 7.2 Tag or take appropriate steps to arrange repair or servicing of equipment as required. 7.3 Maintain storage areas to workplace standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of oranisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Knowledge of and skills in the operation of equipment and main components sufficient for consistent production of quality products including:

- impact of incorrect or faulty materials or tools
- production workflow sequences and materials demand
- focus of operation of work systems and equipment
- correct selection and use of equipment, materials
- processes and procedures
- hazards of the materials and process and appropriate hazard control procedures
- distinguish between causes of faults such as wrong materials, incorrect quantity of materials, contaminated materials, blunt or worn tools, tool or power failures.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg to determine that 20 components having 2 attachments each means that 40 attachments are required.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- recognise the importance of critical material properties and quantities
- recognise potential situations requiring action and then implement appropriate action.

Consistent performance should be demonstrated. For example, look to see that:

- production standards are met consistently
- tools are handled correctly
- tools are correctly cleaned and stored
- faulty tools are identified and handed in for repair.

Assessment method and context

Assessment will occur while using industrial power tools and will be undertaken in a work like environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to operators working either independently or as part of a work team.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- work stands
- portable air or power operated drills, grinders, cutters or saws
- impact wrenches
- hoists/lifting equipment not requiring any special permits or licences
- bolts, screws, rivets, etc
- vices, clamps and braces
- relevant personal protective equipment.

Hazards

Typical hazards include:

- frayed cables/hoses
- dusts/swarf
- metal and other shavings
- manual handling hazards
- equipment failures.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- tool malfunctions
- damaged leads or hoses
- incorrect tool selected
- worn or blunt tools/tool bits
- damaged tools
- non-supply of components or fittings
- incorrect supply of components or fittings
- material failures
- out-of-specification products.

Variables

Key variables to be monitored include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- tool speeds
- tool mass
- operating mediums
- condition of tools
- useability
- cleanliness.
-

PMBPROD240C Cut materials

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers preparation and operation of specialised equipment or procedures to cut materials to size, shape or to a pattern, and the resolving of routine problems to procedure.

Application of the Unit

Application of this unit

This competency applies to operators who are involved in the use of specialised equipment or processes to cut material. The key factors are the making of products to meet quality standards and workplace requirements. This competency is typically performed by operators working either independently or as part of a work team.

It includes:

- checking job sheets for work to be done and identifying the priority in which jobs/product will be made/completed
- setting up equipment
- preparing materials as required
- ensuring that safety procedures are applied to reduce the risks
- identifying and taking action on routine process problems
- completing logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check work requirements.	1.1 Identify work requirements from procedures. 1.2 Identify product, materials and equipment requirements for job(s). 1.3 Recognise hazards and adopt steps required to ensure safety. 1.4 Check with supervisor/appropriate person if requirements are not in accordance with usual practice.
2. Conduct pre-start checks as required.	2.1 Check safety gates and guards are in position and working. 2.2 Check raw materials are correct. 2.3 Undertake other pre-start checks in accordance with procedures.
3. Use tools/equipment.	3.1 Operate cutting tools/equipment to cut materials to procedures. 3.2 Monitor dimensions, quality and quantity of cuts. 3.3 Remedy faults and non-conformances by correcting operation or adjusting tools/equipment as required. 3.4 Collect material which is able to be recycled or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	reused, separate and dispose of waste and scrap.
4. Resolve routine problems.	4.1 Identify likely faults that occur during the operation/task. 4.2 Identify and take action on causes of routine faults in accordance with procedures. 4.3 Make sure appropriate records and log books of equipment operations are maintained to meet procedures. 4.4 Identify non-routine problems and report to designated person.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability to:

- apply and/or explain different types of materials and their behaviour when cut, different cutting equipment and suitability for materials
- identify controls of cutting equipment
- list and describe routine faults in products, routine problems in process
- distinguish between causes of faults such as materials deficiencies, heat, changes to materials during the cutting process, equipment adjustments/set-up, equipment maintenance requirements
- original manufacturer instructions and guidelines for the safe use of the cutting tools/equipment
- relevant procedures relating to safe working practices prescribed for the equipment
- local OHS legislation and/or regulations
- site-specific instructions based on production requirements.

Language, **literacy and numeracy requirements**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- recognise the importance of material properties and qualities
- apply approved procedures
- take appropriate action to resolve faults or report faults to appropriate personnel
- explain and implement emergency shutdown procedures.

Consistent performance should be demonstrated. For example, look to see that:

- material cutting production standards are met consistently
- upstream and downstream communication is timely and effective
- procedures and work instructions are read and interpreted correctly
- problems are identified and appropriate action is taken (ie the problem is fixed or reported)
- all safety procedures are followed.

Assessment method and context

Assessment will occur using industrial materials, equipment and scenarios and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

  - on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to operators working either independently or as part of a work team.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- guillotines, power saws, jig saws, band saws, thermal cutting devices
- controller, such as PLC if fitted
- hand tools as required
- relevant personal protective equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Hazards

Typical hazards include:

- fibres and dusts, airborne and handled
- manual handling hazards
- power tools, leads and power supplies
- stationery and moving machinery, parts and components.

Problems

'Respond to routine problems means apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- pattern, eg pattern incorrect, marking errors
- equipment, eg wear and breakage, temperature variations, loss of power or drives, controller sequence, timer issues
- process, eg sequencing problems.

Variables

Key variables to be monitored include:

- material characteristics
- material availability
- type of cutting equipment
- cutting edge condition.

PMBPROD241C Lay up rubber lining or lag pulleys

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the laying-up of rubber and similar materials to line a variety of components or vessels of varying sizes, including the lagging of pulleys.

Application of the Unit

Application of this unit

This competency applies to operators who prepare materials and rubber line or lag a variety of components and larger vessels. The lining of vessels or tanks is to retard abrasion, impact or corrosion. The re-lagging of pulleys for conveyors provides a positive drive. The key factors are the preparation of the surfaces to be lined/lagged and the successful application of the rubber to the surfaces without contaminating the materials. This competency is typically performed by operators working either independently or as part of a work team.

The operator will:

- review hazards and controls
- plan the lining/lagging task
- determine the appropriate materials and lay up sequence
- apply the lining/lagging materials
- identify and take action on routine process problems
- complete logs and reports.

Note that this competency unit covers repairs carried out in a workshop or other off-site facility. If the work involves on site work, then this competency should be considered in conjunction with *MSAPROD363A Organise on site work*.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Some enterprises may require the achievement of certain other competency units in accordance with workplace safety requirements. Where rubber lining is to be carried out in a confined space, this unit also requires the achievement of *MSAPER205 Enter confined space*.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Plan rubber lining or lagging work.	1.1 Review specifications and work order documentation. 1.2 Identify hazards and risk controls, including emergency evacuation and adequate ventilation, including breathing apparatus where required. 1.3 Plan work including materials, sequences, times and process stages. 1.4 Plan to minimise downtime, economically use materials and meet repair quality specifications. 1.5 Assemble equipment, tools and materials required, checking them for condition, quality and compliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	tags.
2. Prepare surfaces for rubber lining or lagging.	2.1 Lay out materials in an appropriate contamination free area. 2.2 Ensure materials are clean and free of debris and damage. 2.3 Identify non-conforming materials and report as required. 2.4 Examine component, vessel or pulley and ensure the surfaces to be lined or lagged are free of defects and contaminants. 2.5 Plan the sequence for application of the adhesives and materials. 2.6 Prepare lining or lagging surfaces. 2.7 Monitor surface coatings for setting time and manage the staggered supply of adhesives and materials, where appropriate.
3. Lay up rubber lining or lagging.	3.1 Ensure adequate ventilation is provided and monitored during the laying up process. 3.2 Monitor any confined space activity and conform to regulations and procedures. 3.3 Position lining/lagging segments according to the lay-up plan. 3.4 Exclude entrapped air and ensure complete contact between the lining/lagging and surface is obtained. 3.5 Ensure joins are sealed and adhered properly with no gaps or overlaps. 3.6 Check for slips, sagging or other separation of the lining/lagging from the surface. 3.7 Ensure lining/lagging material is finished off as required at the extremities. 3.8 Cure rubber lining/lagging where appropriate.
4. Clean work area.	4.1 Clean, inspect and store tools and equipment used. 4.2 Tag unserviceable tools and equipment, identify faults and inform relevant personnel. 4.3 Clean work area and return to approved condition. 4.4 Dispose of waste or recycle according to procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	4.5 Complete appropriate workplace documentation.
5. Respond to routine problems to procedures.	5.1 Recognise known faults that occur during the operation. 5.2 Identify and take action on causes of routine faults. 5.3 Log problems as required. 5.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the lining process. Application of approved hazard control, safety procedures and the use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge of and skills in the lining/lagging operation sufficient for consistent production of quality products including:

- impact of incorrect or faulty materials
- production workflow sequences and materials demand
- focus of operation of work systems and equipment
- correct selection and use of equipment, materials, processes and procedures
- hazards of the materials and process and appropriate hazard control procedures especially the use of ventilation, breathing apparatus and requirements for confined space entry and emergency escape
- requirements of good manual handling practices
- need for scaffolding and safe work practices at heights.

Competence also includes the ability to:

- plan own work including predicting consequences and identifying improvements
- monitor equipment operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the lining/lagging process.

Competence includes the ability to distinguish between causes of faults such as:

- wrong raw materials/additives/catalyst
- incorrect quantity of materials/additives/catalyst
- contaminated materials/additives/catalyst.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg to interpret specifications and make and interpret measurements and shapes.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- recognise the importance of material properties and qualities
- apply approved procedures
- take appropriate action to resolve faults or report faults to appropriate personnel
- explain and implement emergency evacuation procedures.

Consistent performance should be demonstrated. For example, look to see that:

- rubber layup production standards are met consistently
- communication is timely and effective
- work instructions are read and interpreted correctly
- problems are identified and appropriate action is taken (ie, the problem is fixed or reported)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- all safety procedures are followed.

Assessment method and context

Assessment will occur on industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by use of an appropriate, industrial lining/lagging situation
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to a variety of internal and external work environments served by the rubber industry and includes work done in a production facility and on site.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This competency unit includes the use of manual handling of lining materials, the use of scaffolding and can involve activities within the definition of 'confined space'. (Note that separate competencies, and/or licensing requirements may apply for these activities.)

Lining materials includes rubber compounds which includes green (uncured) sheets, pre-cured rubber sheets and other polymer sheets. Lining or lagging will generally be of metal items, but may include application to composites, concrete and other non-metallic structures, vessels, pulleys or plant items.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand tools (eg spanners, wrenches and hammers)
- knives and other trimming devices
- hoists/lifting equipment not requiring any special permits or licences
- rollers and other surface compression tools
- ventilation equipment (eg fans)
- relevant personal protective equipment, including 'breathers' as required.

Hazards

Typical hazards include:

- spills
- dusts/vapours
- hazardous materials (eg adhesives, solvents and other chemicals)
- manual handling hazards
- knife hazards
- noxious, toxic fumes or inflammable fumes
- confined spaces
- working at heights.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- variations in materials
- incorrectly cut material shapes
- contamination of materials
- contamination of the surfaces to be lined or lagged
- physical size and complexity of some components
- entrapped air
- gaps between lining segments
- inappropriate laps or joins.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Variables

Key variables to be monitored include:

- compatibility of materials, adhesives, solvents and cleaning agents
- cleanliness and condition of lining/lagging materials
- affect of surface condition of the component on the quality of the lining/lagging.
-

Unit Sector(s)

PMBPROD242A Bond polymers to surfaces

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the joining of a solid polymer to another solid surface using adhesives, cohesives, solvents or other joining materials. The polymer may be thermoplastic or cured or uncured thermoset.

Application of the Unit

Application of this unit

This competency applies to operators who are required to join polymers to another surface. It is typically performed by operators working either independently or as part of a work team. The operator will:

- check the surface of products to be joined for suitability or contamination
- check materials for conformity to job requirements
- apply the joining material(s)
- notice any problems and take required actions
- deal with non-conforming products, waste and scrap
- complete logs and reports.

They may record key variables such as work conditions and production rate and reasons for interruptions.

This unit does not include:

- significant surface preparation - see *PMBPROD248C Prepare surfaces for coating*
- heat curing of bonded material - see *PMBPROD265 Operate portable vulcanising equipment, PMBPROD375B Vulcanise products using an autoclave*.

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check work requirements.	1.1 Identify work requirements from production plan or request. 1.2 Select and check appropriate equipment or tool/s, techniques and materials to be used. 1.3 Recognise requirements which may not be in accordance with usual practice. 1.4 Ask questions of appropriate person to confirm unusual practice. 1.5 Ensure housekeeping is to requirements. 1.6 Identify hazards associated with the job and take appropriate action. 1.7 Perform other pre-operational checks to procedures
2. Prepare materials for	2.1 Check substrate for suitability.

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
joining.	2.2 Clean/activate substrates to procedures as required.
3. Apply joining materials.	3.1 Prepare joining materials. 3.2 Apply joining materials to substrate(s) as required. 3.3 Monitor drying/setting as appropriate 3.4 Apply subsequent material/coats as required. 3.5 Complete logs and records as required. 3.6 Keep equipment and work area clean.
4. Join materials.	4.1 Set up required jigs and equipment for joining. 4.2 Bring surfaces together when appropriate. 4.3 Ensure intimate and continuous contact between surfaces. 4.4 Apply required conditions to join until joining process is complete.
5. Respond to routine problems in accordance with procedures.	5.1 Recognise known faults that occur during the operation. 5.2 Identify and take action on causes of routine faults. 5.3 Log problems as required. 5.4 Identify non-routine problems and report to designated person.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of organisation procedures, quality requirements and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risk using the hierarchy of controls applied to the coating process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge and skills in the operation of the joining process and equipment sufficient for consistent production of quality products, including:

- correct selection and use of equipment or tool/s, materials, processes and procedures
- accurately monitoringequipment operation and product quality
- reasons for checking conditions and taking action when outside of the normal range of process variability
- identifying factors which may affect product quality or production output and appropriate remedies
- potential effectsof variations in materials and equipment operation in relation to quality of product
- joining behaviour of polymers to relevant substrates and the role of adhesives,cohesives, solvents and other materials
- waste management and knowing the importance of reusing non-conforming products wherever possible
- basic pre-blending of materials
- methods of application of joining materials
- required surface preparations and their importance to joining
- types of adhesives, cohesives, solvents and their differences, uses, where they may or may not be used and range of application
- critical factors for different types of joining processes such as gap filling, aesthetics, structural strength etc.

Competence also includes the ability to:

- plan production workflow sequences and materials demand
- plan own work. including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the coating process.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine the amounts of materials needing to be blended for a 2 pot adhesive.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to complete adhesive bonding jobs
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that:

- joining production standards are met consistently
- all safety procedures are followed.

Assessment method and context

Assessment will occur using industrial bonding situations and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using appropriate joining materials, situations and tools
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all joining operations where a solid polymer is joined to another substrate. It includes the operation of all relevant additional equipment where that equipment is integral to the joining process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Substrate suitability

Substrate suitability includes:

- surface soundness
- surface preparation such as grit blasting, etching, sanding, buffing, scraping, machining or other preparations
- substrate porosity
- surface pits, protrusions or other irregularities.

Joining materials

Joining materials include:

- adhesives (such as commercially available materials 'Loctite, Sikaflex, Plexus)
- cohesives
- solvents (such as aliphatics, ketones, aromatics)
- other materials (such as glues, fillers)

Joining material preparation

Joining material preparation includes:

- mixing one pot materials to achieve homogeneity
- blending two (or more) pot material components
- thinning (eg with solvent) if required
- measuring components for blends.

Joining material application

Joining material application to include:

- correct application rate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- even application
- economical application
- correct application method.

Contact between surfaces

Contact between surfaces may be effected by:

- use of hand rollers
- use of presses
- may be achieved as part of the curing process where this is done under pressure
- other relevant equipment.

Tools and equipment

This competency includes use of equipment and tools such as:

- application equipment (eg brushes, syringes, pipettes, spray guns, application scrapers)
- additional equipment (eg vapour extraction, application booths)
- manual handling aids (eg hand carts, trolleys)
- hoists/lifting equipment not requiring any special permits or licences
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills and splashes
- toxic fumes or vapours
- hazardous materials
- manual handling hazards
- flammable vapours.

Problems

'Respond to routine problems' means apply known solutions to a limited range of predictable problems. Typical process and product problems may include:

- incorrect selection of joining materials
- variations in materials
- contamination of joining materials or substrates
- inappropriate application of materials
- dust and other contamination
- drying rates
- film thickness variation
- film application rates
- coverage
- tack (too much, not enough, long leg/short leg)
- products with substrate or other faults.

Appropriate action for non-routine problems may be reporting to designated person or other action specified in the procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Variables

Key variables to be monitored include:

- application patterns
- adhesive consistency
- substrate preparation, condition and finish
- adhesive viscosity
- solvent/thinner blend ratios.
-

Unit Sector(s)

PMBPROD247C Hand lay up composites

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers preparation and operations for hand laying up of composite materials to form a simple product and the resolving of routine problems to procedure.

Application of the Unit

Application of this unit

This competency applies to operators who are involved in the production of products by hand lay up of composite materials. This competency is typically performed by operators working either independently or as part of a work team. The operator:

- selects and prepares the materials required to form a product to the required specifications
- sets up moulds
- applies materials as required
- ensures that safety procedures are applied to reduce the risks
- notices any problems and takes required action (eg reporting)
- completes logs and reports as required.

They may record key variables such as mould conditions and production rate and reasons for interruptions.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check work requirements.	1.1 Identify work requirements from production plan or request. 1.2 Check product, material, and equipment meet requirements for the job(s). 1.3 Recognise requirements which may not be in accordance with usual practice. 1.4 Ask questions of appropriate person to confirm unusual practice. 1.5 Identify hazards associated with the job and take appropriate action. 1.6 Perform other pre-operational checks in accordance with procedures.
2. Set up mould and materials as required.	2.1 Set up mould ready for production. 2.2 Ensure materials are available in the form and quantities required. 2.3 Ensure safety equipment is available and fit for use.
3. Hand lay up composites.	3.1 Apply materials to the mould to specification. 3.2 Monitor product/process quality. 3.3 Make adjustments or seek assistance to remedy faults

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	and non-conformity as required. 3.4 Adjust work to minimise scrap and trim.
4. Respond to routine problems in accordance with procedures.	4.1 Recognise known faults that occur during the operation. 4.2 Identify and take action on causes of routine faults. 4.3 Log problems as required. 4.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of an operational knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults. For example, excess resin will only add weight and weaken the finished product. Therefore care needs to be taken to ensure the correct resin to fibre ratio is used.

Knowledge of organization procedures, relevant regulatory requirements, and the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the hand lay up process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of hand lay up equipment and the main components sufficient for consistent production of quality products including:

- production workflow sequences and materials demand
- accurately monitoring equipment and product quality
- understanding the potential effects of variations in raw materials and equipment in relation to quality of product
- waste management and understanding the importance of reusing non-conforming products wherever possible
- correct selection and use of equipment, materials, processes and procedures
- identify factors which may affect product quality or production output and appropriate remedies.
- setting up moulds

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- preparation of resins, including mixing as required
- preparation of fibre reinforcement, including cutting and trimming
- use of composites materials, including gel coats, resins and fibres
- methods of application of composite materials to the mould by hand lay up.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the moulding process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Numeracy is required to the level of reading tables of figures and graphs (and applying the resultant information), using formula percentages/ratios to determine the required mass of an additive (catalyst, pigment etc.) and similar manipulations and interpretation.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to the hand lay up process
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that:

- composites production standards are met consistently
- all safety procedures are always followed.

Assessment method and context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment will occur during the hand lay up process for composites and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- through use of industrial hand lay up composite manufacture, using jobs of appropriate complexity
- in a situation allowing for operation under all normal and a range of abnormal conditions
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the use of equipment and materials to form composite products using hand lay up processes. It includes the operation of all relevant additional equipment where that equipment is integral to the hand lay up process.

Procedures

All operations are performed in accordance with procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- open moulds for composite products
- hand mixing equipment and stirrers
- knives and cutters to trim fibres
- hand application tools, rollers, brushes, etc
- relevant personal protective equipment.

Hazards

Typical hazards include:

- hazardous materials and vapours
- manual handling hazards
- fire hazards due to flammable nature of resins used
- knife hazards
- glass (and other) fibre hazards (inhalation and skin penetration)
- slip hazards (spilled resin).

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process problems may include:

- cracks, dents or imperfections of the mould
- incorrect resin ratios
- contamination of materials
- shifting of fibres before resin laid
- stacking of fibre and resin sequence problems.

Typical product problems may include:

- voids
- poor surface finish
- colour contamination
- release from mould damage.

Appropriate action for non-routine problems may be reporting to designated person or other action specified in the procedures.

Variables

Key variables to be monitored include:

- ambient temperature
- air flow/ventilation rate
- viscosity of resin
- time since resin mixed *vs* pot life of mix
-

with procedures.	operation. 3.2 Identify and take action on causes of routine faults. 3.3 Log problems as required. 3.4 Identify non-routine problems and report to designated person.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of an operational knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in surface preparation equipment and main components sufficient for consistent production of quality products including:

- production workflow sequences and materials demand
- accurately monitoring equipment operation and product quality
- the potential effects of contamination on surface quality
- surface finish measurement techniques
- equipment, tools and consumables required to deliver the specified surface finish
- different substrates and their preparation requirements
- appropriate surface finish techniques for the substrates used
- typical problems with each substrate
- correct selection and use of equipment, materials, processes and procedures (such as the combination of surface finish technique and the appropriate substrate).

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the finishing process.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to prepare surface for coating
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that:

- finishing production standards are met consistently
- all safety procedures are followed.

Assessment method and context

Assessment will occur using industrial surface preparation equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using appropriate, industrial equipment requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the processes required to prepare surfaces for application of surface coatings to specification. It includes the operation of all relevant additional equipment where that equipment is integral to the surface preparation process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand finishing tools
- scrapers
- sandpaper
- buffs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- polishes
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills
- hazardous materials and vapours (such as fumes from solvents or degreasers, or dust from sanding)
- moving equipment
- manual handling hazards.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process problems may include:

- wear and breakage
- overuse of tools, requiring rework
- incorrect substrate used
- incorrect measurement of surface finish.

Typical product problems may include:

- contamination of surface prior to polish
- damage to polished surface.
-

PMBPROD265C Operate portable vulcanising equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the application of technical expertise, work planning and problem solving to set up and operate portable vulcanising equipment.

This competency is typically performed by operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who set up and operate portable vulcanising equipment either in a production facility or an on-site work environment. The key factors are the establishment of the appropriate safe working environment, obtaining the necessary power and other supplies, conducting vulcanising operations and assessing and taking appropriate action at the end of the operations.

It includes:

- planning the curing job
- identifying hazards and applying appropriate controls
- obtaining all necessary clearances and permissions for site work
- setting up equipment and materials
- conducting vulcanising operations
- assessing the finished work and identifying and taking action on routine process problems
- completing logs and reports.
-

Licensing/Regulatory Information

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify work requirements for vulcanising operations.	1.1 Identify the job and vulcaniser characteristics and product quality outcomes required. 1.2 Obtain specifications relevant to the material being vulcanised. 1.3 Identify and obtain equipment and materials required for the vulcanising process. 1.4 Identify hazards associated with the job and take appropriate action. 1.5 Check materials, ancillary supplies, and equipment for quality, access and condition. 1.6 Identify and check emergency stops, gauges, guards and controls.
2. Plan vulcanising operations.	2.1 Identify time, pressure and temperature requirements. 2.2 Plan the task sequences 2.3 Plan for waste management, maintenance and housekeeping requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
3. Prepare vulcanising equipment.	3.1 Check vulcaniser, ancillary, equipment and attachments are fit for purpose. 3.2 Set up vulcanising press according to procedures. 3.3 Set equipment control parameters to specifications. 3.4 Obtain appropriate clearances for vulcanising to commence.
4. Conduct and monitor vulcanising operations.	4.1 Start the unit and commence vulcanising. 4.2 Monitor the unit operation throughout the entire process 4.3 Note and report non-conformity to specifications to procedures. 4.4 Make adjustments as required. 4.5 Shut down unit when cycle completed. 4.6 Follow procedure to disassemble equipment as required. 4.7 Assess the outcome of the vulcanising process and take remedial action as necessary and report to the appropriate person. 4.8 Brand splice as per company policy 4.9 Clean up, lubricate and adjust equipment as required. 4.10 Complete waste removal or recycling as required.
5. Respond to routine problems to procedure.	5.1 Recognise known faults that occur during the operation. 5.2 Identify and take action on causes of routine faults. 5.3 Log problems as required. 5.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the vulcanising process. Application of approved hazard control, safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of portable vulcanising equipment and main components sufficient for consistent production of quality products including:

- importance of correct selection and use of equipment, materials, processes and procedures
- identifying the function of vulcanising equipment, components and the materials used
- describing changes to materials during the vulcanising process
- explaining the impact of vulcanising speed, pressure, time, temperature and tension on product quality and production output
- describing the role of heat and pressure in relation to providing strength, stiffness, resistance to deformation, fatigue and abrasion
- explaining any differences in vulcanising processes and additives for natural, synthetic and mixed rubber compounds
- deciding if they (the operator) are able to rectify the fault or if assistance is required
- explaining the effect of unauthorised or emergency shutdown of equipment on the vulcanising process
- understand the underlying risks in the process and how best to manage them.

Competence includes the ability to:

- plan own work sequence, including identification of key checkpoints for equipment monitoring and product quality checks
- operate equipment and monitor product quality
- identify factors which may influence product quality and production output and appropriate remedies
- make appropriate authorised alterations to own work plan and equipment to maintain both product quality and required production output
- locate, interpret and apply relevant information and maintain workplace records
- identify and safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task.

Distinguish between causes of faults such as:

- equipment condition
- materials (eg. contaminated or wrong raw materials/additives/catalyst)
- process conditions (eg incorrect temperatures or pressures and entrapped air in the vulcanised area).

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Basic numeracy is also required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- understand the inherent risk associated with using a vulcaniser and the potential consequences of incorrect use
- understand procedures
- understand the importance of critical material properties and quantities
- recognise potential situations requiring action
- implement appropriate action and explain logic.

Consistent performance should be demonstrated. For example, look to see that:

- production standards are met consistently
- wire or reinforcing is not visible in the finished product
- bonding is achieved in accordance with specifications.

Assessment method and context

Assessment will occur on industrial equipment in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate, portable vulcanising equipment
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the rubber industry. It includes the operation of all relevant additional equipment where that equipment is integral to the vulcanising process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This unit of competency includes use of equipment and tools such as:

- portable vulcanising equipment (including dispersion plates, pressure bags, edge bars, controllers)
- knives and other rubber cutting and shaping equipment
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids such as handcarts
- relevant personal protective equipment
- powered equipment/aids.

Hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Typical hazards include:

- pressure
- heat and hot rubber
- chemical splashes or spills
- dust or vapours/fumes
- manual handling hazards
- knife hazards.

Task sequences

Task sequences include:

- location of vulcaniser
- process monitoring
- quality checks.

Monitoring of vulcanisation

Monitoring of vulcanisation includes noting:

- times,
- vulcanisation quality,
- equipment operating temperatures and times
- additional pressures applied.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- incorrect vulcaniser set-up
- variations in materials
- contamination of materials
- unsuccessful vulcanising processes
- entrapped gasses
- wire or reinforcing exposure
- inappropriate material specification.

Variables

Key variables to be monitored include:

- heat
- pressure
- time
- tension.

PMBPROD321B Produce rotational moulded products

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation and adjustment of rotational moulding processes and the solving of non-routine problems. This does not cover open flame equipment.

This competency is typically performed by operators demonstrating some relevant theoretical knowledge and using a range of well developed skills requiring some discretion and judgement.

Application of the Unit

Application of this unit

This competency applies to operators who are required to apply knowledge of materials, product purpose and processes to the operation of rotational moulding equipment. The key factors are the production of material meeting quality standards and product requirements and the recognition and resolving of a range of routine and non-routine problems.

It includes:

- identifying and planning own work requirements from production requests
- identifying and minimising any hazards connected with materials and process from materials safety data sheets, labels and workplace procedures
- checking settings and adjustments of equipment
- checking materials for conformity to job requirements
- monitoring equipment operation and correcting process variations
- correcting materials, equipment or process variations and making appropriate adjustments
- discarding non-conforming products ensuring discarded materials are reused where possible and waste and scrap is disposed of in accordance with workplace instructions
- solving routine and non-routine rotational moulding equipment and process problems, seeking guidance where necessary or appropriate
- completing logs and reports.
-

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job toapply and/or explain:

- products, materials and material characteristics
- behaviour of materials in relation to heat, rotation and time
- quality requirements at each production stage
- function and operating principles of rotational moulding equipment, machine components and ancillary equipment
- impact of machine speed, temperature, time during heating and cooling cycles on product quality and production output
- nature of mechanical, hydraulic, pneumatic, electrical and electronic principles which affect machine operation and product development
- rotational moulding cycle and the importance of machine set-up and warm-up for effective processing of materials
- safety procedures and the use of PPE in relation to handling materials, equipment operation and clean up
- the hierarchy of control including engineering controls
- impact of variations in raw materials and equipment operation in relation to final productchanges to materials at various stages of production
- waste management and importance of non-conforming materials
- polymer properties and their interactions with process conditions
- relationships between polymer properties and process conditions
- changes to polymer properties to better suit process requirements
- product problems related to polymer properties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- product problems related to process conditions
- adjustments to process conditions to meet polymer and product requirements.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- interpret from production requests the correct selection and use of equipment, materials, processes and procedures
- maintain output and product quality using appropriate instruments, controls, test information and readings
- identify factors which may affect product quality or production output and appropriate remedies
- identify when the operator is able to rectify faults and when assistance is required
- distinguish between causes of faults.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, eg to determine how many 2 kg, 3 kg and 5 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical materials properties and rotational moulding process characteristics in relation to the process requirements and the end product.

Consistent performance should be demonstrated. For example, look to see that:

- production quality and output standards are met consistently
- the process runs consistently and smoothly.

Assessment method and context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment will occur on an industrial rotational moulding machine(s) equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to rotomoulding systems, including fixed spindle, single spindle, multiple spindle and shuttle, swing and carousel type machines. It includes the operation of all relevant additional equipment where that equipment is integral to the rotational moulding process.

Procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand tools used in the rotational moulding process
- material loading equipment used for loading of raw materials
- relevant personal protective equipment.

Hazards

Typical hazards include:

- noise, light, energy sources
- manual handling
- humidity, air temperatures, radiant heat, hot moulds
- stationary and moving machinery, parts and components.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- routine and non-routine product rotational moulding faults
- machine malfunction
- mould/tooling problems
- variations in materials and/or contamination of materials
- processing problems.

Causes of faults

Causes of faults include:

- short mouldings
- sink marks
- voids
- burn marks
- mica
- splash marks
- warping
- silver streaking
- blistering
- flow marks
- poor surface finish
- windows
- erratic cycles

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- poor colour dispersion
- rotation damage
- colour contamination
- black spots
- incorrect quantity of materials
- contaminated materials.

Variables

Key variables to be monitored include:

- cycle time according to external temperatures and humidity
- operating temperatures
- type of heating used
- cooling time
- speed of rotation/movement
- pattern of movement
- colour of product
- product integrity and general conformance to specification/sample.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all powder coating processes within the plastics and rubber industries. It includes the operation of all relevant additional equipment where that equipment is integral to the powder coating process.

Procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- powder coating spray equipment and ancillaries
- racks, baskets and supports, including overhead tracks and drives
- curing ovens and controls
- hand tools used in the powder coating process
- powder handling equipment
- relevant personal protective equipment.

Hazards

Typical hazards include:

- hazardous chemicals, pre-treatment chemicals and powder coating material
- humidity, air temperatures, radiant heat, hot surfaces
- stationary and moving machinery, parts and components
- temperature
- manual handling hazards
- equipment operations.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- poor pre-treatment coverage, drainage or compatibility
- colour variation
- blemishes
- uneven coating
- over/under cured coating
- variations in materials and/or contamination of materials
- processing problems.

Fault causes

Fault causes include:

- substrate surface condition
- pre-treatment effectiveness
- spray application
- powder
- oven conditions
- incorrect quantity of materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- contaminated materials.

Variables

Key variables to be monitored include:

- spray application and coverage
- operating temperatures
- speed
- colour
- cycle time
- coating integrity and general conformance to specification/sample.
-

Unit Sector(s)

PMBPROD347B Produce composites using hand lamination

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the production of complex composite products using hand lamination of composite materials and the solving of problems.

Application of the Unit

Application of this unit

This competency is typically performed by operators applying knowledge of materials, product purpose and processes of hand lamination to produce products conforming to requirements. It also requires using a range of well developed skills requiring some discretion and judgement to recognise and resolve a range of problems.

The operator will:

- identify and plan own work requirements from production requests
- set up equipment, moulds and forms
- monitor materials and equipment operation
- make appropriate adjustments to correct materials, equipment or process variations
- solve equipment and process problems, seeking guidance where necessary or appropriate.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of *PMBPROD247C Hand lay up composites*.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan own work requirements.	1.1 Identify most appropriate equipment and materials to be used for required product and upstream and downstream operations from production plan or request. 1.2 Identify materials required, including additives. 1.3 Implement measures to control identified hazards in accordance with procedures and duty of care. 1.4 Identify requirements for materials, quality, production and equipment checks.
2. Set up mould and materials to procedures.	2.1 Check materials, resins and fibres are correct and prepared to specifications. 2.2 Inspect and prepare mould as required. 2.3 Prepare jigs, fixtures and tools as required. 2.4 Take appropriate action for non-conforming items. 2.5 Set up date, batch and materials markings to specifications, as required. 2.6 Complete other checks.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
3. Hand lay up composites to procedures.	3.1 Apply materials to the mould to specification. 3.2 Monitor product/process quality. 3.3 Make adjustments to remedy faults and non-conformity as required. 3.4 Adjust work to minimise scrap and waste.
4. Anticipate and solve problems.	4.1 Recognise a problem or a potential problem. 4.2 Determine problems needing priority action. 4.3 Refer problems outside area of responsibility to appropriate person, with possible causes. 4.4 Seek information and assistance as required to solve problems. 4.5 Solve problems within area of responsibility. 4.6 Follow through items initiated until final resolution has occurred.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults. For example, outside temperatures can affect the setting and curing time of resin mixtures. Therefore ratios of resins mixtures need to be strictly monitored to ensure an appropriate curing time for production output.

Knowledge of organisation procedures, quality requirements at each production stage, and the ability to implement them within appropriate time constraints and work standards.

Skill to identify the range of possible causes of product faults.

Application of the knowledge of managing risks using the hierarchy of controls applied to the hand lay up process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge as a basis for solving processing and material problems including:

- characteristics and properties of materials required to form a composite structure of the required strength and surface finish, including fibres and pot life of the resins used

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- impact of resin mixtures, laying of materials, and temperatures on product quality and production output
- changes to materials at various stages of production
- waste management and importance of non-conforming materials
- impact of variations in raw materials and application in relation to final product
- setting up moulds
- selection and preparation of resins, including mixing as required
- selection and preparation of fibre reinforcement, including cutting and trimming
- use of composites materials including gel coats, resins and fibres
- use and application of cores, fillers and surface finishes
- application of composite materials to the mould by hand lay up
- material properties and their interactions with process conditions
- relationships between material properties and process conditions
- changes to material properties to better suit process requirements
- product problems related to material properties
- product problems related to process conditions
- adjustments to process conditions to meet material and product requirements.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- make measurements when required and identify product out of specification
- identify and describe own role and role of others involved directly in the process
- identify factors which may affect product quality or production output and appropriate remedies
- identify when assistance is required to solve problems.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Numeracy is required to the level of reading tables of figures and graphs (and applying the resultant information), using formula percentages/ratios to determine the required mass of an additive (catalyst, pigment etc.) for a given amount of resin, and similar manipulations and interpretation.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the assessee does not currently possess evidence of competency in *PMBPROD247C Hand lay up composites*, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical materials properties and hand lamination process characteristics in relation to the process requirements and the end product
- make adjustments to the process as required
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- products are consistently produced which meet specification
- all safety procedures are always followed.

Assessment method and context

Assessment will occur during the hand lay up process for complex composites and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- through use of industrial hand lay up composite manufacture, using jobs of appropriate complexity
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the use of equipment and materials to form complex composite products using hand lamination processes. It includes the operation of all relevant additional equipment where that equipment is integral to the hand lay up process.

Composites may be regarded as 'complex' due to their shape (eg acute angle corners), technical specification (eg high strength/rigidity/low weight) or the conditions under which the work must be undertaken (eg poor access, hot/cold environment)

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- open moulds for composite products
- hand mixing equipment and stirrers
- knives and cutters
- hand application tools, rollers, brushes, etc
- relevant personal protective equipment.

Hazards

Typical hazards include:

- hazardous materials and vapours
- manual handling hazards
- fire hazards due to flammable nature of resins used
- knife hazards
- slip hazards.

Problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution /a solution recorded in the procedures.

Typical routine faults include:

- incorrect resin ratios
- fibre wet out
- shifting of fibres during lay up
- lay up sequence.

Non-routine faults, which may have multiple causes include:

- mould release problems,
- warping or cracking after moulding
- voids due to resin drainage.

Typical process and product problems may include:

- cracks, dents or imperfections of the mould
- use of incorrect materials
- variations in materials, colour, consistency or mix
- contamination of materials.

Appropriate action for problems outside of area of responsibility may be reporting to an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

- temperature of environment/resin
- time since mixing vs pot life of resin
- air flow/ventilation
- viscosity of resin
- differing fibres and fabrics
- compacting density of application.
-

PMBPROD375B Vulcanise products using an autoclave

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit applies to the application of knowledge of materials, product purpose and processes to the autoclave production of vulcanised rubber products.

Application of the Unit

Application of this unit

This competency typically applies to advanced operators who load green rubber products into an autoclave for curing/vulcanising. The key factors are ensuring compatible loads and the right curing time, temperatures and pressures. It also requires using a range of well developed skills, requiring some discretion and judgement to recognise and resolve a range of problems.

The operator will:

- identify and plan own work requirements from production requests
- load green products and remove cured products
- choose and set the right autoclave conditions
- monitor autoclave temperature and pressure profiles during the curing process
- check settings and adjustments of equipment
- make appropriate adjustments to correct materials, equipment or process variations
- solve routine and non-routine autoclave and vulcanising problems, seeking guidance where necessary or appropriate
- complete logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan own work requirements.	1.1 Identify work requirements from workplace procedures 1.2 Identify equipment and processes used for materials preparation, vulcanising and any related production process and for the downstream operations. 1.3 Identify operating principles and components of vulcanising equipment. 1.4 Identify hazards connected with materials and process from workplace reference materials including materials safety data sheets and equipment instructions. 1.5 Implement measures to control identified hazards in line with procedures and duty of care. 1.6 Identify requirements for materials, quality, production and equipment checks.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	**PERFORMANCE CRITERIA** Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
2. Set up autoclave vulcanising process.	2.1 Identify and read equipment information, quality specifications and standard operating procedures. 2.2 Check heat and pressure settings and process adjustments for conformity to procedures. 2.3 Compare equipment and material condition to known optimum condition and take appropriate action in accordance with procedures (including, where authorised, making adjustments within overall specifications to process settings to ensure product output quality is appropriate). 2.4 Check that all gauges are operating, safety features are activated or fitted, locks and guards are in place.
3. Operate and make adjustments to the autoclave process to procedures.	3.1 Load and close autoclave and bring on line. 3.2 Monitor production outputs, equipment operating temperatures and pressures. 3.3 Make adjustments to remedy faults and non-conformity as required. 3.4 Shut down, vent and unload autoclave. 3.5 Take samples as required and identify product out of specification. 3.6 Note and report non-conformity to required workplace specifications, following workplace procedures. 3.7 Clean, adjust and lubricate equipment as required. 3.8 Pause or stop equipment in an emergency, following procedures.
4. Respond to product quality improvement requests.	4.1 Monitor vulcanising process and note conditions which may affect product quality standards. 4.2 Report process variations. 4.3 Note and implement changes in standard operating procedures and specifications.
5. Anticipate and solve problems	6.1 Recognise a problem or a potential problem 5.2 Determine problems needing priority action. 5.3 Refer problems outside area of responsibility to appropriate person, with possible causes. 5.4 Seek information and assistance as required to

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	solve problems. 5.5 Solve problems within area of responsibility. 5.6 Follow through items initiated until final resolution has occurred.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production. For example,

A knowledge of organization procedures, quality requirements at each stage of production stage and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the vulcanising process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Skill to identify the range of possible causes of product faults.

