This unit of competency covers the skills and knowledge required to undertake table-based operations in footwear production.

The unit of competency applies to the preparation and production of components using table-based operations, working to defined procedures and methods. Table-based operations may apply to various aspects of footwear production processes, including preparation for cutting, preparation of uppers, preparation for assembly and making shoes and components.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare work pieces	2.1	Receive work bundle, check against ticket information and assess any follow-up action
		2.2	Assess quality of received component parts
		2.3	Lay out work pieces in correct sequence
3	Prepare workstation	3.1	Set up workstation according to work requirements and to achieve operator comfort and minimise fatigue
		3.2	Clean and check tools and carry out minor maintenance to ensure they are ready for operations
		3.3	Maintain records
4	Carry out table-based activities	4.1	Perform table-based operations, appropriate to production task, to quality specifications
		4.2	Use tools according to WHS practices to achieve specifications
		4.3	Use appropriate materials according to workplace procedures to achieve specifications
		4.4	Maintain records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Table-based operations include one or more of the following:

- preparation for cutting
- preparation of uppers
- preparation for assembly/making of shoes
- making of components
- making/fitting trims
- inspection of incoming materials

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTFP2011B Perform table-based operations

Assessment Requirements for MSTFP2011 Perform table-based operations

Modification History

Release 1. Supersedes and is equivalent to LMTFP2011B Perform table-based operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures and safe work practices
- applying relevant standards
- checking work against ticket information and workplace standards
- preparing workstation and work before commencing operations
- applying techniques for at least five (5) table-based operations, according to workplace requirements
- using processes and hand tools associated with table-based operations
- carrying out minor tool maintenance
- applying work health and safety (WHS) practices in work operations, with particular reference to adhesives and use of tools
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- characteristics of materials used in product construction
- processes used to prepare or construct components and pieces
- operating procedures for table-based production machines
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in performing table-based operations for footwear, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP3001 Cut leather by hand

Modification History

Release 1. Supersedes and is equivalent to LMTFP3001B Cut leather by hand

Application

This unit of competency covers the skills and knowledge required to cut leather by hand.

The unit of competency applies to the cutting of leather by hand working largely independently and being accountable for own results, including carrying out assigned tasks, coordinating processes and setting and working to deadlines. It includes simple and complicated pattern pieces and a range of leather qualities.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to cut leather**
- 2.1 Set up workstation according to specifications and workplace procedures
 - 2.2 Select cutting equipment and patterns and prepare according to specified work and sizes, and manufacturer instructions
 - 2.3 Collect, sort and lay out materials in preparation for cutting
 - 2.4 Routinely clean and maintain cutting board
 - 2.5 Identify problems or faults with patterns, knives and cutting boards and refer for repair
 - 2.6 Assess the leather for scars, marks and faults that impact on cutting
 - 2.7 Assess and sort leather to comply with requirements of different jobs and pattern pieces
- 3 **Cut leather by hand**
- 3.1 Use cutting knives and patterns to minimise waste
 - 3.2 Identify scars, marks and fault areas of high-quality leather and position patterns accordingly
 - 3.3 Position patterns to allow for identified flaws, nap of suede or other grain or print characteristics of leather
 - 3.4 Use cutting techniques to match pattern shape, size and leather quality
 - 3.5 Cut pieces precisely to size, and colour code, size and colour match
- 4 **Check quality of**
- 4.1 Check finished products against job specifications and

finished product	workplace quality standards
4.2	Address fault or irregularities
4.3	Maintain records of work

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Leather includes one or more of the following:

- buffalo
- cow
- calf
- kid
- kangaroo

- deer
- fish
- reptile
- emu

Assessment Requirements for MSTFP3001 Cut leather by hand

Modification History

Release 1. Supersedes and is equivalent to LMTFP3001B Cut leather by hand

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- preparing equipment and materials before commencing operations
- applying techniques at least five (5) times, including over the full range of cutting operations
- identifying faults in equipment and different types of leather
- positioning patterns to allow for identified flaws, nap of suede or other grain or print characteristics of leather
- rectifying redeemable faults
- adhering to the quality requirements of the enterprise
- planning and coordinating complicated cutting operations
- checking work against work specifications and enterprise standards
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- equipment required for both complicated and uncomplicated leather cutting operations
- cutting board maintenance
- leather types, their qualities and principles of cutting
- leather cutting techniques
- recognition of faults, scars and marks that impact on leather cutting
- use of patterns
- enterprise standards
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in cutting leather by hand, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP3002 Hand last shoe

Modification History

Release 1. Supersedes and is equivalent to LMTFP3002B Hand last shoe

Application

This unit of competency covers skills and knowledge required to last shoes using hand processes.

The unit applies to work involving the hand lasting of shoes, which requires operator dexterity and accuracy in regard to positioning and guiding of work. It involves working independently and being accountable for own results, including carrying out assigned tasks, coordinating processes, and setting and working to deadlines.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- | | | | |
|---|----------------------------------|-----|--|
| | requirements | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to hand last shoe | 2.1 | Receive and check work bundle against ticket information, assess quality of component parts and take any follow-up action according to workplace procedures |
| | | 2.2 | Set up workbench and seating to achieve operator comfort and minimise fatigue |
| | | 2.3 | Lay out work pieces in correct sequence and check tools |
| | | 2.4 | Check last or foot form before attaching insole and check upper for sizes |
| 3 | Hand last shoe | 3.1 | Attach insole to last by hand, positioning it to shape of last and to match size and pairs |
| | | 3.2 | Position toes and upper |
| | | 3.3 | Position upper precisely and manipulate through lasting process, check for correct operations and adjust, as required, to achieve quality requirements and to reflect construction technique |
| | | 3.4 | Make adjustments as required to achieve placement |
| | | 3.5 | Attach shanks and stiffeners and apply staples, as required |
| 4 | String last, as required | 4.1 | Punch holes in shoe bottom by hand or by machine, as required |
| | | 4.2 | Place upper on last and secure upper in place by tacks |
| | | 4.3 | Stitch opposite holes and pull tight by hand or machine using waxed string and remove tacks |

5	Check and despatch completed work	5.1	Assess quality and bundle, stack, store or despatch completed work according to workplace procedures
		5.2	Identify and record production faults and take appropriate action
		5.3	Complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Hand last includes one or**
- techniques for specific requirements of construction

more of the following:

technique, including:

- cement
- moulded
- welt
- Veldtschoen
- Moccasin
- Californian slip lasting
- string lasting

Assessment Requirements for MSTFP3002 Hand last shoe

Modification History

Release 1. Supersedes and is equivalent to LMTFP3002B Hand last shoe

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- checking work against ticket information and workplace procedures
- preparing workstation and work before commencing operations
- applying hand last processes on at least five (5) occasions appropriate to a range of construction techniques
- handling and positioning materials with dexterity and accuracy to match size and pairs
- complying with quality specifications
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- characteristics of typical leathers and how to minimise stretch and how to make allowances for variations
- range of construction techniques
- hand last process
- quality standards and practices
- workplace practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in hand last shoes, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP3003 Assemble shoe by hand

Modification History

Release 1. Supersedes and is equivalent to LMTFP3003B Assemble shoe by hand

Application

This unit of competency covers the skills and knowledge required to assemble shoes by hand.

The unit of competency applies to the assembly of shoes using mainly hand processes, working largely independently and being accountable for own results, including planning, carrying out assigned tasks, coordinating processes, and setting and working to deadlines.

It covers the assembly of components according to specifications but does not include the preparation of components, such as cutting, lasting, and making sole or heel. If these skills are required, then appropriate units should also be selected.

It involves the use of operations involving operator dexterity and accuracy in regard to the positioning and guiding of work.

Work is most likely to be conducted in a small business situation on custom-made shoes, however, it may also be conducted in medium to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTFP2001 Identify materials used in footwear production

Competency Field

Footwear production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to assemble shoe by hand	<p>2.1 Set up workstation and adjust tools, machines and equipment to suit construction process being used</p> <p>2.2 Make adjustments to machines to accommodate specific product requirements, according to workplace procedures</p> <p>2.3 Follow work ticket to collect and sort parts, including last, uppers, insoles, heels and soles</p> <p>2.4 Prepare and position parts and components appropriate to construction process</p> <p>2.5 Determine the sequencing of operations to meet job specifications and timeframes</p>
3	Assemble the shoe	<p>3.1 Position shoe components according to identified construction process</p> <p>3.2 Attach and assemble shoe components in correct sequence</p> <p>3.3 Slip shoe from last</p> <p>3.4 Finish off uppers, heels, edges and soles using</p>

appropriate hand and machine operations and materials

- | | | | |
|---|--|-----|---|
| 4 | Conduct final quality check and despatch work | 4.1 | Conduct final quality check to ensure work complies with job specifications and workplace quality standards |
| | | 4.2 | Make corrections to product as required to meet specifications |
| | | 4.3 | Despatch work to next stage and maintain records |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Components include one or more of the following:**
- soles
 - shanks
 - filler blocks
 - uppers
 - heels
 - linings

Assessment Requirements for MSTFP3003 Assemble shoe by hand

Modification History

Release 1. Supersedes and is equivalent to LMTFP3003B Assemble shoe by hand

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- checking work against ticket information and workplace practices
- preparing workstation and work before commencing construction operations
- planning, sequencing and coordinating operations involved in assembly of shoe components according to required construction process and timeframe
- assembling at least five (5) pairs of shoes according to specifications
- carrying out all operations using machines and processes required for the assembly of shoe components
- making adjustments to machines to meet requirements and procedures
- checking product against standards
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- footwear production processes and machines requiring operator dexterity in handling and positioning of work
- materials used in assembling shoes, including adhesives, solvents and abrasives, and safety requirements of their use
- materials, stitch types, needle types and thread qualities
- sequence of operations in shoe assembly
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in assembling shoes by hand, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP3004 Contribute to footwear production improvement processes

Modification History

Release 1. Supersedes and is equivalent to LMTFP3004B Contribute to footwear production improvement processes

Application

This unit of competency covers the skills and knowledge required to review production processes used in footwear manufacture, and contribute to identifying and implementing improvements.

The unit of competency applies to providing input to improvement of processes in a range of footwear production environments, including volume and custom production. Typically this skill would be performed in a supervisory capacity and apply across the range of footwear production processes.

Improvement contributions may be made to any part of the production process, such as production practices, documentation, supply, despatch, operator practices, safety, quality and housekeeping.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSS402051 Apply quality standards

Competency Field

Footwear production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify key elements of production requirements	<p>1.1 Identify key customers and their needs and expectations</p> <p>1.2 Distinguish how footwear production processes contribute to the value chain</p> <p>1.3 Identify key suppliers and their role in the value chain</p> <p>1.4 Identify quality standards for critical points of production process</p> <p>1.5 Identify production requirements and workplace procedures</p>
2	Review production processes	<p>2.1 Identify housekeeping practices and assess how well they meet standards</p> <p>2.2 Identify work health and safety (WHS) practices and assess if they conform with organisational standards</p> <p>2.3 Identify production waste, assess waste handling and disposal practices against environmental principles, and identify opportunities for waste reduction</p> <p>2.4 Identify methods of monitoring production outcomes and assess footwear production outcomes against production goals</p>
3	Identify improvement opportunities	<p>3.1 Identify improvement opportunities and make suggestions for improving processes</p> <p>3.2 Communicate with appropriate personnel to identify implications of improvement and test outcomes</p> <p>3.3 Provide reports, records and recommendations for improvement</p>

- | | | | |
|---|--|-----|---|
| 4 | Implement improvement to production processes | 4.1 | Identify desired result of improvement and establish method of measuring outcome |
| | | 4.2 | Identify and implement methods of addressing any possible negative implications |
| | | 4.3 | Conduct consultation with relevant personnel to communicate improvement |
| | | 4.4 | Implement and monitor improvement and assess how effectively it achieves desired result |
| | | 4.5 | Make adjustments to improvement, as required |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Footwear production processes include one or more of the following:**
- receiving and processing of materials and components
 - identification of materials quality
 - specialist machine use, such as sole moulding
 - repairs and alterations
 - testing and inspecting
 - despatch, storage and packing
 - finishing processes
- Suppliers include one or more of the following:**
- suppliers of materials and components
 - personnel, specialist support and contractors
 - despatch, warehousing and transport operators
 - publicity and promotional suppliers
 - machinery and equipment suppliers and repair contractors
- Test outcomes of improvement opportunities include one or more of the following:**
- trial
 - verify
 - pilot
 - measure against research
- Appropriate personnel include one or more of the following:**
- managers
 - supervisors
 - colleagues
 - specialist staff

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTFP3004B Contribute to footwear production improvement processes

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTFP3004 Contribute to footwear production improvement processes

Modification History

Release 1. Supersedes and is equivalent to LMTFP3004B Contribute to footwear production improvement processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- reviewing footwear production processes
- identifying and assessing improvement opportunities
- identifying methods of monitoring production outcomes
- assessing footwear production outcomes against production goals
- evaluating implications of improvement
- addressing any possible negative implications
- communicating effectively within the workplace with colleagues and management on process improvement options and outcomes
- conducting quality checks to identify outcomes of improvements
- applying workplace procedures
- sequencing operations
- maintaining accurate records.

Knowledge Evidence

- Evidence must be provided that demonstrates knowledge of:
- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- quality standards applying to footwear handling procedures, construction processes and finished product
- effective communication to review processes and seek improvements
- footwear production processes
- production requirements:
 - timing requirements
 - quantity
 - quality
 - specific order requirements

- procedural requirements
- work health and safety (WHS)
- personnel
- resource use
- suppliers in supply chain
- production waste, waste handling and disposal, and waste minimisation:
 - unusable materials and off-cuts
 - delays
 - movement and transport
 - poor process design
 - inventory
 - inefficient performance of a process
 - making defective items
- impact of incorrect production techniques
- production suppliers and value chain concepts
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in contributing to footwear production improvement processes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP3005 Supervise footwear production operations

Modification History

Release 1. Supersedes and is equivalent to LMTFP3005B Supervise footwear production operations

Application

This unit of competency covers the skills and knowledge required to supervise operations in a designated area within a footwear production enterprise, to ensure team operations meet production requirements.

The unit of competency applies to a first line, team leader supervisory role in a team or work area within a footwear production enterprise. The unit requires extensive knowledge and experience in working with footwear production machines, equipment and processes. Supervisory responsibilities include overseeing the team's production quality and throughput, and ensuring training, team relations, resource allocation and work organisation support team productivity.

The unit of competency includes providing technical support to operators, overseeing production processes to ensure they meet organisational and safety standards, and providing communication links between staff and management.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify scope of supervisory responsibility	1.1	Identify machine operations, staff, resources and production processes within work area
		1.2	Identify scope and limitations of supervisory role
		1.3	Identify production targets
2	Provide technical support to operators	2.1	Identify operator roles and allocation of personnel
		2.2	Monitor operator productivity and identify where training or support is required
		2.3	Communicate with appropriate personnel to identify training needs and organise training
		2.4	Address technical problems raised by operators regarding machinery, product quality and operational safety
		2.5	Provide technical support to operators for skills and knowledge associated with production of footwear products
3	Lead team activity	3.1	Communicate production standards to team members
		3.2	Monitor work allocation requirements to maintain optimum production efficiency
		3.3	Use suitable language to communicate targets and procedures to relevant personnel
		3.4	Monitor and support effective team communication
		3.5	Monitor team compliance with work health and safety (WHS) practices and workplace procedures
		3.6	Monitor production output against targets and take necessary action to resolve problems when required

- | | | | |
|---|--|-----|--|
| 4 | Liaise with production areas and management | 4.1 | Maintain liaison with downstream and upstream production areas to ensure production is efficient and meets quality standards |
| | | 4.2 | Keep management informed of progress and any issues that may affect production outcomes |
| | | 4.3 | Maintain ongoing liaison with management to guide production supervision |
| | | 4.4 | Monitor movement of materials through production process to assess progress |
| | | | |
| 5 | Maintain documentation | 5.1 | Identify documentation procedures for each step of production process |
| | | 5.2 | Monitor compliance with documentation requirements |
| | | 5.3 | Complete production documentation |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output

- housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Production processes include one or more of the following:**
- machines and equipment used in the various sectors of the footwear production industry, including:
 - moulding
 - sewing machines
 - cutting machines
 - robots
- Address problems includes one or more of the following:**
- communicating requirements to operators
 - providing coaching or other relevant support
 - referring to appropriate personnel
 - allocating appropriate staff or resources
 - implementing disciplinary procedures
 - problem solving team or technology issues
- Issues which may affect production outcomes include one or more of the following:**
- staffing
 - machinery
 - materials
 - schedules

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTFP3005B Supervise footwear production operations

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTFP3005 Supervise footwear production operations

Modification History

Release 1. Supersedes and is equivalent to LMTFP3005B Supervise footwear production operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- allocating resources (machines, staff, materials and production processes)
- clarifying and communicating tasks, roles and responsibilities
- allocating work for operators or team members
- identifying and reporting problems with work flow
- solving problems
- communicating effectively with other employees and management
- implementing appropriate ways of correcting non-compliance and inefficiencies
- applying techniques to monitor production work
- providing technical support
- monitoring work health and safety (WHS) practices in work operations
- checking production outputs against specifications
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- production and work flow system in the workplace
- production resources (machines, staff, materials and production processes)
- tasks, roles and responsibilities of relevant personnel
- factors and constraints that impact on effective workflow
- ways of controlling factors and constraints
- efficient operation of all footwear production machines and processes within area of supervision
- quality assurance standards and procedures
- training requirements and processes

- team dynamics
- resource allocation and work organisation
- WHS legislation
- WHS practices, including hazard identification and control measures
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in supervising footwear production operations, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP3006 Apply foot anatomy principles to footwear production

Modification History

Release 1. Supersedes and is equivalent to LMTFP3006B Apply foot anatomy principles to footwear production

Application

This unit of competency covers the skills and knowledge required to identify and describe the main structure and functions of the foot and to apply these principles to the design and production of footwear.

The unit of competency applies to identifying the structure and functions of the foot and how normal footwear design features meet these requirements. The unit of competency does not cover abnormal anatomy or medical conditions affecting feet. The retailing, alteration and manufacture of footwear for clients needing shoes or prostheses for surgical and medical conditions are covered by the Medical Grade Footwear units and qualifications.

