MSS402021 Apply Just in Time procedures

Release: 1

MSS402021 Apply Just in Time procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402021A Apply Just in Time procedures

Application

This unit of competency covers the skills and knowledge required to work in an organisation implementing and/or utilising Just in Time (JIT) procedures.

This unit applies to an individual working in an organisation following JIT who will need to follow procedures which are specific to JIT, such as the controlled flow of material (e.g. the use of kanban and elimination of waste). This will involve the individual in the application of the pull system to their job and the authorisation of product/material flows in accordance with procedures and their level of authority.

This unit requires the application of skills associated with planning and organising and self-management to deliver product on demand using necessary tools, equipment and processes to meet production requirements. The unit also requires an ability to recognise and act on problems that may interfere with meeting production demands.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------------------------|-----|---|
| 1 | Respond to indicator of demand | 1.1 | Identify pull of product through work role. |
| | | 1.2 | Recognise indicator of flow authorisation. |
| | | 1.3 | Identify production or service required. |

- | | | | |
|---|---|-----|--|
| 2 | Make products or deliver service to demand | 2.1 | Make product or deliver service as required by ticket. |
| | | 2.2 | Identify any factors likely to prevent demand being satisfied in own work or work of the team. |
| | | 2.3 | Take action in accordance with procedures. |
| 3 | Update demand information as required | 3.1 | Record information on ticket to procedures, as required. |
| | | 3.2 | Facilitate operation of flow authorisation as part of work. |
| 4 | Recommend improvements | 4.1 | Examine the operation of the JIT system as it relates to own work. |
| | | 4.2 | Identify areas for improvement. |
| | | 4.3 | Identify any additional personal skill requirements to implement JIT procedures. |
| | | 4.4 | Recommend improvements. |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Competitive systems and practices include one or more of:**
- lean operations
 - agile operations
 - preventative and predictive maintenance approaches
 - statistical process control systems, including six sigma and three

sigma

- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

JIT requires availability:

- precisely when the service, product or operation is to be produced or undertaken
- in the right quantity and at the right quality.

Product includes one or more of:

- a physical product
- a supporting utility service, such as water, gas and power
- some other service (e.g. cranes and forklifts).

Indicator of demand includes one or more of:

- kanban bin, ticket or similar
- some other indicator of demand pull which authorises production or movement of an item (in some plants, this may also include authorisation using SCADA software).

Procedures (written, verbal, visual, computer based, etc.) include one or more of:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.