Knowledge as a basis for solving processing and material problems including:

- characteristics of materials and behaviour in relation to heat, thickness and cure rates.
- identify the function of vulcanising equipment, components and the materials used
- changes to materials at various stages of production
- relationship between steam pressure and temperatures and the effects this and time will have on product quality and production output
- impact of heat and pressure in relation to providing strength, stiffness, resistance to deformation, fatigue and abrasion
- monitor equipment operation and product quality
- impact of product section/thickness on cure requirements
- impact of compound cure system on cure requirements
- impact of heating too quickly/slowly on final product properties
- compound properties and their interactions with process conditions
- relationships between compound properties and process conditions
- changes to compound properties to better suit process requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- product problems related to compound properties
- product problems related to process conditions
- adjustments to process conditions to meet compound and product requirements.

Competence also includes the ability to:

- plan own work, including predicting consequences identifying improvements
- maintain output and product quality using appropriate instruments, controls checks, test information and readings
- identify and describe own role and the roles of others involved directly in the vulcanising process
- identify when assistance is required to solve problems
- identify factors which may affect product quality and production output and appropriate remedies.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms, quality assurance records and production reports.

Basic numeracy is also required, eg to determine required steam pressure to give necessary time/temperature cycle.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical materials properties and rubber vulcanising process characteristics in relation to the process requirements and the end product
- make adjustment to the process as required.
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the process runs consistently and smoothly, with the minimum need for human intervention
- all safety procedures are always followed.

Assessment method and context

Assessment will occur on an industrial autoclave and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on anappropriate operating plant requiring demonstration of start-up, operation and shutdown procedures
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This competency applies to the production of vulcanised rubber products within the rubber industries. It includes the operation of all relevant additional equipment where that equipment is integral to the vulcanising autoclave process. It includes the operation of all ancillary steam equipment, but not boiler operation.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand carts and trolleys
- knives and other trimming equipment
- hoists/lifting equipment not requiring any special permits or licences
- basic hand tools
- relevant personal protective equipment.

Hazards

Typical hazards include:

- heat
- confined spaces
- manual handling hazards
- knife hazards.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution / a solution recorded in the procedures.

Typical process and product problems may include:

- air/water blinding of steam equipment
- faulty/unreliable gauges
- matching loads requiring the same cure conditions
- adjusting temperature/pressure profile to match load and product
- wrong cure cycle
- changed product cure systems/section
- steam problems.

Appropriate action for problems outside of area of responsibility may be reporting to an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating temperatures
- stacking and loading off product for autoclaving
- material composition
- operating pressure
- cycle time
- output rate
- product integrity and general conformance to specification and quality sample.
-

PMBPROD380B Produce composites using chopper gun/depositor

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers preparation and hand operation of a resin-glass depositor (chopper gun) to form a composite materials product and the solving of non-routine problems.

Application of the Unit

Application of this unit

This competency applies to advanced operators who are required to apply knowledge of materials, product purpose and processes to the hand operation of chopper guns/depositors for the production of composites. It also requires using a range of well developed skills requiring some discretion and judgement to recognise and resolve a range of problems.

The operator will:

- check settings and adjustments of equipment
- monitor equipment operation
- make appropriate adjustments to correct materials, equipment or process variations
- solve composites production equipment and process problems, seeking guidance where necessary or appropriate
- complete logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit of competency has a prerequisite of *PMBPROD280A Operate resin-glass depositor equipment.*

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan own work requirements.	1.1 Identify equipment and processes to be used for production process and upstream and downstream operations from production plan or request. 1.2 Identify and check materials required including additives. 1.3 Implement measures to control identified hazards in line with procedures and duty of care. 1.4 Identify and check emergency stops, guards and controls. 1.5 Identify requirements for materials, quality, production and equipment checks. 1.6 Identify materials, waste management and housekeeping needs.
2. Set up equipment, mould and materials to procedures.	2.1 Determine equipment requirements. 2.2 Adjust controls as required for factors such as ambient conditions, temperature and materials. 2.3 Check equipment, raw material and mould all match job requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	2.4 Check materials, resins, fibres, release agents are correct. 2.5 Take appropriate action for non-conforming materials. 2.6 Set up date, batch and materials markings to specifications, as required. 2.7 Complete pre-start checks.
3. Hand operate chopper gun/depositor.	3.1 Use chopper gun/depositor to apply materials to the mould to procedures. 3.2 Monitor product quality, thickness, colour and integrity. 3.3 Make adjustments to remedy faults and non-conformances as required. 3.4 Collect and segregate scrap, trim and other materials as required. 3.5 Shut off machine safely and correctly as required following procedures.
4. Anticipate and solve problems.	4.1 Recognise a problem or a potential problem.. 4.2 Determine problems needing priority action. 4.3 Refer problems outside area of responsibility to appropriate person, with possible causes. 4.4 Solve problems within area of responsibility. 4.5 Seek information and assistance as required to solve problems 4.6 Follow through items initiated until final resolution has occurred.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge of organization procedures, quality requirements at each stage of production and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the composites process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Show knowledge as a basis for solving processing and material problems including:

- operation of resin-glass depositor, equipment and components
- production workflow sequences and materials demand
- properties of the materials required to form a composite structure of the required strength and surface finish, including the importance of gel coat properties and bonding
- requirements for correct spraying of materials to the mould surface
- pot life of the resins used
- cleanout procedures
- impact effects of variations in raw materials and equipment operation in relation to quality of final product
- correct selection and use of equipment, materials, processes and procedures
- polymer properties and their interactions with process conditions
- relationships between polymer properties and process conditions
- changes to polymer properties to better suit process requirements.
- product problems related to polymer properties
- product problems related to process conditions
- adjustments to process conditions to meet polymer and product requirements.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify and describe own role and role of others involved directly in the process
- maintain output and product quality using appropriate instruments, controls, test information and readings
- identify factors which may affect product quality or production output and appropriate remedies
- identify when the when assistance is required to solve problems.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Numeracy is required to the level of determining required weights/volumes of materials in a resin mix for different circumstances (say using a data sheet), number of layers of impregnated matrix required to yield the required product laminate thickness, and similar activities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the assessee does not currently possess evidence of competency in *PMBPROD2980A Operate resin-glass depositor equipment*, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical material properties and process variable in relation to the process requirements of the end product.
- make adjustments to the process as required.
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- composites production standards are met consistently
- all safety procedures are always followed.

Assessment method and context

Assessment will occur on chopper-gun depositor equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using an appropriate processing plant
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the use of equipment and materials to form composite products using a chopper gun/depositor. It includes the operation of all relevant additional equipment where that equipment is integral to the process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- open moulds for composite products
- hand tools for mixing and application
- knives and cutters to trim fibres
- chopper gun/depositor, pots, pumps and controls
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills dusts/vapours
- slip and fall
- temperature
- hazardous substances

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- manual handling hazards
- knife hazards.
- moving equipment
- manual handling hazards.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution / a solution recorded in the procedures.

Typical routine faults such as:

- dry and/or wet laminate
- runs, sags, excessive build-up at edges of mould
- poor surface finish
- release damage
- cracks, dents or imperfections of the mould.

Non-routine faults, which may have multiple causes include:

- release problems
- distortion of product after demoulding
- warping and cracking after demoulding.

Typical process and product problems may include:

- variations in materials, colour, consistency or mix
- variations in temperature, pressures and resin-to-fibre ratios
- contamination of materials
- incorrect quantity of materials
- contaminated materials/additives
- equipment faults
- mould damage
- wrong raw materials/additives
- incorrect quantity of materials/additives
- machine failure.

Variables

Key variables to be monitored include:

- temperatures and humidity of environment
- resin to fibre ratios
- surface finish/appearance
- product integrity and general conformance to specification and quality sample.

PMBPROD430B Trial a new die/tool

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the trialing of a new die or tool. It is intended to be applied to 'high pressure' dies such as might be used for injection or blow moulding.

This competency is typically performed by technicians working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to technicians who are involved in the trialing of dies. The key factors are the monitoring of the production process and identifying routine problems.

The technician will:

- check job sheets for work to be done
- conduct pre-start checks
- start up and shut down of equipment
- monitor equipment during production process
- identify routine production problems and notify appropriate persons.

It does not apply to situations such as rotational moulding or composites (see *PMBPROD431A*).

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Prepare for trial to procedures.	1.1 Gather all relevant information available at the enterprise. 1.2 Confirm machine/equipment suitability. 1.3 Confirm die/tool state. 1.4 Confirm raw materials readiness.
2. Set die/tool and machine.	2.1 Fit and set up die/tool. 2.2 Set up process conditions. 2.3 Set control panel to cycle time, temperatures and heating/cooling rates as required. 2.4 Dry cycle machine and die according to procedures.
3. Trial die/tool, interpret data and adjust operation to procedures.	3.1 Carry out trial procedures in a systematic manner to meet trial objectives. 3.2 Identify and record variations from normal. 3.3 Monitor control panel and interpret test results for fluctuations, variations and trends. 3.4 Determine process limitations with respect to product and production specifications. 3.5 Adjust controls to ensure parameters are

ELEMENT ELEMENT	**PERFORMANCE CRITERIA** Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	maintained to job specifications. 3.6 Check that process operation has improved. 3.7 Continue analysing data and making adjustments until desired level of process operation is achieved and product is within specifications. 3.8 Shut down equipment as required. 3.9 Record trial results.
4. Rectify equipment and quality problems.	4.1 Identify range of faults that will affect product and production specifications. 4.2 Determine changes required to tooling and equipment to meet product and production specifications. 4.3 Make sure appropriate records related to machinery and equipment are maintained to enterprise standards. 4.4 Identify and rectify problems that are within area of responsibility. 4.5 Report problems that are outside area of responsibility to appropriate personnel.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the materials, equipment and process sufficient to recognise and rectify potential problems. Knowledge of organization standard procedures and work instructions and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Understanding of the polymer/process interactions.

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control, safety procedures, the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge as a basis for solving processing and material problems, including:

- product specifications and limitations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- production equipment capability
- types and grades of materials and their limitations
- die or tool conditions and operational limitations
- use of ancillary equipment.

Language, literacy and numeracy requirements

This unit requires high levels of numeracy and literacy with the ability to interpret technical specifications and reports. Advanced numeracy allowing the calculation and interpretation of statistics, product formulae and process conditions is also required.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- understand procedures and know the importance of critical material properties and quantities
- recognise potential situations requiring action and then in implementing appropriate action.

Consistent performance should be demonstrated. For example, look to see that:

- new or un-tried dies/tools are tested thoroughly
- product quality and output standards are met consistently
- problems are anticipated from process observations
- problems are efficiently resolved
- the process runs consistently and smoothly.

Assessment method and context

It is preferred that assessment takes place on industrial equipment in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the use of injection moulding, blow moulding and similar equipment. This competency applies to all plastic and rubber processes which involve a die or tool. It applies to situations such as injection or blow moulding dies. It does not apply to situations such as rotational moulding or composites (see *PMBPROD431A*).

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Die

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

A former used to give the required shape to the product and which is used under pressure. Dies are typically used in the extrusion, injection, blow moulding and general rubber sectors. Dies used which are not subject to pressure are referred to as 'moulds' in this Training Package.

Simple die

A two plate die including any ejection system operating in the mould open axis, but excluding moulds with molten material retained within the mould between cycles. Products are simple, straight drawn items. Typical features may include: force, cavity, back plates, support plates, cold runner, sprue, nozzle seat, locating ring-tab, sub, fan, diaphragm and direct gating, ejector pins and sleeves, ejector plate and stripper plate, simple drilling for mould cooling.

Advanced die

A two or three plate die with one or more product forming components which move in a direction other than the mould open axis, and which are driven by the mould rather than external actuation. Excludes moulds which retain molten material within the mould between cycles. Typical features may include: sliding blocks or cores actuated by skew pins or cams; baffled, spiral, tube, and heat pipe cooling systems; rising cores; and internally actuated unscrewing systems.

Complex die

Dies which use at least one external power and control source to actuate product forming components, which move in a direction other than the mould open axis, and require sequencing with the mould operation. Includes moulds which retain molten material within the mould between cycles. Typical features may include: hot runners; insulated runners; externally actuated sliding blocks, cores, and unscrewing systems; safety interlocks.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand tools as required
- relevant personal protective equipment.

Hazards

Typical hazards include:

- noise, light, energy sources
- humidity, air temperatures, radiant heat
- stationary and moving machinery, parts and components.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- selecting the right tools for a new job
- using new and untried die or tool
- adapting the process to the new product and die/tool

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- observing the process to obtain useful trial data
- comparing the product to the desired specification
- determining the cause of non-compliances.

Distinguish between causes of faults such as:

- materials/heat
- equipment adjustment/set-up

Variables

Key variables to be monitored include:

- die/tool set up and adjustment
- machine speed, cycle rate
- temperature
- product quality measures.
-

PMBPROD431B Trial a new, advanced or complex mould

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the trialling of a new, advanced or complex mould. It is intended to be applied to 'low pressure' moulds as used in rotomoulding, thermoforming and composites manufacturing and not to dies such as might be used for injection or blow moulding.

This competency is typically performed by technicians working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to technicians who are involved in the trialling of moulds. The key factors are the monitoring of the production process and identifying routine problems.

The technician will:

- check job sheets for work to be done
- conduct pre-start checks
- start up and shut down equipment
- monitor equipment during production process
- identify routine production problems and notify appropriate persons

It does not apply to situations such as 'high pressure' dies or tools used in injection or blow moulding (see *PMBPROD430A*).

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all plastic and rubber processes which involve a mould. It applies to complex composite moulds, rotomoulding and thermoforming systems,. It does not apply to situations such as injection or blow moulding dies.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Tools and equipment

This competency includes use of equipment and tools such as:

- hand tools as required
- relevant personal protective equipment.

Equipment types may include:

- rotational moulding (eg fixed spindle, single spindle, multiple spindle, shuttle open-flame, swing, carousel, shuttle and 'rock and roll').
- complex composite moulds
- complex thermoforming moulds.

Hazards

Typical hazards include:

- noise, light, energy sources
- humidity, air temperatures, radiant heat
- stationary and moving machinery, parts and components.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- selecting the right tools for a new job
- using new and untried moulds
- adapting the process to the new product and mould
- observing the process to obtain useful trial data
- comparing the product to the desired specification
- determining the cause of non-compliances.

Variables

Key variables to be monitored include:

- performance of mould
- temperatures
- machine speed
- materials, quantities and composition
- product quality requirements.
-

PMBTECH301B Use material and process knowledge to solve problems

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the application of a knowledge of polymers, their additives and their interactions with the process to the solving of problems. It may be applied in any sector of the industry. This unit covers polymer properties and their application in general to processes. The application in specific processes is covered in the specific process units.

This competency is typically performed by advanced operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to advanced operators who recognise potential process problems and analyse process problems using their knowledge and understanding of the polymer materials they are processing. The problems are broader and/or require more knowledge of the properties of polymers than those which apply to a single work station and which may be an element of a 'PROD' competency.

It includes:

- a basic knowledge of different polymer materials
- a basic knowledge of the applications of different polymers
- a basic knowledge of the different properties of polymers
- an understanding of the relationship between process conditions and polymer properties.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Identify and apply applications of polymer materials.	1.1 Identify typical applications for common polymer materials. 1.2 Recognise physical properties of common polymers. 1.3 Use additives with knowledge of the effects of using the incorrect amount/type of additive. 1.4 Handle additives to minimise the associated.
2. Identify and apply impacts of impurities on polymer products.	2.1 Identify major impurities of concern to product and process. 2.2 Examine polymer materials for impurities. 2.3 Apply corrective actions to remove/compensate for impurities.
3. Determine expected material properties from polymer type and grade.	3.1 Identify the relationship between polymer type and polymer characteristics. 3.2 Identify the relationship between polymer grade and degree of polymerisation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	3.3 Identify the influence of polymer structure on properties.
4. Solve process problems related to polymer flow characteristics.	4.1 Use polymer flow test methods and recognise the importance of flow properties to the process. 4.2 Control critical factors leading to changes of state of the polymer during processing using knowledge of the causes. 4.3 Identify the relationship between polymer flow and other polymer properties. 4.4 Recognise process/product signs of incorrect polymer flow characteristics. 4.5 Recommend corrective actions for problems caused by polymer flow.
5. Solve process/product problems related to heating and cooling of product/ material in process.	5.1 Recognise the importance of the degree of cross linking on product properties if appropriate. 5.2 Recognise the importance of the degree of crystallisation/ crystal size on product properties if appropriate. 5.3 Recognise the impact of shrinkage on product properties if appropriate. 5.4 Recognise the impact of annealing on product properties if appropriate. 5.5 Recognise process/product signs of incorrect heating/ cooling. 5.6 Recommend corrective actions for problems caused by heating.
6. Solve process problems related to polymer faults	6.1 Recognise an actual or a potential process problem. 6.2 Analyse that problem in a formal manner. 6.3 Determine appropriate corrective action. 6.4 Implement that corrective action if it is within the range of workplace authority. 6.5 Make recommendations for corrective action outside range of workplace authority. 6.6 Follow through on corrective action and make sure problem is resolved.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge of polymers and how their properties vary and the relevance to these properties to processing and product. Descriptions of polymer molecular shape and arrangement should be limited to commonly accepted diagrammatic representations of these structures. Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Knowledge as a basis for solving processing and material problems including:

- type of polymer and polymer structure
- impact of additives
- the importance of flow and flow properties
- the impact of temperature and heating/cooling rate on processing and properties

Competence also includes the ability to distinguish between the causes of faults such as:

- wrong raw materials/additives or wrong grade
- incorrect quantity of materials/additives
- contaminated materials/additives
- out of specification materials
- process set-up and/or operation.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret technical specifications and similar information.

Writing may be required to the level of completing workplace forms.

Numeracy is required to the level of understanding the significance of numbers and being able to interpret numerical data.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where the assessee does not currently possess evidence of competency in *PMBPROD235B Use materials and process knowledge to complete work operations*, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to apply a theoretical understanding of polymers to workplace problems.

Assessment method and context

Assessment will occur using industrial polymers and work-like scenarios.

Competence in this unit may be assessed:

- using appropriate, industrial scenarios and problems
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry. It includes the operation of all relevant equipment.

Standard procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Polymer properties

Polymer properties related to flow include:

- molecular weight
- molecular structure
- factors effecting viscosity.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Unit Sector(s)

PMBTECH302A Modify existing compounds

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the development of trial compounds in a laboratory or using pilot equipment and then monitoring initial factory trials. This competency would typically be done by a operator either working alone for a minor modification or with other relevant person(s) for a major modification.

This competency covers minor modifications to existing compounds/formulae to develop an updated version of an existing compound or a 'new' compound which is strongly based on an existing compound.

Application of the Unit

Application of this unit

This competency applies to operators who are required to modify the formulae for compounds and demonstrate that an appropriate formula has been developed.

It includes:

- determining the starting formula
- mixing the compound
- interpreting the test results
- modifying the formula
- verifying/modifying the compound during initial factory trials.

PMLTEST307B Prepare trial batches for evaluation may be used where the competency simply requires mixing in the laboratory and *PMLTEST300B Perform basic tests* (or other suitable test unit) may be used for the testing competency.

	exotic materials are likely to be required. 1.5 Identify tests required on trial compound.
2. Estimate starting formula.	2.1 Identify existing compound(s) with similar specifications. 2.2 Estimate required changes to existing compound. 2.3 Check practicality of proposed changes. 2.4 Check HSE impacts of proposed changes. 2.5 Modify proposed starting formulae as appropriate.
3. Prepare trial compounds.	3.1 Identify and control all hazards for pilot mixing. 3.2 Identify and check all required plant and equipment. 3.3 Obtain and prepare all required materials. 3.4 Mix trial compound and obtain sample(s). 3.5 Interpret test results. 3.6 Modify formula and repeat trials as required.
4. Check initial factory trial.	4.1 Check availability of required resources and plant availability. 4.2 Ensure all authorities and permissions have been obtained. 4.3 Check all hazard controls have been implemented. 4.4 Monitor factory trial mixing of compound. 4.5 Obtain sample(s) and interpret test results. 4.6 Modify formula and repeat factory trial as required.
5. Complete trial.	5.1 Complete all required records and reports. 5.2 Check any changes to resources and procedures have been incorporated into standard procedures. 5.3 Ensure any additional HSE or skill requirements have been included in future plans.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence in this unit requires knowledge of:

- the components of relevant compounds and their impact on compound properties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- tests which might be used and the applicability of the different tests for different compound properties
- mixing methods and the impacts of different mixing on compound properties
- existing compounds and their properties
- requirements for factory trialling and scaling up from laboratory/pilot scale
- suppliers of materials
- sources of information about materials.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret technical specifications and literature and to communicate with all relevant stakeholders.

Writing formulae/mixing instructions and similar documents.

Numeracy is required to interpret technical specifications and test results and to calculate quantities and proportions required for the formula, make adjustments and then to scale up to factory trials.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- clarify the requirements of the modified compound
- make an initial estimated formula and justify that initial formula
- modify the formula based on test data and justify the modifications
- make final adjustments for the scaled up formula to work successfully in the factory.

Consistent performance should be demonstrated through the evidence from several formula modifications requiring different types of changes.

Context of assessment

This unit may be best assessed either through a portfolio of compounds developed/ modified, or the use of projects to develop/modify a range of existing compounds.

Competence in this unit may be assessed:

- on the plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - using questions to assess knowledge
  - in a laboratory/pilot plant
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

Method of assessment

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to advanced operators who modify formulae for compounds used in the factory. They will typically be based in a laboratory or similar pilot/product/ material development area but will also have responsibility in the factory for monitoring new batches and ensuring that modified compounds are suitable when released for standard production.

A operator working at this level would typically be responsible to a more senior operator and would work closely with them on new compounds and major modifications of existing compounds.

The operator would not be expected to develop a new compound or make a major modification to an existing compound unless under the direction of a more senior operator.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Health, **Safety and Environment**

All operations are subject to stringent health, safety and environment requirements, which may be imposed through State or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the operator needs to ensure the HSE requirements take precedence.

Compound

Compound is used to mean any mixture of materials which is undertaken to a set formula and in specified proportions.

Tests

Tests includes the normal range of physical, chemical and environmental (weathering) tests which might be applied to the product

Unit Sector(s)

PMBTECH303A Make minor modifications to products

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the minor modification of products in a laboratory or using pilot equipment and then monitoring initial factory trials. This competency would typically be done by an advanced operator either working alone for a minor modification or with other relevant person(s) for a major modification or a new product.

This competency covers minor modifications to existing products to develop an updated version of an existing product or a 'new' product which is strongly based on an existing product. Processes may also need to be modified, but again this modification of process will be minor and based on established practice.

A minor modification will be based on an existing product and will produce a modified product of similar specification. Changes may include things like small changes to sizes, shapes, surface finish. Changes may include minor modification to tooling but will not normally include new or significantly redesigned tooling.

Application of the Unit

Application of this unit

This competency applies to operators who are required to modify products and demonstrate that an appropriate product and manufacturing process has been developed.

It includes:

- confirming the product specification
- making trial or prototype products
- interpreting the test results
- modifying the product design
- verifying/modifying the product and manufacturing process during initial factory trials.

Note that while this unit of competency requires initial factory trials of the modified product, some laboratory (or similar) testing of the product will also be required. This is not part of this unit as the testing may be performed by another person.

PMLTEST300B Perform basic tests (or other suitable test unit) may be used for the testing competency if required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence in this unit requires knowledge of:

- product features and their impact on product properties
- tests which might be used and the applicability of the different tests for different product properties
- relevant manufacturing methods and the impacts of different methods/processes on product properties
- relevant existing products and their properties
- requirements for factory trialling and scaling up from laboratory/pilot scale
- suppliers of materials and tooling
- sources of information about materials and tooling.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret technical specifications and literature and to communicate with all relevant stakeholders.

Writing product design specifications, processing instructions and similar documents.

Numeracy is required to interpret technical specifications and test results and to calculate quantities and proportions required for the specification, make adjustments and then to scale up to factory trials.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit may be best assessed either through a portfolio of products developed/ modified, or the use of projects to develop/modify a range of existing products.

Critical aspects

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- clarify the requirements of the modified product
- make an initial design and process and justify that initial design and process
- modify the design/process based on test data and justify the modifications
- make final adjustments for the scaled up product to work successfully in the factory

Consistent performance should be demonstrated through the evidence from several formula modifications requiring different types of changes.

Context of assessment

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. A holistic approach should be taken to the assessment.

Competence in this unit may be assessed:

- on the plant
- using questions to assess knowledge
- in a laboratory/pilot plant
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

Method of assessment

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This competency applies to advanced operators who modify products. They will typically be based in a laboratory or similar pilot/product development area but will also have responsibility in the factory for monitoring new products and ensuring that modified products are suitable when released for standard production.

An operator working at this level would typically be responsible to a more senior operator and would work closely with them on new products and major modifications of existing products.

The operator would not be expected to develop a new product or make a major modification to an existing product unless under the direction of a more senior operator.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Health, **Safety and Environment** (**HSE**)

All operations are subject to stringent health, safety and environment requirements, which may be imposed through State or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the operator needs to ensure the HSE requirements take precedence.

Tests

Tests includes the normal range of physical, chemical and environmental (weathering) tests which might be applied to the product.

Trial product

The trial product may be full sized, or a scale version. Trial production will typically be 'one off' or small run compared to final production which will occur in normal run sizes under normal conditions.

PMBTECH401B Predict polymer properties and characteristics

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the ability to apply a knowledge of polymer morphology, the properties of polymers in relation to their morphology, physical failure in polymers and test methods for polymeric materials to predict polymer properties and processing characteristics. It applies to all sectors of the industry.

This competency is typically performed by technicians working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to technicians who use an understanding of polymer morphology to explain polymer properties in terms of phase diagrams, to predict polymer properties, and to organise and interpret tests on polymers.

It includes:

- polymer phase change such as glass transition
- property changes due to processing conditions
- physical failure causes
- test method principles
- the relationship of test results to polymer properties and uses.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Predict the impact of processing conditions on polymer properties.	1.1 Predict property changes due to molecular weight and temperature. 1.2 Identify the glass transition temperature and melting point relative to ambient temperature. 1.3 Describe the morphological changes occurring to polymers as the temperature is raised to typical moulding conditions. 1.4 Describe the effect of cooling rate on polymer morphology. 1.5 Predict potential product dimension/shape changes due to internal stresses resulting from molecular orientation. 1.6 Determine the affect of post-mould annealing on the degree of crystallisation and crystal.
2. Predict physical properties of polymers from their morphology.	2.1 Predict the effects on physical properties of: • temperature • crystal size

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	• degree of crystallisation • molecular orientation 2.2 Predict shrinkage from morphology.
3. Determine likely physical failures of polymers.	3.1 Determine impact of physical use conditions on physical failure. 3.2 Determine impact of polymer characteristics on physical failure.
4. Organise and interpret polymer tests.	4.1 Describe melt flow properties from flow data. 4.2 Choose appropriate test type to measure desired criteria. 4.3 Specify relevant standard test method. 4.4 Interpret test result, making allowance for possible variations in test.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the morphology of polymers sufficient to predict common physical properties and behaviours and to interpret test results, allowing for normal variations in data. Knowledge of organization standard procedures and work instructions, relevant regulatory requirements and standard international and national test methods, along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Knowledge as a basis for solving processing and material problems including:

- polymer morphology using phase diagrams
- properties of polymers in relation to their morphology
- physical failure in polymers
- polymer materials test methods and property data
- changes in properties and variations in test data
- changes in physical properties due to compounding, processing or environmental conditions

Language, **literacy and numeracy requirements**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit requires the ability to read and interpret technical literature and standard test methods. High level numeracy is also required, particularly graphical interpretation skills and data interpretation

Numeracyis required to be able to determine sizes, angles and shapes.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that the morphology be understood and that the importance of critical material properties and quantities is known. Competence must be demonstrated in the ability to interpret polymer properties from their morphology.

Consistent performance should be demonstrated. For example, look to see that:

- test procedures are understood
- correct tests and methods are specified
- test results are interpreted appropriately
- polymer properties are described
- changes in properties are adequately explained.

Assessment method and context

Assessment will occur using appropriate industrial polymers and scenarios and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using an appropriate, industrial polymers and properties/characteristics relevant to the process/product
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the use of phase diagrams. It does not include chemical form and structure of polymer molecules beyond a basic knowledge. It may be applied to plastics only, rubber only, thermosetting resins only or all of these.

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry. It requires an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

Standard procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

PMBTECH402B Set advanced or complex dies

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the ability to set advanced or complex dies, verify machine, die, and ancillary equipment functions and remove advanced or complex injection dies.

This competency is typically performed by technicians working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to technicians typically in the injection moulding and blow moulding sectors who set complex dies and make sure they are ready for production.

The key factors are the efficient setting and validation of the right die for the job and the tuning of this die for efficient production. It includes:

- understanding die/process/material/product interactions
- selecting the right die and equipment such as actuated cores, power and control units
- checking the die for wear and damage
- setting and adjusting the replacement die according to specifications
- checking the die and process for efficient operation and making appropriate adjustments

PMBPREP304C Set a die covers the die setting for simple dies.

This unit does NOT include making adjustments, repairs or modifications to dies or equipment which require trade level skills such as might be made by a mechanical, tradesperson or toolmaker or similar skilled metals tradesperson.

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Prepare to change advanced or complex die.	1.1 Determine when changeover will be required, and plan requirements for die change. 1.2 Prepare dies and all equipment related to the advanced or complex die change. 1.3 Prepare the moulding machine for die removal according to enterprise procedures.
2. Change dies.	2.1 Remove die according to enterprise procedures, in a safe, systematic and time efficient manner. 2.2 Clean and store die according to workplace procedures applying corrosion protection if required. 2.3 Prepare the moulding machine according to procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	2.4 Attach replacement die to the machine according to procedures.
3. Set advanced or complex die.	3.1 Set machine conditions for new die. 3.2 Restart machine as per procedure. 3.3 Dry cycle machine and die according to enterprise procedures. 3.4 Check operation of die and power and control devices against die set up specifications. 3.5 Check the first off sample for compliance with required standards. 3.6 Fine tune settings and other production variables as required. 3.7 Note any equipment variances between actual production and documented set up conditions. 3.8 Complete workplace documentation and report to appropriate personnel.
4. Anticipate die setting problems.	4.1 Identify potential problems which may occur during the die changing and setting process. 4.2 Determine possible causes of these problems. 4.3 Identify most likely causes and prioritise appropriate actions. 4.4 Rectify problems using appropriate solutions within area of responsibility. 4.5 Recommend improvements in systems or procedures.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of advanced and complex dies and their interactions with the process, materials and products is required.

Knowledge of organization standard procedures and work instructions and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge about advanced/complex dies and their features which makes them more complex for setting than simple dies. This may include knowledge of:

- sliding blocks or cores actuated by skew pins or cams
- baffled, spiral, tube, and heat pipe cooling systems
- rising cores
- internally actuated unscrewing systems
- external power and control sources,
- externally actuated sliding blocks, cores, and unscrewing systems
- safety interlocks.

Skills in the safe, precise, efficient and correct installation of advanced and complex dies.

Competence includes the ability to apply and/or explain to a level sufficient for the practical completion of the job:

- die setting procedures for advanced/complex dies
- verification procedures for advanced/complex dies.

Competence also includes the ability to distinguish between causes of faults such as:

- wrong dies
- wrongly set die
- worn or damaged die
- non-optimum process conditions
- material type or quality.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret technical specifications and data.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that the procedures and the importance of critical die characteristics be understood. Competence must be demonstrated in the ability to recognise potential situations requiring action and then in implementing appropriate action.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Consistent performance should be demonstrated. For example, look to see that at least one type of advanced or complex die has been correctly set and removed and that there is evidence that other types of advanced or complex dies can also be set/removed.

Assessment method and context

Assessment will occur on equipment using complex dies and will be undertaken in a work-like environment.

Competence in this unit may be assessed using an appropriate, industrial moulding machine:

- requiring demonstration of start-up, operation and emergency stop procedures
- requiring demonstration of changing and setting procedure for an advanced or complex die
- in a situation allowing the generation of evidence of the ability to recognise and resolve problems
- using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This competency unit includes the setting and removal of advanced or complex dies. It does not include simple dies or moulds.

This competency applies typically to the injection moulding and blow moulding sectors. It requires an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Die

A die is a former used to give shape to the product and used under pressure. Dies are typically used in the extrusion, injection, blow moulding and general rubber sectors. Dies which are not subject to pressure are referred to as 'moulds' in this Training Package.

Advanced dies

Advanced dies are two or three plate dies with one or more product forming components which move in a direction other than the mould open axis, and which are driven by the mould rather than external actuation. Typical features may include:

- sliding blocks or cores actuated by skew pins or cams
- baffled, spiral, tube, and heat pipe cooling systems
- rising cores
- internally actuated unscrewing systems.

Complex dies

Complex dies are dies which:

- use at least one external power and control source to actuate product forming components
- move in a direction other than the mould open axis
- require sequencing with the mould operation.

They include moulds which retain polymer melt within the mould between cycles.

Typical features may include:

- hot runners
- insulated runners
- externally actuated sliding blocks, cores and unscrewing systems
- safety interlocks.

Setting

Setting of the machine conditions may include setting the mould height on the machine, the clamp force, the mould safety system, the ejector system, the mould opening and closing distances, speeds and forces and the injection unit.

These settings may be performed automatically, using an electronic storage device to load settings from a previous run of this product, or may be performed by manually setting controls individually.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Die and machine preparation

The die and machine preparation may include making connections such as:

- hydraulic
- pneumatic
- electrical.

Die fitting

Die fitting includes the placement, attachment and adjustment of dies against predetermined specifications, but does not include the modification of dies or equipment to make them fit against new specifications or to change their performance as might be done by a toolmaker or similar metals tradesperson. Repairs to dies are also not covered by this unit.

Die operations

Die operations may include:

- die temperature control
- die component stroke
- clamping force
- speed
- pressure
- sequencing
- interlocks

Machine operations

Machine operations may include:

- machine movement speed and stroke
- pressure
- sequencing
- interlocks.

Ancillary equipment operations

Ancillary equipment operations may include:

- hot-runner temperature control
- hydraulic or pneumatic power supply for actuation of equipment such as cores or sliding blocks
- mould temperature control.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand carts and trolleys
- hoists/lifting equipment not requiring any special permits or licences
- basic hand tools
- relevant personal protective equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Hazards

Typical hazards include:

- hazardous materials
- manual handling hazards
- hot surfaces.

Anticipate problems

'Anticipate problems' includes taking a proactive approach to a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures, and endeavouring to learn from the problem so that it does not recur.

Typical die setting problems may include:

- lack of cleaning of die surface and cooling channels, leading to corrosion
- inadequate fitting of the dies to the platens, causing poor alignment or movement during production
- fine adjustments of die movements, to optimise production.

All operations are performed in accordance with procedures.

Variables

Key variables, and their causes, to be monitored include:

- time/effort required to set a die
- number of attempts to produce a first off within specification
- the need to reset/adjust a die during then production run.

PMBTECH403B Test fibre-composites materials and laminates

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the knowledge and skill applied in testing fibre reinforced plastics materials and laminates for conformance with design and product quality specification.

Application of the Unit

Application of this unit

This competency applies to technicians who will determine test specifications and carry out a variety of tests on fibre-composite materials and products according to industry codes of practice and AS/NZ standards. This competency is typically performed by technicians working either independently or as part of a work team.

It includes:

- raw material applications (eg resin viscosity, specific gravity of resins and gelcoats, gel time, resin exotherm, monomer content, heat deflection temperature, styrene emission, resin colour, gelcoat water resistance)
- laminate applications (eg Barcol hardness, tensile strength and elongation, compressive strength, flexural strength and flexural modulus, impact strength, glass content, water absorption, product weathering capabilities, dielectric strength, flammability, acid and alkali resistance, thickness testing)
- test applications (eg comparing use of common resins and reinforcements in laminates, comparing the tensile strength of given laminates with metals, comparing test failure modes of laminate samples with metals).
-

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Determine test requirements.	1.1 Identify properties to be measured according to specification. 1.2 Select appropriate test methods according to specifications. 1.3 Select appropriate testing equipment according to standards and specifications.
2. Perform raw material tests.	2.1 Prepare samples according to specification. 2.2 Perform tests in accordance with job specifications. 2.3 Record test results according to standard procedures. 2.4 Interpret test results and compare with manufacturer material data sheets.
3. Perform moulded product tests.	3.1 Prepare samples according to specification. 3.2 Perform tests in accordance with job specifications.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	3.3 Record test results according to standard procedures. 3.4 Interpret test result and compare against quality specification.
4. Record and report test results.	4.1 Document tests to enterprise requirements. 4.2 Compare results against standards. 4.3 Make written recommendations (eg process control actions, raw material suitability, product acceptance).

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the materials, equipment and process sufficient to predict their interactions and their impacts on performance. (For example, as resin is heated, its viscosity reduces. If viscosity is too low, there is a risk that the mould will fill before the fibre is fully impregnated; if too high, the reinforcement will have a tendency to distort.)

Knowledge of organization procedures and policies, quality requirements at each production stage and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.(eg manufacturing design requirements, enterprise requirements for testing documentation).

Knowledge as a basis for solving process and material problems:

- types of tests, their purposes and functions
- product or material test performance indices within standard variation, and standard response procedures
- safe test procedures
- role of testing in quality control and quality assurance procedures
- interpreting manufacturer material data sheets
- interpreting variances from specifications
- safety factors;
- effects on laminate design
- relevance of failure mode to FRP laminate design
- effect of creep and fatigue on laminates
- relationship of laminate thickness to bonding and material properties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- span and deflection.

Language, literacy and numeracy requirements

This unit requires the ability to interpret technical specifications and standard laboratory procedures.

It also requires report writing, including graphical representations of results

Numeracy is required to perform required calculations and interpret results.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- select and apply the appropriate test methods for the job, and correctly interpret the test results
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- tests are performed to procedures at all times
- all safety procedures are always followed.

Assessment method and context

Assessment will occur on appropriate fibre composite testing equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by direct observation using appropriate testing equipment
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom.

Additional resources might include sets of specifications from which test requirements might be determined and a range of samples of materials/products from which test samples might be prepared and then tests conducted.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to the testing of raw materials and moulded laminates, using a range of standard testing equipment and test methods within the plastics industry.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This unit of competency includes use of equipment and tools such as:

- testing equipment such as gel timer, flow meter, tensile tester, hardness tester, mold flow indexer, flammability/smoke tester, flexular tester etc.)
- materials handling equipment
- relevant PPE
- equipment as specified by AS/NZ standards (where applicable).

PMBTECH404B Mould chemical resistant and/or fire retardant fibre-composites

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers moulding of fibre-composites for chemical resistant and/or fire retardant applications and the solving of complex, non-routine problems.

Application of the Unit

Application of this unit

This competency is typically performed by technicians applying knowledge of materials, product purpose and processes to laminate and lay-up special-purpose chemical-resistant/fire retardant composite products. It also requires using a broad knowledge base incorporating some theoretical concepts to recognise and resolve a range of problems.