The unit applies to small manufacturers making footwear by hand and dealing direct with the public.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear production

| 1 | Identify the structure and functions of the foot | <ul style="list-style-type: none"> 1.1 Identify the main foot structures 1.2 Describe functions of main foot muscles 1.3 Describe functions of main tendons and ligaments in foot 1.4 Identify the main functions of the foot |
| 2 | Identify the main features and functions of footwear | <ul style="list-style-type: none"> 2.1 Identify types of footwear and distinguish their different uses 2.2 Describe main features of footwear 2.3 Identify processes used to produce footwear features 2.4 Identify examples of flat, wide and different sized feet where specialised footwear may be required |
| 3 | Assess the impact of footwear features | <ul style="list-style-type: none"> 3.1 Identify the effect of poor-fitting or poorly made shoes 3.2 Relate features of footwear to foot function and structure 3.3 Assess features of footwear product and their capacity to support ideal performance of foot 3.4 Identify examples of possible surgical or medical conditions which would trigger referral to a medical practitioner, podiatrist or medical grade footwear practitioner 3.5 Identify quality processes used in workplace to ensure production of optimal footwear products |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - standard operating procedures (SOPs)
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - work health and safety (WHS) practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Processes to produce footwear features include one or more of the following:**
- designing
 - developing patterns and lasts
 - stitching
 - selection of materials
 - manufacture of uppers, inner soles, linings and soles
 - quality checks

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTFP3006B Apply foot anatomy principles to footwear production

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTFP3006 Apply foot anatomy principles to footwear production

Modification History

Release 1. Supersedes and is equivalent to LMTFP3006B Apply foot anatomy principles to footwear production

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- identifying foot structure and function
- identifying footwear features and function
- identifying at least five (5) different footwear products and relating their functions and features to the anatomy of the foot
- identifying the effect of poor-fitting or poorly made shoes
- assessing the impact of footwear features
- identifying medical or surgical conditions that may require referral to a specialist practitioner
- identifying quality processes used in workplace to ensure production of optimal footwear products.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- structures and function of the foot:
 - muscles
 - bones
 - ligaments
 - joints
 - circulation systems
 - nervous system
- role and function of the foot:
 - balance
 - walking

- standing
- running
- climbing
- specific sports
- kicking
- jumping
- features and function of footwear:
 - steel caps
 - moulded soles
 - heels
 - reinforcement
 - lining
 - laces and buckles
 - elastic sides
 - size
 - shape
- types of footwear and their relationship to anatomy of the foot:
 - safety boots
 - work boots and shoes
 - fashion shoes
 - everyday wear shoes
 - walking boots and shoes
 - sport shoes
- footwear production processes
- surgical and medical conditions:
 - injuries
 - health conditions, such as diabetes
 - amputations
 - diseases affecting the foot or ankle
 - sizing
 - foot muscle and structural features
 - deformities
- quality features of footwear production processes.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in applying foot anatomy principles to footwear production, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP4001 Develop design for custom-made footwear

Modification History

Release 1. Supersedes and is equivalent to LMTFP4001A Develop design for custom made footwear

Application

This unit of competency covers the skills and knowledge required to develop a design for custom-made footwear.

This unit of competency applies to interpreting design requirements in consultation with client, determining specifications and developing the design for custom-made footwear.

Work may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Research footwear designs	1.1	Identify and access information sources on footwear design and construction techniques, to ensure knowledge is current
---	----------------------------------	-----	--

- 1.2 Analyse current and historical trends in footwear design and construction techniques
 - 1.3 Analyse impact of footwear componentry designs on footwear
 - 1.4 Analyse footwear designs for various purposes
 - 1.5 Analyse current industry practices and relate to own work
- 2 **Determine design requirements**
- 2.1 Confirm purpose of footwear with client
 - 2.2 Confirm requirements for footwear design with client
 - 2.3 Use communication skills to identify key priorities of client
 - 2.4 Use design tools to develop design concepts
 - 2.5 Explore preliminary design concepts with the client using sketches, pictures, software tools or sample shoes
- 3 **Measure and assess foot**
- 3.1 Take measurements of foot in accordance with work health and safety (WHS) practices to determine footwear size requirements
 - 3.2 Perform gait analysis to obtain baseline data of client's walk pattern
 - 3.3 Conduct trial fit using commercial footwear or client's own footwear according to workplace procedures
- 4 **Confirm footwear design**
- 4.1 Calculate cost estimates and provide to client
 - 4.2 Finalise design to be used for footwear production and confirm order
 - 4.3 Document design and requirements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Design tools include one or more of the following:

- software programs
- electronic tools
- storyboards
- catalogues and pictures
- drawings and illustrations

Requirements include one or more of the following:

- budget
- timing
- costs
- quality
- materials
- colour

- footwear components

Assessment Requirements for MSTFP4001 Develop design for custom-made footwear

Modification History

Release 1. Supersedes and is equivalent to LMTFP4001A Develop design for custom made footwear

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- communicating with client to determine footwear requirements
- exploring design concepts
- using sketches, pictures, software tools or sample shoes to determine at least three (3) design concepts
- taking accurate measurements and performing foot analysis to assess requirements
- conducting trial fit according to workplace procedures
- calculating cost estimates
- developing final design specifications for at least three (3) examples of custom-made footwear
- applying work health and safety (WHS) policies in work operations
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- elements and principles of design
- design tools
- footwear construction
- materials used in footwear production
- specification requirements and costing procedures
- WHS and environmental aspects of relevant workplace activities
- foot measurement and gait analysis techniques
- workplace procedures and reporting processes
- quality practices
- workplace procedures

- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in developing designs for custom-made footwear, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP4002 Make patterns for custom-made footwear

Modification History

Release 1. Supersedes and is equivalent to LMTFP4002A Make patterns for custom-made footwear

Application

This unit of competency covers the skills and knowledge required to develop patterns for custom-made footwear designs for a full range of leathers and other appropriate textiles and materials.

The unit of competency applies to making patterns for custom-made shoes and may involve the selection and modification of existing patterns. Design specifications may be workplace or client initiated. Discretion and judgement is required for both self and others in planning and selecting processes, procedures and outcomes.

The work responsibilities of the patternmaker will vary in scope according to the size of the workplace, the range of designs and specialisation in the workplace, workplace quality standards and the degree of autonomy of the patternmaker.

Patternmakers may have responsibility for the development of prototypes or toiles, making samples and testing patterns, developing the design and estimating leather and material usage.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to make patterns for custom-made footwear	<p>2.1 Interpret design requirements from design brief and determine design specifications</p> <p>2.2 Clarify patternmaking requirements</p> <p>2.3 Select samples of required materials and footwear components for use in patternmaking</p>
3	Develop patterns for custom-made footwear	<p>3.1 Make pattern specifications based on client's measurements and in line with budget, timeframe and costs</p> <p>3.2 Select appropriate techniques to prepare pattern and achieve design according to workplace procedures</p> <p>3.3 Prepare patterns with reference to last construction</p> <p>3.4 Make initial upper design on 3-D last</p> <p>3.5 Accurately translate information from 3-D last master to 2-D working patterns</p> <p>3.6 Produce standard and working patterns of both upper and sole in line with specifications, accepted standards and construction tolerances</p>

- 3.7 Review pattern and make modifications that accurately reflect selected materials, shoe style and specific client requirements
- 4 **Test pattern**
 - 4.1 Make a mock-up or diagnostic fitting with allowance for difference between diagnostic and final materials
 - 4.2 Evaluate diagnostic fitting and review proposed construction and materials in line with design and fit

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Design specifications include the following:**
- production specifications
 - materials
 - colours
 - components

Assessment Requirements for MSTFP4002 Make patterns for custom-made footwear

Modification History

Release 1. Supersedes and is equivalent to LMTFP4002A Make patterns for custom-made footwear

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- interpreting design brief and confirming specifications
- identifying and defining design lines and features
- choosing patterns to suit specifications and measurements or developing new patterns to suit specifications on at least three (3) occasions
- modifying, checking and testing at least three (3) patterns according to selected materials, shoe style and specific client requirements
- making prototype or toile
- making and evaluating a mock-up of proposed construction and materials in line with design and fit, to confirm pattern
- communicating effectively with design team and customers
- applying work health and safety (WHS) policies in work operations
- applying workplace procedures
- maintaining accurate records

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- principles and concepts of patternmaking
- general principles of custom-made footwear design
- cost efficiency in relation to patternmaking
- range of typical leathers, fabrics, including weight and other characteristics
- toile production
- standard and working patterns
- procedures for marker making
- practices for cutting and construction

- WHS and environmental aspects of relevant enterprise activities
- workplace procedures and reporting processes
- WHS practices
- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in making patterns for custom-made footwear, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP4003 Prepare, cut and sew custom-made shoe components

Modification History

Release 1. Supersedes and is equivalent to LMTFP4003A Prepare, cut and sew custom-made shoe components

Application

This unit of competency covers the skills and knowledge required to measure, cut and sew custom-made shoe components.

This unit of competency applies to the preparation, cutting and sewing of custom-made shoe components, including stuff cutting, making or modification of lasts, making of soles, sole and heel units, and insoles. Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes. The unit of competency applies to workplace activities associated with producing custom-made shoes and the degree of complexity will relate to leather and other materials being used and intricacy of design.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Confirm custom-made footwear requirements**
 - 2.1 Review and confirm client requirements and design specifications
 - 2.2 Determine materials required for production, confirm availability and order special or one-off materials from appropriate suppliers
 - 2.3 Review pattern to ensure compliance with design requirements
 - 2.4 Clarify design features with patternmaker, if required, and identify technical aspects of production

- 3 **Prepare shoe last**
 - 3.1 Construct an original last from selected materials to produce a last with the desired shape and dimensions
 - 3.2 Make inside build-ups (additions), form to the last and shape to comply with design specifications
 - 3.3 Trial fit build-up components to review fit and function, modify if required, and attach
 - 3.4 Check the last and any build-up components, and make adjustments and refinements, if necessary, in line with design requirements and established production standards
 - 3.5 Check shoe last for construction faults and compliance with design specifications

- 4 **Prepare and make**
 - 4.1 Prepare components according to workplace procedures
 - 4.2 Correct size cut pieces, mark, count and stamp according

	components		to work ticket and to workplace specifications
		4.3	Prepare components using appropriate method and equipment and according to workplace requirements
5	Cut or click leather	5.1	Cut parts manually or by machine to enterprise quality standards in relation to material flaws and individual pairs selected
		5.2	Click pairs and cut manually or by machine to achieve best yield according to appropriate allowance
		5.3	Check work against pattern and design requirements
6	Prepare and make the upper	6.1	Prepare upper according to workplace procedures
		6.2	Process upper manually or by machine
		6.3	Machine seams and trim threads to achieve specified results
		6.4	Check upper against pattern and design requirements
7	Conduct final quality check for operations	7.1	Check final product meets workplace quality requirements
		7.2	Deal with production faults in accordance with workplace procedures
		7.3	Bundle uppers and component parts, stack, store or despatch in accordance with workplace procedures
		7.4	Document process and faults

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Last includes one or more of the following:

- slip on
- court
- boot
- sandal
- inner shoes
-

Tools and equipment include one or more of the following:

- knives and cutting tools
- stamps
- sewing machines
- threads
- needles
- hand tools
- machine tools
- computers
- mechanical duplicators

Assessment Requirements for MSTFP4003 Prepare, cut and sew custom-made shoe components

Modification History

Release 1. Supersedes and is equivalent to LMTFP4003A Prepare, cut and sew custom-made shoe components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- clarifying design requirements and cutting leather and other materials
- Operating appropriate tools and equipment used in the production of custom made shoes
- constructing an original last from selected materials to produce a last with the desired shape and dimensions
- shaping and modifying lasts to meet specifications
- checking the last and any build-up components, and making adjustments and refinements, if necessary, in line with design requirements
- preparing components using appropriate method and equipment
- cutting parts manually or by machine to enterprise quality standards
- preparing and sewing the upper manually or by machine
- dealing with production faults in accordance with workplace procedures
- checking final product meets workplace quality requirements
- maintaining accurate records of faults, products and processes
- applying all the relevant work health and safety (WHS) practices when working in the leather goods production industry.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- anatomy of foot and ankle
- characteristics of last:
 - slip on
 - court
 - boot
 - sandal

- inner shoes
- last-making methods and materials
- shoe construction methods
- design requirements:
 - colours
 - quantities
 - quality requirements
 - size
 - componentry
 - measurements
 - style
- characteristics of typical leathers, fabrics and other materials used in shoe production
- operating procedures for cutting and machining leather
- tools and equipment:
 - knives and cutting tools
 - stamps
 - sewing machines
 - threads
 - needles
 - hand tools
 - machine tools
 - computers
 - mechanical duplicators
- quality standards and leather handling procedures
- material flaws of leather, including veins, growth marks, tick and scars
- WHS and environmental aspects of relevant workplace activities
- workplace procedures
- processes for communicating with clients and other personnel
- WHS practices, including hazard identification and control measures
- practices for recording and reporting outcomes.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in preparing, cutting and sewing custom-made shoe components, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP4004 Assemble and finish custom-made shoe

Modification History

Release 1. Supersedes and is equivalent to LMTFP4004A Assemble and finish custom-made shoe

Application

This unit of competency covers the skills and knowledge required to assemble and finish custom-made shoes.

This unit of competency applies to manual or machine assembly and finish of custom-made shoes according to pattern specifications. The degree of complexity will depend on the leather and other materials used and intricacy of the design. Discretion and judgement may be required for both self and others in planning and selecting processes, procedures or outcomes.

Competency must be demonstrated in relevant machine operations, including the setting of machines within specified tolerances and in accordance with manufacturer specifications, selection of materials, stitch types, needle threads and their qualities.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Perform preparatory work on shoe	2.1	Set up workstation according to specifications and WHS practices
		2.2	Use discretion and judgement to select, interpret and apply procedures and appropriate assembly processes
		2.3	Follow work ticket to collect, sort, assemble and reassemble parts
		2.4	Undertake conditioning to reflect workplace procedures and according to construction technique
		2.5	Block upper, round or rand, as required, to conform to the last shape
		2.6	Insert counter or stiffener in accordance with workplace procedures and construction techniques
		2.7	Prepare insoles in accordance with specifications and to reflect construction techniques being used
		2.8	Heat activate pre-cemented insoles and uppers, as appropriate
		2.9	Solvent wipe bonding area where roughing could damage the backing fabric
		2.10	Load track, belt or rack or prepare workstation to reflect various stages of production
		2.11	Apply toe puff using the appropriate machine methods, as specified

- 2.12 Mould back part using hot and cold moulds in accordance with construction techniques and specifications
 - 2.13 Carry out specific processes in accordance with workplace requirements
- 3 **Last the shoe**
 - 3.1 Attach uppers and insoles as required in accordance with specifications
 - 3.2 Attach shanks or stiffeners, as required
 - 3.3 Apply stapling, as required
 - 3.4 Insert toe puff
 - 3.5 Check last or foot form before attaching insole and upper, checking for sizes
 - 3.6 Condition toes and upper in accordance with workplace procedures
- 4 **Assemble the shoe**
 - 4.1 Prepare materials in accordance with workplace and manufacturer specifications
 - 4.2 Prepare soles and uppers in accordance with work requirements
 - 4.3 Set up machines and check for correct operations
 - 4.4 Assemble shoes using the appropriate manual or machine construction techniques in accordance with work requirements
- 5 **Finish shoe**
 - 5.1 Conduct finishing of shoe in accordance with specifications
 - 5.2 Assess final quality check against work specifications
 - 5.3 Identify and address construction problems to meet quality standards
 - 5.4 Forward work for preparation to despatch to client

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Parts of the shoe include the following:

- last
- uppers
- insoles
- heels
- soles

Conditioning includes one or more of the following:

- rapid conditioning
- mulling
- use of toe steamer

Construction techniques include one or more of the following:

- cement
- moulded construction
- Veldtschoen construction
- moccasin construction
- welt construction

Machines include one or more of the following:

- heavy stitch
- blake stitcher
- toe laster
- side laster
- seat laster
- seat and side laster
- the forepart laster
- force lasting machine

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTFP4004A Assemble and finish custom-made shoe

Assessment Requirements for MSTFP4004 Assemble and finish custom-made shoe

Modification History

Release 1. Supersedes and is equivalent to LMTFP4004A Assemble and finish custom-made shoe

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- performing all preparatory work operations on shoe in sequence
- setting machines within specified tolerances and in accordance with manufacturer specifications
- applying manual and machine assembly and making techniques according to workplace procedures
- assembling at least three (3) pairs of shoes using the appropriate construction techniques in accordance with work requirements
- conducting finishing operations in accordance with specifications
- assessing final quality against work specifications
- identifying and addressing construction problems as required to meet quality standards
- operating various shoe assembly machines and processes according to workplace procedures
- communicating effectively with clients, individuals, work groups and supervisors
- using discretion and judgement to select, interpret and apply procedures and processes
- preparing and presenting records and reports in appropriate formats
- applying work health and safety (WHS) and environmental policies in work operations.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- shoe construction methods
- manufacturer machine specifications, selection of materials, stitch types, needle threads and their qualities
- manual and machine procedures for making and assembling shoe components
- materials used including adhesives and solvents and safety requirements in their use

- quality standards and leather handling procedures
- WHS and environmental aspects of relevant workplace activities
- effective communication with clients and other personnel
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in assembling and finishing custom-made shoes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFP4005 Fit custom-made footwear

Modification History

Release 1. Supersedes and is equivalent to LMTFP4005A Fit custom-made footwear

Application

This unit of competency covers the skills and knowledge required for the trialling and fitting of custom-made footwear.

The unit of competency applies to the trialling and fitting of custom-made shoes with the client. Discretion and judgement may be required for both self and others in planning and selecting processes, procedures or outcomes.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to fit custom-made footwear**
- 2.1 Review client measurements and construction specifications to confirm all required information has been provided
 - 2.2 Conduct a trial last fitting to check last for fit and function
 - 2.3 Make modifications to last in consultation with client to achieve design and construction specifications
 - 2.4 Make a mock-up or diagnostic fitting in line with specifications
 - 2.5 Evaluate diagnostic fitting and review proposed construction and materials
- 3 **Conduct trial fittings**
- 3.1 Fit custom-made footwear and consult client for further adjustments
 - 3.2 Conduct diagnostic trial fitting of custom-made footwear to reflect real-life usage, ease of fitting, and compliance with design and production specifications
 - 3.3 Identify required adjustments in discussion with client
 - 3.4 Use discretion, judgement and effective interpersonal communication to interact with client and resolve problems
- 4 **Conduct client follow up**
- 4.1 Take measurements of foot and footwear and compare to previous findings
 - 4.2 Take new measurements, if required, to confirm or establish required modifications to footwear
 - 4.3 Maintain consultation with client throughout fitting

processes and act upon follow-up accordingly

- | | | | |
|---|---------------------------------------|-----|---|
| 5 | Document outcomes of follow-up | 5.1 | Record information relating to client measurements, trial fittings and modifications |
| | | 5.2 | Prepare specifications for the development of new footwear or modification of existing footwear |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Measuring devices include

- rulers and tape measures

one or more of the following:

- 2-D tracings
- 3-D techniques

Assessment Requirements for MSTFP4005 Fit custom-made footwear

Modification History

Release 1. Supersedes and is equivalent to LMTFP4005A Fit custom-made footwear

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- checking client measurements and construction specifications to confirm all required information has been provided
- making modifications to last in consultation with client to achieve design and construction specifications
- evaluating diagnostic fitting and reviewing proposed construction and materials
- fitting custom-made footwear and consulting client for further adjustments, as required, on at least three (3) occasions
- communicating effectively with client to resolve problems
- examining and measuring foot and shoe to determine any adjustment required
- fitting and adjusting footwear and providing follow-up
- recording information relating to client measurements, trial fittings and modifications
- preparing specifications for the development of new footwear or modification of existing footwear.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- anatomy of foot and ankle
- footwear measuring procedures
- footwear design and construction
- work health and safety (WHS) and environmental aspects of relevant workplace activities
- effective interpersonal communication with clients
- workplace procedures
- relevant ohs legislation and codes of practice
- quality practices
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in fitting custom-made footwear, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. MSTFR2001 Assess and cost footwear repair job

Modification History

Release 1. Supersedes and is equivalent to LMTFR2001A Assess and cost footwear repair job

Application

This unit of competency covers the skills and knowledge required to assess the shoe or product for repair, estimate materials, labour and time requirements, and establish costs for provision of services or products.

