MSMOPS363 Organise on-site work

Release: 1

MSMOPS363 Organise on-site work

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS363A Organise on site work

Application

This unit of competency covers the skills and knowledge required to organise and prepare for on-site work in a field situation, such as a remote mine site or large industrial complex where extensive permit or clearance systems exist.

The operator will be required to plan the work, ensure permits and other arrangements are in place to allow the on-site work to proceed safely, and set-up the tools, equipment and materials at the site.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes

Performance criteria describe the performance needed to demonstrate achievement of the element

1	Plan the work	1.1	Review the requirements of the work
		1.2	Arrange all necessary permits and permissions for site inspections and work
		1.3	Examine the site where the work will take place
		1.4	Identify plant and equipment isolations

- | | | | |
|---|----------------------------------------|-----|----------------------------------------------------------------------------------------------------------------------------------|
| | | 1.5 | Identify hazards and risk controls |
| | | 1.6 | Plan to minimise downtime, economically use materials and meet quality specifications |
| | | 1.7 | Plan work, including sequences, times, process stages, engineering controls and personal protective equipment (PPE) requirements |
| | | 1.8 | Prepare all necessary documentation and finalise the permissions and approvals for conducting the work |
| 2 | Prepare equipment, tools and materials | 2.1 | Identify equipment, tools and materials required |
| | | 2.2 | Arrange for supply of all tools, equipment and materials |
| | | 2.3 | Arrange for transport to site of all equipment, tools and materials |
| 3 | Set up work location | 3.1 | Assemble and check materials and tools for suitability for purpose |
| | | 3.2 | Establish required communication with site personnel |
| | | 3.3 | Establish a safe work area |
| | | 3.4 | Establish isolations and tag/lock out as required |
| | | 3.5 | Check tools, equipment and materials against site situation and conditions |

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work permits
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Work requirements

Work requirements are determined from one or more of the following:

- work orders
- specifications
- job descriptions
- designs
- other documents

On-site work

On-site work is done in situ, not in a factory or workshop, and includes one or more of the following:

- conveyor belt splicing and repairs
- rubber lagging of conveyor drums
- rubber lining of tanks

- polymer piping systems installation or repairs
- polymer constructions (e.g. fume cupboards or signs)
- refractory lining
- concrete casting

Isolations Isolations include one or more of the following:

- power supply
- tag locations
- process materials
- energy sources and
- equipment isolation system

Safe work area Safe work area includes areas for one or more of the following:

- scaffolding
- lifting gear
- lay down area
- work area
- other equipment in appropriate locations

Tools and equipment Tools and equipment include one or more of the following:

- manual handling aids
- hand winches
- portable power generators and vulcanising equipment
- knives and other cutting instruments
- portable hoists/lifting equipment not requiring any special permits or licences
- spanners, wrenches and hammers
- power operated hand tools, such as drills, cutting disks and sanders
- specialised tools for the job
- relevant PPE

Hazards Hazards include one or more of the following:

- manual handling hazards
- hand tools and handheld power tools (e.g. knife, cutting and grinding disk hazards)
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity

- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Non-routine problems

Routine problems must be resolved by applying known solutions.

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of:

- lack of accessibility
- equipment isolations
- logistics of materials and equipment to work site
- variations in materials and/or contamination of materials

Operational knowledge includes one or more of:

- procedures
- training
- technical information such as journals, engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people