The technician will:

- select materials and processes to meet product requirements
- check product for quality and conformity to specifications
- make adjustments to remedy faults and nonconformity, as required
- solve equipment, material and process problems, seeking assistance where necessary or appropriate.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of:

- *PMBPROD347A* Produce *composites using hand lamination* **OR**
- *PMBPROD380A Produce composites using chopper gun*/*depositors*.

NOTE that *PMAPER200A Work in accordance* with an issued permit may also be needed in some circumstances.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Confirm product specifications.	1.1 Confirm the conditions of use of the desired composite product. 1.2 Confirm the required specification of the desired composite product. 1.3 Determine any other special requirements of the desired composite product. 1.4 Obtain client signoff of specification/ requirements.
2. Select appropriate materials/process to produce the desired composite product.	2.1 Identify the laminate properties suitable for the job. 2.2 Select the appropriate resin, matrix and other materials. 2.3 Select the process to be used to make product. 2.4 Implement measures to control identified hazards in line with procedures and duty of care. 2.5 Make trial samples where required and test or arrange testing of samples as required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	2.6 Check suitability of combination of materials and process to meet all end use requirements, 2.7 Complete pre-start checks.
3. Lay up or mould the laminate.	3.1 Prepare and apply mould release to the mould surface if required. 3.2 Clean and prepare structure surface for adhesion if required. 3.3 Apply laminate materials to the mould or to the structure as required. 3.4 Inspect/test the laminate surface as required. 3.5 Make adjustments to remedy faults and nonconformity as required. 3.6 Adjust process to minimise scrap and waste. 3.7 Clean, adjust and lubricate equipment as required.
4. Anticipate and solve problems.	4.1 Recognise a problem or a potential problem. 4.2 Determine problems needing priority action. 4.3 Determine possible fault causes. 4.4 Solve problems within area of responsibility. 4.5 Refer problems outside area of responsibility to designated person, with .possible causes. 4.6 Follow through items initiated until final resolution has occurred.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge and ability to implement organization procedures, quality requirements at each production stage and relevant regulatory requirements, within appropriate time constraints and work standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Application of the knowledge of managing risks using the hierarchy of controls applied to the lamination or lay-up processes. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment, operation and cleanup.

Knowledge as a basis for solving process and material problems:

- characteristics of materials and behaviour in relation to heat, pressure, flow rate and time
- construction of chemical resistant laminates, techniques and equipment used
- techniques and equipment used for fire retardant laminates
- techniques and equipment used for wet-area applications
- applications (eg marine, aerospace, commercial)
- changes to materials at various stages of production
- impact of variations in raw materials and equipment operation in relation to final product
- waste management and importance of non-conforming materials.

Skills to identify and take appropriate action on the range of possible causes of product faults.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- maintain output and product quality using appropriate instruments, controls, test information and readings
- identify and describe won role and role of others involved directly in the process
- identify when assistance is required to solve problems.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to technicians.

Writing is required to the level of completing workplace forms.

Numeracy is required, eg to determine quantities required and to interpret corrosion resistance and fire retardance data/tables.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- select and apply the appropriate laminate to meet the cost and performance specification for the particular job
- identify critical materials properties and process variables in relation to the process requirements and the end product
- make adjustments to the process as required
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- the process runs consistently and smoothly, with minimum need for intervention
- all safety procedures are always followed.

Assessment method and context

Assessment will occur on special purpose chemical resistant/fire retardant lamination method and equipment and will be undertaken in a work-like environment

Competence in this unit may be assessed:

- over a range of actual special purpose lamination methods which are undertaken in the workplace
- in a situation allowing the for generation of evidence of the ability to recognise, anticipate and solve problems
- using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This unit covers the making of a resistant/retardant laminate in a factory environment on a mould, or the laying up of a composite surface on a substrate such as a tank surface.

This unit covers both the selection of the appropriate resin, matrix and process from the standard systems available from the technician's enterprise, and the making of the resistant/ retardant product. It does not extend to the developing of totally new products using new resin/matrix systems for new (to the enterprise) end use environments. PMB TECH 505 or TECH 601 are more appropriate units in these circumstances.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include:

- waterproofing
- alkali and acid resistance
- heat resistance
- fire retardancy
- smoke generation
- abrasion resistance
- AS/NZ standards as applicable
- cold weather performance and curing.

Tools and equipment

This competency includes use of equipment and tools such as:

- moulds
- hand mixing tools such as stirrers
- knives and cutters to trim fibres
- hand application tools such as rollers, trowels, brushes etc.
- relevant personal protective equipment.

Hazards

Typical hazards include:

- temperature
- hazardous materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- manual handling hazards
- equipment operations
- working at heights
- working in confined spaces.

Problems

'Anticipate and solve problems' means resolve a range of complex, non-routine problems using process and product knowledge to develop solutions to problems which do not have a known solution/s recorded in the procedures.

Typical process and product problems may include:

- cracks, dents or imperfections of the mould/substrate
- variations in materials, colour, consistency or mix
- adjustment and settings of the applicator (where used)
- application of the materials to the mould/substrate as required
- contamination of materials
- equipment malfunctions
- pin holes or other imperfections leading to barrier problems.

Appropriate action for problems outside of area of responsibility may be reporting to an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

- surface finish
- colour
- thickness
- product integrity and general conformance to specifications.
-

PMBTECH405B Repair damaged fibre-composites structures

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the repair of damaged fibre-composites products.

This competency is typically performed by technicians working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who identify, diagnose, and make repairs to products with in-service damage which may be cosmetic or structural damage.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of *PMBPROD247B Hand lay up composites*.

Achievement of competency in *PMAPER200A Work in accordance with an issued permit* may also be required in some workplaces for safety or other reasons before competency is achieved in this unit

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Assess the product and damage.	1.1 Determine scope of repair required, such as either to original manufacturer specifications or other needs. 1.2 Select appropriate repair technique. 1.3 Consult testing reports giving recommended areas to be repaired and extent of damage if available.
2. Make repairs.	2.1 Examine the accessibility of the damaged section(s). 2.2 Identify cosmetic repair areas and structural repair areas. 2.3 Consult original manufacturer's manual or structural repairs manual where available. 2.4 Consult product release documentation, and insurance company requirements if available. 2.5 Prepare and clean up the product prior to commencing the actual repair. 2.6 Make partial mould or prepare insert moulding as required for the type of repair. 2.7 Expose bonding surfaces, and/or structural anchor points, using tapered sanding techniques as determined. 2.8 Rebuild the damaged area and finish surfaces to required standard. 2.9 Take samples for testing and inclusion with documentation as required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
3. Document the repair.	3.1 Raise repair documentation for costing, legal and insurance requirements as required. 3.2 Complete other documentation and records required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job and to apply and explain:

- damage assessment: both sides accessible; one side only accessible; cosmetic damage; structural damage; planning, costing and organizing job repair
- repair techniques: surface and part preparation; laminating, reinforcing and strengthening techniques; filling and joining techniques; surface preparation for paint, gelcoat, flowcoat and detailing for customer delivery
- rectification procedures for repair of marine, automotive, aerospace, industrial, architectural and other FRP mouldings
- use of manufacturer supplied, structural repair manuals, where available
- release documentation, legal and insurance procedures for FRP
- product repairs.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical manufacturer manuals, insurance documentation, technical specifications, product specifications, job sheets, procedures, material labels and safety information as provided to technicians.

Writing is required to the level of completing workplace forms.

Numeracy is required, eg to determine quantities required, interpret technical specifications and undertake costings.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the assessee does not currently possess evidence of competency in *PMBPROD247B Hand lay up composites,* it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to assess the damage and apply the appropriate repair method for the job.

Assessment method and context

Assessment will occur using industrial scenarios and composites and equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using appropriate, industrial composites
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to technicians who need to assess and make structural and cosmetic repairs to composite products.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hoists/lifting equipment not requiring any special permits or licenses
- plastic or other filling compounds
- basic hand tools required for repair of products
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills
- dusts/vapours
- hazardous materials
- manual handling hazards.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures

Typical process and product problems may include:

- inappropriate materials being selected and used
- equipment failures
- effect of weather on curing time and surface finish deterioration.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Types of repair and associated repair techniques may include:

- marine
- automotive
- aerospace
- industrial
- architectural
- civil construction.

Standards of repair may include:

- AS/NZ standards
- industry codes of practice
- original manufacturers standards.
-

PMBTECH406A Diagnose production equipment problems

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers diagnosing the causes of products faults and problems arising from the equipment/plant. These problems may be caused by inappropriate process conditions and/or equipment faults. The competency does not include the rectification of such faults or equipment diagnostic skills more appropriate to maintenance tradespersons, but does include diagnosis to a sufficient level so that identification of faults as equipment or process based can be made and appropriate directions can be given to rectify the problem.

Application of the Unit

Application of this unit

This competency applies to technicians who are required to examine products which have faults, even though they may not be rejects, and determine the likely causes of such faults. The technician might also be required to examine production faults such as where the process as a whole is not performing adequately. The technician would then further investigate the likely equipment, plant and/or process causes of the faults and isolate the most probable cause and recommend the solution. They may then monitor the implementation of the solution and check that the fault has been fixed.

It includes:

- examining products
- identifying faults
- identifying fault causes
- recommending solutions to faults
- checking the fault has been rectified.

While this unit does not require 'hands on competence' for the operation of process equipment, it does require an understanding of the principles of operation of the equipment and the impact of process conditions and equipment faults or changes on the product characteristics/properties. It also requires an understanding of the quality/ inspection/testing regime and the results of this regime and how process conditions and equipment faults or changes impact these results of this regime.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	**PERFORMANCE CRITERIA**
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Identify faults in products/production.	1.1 Examine products/production process. 1.2 Identify faults. 1.3 Categorise faults according to type/likely cause.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.4 Prioritise faults for action.
2. Determine most probable possible cause(s) of fault	2.1 Analyse fault to determine possible causes. 2.2 Investigate possible causes to eliminate less probable causes. 2.3 Shortlist probable causes. 2.4 Check hypothesis of cause(s) is supported by the data available. 2.5 Identify most probable cause.
3. Implement solution to fault	3.1 Develop recommended solution to fault. 3.2 Check HSE implications of solution and modify solution as appropriate. 3.3 Communicate this recommendation as appropriate. 3.4 Check recommendation has been understood and can be implemented. 3.5 Check all hazard controls are in place. 3.6 Monitor progress of implementation. 3.7 Modify recommended solution as required.
4. Check fault solution has worked.	4.1 Monitor product/process for fault. 4.2 Monitor HSE impacts of changes. 4.3 Repeat analysis and solution process if required. 4.4 Update records and procedures to reflect successful solution.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

This competency requires a detailed understanding of:

- how the process/equipment works
- how raw material changes into product through the process/equipment
- impacts of different process conditions on the product
- impacts of different equipment settings/components on the product
- impacts of equipment failure/change/variation on the product
- product faults and their categories according to causes
- causes of all possible product faults due to process/equipment problems.

Note this is not primarily about faults caused by things outside the process/equipment (eg unspecified changes in feed/raw materials), but the possibility of this cause for a fault should be included as required knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Language, literacy and numeracy requirements

This unit requires the ability to communicate to operators, tradespeople and other technical experts about technical issues.

Reading is required to the level of being able to interpret and apply procedures, technical manuals and manufacturer manuals. Writing is also required to be able to write maintenance and similar requests/orders, update procedures and write equipment/process condition specifications.

Numeracy is required to interpret test data, technical specifications, instrument readings and measurements. Some calculation may be involved in developing and implementing solutions.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This competency requires the diagnosis of real product faults and the development and implementation of solutions to these faults. The diagnosis of a number of faults with different types of causes should be required.

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- recognise defective product
- isolate one or two most likely causes, and justify the selection of those causes
- devise a permanent solution to the problem and justify that solution
- check that the solution works
- work with all the required people to make it happen.

Consistent performance should be demonstrated. For example, look to see that:

- defects with different root causes are analysed
- defects with both process condition and equipment problem causes are solved
- defects across the applicable range of products and processes are solved

Context of assessment

Competence in this unit may be assessed:

- on a processing plant as a routine part of the job
- as special projects on a processing plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

Method of assessment

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency applies to technicians who have a role of problem solving product faults as it relates specifically to equipment/process problems. While the technician will take the lead role in this activity, they will need to liaise with a range of people at all levels in the organisation to obtain information and to implement the solution.

This diagnosis and improvement may take place as a result of a problem where the fault level is causing reject product, or it may occur as part of continuous improvement, or a kaizen blitz or other situation where the products are not faulty, but are being improved.

Fault

A fault is any defect in a product, whether it causes the product to be defective or not.

Typical faults may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- colour variation (non-uniform, not to standard hue/intensity/opacity)
- surface blemishes (specs, marks)
- surface finish (gloss level, uneven)
- size/shape (distorted, wrong, variable)
- within specification, but highly variable, forms patterns etc (ie has 'assignable cause')
- strength/stiffness/physical properties (too high/low, variable, uneven)
- chemical properties
- physical/mechanical properties
- biological/biochemical/microbiological properties.

Examine

Examination of products/process may include:

- visual examination
- examination of product quality or other records
- examination of inspection records (if used)
- examination of test results (routine or otherwise)
- specific examination testing undertaken as part of a product improvement activity.

Possible causes

Possible causes include all feasible causes of the problem, before checking to eliminate some.

Investigate

Investigating possible causes includes:

- talking with operators and others
- checking machine histories for prevailing process conditions
- checking current process/equipment conditions
- carrying out small tests to determine the likelihood of a causal link between a condition and a fault.

Health Safety and Environment (**HSE**)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- laboratory test facilities for the product (although the conduct of tests is not part of this unit)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- equipment test instruments for checking the condition of plant (although the conduct of these tests may not be part of this unit).

Process/equipment conditions

Process/equipment conditions may include:

- settings such as temperature, pressure
- rates such as feed rate, flow rate
- setting and adjustment of equipment parts
- worn and broken equipment parts.
-

PMBTECH501B Analyse equipment performance

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the analysis of the performance, and performance verification, of existing equipment. It applies typically to the extrusion, injection and related sectors of the industry.

This competency is typically performed by a senior technician who will take the lead in the data gathering phase and then analyses the data.

Application of the Unit

Application of this unit

This competency applies to technicians who will set up and operate performance verification trials and then analyse the results to determine actual compared to theoretical performance of equipment and equipment components.

It includes:

- calculating the theoretical performance of a screw, die, etc
- gathering data to determine the actual performance of the screw, die etc
- calculation of actual versus theoretical performance
- making recommendations as to the appropriate action to be taken based on the performance verification results
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisites of *PMBTECH401B Predict polymer properties and characteristics* AND *MSAPMOPS401A Trial new process or product*

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Determine theoretical performance.	1.1 Identify item of plant and plant component(s) to be analysed. 1.2 Locate and interpret design specification. 1.3 Identify process materials being processes/to be processed during verification trial. 1.4 Determine process material properties under process conditions. 1.5 Calculate theoretical performance of component(s) with that material under those conditions.
2. Conduct trial.	2.1 Design verification trial to be compatible with theoretical analysis. 2.2 Determine measurements needed from trial to yield required data. 2.3 Select equipment suitable to give required measurements. 2.4 Arrange for verification trial with relevant process personnel.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	2.5 Set up required measurement equipment. 2.6 Supervise trial and ensure trial conditions are appropriate. 2.7 Collect trial data for analysis.
3. Verify performance of component(s).	3.1 Compare theoretical with actual performance. 3.2 Determine significance of variation between theoretical and actual performance. 3.3 Investigate any suspicious results and take appropriate action.
4. Recommend required action.	4.1 Determine appropriate action to bring performance to desired level. 4.2 Initiate the corrective action to procedures. 4.3 Determine measures to increase equipment productivity. 4.4 Re-check performance after corrective action is implemented.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the materials, equipment and process sufficient to predict their interactions and their impacts on performance.

Knowledge of organization procedures and policies along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control, safety procedures, the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge as a basis for solving processing and material problems, including:

- the characteristics and manufacturing behaviours of polymers involved in the process
- polymer materials, their additives and the rheological, heat and other effects of processing to the design of equipment and components to predict practical performance results
- calculate equipment and component performance from the design specification
- determine equipment and design performance from practical trials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- determine the 'limiting component' in the performance of an item of equipment or a process
- determine possible performance of an item of equipment/process if practical improvements were made to the 'limiting item'.

Language, literacy and numeracy requirements

This unit requires high levels of numeracy and literacy with the ability to interpret technical specifications and reports. Advanced numeracy allowing the calculation and interpretation of statistics, product formulae and process conditions is also required.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the assessee does not currently possess evidence of competency in *PMBTECH40A Predict polymer properties and characteristics* AND *PMBORG403B Conduct trails on products or processes*, they may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to apply a understanding of material and process interactions to be able to interpret data and make judgements about the state of the equipment/component

Consistent performance should be demonstrated. For example, look to see that the performance of at least one type of product on a typical machine has been correctly tested and analysed and that there is evidence that other types of analyses can also be achieved.

Assessment method and context

Assessment will occur on industrial equipment in a work-like environment.

Competence in this unit may be assessed:

- on an appropriate processing plant requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the analysis of equipment components such as screws and dies/tools or items of equipment or processes.

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry, but does require both a theoretical/mathematical and a practical analysis of the process at a level equivalent to a screw/die analysis.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

These may include:

- extrusion
- injection
- blow moulding.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Tools and equipment

This competency includes use of equipment and tools such as:

- measuring equipment (eg micrometers, tapes, verniers, scales)
- hand tools
- data analysis tools (eg computer programs for data recording and presentation).

Hazards

Typical hazards include:

- moving machinery
- hot surfaces and products.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- worn components
- validation of new components to design specification
- component performance analysis in order to upgrade process performance.

Variables

Key variables to be monitored include:

- measurements
- machine characteristics.
-

PMBTECH502B Review and analyse production trials and specify retrials

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the reviewing of trial results, analysing and correcting trial outcomes, and specifying and carrying out retrial procedures.

This competency is typically performed by technicians/technologists in all sectors of the industry.

Application of the Unit

Application of this unit

This competency applies to technicians who analyse and review production trials. The key factors are the understanding of the purpose of the trials, and the interpretation of the trial results compared to that purpose.

It includes:

- new product trials
- new process trials
- new equipment trials
- modifications to product trials
- modifications to process trials
- modifications to equipment trials.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of *MSAOPS401A Trial new process or product*.

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	objectives to procedures. 3.3 Record trial results to procedures.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the materials, equipment and process sufficient to interpret trial results and specify appropriate retrial conditions.

Knowledge of organization procedures and policies along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control, safety procedures, the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge as a basis for solving processing and material problems, including:

- a thorough understanding of polymer materials and processing
- calculate results from trial data
- interpret trial results in terms of trial objectives
- determine variations to trial procedures to overcome limitations found
- interpret results in terms of product end use requirements
- make recommendations for changes to materials, process and product based on trial results
- trial objectives
- preliminary product specifications (physical properties, size, weight, appearance)
- production requirements (output, rejects, yield, practical operating window)
- trial results
- product quality results
- production results
- changes
- product design and specifications
- mould, die and/or tooling design and construction
- material grade
- machine configuration or specification
- production specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- processing parameters
- retrial objectives
- product quality
- production requirements
- variations
- sample size
- machine parameters
- material grade changes
- mould, die and/or tooling changes
- machine configurations.

Language, literacy and numeracy requirements

This unit requires high levels of numeracy and literacy with the ability to interpret technical specifications and reports. Advanced numeracy allowing the calculation and interpretation of statistics, product formulae and process conditions is also required.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the assessee does not currently possess evidence of competency in *MSAOPS401A Trial new process or product*, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to apply an understanding of polymer materials and processing to the interpretation of trial results and making judgements about the trials in terms of the trial objectives

Consistent performance should be demonstrated. For example, look to see that the performance of at least one type of product or process trial on a typical machine has been correctly analysed and that there is evidence that other types of analyses can also be set up, run and completed satisfactorily.

Assessment method and context

It is preferred that assessment takes place on industrial equipment in a work-like environment.

Competence in this unit may be assessed:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry, but does require both a theoretical/mathematical and a practical analysis of the trial data.

The competency does not require knowledge of industry sectors and materials other than that in which the technician works. It assumes an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

Procedures

All operations are performed in accordance with procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- procedures
- product specifications
- trial results and data
- data analysing and reporting tools (eg computer spreadsheets).

Hazards

Typical hazards include operating equipment.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- new products or processes
- new dies, moulds or tooling
- modified equipment or components
- modified or new materials.

Variables

Key variables to be monitored include production data.

PMBTECH503B Determine rheology and output of plastics materials from processing equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the application of knowledge of polymer rheology to the flow of polymers through processing equipment, including extruders and injection moulding equipment and the dies and moulds fitted to that equipment.

This competency is typically performed by senior technicians.

Application of the Unit

Application of this unit

This competency applies to technicians who need to perform calculations using the rheological properties of polymers and apply that to their performance in process equipment.

It includes:

- Newtonian and non-Newtonian flow
- shear force and shear rate calculations
- output calculations
- density/temperature/viscosity relationships and calculations.
-

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Determine flow characteristics of polymer compound.	1.1 Calculate and describe shear and shear rates. 1.2 Distinguish between Newtonian and non-Newtonian flow. 1.3 Identify the characteristics of polymer structures which influence flow. 1.4 Identify the relationships between density, temperature and viscosity for polymers. 1.5 Identify the flow characteristics of a polymer compound based on its structure and temperature.
2. Calculate flow rate of polymer compound.	2.1 Use equipment dimensions and data to determine shear rate of polymers through that equipment. 2.2 Calculate output from equipment using viscosity curves and shear rate diagrams. 2.3 Calculate mean velocity at critical points in a process. 2.4 Determine the characteristic curves for the screws and dies in processing equipment, and the resultant operating point for the system.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the principles of rheology, how rheological properties vary with temperature and how they impact on process efficiency and equipment design.

Knowledge of organization procedures and policies along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Knowledge as a basis for solving processing and material problems including:

- Newtonian flow
- non-Newtonian flow
- density/temperature/viscosity relationships
- quantitatively determining shear, shear rate, output, viscosity/density changes with temperature.

Language, literacy and numeracy requirements

This unit requires high level numeracy skills such as are needed for the use of complex algebraic equations, non-linear functions, simultaneous equations and the interpretation of non-linear graphs. Literacy is also required at least equivalent to senior secondary school.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to determine and apply rheology to relevant polymers.

Assessment method and context

Assessment will occur using relevant industrial polymers and rheology relevant to the process/product and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using an appropriate, industrial polymers and rheology relevant to the process/product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Calculate heat transferred from/to items.	1.1 Calculate conductive heat transfer to/from an object. 1.2 Calculate convective heat transfer to/from an object. 1.3 Calculate radiative heat transfer to/from an object. 1.4 Calculate combined heat transfer to/from an object, including resistances in series and parallel.
2. Calculate temperature change caused by a change in heat content.	2.1 Calculate temperature change caused by heating/cooling of polymer compounds in typical examples of processing equipment. 2.2 Calculate change in heat content caused by shear on a polymer compound. 2.3 Calculate temperature rise caused by shear on a polymer.
3. Select appropriate heating and/or cooling mechanism for an application.	3.1 Compare rates of heat transfer/overall heat transfer coefficients for major methods of heating and cooling. 3.2 Determine appropriate methods of varying/controlling rates of heat transfer.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	3.3 Calculate heat transfer rates under a range of conditions.
4. Determine heating required to suit process conditions.	4.1 Determine heating requirements to obtain correct viscosity for processing. 4.2 Select appropriate heat transfer mechanism(s) to achieve desired conditions.
5. Conduct energy balance over process components.	5.1 Determine overall heating load for process components. 5.2 Determine overall cooling load for process components. 5.3 Determine the adequacy (or otherwise) of the process/plant heating/cooling system to cope with this.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of heat transfer principles and calculations sufficient to determine the heating/cooling loads of an existing or a new process. Knowledge of the effects of heat/temperature on the materials being processed and the products being made sufficient to determine the processing temperatures and heating/cooling rates required to achieve a satisfactory product from an efficient process.

Knowledge of the enterprise's procedures and policies along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Knowledge as a basis for solving processing and material problems including:

- conduction
- convection
- radiation
- combined conduction/convection
- specific heat capacity
- mechanical work/heat relationships
- energy balances.

Language, **literacy and numeracy requirements**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit requireshigh level numeracy skills at least equivalent to senior secondary school levels.

Literacy is also required at least equivalent to senior secondary school level.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that the principles be understood and that they are able to be applied to real workplace situations. Competence must be demonstrated in the ability to undertake quantitative analyses and then apply the results to determine heating and cooling loads and flow/supply.

Assessment method and context

Assessment will occur using industrial situations and equipment using industrial polymers and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using appropriate, industrial equipment, situations and polymers
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the heating/cooling loads of all processing equipment and requires the quantitative determination of loads.

This competency applies to all sectors within the plastics, rubber and cablemaking industry.

Standard procedures means all relevant workplace procedures, policies and relevant industry and government codes and standards.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Unit Sector(s)

Not applicable.

PMBTECH505B Choose polymer materials for an application

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the application of a knowledge of polymerisation, polymer structure and modifications of polymer materials to their properties so enabling the choice of an appropriate polymer compound for an applications.

This competency is typically performed by technicians developing new products or applying this knowledge set to advanced process/product problem solving.

Application of the Unit

Application of this unit

This competency applies to technicians who are able to bring together an understanding of the basics of chemistry and polymers and apply this understanding to determine the properties of polymers and polymer products.

It includes:

- the influence of polymerisation mechanisms on polymer properties
- the influence of polymer structure on polymer properties
- methods of modifying the properties of raw polymers
- the selection and interpretation of polymer tests
- the ability to bring these skills together to select appropriate material(s) for an application.
-

Licensing/Regulatory Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Determine possible polymer properties based on polymer type.	1.1 Estimate molecular weight distribution changes with polymerisation mechanisms and conditions. 1.2 Predict the impact of monomer and polymer structure on polymer properties.
2. Estimate polymer properties based on polymer structure.	2.1 Predict property changes caused by polarity and intermolecular forces. 2.2 Determine possible polymer properties based on chain flexibility variations caused by changes in regularity, tacticity and intermolecular forces. 2.3 Estimate polymer properties based on molecular weight/molecular weight distribution, degree of cross-linking. 2.4 Predict barrier properties based on molecular orientation and degree of crystallisation.
3. Choose a polymer compound for an application.	3.1 Select appropriate base polymer/polymers for an application based on the polymer properties. 3.2 Determine reinforcement(s)/additives required to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	meet product specification. 3.3 Predict failure mechanism for selected compound and modify selection if appropriate. 3.4 Determine the need for polymer compatibilisers and specify appropriate use if required. 3.5 Develop formulation and select appropriate production
4. Organise testing of polymer and interpret test results.	4.1 Select appropriate test(s) for compounded polymer based on test purpose and limitations and material being tested. 4.2 Test colour using colour coordinates as required. 4.3 Interpret test results and modify formulation/production method as required to meet product specification.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the polymerisation process and polymer characteristics sufficient to enable the selection of polymers with appropriate base properties.

Knowledge of organization standard procedures and policies. Knowledge of the relevant regulatory requirements and national/international standards along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

This unit assumes a knowledge of basic chemistry, including atomic structure, molecular weight, periodic table, ionic and covalent bonding, intermolecular bonding, hydrogen bonding, structure of organic compounds, functional groups and typical reactions, saturated and unsaturated compounds, aromatic compounds, hydrolysis and addition reactions.

Knowledge as a basis for solving processing and material problems including:

- property changes caused by different mechanisms and conditions for addition polymerisation
- typical processing conditions for typical polymers such as polythene
- property changes caused by using bulk, suspension, solution and emulsion addition polymerisation
- property changes caused by different mechanisms for condensation polymerisation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the formation of cross-linked polymers
- the properties of cross-linked polymers
- impact of polymerisation process on polymer properties
- impact of polymer structure on polymer properties
- modifications to plastics
- test methods
- properties and applications of polymers
- the impact of tacticity on addition polymer properties
- the property changes caused by different copolymer structures
- the influence of molecular structure on chain regularity
- the difference between polymer reinforcements and polymer composites.

Language, **literacy and numeracy requirements**

This unit requires high level literacy and numeracy.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that the polymer and additive properties be understood and the chemistry behind these properties can be explained. Competence must be demonstrated in the ability to predict appropriate polymers and additives from the required properties of a product.

Consistent performance should be demonstrated. For example, look to see thatselections made can be justified.

Assessment method and context

Assessment will occur using industrial polymers and typical/actual applications and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using appropriate, industrial polymers and typical/actual applications
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Unit Sector(s)

PMBTECH506B Analyse the design of products and tools

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the impact of die/tool design on the product and process.

This competency is typically performed by experienced technicians/technologists working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to technicians/technologists who work with dies/tools. The key factors are the identification of key features, their impact on the process/product and the recommendation of modifications to dies/tools.

It includes:

- describing components and functions using appropriate terminology
- interpreting drawings
- identifying design features and their impact on product
- making recommendations for improving/optimising die design.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit of competency has the prerequisites of:

- *MEM9.2B Interpret technical drawing*
- *MSAOPS401A Trial new process or product*
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Identify tool components and operating principles.	1.1 Identify the common types of tools and their advantages and limitations. 1.2 Choose appropriate tool components and systems.
2. Interpret tool drawings.	2.1 Identify tool type from drawing. 2.2 Identify tool components from drawing.
3. Identify tool and part features that affect product quality.	3.1 Recognise common product faults due to tool problems. 3.2 Identify the cause of the faults. 3.3 Recommend modifications to tool or material to rectify.
4. Identify product features that affect tool design.	4.1 Recognise good and poor product design features in terms of ease of tool design and manufacture. 4.2 Identify the critical product design features which affect the selection of an appropriate manufacturing technology. 4.3 Identify the critical product design features which affect tool design.
5. Analyse tool design.	5.1 Use the process for the design, manufacture and

	trialling of tools. 5.2 Use analysis and balancing tools as appropriate to examine optimum tool design. 5.3 Suggest possible improvements to tool or product design.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the materials, equipment and process sufficient to predict their interactions and their impacts on performance.

Knowledge of organization procedures and policies along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Knowledge as a basis for solving processing and material problems including:

- interpret technical drawings and specifications for tools
- function of tool components and systems
- function of clamping/mounting/ancillary systems
- tool operating principles and adjustments
- impact of product design on tooling design
- impact of tooling design on product
- impact of tool design and material properties on productivity
- the technical strengths and weaknesses of common processing and fabrication technologies and their relative suitability for classes of products
- the economic and market features of common processing and fabrication technologies and their impact on the selection of a technology for a product
- impact of polymer and polymer compound properties on tool performance and product
- material/tool interactions
- the impact of different tool designs on product and productivity
- the temperature effects on process and product
- distinguish between types of tool designs required for different product types
- fine tune and balance (where appropriate) the tooling.

Language, **literacy and numeracy requirements**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit requires high levels of numeracy and literacy with the ability to interpret technical specifications and reports. Advanced numeracy allowing the calculation and interpretation of statistics, product formulae and process conditions is also required.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The critical aspects for this unit of competency is the ability to apply a thorough understanding of polymer materials, their additives and the rheological, heat and other effects of processing to the design of tools and components. This understanding of material and process interactions should also be able to be applied in the interpretation of technical specifications and drawings.

Assessment method and context

Assessment will occur on industrial tools and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using appropriate, industrial tools
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
    - by using a suitable simulation and/or a range of case studies/scenarios
    - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the analysis of dies, tools and moulds and the products made from them. It does not include moulds such as are used for composites or thermoforming.

The competency does not require a knowledge of industry sectors and materials other than that in which the technician works. It assumes an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Unit Sector(s)

PMBTECH507B Develop fibre composite products using cored-laminate techniques

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the development of designs for 'sandwich type' fibre-composite laminates and the solving of technical problems.

Application of the Unit

Application of this unit

This competency is typically performed by technicians applying knowledge of materials, product purpose and processes to the design of 'sandwich' composites that meet specific performance requirements in terms of strength, stiffness and/or weight. It also requires transferring and applying theoretical concepts and skills to analyse and plan approaches to technical problems.

The technician will:

- determine appropriate materials and processes to meet design objectives
- determine appropriate equipment and process settings and adjustments
- develop drawings of new product
- solve technical problems associated with the design and manufacturing procedures.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Confirm product specification.	1.1 Confirm physical/structural properties required of product. 1.2 Confirm other requirements of product. 1.3 Identify relevant regulations/standards/codes of practice which may be applicable. 1.4 Draw/use hand sketch to confirm product size and shape.
2. Identify technical requirements.	2.1 Determine the laminate properties appropriate for the job. 2.2 Select the appropriate core material(s). 2.3 Select the appropriate resin, matrix and other materials. 2.4 Determine joints, attachment points and other special features required. 2.5 Determine lay-up technique to be used.
3. Develop specification for manufacturing product.	3.1 Develop technical/engineering drawing of new product to company required standards. 3.2 Develop material list/specification for new product.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	3.3 Develop manufacturing procedures/specifications for new product. 3.4 Complete required documentation.
4. Make trial samples, as required.	4.1 Liaise with production and other relevant people to ensure specifications/procedures are clear, adequate and understood. 4.2 Provide technical expertise to the production process as required to facilitate manufacture. 4.3 Test samples for function and quality. 4.4 Modify designs, where necessary to meet manufacturing and other requirements.
5. Anticipate and solve problems.	5.1 Recognise a problem or a potential problem. 5.2 Determine possible cause. 5.3 Refer problems outside area of responsibility to appropriate person, with possible cause. 5.4 Seek information and assistance as required, to solve problems 5.5 Solve problems within area of responsibility. 5.6 Follow through items initiated until final resolution has occurred.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production. For example, poor adhesion can result in delamination under stress, impact and load conditions

Knowledge and ability to implement organization procedures, quality requirements at each production stage and relevant regulatory requirements, within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the production process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge as a basis for developing designs that meet new product requirements:

- principal construction techniques and the technical advantages of various types
- material properties and their suitability for use as core (eg PVC rigid foams, PU foams, SAN foams, linear PVC foams, plywood, balsa, and various honeycomb materials)
- layered or laminate structural behaviour
- hand lay-up and vacuum-bagging techniques
- failure modes
- function and operating principles of composites forming equipment, machine components and ancillary equipment
- impact of temperature, pressure, time, on product quality and production output
- correct selection and use of equipment, materials, processes and procedures
- impact of variations in raw materials and equipment operation in relation to final product
- factors which may affect product quality or production output and appropriate remedies.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify and describe own role and role of others involved directly in the design and manufacturing process
- identify when assistance is required to solve problems.

Language, literacy and numeracy requirements

This unit requires the ability to write and interpret technical specifications and reports.

Advanced numeracy allowing the calculation and interpretation of statistics, product formulae and process conditions is also required.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to select the appropriate moulded laminate structure to meet the cost and performance specification for the particular job.

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- identify critical materials properties and structural considerations in relation to the design objectives and the end product
- make design modifications , as required
- identify and develop solutions to technical problems

Consistent performance should be demonstrated. For example, look to see that:

- design objectives are consistently met
- manufacturing codes of practice are observed

Assessment method and context

Assessment will occur on a sandwich-type composite design process and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- over a range of actual design projects which are implemented in the workplace
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency applies to the design of composite products using sandwich construction within the plastics and rubber industries. It covers the design of new sandwich products within the scope of normal sandwich product manufacture for the enterprise, ie using the range of materials and techniques which are standard within the enterprise.

For design outside this range, see *PMBTECH601A Develop a new product*.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- drawing tools (including computer aided drawing)
- measuring tools.

Typical hazards include:

- hazardous vapours and materials
- fibres, airborne and handled.

Problems

'Anticipate and solve problems' means develop solutions to a wide range of problems associated with the design and manufacture of a new product.

Typical design and product problems may include:

- structural optimisation
- strength problems
- core shearing
- bending
- cost.

Variables

Key design variables include:

- size
- weight
- thickness
- loading modes
- strength
- stiffness
-

PMBTECH508A Develop a new compound

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the development of a new compound/formulation or the major modification of an existing compound. The aims of the modification may be broad (eg reduce cost, improve performance, improve manufacturing) or specific (eg meet a particular specification). Typically the brief will be broad enough to require examination of all components of the compound.

This technician would typically take the lead in this development project, although they may be working with a more senior technician as part of a larger project.

Application of the Unit

Application of this unit

This competency applies to technicians who are required to develop new compounds/ formulations and demonstrate that an appropriate formulation and manufacturing method have been developed.

It includes:

- determining the appropriate base polymer/polymer blend
- determining the appropriate additives
- determining the appropriate mixing methods and order
- verifying that compound and methods are acceptable in the factory
- ensuring the factory is able to mix this compound as a routine product.

This competency may be used to complement *PMBTECH505A Choose polymer materials for an application*. While PMBTECH505 concentrates on selecting the right polymer from a knowledge of polymer properties, this unit concentrates on the creation of an appropriate formulation using that polymer. Where choice of polymer is obvious/restricted/trivial then this unit stands alone from TECH505.

Where colour is an important part of the compound then *PMAOPS550A Develop a colour formulation* may also be a complementary unit.

Elements and Performance Criteria Pre-Content

ELEMENT	**PERFORMANCE CRITERIA**
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Confirm required properties of compound.	1.1 Communicate with stakeholders regarding technical and aesthetic specification. 1.2 Identify project constraints such as timelines and cost. 1.3 Draft compound specification and project plan. 1.4 Identify required tests to verify compound meets specification. 1.5 Confirm with stakeholders and modify as appropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
2. Develop base formulation.	2.1 Identify appropriate base polymer/polymer blend. 2.2 Select appropriate fillers/reinforcers and estimate required proportions. 2.3 Select appropriate plasticisers and related materials and estimate required proportions. 2.4 Select appropriate other materials and estimate required proportions. 2.5 Draft initial formulation. 2.6 Draft trial mixing procedure and order of addition. 2.7 Identify any Health Safety and Environment (HSE) issues and modify as appropriate.
3. Mix, test and modify formulation.	3.1 Identify and control all hazards for laboratory development program. 3.2 Obtain all required materials and tools/ equipment. 3.3 Produce the trial compound following the draft procedures. 3.4 Evaluate the compound compliance with the specification. 3.5 Modify formulation and procedure as required. 3.6 Draft factory trial formula and procedure
4. Monitor factory trials.	4.1 Identify and control al HSE issues for factory trials. 4.2 Ensure all required materials and tools/equipment are available. 4.3 Organise trial(s) at an appropriate time. 4.4 Ensure trial is monitored and required data collected. 4.5 Evaluate factory trial compound and procedure. 4.6 Modify formulation and procedure as required.
5. Complete compound development.	5.1 Ensure final formulation and procedures are recorded in standard procedures. 5.2 Ensure all required materials and tools and equipment will be routinely available as required. 5.3 Ensure HSE controls are standardised. 5.4 Ensure skill needs of operators have been addressed.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	5.5 Complete all required reports and records. 5.6 Advise stakeholders of the outcome of the project.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence in this unit requires:

- an understanding of compound components to a level necessary to select appropriate components from a range of similar, competing components
- an understanding of mixing processes to a level necessary to select an appropriate mixing method, an order of addition and mixing conditions
- appropriate tests so as to select the tests needed to check for compliance with the specification, and interpret test results
- HSE issues related to various compound components.

Language, literacy and numeracy requirements

This unit requires the ability to communicate at all levels about technical issues and bring agreement as to requirements from the different parties.

Reading is required to the level of interpreting technical information, and writing technical specifications, procedures and reports.

Numeracy is required to the level of interpreting technical information and test results, calculating required proportions and scaling up to a factory sized trial.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This competency should be assessed by examining a number of compound development projects where that development has resulted in a new compound introduced into the factory.