This unit of competency applies to the estimating and costing work required to repair shoes or other items. Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures and outcomes.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear repair

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- | | | | |
|---|---|-----|---|
| | requirements | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to assess and cost repair | 2.1 | Examine and check footwear, including welts, insoles, sole edges, sole bottoms, upper edges and heels |
| | | 2.2 | Identify repair, design and finish requirements and confirm agreement with client to undertake work |
| | | 2.3 | Collect contact information and identify customer's preferred timeframe for work |
| 3 | Calculate footwear repair costs | 3.1 | Estimate types and quantities of materials required |
| | | 3.2 | Estimate time and labour necessary for the repair |
| | | 3.3 | Calculate costs of materials and labour |
| | | 3.4 | Calculate total job cost, including overheads and mark-up percentages |
| | | 3.5 | Calculate final cost to customer |
| 4 | Document details and advise customer | 4.1 | Document details of costs and charges and any special conditions |
| | | 4.2 | Verify costs, calculations or other details by other workplace where necessary |
| | | 4.3 | Prepare customer quotation and advise customer of repair requirements, costs and time required |
| | | 4.4 | Prepare work order ticket and job sheet according to workplace procedures |
| | | 4.5 | Document details for future reference |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Footwear repair costs include:

- type and quantities of materials
- type and amount of labour
- time required
- overheads
- percentage mark-up

Assessment Requirements for MSTFR2001 Assess and cost footwear repair job

Modification History

Release 1. Supersedes and is equivalent to LMTFR2001A Assess and cost footwear repair job

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting client requirements
- estimating type and quantities of material required
- determining the types and amount of labour required to complete the work
- estimating time required to complete the work
- documenting and communicating work-related information, including customer requirements, products, materials and labour required, costing calculations for products, materials and labour, and special conditions
- using calculators, computer programs, and other aids in the estimation and cost calculation processes
- applying workplace procedures
- maintaining records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- range of products and services offered by the enterprise
- enterprise costing policies and procedures, including labour rates and product and material costs
- materials, work flow and repair processes
- technical information about products, materials, equipment and operating procedures
- general industry housekeeping policies and procedures
- operation of calculators, computer programs, and other aids in the estimation and cost calculation processes
- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in assessing and costing footwear repair, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFR2002 Supply and fit new heel block

Modification History

Release 1. Supersedes and is equivalent to LMTFR2002A Supply and fit new heel block

Application

This unit of competency covers the skills and knowledge required for the supply and replacement of heel blocks using a variety of methods.

Discretion, initiative and judgement must be demonstrated on the job in own work, either individually or in a team environment

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear repair

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to fit new heel block**
 - 2.1 Interpret work order and remove old heel block without damage to shoe
 - 2.2 Select appropriate new heel block and cover materials
 - 2.3 Cut pattern for new heel block
 - 2.4 Cover heel block, matching leather or covering material to the original colour and design of the shoe
 - 2.5 Prepare the seat to provide a surface for attachment and insert a new seat piece
- 3 **Prepare heel block and top piece**
 - 3.1 Prepare new heel block
 - 3.2 Select suitable commercially available top piece, if appropriate, or select appropriate top piece material, mark out and cut out to fit heel block
 - 3.3 Scour surface of the top piece material and heel block, if appropriate, using appropriate hand or machine operations to ensure even finish
 - 3.4 Check the fit between the top piece and the heel block and make adjustments, as appropriate
- 4 **Finish heel**
 - 4.1 Replace heel block and top piece
 - 4.2 Check quality of securing and make adjustment, as required
 - 4.3 Trim back top piece to conform to heel block
 - 4.4 Finish off heel and top piece, as required, including staining and dying to match as close as possible original shoe colour and design
 - 4.5 Pack, label and store repaired shoes and record outcomes

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Tools includes one or more of the following:

- shoe hammer
- tack hammer
- shoe knife
- sharpening stick
- peg awl
- glue gun
- pincers
- nippers
- lasting pliers
- shears

- drag knife
- tack

Machine includes one or more of the following:

- finishing machine
- securing machine
- heat activator
- last
- heat pliers

Unit Mapping Information

Assessment Requirements for MSTFR2002 Supply and fit new heel block

Modification History

Release 1. Supersedes and is equivalent to LMTFR2002A Supply and fit new heel block

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- assessing footwear repair requirements
- applying hand and machine techniques over the range of required operations
- handling materials, tools and equipment according to workplace procedures
- repairing at least four (4) heel blocks on a variety of shoe types to meet quality and enterprise standards
- finishing off heel and top piece, as required, including staining and dyeing to match as close as possible original shoe colour and design
- packing, labelling and storing repaired shoes
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- full range of footwear styles and their structure and construction
- characteristics and use of adhesives and primers and their safe application and disposal
- characteristics of typical leathers, fabrics, and other materials used in shoe construction and repair
- quality standards and leather handling procedures
- use of machines, equipment and tools, adhesives and primers, and stains, dyes and inks
- tools:
 - shoe hammer
 - tack hammer
 - shoe knife
 - sharpening stick
 - peg awl

- glue gun
- pincers
- nippers
- lasting pliers
- shears
- drag knife
- tack
- machines:
 - finishing machine
 - securing machine
 - heat activator
 - last
 - heat pliers
- general industry housekeeping policies and procedures
- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in supplying and fitting new heel block, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFR2003 Attach non-slip sole or heel top piece

Modification History

Release 1. Supersedes and is equivalent to LMTFR2003A Attach non-slip sole or heel top piece

Application

This unit of competency covers the skills and knowledge required for covering a sole and heel by non-slip and long-wearing material.

This unit of competency applies to all styles of synthetic and leather soled shoes.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to attach non-slip sole or heel top piece**
 - 2.1 Inspect shoes, identify repair requirements and advise customer on costs prior to commencing shoe repair
 - 2.2 Prepare and review job sheet to ensure all requirements are included
 - 2.3 Determine appropriate method of sole replacement and select, check and prepare appropriate tools and materials
 - 2.4 Apply workplace procedures
- 3 **Prepare the shoe**
 - 3.1 Select pre-cut sole sheet and cut non-slip sole and heel appropriate to the footwear shape and design
 - 3.2 Remove old top piece and non-slip sole back to waist using appropriate tools and methods, ensuring no damage to the shoe
 - 3.3 Scour and clean sole and heel area of shoe using appropriate hand and machine operations to ensure even finish
 - 3.4 Prepare and re-stitch original sole by building up edges, as required
- 4 **Replace and finish sole and heel**
 - 4.1 Apply adhesive evenly to both bottom of shoe and sole, leave to dry and reactivate the adhesive
 - 4.2 Position and attach non-slip sole and top piece using manual and machine operations
 - 4.3 Trim back sole and heel by hand and machine, as appropriate
 - 4.4 Ink or stain sole and heel to match original shoe colour, polish and finish off as close to the original as possible prior to marking

- 4.5 Check repaired shoes meet quality and enterprise standards
- 4.6 Package, label and store repaired shoes and maintain records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Tools include one or more of the following:

- shoe hammer
- tack hammer
- shoe knife
- sharpening stick

- peg awl
- glue gun
- pincers
- nippers
- lasting pliers
- shears
- drag knife
- tack

Machines include one or more of the following:

- finishing machine
- sole press
- heat activator
- last
- heat pliers

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTFR2003A Attach non-slip sole or heel top piece

Assessment Requirements for MSTFR2003 Attach non-slip sole or heel top piece

Modification History

Release 1. Supersedes and is equivalent to LMTFR2003A Attach non-slip sole or heel top piece

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- inspecting shoes, identifying repair requirements and advising customer on costs prior to commencing shoe repair
- preparing workstation and work prior to commencing operations
- applying hand and machine techniques over the range of required operations to attach non-slip sole or heel top piece on at least three (3) occasions
- removing old top piece and non-slip sole back to waist using appropriate tools and methods, ensuring no damage to the shoe
- scouring and cleaning sole and heel area of shoe using appropriate hand and machine operations to ensure even finish
- preparing and re-stitching original sole by building up edges, as required, and using appropriate adhesive and primer according to manufacturer and workplace requirements
- positioning and attaching non-slip sole and top piece using manual and machine operations
- trimming back sole and heel by hand and machine, as appropriate, inking or staining sole and heel to match original shoe colour, and polishing and finishing off as close to the original as possible prior to marking
- repairing shoes to meet quality and enterprise standards and packaging, labelling and storing shoes
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- full range of footwear styles and their structure and construction
- characteristics and use of adhesives and primers, and their safe application and disposal

- characteristics of typical leathers, fabrics, and other materials used in shoe construction and repair
- quality standards and leather handling procedures
- use of machines, equipment and tools, adhesives and primers, stains, dyes and inks
- general industry housekeeping policies and procedures
- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in attaching sole or heel top piece, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFR2004 Replace half leather sole

Modification History

Release 1. Supersedes and is equivalent to LMTFR2004A Replace half leather sole

Application

This unit of competency covers the skills and knowledge required for the replacement of a half leather sole.

This unit of competency applies to the replacement of half leather soles, and includes all styles of shoes.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

 - 2.1 Inspect shoes, identify repair materials and advise customer on costs prior to commencing shoe repair
 - 2.2 Prepare and review job sheet to ensure all requirements are included
 - 2.3 Determine appropriate method of replacing sole and heel, and select, check and prepare appropriate tools and materials
 - 2.4 Apply workplace procedures
- 3 **Prepare sole**
 - 3.1 Remove top lifts and soles back to waist using the appropriate method and tools, ensuring no damage to the shoe
 - 3.2 Select replacement sole material of suitable thickness, and top pieces and lifts, appropriate to original footwear
 - 3.3 Mark waist using the new half sole as a guide, ensuring waist marks are equal on both items of footwear
 - 3.4 Skive half sole in a half moon shape, and taper from the waist mark to the toe consistent with workplace requirements
 - 3.5 Secure lasting margin, patch where necessary, and check or replace fillers, as required
 - 3.6 Scour half sole prior to securing
- 4 **Replace and finish sole**
 - 4.1 Apply adhesive evenly to both bottom of shoe and sole and top lifts, leave to dry and reactive the adhesive
 - 4.2 Position sole and top lifts and secure using appropriate manual and machine operations
 - 4.3 Check quality of adhesion, adjust, as required, and stitch

- sole using a sole stitching machine, if required
- 4.4 Trim edges of soles and top lifts manually or by machine
 - 4.5 Ink or stain edges and heel lifts to match original shoe colour, polish and finish off
 - 4.6 Clean, stain or colour and finish waist to the original colour
 - 4.7 Package, label and store repaired shoes and maintain records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

MSTFR2005 Sew or patch by machine

Modification History

Release 1. Supersedes and is equivalent to LMTFR2005A Sew or patch by machine

Application

This unit of competency covers the skills and knowledge required to machine sew leather or other materials associated with the repair of footwear or other items.

This unit of competency applies to sewing or patching pieces of leather and other material. It covers the use of a basic sewing machine using straight stitching.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear repair

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to sew or patch by machine**
 - 2.1 Inspect shoes or item, identify repair requirements and advise customer on costs prior to commencing repair
 - 2.2 Prepare and review job sheet to ensure all requirements are included
 - 2.3 Determine appropriate method of repair and select, check and prepare appropriate tools and materials
 - 2.4 Apply workplace procedures
- 3 **Prepare work pieces and machine**
 - 3.1 Skive pieces for patching to ensure finished edges are smooth and flush, as required
 - 3.2 Solution pieces in place prior to stitching and finishing
 - 3.3 Set up and adjust machines in accordance with manufacturer instructions, workplace requirements and specifications for the work
 - 3.4 Test machine for correct operations, monitor machine performance and take appropriate action to rectify faults, as required
- 4 **Perform machine sewing and finish work**
 - 4.1 Position and machine pieces accurately to achieve required specifications and quality, including seam or hole line up and over stitching, as required
 - 4.2 Tap down stitches, and trim and burnish threads, as required
 - 4.3 Check quality of final product meets requirements
 - 4.4 Stain, clean, polish and finish off shoes or item to match original colour as close as possible
 - 4.5 Package, label and store repaired shoes or items and maintain records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Set up machine includes the following:

- cleaning and checking to meet quality operations
- selecting threads to match original threads and meet specifications
- selecting needle to ensure correct type and size
- setting and testing stitch length against required specifications
- setting tension according to specifications
- adjusting machine foot height to suit thickness and nature of material being repaired

Assessment Requirements for MSTFR2005 Sew or patch by machine

Modification History

Release 1. Supersedes and is equivalent to LMTFR2005A Sew or patch by machine

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- inspecting shoes, identifying repair materials and advising customer on costs prior to commencing shoe repair
- determining appropriate method of repair and selecting, checking and preparing appropriate tools and materials
- skiving pieces for patching to ensure finished edges are smooth and flush, and solutioning pieces in place prior to stitching and finishing
- setting up, adjusting and operating machines in accordance with manufacturers' instructions, workplace requirements and specifications for the work
- positioning and machining pieces accurately, including seam or hole line up and overstitching as required
- tapping down stitches, and trimming and burnishing threads, as required
- staining, cleaning, polishing and finishing off shoes or items to match original colour as close as possible
- repairing at least three (3) varieties of shoes or items to meet quality and enterprise standards
- identifying faults and taking appropriate action
- packaging, labelling and storing repaired shoes and maintaining records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- machines requiring the positioning, feeding, and handling of work pieces
- operating procedures of a basic sewing machine
- characteristics of typical leathers, fabrics, threads, and other materials used
- quality standards and handling procedures

- work health and safety (WHS) and environmental aspects of relevant repair and assembly processes
- general industry housekeeping policies and procedures
- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

MSTFR3001 Replace full sole and heel

Modification History

Release 1. Supersedes and is equivalent to LMTFR3001A Replace full sole and heel

Application

This unit of competency covers the skills and knowledge required for the replacement of a shoe sole and heel using a variety of replacement or repair methods.

This unit of competency applies to the replacement of a full sole and heel on a variety of shoe styles and replacement materials.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

 - 2.2 Prepare and review job sheet to ensure all requirements are included
 - 2.3 Determine appropriate method of replacing sole, and select, check and prepare appropriate tools and materials
 - 2.4 Apply workplace procedures
- 3 **Prepare sole**
 - 3.1 Remove heel pads, socks and top lifts, as appropriate
 - 3.2 Remove sole and heel block or sole or heel unit using the appropriate method and tools, ensuring no damage to the shoe
 - 3.3 Scour surface of the sole area of the shoe using appropriate hand or machine operations to ensure even finish
 - 3.4 Select pre-cut sole of appropriate thickness and material, or mark and cut sole from sheet of appropriate material and thickness
 - 3.5 Check and replace filler and welting, as required
- 4 **Replace and finish sole**
 - 4.1 Apply adhesive evenly to both bottoms of shoe and sole, leave to dry and reactivate, as required
 - 4.2 Position sole or sole and heel unit and secure using appropriate manual and machine operations
 - 4.3 Check quality of adhesion, adjust as required
 - 4.4 Trim back sole to the appropriate edge by manual or machine operations and re-attach heel block

- 4.5 Ink or stain sole and heel edges to match original shoe colour, polish and finish off
- 4.6 Package, label and store shoes and maintain records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

MSTFR3002 Operate sole stitcher

Modification History

Release 1. Supersedes and is equivalent to LMTFR3002A Operate sole stitcher

Application

This unit of competency covers the skills and knowledge required to stitch soles by machine for welt or veldschoen constructed footwear.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear repair

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to operate sole stitcher**
 - 2.1 Inspect shoes or items, identify repair materials and advise customer on costs prior to commencing shoe repair
 - 2.2 Prepare and review job sheet to ensure all requirements are included
 - 2.3 Determine appropriate method of repair, and select, check and prepare appropriate tools and materials
 - 2.4 Apply workplace procedures
 - 2.5 Clean and check sole stitching machine and prepare shoe
 - 2.6 Set up, adjust, switch on and test machine in accordance with manufacturer instructions and workplace procedures
- 3 **Perform stitching**
 - 3.1 Position shoe accurately and stitch using sole stitcher consistent with manufacturer procedures
 - 3.2 Trim and burnish threads, as required
 - 3.3 Monitor machine operation and respond to faulty operation with appropriate action
- 4 **Check and finish work**
 - 4.1 Check final product to ensure repair meets enterprise quality requirements
 - 4.2 Ink or stain shoes to match original shoe colour as close as possible, polish and finish off
 - 4.3 Package, label and store shoes and maintain records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Sole stitching machines include one or more of the following:

- blake sole stitcher
- welt sole stitcher

Prepare shoe includes one or more of the following:

- securing sole to welting prior to sole stitching, if re-stitching a welt constructed shoe
- securing upper and sole to the inner sole if re-stitching a veldschoen constructed shoe

Set up machine includes the following:

- setting tension according to specifications
- checking wax pot
- checking shoe guide for correct distance

- checking channel knife for correct positioning for welt or veldschoen constructed shoe
- setting and testing stitch length against required specifications

Unit Mapping Information

Assessment Requirements for MSTFR3002 Operate sole stitcher

Modification History

Release 1. Supersedes and is equivalent to LMTFR3002A Operate sole stitcher

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- inspecting shoes, identifying repair materials and advising customer on costs prior to commencing shoe repair
- determining appropriate method of repair, and selecting, checking and preparing appropriate tools and materials
- setting up, adjusting, switching on, testing and monitoring machine in accordance with manufacturer instructions and workplace procedures
- applying machine stitching techniques
- positioning shoe accurately and stitch using sole stitcher consistent with manufacturer procedures on at least three (3) occasions
- trimming and burnishing threads, as required
- repairing shoes to meet quality and enterprise standards
- checking final product to ensure repair meets enterprise quality requirements
- inking or staining shoes to match original shoe colour as close as possible, polishing and finishing off
- identifying faults and taking appropriate action
- packaging, labelling and storing repaired shoes and maintaining records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- operating procedures of a sole stitcher
- characteristics of typical leathers, fabrics, threads and other materials used
- quality standards and handling procedures
- work health and safety (WHS) and environmental aspects of relevant repair and assembly processes
- general industry housekeeping policies and procedures
- quality practices

- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in operating sole stitcher, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFR3003 Hand sew welt

Modification History

Release 1. Supersedes and is equivalent to LMTFR3003A Hand sew welt

Application

This unit of competency covers the skills and knowledge required to hand sew welting to a welt constructed shoe.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear repair

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- | | | | |
|---|------------------------------------|-----|--|
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to hand sew welt | 2.1 | Inspect shoes and advise customer on repair requirements and costs prior to commencing shoe repair |
| | | 2.2 | Prepare and review job sheet to ensure all requirements are included |
| | | 2.3 | Determine appropriate method of hand sewing welt replacement according to workplace procedures |
| | | 2.4 | Cut original stitching from sole to welt and strip back sole to expose damaged welting |
| | | 2.5 | Remove old stitching or welting and skive welt strip |
| 3 | Perform hand sewing | 3.1 | Select and check needle type and size |
| | | 3.2 | Reattach sole to welt and stitch to achieve specified results and quality expectations |
| | | 3.3 | Trim threads, as required |
| 4 | Conduct final quality check | 4.1 | Assess hand sewing operation meets workplace procedures and quality standards |
| | | 4.2 | Document and take action to resolve faults or imperfections |
| | | 4.3 | Clean, polish and finish off welt and shoe to match original shoe colour as close as possible |
| | | 4.4 | Package label and store repaired shoes and record outcomes |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Stitch includes one or more of the following:

- speedy stitching
- saddlery stitching

Unit Mapping Information

Assessment Requirements for MSTFR3003 Hand sew welt

Modification History

Release 1. Supersedes and is equivalent to LMTFR3003A Hand sew welt

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- inspecting shoes, identifying repair materials and advising customer on costs prior to commencing shoe repair
- determining appropriate method of hand sewing welt replacement according to workplace procedures
- cutting and removing original stitching from sole to welt, stripping back sole to expose damaged welting, and skiving welt strip.
- preparing and setting up welt for hand sewing
- reattaching sole to welt and stitching to achieve specified results and quality expectations on at least three (3) occasions
- trimming threads as required
- inspecting completed work and determining any rectification necessary
- cleaning, polishing and finishing off welt and shoe to match original shoe colour as close as possible
- packaging, labelling and storing repaired shoes and maintaining records

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- hazards associated with hand sewing process
- principles and techniques of hand sewing, including various types of stitches used
- technical information and specifications on needles, threads and materials
- relevant quality standards for hand sewing welts
- general housekeeping policies and procedures
- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in hand sewing welt, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFR3004 Re-cover footwear

Modification History

Release 1. Supersedes and is equivalent to LMTFR3004A Re-cover footwear

Application

This unit of competency covers the skills and knowledge required to re-cover footwear using glue or stitching methods.