Critical aspects

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- interpret the requirements of the new compound and express this in suitable form
- make appropriate choices of components and justify those choices
- develop appropriate mixing procedures and conditions and justify those choices
- introduce the new compound into the factory successfully.

Consistent performance should be demonstrated. For example, look to see that:

- a range of compounds meeting different types of specifications are developed
- a range of compounds requiring different components/component amounts are developed.

Context of assessment

Competence in this unit may be assessed:

- on the plant
- using questions to assess knowledge
- in a laboratory/pilot plant
- by using suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

Method of assessment

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency applies to technicians who develop new compounds/formulations or who make significant modifications to existing compounds. They will typically be based in a laboratory/office or similar and will also have responsibility for ensuring the new compound works in the factory.

A technician working at this level would typically take the lead responsibility for the development of a new compound, but may work with other technicians of similar or greater responsibility for large or complex projects or as part of the development of a new product

Compound

Compound is used to mean any mixture of materials which is undertaken to a set formula and in specified proportions.

Tests

Tests includes the normal range of physical, chemical and environmental (weathering) tests which might be applied to the product.

Identify polymers

Identification of base polymer is a necessary starting point for any compound, but this competency does not necessarily require the choosing of a polymer from an understanding of its characteristics. Identification may be done in liaison with others, or by choosing the base polymer used in other products with similar requirements.

Select components

Selecting of components, and the proportions of components to be used should be done from a knowledge of a wide range of possible components, the properties each would bring to the compound, the relative advantages and disadvantages of each and the change in compound properties with changing amounts of each component.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Health, Safety and Environment (HSE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations are subject to stringent Health, Safety and Environment requirements, which may be imposed through State or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the technician needs to ensure the HSE requirements take precedence.

PMBTECH509A Modify an existing product

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the major modification of an existing product. The aims of the modification may be broad (eg reduce cost, improve performance, improve manufacturing) or specific (eg meet a particular specification). Typically the brief will be broad enough to require examination of a broad range of design features.

This technician would typically take the lead in this development project, although they may be working with a more senior technician as part of a larger project.

Application of the Unit

Application of this unit

This competency applies to technicians who are required to develop modified products and demonstrate that an appropriate product and manufacturing method have been developed.

It includes:

- determining the appropriate product specification
- confirming the appropriate compound
- identifying equipment/tooling requirements
- monitoring trials
- checking the modified product meets its requirements
- ensuring the factory is able to make this product as a routine product.

This competency may be used to complement *PMBTECH508A Develop a new compound*. While TECH508 concentrates on developing a compound, this unit concentrates on the modification of a product, which may include a change of compound. Where choice of compound is obvious/restricted/trivial then this unit stands alone from TECH508.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Confirm required product specification/requirements.	1.1 Communicate with stakeholders regarding technical and aesthetic specification and other requirements. 1.2 Identify project constraints such as timelines and cost. 1.3 Draft product specification and project plan. 1.4 Identify required tests to verify product meets specification. 1.5 Confirm with stakeholders and modify as appropriate.
2. Determine requirements for manufacture.	2.1 Identify appropriate compound. 2.2 Select process, equipment and tooling. 2.3 Select appropriate process conditions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	2.4 Determine other requirements for manufacture. 2.5 Draft trial manufacturing procedure. 2.6 Identify any HSE issues and modify as appropriate.
3. Make trial/prototype products.	3.1 Identify and control all hazards for laboratory development program. 3.2 Obtain all required materials and tools/ equipment. 3.3 Produce the trial product following the draft procedures. 3.4 Evaluate the product's compliance with requirements. 3.5 Modify design and procedure as appropriate. 3.6 Draft factory trial procedure.
4. Monitor factory trials.	4.1 Identify and control al HSE issues for factory trials. 4.2 Ensure all required materials and tools/ equipment are available. 4.3 Organise trial(s) at an appropriate time. 4.4 Ensure trial is monitored and required data collected. 4.5 Evaluate factory trial product and procedure. 4.6 Modify specification procedure as appropriate.
5. Complete product modification.	5.1 Ensure final specification and procedures are recorded in standard procedures. 5.2 Ensure all required materials and tools and equipment will be routinely available as required. 5.3 Ensure HSE controls are standardised. 5.4 Ensure skill needs of operators have been addressed. 5.5 Complete all required reports and records. 5.6 Advise stakeholders of the outcome of the project.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence in this unit requires:

- an understanding of product design to a level necessary to select appropriate design components from a range of similar, competing components
- an understanding of making processes to a level necessary to select an appropriate set of process, equipment, tools and conditions and develop procedures
- appropriate tests so as to select the tests needed to check for compliance with the specification, and interpret test results
- HSE issues related to various products, processes, equipment, tools and process conditions.

Language, **literacy and numeracy requirements**

This unit requires the ability to communicate at all levels about technical issues and bring agreement as to requirements from the different parties.

Reading is required to the level of interpreting technical information, and writing technical specifications, procedures and reports.

Numeracy is required to the level of interpreting technical information and test results, calculations related to design and scaling up to a factory sized trial.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

This competency should be assessed by examining a number of product modification projects where that development has resulted in a modified product being introduced into the factory.

Critical aspects

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- interpret the requirements of the modified product and express this in suitable form
- make appropriate choices of process, equipment, tools and conditions and justify those choices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- develop appropriate manufacturing procedures and design specifications and justify those choices
- introduce the modified product into the factory successfully.

Consistent performance should be demonstrated. For example, look to see that:

- a range of products meeting different types of specifications are developed
- a range of products requiring different process/equipment/tools/conditions are developed.

Context of assessment

Competence in this unit may be assessed:

- on the plant
- using questions to assess knowledge
- in a laboratory/pilot plant
- using suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

Method of assessment

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Context

This competency applies to technicians who make significant modifications to existing products. They will typically be based in a laboratory/office or similar and will also have responsibility for ensuring the new product works in the factory.

A technician working at this level would typically take the lead responsibility for the product modification, but may work with other technicians of similar or greater responsibility for large or complex projects or as part of the development of a new product

Compound

Compound is used to mean any mixture of materials which is undertaken to a set formula and in specified proportions.

Tests

Tests includes the normal range of physical, chemical and environmental (weathering) tests which might be applied to the product.

Identify compound

Identification of compound is a necessary starting point for any product, but this competency does not necessarily require the choosing of a compound from an understanding of its characteristics. Identification may be done in liaison with others, or by choosing the compound used in other products with similar requirements.

Select process

Selecting process, equipment and tooling to be used should be done from a knowledge of a wide range of possible processes equipment and tooling, the properties each would bring to the product, the relative advantages and disadvantages of each and the change in product properties with process, equipment and tooling changes.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Health, **Safety and Environment** (**HSE**)

All operations are subject to stringent health, safety and environment requirements, which may be imposed through State or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the technician needs to ensure the HSE requirements take precedence.

PMBTECH510A Analyse failure in polymeric materials

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the viscoelastic response of polymeric materials to stress and strain under various conditions. It covers the response of different polymers, compounds and physical shapes with different applications of stress and strain.

Application of the Unit

Application of this unit

This competency applies to technicians who are required to differentiate between products and compounds based on their response to applied stress/strain.

It includes:

- crystalline and amorphous polymers
- reinforced (fillers or fibres) and filled compounds
- crosslinked and uncrosslinked polymers
- impact, steady and repeated application
- application under different physical and chemical conditions
- response of different shapes
- applications of this to typical products/situations.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Analyse response to steady and static loads.	1.1 Determine stress strain response. 1.2 Determine tear/notch failures. 1.3 Identify modulus and yield. 1.4 Identify creep and stress relaxation. 1.5 Determine stiffness. 1.6 Identify applications where the typical viscoelastic response of polymers is an advantage. 1.7 Identify applications where the typical viscoelastic response of polymers must be modified and common methods of modification.
2. Analyse response to time varying loads.	2.1 Determine hysteresis in tensile and shear loadings. 2.2 Determine the effect of slow/rapid (impact) loading. 2.3 Identify failure modes in flex cycling 2.4 Identify fatigue failure. 2.5 Identify failures in sinusoidal loadings. 2.6 Identify applications where the typical

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	viscoelastic response of polymers is an advantage. 2.7 Identify applications where the typical viscoelastic response of polymers must be modified and common methods of modification.
3. Analyse the effect of environment/history on mechanical response.	3.1 Determine effect of temperature on response. 3.2 Determine effect of surface degradation on response. 3.3 Determine effect of molecule/fibre/filler orientation on response. 3.4 Determine the effect of environmental degradation on failure. 3.5 Identify applications where the typical response of polymers is an advantage. 3.6 Identify applications where the typical response of polymers must be modified and common methods of modification.
4. Analyse the effect of shape on mechanical response.	4.1 Determine the effect of shape on the stress/strain relationship (triaxiality). 4.2 Determine the effect of shape on stiffness. 4.3 Determine the effect of shape on response to cyclical loads. 4.4 Determine the effect of shape on creep and relaxation. 4.5 Identify applications where the typical response of polymers is an advantage. 4.6 Identify applications where the typical response of polymers must be modified and common methods of modification.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence in this unit requires the ability to apply and explain:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- classical (ie elastic) stress and strain
- classical (ie elastic) Young's modulus and Poisson ratio
- stress, compression, shear and torsion
- stiffness and bending moments
- application of the above for viscoelastic bodies
- models of viscoelasticity
- creep and relaxation
- effects of temperature (above and below the glass transition point)
- effects of degradation, eg surface oxidation (such as UV, O3); swelling (such as solvent, chemical)
- three dimensional responses to stress
- responses to stress cycling, including heat build up
- mechanical responses to changing the properties of polymer structures and components

Language, **literacy and numeracy requirements**

This unit requires the ability to interpret and apply technical information.

Reading is required to the level of reading and applying technical brochures, books and other information.

Numeracy is required to the level of applying technical information and calculating stress/strain and related data, drawing and interpreting graphs.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- explain test results in terms which are appropriate to the polymeric material of the sample
- apply the results of the analyses to typical applications
- identify applications where typical polymer properties are an advantage
- distinguish between applications where polymers may be used satisfactorily (although without an inherent advantage) and those where it has an inherent advantage.

Consistent performance should be demonstrated. For example, look to see that:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the model(s) of viscoelasticity can be consistently applied to a range of likely situations
- the response to the application of stress in a range of circumstances can be explained
- the effect of shape can be predicated and explained for different stress application situations.

Context of assessment

This unit will require an assessment of the underpinning principles and should also include practical analyses as indicated by the elements. Such practical would typically be undertaken in a laboratory, either in an industry workplace or a teaching facility

Competence in this unit may be assessed:

- in a teaching facility laboratory
- in an industrial laboratory
- in a situation where the tests can be done
- using suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

Method of assessment

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency applies to technicians who are required to analyse the mechanical/ physical responses of polymer structures and components. These may include:

- large structural beams,
- small mechanical components,
- damping products such as bridge or acoustic bearings
- other items where the mechanical/physical properties are important.

It includes a wide range of polymer compounds including:

- crystalline and amorphous polymers
- reinforced (fillers or fibres) and filled compounds
- crosslinked and uncrosslinked polymers.

However, the properties of these polymers is not the prime focus of this unit.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. ASNZ/ISO standards for mechanical/physical testing of polymers will be relevant here and appropriate standards should be followed.

Tools and equipment

This competency includes use of equipment and tools such as:

- stress/strain testers
- impact testers
- cycling testers
- environmental aging equipment
- basic length/thickness measuring equipment.

Hazards

Typical hazards include:

- stored energy (eg in stressed test samples
- test preparation equipment
- conditions and materials used for causing sample degradation.
-

PMBTECH601B Develop a new product

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the development of a new product for a company and the facilitation of its initial production.

This competency is typically performed by high level staff, working as part of a product design, development and implementation team and taking a lead technical role.

Application of the Unit

Application of this unit

This competency applies to operators who are required to people who develop new products to meet a specified end use. This will involve working closely with a range of management and operations personnel and requires balancing the business and technical sides of the new product. This unit of competency applies to the technical expert.

Critical aspects for success include:

- ensuring the technical performance meets the customer's needs
- making sure the market needs of cost, timeliness and quality are appropriately balanced
- designing a product and process which can be efficiently made by the company
- liaising with the required people to ensure tooling design and manufacture and equipment modification is correct
- optimising the process for the new product at the completion of the development phase.
-

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	**PERFORMANCE CRITERIA**
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Confirm design brief of new product.	1.1 Communicate with customer and other key stakeholders and agree on; technical specification, aesthetic requirements, timelines, cost, and other market requirements. 1.2 Determine regulatory/industry code/intellectual property requirements for product. 1.3 Identify possible tooling/process/equipment need 1.4 Develop design brief, including relevant drawings, to meet needs. 1.5 Obtain 'sign off' on total design brief from all relevant persons.
2. Determine material requirements for product.	2.1 Select appropriate base polymer grade/polymer blend or range of polymers/grades for evaluation. 2.2 Select type(s) of reinforcement and other additives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	needed 2.3 Determine material testing and evaluation regime required to meet product end use requirements, including regulatory/ industry code requirements. 2.4 Arrange for compounding, testing and evaluation of trial materials. 2.5 Interpret material trial results and guide material trial process. 2.6 Determine final materials specification.
3. Determine process requirements for product.	3.1 Select appropriate process to make product based on appropriate factors 3.2 Determine any special process/equipment requirements for this product. 3.3 Communicate with production personnel to determine their concerns and/or special needs.
4. Ensure process needs for new product have been met.	4.1 Liaise with tool/ die/ mould/equipment design/procurement personnel. 4.2 Interpret hardware specifications and ensure they are appropriate for the job required. 4.3 Liaise with process personnel to ensure appropriate draft procedures for new product have been developed.
5. Trial new product through the process.	5.1 Design trialing procedure to deliver required information. 5.2 Ensure OHS and environmental requirements are stringently observed. 5.3 Coordinate the trialing of the new product. 5.4 Interpret product trial results and guide product trial process. 5.5 Tune process to optimise production of new product.
6. Determine process capability.	6.1 Plot appropriate statistical process control charts. 6.2 Determine 3 sigma confidence limits. 6.3 Compare confidence limits with product specification.
7. Coordinate product trials.	7.1 Determine product testing and evaluation regime

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	required to meet end use requirements, including regulatory/industry code requirements. 7.2 Arrange for testing and evaluation of trial product/prototype. 7.3 Interpret product trial results and guide product trial process. 7.4 Determine final product specification. 7.5 Make required changes to materials, process and equipment.
8. Implement standard procedures for new product.	8.1 Monitor initial production and adjust process, conditions and materials to make the process a smooth operation. 8.2 Ensure process specifications reflect the optimised operation developed. 8.3 Ensure standard operating procedures are correct for the new product. 8.4 Ensure equipment and other hardware records are updated to reflect additions/changes. 8.5 Ensure project records are complete and all required reports have been completed and submitted. 8.6 Archive records according to company procedure.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the materials, equipment and process sufficient to choose an appropriate combination of materials and process to achieve the end use function of the product.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Knowledge as a basis for solving processing and material problems including:

- polymer type and grade for a range of applications
- additives (including reinforcing) and grade for a range of applications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- appropriate process for a range of product/market applications
- material and product testing procedures
- the impact of the polymerisation process on the polymer process
- appropriate polymer type and grade for typical applications
- appropriate additives and grades for a range of applications
- effects of processes and processing on the final properties of the product
- miscibility and solubility effects and phase separation/single phase processing
- mathematically determine
- volume fractions in a formula
- product cost estimates
- laboratory test results
- field test results
- market analysis data
- trialing data.

Language, literacy and numeracy requirements

This unit requires high levels of numeracy and literacy with the ability to write and interpret technical specifications and reports. Advanced numeracy allowing the calculation and interpretation of statistics, product formulae and process conditions is also.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The critical aspect for this unit of competency is the ability to apply a thorough understanding of polymer materials, their additives and the rheological, heat and other effects of processing to a new situation and use this understanding to predict likely solutions to the new product design specification challenge. This understanding of material and process interactions should also be able to be applied in interpreting data and making adjustments to materials and process to achieve the desired outcomes.

Assessment method and context

Assessment will occur using industrial products, situations and equipment using industrial polymers and will be undertaken in a work-like environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competence in this unit may be assessed:

- using appropriate, industrial product, situations and polymers
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

The development must be of a product which is new to the organisation and not just a modification of an existing product. It is possible that a major redesign of an existing product may encompass all the aspects of a new product design to an appropriate breadth and depth. Where the only available product design projects are the major re-design of an existing project, normally several such projects will be required to match the breadth and depth of skills which can be demonstrated by the development of a totally new product

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This competency unit is for the design of a new product 'from scratch'. It assumes an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry. The competency assumes a working knowledge of all main processes and materials so that an informed choice can be made between them.

This unit requires an understanding of all standard processes, major polymer types and common additives.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include

- OHS
- food grade requirements
- environmental regulations
- PACIA packaging covenant
- structural codes.

Tools and equipment

This competency requires an understanding of the use of all standard processing equipment, It includes use of equipment and tools for:

- design of dies, such as are used in extrusion, injection moulding and blow moulding
- design of mould,s such as are used in rotational moulding and composites
- understanding
- relevant personal protection.

Appropriate factors

Appropriate factors include:

- type of material
- dimensional precision of product
- length of run/number of products
- required aesthetics
- size and complexity of product
- available capital funding
- process equipment available.

Problems

Typical process and product problems may include:

- defining product end use requirements in terms meaningful to the product design and manufacture
- matching suitable materials and processes to the product needs and company expertise and facilities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- matching (and improving) process capability to product tolerances.
-

PMBTECH602B Develop a new die or tool

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the development of a new die or tool for a company and the facilitation of its initial use in production.

This competency is typically performed by high level staff, working as part of a die/tool design, development and implementation team and taking a lead technical role.

Application of the Unit

Application of this unit

This competency applies to people who develop new dies/tools to meet a specified end use. This will involve working closely with a range of management and operations personnel and toolmakers who will often be external to the company. It requires balancing the ease of use and process efficiency with tool/ die life and maintenance requirements. This unit of competency applies to the technical expert.

Critical aspects for success include:

- ensuring the technical performance meets the process and maintenance/reliability needs
- making sure the needs of cost, timeliness and quality are correctly balanced
- designing a die/tool which is efficient to use by the company
- liaising with the required people to ensure tooling design matches the product and process needs
- optimising the process for the new die/tool at the completion of the development phase.
-

Licensing/Regulatory Information

Not applicable.

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	techniques. 2.4 Validate die design specifications against die requirements and design brief.
3. Liaise with toolmaker on die manufacture.	3.1 Discuss design brief and concept design with tool maker(s). 3.2 Verify understanding of die/tool requirements and ability to meet requirements. 3.3 Negotiate contract to make die according to company policy and procedures. 3.4 Continue to liaise with toolmaker.
4. Trial new die and determine modification(s)(if any) required.	4.1 Design trialing procedure to deliver required information. 4.2 Ensure OHS and environmental requirements are stringently observed. 4.3 Coordinate the trialing of the new die/tool. 4.4 Interpret die/tool trial results and guide die trial process. 4.5 Tune process to optimise use of new die/tool.
5. Bring new die into standard production.	5.1 Monitor initial production and adjust die, process and conditions to make the process a smooth operation. 5.2 Ensure process specifications reflect the optimised operation developed. 5.3 Ensure standard operating procedures are correct for the new product. 5.4 Ensure equipment and other hardware records are updated to reflect additions/changes. 5.5 Ensure project records are complete and all required reports have been completed and submitted. 5.6 Archive records according to company procedure.

Required Skills and Knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the materials, equipment and process sufficient to design an efficient and effective die and to test that die in the process and validate its fitness for purpose.

Knowledge of organization policies and procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Knowledge as a basis for solving processing and material problems including:

- die material(s)
- die finish(s)
- the impact of the melt viscosity on die size and design
- runner/sprue design needed
- dies size and shape required to product required product
- Fourier analysis
- mould flow analysis
- shear stress/strain rates (viscosity)
- die design data
- production trial data.

Language, **literacy and numeracy requirements**

This unit requires high levels of numeracy and literacy with the ability to write and interpret technical specifications and reports. Advanced numeracy allowing the calculation and interpretation of statistics, product formulae and process conditions is also required.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The critical aspects for this unit of competency is the ability to apply a thorough understanding of polymer materials, their additives and the rheological, heat and other effects of processing to the design of a new die/tool. The influence of die/tool design on the operability of the process and the properties of the product also need to be understood. The interpretation of die trial data and the modification of die and/or process to improve the outcome, are also critical.

Assessment method and context

Assessment will occur using industrial dies/tools and equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using appropriate, industrial dies/tools and polymers
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
    - by using a suitable simulation and/or a range of case studies/scenarios
    - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Context

This competency unit is for the design of a new die or tool. It assumes an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry. The competency assumes a working knowledge of all main processes, polymer materials and materials of construction of dies/tools so that an informed choice can be made between them

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include:

- injection moulding
- extrusion
- blow moulding
- extrusion blow moulding
- injection blow moulding.

This competency includes the ability to mathematically design dies and analyse die trials. It also requires an understanding of the operation of the process equipment

Problems

Typical process and product problems may include:

- clarifying the design brief
- communication breakdowns between product designer, die designer, toolmaker and production and maintenance needs.
-

Unit Sector(s)

PMBTECH603B Design structural/mechanical polymer components

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the mechanical/structural design of components which are to be made from polymeric materials. It applies the traditional engineering structures to viscoelastic materials.

This competency is typically performed by senior technicians/technologists who are designing, or part of a team, designing polymeric structures or polymeric mechanical components.

Application of the Unit

Application of this unit

This competency applies to technologists designing new mechanical or structural components. The key factors in the design of the component are adequate strength and rigidity and making allowances for, and taking maximum advantage of, the inherent properties of polymeric materials.

It includes working with:

- structural components, such as support columns and beams in plastic playground equipment
- rigid beams and frames, such as in boat hulls and decks
- mechanical components, (such as gears, cams, etc) subject to forces/transmitting mechanical power
- a certified structural engineer (when appropriate) to provide specialised polymer knowledge.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit of competency has the prerequisite of *PMBTECH505B Choose polymer materials for an application.*

This unit of competency requires a detailed understanding of mechanics such as might be gained from some engineering studies. Where this knowledge is to be gained as part of this unit of competency, it will require a significantly greater effort and time than would otherwise be required.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Determine mechanical/ structural design requirements.	1.1 Determine stress/strain requirements of end use. 1.2 Determine flexural/rigidity requirements of end use. 1.3 Determine required physical properties (such as size, shape, density) of end use. 1.4 Determine environmental requirements (physical, chemical, radiation) of end product. 1.5 Identify how component fits with entire end product. 1.6 Develop mechanical design brief and verify with appropriate people.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	**PERFORMANCE CRITERIA** Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
2. Select material(s) and additives, including reinforcing, appropriate for the design brief.	2.1 Select material/combination of materials with appropriate physical properties. 2.2 Select material/combination of materials with appropriate chemical properties. 2.3 Select material/combination of materials with appropriate radiation resistance properties. 2.4 Arrange for compounding and testing of possible material(s) as appropriate. 2.5 Determine relevant properties of selected material/shortlisted materials.
3. Undertake mechanical design of component.	3.1 Calculate size and shape/profile of component to meet design brief. 3.2 Liaise with product developer to also deliver required aesthetic aspects. 3.3 Liaise with product developer/production to ensure efficiency in manufacture. 3.4 Suggest modifications to material(s)/compound as required.
4. Design jointing/joining/ other product interfaces.	4.1 Liaise with designers of other components. 4.2 Agree on interface requirements/joints/joining as appropriate. 4.3 Design suitable interfaces. 4.4 Check interface design to ensure it meets the end use requirements without sacrificing integrity.
5. Finalise design.	5.1 Check internal consistency of design. 5.2 Check overall design meets end use requirements. 5.3 Write component specification. 5.4 Liaise with product developer/production to write production specification/procedures. 5.5 Supervise manufacture and testing of prototypes/manufacturing trials as appropriate. 5.6 Finalise specifications and manufacturing processes, complete all reports. 5.7 Ensure project records are complete and all required reports have been completed and submitted.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	5.8 Archive records according to company procedure.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the materials, equipment and process sufficient to design a component which is mechanically/structurally fit for its end purpose and which can be efficiently manufactured.

Knowledge of organization policies and procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Competence includes the ability for the practical completion of the job toapply and explain:

- stress/strain data of polymeric materials to the design situation
- material creep/viscoelasticity
- impact and notch strength
- tensile, compressive, shear and torsional strength
- tear strength
- adequate safety factors
- overall design features which take advantage of the polymeric material(s) being used.

Competence also includes the ability to make compounding recommendations to modify properties such as:

- stress/strain data of polymeric materials
- material creep/viscoelasticity, rheometric properties
- material strength
- environmental resistance (e.g. temperature, chemicals, UV
- and other radiation)
- make changes to physical size and shape to change:
- stiffness/rigidity, deflection
- strength.

Language, **literacy and numeracy requirements**

This unit requires high levels of numeracy and literacy with the ability to write and interpret technical specifications and reports. Advanced numeracy allowing the calculation and interpretation of statistics, design formulae and process conditions is also required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The critical aspect for this unit of competency is the ability to apply a thorough understanding of polymer materials, their additives and the rheological, heat and other effects of processing to the design of a new mechanical or structural component. The ability to modify both compound design and mechanical design to optimise the results should be evident. The designed product must not only be fit for its purpose but also capable of efficient manufacture for an appropriate price.

Assessment method and context

Assessment will occur using industrial situations and equipment using industrial polymers and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- using appropriate, industrial equipment, situations and polymers
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and respond to problems
    - by using a suitable simulation and/or a range of case studies/scenarios
    - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice and/or Australian/international standards, the latest version must be used.

Context

This competency unit is for the design of a new product or a component of a new product which has a significant structural or mechanical requirement. It assumes an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry. The competency assumes a working knowledge of all main processes and polymer materials so that an informed choice can be made between them.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

PMC554020D Design and prepare models, moulds and dies

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the design and preparation of models, moulds, and dies, and includes the preparation of cases and frames.

Application of the Unit

Application of the unit	This unit of competency applies to technicians or tradespeople who are responsible for determining the requirements for devices to be made from plans, specifications and schedules. Technicians are able to make the device from materials selected and adjust and check its dimensional accuracy. Often the devices are made from timber, but other materials, including sheet metal and fibreglass, for instance are possible. This unit of competency covers the making of moulds, models and dies for use in a variety of manufacturing operations, such as: • concrete products • clay products • ceramic products This unit was developed for larger production contexts but it may also be relevant to craft practitioners producing ceramic work. This competency is typically performed by an experienced technician, leading hand or supervisor.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Design and make models	1.1. Establish model design from drawings, originals or in consultation with the customer 1.2. Select and prepare appropriate materials for model construction 1.3. Make models ensuring the final product is to specification, and shrinkage is allowed for
2. Set up and produce block moulds	2.1. Select appropriate model to meet specification 2.2. Determine required sections and parting lines 2.3. Check mould meets occupational health and safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	(OHS) needs 2.4. Mix materials as required 2.5. Fill mould with mould material as required 2.6. Remove mould from model when required strength has been achieved 2.7. Finish mould to specifications and register correctly
3. Prepare cases and frames	3.1. Consult manufacturing schedule to determine type of mould to be made 3.2. Select appropriate frame or frames 3.3. Mix materials as required 3.4. Fill block mould 3.5. Remove block mould from the case and frame when required strength has been obtained 3.6. Register and date cases according to procedures 3.7. Prepare block mould for use
4. Prepare and make working moulds	4.1. Select the appropriate case/frame 4.2. Mix and pour mould material as required 4.3. Remove mould from model when required strength has been obtained 4.4. Finish and register moulds to procedures 4.5. Stack and dry moulds to procedures 4.6. Store moulds to procedures
5. Prepare dies	5.1. Consult manufacturing schedule to determine type of die to be made 5.2. Select and prepare required master die 5.3. Mix and pour die material as required 5.4. Remove die from master die when required strength has been obtained 5.5. Mark and finish dies to enterprise specifications 5.6. Cure and store dies to procedures
6. Respond to problems	6.1. Identify possible routine and non-routine problems in the equipment or process 6.2. Determine problems needing action 6.3. Determine possible fault causes 6.4. Rectify problem using appropriate solution within area of responsibility 6.5. Report problems outside area of responsibility to designated person

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using and maintaining all required materials, tools and parts
- recognising situations which could cause production problems and taking appropriate action
- implementing enterprise's procedures and relevant regulatory requirements within appropriate time constraints and in a manner relevant to the operation of moulds and dies
- diagnosing and solving problems involved in the work
- predicting hazards that may arise from mould or die design or preparation
- communicating effectively with team members, management and other departments
- reading and numeracy to interpret workplace documents and technical information

Required knowledge

Required knowledge includes:

- specified quality standards
- characteristics of different materials
- requirements from drawings, specifications or job sheets
- distinguish between causes of faults such as:
  - materials
  - dimensions
  - allowance for shrinkage
  - damage to components

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Overview of assessment	The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise situations requiring action and then in implementing appropriate corrective action. Consistent performance should be demonstrated. In particular look to see that: • OHS requirements are met • quality improvement techniques are applied • emergency procedures are understood and applied • waste is minimised.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation or case studies/scenarios may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual plant and will include 'walk-throughs' of the relevant competency components. A bank of scenarios/case studies/what ifs and questions will be required to probe the reasoning behind observable actions.
Method of assessment	This unit has no prerequisite competencies. Individual enterprises may choose to add prerequisites and co-requisites relevant to their processes.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different

RANGE STATEMENT	
work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Procedures	All operations are performed in accordance with standard procedures and work instructions
Materials	Materials may include: • additives • body materials • epoxy resins • metal strapping • plaster • plastic • release agents • rubber • slip • timber • water
Equipment	Equipment may include: • block moulds and working moulds • cases and frames • hand and power tools • jigs and fixtures • master dies • mixing equipment • models • weighing equipment
OHS	The identification and control of hazards and the application of OHS are to be in accordance with current, applicable legislation and regulations, and company procedures. All operations are subject to stringent OHS requirements and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and OHS requirements, the OHS requirements take precedence

PMC554090B Undertake simple refractory design

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers applying design principles and undertaking simple design tasks. The technical requirements of the design are paramount and the application of an understanding of refractories, heat transfer and refractory wear and failure mechanisms are primary. The aesthetics of the design are of little if any significance.

Application of the Unit

Application of the unit	This unit of competency applies to technicians who are responsible for designing simple or small refractory installations or repairs. They apply the principles of heat transfer, thermal expansion, abrasion and structures along with a knowledge of refractory materials and installation techniques to the design to yield a product which will meet a rigid technical specification. This unit covers a refractory design for a situation which can be achieved by the application of standard products/components in a standard manner. It does not cover innovative products/ applications nor those situations where the design must be done by a registered engineer, although it may involve working with an engineer on a design This will typically be done by an individual technician working in liaison with customers, installers and technical experts.

PMC554091B Analyse refractory failures

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers analysing a refractory failure to determine failure mode. It involves understanding failure modes, differentiating different modes and understanding forensic procedures.

Application of the Unit

Application of the unit	Refractories may fail due to a number of reasons, and these may be mechanical (wear, impact) or thermal (thermal stresses, flame impingement) or due to other reasons. The analysis of failures is important so that replacement refractories can be better designed to reduce this failure and extend the time between failure/ replacement. This unit covers all common types of refractory failures. The failure needs to be recognised and distinguished from other possible causes. Possible causes for the failure also need to be identified particularly if failure is unexpected/refractory life is shorter than expected This unit would typically be undertaken by a technician working either alone or in liaison with another refractory expert.

Method of assessment	It may be appropriate to assess this unit concurrently with relevant teamwork and communication units. It may be appropriate to assess this unit concurrently with other relevant units. Where the analysis of refractory failure is to occur on-site or in a vessel then competency in the appropriate OHS and/or permit units is also required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Procedures	All operations are performed in accordance with standard procedures and work instructions
Investigation	Investigation involves: • the collection of evidence, and may require the specifying of appropriate tests and the analysis of plant records and logs
Reports	The report should summarise: • the nature of the failure • the cause • the methods used to determine this cause • conclusions drawn and recommendations made
Occupational health and safety (**OHS**)	All operations are subject to stringent OHS requirements and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and OHS requirements, the OHS requirements take precedence

2	PSP04V4.2	Layout adjusted. No changes to content.
1	PSP04V4.1	Primary release.

Unit Descriptor

This unit covers promotion of the value of workplace diversity and the contribution it makes to effective work practices, the generation of new ideas, and the organisation's responsiveness to the community. It includes promoting the benefits of workplace diversity and contributing to diversity outcomes.

In practice, diversity is promoted in the context of other generalist or specialist work activities such as upholding and supporting public service values, providing input to change, contributing to policy development and implementation, delivering client services, managing contracts, etc.

This is one of 6 units of competency in the Competency Fields of *Working in Government* and *Management* that deal with diversity. Related units are:

- PSPGOV201B Work in a public sector environment
- PSPGOV308B Work effectively with diversity
- PSPGOV505A Promote diversity
- PSPMNGT605B Manage diversity
- PSPMNGT702A Influence and shape diversity management
-
- No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication

Application of the Unit

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.	Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Promote the benefits of diversity	1.1 The ***diversity*** of the workgroup is analysed to identify the strengths and differences that benefit both staff and the organisation. 1.2 ***Workplace diversity issues, benefits*** and risks are explained to others using language and supporting material suitable to their needs and the situations they are likely to experience. 1.3 Diversity training and awareness programs are identified and ***promoted*** to encourage and support others to appreciate the benefits of diversity. 1.4 Opportunities for leadership in, and advocacy of, workplace diversity are identified and utilised within own area of responsibility.
2. Contribute to diversity outcomes	2.1 Currency is maintained in knowledge of diversity principles and practices that are applied in the workplace. 2.2 Others are assisted to access and use ***legislation, policy and guidelines*** to ensure work practices contribute to diversity benefits. 2.3 Development and use of a range of ***communication styles*** is modelled and fostered to respond to the diversity of the workplace and its clients.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4 Targeted responses to the needs of the organisation's diverse client group/s are identified and implemented in accordance with organisational policy and procedures.
	2.5 Feedback on diversity policies, strategies and practices/services is provided to managers in accordance with organisational procedures.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

- applying legislation, regulations, policies, procedures and guidelines relating to/impacting on workplace diversity, such as equal employment opportunity, anti-discrimination
- using a range of communication styles to suit different audiences and purposes
- communicating with people from diverse backgrounds
- delivering services/responding to the needs of diverse client groups
- responding to workplace diversity, including gender and disability
- identifying racist behaviours
- explaining complex and formal documents such as legislation and codes of conduct and applying them to work practices
- actively demonstrating to others a clear commitment to the principles and practices of workplace diversity

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- complexities of cultural diversity, including issues of racism, discrimination, harassment and victimisation
- direct versus indirect discrimination
- public sector definitions of diversity
- issues and benefits relating to workplace diversity
- equal employment opportunity, equity and diversity principles
- principles and practices of cultural awareness
- avoidance of gender bias in language
- principles of multiculturalism
- productive diversity principles including flexibility, multiplicity, devolution, negotiation and pluralism

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- institutional racism and resulting indirect discrimination
- public sector values and codes of conduct
- jurisdictional legislation, instructions, directions and standards that underpin or impact on workplace diversity
- public sector policies, practices and procedures related to diversity, including those related to the provision of language services

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit:*Nil*
- *Co-requisite* units that must be assessed with this unit:*Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment process include, but are not limited to:
  - PSPETHC401A Uphold and support the values and principles of public service
  - PSPLEGN401A Encourage compliance with legislation in the public sector
  - PSPGOV402B Deliver and monitor service to clients
  - PSPGOV411A Deal with conflict
  - PSPGOV412A Use advanced workplace communication strategies
  - PSPGOV414A Provide workplace mentoring
  - PSPGOV418A Develop internal and external networks
  - PSPGOV419A Work with interpreters
  - PSPPOL404A Support policy implementation

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of Employability Skills as they relate to this unit
- valuing diversity in a range of (3 or more) contexts (or occasions, over time) such as upholding and supporting public service values, providing input to change, contributing to policy development and implementation, administering contracts

Resources required to

These resources include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

carry out assessment	• definition and benefits of workplace diversity • statistics on community diversity • public sector values and codes of conduct • organisational procedures and protocols • legislation, regulations, policies, procedures and guidelines relating to/impacting on workplace diversity
Where and how to assess evidence	Valid assessment of this unit requires: • a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered, including coping with difficulties, irregularities and breakdowns in routine • valuing diversity in a range of (3 or more) contexts (or occasions, over time) such as upholding and supporting public service values, providing input to change, contributing to policy development and implementation, administering contracts. Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as: • people with disabilities • people from culturally and linguistically diverse backgrounds • Aboriginal and Torres Strait Islander people • women • young people • older people • people in rural and remote locations. Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of: • case studies • demonstration • observation • portfolios • projects • questioning • scenarios • simulation or role plays • authenticated evidence from the workplace and/or training
For consistency of assessment	Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

The Range Statement provides information about the context in which the unit of competency is carried out. The variables cater for differences between States and Territories and the Commonwealth, and between organisations and workplaces. They allow for different work requirements, work practices and knowledge. The Range Statement also provides a focus for assessment. It relates to the unit as a whole. Text in ***bold italics*** in the Performance Criteria is explained here.	
Diversity may include:	• age • cultural background • educational level • ethnicity • expertise • family responsibilities • gender • interests • interpersonal approach • language • life experience • marital status • not fitting the dominant paradigm of the organisation • personality • physical ability • political orientation • religious belief • sexual orientation • socio-economic background • thinking/learning styles • work experience • working styles

Workplace diversity issues may include:	• equal employment opportunity issues such as:
	  • direct and indirect discrimination - discriminatory systems and practices
	  • harassment
	  • racism
	  • under-representation of equity groups in the public sector
	  • employment of equity groups concentrated at lower levels in the public sector
	  • women making up more than half of the public sector workforce but disproportionately represented at lower salary levels
	  • barrier (or glass ceiling) that prevents equity group members

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	progressing to higher salary levels • disproportionate representation of equity group members in non-permanent, casual or contract positions • inappropriate supervisory treatment of equity group members • culturally inappropriate workplaces • enabling access to buildings to people with a disability • making reasonable adjustment to work processes. • quality of service delivery to clients from diverse backgrounds • sidelining staff from diverse backgrounds to 'diversity roles' rather than the opportunity to pursue what interests them, or where they add most value • people from recognised diversity groups choosing not to be identified through usual statistical collection methods • workplace systems or practices that don't allow a balance between work and family responsibilities • inequitable access to acting opportunities, workplace training and development • questioning/disregarding the dominant paradigm of the organisation • inappropriate treatment of those who don't fit the dominant paradigm of the organisation • risks associated with diversity not managed • different values: • uncertainty avoidance • collectivist/individualist • power/distance • masculine/feminine • resolving communication issues • developing cultural competence • negotiating commonalities • resolving conflict • negotiating difference
Benefits of diversity may include:	• improved client service - internal and external • improved service delivery • promotion of equity and fairness • improved access for clients from diverse backgrounds to government services and programs • improved relationship with the community • wider sources of recruitment • greater responsiveness to change • cultural enrichment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• promotion of creativity • creation of a harmonious and supportive work environment • retention of staff • facilitation of attainment of organisation goals • increased skills and experience added to the workplace • a workforce representative of the client base • a balanced workforce in terms of age, gender, race and culture
Promotion of training and awareness programs may include:	• word of mouth • memos • emails • flyers • intranet

Legislation, ***policy and guidelines*** may include:	• Commonwealth and State/Territory legislation addressing diversity issues for example:
	  • Racial Discrimination Act 1975
	  • Sex Discrimination Act 1984
	  • Disability Discrimination Act 1992
	  • Workplace Relations Act 1996
	  • Privacy Act 1988
	  • Human Rights and Equal Opportunity Commission Act 1984
	  • Equal Opportunity for Women in the Workplace Act 1999.
	• public service/public sector management acts
	• workplace diversity guidelines/program
	• national and international codes of practice and standards
	• the organisation's plans, strategies and policies relating to diversity
	• policies relating to language services
	• government policy mandating equal employment opportunity and/or workplace diversity requirements, such as:
	  • Managing diversity in the Western Australian public sector, August 1995
	  • Valuing cultural diversity, State of Victoria, 2002.
	• public sector ethics/values/codes of conduct
	• public sector management standards (subordinate law)
	• Commissioner's directions/instructions
	• community guidelines, policy and practices (such as those within Aboriginal and Torres Strait Islander communities)

Communication styles may include:	• plain English • language in active rather than passive voice • simple sentence structure even though content may be complex

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• lack of jargon and acronyms • culturally appropriate body language • oral or written • use of graphics and illustrations • use of colour • reader-friendly layout • effective paragraphing • different languages • interpreting and translating • use of different media e.g. online

PSPPM402B Manage simple projects

Modification History

Release	TP Version	Comments
3	PSP12V1	Unit descriptor edited.
2	PSP04V4.2.	Layout adjusted. No changes to content.
1	PSP04V4.1	Primary release.

Unit Descriptor

This unit covers management of generally low risk projects that may be small scale and managed by one person or a person with a small team. It includes implementing project start-up activities, coordinating project implementation, monitoring the project and arranging follow-up activities. Contract management requirements are not included as this aspect is addressed by units of competency within the Competency field of *Procurement and Contract Management*.

In practice, managing simple projects overlaps with other generalist and specialist work activities such as applying government processes, using resources, gathering information, managing contracts etc.

This unit, and unit *PSPPM405A Administer simple projects*, are mutually exclusive. One or the other, but not both, may contribute to a qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.	Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. **Implement start-up activities**	1.1 The ***project plan*** is updated with confirmed information for key dates and activities, resources and project governance details in accordance with the project implementation strategy. 1.2 Project ***stakeholders'*** understanding of and agreement to fulfil the project requirements and their roles and responsibilities are confirmed. 1.3 ***Required systems*** are established and maintained throughout the project in accordance with the project plan. 1.4 A working knowledge of ***project management tools*** is used to facilitate integration of project activities and achievement of project outcomes.
2. **Coordinate project implementation**	2.1 ***Integration*** and ***management*** of project activities are handled in accordance with the project plan. 2.2 Stakeholder input and expectations are managed and their commitment is maintained throughout the life of the project in accordance with organisational policy and procedures and the project plan. 2.3 Disagreements and disputes are resolved or referred to a higher authority in accordance with organisational policy and procedures. 2.4 Project ***change proposals*** are received and changes are recommended/made in accordance with the project plan, and documented in accordance with ***policy and procedures***.
3. **Monitor project**	3.1 All aspects of the project are continually monitored and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	corrective action is taken as necessary to maintain progress in accordance with the project plan.
	3.2 Consultation and reporting mechanisms are applied in accordance with the communication plan when dealing with management, staff and/or contractors, steering committee members or other stakeholders.
	3.3 Project governance plans and any related contracts are monitored, reviewed and amended as appropriate, and results are reported in accordance with the communication plan.
	3.4 Project progress is monitored against agreed milestones in accordance with the project plan to provide a measure of performance throughout the life of the contract.
	3.5 Programmed review of objectives and achievement is implemented in accordance with the project plan.
4. Arrange project follow-up activities	4.1 Project deliverables are analysed against ***specifications***, performance standards and project objectives, under broad guidance, and the results are reported to stakeholders.
	4.2 An initial support package or product manual is produced, if required, to provide guidance for stakeholders who will be required to apply the project results.
	4.3 The support package includes options for stakeholders to take account of environmental and cultural factors in applying project results.
	4.4 Operational and support authorities are consulted to research any testing/trialling/building requirements resulting from the project, and evaluation of any recommendations are included in the project report.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

- leading and mentoring people to achieve project deliverables
- maintaining agreement of stakeholders and team members to timelines, roles and responsibilities
- communicating with stakeholders and team members using a range of communication styles to suit different audiences and purposes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- responding to diversity, including gender and disability
- using project management tools applicable to small scale or low risk projects
- applying ethical decision making and problem solving related to project management of small scale or low risk projects
- writing recommendations and preparing implementation support packages requiring precision of expression
- applying workplace safety procedures in line with project requirements
- accessing/preparing information electronically or in hard copy

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- legislation, organisational policies and procedures that may impact on project management, for example:
  - public sector codes of ethics/conduct
  - occupational health and safety and environment requirements
  - project governance requirements
  - quality standards
- risk management
- procurement guidelines
- human resources
- equal employment opportunity, equity and diversity principles
- project management tools to suit a range of small scale or low risk projects
- project management principles
- organisational and political context

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit:*Nil*
- *Co-requisite* units that must be assessed with this unit:*Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment process include, but are not limited to:
  - PSPETHC401A Uphold and support the values and principles of public service
  - PSPGOV402B Deliver and monitor service to clients

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- PSPGOV403B Use resources to achieve work unit goals
- PSPGOV411A Deal with conflict
- PSPGOV412A Use advanced workplace communication strategies
- PSPGOV422A Apply government processes
- PSPLEGN401A Encourage compliance with legislation in the public sector
- PSPPROC410A Administer contracts
- PSPPM401B Design simple projects
- PSPPM403B Close simple projects

- *Excluded units* that may not contribute to the same qualification as this unit:
  - PSPPM405A Administer simple projects

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see Employability Summaries in Qualifications Framework)
- simple projects managed in a range of (3 or more) contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- legislation, guidelines, procedures and protocols relating to project management
- workplace project documentation
- scenarios and case studies
- examples of project management tools

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered when implementing projects, including coping with difficulties, irregularities and breakdowns in routine
- simple projects managed in a range of (3 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

backgrounds
- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- demonstration
- portfolios
- questioning
- scenarios
- authenticated evidence from the workplace and/or training courses

For consistency of assessment

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments

Range Statement

The Range Statement provides information about the context in which the unit of competency is carried out. The variables cater for differences between States and Territories and the Commonwealth, and between organisations and workplaces. They allow for different work requirements, work practices and knowledge. The Range Statement also provides a focus for assessment. It relates to the unit as a whole. Text in ***bold italics*** in the Performance Criteria is explained here.

Project plan will include some or all of:

- acquisition strategies
- budget and financial management strategy
- contract management
- cost estimates
- evaluation criteria
- expected outcomes/measurable benefits of the project
- facilities
- inclusions and exclusions from project
- information/communication strategy
- intellectual property strategies
- milestones

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- objectives
- outputs/project deliverables and their acceptance criteria
- people plan including human resource management and human resource development
- performance criteria/indicators
- project control mechanisms
- project implementation strategy
- project governance strategy
- purpose
- quality assurance
- quality control
- quality standards for project
- rationale
- required project resources
- resource management
- risk management
- roles and responsibilities
- schedule/timeline
- task/work breakdown structure (WBS)

Stakeholders may include:

- project sponsor/funding bodies
- clients or customers (internal and external)
- industry
- other agencies
- general public
- relevant interest groups
- unions
- functional areas
- the organisation's senior management
- Ministers
- project team
- steering committee members
- end user
- supplier/service provider

Required systems for project management may include:

- planning and monitoring system
- financial management including:
  - budget allocation/funding
  - income generated
  - expenditure
- recordkeeping for documented information such as:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- correspondence
- quality data including survey, needs, test results
- contracts
- time allocated and spent on each aspect of the project
- progress reports
- performance reports against milestones
- project outcomes
- samples, prototypes, models

Project management tools may include:

- risk analysis
- organisational project governance framework
- communications plan
- reporting framework
- project management software and other tools:
  - Gantt and bar charts
  - Program Evaluation and Review Technique (PERT) charts
  - Critical Path Method
  - cost schedule control system
  - logistics support analysis
  - life cycle cost analysis
  - spreadsheets
  - recording systems - electronic and manual

Integration of project activities may include:

- scope
- time
- cost
- quality
- human resources
- communications
- risk
- procurement

Management may include:

- scope management
- communication and reporting
- schedule management
- financial management
- quality management
- resources management
- people management
- logistics management
- risk management

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• contract management • change management
Change proposals may include:	• scope • administration • engineering, technical, technology changes • time • cost • resources

Policy and procedures may include:	• government legislation (Federal, State and Local) affecting organisation's administration such as:
	  • public sector management acts
	  • financial management and accounting legislation and regulations
	  • privacy legislation
	• government and organisational guidelines and procedures relating to:
	  • project governance
	  • resourcing
	  • security
	  • strategic plans
	  • recruitment
	  • risk management
	  • procurement guidelines
	  • designation approvals
	  • industrial agreements

Specifications may include:	• functional • technical • performance • material

PSPPM501B Design complex projects

Modification History

Release	TP Version	Comments
3	PSP12V1	Unit descriptor edited.
2	PSP04V4.2.	Layout adjusted. No changes to content.
1	PSP04V4.1	Primary release.

Unit Descriptor

This unit covers planning and development of projects which may be reasonably complex in terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the projects. It includes identifying project opportunities, undertaking scoping, analysing the feasibility of projects, developing project plans and managing the establishment of projects. Contract management requirements are not included as this aspect is addressed by units of competency within the Competency field of *Procurement and Contract Management*.

In practice, designing complex projects overlaps with other generalist and specialist work activities such as acting ethically, coordinating resource allocation and usage, developing client services, undertaking research and analysis.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication

Application of the Unit

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.	Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify project opportunities and undertake scoping	1.1 A ***critical analysis*** of the need for a project is conducted in accordance with organisational ***policy and procedures***. 1.2 A project definition study is undertaken, where necessary, to determine the scope of the project. 1.3 Project scoping is completed in accordance with organisational policy and procedures and identifies a rationale for the project that includes the purpose, outcomes/expected benefits. 1.4 ***Stakeholders*** are identified and canvassed to ensure that their requirements are addressed in project planning.
2. Analyse project feasibility	2.1 Research and analysis is undertaken to identify impacts and risks, ***constraining factors*** and alternate options. 2.2 Technical feasibility, supportability and cost effectiveness of the project are analysed and the outcome is reported to key stakeholders. 2.3 Alternatives for project design are assessed and a preferred option that fits the strategic direction of the organisation/work unit is identified and reported. 2.4 Relevant specialists are consulted to determine the extent of financial, technical, security, scheduling, ***whole-of-life support*** and probity, and other risks. 2.5 A business case is prepared and ***approvals*** to proceed with project development are obtained in accordance with organisational policy, procedures and guidelines.
3. Develop project	3.1 Project aims, objectives and impacts are defined in the ***project***

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
plans	***plan***, and timeframes and resources to complete quality deliverables on time and within budget are identified. 3.2 Projected outcomes are recorded in measurable and achievable forms and indicators to monitor the performance of the project are developed and agreed by relevant parties. 3.3 Potential risks are investigated and identified in the project plan and a risk management process is established to analyse information and options to ***manage risks***. 3.4 Skills, roles and responsibilities of team members and stakeholders are clarified and agreed, and reporting requirements are identified. 3.5 ***Management*** of ***project parameters*** is addressed in the project plan and evaluation criteria are designed in accordance with organisational policy and practice. 3.6 ***Project management tools*** are utilised for planning in accordance with project requirements and the project is designed and ***documented*** in consultation with ***specialists*** to meet user requirements.
4. Manage establishment of project	4.1 If required, stakeholders are lobbied in accordance with organisational policy and procedures, to negotiate endorsement for the project. 4.2 Terms of reference are written and agreed to by stakeholders and resources are obtained in accordance with organisational procedures to establish the project. 4.3 Project scope and objectives are reviewed and analysed, and a strategy is developed to establish ***work breakdown structures*** to implement the project. 4.4 Project ***infrastructure*** is identified and established in accordance with organisational policy and procedures. 4.5 Specialist and technical support relevant to the project is obtained in accordance with the project plan. 4.6 Project governance structure and processes are established as detailed in the project plan.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Look for evidence that confirms skills in:

- using project planning techniques related to projects that may be reasonably complex in terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the projects
- detailing requirements, writing recommendations and preparing plans requiring precision of expression
- negotiating timelines, roles and responsibilities with stakeholders and team members
- scheduling project activities
- communicating with stakeholders using a range of communication styles to suit different audiences and purposes
- responding to diversity, including gender and disability
- using project management tools suited to planning reasonably complex projects
- applying risk management techniques in project establishment including risk sharing and transfer
- using public relations strategies to promote and gain endorsement for projects
- including workplace safety issues in project planning requirements
- accessing/preparing information electronically or in hard copy

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- legislation, organisational policies and procedures that may impact on the project and management of the project, for example:
  - public sector codes of ethics/conduct
  - occupational health and safety and environmental and sustainability requirements
- project governance requirements
- financial management requirements
- quality standards
- risk management
- procurement
- human resources
- equal employment opportunity, equity and diversity principles
- project planning methods which may be reasonably complex in terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the projects
- project management tools suited to planning reasonably complex projects
- principles relating to the planning phase of project management
- the project specifications
- market capability
- resource plans

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- project approval processes
- scheduling packages
- cost schedule control systems
- integrated logistics support
- work breakdown structures
- change management in the context of designing complex projects

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit:*Nil*
- *Co-requisite* units that must be assessed with this unit:*Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment process include, but are not limited to:
  - PSPETHC501B Promote the values and ethos of public service
  - PSPGOV502B Develop client services
  - PSPGOV503B Coordinate resource allocation and usage
  - PSPGOV504B Undertake research and analysis
  - PSPGOV505A Promote diversity
  - PSPGOV507A Undertake negotiations
  - PSPGOV512A Use complex workplace communication strategies
  - PSPPM502B Manage complex projects
  - PSPPM503B Close complex projects
  - PSPPROC502A Establish contract management arrangements

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see table Following for examples)

contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- legislation, guidelines, procedures and protocols relating to project planning and management
- workplace project documentation
- scenarios and case studies
- examples of project management tools

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered when initiating projects, including coping with difficulties, irregularities and breakdowns in routine
- complex projects designed in a range of (3 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse backgrounds
- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- demonstration
- observation
- portfolios
- projects
- questioning
- scenarios
- simulation or role plays
- authenticated evidence from the workplace and/or training courses

For consistency of

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the

assessment	competency in different situations or environments

Range Statement

The Range Statement provides information about the context in which the unit of competency is carried out. The variables cater for differences between States and Territories and the Commonwealth, and between organisations and workplaces. They allow for different work requirements, work practices and knowledge. The Range Statement also provides a focus for assessment. It relates to the unit as a whole. Text in ***bold italics*** in the Performance Criteria is explained here.

Critical analysis may include:	• internal and external environment scan • political imperatives • previous and current related projects • policies likely to be impacted • cost-benefit analysis

Policy and procedures may include:	• government legislation (Federal, State and Local) affecting organisation's administration such as:
	  • public sector management acts
	  • financial management and accounting legislation and regulations
	  • privacy legislation
	  • environmental/sustainability legislation
	• government and organisational guidelines and procedures relating to:
	  • project governance
	  • resourcing
	  • security
	  • strategic plans
	  • recruitment
	  • risk management
	  • procurement guidelines
	  • designation approvals
	  • industrial agreements

Stakeholders may include:	• project sponsor/funding bodies • clients or customers (internal and external) • industry • other agencies • general public • relevant interest groups

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• unions • functional areas • the organisation's senior management • Ministers • project team • steering committee members • end user • supplier/service provider
Constraining factors may include:	• political • industrial • legislative • technical • financial • social • cultural • security/privacy • environmental • logistical support • resources
Whole-of-life support may include:	• maintenance • supply • technical data • personnel • training • facilities • packaging, handling • storage and transportation • support and test equipment • computing support
Approval may be required from:	• project sponsor • business owner of the project • program manager • line manager • specialist project management office • chief executive officer, manager or management representative • funding body • customer or client
Project plan will include	• acquisition strategies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

some or all of:	• budget and financial management strategy • contract management • cost estimates • evaluation criteria • expected outcomes/measurable benefits of the project • facilities • inclusions and exclusions from project • information/communication strategy • intellectual property strategies • milestones • objectives • outputs/project deliverables and their acceptance criteria • people plan including human resource management and human resource development • performance criteria/indicators • project control mechanisms • project implementation strategy • project governance strategy • purpose • quality assurance • quality control • quality standards for project • rationale • required project resources • resource management • risk management • roles and responsibilities • schedule/timeline • task/work breakdown structure (WBS)
Risk management may include:	• acceptance • avoidance • minimisation • transfer
Management may include:	• risk management • schedule management • financial management • communication, including reporting • resources management • logistics management

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- scope management
- change management
- quality management
- people management
- procurement management
- occupational health and safety management

Project parameters include:

- project scope - outcomes, objectives, project deliverables
- feasibility
- skills required for project team
- people required for project including specialist expertise
- communications including reporting requirements
- risks associated with project including people, environment, resources, technology change during the life of the project, if applicable
- steering committee arrangements
- timeframe and milestones
- cost
- resources for project
- acquisition/procurement
- organisational structure for project
- project quality control and operational flexibility
- project governance structure
- monitoring through staged rollout
- project delivery requirements
- pilot outcomes
- intellectual property
- integration of project within organisation
- transition arrangements
- change management
- project evaluation

Project management tools may include:

- risk analysis
- organisational project governance framework
- communications plan
- reporting framework
- project management software and other tools:
  - Gantt and bar charts
  - Program Evaluation and Review Technique (PERT) charts
  - Critical Path Method
  - cost schedule control system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- logistics support analysis
- life cycle cost analysis
- spreadsheets
- recording systems - electronic and manual

Documented information may include:

- reports detailing strategy
- statement of requirement/work
- industry development proposals
- project plans
- resource plans
- project team work plans
- risk and issues plan and log
- performance evaluation criteria
- reports to industry
- whole-of-life support proposals
- project definition study

Relevant specialists may include:

- legal
- technical
- financial
- other functional areas
- other relevant agencies
- logistics

Work breakdown structures may include:

- how the work is to be performed and how cost and schedule data are to be tracked and reported
- identification of the project tasks (deliverables)
- identification of specific management responsibilities for tasks

Project infrastructure may include:

- staffing levels/need for recruitment action and training
- equipment and technical support
- resource requirements including travel, finance etc
- project office accommodation
- management infrastructure

Unit Descriptor

This unit covers management of projects that may be reasonably complex in terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the projects. It includes managing start-up, project implementation, project integration and follow-up activities. Contract management requirements are not included as this aspect is addressed by units of competency within the Competency field of *Procurement and Contract Management*.

In practice, managing complex projects overlaps with other generalist and specialist work activities such as acting ethically, coordinating resource allocation and usage, developing client services, undertaking research and analysis.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.

Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage start-up activities	1.1 ***Project plans*** are refined in consultation with steering committee and team members, and precise details are included for schedules of activities, milestones and resources.
	1.2 ***Required systems*** are established and maintained throughout the project in accordance with the complexity of the project and in line with the project plan.
	1.3 Project team members' understanding of and commitment to fulfilling the project requirements and their roles and responsibilities for the duration of the project are confirmed.
	1.4 ***Project management tools*** are selected and applied effectively to achieve project outcomes.
2. Manage project implementation	2.1 ***Integration*** and ***management*** of complex project activities are handled in accordance with the project plan.
	2.2 Leadership and required ***development*** are provided to the project team, and morale, stress levels and triggers are managed throughout the life of the project in accordance with organisational ***policy and procedures***.
	2.3 ***Stakeholder*** input and expectations are managed throughout the project in accordance with the communication plan.
	2.4 Disagreements and disputes are resolved to the satisfaction of stakeholders or referred to a higher authority in accordance with organisational policy and procedures.
	2.5 Project ***change proposals*** are negotiated, agreed and documented in accordance with policy and procedures.
3. Manage project integration	3.1 All aspects of the project and related projects are integrated and links are established to ensure objectives are met in accordance with the project plan.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.2 Consultation and reporting mechanisms are applied in accordance with the communication plan and staff and contractors are regularly consulted to discuss progress and ensure effective results.
	3.3 Project integration is monitored, and management plans and any related contracts are reviewed and amended as appropriate, with results reported in accordance with mechanisms identified in the communication plan.
	3.4 Ongoing progress is monitored against agreed milestones in accordance with the project plan to provide a measure of performance throughout the life of the project.
	3.5 Programmed review of objectives and achievement is planned and implemented in accordance with the project plan.
4. Coordinate project follow-up activities	4.1 Significant judgment is applied in the analysis of project deliverables against ***specifications***, performance standards and project objectives, and the results are reported to stakeholders.
	4.2 Support package arrangements are identified and offered to stakeholders who will be required to apply the project results.
	4.3 Options for stakeholders to take account of environmental and cultural factors in applying the project results are included in the support package.
	4.4 Operational and support authorities are consulted to investigate any testing/trialling/building and evaluation requirements resulting from the project, and funding implications estimated in project report.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

- leading and mentoring people to achieve project outcomes
- maintaining agreement of stakeholders and team members to timelines, roles and responsibilities
- negotiating with stakeholders and team members using communication styles to suit different audiences and purposes
- responding to diversity, including gender and disability
- using project management tools applicable to reasonably complex projects

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- applying ethical decision making and problem solving related to project management of reasonably complex projects
- writing recommendations and preparing project reports requiring precision of expression
- applying workplace safety procedures in line with project requirements
- accessing/preparing information electronically or in hard copy

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- legislation, organisational policies and procedures that may impact on project implementation, for example:
  - public sector codes of ethics/conduct
  - occupational health and safety and environmental and sustainability requirements
- project governance requirements
- quality standards
- risk management
- procurement guidelines
- financial management and budgetary framework
- human resources
- equal employment opportunity, equity and diversity principles
- project management tools to suit a range of reasonably complex projects in terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the project
- project management systems
- organisational and political context
- critical analysis in a project management context
- business and commercial issues related to the projects managed

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit:*Nil*
- *Co-requisite* units that must be assessed with this unit:*Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment

process include, but are not limited to:

- PSPETHC501B Promote the values and ethos of public service
- PSPGOV502B Develop client services
- PSPGOV503B Coordinate resource allocation and usage
- PSPGOV504B Undertake research and analysis
- PSPGOV505A Promote diversity
- PSPPM501B Design complex projects
- PSPPM503B Close complex projects
- PSPPROC501A Manage contract risk
- PSPPROC503A Manage contract performance

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see Employability Summaries in Qualifications Framework)
- management of complex projects in a range of (3 or more) contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- legislation, guidelines, procedures and protocols relating to project management in the organisation and the public sector
- workplace project documentation
- scenarios and case studies
- examples of project management tools

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered when managing complete projects, including coping with difficulties, irregularities and breakdowns in routine
- management of complex projects in a range of (3 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse backgrounds

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- demonstration
- portfolios
- questioning
- scenarios
- authenticated evidence from the workplace and/or training courses

For consistency of assessment

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments

Range Statement

The Range Statement provides information about the context in which the unit of competency is carried out. The variables cater for differences between States and Territories and the Commonwealth, and between organisations and workplaces. They allow for different work requirements, work practices and knowledge. The Range Statement also provides a focus for assessment. It relates to the unit as a whole. Text in ***bold italics*** in the Performance Criteria is explained here.

Project plans will include some or all of:

- acquisition strategies
- budget and financial management strategy
- contract management
- cost estimates
- evaluation criteria
- expected outcomes/measurable benefits of the project
- facilities
- inclusions and exclusions from project
- information/communication strategy
- intellectual property strategies
- milestones
- objectives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- outputs/project deliverables and their acceptance criteria
- people plan including human resource management and human resource development
- performance criteria/indicators
- project control mechanisms
- project implementation strategy
- project governance strategy
- purpose
- quality assurance
- quality control
- quality standards for project
- rationale
- required project resources
- resource management
- risk management
- roles and responsibilities
- schedule/timeline
- task/work breakdown structure (WBS)

Required systems for project management may include:

- planning and monitoring system
- financial management including:
- budget allocation/funding
- income generated
- expenditure
- recordkeeping for documented information such as:
- correspondence
- quality data including survey, needs, test results
- contracts
- time allocated and spent on each aspect of the project
- progress reports
- performance reports against milestones
- project outcomes
- samples, prototypes, models

Project management tools may include:

- risk analysis
- organisational project governance framework
- communications plan
- reporting framework
- project management software and other tools:
- Gantt and bar charts
- Program Evaluation and Review Technique (PERT) charts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Critical Path Method
- cost schedule control system
- logistics support analysis
- life cycle cost analysis
- spreadsheets
- recording systems - electronic and manual

Integration of project activities may include:

- scope
- time
- cost
- quality
- human resources
- communications
- risk
- procurement

Management may include:

- scope management
- communication and reporting
- schedule management
- financial management
- fraud control
- quality management
- resources management
- people management
- logistics management
- risk management
- contract management
- project implementation
- transition
- change management

Development may include:

- regular meetings
- feedback
- encouragement
- mentoring and coaching
- additional physical and human resources (within allocated budget) if and as required

Policy and procedures may include:

- government legislation (Federal, State and Local) affecting organisation's administration such as:
  - public sector management acts
  - financial management and accounting legislation and regulations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- privacy legislation
- government and organisational guidelines and procedures relating to:
  - project governance
  - resourcing
  - security
  - strategic plans
  - recruitment
  - risk management
  - procurement guidelines
  - designation approvals
  - industrial agreements
  - environment and sustainability

Stakeholders may include:

- project sponsor/funding bodies
- clients or customers (internal and external)
- industry
- other agencies
- general public
- relevant interest groups
- unions
- functional areas
- the organisation's senior management
- Ministers
- project team
- steering committee
- end user
- supplier/service provider

Contract change proposals may include:

- administration
- cost
- engineering, technical, technology changes
- resources
- scope
- specifications
- time

Specifications may include:

- functional
- technical
- performance
- material

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.

Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review project activity	1.1 Evaluation of project process, supplier performance and achievement against objectives is undertaken in consultation with ***stakeholders*** and results are reported in accordance with the ***project plan*** evaluation framework and organisational ***policy and procedures***. 1.2 The extent to which clients needs were met is evaluated and action to rectify problems is identified and documented. 1.3 Implications of project outputs/outcomes for policies and operating procedures are identified and recommendations are made for their amendment. 1.4 Information obtained from the evaluation of the project is provided in accordance with organisational requirements so it may be used to improve relevant policy and practice .
2. Manage project closure	2.1 Any funding associated with the project is acquitted against project budget items, and financial records are checked for accuracy and completed in accordance with organisational procedures. 2.2 Project wind-down is ***managed*** and ***documentation***, records and ***approvals*** are handled in accordance with project plan and organisational policy and procedures. 2.3 Project stakeholders are debriefed, and infrastructure and resources are redeployed in accordance with organisational policy and procedures. 2.4 Project hand-over to user/s is completed in accordance with organisational procedures, and lessons learnt are documented and reported to stakeholders to assist in continuous improvement. 2.5 Stakeholders are advised of procedures and authorities for initial support to apply project results where relevant, and strategies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	are provided to manage long-term project momentum in accordance with organisational requirements.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

- analysing results and evaluating outcomes against objectives
- writing recommendations and preparing reports requiring precision of expression
- communicating with stakeholders and team members using a range of communication styles to suit different audiences and purposes
- responding to diversity, including gender and disability
- debriefing stakeholders and redeploying resources and infrastructure
- acquitting and reporting on resource expenditure including time and costs
- using project management tools applicable to reasonably complex projects
- applying workplace safety procedures in line with project requirements
- accessing/preparing information electronically or in hard copy

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- legislation, organisational policies and procedures that may impact on project finalisation, for example:
  - public sector codes of ethics/conduct
  - occupational health and safety and environmental and sustainability requirements
  - project governance requirements
  - quality standards
  - risk management
  - procurement guidelines
  - financial management
  - human resource management and development
  - equal employment opportunity, equity and diversity principles
  - project specifications and objectives
- project management tools to suit a range of reasonably complex projects in

RIIOHS204A Work safely at heights

Modification History

Not applicable.

Unit Descriptor

This unit covers working safely at heights in resources and infrastructure industries. It includes: identifying the work requirements, work procedures and instructions for the task; accessing and installing equipment; performing work at heights; and cleaning up the work area.

Application of the Unit

This unit specifies the competency required to undertake safe working practices when working at heights or depths.

This unit is appropriate for those working in a operational roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	1.1. Access, interpret and apply ***compliance documentation*** relevant to working safely at heights 1.2. Identify the scope of the task 1.3. Adhere to ***OHS requirements*** associated with working safely at heights, and the workplace environment throughout the work 1.4. Inspect site to determine layout and physical condition, condition of structures, prevailing weather conditions, equipment requirements and potential hazards 1.5. Identify and document scope of the task and proposed work practices/activities 1.6. Identify, select and check safety equipment for serviceability 1.7. Identify, manage and report potential risks and hazards
2. Identify work procedures and instructions for the task	2.1. Select materials, ***tools and equipment***, including personal safety equipment, and check for serviceability 2.2. Inspect/install fall protection and perimeter protection equipment ensuring adequacy for work and conformance to regulatory requirements 2.3. Identify approved methods of moving tools and equipment to work area and minimise potential hazards associated with tools at heights 2.4. Install ***safety system*** in accordance with requirements 2.5. Select and install appropriate signs and barricades
3. Access and install equipment	3.1. Correctly fit, adjust and anchor fall protection and associated equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	3.2. Make appropriate arrangements to install required equipment 3.3. Use recommended methods to access work area for people, tools and equipment 3.4. Place tools and materials to eliminate or minimise the risk of items being knocked down
4. Perform work at heights	4.1. Check access from ground to work area to ensure it is safe and in accordance with requirements 4.2. Keep fall equipment in place and adjusted appropriately to all for movement during work 4.3. Undertake manual handling of materials and equipment in accordance with requirements 4.4. Locate materials and equipment ensuring that they are safely secured and distributed 4.5. Check safety system periodically for compliance with requirements and procedures 4.6. Monitor risk control measures to ensure that they are effective and appropriate to the task and work environment 4.7. Reassess risk control measures, as required, in accordance with changed work practices and/or site conditions and undertake alterations
5. Clean up work area	5.1. Dismantle safety system in accordance with sequence and remove from worksite 5.2. Clear work area and dispose of or recycle materials 5.3. Clean, check, maintain and store tools and equipment

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.
Required skills
Specific skills are required to achieve the performance criteria in this unit, particularly

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to work safely at heights: • apply legislative, organisation and site requirements and procedures • access, interpret and apply technical and safety information • apply diagnostic/faultfinding techniques • apply environmental requirements • apply isolation procedures • work in varying weather conditions
Required knowledge
Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to work safely at heights: • the names and functions of equipment, components and materials • equipment manufacturer's instructions and specifications • safe shifting and handling of tools and materials • statutory and regulatory authority requirements • the nature of work undertaken at heights • heights safety systems • the processes of providing for safe working practices • safety equipment/systems and considerations to facilitate working safely at heights • safe work methods

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following: • knowledge of the requirements, procedures and instructions for working safely at heights • implementation of requirements, procedures and techniques for safe, effective and efficient working at heights

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• working with others to undertake and complete work safely at heights that meets all of the required outcomes • consistent timely completion of work at heights that safely, effectively and efficiently meets the required outcomes
Context of and specific resources for assessment	• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. • Aboriginal people and other people from a non English speaking background may have second language issues. • Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. • Where applicable, physical resources should include equipment modified for people with disabilities. • Access must be provided to appropriate learning and/or assessment support when required.
Method of assessment	This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods: • written and/or oral assessment of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	candidate's required knowledge
	• observed, documented and/or first hand testimonial evidence of the candidate's:
	  • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
	  • consistently achieving the required outcomes
	• first hand testimonial evidence of the candidate's:
	  • working with others to undertake and complete work safely at heights

Guidance information for assessment	Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Relevant compliance documentation may include:	• legislative, organisation and site requirements and procedures • manufacturer's guidelines and specifications • Australian standards • code of practice • Employment and workplace relations legislation • Equal Employment Opportunity and Disability Discrimination legislation
OHS requirements may include those associated with:	• protective clothing and equipment • use of tools and equipment • workplace environment and safety • handling of materials • use of fire fighting equipment • use of First Aid equipment • hazard control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• hazardous materials and substances
Hazards may include:	• falling objects • removal of scaffold components • inappropriate carrying of materials on ladders • excessive bending or twisting in different work situations
Tools and equipment may include:	• fall protection • perimeter protection • signage and barricades • ladders • lifting/load shifting equipment including: • hand trolleys • rollers • forklifts • chain blocks • hoists • jacks • scaffolds • elevated work platforms • lifting equipment (such as cranes)
Safety systems may include:	• scaffolds • handrails • foot walks • kickboards • safety harness • harness fixing points

RIIRIS201B Conduct local risk control

Modification History

Not applicable.

Unit Descriptor

This unit covers the conduct of local risk control in resources and infrastructure industries. It includes identifying hazards; assessing risk and identifying unacceptable risk; identifying, assessing and implementing risk treatments; and completing records and reports.

Application of the Unit

This unit is appropriate for those working in entry level operational roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hazards	1.1. Access, interpret and apply ***compliance documentation*** relevant to conducting local risk control 1.2. Inspect work area conditions to identify potential ***hazards*** in the workplace 1.3. Apply existing procedures to deal with recognised hazards 1.4. Recognise the type and scope of unresolved hazards and their likely impact
2. Assess ***risk*** and identify unacceptable risk	2.1. Assess and determine ***consequence*** if the event should occur 2.2. Consider and determine ***likelihood*** of the event 2.3. Identify criteria for the acceptability/unacceptability of the ***risk*** or source from the appropriate party 2.4. Assess risk against criteria to identify if it warrants '***unacceptable risk'*** status and either action or refer to the appropriate party
3. Identify, assess and implement risk treatments	3.1. Identify and consider all possible ***risk treatment options*** 3.2. Identify options by preliminary analysis and consideration of possible options 3.3. Analyse options, including the identification of resource requirements 3.4. Select most appropriate action for dealing with the situation 3.5. Plan and prepare the course of action in detail and acquire/obtain required resources 3.6. Implement the risk treatment 3.7. Review risk management processes
4. Complete records and reports	4.1. Communicate information on the course of action and implementation 4.2. Complete ***records and reports*** for hazards and actions from personal risk assessment as specified by legislation and site

	requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct local risk control:

- apply legislative, organisation and site requirements and procedures
- speak clearly and directly, listen carefully to instructions and information, respond to and clarify directions
- collect, analyse and organise information
- access, interpret and apply site information
- work with other team members
- apply teamwork to a range of situations
- apply problems solving skills
- apply decision making skills
- show initiative in adapting to changing work conditions or contexts
- apply time management
- take responsibility for self organisation of work priorities
- apply mathematical skills to perform a basic risk ranking of hazards
- interpret and apply material safety data sheets (MSDS)

Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct local risk control:

- risk management processes and methods, including: identifying hazards, assessing risks, determining acceptability of risks, identifying controls
- AS/NZS 4360-2004 Risk Management
- specific worksite risk management procedures
- specific worksite safety systems information
- specific worksite communication, reporting and recording procedures

	• Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. • Where applicable, physical resources should include equipment modified for people with disabilities. • Access must be provided to appropriate learning and/or assessment support when required.

Method of assessment	This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
	• written and/or oral assessment of the candidate's required knowledge
	• observed, documented and/or first hand testimonial evidence of the candidate's:
	  • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
	  • consistently achieving the required outcomes
	• first hand testimonial evidence of the candidate's:
	  • working with others to undertake and conduct of local risk control

Guidance information for assessment	Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Relevant compliance documentation may include:	• legislative, organisation and site requirements and procedures • Australian standards • code of practice • Employment and Workplace Relations legislation • Equal Employment Opportunity and Disability Discrimination legislation
Hazard is defined as:	• a source of potential harm or a situation with a potential to cause loss
Hazards may include:	• equipment • stored energy • methods • plans • people • the work environment
Risk is defined as:	• The chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood
Risk treatment is defined as:	• selection and implementation of appropriate options for dealing with risk
Consequence is defined as:	• the outcome of an event or situation expressed qualitatively or quantitatively, being a loss, injury, disadvantage or gain
Frequency is defined as:	• a measure of likelihood expressed as the number of occurrences of an event in a given time
Likelihood is used as:	• a qualitative description of probability and frequency
Probability is defined as:	• the measure of the chance of occurrence expressed as a number between 0 and 1
Criteria for the acceptability/ **unacceptability of the risk** must be determined by:	• the organisation's internal policy, goals and/ or objectives in reference to relevant legislation
Risk treatmentoptions may include:	• eliminating the hazard • substitution • engineering controls • administrative controls (procedures, etc) • personal protective equipment.
Records and reports may include:	• hazard reporting forms • supervisor/deputy/OCE reports

SIRXCCS201 Apply point-of-sale handling procedures

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release Date	Comments
First Release:	This is a revised unit, based on and equivalent to SIRXCCS001A Apply point-of-sale handling procedures.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to operate point-of-sale equipment, apply store policy and procedures to a range of transactions, interact with customers, and package or wrap an item for transportation.

It covers demonstration of the ability to operate a range of point-of-sale equipment in order to complete sales, returns and exchange transactions, and process a number of methods of payment, according to store policies.

Application of the Unit

This unit applies to frontline service personnel.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Operate point-of-sale equipment.	1.1. Open and close point-of-sale terminal according to ***store policy and procedures***. 1.2. Clear point-of-sale terminal and transfer tender according to store procedure. 1.3. Handle cash according to store security procedures. 1.4. Maintain supplies of change in point-of-sale terminal according to store policy. 1.5. Attend active point-of-sale terminals according to store policy. 1.6. Complete records for transaction errors according to store policy. 1.7. Maintain adequate supplies of dockets, vouchers and ***point-of-sale documents***. 1.8. Inform ***customers*** of delays in the point-of-sale operation where required.
2. Ensure accuracy of transactions.	2.1. Identify and perform ***numerical calculations*** to ensure accurate pricing and collection of money. 2.2. Collect numerical information from various sources and calculate accurately with or without the use of a calculator.
3. Perform point-of-sale transactions.	3.1. Complete ***point-of-sale transactions*** according to store policy. 3.2. Identify and apply store procedures in respect of cash and non cash transactions. 3.3. Identify and apply store procedures in regard to exchanges and returns. 3.4. Move goods through point-of-sale area efficiently and with attention to fragility and packaging. 3.5. Enter information into ***point-of-sale equipment***. 3.6. State price or total and amount of cash received verbally to customer. 3.7. Tender correct change.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4. Complete sales.	4.1. Complete customer order forms, invoices and receipts and process any loyalty card transactions. 4.2. Identify and process customer delivery requirements according to set timeframes. 4.3. Process sales transactions or direct customers to point-of-sale terminals according to store policy without undue delay. 4.4. Acknowledge and thank customer in line with store policy and procedures.
5. Wrap and pack goods.	5.1. Maintain and request adequate supplies of ***wrapping and packaging materials***. 5.2. Select appropriate wrapping or packaging material. 5.3. Wrap merchandise neatly and effectively where required. 5.4. Pack items safely to avoid damage in transit, and attach labels where required. 5.5. Arrange transfer of merchandise for parcel pick up or other ***delivery methods*** if required.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and interpersonal skills to:
  - ask questions to identify and confirm requirements
  - inform customers of delays
  - listen actively
  - request adequate supplies of wrapping material or bags through clear and direct communication
  - share information
  - state price or total and amount of cash received
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- self-management skills to:
  - deal with different types of transactions
  - follow set routines and procedures
- literacy and numeracy skills to:
  - document sales and delivery information
  - render change
  - undertake work functions, including addition, division, multiplication, percentages and subtraction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required knowledge

- cash and non-cash handling procedures, including:
  - balancing point-of-sale equipment
  - calculating non-cash documents
  - change required, denominations of change and tendering change
  - clearance of terminal and transference of tender
  - counting cash
  - maintenance of cash float
  - opening and closing point-of-sale terminal
  - recording takings
  - security of cash and non-cash transactions
- functions and procedures for operating point-of-sale equipment, including:
  - calculators
  - electronic scales
  - numerical display board
  - registers
- merchandise handling techniques, including wrapping and packaging techniques
- range of services provided by the store
- relevant legislation and statutory requirements, including:
  - industry codes of practice
  - work health and safety (WHS)
  - Australian consumer law
  - scanners
- store policy and procedures in relation to:
  - allocated duties and responsibilities
  - bag checking
  - customer service
  - exchanges and returns
  - handling, packing and wrapping goods or merchandise
  - point-of-sale transactions
- stock availability
- key features of a calculator

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • operates point-of-sale equipment according to manufacturer instructions and store policy and procedures • applies store policy and procedures in regard to cash handling and point-of-sale transactions • interprets, calculates and records numerical information accurately • processes sales transaction information responsibly and accurately according to store policy and procedures • applies store policy and procedures in regard to the handling, packing, wrapping and delivery of goods or merchandise.