This unit of competency applies to stripping and re-covering of shoes with new material.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear repair

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to re-cover footwear**
 - 2.1 Inspect shoes, identify repair materials and advise customer on costs prior to commencing shoe repair
 - 2.2 Prepare and review job sheet to ensure all requirements are included
 - 2.3 Determine appropriate method of re-covering the shoe and select, check and prepare appropriate tools and materials
 - 2.4 Strip down shoe to separate upper, heel block and sole unit without causing damage to the shoe components
- 3 **Make patterns and secure fabric**
 - 3.1 Mask heel block using appropriate masking process
 - 3.2 Cut out, check and adjust pattern as required
 - 3.3 Cover upper using appropriate masking technique
 - 3.4 Cut out material to match patterns, specifications and client requirements
 - 3.5 Secure fabric to upper
 - 3.6 Re-last the underneath of the shoe
- 4 **Finish and check shoe**
 - 4.1 Reattach heel to the sole
 - 4.2 Secure sole using appropriate securing process
 - 4.3 Check cover for fit and finish and make adjustments as appropriate
 - 4.4 Ink, clean, polish and finish off sole and heels to match original shoe colour as close as possible
 - 4.5 Package, label and store re-covered shoes and maintain records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Assessment Requirements for MSTFR3004 Re-cover footwear

Modification History

Release 1. Supersedes and is equivalent to LMTFR3004A Re-cover footwear

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- inspecting shoes, identifying repair materials and advising customer on costs prior to commencing shoe repair
- determining appropriate method of recovering shoe, and selecting, checking and preparing appropriate tools and materials
- stripping down shoe to separate upper, heel block and sole unit without causing damage to the shoe components
- making patterns of shoe components, and cutting and securing fabric
- re-covering shoes to meet quality and enterprise standards on at least two (2) occasions
- securing fabric and assembling shoe components
- checking cover for fit and finish and making adjustments as appropriate
- inking, cleaning, polishing and finishing off sole and heels to match original shoe colour as close as possible
- packaging, labelling and storing repaired shoes and maintaining records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- full range of footwear styles and their structure and construction
- characteristics and use of adhesives and primers and their safe application and disposal
- characteristics of typical leathers, fabrics, and other materials used in shoe construction and repair
- quality standards and leather handling procedures
- general industry housekeeping policies and procedures
- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in re-covering footwear, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFR3005 Dye footwear or leather product

Modification History

Release 1. Supersedes and is equivalent to LMTFR3005A Dye footwear or leather product

Application

This unit of competency covers the skills and knowledge required to strip, dye and finish footwear products or other items.

This unit of competency applies to various leathers and synthetics. Dyes, paints and finishes may be applied by hand or mechanical means.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Footwear repair

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to dye footwear or leather**
 - 2.1 Inspect shoes or leather product and advise customer on repair requirements and costs prior to commencing repair
 - 2.2 Prepare and review job sheet to ensure all requirements are included
 - 2.3 Assess leather, fabric or material composition and finish of shoe or product to determine requirement for stripping and dyeing
 - 2.4 Strip back surface to original form using appropriate technique, processes or materials to remove dirt and polish
 - 2.5 Apply preparing agent and mask areas not to be dyed, using appropriate masking technique
- 3 **Prepare and apply dye**
 - 3.1 Select colour of dye, finish, stain, or paint to match original requirements
 - 3.2 Prepare stain, dye, finish or paint in compliance with job sheet and client requirements
 - 3.3 Use relevant application method to apply dye, stain, finish or paint by hand or spray can or spray gun to ensure adequate coverage and standard
 - 3.4 Dry product, as required
- 4 **Finish shoe or leather product**
 - 4.1 Apply leather dressing to seal product, as required
 - 4.2 Finish shoe or product, including buffing and polishing
 - 4.3 Check, package, bag and label product consistent with workplace requirements
 - 4.4 Record outcomes

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Footwear leather and fabrics include one or more of the following:

- leather, such as:
 - calf
 - cow hide
 - kid
 - goat
 - buffalo
 - kangaroo
 - reptile
 - sheep

- ostrich
- emu
- pig
- fabrics, such as:
 - satin
 - silk
 - taffeta
 - rubber
 - cork
 - metal
 - thermo plastic rubber (TPR)

Application methods include one or more of the following:

- hand
- can
- machine sprayers

Assessment Requirements for MSTFR3005 Dye footwear or leather product

Modification History

Release 1. Supersedes and is equivalent to LMTFR3005A Dye footwear or leather product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- liaising with customer to check work order and confirm costs
- assessing dyeing requirements
- applying hand and machine stripping, preparing and dyeing techniques on at least three (3) different footwear or other leather product surfaces to meet quality and enterprise standards
- selecting colour of dye, finish, stain, or paint to match original requirements
- selecting, preparing and using relevant application method to apply dye, stain, finish or paint by hand or spray can or spray gun to ensure adequate coverage and standard
- matching colours
- applying leather dressing to seal product as required, and finishing shoe or product, including buffing and polishing
- checking, packaging, bagging and labelling product consistent with workplace requirements
- recording outcomes.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- range and characteristics and use of pigments, dyes, colours, stains, finishes and paints, and their safe application and disposal
- characteristics of typical leathers, fabrics, and other materials used in shoe construction and their reaction to strippers, dyes and stains
- colour matching techniques
- quality standards and leather handling procedures
- general industry housekeeping policies and procedures
- quality practices

- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in dyeing footwear or leather products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTFR3006 Undertake specialised footwear repair techniques

Modification History

Release 1. Supersedes and is equivalent to LMTFR3006A Undertake specialised footwear repair techniques

Application

This unit of competency covers the skills and knowledge required to undertake repair of footwear requiring specialised repair techniques.

This unit of competency applies to regeneration of vintage shoes, repair of stiletto or tap shoes, stretching of shoes, or repair of shoes made from expensive or purpose-built designs or materials.

Work requires individuals to demonstrate discretion, judgement and problem solving skills in the repair of footwear.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

demonstrate achievement of the element.

- | | | |
|---|---|---|
| 1 | Determine job requirements | 1.1 Follow standard operating procedures (SOPs) |
| | | 1.2 Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions |
| | | |
| 2 | Prepare to undertake specialised footwear repair | 2.1 Examine footwear to assess repair requirements |
| | | 2.2 Identify client priorities, preferences, budget and timelines |
| | | 2.3 Confirm procedure for repair with client and calculate initial pricing |
| | | 2.4 Obtain client agreement to proceed with service and document requirements |
| | | 2.5 Identify special care and repair requirements of footwear materials and design features, and select specialised repair techniques |
| | | 2.6 Prepare work area, materials and equipment and identify any additional skill needs required to undertake specialised repair |
| | | |
| 3 | Repair footwear | 3.1 Repair footwear using specialised repair techniques and workplace procedures |
| | | 3.2 Check footwear to ensure repair meets quality standards |
| | | 3.3 Manage actual costs against initial pricing |
| | | |
| 4 | Finish repair and present to client | 4.1 Finish footwear according to repair requirements |
| | | 4.2 Polish or clean footwear, as necessary, and present to client |

- 4.3 Apply interpersonal skills to conduct final inspection to ensure completed work meets client needs and expectations, and workplace quality standards

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Specialised repair includes one or more of the following:

- rejuvenation or repair of vintage shoes
- repair of shoes with uncommon or expensive fabrics or materials
- repair of specialised footwear, such as shoes with special design features (e.g. stilettos)
- repair of shoes that are purpose built (e.g. for fire protection,

- tap or dance shoes)
- stretching of shoes

Footwear materials include two or more of the following:

- leather, such as:
 - calf
 - cow hide
 - kid
 - goat
 - buffalo
 - kangaroo
 - reptile
 - sheep
 - ostrich
 - emu
 - pig
- adhesives and chemicals, such as:
 - polyurethane adhesives
 - rubber cement
 - methyl ethyl ketone
 - halogenation solvent
 - dichloromethane
 - petrol
 - methylated spirits
 - solvent-based spray finishes
 - solvent-based emulsions
- fabrics, such as:
 - satin
 - silk
 - taffeta
 - rubber
 - cork
 - metal
 - thermo plastic rubber (TPR)

Assessment Requirements for MSTFR3006 Undertake specialised footwear repair techniques

Modification History

Release 1. Supersedes and is equivalent to LMTFR3006A Undertake specialised footwear repair techniques

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting repair requirements
- confirming repair procedures and costs with client
- identifying special care and repair requirements of footwear materials and design features, and selecting specialised repair techniques
- repairing footwear using specialised techniques on at least three (3) different specialised footwear items
- finishing footwear according to repair requirements and polishing or cleaning footwear, as necessary, and present to client
- applying interpersonal skills to conduct final inspection and to present completed item to client, to ensure completed work meets client needs and expectations, and workplace quality standards.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product processes and equipment for specialised repair techniques
- a range of footwear materials, including their response to repair techniques
- features of specialised footwear and footwear designs
- footwear materials
- quality practices
- workplace procedures
- recording and reporting practices

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in undertaking specialised footwear repair, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTGN2001 Use steaming and pressing equipment in TCF production

Modification History

Release 1. Supersedes and is equivalent to LMTML2006A Use millinery steaming and pressing equipment

Application

This unit of competency covers skills and knowledge required to use steaming and pressing equipment in textile or clothing production operations, dry cleaning, laundry operations and millinery. It applies to garment or textile production, servicing and presentation according to the requirements and standards of the relevant textile, clothing and footwear (TCF) industry sector.

The unit of competency applies to pressing work where the position and handling of work are under the control of the operator and operator skills contribute to the final appearance and finish of the work.

The unit of competency applies to maintaining and operating equipment to press work that requires knowledge of a wider range of fabrics or more complex items. Work may be conducted in small to large scale enterprises and may involve individual and team activities.

This unit of competency is applicable to all sectors of the TCF industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to use steaming and pressing equipment	<p>2.1 Prepare work area according to industry production sector and workplace procedures</p> <p>2.2 Select, check and inspect steaming and pressing equipment and workstation</p> <p>2.3 Identify materials to be steamed or pressed and their performance characteristics</p>
3	Test pressing and steaming equipment	<p>3.1 Test steaming of sample materials according to composition and construction of materials</p> <p>3.2 Test pressing of sample materials according to composition and construction of materials</p> <p>3.3 Adjust settings on pressing and steaming equipment, as necessary</p> <p>3.4 Identify operational problems of equipment, report and address</p>
4	Use steaming and pressing equipment	<p>4.1 Conduct steaming and pressing according to the tests on material samples and manufacturer instructions</p> <p>4.2 Engage steaming and pressing equipment to form, adjust, finish and present garments, textiles or millinery, as required</p>

- 4.3 Disengage steaming and pressing equipment according to manufacturer instructions
- 4.4 Conduct steaming and pressing according to the tests on material samples and manufacturer instructions

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - personal protective equipment (PPE)
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Industry production sectors include, but are not limited to, the following:**
- garments
 - textiles
 - millinery
 - laundry
 - dry cleaning

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Check and inspect includes, but is not limited to, the following:

- inspecting tags or documents to ensure certified electrical testing has been conducted on electrical equipment
- checking water reservoirs are filled to the designated levels in relevant equipment
- inspecting contact surfaces of steaming and pressing equipment are clean
- checking thermostats are in working order and set at appropriate temperature
- checking condition of electrical cords

Materials include, but are not limited to, one or more of the following:

- woven
- knitted
- non-woven
- trims and components
- fusing
- woven cottons
- denim
- single knits
- tricot
- gabardine
- cotton drill
- calico
- double knit
- rugby knit
- poplin
- pre-formed millinery materials
- flat materials
- braids
- foundation fabrics, such as canvas

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTML2006A Use millinery steaming and pressing equipment

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTGN2001 Use steaming and pressing equipment in TCF production

Modification History

Release 1. Supersedes and is equivalent to LMTML2006A Use millinery steaming and pressing equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- setting up equipment to suit job requirements and performing routine checking and maintenance
- operating equipment according to manufacturer specifications
- identifying material characteristics
- testing material samples
- steaming and pressing a variety of materials and/or items according to the tests on material samples and manufacturer's instructions, on at least three (3) occasions
- using steaming and pressing equipment to form, adjust, finish and present garments, textiles, laundry or dry cleaning items or millinery, as appropriate to the sector
- reporting and documenting processes, as required
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- material types and their performance characteristics:
 - reaction to heat, steam, time and pressure, including:
 - stretching
 - shrinking
 - elasticity
 - tension
 - drying time
- manufacturer instructions for:
 - SOPs

- troubleshooting
- minor maintenance procedures
- limitations of usage
- conditions of warranty
- suggested temperature, timing and moisture for various materials
- operation of steaming and pressing equipment to form, adjust, finish and present garments, textiles, millinery, laundry or dry cleaning items, as appropriate to the sector
- steaming and pressing equipment, such as:
 - irons
 - presses
 - industrial steam irons
 - suction boards
 - sleeve board
 - sleeve roll
 - millinery steamer
 - hot block
 - hat stretcher
 - hairdryer
 - industrial pressing station
 - ironing board
 - water bottle
 - pressing pad or roll
 - needle board
 - pressing cloth
 - distilled water
- equipment testing and checking
- material samples testing:
 - testing on a small piece of material at various heat settings to ascertain optimum settings (temperature and time) for the material
 - test material reaction to steam or water
- procedures to engage and disengage tools and equipment:
 - turning-on electricity source
 - setting temperature and timing devices
 - pre-heating
 - turning off power source
 - allowing equipment to cool before storage
 - emptying water reservoir
 - cleaning equipment
 - disassembling parts ready for storage
- steaming and pressing presentation:

- components
- finished items for packaging or storage
- finished items after unpacking
- a finished item to revitalise it
- items ready for visual merchandising
- a finished item ready for despatch
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in using steaming and pressing equipment in TCF production, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN2002 Package and handle TCF items for storage or despatch

Modification History

Release 1. Supersedes:

- LMTCL2014 Pack, store, handle and despatch headwear
- LMTDC2009A Prepare articles for storage or despatch
- LMTTF2003A Package and handle products for despatch

Not equivalent

Application

This unit of competency covers the skills and knowledge required to compile, pack and consign orders according to required handling and transportation process in textile, clothing and footwear (TCF) sectors, including clothing and textile production, dry cleaning and laundry operations.

This unit of competency applies to handling items and coordinating orders for delivery or collection or storage. The unit applies to a range of TCF sectors and the evidence requirements may focus on one or more industry sectors or workplace contexts.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to handle, package and store TCF items	2.1	Identify or confirm storage and handling requirements and workplace procedures
		2.2	Prepare work area, tools and equipment
		2.3	Check records to assist with process and confirm quality of items
		2.4	Identify the range of products or items manufactured or serviced by the workplace
		2.5	Locate, retrieve, lift and transport items, as required, using appropriate equipment and according to WHS and workplace procedures
3	Prepare and package TCF items	3.1	Check product identification and add labels, tags and instructions, as required
		3.2	Fold, hang and pack items, as required, for storage, collection, loading or delivery according to WHS, hygiene and workplace procedures for handling finished articles
		3.3	Restrain products to prevent unfolding and seal or tie packaging, as required, for protection

- | | | | |
|---|--|-----|--|
| | | 3.4 | Compile orders to workplace and customer specifications and requirements |
| | | 3.5 | Coordinate and sequence orders to meet delivery or collection timetable |
| 4 | Store or despatch articles and maintain records | 4.1 | Check specifications and documentation |
| | | 4.2 | Store items in an appropriate location ready for pick-up, loading or delivery |
| | | 4.3 | Coordinate preparation and despatch of orders to meet delivery or collection timetables and workplace procedures |
| | | 4.4 | Communicate appropriately with relevant personnel to deal with damaged or inferior products and resolve problems |
| | | 4.5 | Complete relevant documentation and maintain records |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- PPE
- quality practices, including responsibility for

maintenance of own work quality and contribution to quality improvement of team or section output

- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Preparation of work area includes, but is not limited to, one or more of the following:

clearing and cleaning work area in preparation for packaging and handling process

examining tools and equipment damage, missing components or other defects (including frayed power cords where applicable)

checking extension power cables for knots and insulation damage

connecting electrical tools safely to power supply

using safety equipment during tool operation in accordance with WHS practices

Tools and equipment include, but are not limited to, one or more of the following:

- manual or powered conveyancing equipment
- manual or powered lifting and hoisting equipment
- trucks and other manual or powered equipment for transporting products
- manual or powered packaging equipment, including:
 - nailing
 - stapling
 - banding machines

Unit Mapping Information

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- preparing and maintaining work area, tools and equipment
- handling products or items safely, according to hygiene requirements and workplace procedures
- locating and interpreting specifications and confirming requirements of customer and enterprise
- operating manual or powered handling and packaging equipment
- folding, hanging and packing items as required for storage, collection, loading or delivery according to safety and workplace procedures for handling finished items, on at least two (2) occasions
- communicating appropriately with relevant personnel to report and respond to inconsistencies or other problems
- compiling and coordinating orders for storage and despatch
- complying with relevant federal and state or territory legislative or regulatory requirements
- documenting actions maintaining relevant work records in accordance with workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- workplace or enterprise policies and procedures
- packing, processing, handling, storage and despatch procedures, such as:
 - product folding techniques
 - checking specifications and documentation

- consigning orders
- sequencing delivery points
- coordinating delivery and collection timetables
- quality standards
- work health and safety (WHS), hygiene and environmental aspects related to workplace operation and manual handling
- operating principles of product handling and packaging equipment
- the range of TCF products manufactured or serviced by the workplace, such as:
 - garments
 - accessories
 - millinery
 - laundry items
 - canvas and sail products
 - textiles
- relevant product specifications for identified workplace or job role
- environmental requirements of relevant industry sector and workplace procedures
- storage machines and equipment, such as:
 - manual and electrical packaging equipment
 - mechanical storage conveyors
 - static railing
- loading, delivery and pick-up procedures
- power sources, such as single phase, three phase and weather protected outlets
- workplace procedures
- practices for recording and reporting
- federal and state or territory legislative or regulatory requirements.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in packaging and handling TCF items for storage or despatch, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN2003 Work in the TCF industry

Modification History

Release 1. Supersedes and is equivalent to LMTGN2003B Work in the Textiles, Clothing and Footwear industry

Application

This unit of competency covers the skills and knowledge required to identify key production processes within a textiles, clothing and footwear (TCF) sector.

The unit of competency applies to all sectors in the TCF industry. It may be applied to a specific sector but must include production processes and flow of product from raw materials through to distribution.

The unit of competency applies to working in any sector of the TCF industry and includes identification of applicable legislation, guidelines and workplace practices for the relevant sector.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Determine | 1.1 | Follow standard operating procedures (SOPs) |
| | | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to work in the TCF industry | 2.1 | Identify relevant TCF sectors |
| | | 2.2 | Identify Industry representatives and their roles |
| | | 2.3 | Identify relevant legislation and guidelines common to employment within identified TCF sector |
| | | 2.4 | Identify TCF worker rights, responsibilities and legal obligations |
| | | 2.5 | Identify features of product quality in identified workplace |
| | | 2.6 | Recognise the role of employability skills in TCF workplace |
| 3 | Identify production processes and supply chains | 3.1 | Identify materials used in the TCF workplace |
| | | 3.2 | Identify workplace production processes for converting materials into products |
| | | 3.3 | Identify workplace supply chains for products |
| 4 | Recognise workplace processes | 4.1 | Identify workplace practices and describe key activities of workplace |
| | | 4.2 | Distinguish key personnel and their roles |

- | | | | |
|---|---|-----|---|
| | | 4.3 | Identify WHS practices and participate in initial WHS orientation |
| | | 4.4 | Identify workplace areas or departments and their role in the production process |
| 5 | Learn skills for productive work | 5.1 | Identify required skills for current work role |
| | | 5.2 | Recognise own skills and skills limitations, and identify opportunities for further skill development |
| | | 5.3 | Develop a plan for learning required skills, with support of supervisor |
| | | 5.4 | Participate in learning and development activities |
| 6 | Manage own work | 6.1 | Take responsibility for own work tasks and role |
| | | 6.2 | Exercise initiative and express ideas and suggestions for improvements in own work processes |
| | | 6.3 | Apply problem-solving strategies to address problems, inconsistencies or concerns when fulfilling work role |
| | | 6.4 | Monitor own work against workplace standards, identify areas for improvement, and seek improvement |
| | | 6.5 | Work effectively and cooperatively with others in work team |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Materials include, but are not limited to, one or more of the following:

- natural and synthetic fibres, fabrics and textiles
- animal hides
- components, such as buttons and zips

Key personnel include, but are not limited to, one or more of the following:

- supervisor or team leader
- production staff and operators
- management and specialist support staff
- unions or industry associations or representatives
- WHS representatives

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping

- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTGN2003 Work in the TCF industry

Modification History

Release 1. Supersedes and is equivalent to LMTGN2003B Work in the Textiles, Clothing and Footwear industry

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- recognising key industry sectors and industry bodies
- identifying relevant standards, legislation and guidelines common to employment within identified TCF sector
- identifying production processes and supply chains in identified TCF sector
- recognising own skills and skills limitations, and identifying opportunities for further skill development
- distinguishing key roles, process and personnel in identified workplace
- taking responsibility for own work tasks and role and monitoring own work against workplace standards
- working effectively and cooperatively with others in work team.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- key industry and workplace processes and representatives:
 - industry associations
 - unions
 - relevant legislative bodies governing work health and safety (WHS), environmental protection and anti-discrimination
- applicable legislation and guidelines:
 - WHS
 - anti-discrimination
 - equal employment opportunities (EEO)
 - workplace diversity
 - freedom of information
 - environmental guidelines

- industrial relations awards
- Australian Standards
- industry terminology and acronyms
- TCF industry relevant sectors which relate to, overlap or are part of the supply chain to the workplace, such as:
 - textile production
 - early stage wool processing
 - cotton ginning
 - textile fabrication
 - clothing production
 - millinery
 - footwear production
 - footwear repair
 - leather production
 - laundry operations
 - dry cleaning operations
 - TCF mechanic/technician
 - medical grade footwear
 - technical textiles and non-wovens
 - fashion design and technology
- quality standards and practices:
 - specified standards of production
 - consistency in quality
 - producing to specification
 - working within specified time requirements
 - meeting customer requirements
- job descriptor
- roles and functions of departments/sections/units
- supply chain:
 - product flow from raw materials to production, distribution, marketing and sale
 - customers and suppliers
- WHS practices, including hazard identification and control measures
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in working in the TCF industry, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN2004 Work in a team environment

Modification History

Release 1. Supersedes and is equivalent to LMTGN2004B Work in a team environment

Application

This unit of competency covers the skills and knowledge required to work in a team environment.

The unit of competency applies to working in a team environment with limited discretionary powers. It relates to a variety of environments, including restricted space and hazardous, controlled or exposed conditions.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Identify work activities**
 - 2.1 Identify team role and tasks
 - 2.2 Identify individual tasks that are part of the team requirement
 - 2.3 Prioritise team and individual activities as directed
 - 2.4 Identify own role and responsibilities within team environment

- 3 **Plan work team activities**
 - 3.1 Identify components of work activities and the relevant procedure or work instruction
 - 3.2 Identify roles and responsibility of team members
 - 3.3 Identify reporting relationships within team and external to team
 - 3.4 Identify responsibility for own skill development to support team functioning
 - 3.5 Record and report activities orally or in writing as required by procedures or work instructions

- 4 **Participate in a team**
 - 4.1 Use interpersonal skills appropriate to the work context to support effective teamwork
 - 4.2 Seek assistance from team members to complete allocated tasks
 - 4.3 Acknowledge team roles and support team members in achieving their role

- 4.4 Contribute to team planning and opportunities to improve the efficiency of the work of the team
- 4.5 Apply teamwork within and between work teams to respond to routine problems and benefit workplace outcomes

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Routine problems include, but are not limited to, one or more of the following:

- required information or materials not available
- required tools or equipment not available
- conflict of work priorities
- interpersonal conflict within the team or between teams

Assessment Requirements for MSTGN2004 Work in a team environment

Modification History

Release 1. Supersedes and is equivalent to LMTGN2004B Work in a team environment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- operating in a team to complete workplace activities
- identifying, planning, clarifying and checking work team activities
- conveying information in written or oral form according to procedures
- working effectively with others to respond to routine problems
- selecting and using appropriate workplace language and interpersonal skills to support effective teamwork
- demonstrating teamwork within and between work teams to respond to routine problems and benefit workplace outcomes
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operation of work systems, equipment and management, site and organisational operating procedures
- impact of job on workplace and team and individual performance
- ways to provide support to other team members
- ways to modify activities depending on team requirements and workplace contexts
- appropriate communications, consistent with the culture of the workplace
- ways to handle performance issues
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in working in a team environment, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. MSTGN2005 Perform minor maintenance

Modification History

Release 1. Supersedes and is equivalent to LMTGN2005B Perform minor maintenance

Application

This unit of competency covers skills and knowledge to provide minor maintenance of production machines.

The unit of competency applies to checking machine performance and undertaking minor adjustments to production machines.

Work involves limited discretion, initiative and judgement on the job in own work, including liaison with specialist mechanics and technicians.

Work may be conducted in a variety of environments, such as operational workplace activities, restricted space and hazardous, controlled or exposed conditions.

Work may be undertaken on a range of machines that may include microprocessor or computer controls.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MSTGN2005 Perform minor maintenance

Modification History

Release 1. Supersedes and is equivalent to LMTGN2005B Perform minor maintenance

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- starting and stopping machines and undertaking machine maintenance according to specifications, on at least two (2) occasions
- recognising fault conditions
- monitoring operating performance of machine, including machine production readings, against machine specifications
- making minor adjustments to rectify minor machine faults or problems
- completing all required tasks within job role for maintaining machine operations
- applying workplace procedures
- recording and reporting machine or product faults.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- procedures and guidelines for safe operation and maintenance of machines
- typical fault conditions and related fault-finding procedures
- basic machine maintenance and repair techniques
- cleaning and lubricating techniques
- technical specifications manuals
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in performing minor machine maintenance, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN2006 Perform test or inspection to check product quality

Modification History

Release 1. Supersedes and is equivalent to LMTGN2006B Perform test or inspection to check product quality

Application

This unit of competency covers the skills and knowledge required to test or inspect product quality.

The unit of competency applies to periodic testing or inspection of raw materials or finished products as part of the production process.

Limited discretion, initiative and judgement may be demonstrated on the job in own work, either individually or in a team environment. Work may be conducted in a variety of environments, including operational workplace activities, restricted space, and hazardous controlled or exposed conditions.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare for test or inspection	2.1	Select appropriate materials or samples to test aspects of product quality
		2.2	Select and prepare equipment and confirm calibration
3	Perform test or inspection	3.1	Use prescribed testing or inspection procedures to test samples against specified standards
		3.2	Comply with workplace procedures, required quality standards and check procedures
4	Record and report result	4.1	Convert collected data into a form suitable for interpretation, where required
		4.2	Report outcomes and advise appropriate personnel
		4.3	Document and record process and result

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Equipment includes, but is not limited to, one or more of the following:

- purpose built test equipment
- general test or inspection equipment related to the particular requirements

Aspects of product quality include, but are not limited to, the following:

- consistency in quality
- producing to specification
- producing within time requirements
- meeting customer requirements

Assessment Requirements for MSTGN2006 Perform test or inspection to check product quality

Modification History

Release 1. Supersedes and is equivalent to LMTGN2006B Perform test or inspection to check product quality

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- clarifying and confirming requirements
- setting and operating test or inspection equipment
- testing or inspecting samples on at least two (2) occasions
- interpreting and applying established procedures
- documenting, assessing and reporting data
- maintaining accurate records
- applying workplace procedures.
-

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- inspection and testing processes relevant to the product, such as:
 - visual checking
 - colour matching
 - weighing
 - height
 - weight
 - thickness measuring
 - moisture measuring
 - measuring rubbing fastness
 - stretch
 - wear
 - cracking

- colour
- gloss
- softness
- handle
- texture
- light and colour fastness
- heat fastness
- tensile characteristics
- flexibility
- test equipment and its operation
- relevant measurement techniques and quality checking procedures
- setting and adjustment requirements
- characteristics of materials
- recording and reporting procedures
- aspects of quality
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in performing test or inspection to check product quality, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN2007 Select, transfer and remove materials and products

Modification History

Release 1. Supersedes and is equivalent to LMTGN2007B Select, transfer and remove materials and products

Application

This unit of competency covers skills and knowledge required to select, transfer and remove materials and products in support of the production processes.

Work requires discretion, initiative and judgement. Work may be conducted in a variety of environments, such as operational workplace activities, restricted space, hazardous, controlled or exposed conditions.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

This unit does not cover the use of a forklift.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Determine job requirements | 1.1 | Follow standard operating procedures (SOPs) |
| | | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| | | | |
| 2 | Determine requirements | 2.1 | Review work requests and confirm requirements |
| | | 2.2 | Organise, confirm and record tasks according to specified procedures |
| | | 2.3 | Select, check and correctly use relevant personal and other safety equipment, where needed |
| | | 2.4 | Identify and organise appropriate equipment for transferring materials |
| | | | |
| 3 | Select materials and products | 3.1 | Interpret documentation and identify codes and references indicating source, customer, storage location or batch, where relevant |
| | | 3.2 | Identify and select materials or products to be loaded or unloaded |
| | | 3.3 | Document and report non-conforming materials and products |
| | | 3.4 | Update transfer and store documentation |
| | | | |
| 4 | Load, unload and transfer materials or products | 4.1 | Use suitable equipment (other than forklift) to load and unload materials according to materials handling requirements, safe work practices and correct manual handling techniques |

- 4.2 Transfer materials to correct destination
- 4.3 Apply environmental requirements and procedures concerned with waste, pollution and recycling of materials at all stages of the process
- 4.4 Maintain and clean materials, equipment and work environment
- 4.5 Complete relevant documentation associated with tasks

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Equipment includes, but is not limited to, one or more of the following:

- hand and power tools
- pallet truck and hand trolleys
- overhead cranes

Assessment Requirements for MSTGN2007 Select, transfer and remove materials and products

Modification History

Release 1. Supersedes and is equivalent to LMTGN2007B Select, transfer and remove materials and products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting work orders and industry documentation
- identifying and locating materials and products
- using suitable equipment (other than forklift) to load and unload materials according to materials handling requirements, safe work practices and correct manual handling techniques
- loading/unloading and transporting materials and products on at least two (2) occasions
- documenting and reporting non-conforming materials and products
- maintaining clean equipment, machines and work environment
- applying workplace procedures
- completing relevant documentation and maintaining records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- use of products and materials
- procedures to handle products and materials
- materials handling requirements
- correct manual handling techniques
- procedures to use required equipment
- despatch and receipt procedures
- loading and unloading procedures
- industry documentation and work orders
- cleaning of machines and equipment
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in selecting, transferring and removing materials and products, at least to the level being assessed, with relevant industry knowledge and experience.

|---|---|--|
| 1 | Determine job requirements | <p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p> |
| 2 | Plan and coordinate work schedules | <p>2.1 Confirm tasks, jobs and work priorities with supervisor or manager</p> <p>2.2 Use appropriate procedure to assign materials and tasks to team, section and individuals</p> <p>2.3 Establish and communicate priority of tasks to team, section or individuals</p> <p>2.4 Organise materials to meet work requirements</p> |
| 3 | Monitor performance and quality | <p>3.1 Communicate orally or in writing with team, section or individuals to establish required work standard and ensure understanding of task requirements</p> <p>3.2 Monitor and report standard of performance, including quality standards of team, section or individuals, to ensure achievement of outcomes</p> <p>3.3 Provide instruction and support as required to achieve standards and outcomes</p> <p>3.4 Communicate proposals for improvements to work processes, efficiency and organisation to appropriate personnel</p> <p>3.5 Identify proposals to prevent or correct problems and report to appropriate personnel, according to workplace procedures</p> |

4	Communicate with work team, section and individuals	4.1	Monitor implementation of WHS and environmental standards and procedures and provide feedback to work team, section and individuals
		4.2	Use effective communication to explain work related information
		4.3	Seek feedback from team, section members and individuals to help team work effectively

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Appropriate personnel include, but are not limited to, one or more of the following:

- line supervisor or manager
- team or section leaders
- supervisors or managers in other sections

- technical specialists

Assessment Requirements for MSTGN2008 Coordinate work of team or section

Modification History

Release 1. Supersedes and is equivalent to LMTGN2008B Coordinate work of team or section

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- prioritising and organising resources (machines, staff, materials and production processes) and allocating work
- using appropriate procedures to assign materials and tasks to team, section and individuals
- providing instruction and advice
- maintaining and monitoring procedures
- identifying and reporting problems with work flow
- analysing and recording results according to workplace procedures
- using effective oral and written communication to explain work related information and seek feedback from team, section members and individuals to help team work effectively
- monitoring and reporting on performance and quality standards, and providing instruction and support as required to achieve standards and outcomes.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- production and work flow system in the team
- factors and constraints that impact on effective work flow
- effective work methods to achieve production objectives and timelines
- procedures to allocate tasks:
 - expression of interest
 - worker preference or choice
 - ballot
 - line supervisor directive
 - team consensus
- problem prevention and resolution
- methods for monitoring and coordinating the use of resources

- quality assurance standards and practices
- effective communication:
 - effective verbal and non-verbal communication
 - oral, written and visual communication
 - active listening
 - positive language
 - recognising and adapting to cultural differences
 - negotiation and conflict resolution skills
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in coordinating work of a team or section, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN2009 Operate computing technology in a TCF workplace

Modification History

Release 1. Supersedes and is equivalent to LMTGN2009B Operate computing technology in a textiles, clothing and footwear workplace

Application

This unit of competency covers the skills and knowledge required to use computing technology in a textiles, clothing and footwear (TCF) workplace.

The unit of competency applies to identifying the types and sources of information required, and using computing technology to access, enter, manipulate and store information. The equipment may include computers and other equipment based on computing technology. Impact of technology use must be related to work role.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MSTGN2009 Operate computing technology in a TCF workplace

Modification History

Release 1. Supersedes and is equivalent to LMTGN2009B Operate computing technology in a textiles, clothing and footwear workplace

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- accessing and using computer technology and navigating at least two (2) software applications relevant to work role
- entering, retrieving and manipulating data using appropriate software applications
- using technology according to ergonomic practices
- using numerical operations
- navigating relevant software application menus, functions and commands to locate, input or store information/data to match work role
- identifying impact of computer technology on work role
- saving information or data and storing in a file structure according to workplace requirements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- functions and capabilities of computing technology used in the work role
- impact of technology use on the work role
- functions of software applications:
 - word processing
 - spreadsheets
 - databases
 - email programs
 - internet browsers

MSTGN2010 Perform tasks to support production

Modification History

Release 1. Supersedes and is equivalent to LMTGN2010B Perform tasks to support production

Application

This unit of competency covers the skills and knowledge required to perform tasks to support production.

The unit of competency applies to a range of manual tasks that support production processes and which are not covered by a specific unit of competency. Production support tasks include cleaning and housekeeping, assisting in loading, feeding and unloading transporting equipment, loading and unloading materials from machines, storing materials, and recording and documenting tasks.

Work may be conducted in a variety of environments, including operational workplace activities, restricted space and hazardous, controlled or exposed conditions.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry. Work is conducted according to defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

products

- 4.3 Use appropriate methods and manual handling techniques
- 4.4 Handle materials and products to facilitate environmental protection, safe waste disposal, pollution control and recycling
- 4.5 Complete required documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices
- Safe handling and disposal of chemicals as per site policies and MSDS

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Equipment and tools include, but are not limited to, one or more of the following:

- cleaning equipment
- chemicals and detergents
- use of hand tools
- pallet truck
- hand trolleys
- weighing equipment

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTGN2010B Perform tasks to support production

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTGN2010 Perform tasks to support production

Modification History

Release 1. Supersedes and is equivalent to LMTGN2010B Perform tasks to support production

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- safely using and disposing of chemical used in production
- interpreting and applying established workplace procedures
- preparing and organising required tools and equipment
- performing tasks to meet requirements and comply with record keeping and workplace procedures
- using correct manual handling techniques to provide assistance in transfer or removal of materials or products
- documenting and transferring information
- clarifying and checking task-related information
- carrying out work according to work health and safety (WHS) practices and facilitating environmental protection, safe waste disposal, pollution control and recycling.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- procedures and requirements for cleaning and housekeeping
- use of relevant products and materials
- maintenance planning and workplace practices
- manual handling techniques
- manual tools and equipment
- procedures for handling, storage and disposal of cleaning chemicals
- quality standards and practices
- WHS practices, including hazard identification and control measures
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in performing tasks to support production, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN2011 Identify fibres, fabrics and textiles used in the TCF industry

Modification History

Release 1. Supersedes:

- LMTCL2003B Identify fibres and fabrics
- LMTTX2001B Identify fibres, yarns and textile materials and their uses in textile production

Not equivalent

Application

This unit of competency covers the skills and knowledge required to identify fibres, yarns, fabrics and textile materials and how they are used in the construction of garments and accessories and in textile production processes.