Context of and specific resources for assessment	Assessment must ensure access to:
	• a real or simulated retail work environment
	• relevant documentation, such as:
	  • stock, inventory and price lists
	  • financial transaction dockets and slips
	  • lay-by, credit and product return slips
	  • store policy and procedures manuals
	• a range of point-of-sale equipment.

Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • observation of performance in the work • role play • customer feedback • answers to questions about specific skills and knowledge • review of portfolios of evidence and third-party workplace reports of on-the-job performance.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, work and job role is recommended, for example: • SIRXCCS202 Interact with customers • SIRXFIN201 Balance and secure point-of-sale terminal • SIRXINV001A Perform stock control procedures • SIRXRSK201 Minimise loss.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the individual, accessibility of the item, and local industry and regional contexts) may also be included.

Store policy and procedures in regard to:	• cash handling • financial transactions • handling techniques of stock • operation of point-of-sale equipment • sales transactions • security.
Point-of-sale documents may include:	• credit slips • lay-by slips • message pads • order forms • product return slips • promotional materials.
Customers may include:	• customers with routine or special requests • internal and external contacts • new or repeat contacts • people from a range of social, cultural and ethnic backgrounds • people with varying physical and mental abilities.
Numerical calculations may include:	• addition and subtraction • calculations of cash amounts and change • calculations of discount amounts • estimation of quantities • measurement • multiplication and division • percentages.
Point-of-sale transactions may include:	• cheques • credit cards and store cards • EFTPOS • exchanges • gift vouchers • lay-by • returns • smart cards • travellers cheques.
Point-of-sale equipment may include:	• cash drawer • cash register • EFTPOS terminal • electronic scales • numerical display board

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• scanner • security tagging.
Wrapping and packaging materials may include:	• adhesive tape • bags • boxes • bubble wrap • gift wrapping • paper • ribbon • string.
Delivery methods may include:	• courier • domestic or international delivery • freight • parcel pick-up • post or express post.

SIRXINV004A Buy merchandise

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit describes the performance outcomes, skills and knowledge required to buy merchandise in a retail environment. It involves analysing the market, planning the product range, establishing supplier relationships, negotiating supply of goods, introducing the product range, maximising profit and rationalising stock.

Application of the Unit

Application of the unit This unit requires the consistent application of store policy and legislative requirements in regard to market analysis, planning merchandise and service ranges, procurement and rationalisation of stock, maintenance of supplier relations, quality control and staff merchandise training. The team member is required to recognise known and unknown loss and how it affects buying and ordering patterns, and to interpret and apply market trends to the store situation to create opportunities to improve sales and service while maximising profits.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Analyse market.	1.1 Identify and analyse ***store merchandise and marketing policy and procedures***.
	1.2 Monitor ***customer requirements*** formally and informally in order to evaluate market trends and customer needs.
	1.3 Research new products and services.
	1.4 Identify, evaluate, implement and review opportunities to improve sales.
	1.5 Monitor ***merchandise range*** to identify the demand for individual items and seasonal variations.
	1.6 Monitor market competition.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2 Analyse factors affecting stock levels and range requirements.	2.1 Apply mathematical calculations to measure analyse and report on existing and potential stock loss and dissipation and its ***impact on business operations***.
	2.2 Analyse store or department sales figures to determine contribution rates of product lines.
	2.3 Determine store or department space requirements and brand product mix according to store policy.
	2.4 Determine future directions for merchandise ranges according to store policy.
3 Plan merchandise ranges.	3.1 Develop and implement buying plan according to outcomes of analysis and store policy.
	3.2 Determine future directions for merchandise ranges according to store policy.
	3.3 Liaise with ***relevant personnel*** to coordinate promotional and marketing activities.
	3.4 Analyse store or department sales figures to determine contribution rates of product lines.
	3.5 Determine investment levels with reference to previous years' sales figures, predicted demand and projected gross profit.
	3.6 Identify and act upon contribution improvement opportunities.
	3.7 Determine store or department space requirements and brand product mix according to store policy.
	3.8 Determine stock levels according to peak seasons, special events and supplier lead time.
	3.9 Analyse, evaluate and amend merchandise range and sources of supply according to management, staff and customer ***feedback***.
4 Establish supplier relations.	4.1 Develop cooperative relationships with supplier representatives according to store policy.
	4.2 Continuously review existing suppliers in regard to quality, profitability, service and delivery status.
	4.3 Identify new suppliers and delete existing suppliers according to ***performance indicators***.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
5 Negotiate supply of goods.	5.1 ***Negotiate*** and implement arrangements with suppliers according to store policy and procedures, and communicate to relevant personnel.
	5.2 Authorise special ***pricing arrangements*** and customer payment agreements and communicate to relevant staff and management personnel according to store policy.
	5.3 Monitor records of suppliers and stock for accuracy and legibility and take appropriate action where necessary.
	5.4 Identify ***market factors*** affecting supply and communicate to relevant personnel.
	5.5 Convey complete and accurate records of negotiations and agreements to relevant personnel within designated timelines.
	5.6 Take immediate corrective action where potential or actual problems with supply are indicated.
	5.7 Identify and develop new suppliers to maintain and improve sales and service delivery.
	5.8 Analyse, evaluate and amend stock range and source of supply according to management, staff and customer feedback.
6 Monitor quality control.	6.1 Establish merchandise quality standards with suppliers according to ***legal requirements***, customer requirements and store policy.
	6.2 Monitor and ensure quality of merchandise during supply, manufacture and delivery processes.
	6.3 Record and analyse stock return figures against target figure.
7 Introduce product ranges.	7.1 Inform relevant personnel of new product ranges and advise on preferred location of merchandise.
	7.2 Implement ***staff training*** in product knowledge to introduce product range.
	7.3 Demonstrate or display new ranges to ***staff*** according to store merchandising plan.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
8 Maximise profit.	8.1 Calculate or estimate individual product range contributions against budget and targets.
	8.2 Develop and implement product range assessment checks against budget and targets.
	8.3 Calculate or estimate overall selling space contributions according to store merchandising plan.
	8.4 Maximise profit margins in negotiations with suppliers.
	8.5 Determine store pricing policies according to stated net profit margin in store merchandising plan and consumer law.
	8.6 Negotiate specifications for ***terms of trade***.
9 Rationalise stock.	9.1 Review and update stock range at regular intervals.
	9.2 Identify stock lines to be ***deleted*** and take action to minimise adverse effect on profit.
	9.3 ***Consolidate stock*** as required to maximise sales potential.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- evaluating and analysing:
  - market trends and projections
  - sales figures and investment levels
  - space requirements
- negotiation skills
  - interpersonal communication skills to:
  - liaise with relevant personnel
  - establish supplier relationships, negotiate supply of goods
  - provide information and training on product range
  - provide feedback and coaching through clear and direct communication

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- ask questions to identify and confirm requirements
- give instructions
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- group presentation skills
- report writing
- using and applying technology, including electronic data interchange
- literacy and numeracy skills in relation to:
  - developing pricing policies
  - calculating and estimating product range contributions
  - calculating the cost of stock loss and dissipation
  - analysing stock figures.

The following knowledge must be assessed as part of this unit:

- store policy and procedures in regard to:
  - marketing
  - buying
  - profit margins
  - quality control
  - stock inventory levels: current and future
  - stock location and allocated areas
- staff product knowledge training
- industry and store information, including:
  - market needs
  - range of merchandise available
  - market competition
  - existing and possible new suppliers
  - channels of distribution
- relevant legislation and statutory requirements
- relevant industry codes of practice
  - pricing procedures, including GST requirements.

Evidence Guide

EVIDENCE GUIDE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- consistently applies store policy and procedures, industry codes of practice, statutory requirements and regulations in regard to buying, merchandising and marketing practices
- applies market analysis, planning, procurement and rationalisation of stock and merchandise and service ranges, maintenance of supplier relations and quality control
- interprets market trends and applies these to the store situation to create opportunities to improve sales and services, while maximising profits
- analyses market and plans the introduction of a product and service range
- identifies suppliers, negotiates supply of goods, rationalises stock and monitors quality control
- trains and communicates information to and from staff or team members in regard to stock and merchandise and service range.

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail work environment
- relevant information and documentation, including:
  - store policy and procedures
  - legislation and statutory requirements
  - industry codes of practice
  - merchandise and supplier data.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- customer feedback

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

- written or verbal questioning to assess knowledge and understanding
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Assessing employability skills

Employability skills are integral to effective performance in the workplace and are broadly consistent across industry sectors. How these skills are applied varies between occupations and qualifications due to the different work functions and contexts.

Employability skills embedded in this unit should be assessed holistically in the context of the job role and with other relevant units that make up the skill set or qualification.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Store merchandise and marketing policies may include:

- store culture
- current market position
- target market.

Customer requirements may be monitored by:

- questionnaires
- surveys
- observation.

Merchandise range may include:

- existing stock
- new stock.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

Impact on business operations may include:	• buying • ordering patterns • planning • budgeting.
Relevant personnel may include:	• frontline staff • relevant managers • supervisor • team leader • specialist staff.
Feedback may be sought and given:	• verbally • in writing • in groups • individually.
Performance indicators may include:	• price • quality • performance • supply reliability • merchandise range.
Negotiation process may include:	• face-to-face • correspondence • meetings • telephone or electronic media.
Pricing arrangements may include:	• cash on delivery (COD) • cheque • credit card • invoice • GST.
Market factors may include:	• fashion trends

SIRXMER303 Coordinate merchandise presentation

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release	Comments
First Release	This is a revised unit, based on and equivalent to SIRXMER002A Coordinate merchandise presentation.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to apply knowledge of store merchandising and pricing policy and standards to support and coordinate relevant frontline staff members and ensure that they arrange, present and label or price merchandise according to store requirements.

It also involves informing staff of store merchandise presentation requirements for sales, promotions and special events, and providing feedback to management in regard to improvement of store marketing and promotional activities.

Application of the Unit

This unit applies to frontline visual merchandisers who supervise sales and other staff implementing and maintaining displays according to store merchandising standards.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Instruct and coordinate staff.	1.1. Communicate and demonstrate store ***display standards and requirements*** to ***staff***. 1.2. Identify occurrence and timing of promotions and special events and inform staff. 1.3. Identify items to be advertised or promoted, according to store merchandising policy and inform staff. 1.4. Identify appropriate timing for dismantling and disposing of displays and inform staff.
2. Supervise construction and maintenance of presentations.	2.1. Plan and coordinate promotions and special events as directed by management. 2.2. Plan and supervise construction and maintenance of ***displays*** in order to achieve balance and visual impact. 2.3. Ensure product or service ***display information*** accurately depicts product or service being promoted. 2.4. Ensure displays are completed according to required time schedule, with minimum disruption to ***customer*** service and traffic flow. 2.5. Ensure displays are constructed and maintained in a safe and secure manner. 2.6. Regularly monitor replenishment of merchandise and rotation of stock on store displays and take action as required.
3. Implement merchandise pricing.	3.1. Implement store policy and procedures in regard to pricing and ticketing. 3.2. Identify current prices for products and services and amend according to store policy. 3.3. Inform team members of price changes and current pricing policies.
4. Review merchandise presentations.	4.1. Evaluate promotions or special events against sales turnover and store presentation standards. 4.2. Evaluate merchandise presentation against sales turnover and store presentation standards. 4.3. Provide management with feedback in regard to improvement of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

store marketing and promotional activities.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and interpersonal skills to:
  - give instructions
  - provide feedback to management through clear and direct communication
  - provide information to staff
  - share information
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- literacy and numeracy skills to:
  - prepare machine or manual labels and tickets
  - present and price merchandise
  - read and interpret store policies and procedures
- observation skills to assess display and presentation compliance with visual merchandising standards
- technology skills to operate and maintain electronic labelling and ticketing equipment
- team leadership skills to:
  - instruct and support staff
  - supervise staff activities

Required knowledge

- availability and use of materials
- correct storage procedures for labelling and ticketing equipment and materials
- load-bearing capacity of fixtures and display areas
- location of display areas
- manufacturer specifications for the use of electronic labelling and ticketing equipment
- occurrence and timing of store promotions, including advertising, catalogues and special offers
- pricing procedures, including GST requirements
- principles and techniques of interpersonal communication skills
- principles of display and design
- procedure for accessing information and implementing price changes
- relevant industry codes of practice relating to coordinating merchandise presentation
- relevant legislation and statutory requirements relating to coordinating merchandise presentation, including Australian Consumer Law

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relevant work health and safety (WHS) legislation and codes of practice
- store policies and procedures in regard to:
  - efficient use of resources
  - merchandise range
  - merchandising, pricing and ticketing
  - minimum stock levels required
  - stock rotation and replenishment
  - storage of stock
- store promotional themes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- implements and instructs staff regarding store display, merchandising, ticketing and pricing policies and procedures
- coordinates and monitors display, promotion and presentation of merchandise according to store policies and procedures and legislative requirements
- identifies products to be advertised or promoted according to store merchandising policies
- coordinates construction and maintenance of displays within time schedule set in regard to advertising, catalogues, special offers and in-store promotions in a safe and secure manner
- informs staff of pricing policies, promotions, special events, display standards and requirements, and timing for dismantling and disposing of displays
- evaluates and reports effectiveness of store merchandising and promotional activities to management and staff as required by store policies and procedures.

Context of and specific resources for assessment

Assessment must ensure access to:

- a real or simulated retail work environment
- pricing and ticketing equipment
- merchandise for display
- display materials and props
- relevant documentation, such as:
  - store policy and procedures manuals on merchandising
  - WHS requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- manufacturer instructions and operation manuals on electronic ticketing equipment
- legislation and statutory requirements
- industry codes of practice
- a work team.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- customer feedback
- answers to questions about specific skills and knowledge.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the individual, accessibility of the item, and local industry and regional contexts) may also be included.

Display standards and requirements may include:

- maintaining existing displays
- safety
- setting up new displays
- ticketing and display signage.

Staff may be:

- from a range of social, cultural and ethnic backgrounds
- from within or outside own work team
- full-time, part-time, casual or contract.

Displays may be located in a variety of areas, including:

- fixtures on floor
- interior or exterior
- permanent or temporary
- publicly accessible areas
- shelves
- walls
- windows.

Display information may include:

- discount information
- price

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- product brand
- special guarantees
- product characteristics, such as:
  - size
  - weight capacity
  - materials.

Customers may include:

- internal and external contacts
- new or repeat contacts
- people from a range of social, cultural and ethnic backgrounds
- people with varying physical and mental abilities.

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Manage store merchandising.	1.1 Ensure layout and presentation support market position and promote customer flow according to store ***visual merchandising policies and plans***.
	1.2 Develop and implement layout assessment checks.
	1.3 Define standards for visual presentations and displays and clearly communicate to all staff
	1.4 Consult floor staff to assess customer response to space allocations.
2 Plan and manage store advertising and promotions.	2.1 Manage and implement store policies and procedures, in regard to store ***promotional activities***.
	2.2 Organise activities in line with anticipated or researched customer requirements.
	2.3 Manage ***promotions*** in order to achieve maximum customer impact.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4 Negotiate arrangements with suppliers in regard to special promotional activities.
	2.5 Coordinate store activities to complement shopping centre or retail complex promotions.
	2.6 Develop and implement assessment checks to measure effectiveness of promotions, including layout, visual impact and customer response.
	2.7 Document and report on promotional activities.
3 Manage store pricing policies.	3.1 Maintain store pricing according to ***organisation pricing policies and procedures*** in regard to pricing.
	3.2 Maintain accurate information on pricing trends and changes and communicate to relevant staff.
	3.3 Develop and implement procedures for pricing according to store policies and ***legislative requirements***.
4 Manage housekeeping.	4.1 Develop and implement store policies and procedures in regard to ***store housekeeping and maintenance***.
	4.2 Develop and manage rosters or schedules, ensuring store housekeeping standards are monitored and maintained.
	4.3 Initiate ***contingency plan*** in the event of merchandise or store presentation problems.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- providing feedback on performance
- interpersonal communication skills to:
  - communicate store standards and expectations to staff
  - consult floor staff
  - negotiate arrangements with suppliers, through clear and direct communication
  - ask questions to identify and confirm requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- roster development
- report writing
- literacy skills in regard to:
  - researching, analysing and interpreting a broad range of written material
  - preparing rosters
  - preparing reports
  - documenting results

The following knowledge must be assessed as part of this unit:

- store policies and procedures, in regard to:
  - layout and presentation
  - advertising and promotions
  - pricing or marking down of goods, including risk assessment
  - housekeeping for premises, fittings, fixtures and equipment
  - store merchandise and service range
  - store merchandising plan
  - range and availability of new products and services
  - customer demand and market trends
  - product quality standards
- OHS legislation and codes of practice
- relevant legislation and statutory requirements
- relevant industry codes of practice
- pricing procedures, including GST requirements
- principles and techniques in:
  - visual merchandising
  - project management

Evidence Guide

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- collaboratively plans layout and presentation of merchandise according to store policies and procedures
- assesses effectiveness of layout and presentation according to sales targets or predetermined objectives
- collaboratively plans, coordinates and implements advertising and promotions activities according to store policies and procedures
- assesses and reports on effectiveness of advertising and promotions to staff and management according to store policies and procedures
- collaboratively plans, coordinates and implements pricing activities according to store policies and procedures
- collaboratively plans, coordinates and implements housekeeping activities according to store policies and procedures and OHS legislation, regulations and codes of practice.

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail work environment
- relevant documentation, such as:
  - store policy and procedures manuals
  - store merchandising plan
  - legislation and statutory requirements
  - OHS legislation, regulations and codes of practice
- a work team.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- customer feedback
- answers to questions about specific skills and knowledge.

Holistic assessment with other units relevant to the

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- consistently applies store policy and procedures and legislative requirements, including industry codes of practice in regard to store security and theft prevention in a range of contexts and situations
- consistently applies store policy and procedures in regard to following security procedures and for reporting theft or suspicious behaviour to relevant personnel
- monitors stock, work area, customers and staff to minimise opportunities for theft.

Context of and specific resources for assessment

Assessment must ensure access to:

- a real or simulated work environment
- relevant documentation, such as:
  - store policy and procedures manuals
  - legislation and statutory regulations
  - industry codes of practice
  - Trade Practices and Fair Trading Acts
- relevant security equipment
- point-of-sale equipment.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- a simulated work environment
- third-party reports from a supervisor
- customer feedback
- answers to questions about specific skills and knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- SIRXCCS001A Apply point-of-sale handling procedures
- SIRXCCS002A Interact with customers
- SIRXINV001A Perform stock control procedures
- SIRXFIN001A Balance point-of-sale terminal.

Assessing employability skills

Employability skills are integral to effective performance in the workplace and are broadly consistent across industry sectors. How these skills are applied varies between occupations and qualifications due to the different work functions and contexts.

Employability skills embedded in this unit should be assessed holistically in the context of the job role and with other relevant units that make up the skill set or qualification.

Required skills

- interpersonal skills to:
  - convey product knowledge to staff
  - apply knowledge to provide advice to customers
  - handle difficult customers through clear and direct communication
  - ask questions to identify and confirm requirements
  - share information
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- literacy skills in regard to:
  - use a range of communication and electronic equipment
  - access relevant product and service information
  - interpret product information
  - interpret store policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - record information
- numeracy skills to:
    - estimate and calculate costs relevant to pricing products

Required knowledge

- specialised product knowledge, including:
    - warranties
    - benefits and features
    - shelf life and use-by date
    - storage requirements
    - ingredients or materials contained in product
    - product and ingredient origins
    - care and handling of products
    - corresponding or complementary products and services
    - stock availability
- store and industry manuals and documentation
- stock and merchandise range
- service range
- store policies and procedures including:
    - procedures for taking orders
    - pricing procedures, including GST requirements
- relevant legislation and statutory requirements and industry code of practice relating to the retail industry

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • consistently applies store policies and procedures and industry codes of practice in regard to customer service and selling products and services • develops, maintains and conveys product knowledge to customers and other staff • applies detailed and specialised product knowledge to provide accurate advice according to the needs of the customer.
Context of and specific	Assessment must ensure access to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

resources for assessment	• a retail work environment
	• a range of stock and merchandise
	• relevant documentation, such as:
	  • price lists
	  • policy and procedures manuals
	• a range of customers with different requirements
	• a range of communication equipment.

Methods of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • observation of the candidate in the workplace • third-party reports from a supervisor • customer feedback • answers to questions about specific skills and knowledge • review of portfolios of evidence and third-party workplace reports of on-the-job performance.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Product knowledge may include:	• brand options • product features and benefits • warranties • safety features • use-by dates • handling and storage requirements • stock availability • price.
Product knowledge may be developed and maintained by:	• accessing the internet • attending product launches • attending product seminars • discussions with staff • accessing product information booklets and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	pamphlets.
Store policy and procedures in regard to:	• interaction with customers • selling products and services.
Legislative requirements may include:	• Trade Practices and Fair Trading Acts • tobacco laws • liquor laws • lottery legislation • industry codes of practice • WHS • sale of second-hand goods • sale of X and R rated products • trading hours • transport, storage and handling of goods.
Staff may include:	• full-time, part-time or casual • under contract • people with varying degrees of language and literacy • people from a range of cultural, social and ethnic backgrounds • people with a range of responsibilities and job descriptions.
Customer requirements may include:	• specific brand • sizing • quality • quantity • price range • usage.
Customers may include:	• new or repeat contacts • external and internal contacts • customers with routine or special requests • people from a range of social, cultural and ethnic backgrounds and with varying physical and mental abilities.
Pricing structure may include:	• sales reductions • pricing procedures, including GST requirements • mark-downs.

SITXMGT501 Establish and conduct business relationships

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITXMGT006A Establish and conduct business relationships. Minor adjustments to expression of content to streamline and improve unit.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to establish and manage positive business relationships. It requires the ability to use high-level communication and relationship building skills to conduct formal negotiations and make commercially significant business-to-business agreements.

Application of the Unit

This unit applies to all industry sectors, and to individuals who take responsibility for making decisions about purchasing or marketing activities. They also oversee the maintenance of contracts or agreements. This could include senior operational personnel, sales and marketing personnel, managers or owner-operators of small businesses. Agreements may relate to corporate accounts, service contracts, agency agreements, venue contracts, rate negotiations, preferred product agreements, supply agreements and marketing agreements.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Build business relationships.	1.1 Establish relationships within appropriate cultural context. 1.2 Build trust and respect in business relationships through use of effective communication skills and techniques. 1.3 Proactively identify and take up ***opportunities to maintain regular contact with customers and suppliers***.
2. Conduct negotiations.	2.1 Conduct negotiations in a professional manner in the relevant cultural context. 2.2 Conduct negotiations in the context of current organisation goals. 2.3 Maximise benefits for all ***parties*** through use of established ***negotiation techniques*** and in the context of establishing long term relationships. 2.4 Incorporate feedback and input from colleagues into negotiation where appropriate. 2.5 Communicate results of negotiations to appropriate colleagues and stakeholders within appropriate timeframes.
3. Make formal business agreements.	3.1 Confirm agreements in writing according to organisational requirements, using formal contracts where appropriate. 3.2 Obtain approvals for all aspects of formal agreements according to organisational procedures. 3.3 Evaluate and act on the need for specialist advice as required.
4. Foster and maintain business relationships.	4.1 Proactively seek, review and act upon information needed to maintain sound business relationships. 4.2 Honour agreements within scope of individual responsibility, complying with agreed terms. 4.3 Take account of agreed performance indicators. 4.4 Make adjustments to agreements in consultation with customer or supplier and share information with appropriate colleagues. 4.5 Nurture relationships through regular contact and use of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

effective interpersonal and communication styles.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - conduct negotiations that may be of significant commercial value
  - establish and nurture ongoing professional relationships
- critical thinking skills to evaluate potentially complex internal and external issues that affect professional relationships and business negotiations
- initiative and enterprise skills to pro-actively seek opportunities for building business relationships
- literacy skills to:
  - read and interpret potentially complex agreements, conditions and contracts
  - develop or participate in the development of formal commercial agreements
- numeracy skills to evaluate commercial data and cost structures
- planning and organising skills to plan activities and initiatives that support professional relationships
- problem-solving skills to anticipate and respond to challenges in the negotiation process.

Required knowledge

- commercial context for business relationships in the relevant industry sector, including:
  - industry structure and interrelationships
  - sources of supply
  - distribution and marketing networks
  - professional networks
- principles of negotiation, stages in the negotiating process and different techniques that can be applied
- nature of agreements and contracts in the relevant industry sector and their key inclusions
- key components of contract law at an overview level, including:
  - terms and obligations of contract
  - methods of contractual agreement
  - exclusion clauses
  - dispute resolution clause
  - termination of contracts
- other legal requirements that impact negotiations and agreements in the relevant industry sector, including consumer protection.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- establish and maintain business relationships over a period of time that allows for the demonstration of interpersonal and relationship building skills
- conduct formal negotiations and make and manage agreements and contracts in a specific business context
- demonstrate knowledge of industry structure and interrelationships, industry networks, and distribution and marketing networks
- demonstrate knowledge of the role and features of contracts in a given business operation or sector.

Context of and specific resources for assessment

Assessment must ensure use of:

- other people with whom business relationships can be established
- real or simulated sales or operational details for which contracts may be negotiated and agreed
- materials that support the negotiation process, such as preparatory facts, statistics, KPIs and market information.

Method of assessment

A range of assessment methods should be used to assess the practical skills and knowledge required to establish and conduct business relationships. The following examples are appropriate for this unit:

- direct observation of the individual participating in negotiations
- evaluation of negotiation activities undertaken by the individual, including:
  - planning and preparation
  - outcomes and reporting
  - agreements reached
- use of case studies to assess application of different techniques to different negotiating scenarios
- written or oral questioning to assess knowledge of industry structure and interrelationships, negotiating principles and techniques and legal compliance issues
- review of portfolios of evidence and third-party

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITTPPD401 Package tourism products
- SITTPPD601 Develop tourism products
- SITXINV601 Establish stock purchasing and control systems
- SITXMPR403 Plan and implement sales activities
- SITXMPR404 Coordinate marketing activities.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Opportunities to maintain regular contact with customers and suppliers may include:

- association membership
- cooperative promotions
- industry functions
- informal social occasions
- program of regular telephone contact
- social media.

Parties may be:

- cooperative partners
- customers
- suppliers.

Negotiation techniques may include:

- active listening and questioning
- appropriate cultural behaviour
- appropriate language
- bargaining
- clarification of needs of all parties
- confirming agreements
- developing options
- identification of Key Performance Indicators (KPIs), goals and limits
- identifying points of agreement and points of difference
- non-verbal communication techniques
- preparatory research of facts, statistics,

SITXMPR401 Coordinate production of brochures and marketing materials

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.2	Correction to mapping to show non equivalence.
1.0	N Replaces and is not equivalent to SITXMPR001A Coordinate production of brochures and marketing materials. Minor adjustments to expression of content to streamline and improve unit. Added trade practices to Required knowledge. Added sustainability. More emphasis on physical and virtual.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to coordinate the development process for brochures and other marketing materials from a content and production perspective.

Application of the Unit

This unit applies to all industry sectors and all types of marketing materials, both physical and virtual. People working independently with limited supervision undertake this role. Depending on the business context, this could include sales and marketing personnel, managers, and owner-operators of small businesses.

This unit reflects the general skills needed by those involved in sales and marketing activities and does not include the skills required by professional graphic designers or copywriters.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

materials. measures.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to collaborate with others on technical, organisational and creative issues
- critical thinking skills to evaluate factors that impact on production of marketing materials
- literacy skills to:
  - read and interpret quotations and product conditions
  - proofread draft materials
  - create copy or check quality of outsourced copy
  - research information for inclusion from varied and potentially unfamiliar sources
- planning and organising skills to plan and coordinate all aspects of the production process
- problem-solving skills to respond to challenges that arise in the production of marketing materials
- numeracy skills to:
  - calculate costs and quantities of materials to be produced
  - work with numerical concepts of size, shape and layout
  - work with detailed product costings
- technology skills to:
  - liaise with others about technical production issues
  - work with current industry marketing technologies.

Required knowledge

- objectives of materials and the market for which material is required
- physical and virtual media marketing opportunities and factors that impact production of materials in those contexts
- current digital print production technologies, processes and terminology
- printing and industry conventions in relation to placement of information, page numbering and copyright information
- quality indicators in marketing material production, including:
  - readability
  - photographic quality
  - effective use of colour
  - spacing requirements
- creative writing techniques used for the content of brochures and other marketing materials
- procedures and requirements for preparation and proofing of material

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- copyright laws and restrictions that apply to the inclusion of certain content in brochures and other marketing materials
- procedures for copyright clearance of restricted materials
- trade practices requirements around the need for accuracy of information in marketing materials.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • coordinate all aspects of the development process and produce materials within specified deadlines • produce materials that meet stated objectives, provide current and accurate information, and are free of errors • demonstrate knowledge of current production processes, terminology and copyright restrictions.
Context of and specific resources for assessment	Assessment must ensure use of: • a real or simulated product or service for which brochures and marketing materials can be developed • current information and communications technology for the development of content • suppliers, such as graphic designers, print production organisations and copywriters with whom the individual can interact.
Method of assessment	A range of assessment methods should be used to assess the practical skills and knowledge required to coordinate the production of brochures and marketing materials. The following examples are appropriate for this unit: • evaluation of brochures or other physical or virtual marketing materials produced by the individual • written or oral questioning to assess knowledge of coordination and production processes, copyright laws and clearance procedures • review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.
Guidance information for	The assessor should design integrated assessment activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

assessment	to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example: • SITXMGT501 Establish and conduct business relationships • SITXMPR404 Coordinate marketing activities.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Brochures and marketing materials may include:	• advertising materials • conference programs and registration forms • destination guides • direct mail pieces • display materials • event prospectus • invitations • product brochures • product support manuals • promotional flyers and leaflets.

Factors for consideration during planning may relate to:	• accessibility, such as the need to provide materials in alternative formats
	• availability of information
	• design issues:
	  • style
	  • size
	• legal requirements
	• marketing considerations:
	  • distribution considerations
	  • market for review of competitive materials
	  • objectives
	• resource constraints:
	  • budget
	  • in-house capability
	• technology:
	  • digital media opportunities
	• objectives of the material

- sustainability considerations
- time parameters.

Information for inclusion may be:

- advertisements
- logos
- maps
- photos
- special offers or incentives
- sponsor messages
- supplier information
- tariff details.

Accurate and complete specifications include:

- conditions of contract
- delivery platform
- interactivity requirements
- layout and style of text
- number of colours
- number of photographs
- production and delivery deadlines
- size
- total number required
- type of paper (for print-based materials).

SITXMPR402 Create a promotional display or stand

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	N Replaces but is not equivalent to SITXMPR002A Create a promotional display or stand. Minor adjustments to expression of content to streamline and improve unit. Added elements and principles of design.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to create a display or stand for the promotion of a product or service. It requires the ability to identify the objectives of the promotion, determine who the audience will be, select all display components and assemble the display or stand.

Application of the Unit

This unit applies to all industry sectors. People working with some level of independence create displays at promotional events or within their own workplaces. This includes sales and marketing personnel, managers, and owner-operators of small businesses. Displays may be used to promote any product, service, or event; a group of products being cooperatively marketed; or even a whole city, region or tourism precinct.

This unit does not cover the skills of a specialist display designer or visual merchandiser.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Make preparations for display or stand.	1.1 Identify display or stand objectives in consultation with appropriate colleagues. 1.2 Obtain operational ***information to assist in display or stand preparation*** to allow time for adequate planning. 1.3 Plan display or stand to meet target audience needs. 1.4 Select and organise adequate ***display supplies*** and transportation arrangements according to display plan. 1.5 Identify the need for and seek assistance from display specialists where appropriate.
2. Create the display.	2.1 Create or dress the display or stand, making creative use of available materials and supplies. 2.2 Consider the ***elements and principles of design*** in creating the display. 2.3 Use ***display techniques*** that maximise visual appeal of display and reflect the nature of product or service being sold. 2.4 Use display equipment correctly and safely. 2.5 Check display or stand to ensure safety of colleagues and customers.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- critical thinking skills to evaluate options for creative display
- literacy skills to:
  - interpret information about the needs of the target audience and operational aspects of the display or stand

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- numeracy skills to work with concepts about size, space and layout
- planning and organising skills to coordinate practical and creative aspects of display creation
- visual literacy skills to work with the elements and principles of design.

Required knowledge

- industry contexts in which displays are used, including:
  - trade and consumer shows
  - shopping centre promotions
  - information centre displays
  - window displays
  - promotional functions
- materials and equipment used for display in different locations and settings, such as stages, exhibition booths, permanent displays and window displays
- elements and principles of design as they apply to the creation of displays
- visual merchandising techniques using commonly available materials, including techniques for maximising the effectiveness of collateral in displays, including brochures and posters
- work health and safety practices for transporting, carrying and assembling the display or stand
- safety issues associated with the construction and operation of promotional displays and stands in different venues.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • create a display or dress a promotional stand to meet specific objectives using accepted display techniques and working within typical workplace time constraints • apply the elements and principles of design • create display or stand in a well organised and safe manner.
Context of and specific resources for assessment	Assessment must ensure use of: • a display space or promotional stand • display and promotional materials used in the relevant industry sector.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Method of assessment	A range of assessment methods should be used to assess the practical skills and knowledge required to create a promotional display or stand. The following examples are appropriate for this unit: • evaluation of the creativity and visual appeal of a display created by the individual • use of case studies to assess application of different display techniques to typical industry promotional situations • written or oral questioning to assess knowledge of different visual merchandising techniques, safety considerations • review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.
Guidance information for assessment	The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example: • SITXCOM302 Make presentations • SITXMPR404 Coordinate marketing activities.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information to assist in display or stand preparation may include:	• budget allocation • floor plans • nature of display area, including booth and stage • need for utilities, such as electricity and water • need for waste management • work health and safety requirements • security • set-up times and duration • type of surface on which display is to be created.
Display supplies may include:	• adhesives and velcro • audiovisual systems, including videos and sound systems • balloons and other decorations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- collateral materials, such as brochures, posters, banners and organisational colours and logo
- computers
- floral arrangements and potted plants
- furniture
- mobiles
- pins
- scissors
- string.

Elements and principles of design may include:

- alignment
- balance
- coherence
- colour
- composition
- contrast
- direction
- dominance
- emphasis
- form
- line
- movement
- pattern
- proportion
- proximity
- repetition
- rhythm
- shape
- simplicity/complexity
- space (positive and negative)
- subordination
- texture
- unity.

Display techniques may include the use of:

- cultural artefacts
- fabric
- flags
- freestanding display options
- local produce
- printed materials
- product samples
- signs
- 3-D materials.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to establish and conduct positive business relationships
- critical thinking skills to evaluate the potential of different marketing activities
- initiative and enterprise skills to proactively identify and respond to new opportunities
- literacy skills to:
  - interpret market trend information and marketing plans
  - develop detailed action plans for marketing activities
  - prepare media releases and marketing reports
- numeracy skills to work within marketing budgets
- planning and organising skills to coordinate diverse and unpredictable operational details
- problem-solving skills to proactively identify and respond to potentially complex implementation challenges
- self-management skills to take responsibility for the quality and outcomes of marketing activities
- technology skills to work with current web based marketing technologies.

Required knowledge

- content and structure of marketing plans
- key marketing principles, including the marketing management process and the four Ps - product, place, price and promotion
- industry structure and interrelationships, industry networks and information sources
- industry and market knowledge appropriate to the sector and organisation, including:
  - distribution and marketing networks, especially those that support the product or service being promoted, including e-business options and major promotional events
  - commission structures
  - current customer and market trends and preferences
- features, benefits and practical application of marketing activities commonly used in the service industries, including:
  - advertising
  - familiarisations
  - in-house promotions
  - public relations
  - social media
  - trade and consumer shows
  - signage and display
- legal issues that impact on the marketing of products and services, including consumer protection provisions
- ethical considerations for marketing activities, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - appropriate use of images and text
  - protection of children
  - targeting of particular groups in the community
- sustainability considerations for marketing activities, including:
  - reducing waste of printed materials
  - sustainability as a marketing tool.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • plan and coordinate multiple and different marketing activities for an operation, product or service • integrate knowledge of the relevant industry, including structure and interrelationships, industry networks, information sources, and distribution and marketing networks • integrate knowledge of the types of marketing activities used in the relevant industry sector and major industry promotional events • demonstrate knowledge of marketing principles and their application to practical workplace activities.
Context of and specific resources for assessment	Assessment must ensure use of: • real or simulated products or services for which the individual can conduct marketing activities • current information and communications technology used by industry for marketing activities • marketing plans and operational marketing documents, such as action plans and marketing reports.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • evaluation of marketing activities planned and conducted by the individual, including reports on lessons to be learned for future activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- evaluation of critiques prepared by the individual about industry marketing activities
- use of case studies to assess the application of marketing knowledge to different industry situations
- written or oral questioning to assess knowledge of marketing principles, structure of the industry, industry interrelationships, distribution networks and legal compliance issues
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITXMPR403 Plan and implement sales activities.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Marketing activities may include:

- advertising
- display and signage
- events
- familiarisations:
  - media
  - trade
- industry and public relations activities
- market research
- product development within scope of individual responsibility
- web-based and social media activities.

Information to be incorporated into the planning process may include:

- competitive activity
- financial statistics
- marketing reports
- marketplace trends
- sales reports.

Legal, ***ethical and sustainability issues*** may

- consumer law and trade practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

relate to:	• work health and safety obligations • resource conservation • targeting of particular groups • ways of presenting information.

Potential and suitability of promotional activities may relate to:	• consistency with overall marketing direction
	• exposure to be achieved
	• matching of attendees to target markets
	• resource considerations:
	  • financial
	  • human
	• timing of the activity or event.

Operational details may include:	• administrative and procedural requirements • availability of promotional materials • available technology • contracting of other services, such as display • equipment requirements • need for external assistance • potential for cooperative approaches • public relations implications • staffing requirements and briefings • strategies to ensure maximum benefits • travel arrangements.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and organise the assessment process, including recognition of prior learning (RPL), in a competency-based assessment system. It also includes the development of simple assessment instruments.

Application of the Unit

This unit typically applies to assessors and workplace supervisors with assessment planning responsibilities; and trainers or other assessors responsible for planning assessment, including RPL.