The unit of competency applies to a range of natural and synthetic materials which may be used for knitted, woven, spun, tufted or non-woven products. While the unit relates to a comprehensive coverage of textile, clothing and footwear (TCF) materials, evidence may be contextualised to a sector or workplace.

The unit of competency applies to work conducted in all clothing design, production and merchandising, and textile production and finishing processes using fibres, yarns and textile materials.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team related activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Distinguish types of TCF materials	<p>2.1 Recognise types of fibres and yarns, fabrics and textile materials used in the manufacture of clothing and textile products</p> <p>2.2 Identify methods of distinguishing and identifying fibres, yarns or textile materials</p> <p>2.3 Identify common and emerging fabrics used in the garment industry</p> <p>2.4 Identify processes used on raw fibres, basic processed yarns or finished yarns to create textiles</p> <p>2.5 Identify generic and trade names for common fabrics and textile materials</p>
3	Identify characteristics of	<p>3.1 Identify fibres used in construction of a variety of fabrics</p> <p>3.2 Identify construction processes of a range of fabrics</p>

	fabrics	3.3	Examine a range of fabric types and identify physical and visual qualities
		3.4	Identify generic and trade names for common fabrics and textile materials
4	Distinguish methods of constructing fabric and textile material	4.1	Identify the purposes of processing stages
		4.2	Distinguish basic processes of spinning fibres into yarns or processing yarns into knitted, woven or non-woven textile material
		4.3	Identify textile product construction processes
		4.4	Identify uses of different types of fibres and yarns and their effects on finished products
5	Identify uses of fabrics and textiles	5.1	Identify common uses of a variety of fabrics and labelling requirements
		5.2	Identify a range of textile products and their end uses and labelling requirements
		5.3	Identify methods of measuring fabric and textile material quality in an identified workplace
		5.4	Identify the impact of quality on production processes

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- Australian/New Zealand Standard *AS/NZS 1957:1998 Textiles - Care labelling* applies to this unit at the time of publication.
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Fibres and yarns include, but are not limited to:

- natural fibres, such as cotton, wool, silk and linen
- synthetic fibres, such as polyamide, polyester, acrylic, lycra, rayon and acetate

Fabrics and textiles include, but are not limited to:

- natural and synthetic single yarn fabrics and blends
- knitted fabrics, including weft knits and warp knits
- woven fabrics, including plain, twill, satin, dobby, jacquard and pile
- non-woven fabrics, such as felts, nets, braids, bonded and composite
- emerging smart fabrics

Construction processes include, but are not limited to

- spinning
- knitting
- weaving
- blending
- fusing
- bonding
- finishing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying at least five (5) types of fibres, yarns, fabrics and textile materials and their labelling requirements according to relevant standards
- identifying at least five (5) textile fibres and yarns used construction processes
- identifying physical and visual properties of at least five (5) common fabrics or textiles, including emerging materials, relevant to sector or enterprise
- distinguishing methods of constructing fabric and textile material
- identifying suitable application and end uses of at least five (5) fibres, yarns, fabrics and textile materials
- comparing fibres, yarns and textile materials to specifications and quality requirements in an identified sector or enterprise.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- AS/NZS 1957:1998 Textiles - Care labelling
- fibre, yarn, fabric and textile identification, such as:
 - natural fibres, such as cotton, wool, silk and linen
 - synthetic fibres, such as polyamide, polyester, acrylic, lycra, rayon and acetate
- types of fabrics and textiles and their construction methods, such as:
 - natural and synthetic single yarn fabrics and blends
 - knitted fabrics, including weft knits and warp knits
 - woven fabrics, including plain, twill, satin, dobby, jacquard and pile

- non-woven fabrics, such as felts, nets, braids, bonded and composite
- emerging smart fabrics
- features and characteristics of fibres, yarns, fabrics and textile materials, such as:
 - bias
 - stretch
 - fraying
 - feel
 - handle
 - shrinkage
- fibres, yarns and textile construction processes, such as:
 - spun
 - ply
 - combo
 - blended
 - crimped
 - monofilament
 - multifilament
 - staple spun
 - technical textiles
- methods of identifying fibres, such as:
 - labelling
 - visual
 - handle
 - acetone
 - burn test
- fabric construction processes, such as:
 - spinning
 - knitting
 - weaving
 - blending
 - fusing
 - bonding
 - finishing
- textile processing
- visual features, such as:
 - colours
 - textures
 - patterns
 - right side/wrong side
- fabric and textile qualities, such as:

- firmness
- softness
- handle
- weight
- grain
- gauge
- drape
- porosity
- covering power
- count
- light penetration
- generic and trade names for common fabrics and textile materials
- fabric and textiles uses
- quality standards and practices
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in identifying fibres, fabrics and textiles in the TCF industry, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN2012 Work safely with chemicals in TCF operations

Modification History

Release 1. Supersedes:

- LMTHL2004A Prepare chemicals to a formula
- LMTLA2001A Conduct safe handling of laundry chemicals
- LMTTX2015B Handle and prepare chemicals, dyes and other substances used in textile production

Not equivalent

Application

This unit of competency covers the skills and knowledge required to handle and work with chemical substances and preparations that are used in sectors of the textile, clothing and footwear (TCF) industry. It includes cleaning chemicals and solvents commonly used in laundry operations and chemicals, dyes and other substances that are used in textile production.

This unit of competency is applicable to all sectors of the TCF industry.

It applies to operators who prepare, use and store chemicals for TCF operations. While the unit of competency relates to safe practices pertaining to all chemical handling, and use of a range of chemical substances, the application of the unit and the evidence requirements may focus on one or more industry sectors or workplace contexts.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

Licensing, legislative or certification requirements to work safely with chemicals may apply in some contexts.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to use chemicals in TCF operations	<p>2.1 Access information on chemicals and substances used in TCF enterprises</p> <p>2.2 Distinguish types of chemicals and preparations that require safe handling in own workplace</p> <p>2.3 Identify personal responsibilities in working with chemicals</p> <p>2.4 Interpret common terminology in safety data sheets (SDS) for chemicals used in cleaning, textile production or other application, according to workplace requirements</p> <p>2.5 Identify procedures for using chemicals in a cost-effective manner</p>
3	Identify chemical control measures	<p>3.1 Identify location and storage conditions for substances and associated documentation</p> <p>3.2 Differentiate between a range of laundry and other chemicals, and identify risks associated with preparing and using chemicals</p> <p>3.3 Identify risk control measures and special handling</p>

- procedures for substances
- 3.4 Implement correct procedures for calculating quantities and measuring chemicals
 - 3.5 Identify hazards associated with the handling and uses of substances used in the workplace, and the emergency procedures required
 - 3.6 Identify local procedures to document procedures and respond to environmental considerations
- 4 **Apply safe handling of chemicals and solvents**
- 4.1 Ventilate work area and eliminate ignition sources
 - 4.2 Measure, handle and store according to WHS practices and workplace procedures
 - 4.3 Safely operate machinery and equipment associated with use of chemicals and solvents
 - 4.4 Demonstrate procedures to act upon accidents and emergencies according to procedures required for the chemical concerned
 - 4.5 Use PPE according to regulations
- 5 **Promote safe handling of chemicals**
- 5.1 Maintain work area and dispose of chemicals according to regulatory requirements, environmental considerations and SDS recommendations
 - 5.2 Communicate handling and storage information within workplace
 - 5.3 Complete required documentation
 - 5.4 Clear spillages according to workplace procedures and complete housekeeping requirements
 - 5.5 Report WHS issues, faults or emergencies to relevant personnel

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS procedures

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Access information on chemicals and substances includes, but is not limited to, one or more of the following:

- identifying relevant regulations and codes of practice relating to the control of hazardous substances
- assessing workplace information and workplace procedures regarding the safe handling of chemicals used in job role in industry sector
- identifying chemicals and their characteristics
- differentiating between toxic agents, corrosives, reactives, and flammables and combustibles
- identifying workplace procedures for accessing

stored substances and their housekeeping requirements

- locating relevant SDS for hazardous substances
- recognising and responding to signage and labelling

Risks and hazards include, but are not limited to, one or more of the following:

- exposure to chemicals, other harmful substances, machinery and equipment including:
- load shifting equipment, such as overhead cranes and forklifts
- production machinery and equipment
- inflammable materials and fire hazards
- manual handling of materials and equipment
- waste management and disposal
- extremes in weather conditions
- variations in lighting levels
- a range of floor surfaces
- water hazards
- accidents
- traffic flow, vehicle and equipment operation
- a range of storage areas
- health risks arising from exposure to chemicals

Common terminology in safety data sheets (SDS) includes, but is not limited to, five or more of the following:

- acute effect
- acute toxicity
- asphyxiant
- ceiling
- carcinogen
- chronic effect
- chronic toxicity
- combustible material
- corrosive
- decomposition
- dermal
- flash point
- flammable material
- ignition sources
- ingestion
- irritant
- mutagen
- oxidizer

- pH
- reactivity
- sensitizer
- solubility
- short-term exposure limit (STEL)
- teratogen
- threshold limit value (TLV)
- toxicity
- toxic substance
- time weighted average (TWA)

Work environment includes, but is not limited to, one or more of the following:

- operational workplace activities
- restricted space
- hazardous, controlled or exposed conditions
- day or night conditions

Unit Mapping Information

Release 1. Supersedes:

Assessment Requirements for MSTGN2012 Work safely with chemicals in TCF operations

Modification History

Release 1. Supersedes:

- LMTHL2004A Prepare chemicals to a formula
- LMTLA2001A Conduct safe handling of laundry chemicals
- LMTTX2015B Handle and prepare chemicals, dyes and other substances used in textile production

Not equivalent

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- identifying personal responsibilities in working with chemicals
- applying relevant Australian Standards to comply with job role and workplace requirements
- applying *AS/NZS 4146:2000 Laundry practice* (applicable to a laundry workplace)
- distinguishing types of chemicals and preparations that require safe handling in own workplace
- identifying risks and hazards, risks and using appropriate control measures
- differentiating between toxic agents, corrosives, reactives, and flammables and combustibles
- locating and interpreting safety data sheets (SDS) and other available safety information on identified chemicals
- identifying and applying procedures for responding to accidents and incidents
- using personal protective equipment (PPE)
- measuring, handling, transferring, storing and disposing of chemicals safely and with respect to environmental considerations
- communicating and recording accurate information.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of PPE
- Australian Standards, industry regulations and codes of practice that govern the control of chemicals in the identified workplace

- *AS/NZS 4146:2000 Laundry practice* (applicable to a laundry workplace)
- characteristics of different chemicals and solvents, toxic agents, corrosives, reactives, and flammables and combustibles, relevant to sector and workplace, such as:
 - perchlorethylene
 - white spirit
 - hydrocarbon
 - liquid silicon
 - detergent
 - chlorine bleach
 - oxybleach
 - builder
 - starch
 - fabric conditioner
 - laundry sour
 - caustic alkali
- characteristics of preparations used in textile production, such as:
 - dyes
 - chemicals
 - cleaning agents
 - solvents
 - substances used in the preparation of yarns or textile products for production processes
 - other liquid or particle additives used in textile production
- workplace information, such as:
 - SDS for hazardous substances
 - the meaning of common SDS terms
 - workplace procedures
 - signage and labelling
 - verbal instruction
- personal responsibilities in the control of chemicals in the workplace
- risks and hazard, such as:
 - mixing of chemicals
 - spills and leaks in the workplace
 - chemical fires
 - exposure to perchlorethylene, dyes or other cleaning chemicals via absorption, inhalation or ingestion
 - exposure to chemicals, other harmful substances, machinery and equipment including:
 - load shifting equipment, such as overhead cranes and forklifts
 - production machinery and equipment
 - inflammable materials and fire hazards
 - manual handling of materials and equipment

- waste management and disposal
- extremes in weather conditions
- variations in lighting levels
- a range of floor surfaces
- water hazards
- accidents
- traffic flow, vehicle and equipment operation
- a range of storage areas
- storage conditions, such as:
 - temperature
 - security
 - labelling
 - organisation
 - containers used
- PPE relevant to workplace and job role:
 - goggles or face shields
 - respirators
 - air-supplied or self-contained helmets
 - safety boots, gloves and appropriate clothes/garments
 - risks associated with operating machinery or equipment that use chemicals
 - risk and hazard control measures, such as:
 - isolation procedures
 - guards and safety devices
 - traffic and pedestrian flow regulation
 - inspections
 - housekeeping
 - communication protocols
- procedures for the safe and cost-effective measuring and mixing of chemicals and other agents
- personal responsibilities, such as:
 - following WHS procedures
 - following workplace procedures
 - following environmental procedures
 - reporting incidents
 - using PPE
- common SDS terminology used in sector application
- workplace procedures for reporting emergencies or WHS issues, control of chemical spills and fires, hazard identification and control measures
- reporting and documentation requirements.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in working safely with chemicals in TCF operations, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN3001 Control production in a section of a TCF enterprise

Modification History

Release 1. Supersedes and is equivalent to LMTGN3001B Control production in a section of a textiles, clothing and footwear enterprise

Application

This unit of competency covers the skills and knowledge to control operations within a section of a textiles, clothing and footwear (TCF) enterprise, to ensure production is efficient and meets established targets.

The unit of competency applies to scheduling activities, allocation of resources, monitoring productivity and addressing obstacles to efficiency. It applies to an area of production within an enterprise and work within established guidelines.

Work would be conducted largely independently and with accountability for own results, including, carrying out assigned tasks, coordinating processes, and setting and working to deadlines.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be self-directed and unsupervised.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Identify requirements for efficient production	<p>2.1 Identify machine operations, staffing, resources and production processes within work area</p> <p>2.2 Identify production targets for work area and communicate tasks, roles and responsibilities to team members</p> <p>2.3 Set and adjust machines according to workplace procedures</p> <p>2.4 Plan to implement quality standards, workplace procedures and WHS practices</p> <p>2.5 Interpret production specifications and key conditions affecting production</p> <p>2.6 Identify supply and production scheduling requirements for area</p>
3	Monitor and assess production efficiency	<p>3.1 Check compliance with specified requirements to ensure work flow and efficiency is maintained</p> <p>3.2 Identify, report or record non-compliance and interruption to work flow, and investigate to determine causes</p>

- | | | | |
|---|---|-----|--|
| | | 3.3 | Assess production outcomes against targets |
| | | 3.4 | Implement ongoing monitoring activities to assess production efficiency |
| | | 3.5 | Seek additional information, as required, to monitor efficiency |
| 4 | Control production to achieve efficiency targets | 4.1 | Set or interpret production standards to meet production targets |
| | | 4.2 | Recommend or implement corrective or preventative action to correct non-compliance |
| | | 4.3 | Use effective communication to communicate targets and procedures to team members and other relevant personnel |
| | | 4.4 | Manage production schedules and ensure supply of resources to maintain work flow |
| | | 4.5 | Schedule maintenance of machinery, as required |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication

- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Key conditions affecting production include, but are not limited to, one or more of the following:

- seasonal
- employment patterns
- skill availability
- industry influences
- influences on raw materials quality or availability
- safety issues
- costs

Production schedules include, but are not limited to, one or more of the following:

- daily or production runs
- repetitive production runs
- short runs and quick changes

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTGN3001B Control production in a section of a textiles, clothing and footwear enterprise

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTGN3001 Control production in a section of a TCF enterprise

Modification History

Release 1. Supersedes and is equivalent to LMTGN3001B Control production in a section of a textiles, clothing and footwear enterprise

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying and interpreting product specifications and production schedules
- organising machine operations, staff and production processes
- checking production processes and outputs against specifications, targets and efficiency standards
- identifying non-compliance and interruption to work flow, investigating causes and implementing appropriate ways to correct non-compliance and inefficiencies
- managing production schedules, work flow and machine maintenance to maintain production
- using effective communication to communicate targets and procedures to team members and other relevant personnel
- managing production schedules and ensure supply of resources to maintain work flow
- maintaining accurate records
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- production and work flow system in the workplace
- factors and constraints that impact on effective work flow
- ways of controlling factors and constraints
- obstacles to efficiency
- cost-effective work methods to achieve production objectives and timelines
- methods for monitoring and controlling the use of resources
- quality standards and practices
- effective communication appropriate for the context

- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in controlling production in a section in a TCF enterprise, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN3002 Organise and plan own work to achieve planned outcomes

Modification History

Release 1. Supersedes and is equivalent to LMTGN3002B Organise and plan own work to achieve planned outcomes

Application

This unit of competency covers the skills and knowledge required to organise and plan own work to achieve planned outcomes.

The unit of competency applies the planning, organising and coordination of production operations.

Work involves working largely independently and being accountable for own results, including carrying out assigned tasks, coordinating processes and setting and working to deadlines.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<p>1 Determine job requirements</p>	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
<p>2 Prepare for and plan work</p>	<p>2.1 Confirm production operations, materials, products and work requirements with relevant personnel</p> <p>2.2 Identify assigned tasks and work outcomes</p> <p>2.3 Prepare relevant machines and equipment</p> <p>2.4 Develop personal work plan and confirm with relevant personnel</p>
<p>3 Organise work operations</p>	<p>3.1 Plan, organise and coordinate production operations</p> <p>3.2 Handle, receive and assemble materials and products</p> <p>3.3 Use machines and equipment and resources to carry out assigned tasks</p> <p>3.4 Monitor and assess work according to planned steps and quality criteria</p> <p>3.5 Seek learning opportunities and advice from other personnel to extend ability to meet work targets</p>
<p>4 Check and record work outcomes</p>	<p>4.1 Check work regularly against specifications</p> <p>4.2 Identify problems or difficulty with tasks, production operations, deadlines or quality standards</p>

- 4.3 Investigate, report and rectify problems
- 4.4 Establish a record keeping system and maintain records according to workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Work plan includes, but is not limited to, the following:

- completing assigned tasks
- identifying steps required to complete work
- identifying required resources
- confirming quality requirements
- documenting critical deadlines

- establishing outcome objectives
- documenting sequence of operations

Assessment Requirements for MSTGN3002 Organise and plan own work to achieve planned outcomes

Modification History

Release 1. Supersedes and is equivalent to LMTGN3002B Organise and plan own work to achieve planned outcomes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- developing and following an approved work plan
- implementing production processes and operating machines and equipment
- handling, receiving, and assembling materials and products
- coordinating, monitoring and assessing work according to planned steps and quality criteria
- establishing and applying required quality procedures and required work steps
- identifying and dealing with problems arising in own work
- seeking advice and support, as required
- maintaining accurate records
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- production processes, machines and equipment
- operating procedures for production machines
- components of work plans
- characteristics of typical materials and products used in production
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in organising and planning own work to achieve planned outcomes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN3003 Estimate and cost job

Modification History

Release 1. Supersedes and is equivalent to LMTGN3003B Estimate and cost job

Application

This unit of competency covers skills and knowledge required to estimate materials, labour and time requirements, and establish costs for products and services.

The unit of competency applies to estimating and costing products and services for an identified project, activity or operation.

Discretion, initiative and judgement must be demonstrated on the job, either individually or in a team environment. Work may involve referral of matters to other workplace personnel. Work is undertaken according to established procedures involving a range of products, services and equipment.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Gather relevant information about job	1.1	Obtain details of customer requirements through discussion with customer or from information supplied
		1.2	Develop details of products and services to be provided and any special provisions
		1.3	Determine delivery details and methods of transportation, where necessary
		1.4	Record details and document specifications
2	Estimate materials, labour and time	2.1	Research, locate and interpret technical information about materials, equipment, products and services required for the job
		2.2	Estimate types, quality and quantities of materials required for work
		2.3	Estimate acceptable price range for required products
		2.4	Estimate labour requirements to perform required services
		2.5	Estimate time requirements to perform required services
3	Calculate costs	3.1	Calculate total materials costs and labour costs
		3.2	Calculate transport and delivery costs for products, as required
		3.3	Determine allowances for overheads and mark-up percentages
		3.4	Calculate total job cost
		3.5	Calculate final cost to customer
4	Document and	4.1	Use calculators, computers with appropriate software or other aids to estimate, calculate and verify costings

- verify details** according to workplace procedures
- 4.2 Document details of costs and charges
 - 4.3 Obtain verification of costs, calculations and other details by other enterprise personnel, as required
 - 4.4 Prepare customer quotation in appropriate format to meet required enterprise or industry standards
 - 4.5 Document and record details for future reference

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Assessment Requirements for MSTGN3003 Estimate and cost job

Modification History

Release 1. Supersedes and is equivalent to LMTGN3003B Estimate and cost job

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting work orders, customer requirements, specifications and instructions for products and materials to be used
- locating and interpreting technical information about products, materials, equipment and operating procedures
- estimating and costing materials and equipment, labour, time, transport and overheads, on at least two (2) occasions
- calculating total costs of products or services
- calculating costs to customer and preparing quotation
- using calculators, computer programs and other aids to estimate, calculate and communicate costs
- documenting and communicating job-related information, including customer requirements; products, materials and labour required; costing calculations for products, materials and labour and special conditions in required format
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- products and services offered by the enterprise
- details of materials, products and equipment
- workplace costing procedures
- components of overheads costs
- components of direct labour costs
- work flow and manufacturing processes
- basic mathematical processes and formulas
- labour rates and approximate costs of products and materials
- use of calculators, computers and other technology

- industry standards for customer service and providing quotations
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements
 - have vocational competency in estimating and costing jobs, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN3004 Supervise operations in a TCF enterprise

Modification History

Release 1. Supersedes and is equivalent to LMTGN3009B Supervise operations in a textiles, clothing and footwear enterprise

Application

This unit of competency covers the skills and knowledge required to supervise operations within a textiles, clothing and footwear (TCF) enterprise.

The unit of competency applies to a supervisory role within a TCF enterprise. This role requires extensive knowledge and experience in working with machines, equipment, materials and processes associated with the TCF operations.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be self-directed and unsupervised.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. It may involve the supervision of a section of an enterprise, other personnel and/or technical processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Identify scope of supervisory responsibility	<p>2.1 Identify machine operations, staff, resources and operation processes within work area</p> <p>2.2 Determine production targets and identify maintenance requirements</p> <p>2.3 Identify scope and limitations of supervisory role</p> <p>2.4 Identify responsibilities to coordinate orientation activities for new staff and visitors</p>
3	Provide technical support to operators	<p>3.1 Identify operator roles and allocate personnel</p> <p>3.2 Monitor operator productivity and ability to conduct work effectively and safely</p> <p>3.3 Identify training needs and communicate with appropriate personnel</p> <p>3.4 Address technical problems raised by operators regarding machinery, product quality and operational safety</p> <p>3.5 Provide technical support to operators</p>
4	Supervise team activity	<p>4.1 Establish production standards with team members and monitor WHS compliance and workplace procedures</p>

- 4.2 Monitor and address work allocation requirements in order to maintain optimum production efficiency
 - 4.3 Use effective communication skills to communicate targets and procedures to appropriate personnel
 - 4.4 Monitor and support team communications and relationships
 - 4.5 Monitor and address movement of materials through operations and production output against targets, as necessary
- 5 **Maintain communication**
- 5.1 Liaise with downstream and upstream areas to ensure quality and efficiency of operations as required
 - 5.2 Keep management informed of progress and any issues which may affect operation outcomes
 - 5.3 Maintain ongoing liaison with management to guide operation targets
 - 5.4 Consult with maintenance staff and management to identify opportunities to minimise down time
- 6 **Complete workplace documentation**
- 6.1 Identify documentation procedures for each step of operations
 - 6.2 Monitor compliance with documentation requirements
 - 6.3 Complete enterprise documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Operation processes include, but are not limited to, the following:

- use of machines and equipment
- use of chemicals
- use of materials

Orientation activities include, but are not limited to, one or more of the following:

- organising introduction to staff
- organising introduction to workplace
- conducting tour of work areas or facilities
- explaining work processes
- completing documentation
- coaching or providing on-the-job training for job activities
- explaining implementation of safe work practices
- reporting back to appropriate personnel
- identifying hazards
- providing WHS briefing

Issues which may affect operation outcomes include, but are not

- staffing
- machinery

limited to, one or more of the following:

- materials
- schedules
- maintenance requirements

Assessment Requirements for MSTGN3004 Supervise operations in a TCF enterprise

Modification History

Release 1. Supersedes and is equivalent to LMTGN3009B Supervise operations in a textiles, clothing and footwear enterprise

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- planning, scheduling and prioritising resources (machines, staff, materials and operation processes)
- clarifying and communicating tasks, roles and responsibilities
- allocating work for operators/team members
- addressing technical problems raised by operators regarding machinery, product quality and operational safety, and providing technical support to operators as required
- identifying and reporting problems with work flow
- maintaining ongoing liaison upstream and downstream and with management to guide operation targets
- monitoring and addressing work allocation requirements, movement of materials through operations and production output in order to maintain optimum production efficiency
- supervising and completing enterprise documentation for all stages of production, as required, and monitoring compliance with documentation requirements.
- identify and report on skills deficiency in operations

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- production and workflow system in the workplace
- factors and constraints that impact on effective workflow
- ways of controlling factors and constraints
- efficient operation of machines and processes within area of supervision
- machinery maintenance requirements
- quality assurance standards and procedures
- quality standards and practices

- effective communication
- work health and safety (WHS) practices, including hazard identification and control measures
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency supervising operations in a textiles, clothing and footwear enterprise, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN3005 Plan tasks to assist production operations

Modification History

Release 1. Supersedes and is equivalent to LMTGN3005B Plan tasks to assist production operations

Application

This unit of competency covers the skills and knowledge required to assist in production planning by performing specific planning tasks.

The unit of competency applies to planning of tasks that will assist production operations. Tasks may include the development of rosters, work health and safety (WHS) practices, workplace procedures, documentation practices and organisational systems.

Work requires discretion, initiative and judgement.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with WHS requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to plan tasks	<p>2.1 Discuss planning requirements with supervisor and confirm work brief</p> <p>2.2 Confirm timeline, jobs and work priorities associated with planning tasks with supervisor or manager</p> <p>2.3 Check workplace procedures and documentation relating to planning tasks and identify key personnel</p>
3	Conduct planning task	<p>3.1 Communicate with team, section or individuals and key personnel to seek support for planning task requirements</p> <p>3.2 Assess and apply relevant criteria from previous and current work practices, organisational guidelines, documentation systems and quality standards to planning task</p> <p>3.3 Use planning tools and techniques to coordinate and sequence tasks and integrate WHS practices to develop plan that meets workplace requirements</p> <p>3.4 Test plan with key personnel and adjust, as required</p>
4	Implement plan	<p>4.1 Communicate all plan information in an effective way to work team, section and individuals</p> <p>4.2 Seek feedback from team, section members and individuals to support effective operation of team or section</p>

- 4.3 Monitor implementation of plan, and identify and apply changes, where required, to improve outcomes
- 4.4 Document plan and implementation practices

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Planning task includes, but is not limited to, one or more of the following:

- shift rosters
- workplace or operation instructions and procedures
- WHS practices, including committee representation
- workplace documentation
- organisational systems

Key personnel include, but are not limited to, one or more of the following:

- operations managers
- supervisors and team leaders
- human resources staff
- relevant employees

Planning tools and techniques include, but are not limited to, one or more of the following:

- scheduling
- time management
- brainstorming
- setting goals and defined outcomes
- prioritising
- reviewing and evaluating strategies

WHS practices include one or more of the following:

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and includes one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTGN3005B Plan tasks to assist production operations

Assessment Requirements for MSTGN3005 Plan tasks to assist production operations

Modification History

Release 1. Supersedes and is equivalent to LMTGN3005B Plan tasks to assist production operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- planning and organising work tasks, work processes and staff
- using suitable planning techniques
- meeting work process efficiency standards
- communicating all plan information in an effective way to work team, section and individuals, and seeking and acting upon feedback, as appropriate
- using planning tools and techniques to coordinate and sequence tasks and integrate work health and safety (WHS) practices to develop plan that meets workplace requirements
- monitoring implementation of plan, and identifying and applying changes, where required, to improve outcomes
- documenting plan and implementation practices.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- production and work flow system
- factors and constraints that impact on task
- effective work methods to achieve production objectives and timelines
- planning tools and techniques
- documentation practices
- quality standards and procedures
- scheduling techniques
- resourcing policies
- general staffing levels, capabilities and application of standard times
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in planning tasks to assist production operations, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN3006 Draw 3-D designs

Modification History

Release 1. Supersedes and is equivalent to LMTGN3008A Draw 3D designs

Application

This unit of competency covers the skills and knowledge required to draw 3-D designs for custom-made and production textile, clothing and footwear (TCF) products.

The unit of competency applies to the illustration or drawing of designs from the designer or rough sketch. The 3-D drawings feature all perspectives of the product, and are used as a communication tool for construction or promotional purposes. The drawing may be done manually or by computer.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare for drawing**
 - 2.1 Select and prepare drawing tools and equipment
 - 2.2 Set up workbench and seating according to WHS practices
 - 2.3 Interpret designer or rough sketch based on workplace procedures and input from client, designer, producer or a record of an existing product
 - 2.4 Identify features, specifications and quality criteria for drawing

- 3 **Apply 3-D drawing techniques**
 - 3.1 Accurately draw design of product using templates, where required, and showing relevant wearing or placement angles
 - 3.2 Draw front, back and profile views of the product
 - 3.3 Confirm drawing with customer or designer and make necessary adjustments to meet requirements

- 4 **Finalise 3-D designs**
 - 4.1 Render finalised drawing according to requirements by hand or computer
 - 4.2 Select presentation materials, tools and equipment
 - 4.3 Apply visual presentation techniques to final illustration
 - 4.4 Present final illustration of 3-D design to client
 - 4.5 File and store documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Input includes, but is not limited to, one or more of the following:**
- verbal description from client
 - discussion between client and producer
 - discussion and description between producer and designer
 - a record of an existing product

- Interpret includes, but is not limited to, three or more of the following:**
- parts or sections of the product
 - trims or features
 - shape and silhouette
 - colour
 - textures
 - balance

- how the product is worn
- traditional and non-traditional materials

Product includes, but is not limited to, one or more of the following:

- headwear
- footwear
- accessories
- garment
- other textile product

Angles include, but are not limited to, one or more of the following:

- side
- front
- back
- square

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTGN3008A Draw 3D designs

Assessment Requirements for MSTGN3006 Draw 3-D designs

Modification History

Release 1. Supersedes and is equivalent to LMTGN3008A Draw 3D designs

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting design based on workplace procedures and input from client, designer, producer or a record of an existing product
- using drawing tools and equipment to illustrate designs
- drawing an accurate 3-D drawing of a design product using templates, where required, and showing relevant wearing or placement angles
- seeking and applying feedback from client
- rendering finalised drawing by hand or computer to create 3-D design, including front, back and profile views of the product
- applying quality criteria in the completion of the drawing
- presenting final drawings that accurately represent designs for at least three (3) different products using visual presentation techniques
- maintaining accurate records
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- parts of and terminology of the product
- drawing tools and equipment, such as:
 - HB lead pencil
 - eraser
 - pencil sharpener
 - black felt tip pens (02, 04 and 06)
 - A3 layout pad
 - computer and software
- drawing templates, such as:

- variety of different face or body shapes, necks and shoulders
- variety of body or head profiles
- facial features (eyes, eyebrows, nose, mouth and ears)
- hair styles and colouring
- women, men or children
- product styles
- presentation materials, tools and equipment, such as:
 - mounting board
 - frames
 - backings
 - electronic
 - cutting tools
 - adhesives
 - cover sheet to protect illustration (e.g. plastic sleeves and drawing paper)
- rendering techniques, such as:
 - solid colour
 - wash
 - felt pens
 - gouache
 - pen and ink
 - pencil
 - shading
- industry standards
- visual presentation, such as:
 - mounting
 - display of different angles of product
 - production notes
 - electronic methods
- enterprise requirements
- traditional and non-traditional materials quality concepts
- quality criteria:
 - proportion
 - perspective
 - detailing
 - neatness
 - accuracy
 - the media to be used
 - rendering
 - size of the drawing
- workplace procedures

- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in drawing 3-D designs, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN3007 Monitor and operate trade waste

Modification History

Release 1. Supersedes and is equivalent to LMTGN3007B Monitor and operate trade waste

Application

This unit of competency covers the skills and knowledge required to monitor, operate, measure and report on trade waste system performance and process quality control.

This unit of competency applies to processing plant operations and inspection of work areas, monitoring, operating, measuring and reporting on trade waste systems.

Work may be conducted in restricted spaces or exposed conditions or controlled or open environments.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Monitor treatment plant performance	<p>2.1 Conduct and assess routine plant inspections in accordance with organisational and plant requirements</p> <p>2.2 Collect and conduct tests of process samples</p> <p>2.3 Collect and report process data according to organisational and plant requirements and workplace procedures</p> <p>2.4 Identify corrosion damage</p>
3	Control chemical use	<p>3.1 Use, handle and store chemicals in accordance with organisational and statutory requirements</p> <p>3.2 Prepare chemical dosing in accordance with plant processes and organisational and statutory requirements</p> <p>3.3 Maintain information related to chemical supply and usage in accordance with statutory requirements</p> <p>3.4 Interact and communicate with other employees and relevant authorities</p>
4	Operate and control processes	<p>4.1 Monitor processes to maintain parameters of operation</p> <p>4.2 Identify and report process faults and operational conditions of plant in accordance with organisational and statutory requirements</p>

- 4.3 Assess basic system adjustments to enhance system performance in accordance with organisational and statutory requirements
- 4.4 Compile reports compiled from plant and system data to meet organisational and statutory requirements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Process includes, but is not limited to, one or more of the following:

- chemical precipitation
- activated sludge
- biodegradable reduction
- solids handling

Data includes, but is not limited to, one or more of the following:

- plant performance data
- chemical usage

Tests include, but are not limited to, one or more of the following:

- settling tests
- pH
- dissolved oxygen

System adjustments include, but are not limited to, one or more of the following:

- pH correction
- dissolved oxygen levels

Equipment includes, but is not limited to, one or more of the following:

- electronic monitoring and metering systems
- manual chart recording systems
- laboratory testing and sampling equipment
- computerised equipment

Assessment Requirements for MSTGN3007 Monitor and operate trade waste

Modification History

Release 1. Supersedes and is equivalent to LMTGN3007B Monitor and operate trade waste

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- conducting routine plant inspections, assessing processes, and collecting and conducting tests of process samples, in accordance with organisational and plant requirements
- complying with organisational and statutory requirements to use, handle and store chemicals, prepare and apply chemical and biological dosing
- maintaining accurate records of test results/work records
- communicating effectively within the workplace and maintaining information related to chemical supply and usage
- interpreting and applying established procedures
- identifying and reporting process faults and operational conditions of plant in accordance with organisational and statutory requirements
- compiling reports compiled from plant and system data to meet organisational and statutory requirements
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry process and equipment
- system hydraulics and layout, control systems
- chemical dosing processes
- hazardous material handling procedures
- work health and safety (WHS) and environmental aspects of relevant testing processes
- workplace procedures and reporting processes
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in monitoring and operating trade waste, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN4001 Coordinate or set up machines for product change

Modification History

Release 1. Supersedes:

- LMTGN4001A Coordinate or set up machines for product change - Equivalent
- LMTGN4009A Set and modify machines for product change - Equivalent
- LMTLA4002A Program and monitor commercial laundry machine control systems - Not equivalent.
-

Application

This unit of competency covers the skills and knowledge required to set up machines for production changes in a textiles, clothing and footwear (TCF) enterprise.

This unit of competency applies to a TCF enterprise where discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with standard SOPS</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to coordinate or set up machines	<p>2.1 Interpret product specifications correctly to meet machine setting requirements</p> <p>2.2 Set machine in accordance with product specifications, machine manufacturer instructions and workplace procedures</p> <p>2.3 Obtain material to be used</p>
3	Organise sample quality testing	<p>3.1 Operate machine in accordance with manufacturer and workplace instructions to produce a specified sample</p> <p>3.2 Test sample, or organise the test, in accordance with workplace practices to meet required quality standards</p>
4	Finalise and record machine settings	<p>4.1 Interpret test results to determine adjustment requirements and re-adjust machine settings, if necessary</p> <p>4.2 Assess adjustment changes in accordance with product and machine specifications</p> <p>4.3 Inform appropriate production personnel when the newly set-up machine is available, in accordance with workplace procedures</p> <p>4.4 Prepare reports and maintain records where necessary, in accordance with workplace procedures</p>

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Machines include, but are not limited to, one or more of the following:

- any machine typically used in the TCF sector concerned
- microprocessor or computer-controlled machines
- both production and facility equipment used in the enterprise

Unit Mapping Information

Release 1. Supersedes:

- LMTGN4001A Coordinate or set up machines for product change - Equivalent
- LMTGN4009A Set and modify machines for product change - Equivalent
- LMTLA4002A Program and monitor commercial laundry machine control systems - Not equivalent.

-

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting specifications for machine settings
- interpreting and carrying out established procedures
- operating machine in accordance with manufacturer and workplace instructions to produce specified sample on at least two (2) occasions
- arranging or conducting testing of sample
- making appropriate re-adjustments
- communicating with relevant production personnel when the newly set up machine is available
- applying workplace procedures in production operations
- preparing reports and maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- setting up and adjustment requirements for the range of machines and equipment used in the workplace
- quality requirements
- machine manufacturer specifications
- safety and environmental aspects of relevant workplace activities
- quality practices
- workplace procedures

- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in coordinating or setting up machines for product change, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. MSTGN4002 Participate in product engineering

Modification History

Release 1. Supersedes and is equivalent to LMTGN4002A Participate in product engineering

Application

This unit of competency covers the skills and knowledge required to participate in product engineering in a textiles, clothing and footwear (TCF) enterprise.