The unit is suitable for those with an existing assessment strategy which documents the overall framework for assessment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
unit of competency.	*is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

1. Determine assessment approach	1.1 Identify candidate and confirm ***purposes and context of assessment/RPL*** with relevant people according to l***egal, organisational and ethical requirements*** 1.2 Identify and access ***benchmarks for assessment/RPL*** and any specific assessment guidelines
2. Prepare the assessment plan	2.1 Determine evidence and ***types of evidence*** needed to demonstrate competence, according to the ***rules of evidence*** 2.2 Select ***assessment methods*** which will support the collection of defined evidence, taking into account the context in which the assessment will take place 2.3 Document all aspects of the ***assessment plan*** and confirm with relevant personnel
3. Develop assessment instruments	3.1 Develop ***simple assessment instruments*** to meet target group needs 3.2 Analyse ***available assessment instruments*** for their suitability for use and modify as required 3.3 ***Map assessment*** instruments against unit or course requirements 3.4 Write clear instructions for candidate about the use of the instruments 3.5 Trial draft assessment instruments to validate content and applicability, and record outcomes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- cognitive interpretation skills to:
  - interpret competency standards and other assessment documentation, including material

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

relating to reasonable adjustment
    - identify opportunities for integrated competency assessment
    - contextualise competency standards to the operating assessment environment, including RPL
    - consider access and equity needs of diverse candidates
- technology skills to use appropriate equipment and software to communicate effectively with others
- research and evaluation skills to:
    - obtain competency standards, assessment tools and other relevant assessment resources
    - research candidate characteristics and any reasonable adjustment needs
    - evaluate feedback, and determine and implement improvements to processes
- literacy skills to read and interpret relevant information to design and facilitate assessment and recognition processes
- communication skills to discuss assessment, including RPL processes with clients and other assessors
- interpersonal skills to:
    - demonstrate sensitivity to access and equity considerations and candidate diversity
    - promote and implement equity, fairness, validity, reliability and flexibility in planning an assessment processes.
- **Required knowledge**
- ethical and legal requirements of an assessor
- competency-based assessment, including:
    - work focused
    - criterion referenced
    - standards based
    - evidence based
- different purposes of assessment and different assessment contexts, including RPL
- how to read and interpret the identified competency standards as the benchmarks for assessment
- how to contextualise competency standards within relevant guidelines
- four principles of assessment and how they guide the assessment process
- purpose and features of evidence, and different types of evidence used in competency-based assessments, including RPL
- rules of evidence and how they guide evidence collection
- different types of assessment methods, including suitability for collecting various types of evidence
- assessment instruments and their purpose; different types of instruments; relevance of different instruments for specific evidence-gathering opportunities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Evidence of the ability to:
	• plan and organise the assessment process on a minimum of two occasions
	• collect evidence that demonstrates:
	  • documented assessment plans
	  • having covered a range of assessment events
	  • catering for a number of candidates
	  • different competency standards or accredited curricula
	  • an RPL assessment
	  • contextualisation of competency standards and the selected assessment tools, where required
	  • incorporation of reasonable adjustment strategies
	  • development of simple assessment instruments for use in the process
	  • organisational arrangements.

Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided. Assessment must ensure access to training products, such as training packages and accredited course documentation.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Purposes of assessment/ RPL may include:	• recognising current existing competence of candidates • determining if competence has been achieved following learning • establishing candidate progress towards achievement of competence • determining language, literacy and numeracy needs of candidates • certifying competence through a qualification or Statement of Attainment • licensing or regulatory requirements.

Context of assessment/ RPL may include:	• environment in which the assessment/RPL will be carried out, including real or simulated workplace
	• opportunities for collecting evidence in a number of situations
	• relationships between competency standards and:
	  • evidence to support RPL
	  • work activities in the candidate's workplace
	  • learning activities
	• who carries out the assessment/RPL.

Organisational, legal and ethical requirements may include:	• assessment system policies and procedures
	• assessment strategy requirements
	• reporting, recording and retrieval systems for assessment, including RPL
	• quality assurance systems
	• business and performance plans
	• access and equity policies and procedures
	• collaborative and partnership arrangements
	• defined resource parameters
	• mutual recognition arrangements
	• industrial relations systems and processes, awards, and enterprise agreements
	• Australian Quality Training Framework
	• registration scope
	• human resources policies and procedures
	• legal requirements, including:
	  • anti-discrimination
	  • equal employment opportunity
	  • job role, responsibilities and conditions
	• relevant industry codes of practice
	• confidentiality and privacy requirements
	• OHS considerations, including:
	  • ensuring OHS requirements are adhered to during the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	assessment process • identifying and reporting OHS hazards and concerns to relevant personnel.
Benchmarks for assessment/RPL may include:	• criterion against which the candidate is assessed or prior learning recognised, which may be: • competency standard/unit of competency • assessment criteria of course curricula • performance specifications of an enterprise or industry • product specifications.
Types of evidence may include:	• direct • indirect • supplementary.
Rules of evidence ensure that evidence collected is:	• valid • sufficient • authentic • current.
Assessment methods are the particular techniques used to gather evidence and may include:	• direct observation, for example: • real work/real time activities at the workplace • work activities in a simulated workplace environment • structured activities, for example: • simulation exercises and role-plays • projects • presentations • activity sheets • questioning, for example: • written questions, e.g. on a computer • interviews • self-assessment • verbal questioning • questionnaires • oral or written examinations (applicable at higher AQF levels) • portfolios of evidence, for example: • collection of work samples compiled by candidate • product with supporting documentation • historical evidence • journal or log book • information about life experience • review of products, for example: • testimonials and reports from employers and supervisors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• evidence of training • authenticated prior achievements • interview with employer, supervisor, or peer.
Assessment plan may include:	• overall planning document describing: • what is to be assessed • when assessment is to take place • where assessment is to take place • how assessment is to take place.
Simple assessment instruments may include:	• instruments developed by an assessor as part of formative or summative assessment activities, including: • profiles of acceptable performance measures • templates and proformas • specific questions or activities • evidence and observation checklists • checklists for the evaluation of work samples • recognition portfolios • candidate self-assessment materials • instruments developed elsewhere that have been modified by the assessor for use with a particular client group.
Available assessment instruments may include:	• commercially available instruments • those created by others inside the registered training organisation.
Map assessment means:	• showing a clear relationship between the evidence and the requirements of the unit.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

1. Prepare for assessment	1.1 Interpret ***assessment plan*** and confirm organisational, legal and ethical requirements for conducting assessment with relevant people 1.2 Access and interpret relevant ***benchmarks for assessment*** and nominated ***assessment tools*** to confirm the requirements for evidence to be collected 1.3 Arrange identified material and physical resource requirements according to assessment system policies and procedures 1.4 Organise ***specialist support*** required for assessment 1.5 Explain, discuss and agree details of the assessment plan with candidate
2. Gather quality evidence	2.1 Use agreed ***assessment methods*** and instruments to gather, organise and document evidence in a format suitable for determining competence 2.2 Apply the principles of assessment and rules of evidence in gathering quality evidence 2.3 Determine opportunities for evidence gathering in actual or simulated activities through consultation with the candidate and relevant personnel 2.4 Determine opportunities for integrated assessment activities and document any changes to assessment instruments where required
3. Support the candidate	3.1 Guide candidates in gathering their own evidence to support recognition of prior learning (RPL) 3.2 Use appropriate communication and interpersonal skills to develop a professional relationship with the candidate that reflects sensitivity to ***individual differences*** and enables two-way ***feedback*** 3.3 Make decisions on reasonable adjustments with the candidate, based on candidate's needs and characteristics 3.4 Access required specialist support in accordance with the assessment plan 3.5 Address any OHS risk to person or equipment immediately
4. Make the assessment decision	4.1 Examine collected evidence and evaluate it to ensure that it reflects the evidence required to demonstrate competence 4.2 Use judgement to infer whether competence has been demonstrated, based on the available evidence 4.3 Make assessment decision in line with agreed assessment procedures and according to agreed assessment plan 4.4 Provide clear and constructive feedback to candidate regarding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	the assessment decision and develop any follow-up action plan required
5. Record and report the assessment decision	5.1 Record assessment outcomes promptly and accurately 5.2 Complete and process an assessment report according to agreed assessment procedures 5.3 Inform other relevant parties of the assessment decision according to confidentiality conventions
6. Review the assessment process	6.1 Review the assessment process in ***consultation*** with relevant people to improve own future practice 6.2 Document and record the review according to relevant assessment system policies and procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to:
  - break down competency standards
  - interpret assessment tools and other assessment information, including those used in RPL
  - identify candidate needs
  - make judgements based on assessment of available evidence
- observation skills to:
  - recognise candidate's prior learning
  - determine candidate's performance
  - identify when candidate may need assistance during the assessment processes
- research and evaluation skills to:
  - access required human and material resources for assessment
  - access assessment system policies and procedures
  - access RPL policies and procedures
  - evaluate evidence
  - evaluate assessment process
- cognitive skills to:
  - weigh up the evidence and make a judgement
  - consider and recommend reasonable adjustments
- decision-making skills to:
  - recognise a candidate's prior learning

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - make a decision on a candidate's competence
- literacy skills to:
    - read and interpret relevant information to conduct assessment
    - prepare required documentation and records or reports of assessment outcomes in required format
- communication and interpersonal skills to:
    - explain the assessment, including RPL process
    - give clear and precise instructions
    - ask effective questions
    - provide clarification
    - discuss process with other relevant people
    - give appropriate feedback
    - discuss assessment outcome
    - use language appropriate to candidate and assessment environment
    - establish a working relationship with candidate.

Required knowledge

- competency-based assessment, including:
    - vocational education and training as a competency-based system
    - criterion-referenced assessment as distinct from norm-referenced assessment
    - competency standards as the basis of qualifications
    - structure and application of competency standards
    - principles of assessment and how they are applied
    - rules of evidence and how they are applied
    - range of assessment purposes and assessment contexts, including RPL
    - different assessment methods, including suitability for gathering various types of evidence, suitability for content of units, and resource requirements and associated costs
    - reasonable adjustments and when they are applicable
    - types and forms of evidence, including assessment instruments that are relevant to gathering different types of evidence used in competency-based assessment, including RPL
    - potential barriers and processes relating to assessment tools and methods
    - assessment system, including policies and procedures established by the industry, organisation or training authority
- RPL policies and procedures established by the organisation
- cultural sensitivity and equity considerations
- relevant policy, legislation, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the vocational education and training sector, such as:
    - copyright and privacy laws in terms of electronic technology
    - security of information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - plagiarism
  - training packages and competency standards
  - licensing requirements
  - industry and workplace requirements
  - duty of care under common law
  - recording information and confidentiality requirements
  - anti-discrimination, including equal employment opportunity, racial vilification and disability discrimination
  - workplace relations
  - industrial awards and enterprise agreements
- OHS responsibilities associated with assessing competence, such as:
  - requirements for reporting hazards and incidents
  - emergency procedures
  - procedures for use of relevant personal protective equipment
  - safe use and maintenance of relevant equipment
  - sources of OHS information.
-

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• assess competence of a number of candidates within the vocational education and training context against different units of competency or accredited curricula, following the relevant assessment plan
	• assess at least one candidate for RPL
	• consider reasonable adjustment and the reasons for decisions in at least one assessment
	• cover an entire unit of competency and show:
	  • the application of different assessment methods and instruments involving a range of assessment activities and events
	  • two-way communication and feedback
	  • how judgement was exercised in making the assessment decision
	  • how and when assessment outcomes were recorded and reported

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• assessment records and reports completed in accordance with assessment system and organisational, legal and ethical requirements • how the assessment process was reviewed.
Context of and specific resources for assessment	Evidence must be gathered in the workplace whenever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment plan may include:	• overall planning, describing:
	  • what is to be assessed
	  • when assessment is to take place
	  • where assessment is to take place
	  • how assessment is to take place.

Benchmarks for assessment:	• refer to a criterion against which the candidate is assessed • may be a competency standard/unit of competency, assessment criteria of course curricula, performance specifications, or product specifications.
Assessment tools include:	• the learning or competency unit(s) to be assessed • the target group, context and conditions for the assessment • the tasks to be administered to the candidate • an outline of the evidence to be gathered from the candidate • the evidence criteria used to judge the quality of performance (i.e. the assessment decision-making rules) • the administration, recording and reporting requirements • the evidence of how validity and reliability have been tested and built into the design and use of the tool.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Specialist support may include:	• assistance by third party, such as carer or interpreter • support from specialist educator • provision of developed online assessment activities • support for remote or isolated candidates and assessors • support from subject matter or safety experts • advice from regulatory authorities • assessment teams and panels • support from lead assessors • advice from policy development experts.

Assessment methods include:	• particular techniques used to gather different types of evidence, such as:
	  • direct observation
	  • structured activities
	  • oral or written questioning
	  • portfolios of evidence
	  • review of products
	  • third-party feedback.

Individual differences may include:	• English language, literacy and numeracy barriers • physical impairment or disability • intellectual impairment or disability • medical condition that may impact on assessment, such as arthritis, epilepsy, diabetes and asthma • learning difficulties • mental or psychological disability • religious and spiritual observances • cultural images and perceptions • age • gender.
Feedback may include:	• ensuring assessment/RPL process is understood • ensuring candidate concerns are addressed • enabling questions and answers • confirming outcomes • identifying further evidence to be provided • discussing action plans • confirming gap training needed • providing information regarding available appeal processes • suggesting improvements in evidence gathering and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	presentation.
Consultation may involve:	• moderation with other assessors, or training and assessment coordinators • discussions with client, team leaders, managers, RPL coordinators, supervisors, coaches and mentors • technical and subject experts • English language, literacy and numeracy experts.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to participate in an assessment validation process.

Application of the Unit

This unit typically applies to those participating in assessment validation. It does not address leading the validation process.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

1. Prepare for validation	1.1 Discuss and confirm the approach to validation according to defined purposes, context, and relevant ***assessment system policies and procedures***
	1.2 Analyse relevant ***benchmarks for assessment*** and agree on the evidence needed to demonstrate competence
	1.3 Arrange ***materials*** for ***validation activities***
2. Contribute to validation process	2.1 Demonstrate active ***participation*** in validation sessions and activities using appropriate communication skills
	2.2 Participate in validation sessions and activities by applying the principles of assessment and rules of evidence
	2.3 Check all documents used in the validation process for accuracy and version control
3. Contribute to validation outcomes	3.1 Collectively discuss validation findings to support improvements in the quality of assessment
	3.2 Discuss, agree and record recommendations to improve assessment practice
	3.3 Implement changes to own assessment practice, arising from validation

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- planning skills to participate in validation activities within agreed timeframes
- problem-solving skills to identify information that is inconsistent, ambiguous or contradictory
- evaluation skills to:
  - determine evidence requirements from competency standards
  - review assessment process, tools and methods
  - review collected evidence
- communication skills to share information in validation meetings.

Required knowledge

- how to interpret competency standards and other related assessment information to determine the evidence needed to demonstrate competence, including:
  - criterion-referenced assessment as distinct from norm-referenced assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - various reasons for carrying out validation and the different approaches to validation that may be appropriate before, during and after assessment
  - critical aspects of validation, including validation of assessment processes, methods and products
  - relevant OHS legislation, codes of practice, standards and guidelines, impacting on assessment
  - legal and ethical requirements of assessors, particularly in relation to validation activities
- principles of assessment
- rules of evidence.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • actively participate in a minimum of two validation sessions or meetings which, in combination, address the critical aspects of validation using different validation approaches and activities • clearly explain purposes of validation and the legal and ethical responsibilities of assessors • collate documentation relating to validation process in a logical manner • demonstrate communication and liaison with relevant people • provide feedback and interpret documentation in validation sessions • record contribution to validation findings.
Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided. Assessment must ensure access to: • assessment reports and records • other documentation relevant to validation.
Method of assessment	
Guidance information	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment system policies and procedures may include:	• candidate selection • rationale and purpose of competency-based assessment • assessment records, and data and information management • recognition of current competency, recognition of prior learning and credit arrangements • assessment reporting procedures • assessment appeals • candidate grievances and complaints • validation • evaluation and internal audit • costs and resourcing • access and equity, and reasonable adjustment • partnership arrangements • links with human resource or industrial relations system • links with overall quality management system.
Benchmarks for assessment:	• refers to criterion against which the candidate is assessed • may be one or more units of competency or assessment criteria of course curricula.
Materials may include:	• assessment tools • samples of collected evidence • documentation outlining the basis of assessment decisions • reports and records of assessment decisions • samples of benchmarks of appropriate evidence • Assessment Guidelines of the relevant training packages • information from the evidence guide of the relevant units of competency.

Validation activities may include:	• analysing and reviewing:
	  • assessment tools
	  • collected evidence
	  • assessment decisions and records of assessment outcomes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• other aspects of assessment policies, processes and outcomes • recording evidence of validation processes and outcomes.
Participation may include comparison and evaluation of:	• assessment practices • assessment plans • interpretation of units of competency • assessment methods and instruments • assessment decisions • collected evidence.

TAEDEL301A Provide work skill instruction

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to conduct individual and group instruction and demonstrate work skills, using existing learning resources in a safe and comfortable learning environment. The unit covers the skills and knowledge required to determine the success of both the training provided and one's own personal training performance. It emphasises the training as being driven by the work process and context.

Application of the Unit

Application of the unit	This unit supports a wide range of applications across any workplace setting and so can be used by any organisation. Its use is not restricted to training organisations.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise instruction and demonstration	1.1. Gather information about ***learner characteristics*** and learning needs 1.2. Confirm a ***safe learning environment*** 1.3. Gather and check ***instruction and demonstration objectives*** and seek assistance if required 1.4. Access and review relevant ***learning resources*** and ***learning materials*** for suitability and relevance, and seek assistance to interpret the contextual application 1.5. Organise access to necessary equipment or physical resources required for instruction and demonstration 1.6. Notify learners of ***details*** regarding the implementation of the learning program and/or delivery plan
2. Conduct instruction and demonstration	2.1. Use interpersonal skills with learners to establish a safe and comfortable learning environment 2.2. Follow the learning program and/or delivery plan to cover all learning objectives 2.3. Brief learners on any ***OHS procedures*** and requirements prior to and during training 2.4. Use ***delivery techniques*** to structure, pace and enhance learning 2.5. Apply ***coaching*** techniques to assist learning 2.6. Use communication skills to provide information,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	instruct learners and demonstrate relevant work skills 2.7. Provide opportunities for practice during instruction and through work activities 2.8. Provide and discuss feedback on learner performance to support learning
3. Check training performance	3.1. Use ***measures*** to ensure learners are acquiring and can use new technical and generic skills and knowledge 3.2. Monitor learner progress and outcomes in consultation with learner 3.3. Review relationship between the trainer/coach and the learner and adjust to suit learner needs
4. Review personal training performance and finalise documentation	4.1. Reflect upon personal performance in providing instruction and demonstration, and document strategies for improvement 4.2. Maintain, store and secure learner records according to organisational and legal requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- verbaland non-verbal communication techniques, such as:
  - asking relevant and appropriate questions
  - providing explanations
  - demonstrating
  - using listening skills
  - providing information clearly
- safety skills to implement OHS requirements, by acting and responding safely in order to:
  - identify hazards
  - conduct prestart-up checks if required
  - observe and interpret learner behaviour that may put people at risk
- time-management, skills to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- ensure all learning objectives are covered
- pace learning

- reflection skills in order to:
  - identify areas for improvement
  - maintain personal skill development
- literacy skills to:
  - complete and maintain documentation
  - read and follow learning programs and plans
  - read and analyse learner information
- technology skills to operate audio-visual and technical equipment
- interpersonal skills to:
  - engage, motivate and connect with learners
  - provide constructive feedback
  - maintain appropriate relationships
  - establish trust
  - use appropriate body language
  - maintain humour
  - demonstrate tolerance
  - manage a group
  - recognise and be sensitive to individual difference and diversity
- observation skills to:
  - monitor learner acquisition of new skills, knowledge and competency requirements
  - assess learner communication and skills in interacting with others
  - identify learner concerns
  - recognise learner readiness to take on new skills and tasks

Required knowledge

- learner characteristics and needs
- content and requirements of the relevant learning program and/or delivery plan
- sources and availability of relevant learning resources and learning materials
- content of learning resources and learning materials
- training techniques that enhance learning and when to use them
- introductory knowledge of learning principles and learning styles
- key OHS issues in the learning environment, including:
  - roles and responsibilities of key personnel
  - responsibilities of learners
  - relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
procedures • risk controls for the specific learning environment

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• carry out aminimum of three training sessions, involving demonstrating and instructing particular work skills for different groups; with each session addressing:
	  • different learning objectives
	  • a range of techniques and effective communication skills appropriate to the audience.

Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Learner characteristics may include:	• language, literacy and numeracy levels • learning styles • past learning and work experiences • specific needs • workplace culture.
Safe learning environment may include:	• exit requirements • personal protective equipment • safe access • safe use of equipment.

Instruction and demonstration objectives may include:	• competencies to be achieved
	• generic and technical skills, which may be:
	  • provided by the organisation
	  • developed by a colleague
	  • individual or group objectives
	  • learning outcomes.

Learning resources may include:	• any material used to support learning, such as:
	  • learner and user guides
	  • trainer and facilitator guides
	  • example training programs
	  • specific case studies
	  • professional development materials
	  • assessment materials
	• a variety of formats
	• those produced locally
	• those acquired from other sources.

Learning materials may include:	• handouts for learners • materials sourced from the workplace, e.g. workplace documentation, operating procedures, and specifications.
Details may include:	• location and time • outcomes of instruction or demonstration • reason for instruction or demonstration • who will be attending instruction session.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
OHS procedures may include:	• emergency procedures • hazards and their means of control • incident reporting • use of personal protective equipment • safe work practices • safety briefings • site-specific safety rules.
Delivery techniques may include:	• coaching • demonstration • explanation • group or pair work • providing opportunities to practise skills and solve problems • questions and answers.
Coaching may include:	• learning arrangements requiring immediate interaction and feedback • on-the-job instruction and 'buddy' systems • relationships targeting enhanced performance • short-term learning arrangements • working on a one-to-one basis.
Measures may include:	• informal review or discussion • learner survey • on-the-job observation • review of peer coaching arrangements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify space requirements	1.1 The medium-term and long-term storage needs of the organisation are assessed to facilitate planning in accordance with the business plan of the enterprise and legislative requirements
	1.2 Product type, picking frequencies, value, fragility, weight, handling characteristics, quantity and holding periods are assessed to consider type and amount of storage
	1.3 Facility is assessed to determine the stock holding and handling requirements for each inventory item
	1.4 Volume requirements are calculated to ensure that ongoing stock holding needs are met
	1.5 The total space requirement is calculated and used to formulate plan for space utilisation
2 Identify safety and security requirements	2.1 An assessment is made of risks to ensure maximum safety and security for personnel, stock and facilities
	2.2 Storage handling security and incident/emergency procedures for each class or type of product are identified and documented
	2.3 Fire prevention and firefighting systems are identified in accordance with building code regulations and storage material requirements
	2.4 An evacuation plan is developed in accordance with the safety program of the enterprise
3 Develop documentation system	3.1 A system for recording and tracing stock location, receival, throughput and despatch is developed and implemented to enable reporting, quality assurance and financial requirements to be met
	3.2 A system for recording communication with carriers, customers and employees is developed and implemented to assess operational effectiveness and to provide data for system improvement
4 Design storage zones	4.1 Space requirements and equipment operation are accurately assessed to facilitate the planning of warehouse zones
	4.2 An assessment is made of the facility to enable the most

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	effective use of available space
	4.3 Positioning of storage areas, bays, work stations and the like is undertaken in accordance with data obtained from the planning process
	4.4 Provision for maintenance and cleaning is catered for
5 Evaluate facility utilisation	5.1 A continual system of review is used involving regular checks to ensure storage areas and systems are functioning at optimum levels
	5.2 Receiving and despatch systems provide efficient operations
	5.3 Storage and handling systems provide ease of access and comply with ergonomic principles
	5.4 Product handling and storage minimises product damage, contamination and stock losses
	5.5 Facility layout remains sufficiently flexible to meet changing storage and handling requirements
	5.6 Appropriate reporting systems are established and used to maintain data for the design of improved facilities and systems

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice, including knowledge of fire safety and building regulations applicable to the facility
- Relevant OH&S and environmental procedures and regulations
- Focus of operation of warehouse systems, resources, management and workplace operating systems
- Enterprise business policies and plans including procedures for operations of the facility
- Throughput and storage requirements for specific types of inventory
- Principles, purpose and location of controls, monitoring devices, and systems
- Selection and appropriate application of technology, information systems and procedures
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Procedures for managing and controlling hazardous situations when carrying out work activities, particularly those that relate to the storage of materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED KNOWLEDGE AND SKILLS

- Procedures to be followed in the event of an emergency

Required skills:

- Communicate effectively with others when managing facility and inventory requirements
- Read and interpret plans, diagrams, regulations, codes of practice and other documentation relevant to the management of facilities and inventory requirements
- Provide leadership to others when managing facilities and inventory requirements
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and or rectify any identified problems that may arise during the planning and management of facilities and inventory requirements
- Develop and implement contingency plans for unplanned events which may arise during the management of facilities and inventory requirements
- Prioritise work and coordinate the work of others
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Select and apply appropriate technology, information systems and procedures when managing facility and inventory requirements

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts • Resources for assessment include: • a range of relevant exercises, case studies and/or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	other simulated practical and knowledge assessment, and/or • access to an appropriate range of relevant operational situations in the workplace • In both real and simulated environments, access is required to: • relevant and appropriate materials and equipment, and • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation • As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests • Practical assessment must occur: • through activities in an appropriately simulated environment at the registered training organisation, and/or • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve:	• twenty four hour operation • single and multi site location • large, medium and small companies
Depending on the organisation concerned, workplace procedures may be called:	• standard operating procedures (SOPs) • company procedures • enterprise procedures • organisational procedures • established procedures
Communication in the work area may include:	• phone • electronic data interchange (EDI) • fax

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

Consultative processes may involve:	• email • internet • RF systems • oral, aural or signed communications • other employees and supervisors • relevant authorities and institutions • management and union representatives • industrial relations and OH&S specialists • customers and suppliers • other professional or technical staff, contractors and maintenance personnel
Documentation and records may include:	• regulations and codes of practice relevant to the functions of a storage facility, including the ADG code, fire safety and firefighting regulations, building code regulations, storage and handling procedures, and security procedures relevant to the specific facility • relevant OH&S and environmental protection regulations • quality assurance procedures • emergency procedures, particularly in relation to fire and evacuation • operations manuals, job specifications and induction documentation • relevant Australian Standards and certification requirements
Applicable legislation and regulations may include:	• Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances • relevant state/territory OH&S and environmental protection legislation • building codes, fire safety and firefighting codes and regulations

TLID2010A Operate a forklift

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to operate a forklift, including checking forklift condition, driving the forklift to fulfil operational requirements, monitoring site conditions, and monitoring and maintaining forklift performance. Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory OH&S authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Operation of a forklift must be carried out in compliance with the licence requirements and regulations of the relevant state/territory authority.

Operation of a forklift is performed under some supervision, generally within a team environment. It involves the application of routine equipment operation principles and procedures to maintain the safety and operation of a forklift in a variety of operational contexts.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Check forklift condition	1.1 Condition of forklift is checked for compliance with OH&S and workplace requirements for warning devices, manufacturers specifications and the nature of the load shifting task
	1.2 Attachments are checked to ensure appropriate adjustment and operation
	1.3 Mirrors and seats are adjusted for safe operation by the driver
	1.4 Log books are checked and appropriate workplace documentation is completed in accordance with workplace requirements
2 Drive the forklift	2.1 Forklift is started, steered, manoeuvred, positioned and stopped in accordance with regulations and manufacturers instructions
	2.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage
	2.3 Operational hazards are identified and/or anticipated and avoided or controlled through defensive driving and appropriate hazard control techniques
	2.4 Forklift is driven in reverse, maintaining visibility and achieving accurate positioning
	2.5 The forklift is parked, shut down and secured in accordance with manufacturers specifications, regulations and workplace procedures
3 Operate a forklift to handle loads	3.1 The lifting task to be undertaken is appropriately planned and the correct lifting truck and attachments are selected
	3.2 The load is lifted, carried, lowered and set down in accordance with OH&S legislation, manufacturers specifications and company procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
4 Monitor site conditions	4.1 When selecting the most efficient route, hazards and traffic flow are identified and appropriate adjustments are made
	4.2 Site conditions are assessed to enable safe operations and to ensure no injury to people or damage to property, equipment, loads or facilities occurs
5 Monitor and maintain forklift performance	5.1 Performance and efficiency of vehicle operation is monitored during use
	5.2 Defective/irregular performance and malfunctions reported to relevant personnel
	5.3 Forklift records are maintained/updated in accordance with workplace procedures and legislative requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant duty of care requirements pertaining to the operation of a forklift
- Relevant OH&S and environmental procedures and regulations
- Workplace operating procedures
- Forklift controls, instruments and indicators and their use
- Forklift handling procedures
- Procedures to be followed in the event of an operational emergency
- Engine power management and safe operating strategies
- Efficient driving techniques
- Operating hazards and related defensive driving and hazard control techniques
- Pre-operational checks carried out on forklift and related action
- Principles of stress management when driving a forklift
- Site layout and obstacles

Required skills:

- Communicate effectively with others when operating a forklift
- Read and interpret instructions, procedures, information and signs relevant to the operation of a forklift

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required skills:

- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of a forklift
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a forklift
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when operating a forklift
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a forklift
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- Monitor performance of forklift and its equipment and take appropriate action where required
- Ensure that a forklift and its equipment are maintained in terms of service schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the

	  • through activities in an appropriately simulated environment at the registered training organisation, and/or
	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Types of forklift may include:	• counterbalance trucks • reach trucks • pallet trucks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

Operations may be carried out in typical forklift operational situations, including:	• operations conducted at day or night • typical weather conditions • on the open road • on a private road or worksite • while at a workplace
Customers may be:	• internal or external
Workplaces may comprise:	• large, medium or small worksites
Work may be conducted in:	• restricted spaces • exposed conditions • controlled or open environments
Loads to be shifted may require:	• special precautions
Loads to be shifted may be:	• irregularly shaped • packaged or unpackaged • labelled or unlabelled • palleted or unpalleted
Hazards in the work area may include exposure to:	• chemicals • dangerous or hazardous substances • movements of equipment, goods and materials
Personnel in the work area may include:	• workplace personnel • site visitors • contractors • official representatives
Forklift handling procedures may include:	• starting a forklift • steering and manoeuvring a forklift • accelerating and braking • positioning and stopping a forklift • reversing a forklift • operating forklift controls, instruments and indicators • using defensive driving techniques • managing engine performance
Pre-operational checks may include:	• visual check of forklift • checking and topping up of fluid levels • checks of tyres • checks of operation of forklift lights and indicators • checks of brakes
Hazards may include (examples only):	• wet and iced operating surfaces • oil on operating surface

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• faulty brakes • workplace obstacles and other operational equipment and vehicles • damaged loads and pallets • other personnel in work area
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:	• company procedures • enterprise procedures • organisational procedures • established procedures
Personal protection equipment may include:	• gloves • safety headwear and footwear • safety glasses • two-way radios • high visibility clothing
Information/documents may include:	• goods identification numbers and codes, including IMDG markings and HAZCHEM signs • manifests, bar codes, picking slips, merchandise transfers, stock requisitions, goods and container identification • Australian Standard 2359 - Industrial Truck Code • manufacturers specifications for forklift and associated equipment • operations and service record book or log • workplace procedures and policies for the operation of forklifts • supplier and/or client instructions • ADG Code and material safety data sheets • regulatory requirements concerning the use of forklifts • award, enterprise bargaining agreement, other industrial arrangements • standards and certification requirements • quality assurance procedures • emergency procedures
Applicable procedures and codes may include:	• relevant state/territory regulations pertaining to the operation of forklifts • relevant codes and standards, including Australian Standard 2359 - Industrial Truck Code • relevant state/territory OH&S legislation • relevant state/territory fatigue management regulations • relevant state/territory environmental protection legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Determine management control process	1.1 Roles and responsibilities of business units or departments are clarified to ensure effective management of assets in line with organisation policy and procedures
	1.2 Specific reporting and monitoring standards required by enterprise requirements are understood and complied with
	1.3 Information systems that provide the information necessary for effective and efficient asset management for all levels within the organisation are maintained
	1.4 Regular audits are arranged, where appropriate to the organisation, to establish a continuous improvement cycle
2 Implement existing practices, procedures and systems	2.1 Assessments of current status of asset management activities within business units or departments are conducted regularly in accordance with asset management plan
	2.2 Milestones and targets are adhered to by the groups responsible
	2.3 Areas of difficulty are identified and strategies are followed to overcome these difficulties
3 Review service levels	3.1 Current levels of service provided by asset stock are critically examined
	3.2 Areas of possible improvement in the effectiveness and efficiencies of owning and operating assets are identified in consultation with relevant personnel
	3.3 Appropriate benchmarking is undertaken to enable continuous improvement in asset management strategies and practices

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Code of practice for working collaboratively with others particularly with those involved in inputting data into asset management systems
- Requirements for completing relevant documentation including asset management reports
- Benchmarking practices
- Quality management principles and procedures
- Organisational and industry functions
- Detail of different approaches to asset management, including theoretical knowledge
- Characteristics of different types of information systems used to provide and assist in asset management
- Procedures for operating electronic communications equipment
- Procedures for identifying equipment defects and assessing for appropriate action

Required skills:

- Communicate effectively with others when implementing asset management systems
- Consult and liaise as required when working with a team of staff
- Manage team and encourage team participation
- Use critical analysis in order to determine the best approach to asset management for the enterprise
- Use lateral thinking in order to solve problems as they arise, or to generate ideas
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities and convey reports to senior management
- Operate electronic communication equipment to required protocol
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Implement demand-driven supply chain management strategy	1.1 Responsibility for supply chain management within the organisation is assigned in accordance with supply chain management strategy 1.2 Technology and software for implementation of the supply chain management system is accessed and operationalised within the requirements of the strategy and budgetary allocation 1.3 Policies and procedures are designed to guide business relations and operations in accordance with the strategy 1.4 Supporting business processes are designed or re-designed to support implementation of the strategy 1.5 Support is provided to staff, customers and supply chain to assist in implementation of the supply chain management strategy
2 Manage supply chain	2.1 Communication and information exchange with strategic partners and suppliers is managed in accordance with the supply chain management strategy 2.2 Collaboration with supply chain organisations is facilitated to determine demand at each level of the supply chain in accordance with the supply chain management strategy 2.3 Sales and payments are managed in accordance with supply chain and risk management strategies, and legal and ethical requirements 2.4 Actions to build trust and foster a supply chain culture are implemented in accordance with the supply chain management strategy 2.5 Opportunities are identified to adjust policies and procedures to respond to the changing needs of customers, supply chain and the organisation
3 Evaluate and improve supply chain	3.1 Demand chain management and supply chain management are monitored in accordance with the supply chain management

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
effectiveness	strategy 3.2 The effectiveness of the supply chain is reviewed with each level of the supply chain, including staff and customers and areas identified for improvement 3.3 Business data and reports are used to compare outcomes, budgets, timelines and forecasts to actual performance 3.4 Technology performance is reviewed and recommendations are made for improvements to hardware, software and/or their use in accordance with strategy and budget 3.5 Feedback and evaluation results are used to plan and improve future supply chain management strategies

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislation, codes of practice and national and international standards, for example Trade Practices Act, Sale of Goods Act and contract law
- Specific OH&S issues relevant to goods and services purchased
- Legislation related to importation of commodities, if relevant
- Organisation policies and procedures related to supply chain management, purchasing, and contracting and tendering
- Business terms and conditions for purchasing, tendering and contracting
- Ethical behaviour
- Product knowledge related to goods and services required by the organisation
- Ways to build trust and collaboration as opposed to competition
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation

Required skills:

- Negotiate and liaise with suppliers and relevant stakeholders using verbal skills
- Use policy development and implementation support skills
- Use appropriate technology, including software
- Work with attention to detail and thoroughness

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required skills:

- Focus on the customer
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unplanned events such as problems arising during the implementation and management of the supply chain

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures

EVIDENCE GUIDE

	conducted through appropriate written/oral tests
	• Practical assessment must occur:
	  • through activities in an appropriately simulated environment at the registered training organisation, and/or
	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Improvements in the supply chain may include:	• the role of 'middlemen' or other middle supply chain elements being reduced or made redundant as newer more efficient supply chain methodologies and technologies are implemented • new value being created between producers and consumers
Demand chain management is:	• a collaborative process that involves determining how much product needs to be produced at each level of the supply chain through to the end consumer
Support to staff and others may include:	• policies, procedures and guidelines • intranet site information • workshops, briefings and training programs • written documentation in the form of manuals, help books, protocols • provision of a help-desk or contact persons • mentoring and coaching arrangements
Supporting business processes may include:	• data input • administration • ordering • delivering and receiving • accounting • payments
Supply chain management is:	• management of the entire cycle from raw materials to producers, component suppliers, manufacturers, wholesalers, third party service providers, retailers, customers and recyclers, plus freight, distribution and cash

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	flow
Depending on the organisation concerned, workplace procedures may be called:	• standard operating procedures (SOPs) • company procedures • enterprise procedures • organisational procedures • established procedures
Documentation and records may include:	• relevant OH&S and environmental protection regulations • quality assurance procedures • documentation of policies and procedures associated with managing the supply chain strategy within the organisation • dangerous goods declarations and material safety data sheets, where applicable • goods manifest • relevant Australian Standards and certification requirements
Applicable legislation and regulations may include:	• relevant industry codes of practice • relevant Australian and state/territory regulations and codes of practice • workplace relations regulations • Sale of Goods Act, Trade Practices Act • relevant legislation related to the importation of commodities, if relevant

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to implement and monitor logistics planning and process. It includes planning an efficient logistics operation; developing a contingency management strategy; producing operational schedules; and monitoring and coordinating systems for logistics operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan efficient logistics operation	1.1 Relevant Australian and international codes and regulations and workplace policies for logistics operation are identified
	1.2 Specifications and/or requirements for task outcomes are obtained, interpreted and, where necessary, clarified and applied to the development of a work plan
	1.3 Preliminary schedules are matched against operational capacity and capability of available transport systems, equipment and staff
	1.4 Strategies to address identified deficiencies in operational capability and availability are undertaken in accordance with workplace procedures
2 Develop contingency management strategy	2.1 Sequence of required activities is identified in accordance with company requirements
	2.2 Typical problems that may arise with logistics operations are identified and strategies for dealing with them determined
	2.3 Contingency management strategies for identified issues/incidents are established and evaluated including reference to previous scenarios of similar nature
3 Produce operation schedules for logistics	3.1 Resources are arranged in association with relevant Australian and overseas personnel to meet the operational schedules, policy and procedures
	3.2 Australian and international regulatory requirements, codes of practice and workplace procedures are identified and accounted for in operational schedule
	3.3 Records are stored in accordance with workplace procedures
4 Monitor and coordinate systems for logistics operations	4.1 Outcomes are checked and compared with planned objectives, task instructions and specifications to ensure all requirements are met
	4.2 Non-compliance with quality standards, planned processes or regulatory requirements is identified and appropriate action is initiated to report and rectify any identified problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	4.3 Customer concerns and suggestions for service improvements are acted upon in accordance with workplace procedures
	4.4 Any changes in Australian and international regulations and codes of practice relevant to export logistics are monitored, identified and appropriate action is initiated to ensure ongoing compliance of export logistics processes and systems

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice as they relate to the level and type of logistics operations undertaken by the enterprise
- Relevant OH&S and environmental procedures and regulations
- Australian and international regulatory, permit and licence requirements relevant to logistics
- Broad principles of supply chain management
- Business policies and plans including procedures for outsourcing components of operations and engaging additional resources
- Workplace policies including issue resolution and grievance procedures
- Coaching and mentoring approaches to support team members to share knowledge and skills

Required skills:

- Read and interpret local and international transport schedules, regulatory requirements, customer instructions, and workplace procedures and manuals
- Identify and solve problems that may arise during the planning and management of export logistics
- Provide leadership to others
- Plan and organise logistics operations
- Select and apply appropriate application of technology, information and communication systems and procedures
- Complete documentation related to work activities
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required skills:

- Develop and document contingency plans as part of the planning process
- Modify activities depending on differing operational contingencies, risk situations and environments

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and equipment, and
	  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation • As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests • Practical assessment must occur: • through activities in an appropriately simulated

EVIDENCE GUIDE

	environment at the registered training organisation, and/or • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Consultative processes may involve:	• other employees and supervisors • relevant authorities and institutions • management and union representatives • industrial relations and OH&S specialists • customers and agents
Documentation and records may include:	• regulations and codes of practice relevant to ADG code, including safeworking and local authority regulations and procedures • relevant OH&S and environmental protection regulations • workplace policies and procedures related to ADG code • quality assurance procedures • dangerous goods declarations and material safety data sheets, where applicable • goods manifest • relevant Australian Standards and certification requirements
Applicable legislation and regulations may include:	• Australian Marine Orders and the International Maritime Dangerous Goods Code • Dangerous Goods by Air regulations • Australian and International Explosives Codes • transport licence/permit requirements • export/import/quarantine/bond requirements • Marine/Aviation Orders • equal opportunity, equal employment opportunity and affirmative action • Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances • relevant state/territory OH&S and environmental

TLIR4003A Negotiate a contract

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to contract transport and distribution services in accordance with relevant regulatory requirements and workplace procedures. This includes negotiating the contract with a contractor, finalising the contract negotiations, and completing all enterprise contract requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be must be carried out in compliance with the relevant regulations, standards, legal requirements and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Negotiate contract with contractor	1.1 Requirements of the contract are clearly documented and understood by the relevant parties 1.2 Areas of ambiguity or concern are clarified and resolved 1.3 Negotiations are undertaken with selected contractor for the contracting of required goods/services on a 'without prejudice' basis 1.4 Conditions for service and/or supply of goods/services are agreed between the enterprise and the contractor including the determination of key performance indicators 1.5 Alternative contractors are negotiated with if agreement is unable to be reached with preferred contractor 1.6 Contract negotiations conform to established workplace requirements and relevant legislation
2 Complete contract negotiations	2.1 Contract documentation is drafted in accordance with relevant legislation, workplace procedures and negotiated conditions of service and supply 2.2 Technical support in the drafting of contracts is accessed where required 2.3 Contract documentation is signed and exchanged between the relevant parties
3 Complete enterprise	3.1 Documentation systems are established to ensure traceability of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
contract requirements	orders and financial transactions 3.2 Workplace systems that require interaction with contractors are identified and actioned 3.3 Quality assurance procedures for supplied goods/services are initiated 3.4 Contract and ancillary documentation is completed and stored in accordance with workplace procedures and, where applicable, regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, codes of practice and legal requirements relevant to contractual arrangements
- Relevant OH&S and environmental protection procedures and regulations
- Workplace procedures for the negotiation of a contract
- Problems that may occur during the negotiation of a contract and action that can be taken to report or resolve the problems
- Risks that may exist when negotiating a contract and ways of controlling the risks involved
- Focus of operation supply arrangements, resources, management and workplace operating systems
- Applicable aspects of contract law
- Processes for contract formulation and negotiation
- Workplace business policies and plans including procedures for maintenance of confidentiality
- Equipment applications, capacities, and configurations
- Resource availability including the competencies of individuals in the team/group
- Relevant contract documentation requirements

Required skills:

- Communicate effectively with others when negotiating a contract
- Read and interpret instructions, procedures, information and regulatory requirements relevant to the negotiation of a contract
- Prioritise work and coordinate self and others in relation to workplace activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required skills:

- Complete documentation related to the negotiation of a contract
- Operate electronic communication equipment to required protocol
- Provide leadership and work collaboratively with others when negotiating a contract
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when negotiating a contract in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate risks that may exist when negotiating a contract
- Plan and organise work activities
- Monitor work activities in terms of planned schedule
- Modify activities to cater for variations in workplace contexts and environment
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and apply appropriate technology and information systems
- Adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken:	• in various work environments in warehousing, storage, transport and distribution industries
Customers may be:	• internal or external
Operations may be conducted:	• by day or night
The workplace environment may involve:	• twenty-four hour operation • single and multi-site location • large, medium and small workplaces
Services, products, risks, work systems and requirements:	• potentially vary in different sections of the enterprise
Contracts may be for:	• singular or continuous supply of goods and/or services
Document/data interchange may be:	• electronic • paper-based

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

Clients/customers/suppliers may include:	• domestic and international contractors • corporations • individuals • government agencies
Contract must conform to:	• relevant legislation in regard to issues of probity and fair dealings
Consultative processes may involve:	• employees, supervisors and managers • contractors • suppliers and current or potential clients • legal representatives, financial managers, accountants • relevant authorities, government departments and institutions • representatives of other enterprises and organisations related to the international transfer of freight • industrial relations and OH&S specialists • other professional, maintenance and technical staff
Communications systems may involve:	• fixed and mobile telephone • radio • fax • email • electronic data transfer of information • mail, forms and internal memos
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:	• company procedures • enterprise procedures • organisational procedures • established procedures
Documentation/records may include:	• codes of practice and regulations relevant to the transport and distribution contractual arrangements • legal and contract documentation • workplace operating procedures and policies • operations manuals, job specifications and procedures and induction documentation • supplier and/or client instructions • Australian and International standards, criteria and certification requirements • communications technology equipment and oral, aural or signed communications • quality assurance standards and procedures • emergency procedures • relevant competency standards and training materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

Applicable procedures and codes may include:	• QA plans, data and document control • conditions of service, legislation and industrial agreements including workplace agreements and awards • regulations and codes of practice relevant to contractual arrangements • Australian and international regulations and codes of practice for the handling and transfer of dangerous goods and hazardous substances • relevant financial regulations • Australian and international standards and certification requirements • relevant state/territory OH&S legislation • relevant state/territory environmental protection legislation • relevant licence or permit requirements and associated regulations • relevant workplace relations legislation • relevant workers compensation legislation • equal opportunity, equal employment opportunity and affirmative action legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify purchasing requirements	1.1 Purchasing requirements are identified from orders and instructions in accordance with workplace procedures
	1.2 Quantities, quality of goods, price limitations and delivery requirements are determined or confirmed in consultation with appropriate personnel
2 Source purchase	2.1 Source/s of materials are identified from workplace preferred supplier lists or through networks and knowledge of local and/or overseas suppliers
	2.2 The supplier/vendor is advised of the requirements and specifications in accordance with site requirements
	2.3 Availability of supply is confirmed
	2.4 Difficulties in supply are reported in accordance with workplace procedures
3 Check costings	3.1 Alternative suppliers are contacted to check different costings
	3.2 Actual costs are compared to predicted costs
	3.3 Any recommendations regarding alternative suppliers are communicated to appropriate personnel following workplace procedures
	3.4 All records/reports are maintained in accordance with site requirements
4 Purchase materials	4.1 Capacity of supplier to meet price, quality and delivery expectations is checked
	4.2 Order is placed with supplier and delivery schedules are confirmed
	4.3 Appropriate orders and invoices are exchanged according to workplace procedures
	4.4 Materials are checked/inspected on receipt in accordance with site requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice, particularly those relating to trade practices and privacy of information
- Relevant OH&S and environmental procedures and regulations
- Enterprise purchase/sales records system
- Knowledge of different types of purchasing systems, their use and applications
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation, particularly in relation to systems implementation
- Code of practice for working collaboratively with others
- Typical problems encountered in implementing purchasing systems and possible solutions
- Steps involved in planning the work activities

Required skills:

- Communicate effectively with others when completing work activities
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to purchasing systems, including reports, and documenting of discrepancies
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, errors in data input, collection or measurement, particularly in relation to cost, order quantity or quality
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule and ensure purchasing system is operating within identified time constraints

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant legislation, codes of practice and national standards related to procurement, for example Trade Practices Act, contract law, sale of goods legislation, consumer protection legislation and legislation related to the import of goods and services, where relevant
- Relevant OH&S and environmental procedures and regulations
- All details of the organisation's purchasing strategies
- Product knowledge about the goods and services being supplied
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Code of practice for working collaboratively with others
- Steps involved in planning the work activities

Required skills:

- Communicate effectively with others, including verbal skills to negotiate and liaise with potential suppliers and relevant personnel, and written skills including report writing
- Read and interpret instructions, procedures, information and signs relevant to the planning of purchasing
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Work systematically with required attention to detail
- Promptly report and/or rectify any identified problems in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule
- Apply and use software appropriately

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required skills:

- Behave ethically and with probity in all aspects or work activities and adhere to industry and organisational codes of conduct

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and equipment, and
	  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation • As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests • Practical assessment must occur: • through activities in an appropriately simulated environment at the registered training organisation,

and/or

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Relevant personnel may include:	• internal users of purchased goods and services • owner and Board • CEO, managers, leaders, coordinators, supervisors and other persons authorised to commit the organisation to purchases • specialist personnel involved in purchasing, asset maintenance and finance
Purchasing methods may include:	• written quotations • invitation of open or select tenders • direct purchases using supply agreements • electronic trading • direct negotiations
Invitations to offer may include:	• specifications of goods and/or services required • criteria for selection of suppliers from offers received • draft contracts and agreements • delivery schedules • requirements for off-site storage and warehousing • required supplier capacity • quality requirements
Purchasing strategies include:	• the organisation's documented strategies for purchasing, covering policies, procedures, guidelines and documentation formats for purchasing from suppliers including entities owned by the organisation, partners, alliance members and local and distant suppliers • criteria for evaluating purchasing performance • methodology for evaluating purchasing performance • different policies, procedures and strategies for different dollar values of purchases • limits of authority to approve purchases • requirements for fairness and transparency in purchasing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• organisational and industry codes of conduct and ethics
Clarification of issues may include:	• requests for further information about specifications not responded to, misinterpretations of specifications and supplementary/add on products or services
Further information may include:	• requests about specifications not responded to, misinterpretations of specifications and supplementary/add on products or services • supplier briefings and presentations
Consultative processes may involve:	• other employees and supervisors • relevant authorities and institutions • management and union representatives • industrial relations and OH&S specialists
Communication in the work area may include:	• phone • electronic data interchange (EDI) • fax • email • internet • RF systems • oral, aural or signed communications
Depending on the organisation concerned, workplace procedures may be called:	• standard operating procedures (SOPs) • company procedures • enterprise procedures • organisational procedures • established procedures
Documentation and records may include:	• organisation's policies, procedures, strategies, methods and instructions relevant to procurement • lists of relevant personnel to consult • proformas and instructions used when preparing invitations to offer • quality assurance procedures • technical instructions
Applicable legislation and regulations may include:	• relevant legislation, codes of practice and national standards related to procurement, for example Trade Practices Act, contract law, sale of goods legislation, consumer protection legislation and legislation related to the import of goods and services, where relevant • relevant industry codes of practice • Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances • relevant state/territory OH&S and environmental

TLIR5005A Manage a contract

Modification History

Release 2. This is the second release of this unit in the TLI10 Transport and Logistics Training Package Version 4.0.

In Release 2 renumbering of the Elements and Performance Criteria were corrected.

Release 2 is equivalent to the previous release.

Unit Descriptor

This unit involves the skills and knowledge required to manage a contract. It includes confirming contract requirements; establishing a contract management system; and monitoring and evaluating the contract. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Nil.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

1	Confirm contract requirements	1.1 Consult relevant parties to identify their requirements of the contract
		1.2 Identify special provisions needed
		1.3 Identify whether the contract is straightforward or whether specialist legal advice is needed and obtain advice where required
		1.4 Contract specifications clearly identify the outcomes and measures required in the key performance areas
		1.5 Relationship with contractor is managed in accordance with organisational policy and procedures
2	Establish contract management system	2.1 Effective communication/information strategies are established
		2.2 Dispute and complaint system is established according to organisational policy and procedures
		2.3 Consistent and accurate records of contract progress are maintained
		2.4 Management strategy is documented, monitored for effectiveness and adapted as necessary during the life of the contract
3	Monitor contract	3.1 Regular inspections of contract services are undertaken to ensure compliance with specifications
		3.2 Regular planned progress meetings are conducted and documented between all contract personnel to ensure problems are identified and resolved early and documented
		3.3 Variations between the specified scope of services and the contract are identified and documented and relevant personnel are notified without delay
		3.4 Contract costs are monitored on a regular basis to ensure that the service is carried out within financial and contractual requirements
		3.5 Payments for contract services are authorised in accordance with the conditions of contract and organisation's contract administrative system
4	Evaluate the contract	4.1 Evaluation of contract performance is undertaken relative to planned performance measures and in consultation with stakeholders and suppliers
		4.2 Conclusions are detailed against agreed criteria and a complete picture of performance of the supplier, the organisation's procurement processes and value for money is provided

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.3 Evaluation is documented in accordance with organisational requirements to assist improvement in future procurement activities

4.4 Relevant parties are advised of evaluation outcomes in a timely manner in accordance with organisational guidelines

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice related to procurement, including law of contract, trade practices law and commercial law to a level sufficient to be able to manage the performance of a contractor
- Purchasing policies and practices of the organisation
- Whole-of-life considerations
- Disposals considerations
- Procedures for acceptance of goods or services
- Procurement approval processes
- Sufficient knowledge of finance to be able to manage a contract including negotiating price variations during the contract
- Performance management to be able to identify and manage compliance with the contract
- Confidentiality issues in relation to contracted services such as intellectual property
- Negotiation practice in procurement, including legal aspects
- Ethical issues
- Equal employment opportunity and anti-discrimination law
- Financial and accounting issues relevant to the contract.
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Code of practice for working collaboratively with others

Required skills:

- Communicate effectively with others when managing a contract
- Read and interpret instructions, procedures, information and the contract itself
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to contract management, including reports relevant to deliverables of stages and completion

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Negotiate solutions to problems as they arise during the management timeframe of the contract
- Modify activities depending on differing operational contingencies, risk situations and environments and negotiate those modifications where necessary with the contractor or agent
- Monitor work activities in terms of planned schedule

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying: • the underpinning knowledge and skills • relevant legislation and workplace procedures • other relevant aspects of the range statement
Context of and specific resources for assessment	Performance is demonstrated consistently over a period of time and in a suitable range of contexts Resources for assessment include: • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or • access to an appropriate range of relevant operational situations in the workplace In both real and simulated environments, access is required to: • relevant and appropriate materials and equipment, and • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment	Assessment of this unit must be undertaken by a registered training organisation • As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests Practical assessment must occur: • through activities in an appropriately simulated environment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Determine purchasing objectives	1.1 Industry benchmarks for purchasing are researched and analysed for suitability to organisation 1.2 Organisation's purchasing data and information are analysed 1.3 Consultations are undertaken with relevant stakeholders and personnel to inform development of purchasing objectives 1.4 Purchasing objectives in line with organisation's goals are drafted 1.5 Approval is gained from relevant personnel for purchasing objectives
2 Develop purchasing strategies	2.1 Purchasing strategies are developed, taking into account legal requirements and purchasing objectives 2.2 Purchasing criteria include the five rights 2.3 Human resource, financial and other plans are developed to implement purchasing strategies 2.4 Approval is gained for plans to implement purchasing strategies 2.5 Changes resulting from approval process are made to plans and strategies, as required
3 Implement purchasing strategies	3.1 Purchasing strategies are communicated to relevant personnel and stakeholders 3.2 Resources needed to implement purchasing strategies are accessed 3.3 Support is provided to implement purchasing strategies 3.4 Implementation of purchasing strategies by the organisation is monitored 3.5 Problems and issues arising during implementation are identified and addressed 3.6 Reports are provided to relevant personnel and stakeholders on implementation of purchasing strategies
4 Evaluate purchasing strategies and implement improvements	4.1 Implementation of purchasing strategies is reviewed 4.2 Improvements to purchasing strategies are identified from review process 4.3 Approval is gained to implement improvements to purchasing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	strategies
	4.4 Improvements are communicated to relevant stakeholders and support is provided to implement improvements
	4.5 Implementation of improvements is monitored and reviewed to determine effectiveness of improvements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislation, codes of practice, national and international standards, for example Trade Practices Act, contract law, sale of goods legislation, and legislation related to the import of goods and services, if relevant
- Occupational health and safety (OH&S) issues relevant to goods and services purchased by the organisation
- Organisation policies and procedures related to purchasing; contracting and tendering; business terms and conditions for purchasing, tendering and contracting; and ethical behaviour
- Product knowledge related to goods and services required by the organisation
- Information about industry benchmarks for purchasing, including information from peak bodies and industry associations and Australian Standards

Required skills:

- Communicate effectively with others when developing, implementing and reviewing purchasing strategies, including consulting and negotiating with stakeholders, using writing skills to document policies and procedures, and supporting staff to implement strategies
- Read and interpret instructions, procedures and information relevant to work activities
- Prepare reports appropriate to the development, implementation and review of purchasing strategies
- Plan and prioritise work activities and research and analyse data
- Develop human resource, financial and other plans when developing, implementing and reviewing purchasing strategies
- Use monitoring, review and evaluation skills when developing, implementing and reviewing purchasing strategies
- Identify and address any problems relating to the development, implementation and review of purchasing strategies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required skills:

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interaction with others

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to establish and develop a strategy and model for supply chain management. The establishment and development of supply chains in the materiel system are an integral support to the stated capability requirement. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

Application of the Unit

This unit was developed for materiel logisticians working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Determine the requirements of the supply chain	1.1 Components of the supply chain are identified and their links and inter-relationships are analysed in accordance with organisational policy and procedures
	1.2 Communication, data access, information sharing and technology requirements for an integrated supply chain are determined
	1.3 Requirements for collaborative planning, forecasting and tailored supply chains are identified
	1.4 Supply chain requirements are documented in accordance with organisational policy and procedures
2 Determine a strategy for supply chain management	2.1 Strategies for the supply chain are determined that cover outsourcing, choice of suppliers and partners, reshaping contractual relationships and the performance of the entire supply chain rather than individual supply chain segments
	2.2 Strategy includes matching supplier capability to customer requirements including strategies to optimise electronic information sharing and inventory risk management and minimise environmental impacts
	2.3 Strategies to build effective customer supplier relationships are identified
	2.4 Performance management strategies include customer satisfaction requirements across the supply chain continuum
	2.5 Supply chain management strategy includes strategic alliances, electronic business and electronic data interchange
	2.6 Strategy addresses legal, ethical, environmental and security issues relating to supply chain management
	2.7 Strategy includes the integration of supply chain processes into existing business processes
3 Develop a model for supply chain	3.1 Supply chain management options are researched, and strengths

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
management	and weaknesses of each option are identified 3.2 Supply chain management models are investigated and their requirements are analysed and compared with the capability and culture of the supply chain 3.3 Model for supply chain management is developed that meets the needs of the organisation including information flow, collaborative planning and forecasting in accordance with the organisation's supply chain management strategy 3.4 Supply chain management model is developed to support reduced inventory footprints, operating costs, faster cycle times and greater customer satisfaction rates

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Codification and cataloguing processes
- Industrial base capability
- Integrated logistics support
- International agreements
- Interoperability
- Legislative and regulatory environment, including environmental, sustainability issues as it pertains to supply chains
- Logistics governance
- Logistics support analysis principles and processes
- Materiel sustainment
- Performance measurement
- Planning processes
- Product knowledge related to systems and/or equipment in service in the organisation
- Organisational policy and procedures
- Organisational role relevant to supply chains
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to supply chains
- Supply chain concepts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required skills:

- Analyse and evaluate information, and determine how it may be impacted by the supply chain or how the supply chain might be impacted by the information being considered
- Apply logistics and project management knowledge in establishing supply chains
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation, and identify long-term factors and external considerations that need to be taken into consideration when establishing a supply chain
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify relevant information from the integrated logistics support program and materiel sustainment program that is relevant to the establishment of supply chains
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Source information on best practice approaches adopted in both the public and private sectors, demonstrating an insight into how industry operates and the business drivers that influence industry with their dealings
- Undertake performance measurement to enable objectives to be measured against defined parameters

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - analyse supply chain requirements
  - identify the requirements for plans and adjust them as necessary to ensure effective and efficient performance
  - initiate and efficiently monitor processes
  - initiate any remedial action required
  - communicate with stakeholders
  - prepare and provide relevant reports and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	documentation • Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment	• Competency should be assessed in the workplace or in a simulated workplace environment
	• Access is required to:
	  • computer and relevant software
	  • legislation, guidelines, procedures and protocols relating to materiel logistics
	  • plans
	  • workplace documentation

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation
	• Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
	• Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
	• Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
	  • authenticated evidence from the workplace and/or training programs
	  • case studies
	  • demonstration
	  • feedback from supervisors and peers regarding the candidate's ability
	  • observation
	  • portfolios
	  • projects
	  • questioning
	  • reviews or reports prepared by the candidate
	  • scenarios
	  • simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Supply chain may include:	• cash flow • entire cycle from raw materials to producers, component suppliers, manufacturers, wholesalers, third party service providers, retailers, customers and recyclers, freight, distribution • use of open and international supply chain management standards
Organisational policy and procedures may include:	• Australian Standards • international standards • logistics support analysis principles and processes • organisational instructions and standards
Data may include:	• electronic catalogues • electronic data interchange (EDI) • inventory data • logistics databases • product shipment data • real-time warehouse inventory status
Technology requirements may include:	• information technology to smooth the flow of data • radio frequency identification (RFID), barcoding and scanning technology • wireless application protocol (WAP) to allow personnel to access logistics databases via handheld or palm-sized devices

UEGNSG604B Fill gas cylinders

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the filling of gas cylinders for the distribution of LPG to customers. It includes persons; equipment; inspection and testing for correct date on cylinder; company's ownership; corrosion and impact damage; leaks; component and part damage; legislative and regulatory requirements for this standard as set out in AS 1596, AS 2030 and AS 3509 or its/their replacements.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to work sites where the distribution of liquefied petroleum gas occurs.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for filling of cylinders	1.1 Work instructions are received and confirmed
	1.2 Relevant requirements and established procedures to be followed for the work to be performed are discussed with all persons to establish and confirm the work schedule
	1.3 OHS, environmental and sustainable energy policies and procedures to be followed for the work to be performed are received and confirmed
	1.4 Suggestions to assist with the filling of gas cylinders are made to others involved in the work
	1.5 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures
	1.6 Scope of responsibility under the relevant work permit are received and confirmed according to requirements and established procedures with relevant persons
	1.7 Resources including equipment, tools and personal protective equipment required for the job are obtained and in working order according to established procedures
	1.8 Relevant responsibilities associated with First Aid and other related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures to ensure safety measures and followed in the instance of an incident.
	1.9 Client issues are referred to appropriate persons in accordance with industry and community standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA	
	1.10	Site is prepared according to given instructions and the work schedule for a quality outcome and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
2 Fill cylinders	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces or aloft, and use of power tools, techniques and practices are safely followed in accordance with given instructions and according to requirements confirmed to eliminate the prospects of incidents
	2.3	Operational knowledge for the filling of gas cylinders is confirmed to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements and established procedures
	2.4	The filling of gas cylinders is carried out in accordance with given instructions and established procedures
	2.5	Cylinders with defects such as leaks, damage etc are identified, marked and quarantined and identified hazards and OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Non-routine events are referred to the immediate authorised persons for directions according to established procedures
	2.7	Problems associated with the filling of gas cylinders are dealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Move and store	3.1	Cylinders are lifted and moved according to

ELEMENT	PERFORMANCE CRITERIA	
cylinders safely		standard operating procedures against the work schedule and anomalies reported to authorised persons
	3.2	Accidents and incidents are actioned and reported to authorised persons in accordance with established procedures
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Appropriate persons are notified of work completion according to established procedures
	3.6	Work completion records, report forms and data sheets are completed accurately in accordance with given instructions and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8)This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for the filling of gas cylinders.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G604 Fill cylinders B

G 2.1.1 Work in the gas sector

Evidence shall show an understanding of how work is

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

conducted in the Gas Industry, specifically:

- The Gas Industry in Australia
- Australian gas resources
- Types of gas and uses
- Combustion.

G 2.1.2 Identify roles of statutory authorities

Evidence shall show an understanding of the roles of statutory authorities (government agencies, both State and Federal) that operate in the Gas Industry, including identifying:

- Statutory bodies
- Roles of statutory bodies
- Employer and employee responsibilities to statutory bodies.

G 2.1.3 Identify employment roles and responsibilities

Evidence shall show an understanding of the roles of major groups in the Gas Industry, that is employers and employees, including:

- The role of the employer
- Industry associations
- Employer obligations to safety
- Identification of disadvantaged and minority groups in Australian society
- Employers obligations to persons from disadvantaged and minority groups
- Employers obligations to occupational health and safety
- The role of commonwealth and state training regulatory authorities and industry skills councils and state training advisory bodies
- Roles and responsibilities of gas industry employees
- The employment contract
- Working to safety requirements
- Work according to lawful commands
- Belonging to employee organisations
- How to work with people from disadvantaged and minority groups
- Understanding the employees obligations to occupational health and safety
- Sources of support.

G 2.1.4 Apply relevant OHS regulations, policies and procedures

Evidence shall show an understanding of the basic workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

health and safety legislation and how this applies to individuals in a Gas Industry workplace, indicated by the following:

- Employer's responsibilities to relevant OHS legislation
- Employee's responsibilities to OHS legislation and organisation's policies and procedures
- OHS policies and procedures at the worksite.
- Australian Standards, guidelines and codes of practice

G 2.1.5 Work safely in the gas industry by reducing risk and using correct PPE

Evidence shall show an understanding of how to work safely in the gas industry indicated by the ability to:

- Correctly interpret and comply with Safety Signs including workplace Hazards, Warnings and PPE requirements
- Correctly interpret gas markers
- Identify the correct PPE required for work in the Gas Industry
- Locate and comply with procedures for correctly checking, maintaining and storing PPE
- Apply the process of Hazard identification, Risk assessment and Control
- Complete Risk Assessment forms such as Work Permits and JHA’s, JSA’s, JSEA’s, SWM’s etc
- Report workplace hazards

G 2.1.6 Work safely with hazardous materials and equipment

Evidence shall show an understanding of what constitutes hazardous materials and the equipment and processes used to safely work with these indicated by the following:

- Identify hazardous materials and equipment
- Location and purpose of Material Safety Data Sheets (MSDS)
- Read, interpret and discuss MSDS
- Knowledge of methods for safe disposal of hazardous waste materials
- Read, interpret and discuss relevant manufacturer's specifications
- Use and dispose of hazardous materials and equipment safely
- Use of spill kits and PPE

G 2.1.7 Apply safe manual handling techniques in the workplace

Evidence shall show an understanding of manual handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

and how to apply this knowledge to handling heavy and awkward objects in a Gas Industry workplace, specifically:

- Principles for managing manual handling
- Characteristics and types of safe manual handling
- Safe manual handling techniques
- Manual handling and risk management

G 2.1.8 Control traffic at the work site

Evidence shall show knowledge and skills in coordinating traffic flow at a workplace where traffic control is required, that is, where work is conducted on or near a road, indicated by the following:

- Read and interpret relevant traffic authority regulations for traffic control at a worksite
- Identify signs and devices required to control pedestrians and traffic at a worksite depending on traffic flow volumes
- Apply techniques for controlling pedestrians and traffic at various worksites
- Use procedures for monitoring traffic controls
- Set up and monitor pedestrian and traffic controls

G 2.1.9 Respond to emergency and accident situations

Evidence shall show knowledge and skills in dealing with emergency or accident situations at a Gas Industry workplace, indicated by the following:

- Situations of accidents and emergency
- Comply with procedures for accidents and incidents
- Correct use of emergency equipment and procedures for a fire
- Correct use of breathing apparatus
- Correct use of gas detectors/oxygen monitoring devices
- Correct use of emergency equipment and procedures for a gas leak or vapour emission
- Report emergencies and accidents

G 2.1.14 Read and interpret Gas Industry documents

Evidence shall show an ability to read and interpret Gas Industry documents indicated by the following:

- Understand and use signs, symbols terminology and legends as used in gas industry procedures and documents
- Identify, locate and implement gas industry standards, policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Interpret and read basic drawings and diagrams

G 2.1.15 Complete workplace forms, and reports

Evidence shall show an ability to complete routine Gas Industry forms, memos and reports either written or electronic, indicated by the following:

- Identify, locate, interpret and use workplace forms, and reports
- Enter the required information accurately on gas industry forms and reports

G 2.1.16 Identify requirements of work activity

Evidence shall show ability to:

- Clarify expected outcomes of a work activity in a Gas Industry workplace
- Receive, clarify and respond to verbal work instructions for work activity
- Interpret and discuss an organisation's policies, quality requirements and specifications for work activity

G 2.1.17 Apply basic planning skills

Evidence shall show a demonstrated ability to apply basic planning skills in a Gas Industry workplace, indicated by the following:

- Develop checklists of tasks
- Prioritise tasks
- Identify resources required to complete tasks safely and efficiently
- Identify resource or scheduling conflicts and apply solutions
- Develop time lines to complete tasks

G 2.1.18 Conduct tasks to complete work activities

Evidence shall show ability to organise the activities to complete a job in a Gas Industry workplace, indicated by the following:

- Locate and organise equipment, tools and machinery required to complete tasks safely and efficiently
- Complete tasks according to planned sequences and within appropriate timeframes
- Understand quality assurance and work according to established and standard operating procedures

G 2.1.19 Review work activities

Evidence shall show an ability to review work activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

undertaken in a Gas Industry workplace, indicated by the following:

- Check work activities against a work plan
- Seek feedback on the outcome of work activities with appropriate persons
- Report outcomes of work activities in writing or orally according to enterprise procedures

G 2.1.20 Customer relations

Evidence shall show an understanding of the requirements for providing good customer relations to Gas Industry stakeholders, indicated by the following:

- Notify stakeholders of activities
- Communicate with stakeholders within scope of responsibilities
- Refer stakeholders to appropriate parties
- Demonstrate understanding of ring fencing requirements (if applicable)
- Keep the customer informed on job progress
- Provide good customer relations

G 2.1.21 Undertake problem solving

Evidence shall show an understanding of the requirements to undertake basic problem solving in a Gas Industry workplace, indicated by the following:

- Demonstrate problem solving and diagnostics methodology
- Identify possible solutions
- Recommend probable solutions and
- Apply basic problem solving techniques

G 2.1.22 Operate in confined spaces

Evidence shall show an understanding of the requirements to recognise and operate in confined spaces in a Gas Industry workplace, indicated by the following:

- Knowledge of the requirements of Legislation, Regulations, Australian Standards and enterprise specific procedures for safe working in confined spaces
- Ability to recognise what a confined space is and the entry safety requirements
- Ability to understand and comply with manufacturers' guidelines for the safe use of PPE used in confined spaces
- Understand how and when to use gas detectors for

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

confined spaces entry
- Understand how and when to use breathing apparatus and rescue and recovery equipment

Note: A confined spaces entry ticket would satisfy and exceed the requirements of this EKAS clause

G 2.1.25 Protect the environment

- Evidence shall show an understanding and ability to perform work in the gas industry in a manner that protects the environment indicated by the following:Understanding of the relevant Commonwealth/State/Territory environmental legislation, regulations and codes of practice
- Understanding of employee's and employer's responsibilities to relevant environmental legislation, regulations and codes
  - Understanding and compliance with enterprise procedures for flora control
  - erosion control
  - fauna control
  - the protection of indigenous and cultural heritage sites
- Understanding the role of regulatory bodies in monitoring environmental activities, risk and incident compliance
- Understanding community expectations for protecting the environment
- Correct use of environment protection procedures, records, inspections and incident reporting
- Identifying environmental hazards
- Assessing environmental risks
- Implementing environmental control measures
- Ability to respond to workplace environmental incidents

Note: Environmental damage can be caused by chemicals, oil, water contamination, carcinogenic agents, gases, dusts, waste contamination and noise

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

G 2.1.26 Communicate in the workplace

Evidence shall show an understanding and ability to communicate effectively in a Gas Industry work team indicated by the following:

- Effective use oral and written communications methods to achieve work related outcomes and solutions.
- Effectively receive, interpret and respond to workplace information and instructions
- Effectively convey and report work related information to fellow workers and customers
- Interact with fellow workers in a socially and culturally appropriate manner

G 2.6.1 Occupational Health and Safety for working with LPG

Evidence shall show an understanding of the specific OHS and working procedures required to work with LPG gas, indicated by awareness of:

- OHS and environmental legislation
- Australian Dangerous Goods Code (ADG)
- inspection procedures
- properties of LPG
- operational capacity of safety equipment on tankers
- standard operating procedures for dealing with LPG
- position and manoeuvrability of tankers
- appropriate ability to read meters
- and understanding of manufacturer's specifications
- out of gas procedures.

G 2.6.3 Operate equipment within its limitations

Evidence shall show an understanding of the specific knowledge required to operate equipment within its limitation in the LPG environment, indicated by the following:

- identify and understand the equipment used in the transporting of LPG
- use equipment for storing and transporting LPG.

G 2.6.6 Gas storage processes

Evidence shall show an understanding of the requirements to undertake tasks in the storage of LPG, indicated by the following:

- inspection procedures for cylinders and valves
- filling and storing of gas cylinders and valves.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Group No	The minimum number of items on which skill is to be demonstrated	Item List
A	At least 5	Cylinder trolleys Hose and fittings Leak detection devices Valves Gauges Spindles
B	All	Inspection tests to determine: Date on cylinder is within the required period Company's ownership Corrosion and impact damage Correct storage Valve threads are clean and in good condition Safety relief valve is capped and free from obstruction
C	All	Requirements from: State regulations/statutes Aust Dangerous Goods Code AS1596 or replacement AS2030 or replacement AS3509 or replacement AS 2865 Emergency procedures and response action
D	All	Work utilising relevant OHS legislation, regulations, codes of practice, policies and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		procedures Maintain a safe and clean workplace Work safely with hazardous materials and equipment Job safety analysis Apply safe manual handling techniques Respond to emergency situations Communicate effectively in the workplace Apply basic planning and job completion skills Operate equipment within its limitations Basic industry technology
E	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in filling gas cylinders.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG102B	Carry out work activities in a utilities industry work environment
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

UEGNSG104B	Comply with environmental policies and procedures
UEGNSG105B	Establish the work site

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to filling gas cylinders.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Appropriate Persons

Equipment (2)

Inspection Checks

Legislative Requirements (2)

Prerequisite Unit(s) **2)**

Competencies **2.1)**

There are no prerequisite units.

Employability Skills Information

Refer to the Evidence Guide

Elements and Performance Criteria Pre-Content

5) Elements describe the essential outcomes of a competency standard unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare for drafting	1.1	Work requirements are identified from request/work orders or equivalent and clarified/confirmed with appropriate parties or by site inspection
	1.2	Occupational Health and Safety standards, statutory requirements, relevant Australian standards, codes of practice, manufacturers' specifications, environmental requirements and enterprise procedures are identified, applied and monitored throughout the work procedure
	1.3	Relevant plans, drawings and texts are selected and interpreted in accordance with the work plan
	1.4	Where appropriate, the teams and individuals roles and responsibilities within the team are identified and, where required, assist in the provision of the on-the-job training.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2 Perform electrical drafting	2.1 Schematics drawn to indicate relative positioning of electrical/electronic components
	2.2 Electrical drawings are produced in accordance with all relevant specification requirements
	2.3 Electrical/electronic components selected from manufacturer's/suppliers catalogues to meet specification requirements
	2.4 Drawings are produced in accordance with relevant standards
3 Complete the work	3.1 Drawings checked to ensure that assembly is possible in accordance with specification requirements
	3.2 Drawings produced, registered and recorded in accordance with instructions/site documentation procedures
	3.3 Relevant personnel notified and existing drawings/specification sheets updated as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

6) This describes the Essential Skills and Knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired performing electrical / electronic drafting.

The extent of the Essential Knowledge and Associated Skills required follows:

Evidence shall show that knowledge has been acquired for safe working practices of:

- Occupational Health and Safety standards
- Relevant statutory requirements
- standards and codes of practice
- Detailed drafting concepts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- Technical drawings and data
- Engineering practices (Electrical)
- Engineering drawing equipment
- Electrical/electronic drawing symbols
- Electrical/electronic circuits
- Communication principles
- Computer Aided Drawing systems

Specific skills needed to achieve the Performance Criteria:

- Apply Occupational Health and Safety standards
- Apply relevant statutory requirements and codes of practice
- Interpret and use technical drawings and data
- Perform electrical/electronic drafting
- Use drawing equipment
- Use Computer Aided Drawing systems
- Communicate effectively
- Apply data analysis techniques and tools.

Evidence Guide

EVIDENCE GUIDE

8) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the Range Statement of unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this competency standard unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.**1**)

Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the

EVIDENCE GUIDE

competency in the normal work environment or in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines - UEP06". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
    - Apply sustainable energy principles and practices as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

specified in the Performance Criteria and Range Statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in 6) of this unit
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - The knowledge and application of relevant sections of: Occupational Health and Safety legislation; Statutory legislation; Enterprise/site safety procedures; Enterprise/site emergency procedures
  - Preparation for drafting
  - Electrical drafting
  - Use of engineering drawing equipment
  - Dealing with an unplanned event by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Competency Standards should be assessed in the workplace or simulated workplace and under the normal range of workplace conditions.

Assessment of this unit will be supported with documentary evidence, by means of endorsement stating type and application of work.

In addition to the resources listed above in Context of assessment', evidence should show competency working, in limited spaces, with different types of plant and equipment as well as different structural/construction types and methods and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

in a variety of environments.

Method of assessment

8.4)

This unit shall be assessed by methods given in Volume 1, Part 3 Assessment Guidelines.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

Nil

Key competencies

8.6)

Evidence that particular key competencies have been achieved within this unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	**Example of Application**	**Performance Level**
How are ideas and information communicated within this competency?	Refer to the following example of application: Explain ideas and actions, make suggestions for alternative actions and deal with contingencies and non-routine situations.	2
How can information be collected, analysed and organised?	Refer to the following example of application:	2
	Information with regard to operations, faults and maintenance may be observed and monitored for analysis and organised into records and reports.	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Key competencies	Example of Application	Performance Level
How are activities planned and organised?	Refer to the following example of application: Planning the required activity, to include co-ordination and use of equipment, materials and tools to avoid backtracking and rework.	2
How is team work used within this competency?	Refer to the following example of application: Co-ordinate activities of the team and provide appropriate support to other team members in completion of work tasks to meet the team's goals.	2
How are mathematical ideas and techniques used?	Refer to the following example of application: Calculation of time to complete routine projects, operations, tasks, estimation of distances, levels, loads and material requirements.	2
How are problem solving skills applied?	Refer to the following example of application: Determine solutions which focus on long and short-term resolution of work task problems.	2
How is use of technology applied?	Refer to the following example of application: Access, communicate, measure and provide information to monitor operations and performance of plant and equipment.	2

Skills Enabling Employment

8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and	Refer to the following example of application:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	using skills within a real workplace	Completion of tasks within an acceptable timeframe and performance with some supervision.
2	Learning to learn in the workplace	Refer to the following example of application:
		Comprehension and application of theoretical knowledge to well-developed skills.
3	Reflecting on the outcome and process of work task	Refer to the following example of application: Focused on improvement in own and other team member's performance in the workplace.
4	Interacting and understanding of the context of the work task	Refer to the following example of application: Working understanding of the processes and systems which apply to the workplace.
5	Planning and organising the meaningful work task	Refer to the following example of application: Achieving work tasks in a timely manner and ensuring that the work team achieves its stated work goals.
6	Performing the work task in non-routine or contingent situations	Refer to the following example of application: Seek advice and apply solutions to problems relevant to the workplace environment.

UEPMNT421A **Conduct technical inspection of process plant and equipment**

Range Statement

RANGE STATEMENT

7) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

Relevant legislation, standards or codes of practice may apply.

Dimensions may be notated in metric or imperial units.

Circuit diagrams will use electrical drawing symbols to Australian or equivalent standards.

Types of circuits drafted may include wiring, schematic and logic.

Drawing equipment used may include Computer Aided Drafting (CAD), conventional drawing tools.

Generic terms are used throughout this Training Package for vocational standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms are given in Volume 2, Part 1.

Unit Sector(s)