This unit of competency applies to product engineering in any TCF sector where judgement may be required in planning and selecting appropriate processes or procedures for self and others.

Work may be conducted in a variety of environments, including operational workplace activities, restricted space, and hazardous, controlled or exposed conditions.

Product engineering may occur in relation to repetitive production runs, short runs and quick changes and can relate to products including fabrics, fibres, yarns, design varieties, weaves, dyes and finishes.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare for production	<p>2.1 Examine structure of sample material or product from identified TCF sector to confirm structure</p> <p>2.2 Document detail of structure or composition, where required, to assist in production planning</p> <p>2.3 Evaluate material or product structure to identify options for production</p>
3	Plan method of production	<p>3.1 Assess options to determine most effective and efficient method of production, to ensure highest quality and yield from raw materials, and ease of production</p> <p>3.2 Document options and recommendations in accordance with workplace procedures</p> <p>3.3 Examine existing resources, machines, production techniques and scheduling arrangements in relation to the production requirements</p> <p>3.4 Identify and document any potential requirements for change in accordance with workplace procedures</p>

- | | | | |
|---|--|-----|--|
| 4 | Prepare cost estimates and maintain records | 4.1 | Identify material requirements and economical batch sizes |
| | | 4.2 | Identify labour hours, times and other statistics required and make cost estimates |
| | | 4.3 | Determine available machine hours and make estimates, where required |
| | | 4.4 | Estimate and document overall costs in accordance with workplace practices |
| | | 4.5 | Maintain production planning records and prepare reports, where necessary, in accordance with workplace procedures |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards includes:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

TCF sectors include, but are not limited to, one or more of the following:

- textile production
- clothing production
- footwear
- cotton ginning
- leather production
- millinery
- canvas and sails production
- laundry operations
- dry cleaning operations
- fashion design and technology

Methods of production include, but are not limited to, two or more of the following:

- just in time (JIT)
- value-added modelling (VAM)
- quick response
- quality circles
- team processes
- benchmarking

Cost estimating includes, but is not limited to:

- written bill of labour, order of work or plant sample

Assessment Requirements for MSTGN4002 Participate in product engineering

Modification History

Release 1. Supersedes and is equivalent to LMTGN4002A Participate in product engineering

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- confirming specifications
- determining structure and composition of material or product
- making calculations, interpreting and using data from various sources
- assessing options for method of production
- establishing potential machine and production changes
- identifying material requirements, economical batch sizes, labour hours, times and other statistics required, and making cost estimates
- determining available machine hours, making estimates, where required, and estimating costs
- maintaining production planning records and preparing reports, where necessary, in accordance with workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- machines and their capabilities
- quality assurance processes; production processes and software
- costing procedures for:
 - materials
 - economical batch hours
 - labour
 - machine hours
 - other statistics
- methods of production
- products produced by the workplace and material or fabric structure (techniques)

- work and workplace organisation systems
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in participating in product engineering, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTGN4003 Install and commission process and machine control programs

Modification History

Release 1. Supersedes and is equivalent to LMTGN4003A Install and commission process and machine control programs

Application

This unit of competency covers the skills and knowledge required to install and commission process and machine control system programs in machines and equipment.

The unit of competency applies to machines and equipment used within a production workplace using complex textile, clothing and footwear (TCF) production equipment with control systems involving advanced:

- electronic technology
- pneumatic technology
- hydraulic technology
- robotics technology.

Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes, including liaison with specialist technicians.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Install automatic process and machine control program	2.1	Select appropriate program loading technique and connect external loading devices to automatic process and machine control system correctly
		2.2	Place process and machine control system in correct operational mode to accept program loading
		2.3	Download program in accordance with manufacturers' recommended procedure, workplace procedures or appropriate SOPs and WHS practices
		2.4	Undertake checks appropriately during and after downloading to ensure data transfer is accurate and complete
		2.5	Disconnect all external program loading devices and connections from process and machine control system
3	Commission automatic process and machine control program	3.1	Determine program format and operational intent
		3.2	Check program instructions for compliance with specifications
		3.3	Counter-set software timers to specification, where

- required
- 3.4 Step through program manually and check and measure outputs for compliance with specifications
 - 3.5 Check external inputs for compliance with specifications according to specified procedures
 - 3.6 Run program and check total operation for compliance with specifications, where applicable
 - 3.7 Assess confirmation of program master copy storage
- 4 **Maintain records**
- 4.1 Maintain records and prepare reports, where necessary, in accordance with workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Assessment Requirements for MSTGN4003 Install and commission process and machine control programs

Modification History

Release 1. Supersedes and is equivalent to LMTGN4003A Install and commission process and machine control programs

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- installing automatic process and machine control program
- selecting and using appropriate loading technique
- performing checks to ensure accurate data transfer
- commissioning automatic process and machine control program
- checking program instructions
- running program to ensure compliance with specifications
- monitoring performance
- maintaining accurate records
- following workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- appropriate installation and commissioning procedures
- quality requirements and relevant standards
- machine and equipment manufacturer specifications and instructions
- safety and environmental aspects of relevant workplace activities
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in installing and commissioning process and machine control systems, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN4004 Analyse TCF merchandising and marketing principles

Modification History

Release 1. Supersedes and is equivalent to LMTGN4019A Analyse textiles, clothing and footwear merchandising and marketing principles

Application

This unit of competency covers the skills and knowledge required to analyse key principles of merchandising and marketing when applied in a textiles, clothing and footwear (TCF) environment.

The unit of competency applies to activities associated with marketing at all stages of the TCF supply chain and merchandising through wholesale and retail channels. TCF products may be items and services from any sector within the TCF industry and include final products, such as garments or fashion accessories, or processed materials such as fabrics and industrial or domestic textiles.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Determine job requirements	1.1 Follow standard operating procedures (SOPs)
	1.2 Comply with work health and safety (WHS) requirements at all times
	1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
	1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
2 Investigate TCF market conditions	2.1 Use industry appropriate research methods to survey domestic conditions affecting the TCF market and identify effects of these conditions on the TCF industry
	2.2 Explore global conditions affecting the TCF market and identify effects of these conditions on the TCF industry
	2.3 Assess significance of TCF product range on the global market
	2.4 Identify key components of the TCF supply chain and analyse influences on supply chain conditions
	2.5 Examine features of mainstream and niche markets within the TCF market
	2.6 Investigate role of merchandising in the TCF marketplace
3 Determine the characteristics of the TCF market	3.1 Access and investigate current information on the TCF market to determine trends influencing TCF production and supply
	3.2 Investigate TCF market segmentation, targeting and price positioning for TCF product range
	3.3 Identify key characteristics of TCF market segments and examine implications for marketing activity
	3.4 Analyse consumer behaviour for TCF product range

- | | | | |
|---|--|-----|---|
| 4 | Assess features of a TCF product to determine effective marketing | 4.1 | Identify technical specifications of a TCF product and determine implications for market positioning |
| | | 4.2 | Explore role of creativity in the marketing of TCF products |
| | | 4.3 | Identify networks applying to the marketing and merchandising of a TCF product |
| | | 4.4 | Identify strengths, weaknesses, opportunities and threats applying to a TCF product and assess implications for marketing |
| | | 4.5 | Document and record outcomes of marketing investigation |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- TCF products include, but are not limited to, one or more of the following:**
- items and services from any sector within the TCF industries
 - components
 - final products:
 - garments
 - fashion accessories
 - shade sales, domestic or vehicle awnings
 - processed materials:
 - fabrics
 - industrial textiles
 - domestic textiles
- Domestic conditions include, but are not limited to, one or more of the following:**
- availability of raw material
 - tariff agreements
 - costs of transportation
 - employment rates, skill availability and training support
 - status of businesses within the supply chain
 - image of Australia as a provider of quality, cost-effective TCF products
 - economic status
- Global conditions include, but are not limited to, one or more of the following:**
- availability of raw material
 - tariffs, levies, taxes and other import and export considerations
 - costs of transportation for importing and exporting product to and from Australia
 - skill availability and labour forces
 - size and influence of international interests
 - image of Australia as a provider of quality, cost-effective TCF products
 - economic status

Assessment Requirements for MSTGN4004 Analyse TCF merchandising and marketing principles

Modification History

Release 1. Supersedes and is equivalent to LMTGN4019A Analyse textiles, clothing and footwear merchandising and marketing principles applicable.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- using a combination of digital, manual and personal research strategies to investigate domestic and global market conditions
- undertaking research and recording details of at least two (2) research strategies
- determining the characteristics of the TCF market to identify trends, market segments, consumer behaviour and price positioning for a product range
- determining at least two (2) features of identified TCF product range that support effective marketing
- identifying networks applying to the marketing and merchandising of identified TCF product
- assessing a TCF product and its suitability for marketing
- assessing strengths, weaknesses, opportunities and threats applying to a TCF product, and the implications for marketing
- documenting and recording outcomes of marketing investigation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- digital, manual and personal research strategies
- characteristics of domestic and global TCF market segments and the relationship between them:
 - demographics
 - economics
 - location
 - education
- components of the TCF supply chain:

- designers and product engineers
- manufacturers
- distributors, wholesalers, exporters and importers
- transporters
- sales, marketing and retail providers
- range of products available in the TCF industry
- segmentation of the TCF market
- demographics of the TCF consumer
- technical aspects of TCF product
- research methods relevant to and appropriate to TCF industry:
 - web searches
 - reviewing statistical data
 - examining industry publications
 - conducting personal interviews
 - completing surveys
 - reading industry reports
 - attending exhibitions, displays and presentations
- trends and the role of marketing and merchandising
- characteristics of identified TCF product that make it suitable for marketing
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in analysing textiles, clothing and footwear merchandising and marketing principles, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN4005 Plan and implement production within a work area

Modification History

Release 1. Supersedes and is equivalent to LMTGN4005A Plan and implement production within a work area

Application

This unit of competency covers the skills and knowledge required to plan and implement production within a work team within a textiles, clothing or footwear (TCF) industry workplace.

This unit of competency applies to determining, planning, implementing and monitoring production work flow within a work team in a TCF sector workplace. Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes.

Work may be conducted in a variety of environments, including operational workplace activities, restricted space, hazardous, controlled or exposed conditions.

Operations may cover various time scales to reflect seasonal planning.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare for production	<p>2.1 Identify projected quantity and quality requirements, standard times and production capacities</p> <p>2.2 Identify production process and material handling options</p> <p>2.3 Establish resources required for the project or production order</p> <p>2.4 Prioritise work and identify the steps required for the process to ensure efficient use of resources</p> <p>2.5 Prepare documentation according to workplace procedures</p>
3	Organise team and resources	<p>3.1 Select and organise work team according to workplace procedures and TCF sector industry practices</p> <p>3.2 Identify and organise facility, equipment and material and resources required for the production process in accordance with the production schedule and WHS practices</p>

- | | | | |
|---|--|-----|--|
| 4 | Implement and monitor work flow | 4.1 | Implement production and monitor work flow to make sure production schedule is maintained |
| | | 4.2 | Use necessary methods to direct work to each work area or location, as required |
| | | 4.3 | Identify potential congestion areas and take action to streamline work flow |
| | | 4.4 | Prepare to troubleshoot on a regular basis and be ready to respond to breakdowns, absenteeism and other factors |
| | | 4.5 | Coordinate systematic variations to the production plan to ensure production meets the schedule and specifications |
| | | 4.6 | Maintain records and prepare reports in accordance with workplace procedures |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Production planning includes, but is not limited to, one or more of the following:

- establishing an overall plan for manufacture/product delivery
- repetitive production runs
- short runs
- quick changes
- a diversity of styles
- indent orders
- stock services replenishment

Production process includes, but is not limited to, one or more of the following:

- just in time (JIT)
- value-added modelling (VAM)
- quick response
- quality circles
- team processes
- benchmarking

Production schedule includes, but is not limited to, one or more of the following:

- plant layout
- machine involvement
- personnel required for particular operations

Variations to production plan include, but are not limited to, one or more of the following:

- re-allocating work in accordance with production priorities, where required
- identifying and dealing with inefficiencies in accordance with workplace production practices
- defining and communicating team or individual responsibilities

Assessment Requirements for MSTGN4005 Plan and implement production within a work area

Modification History

Release 1. Supersedes and is equivalent to LMTGN4005A Plan and implement production within a work area

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- establishing production requirements and preparing for production on at least two (2) occasions
- prioritising work and identifying the steps required for the process to ensure efficient use of resources and prioritising work
- selecting and organising work team according to workplace procedures and textile, clothing and footwear (TCF) sector industry practices
- implementing and monitoring work flow and ensuring efficiency of production according to work health and safety (WHS) requirements on at least two (2) occasions
- responding to and dealing with inefficiencies, absenteeism, breakdowns and other interruptions to work flow
- coordinating variations to production plan
- maintaining records and prepare reports in accordance with workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- TCF sectors:
 - textile production
 - clothing production
 - footwear
 - cotton ginning
 - leather production
 - millinery
 - canvas and sails production
 - laundry operations

- dry cleaning operations
- fashion design and technology
- work organisation systems and workplace organisation features
- production planning processes, such as material supply
- production operations, machines and equipment
- characteristics and performance of materials
- WHS and environmental aspects of relevant workplace activities:
 - hazard identification and control
 - risk assessment
 - implementing risk reduction measures specific to the tasks described by this unit
 - manual handling techniques
 - SOPS
 - PPE
 - safe materials handling
 - taking of rest breaks
 - ergonomic arrangement of workplaces
 - following marked walkways
 - safe storage of equipment
 - housekeeping
 - reporting accidents and incidents
 - other WHS practices relevant to the job and enterprise
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in planning and implementing production within a work area, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN4006 Apply TCF market supply systems

Modification History

Release 1. Supersedes and is equivalent to LMTGN4018A Apply textile clothing and footwear market supply systems

Application

This unit of competency covers the skills and knowledge required to apply systems of supply for the textiles, clothing and footwear (TCF) market.

The unit of competency applies to the supply of materials and resources, manufacture and distribution of TCF products and services.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTGN2011 Identify fabrics, fibres and textiles used in TCF industry

- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

TCF products include, but are not limited to, one or more of the following:

- clothing
- fashion items
- textiles
- footwear
- leather products
- accessories

TCF personnel expertise include, but are not limited to, one or more of the following:

- quality assurance personnel
- test and laboratory experts
- designers
- researchers
- importers
- exporters
- transporters

Supply criteria includes, but is not limited to, one or more of the following:

- availability of raw materials
- timelines
- quality standards
- colour
- quantity
- reliability
- communication channels
- reputation
- price
- delivery schedule

Routine tests include, but are not limited to, one or more of the following:

- visual inspection
- tactile analysis
- acetone
- burn test
- microscopy

Assessment Requirements for MSTGN4006 Apply TCF market supply systems

Modification History

Release 1. Supersedes and is equivalent to LMTGN4018A Apply textile clothing and footwear market supply systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying products, raw materials and personnel in TCF domestic and/or international supply chain systems for a TCF sector
- specifying the role of TCF suppliers and supply criteria for at least two (2) different TCF products
- identifying criteria for assessing quality of TCF materials and products
- using appropriate electronic and digital tools and communication and records systems in domestic and/or international TCF supply systems to record supply details for at least two (2) identified TCF products
- using appropriate TCF industry terminology to communicate effectively and document processes in domestic and/or international supply chain operations
- evaluating current TCF supply chain arrangements and relationships, and assessing strengths and weaknesses
- documenting processes in domestic and/or international supply chain.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- components of TCF supply chain, such as:
 - product flow
 - raw material
 - production
 - distribution
 - marketing
 - customers
 - business support and administrators

- characteristics of fibres, fabrics and fashion and textile products
- information resources on fibres and fabrics
- TCF production processes
- supply criteria
- quality indicators, such as:
 - straightness of grain
 - even/uneven yarn
 - slippage
 - length of fibres
 - pilling
 - fabric resilience
 - workability
 - wash testing
 - shade
 - tensile properties
 - handle
- test procedures to assess quality of materials and products
- electronic and digital tools used in TCF supply chain, such as:
 - point of sale systems
 - design software
 - computer-aided manufacturing programs
 - just in time (JIT) programs
 - bar coding systems
 - websites
 - electronic payment systems
 - stock control systems
 - digital applications
- electronic and digital communication and recording tools appropriate for TCF supply chain, such as:
 - email
 - websites
 - documentation systems
 - order systems
- catalogues
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in applying TCF market supply systems, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTGN4007 Contribute to the development of products or processes

Modification History

Release 1. Supersedes and is equivalent to LMTGN4016A Contribute to the development of products or processes

Application

This unit of competency covers the skills and knowledge required to contribute to developing products or processes within the workplace.

This unit of competency applies to activities contributing to development of products or processes within the enterprise. It includes conducting trials to establish whether products or processes conform to requirements. Judgement may be required in planning and selecting appropriate processes or procedures for self and others.

Work may be conducted in restricted spaces or exposed conditions or controlled or open environments.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work responsibilities will vary in scope according to size of the workplace, range of designs or products, specialisation in the workplace and workplace quality standards. Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1 Follow standard operating procedures (SOPs) 1.2 Comply with work health and safety (WHS) requirements at all times 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare for development of products or processes	2.1 Identify and interpret provisional specifications in consultation with others, where required 2.2 Identify requirements for feasibility study in conjunction with others, as required 2.3 Provide assistance to feasibility studies to assess feasibility of design and development
3	Assist in developing or engineering product	3.1 Interpret product or process specifications and develop preliminary specifications from feasibility study 3.2 Use specifications to develop or engineer the product 3.3 Check or select raw materials to meet requirements 3.4 Determine machine or equipment or skill availability according to requirements
4	Conduct and assess trials	4.1 Confirm and clarify requirements for trial to establish procedures and parameters as per site policies or procedures

- 4.2 Liaise with production areas to organise and conduct trials as per site policies or procedures
 - 4.3 Assess trials in accordance with the established workplace procedures
- 5 **Interpret and report results**
 - 5.1 Analyse results of the trials to determine if performance is suitable for production to proceed
 - 5.2 Prepare reports on performance
 - 5.3 Maintain records according to workplace procedures, where required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Feasibility studies include, but are not limited to, one or more of the following:

- sampling
- trial run production
- consideration of machine capabilities
- availability of resources
- required quality
- cost

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and includes one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTGN4007 Contribute to the development of products or processes

Modification History

Release 1. Supersedes and is equivalent to LMTGN4016A Contribute to the development of products or processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- providing assistance to feasibility studies to assess feasibility of design and development for at least two (2) different products or processes
- interpreting product or process specifications from feasibility study and using them to develop or engineer two (2) different products
- determining availability of required resources, including equipment, raw materials, skills and personnel according to requirements
- selecting, interpreting and evaluating procedures or processes
- liaising with production area to organise and conduct trials, and analysing and reporting on results of trials to determine if production can proceed
- preparing reports on performance and maintaining records according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product processes
- product and process development procedures
- machine or equipment, resource and skill capabilities within the workplace
- feasibility study and sampling procedures
- safety and environmental aspects of relevant workplace activities
- trials to assess if production can proceed, such as:
 - confirming and clarifying requirements
 - liaising with production area
 - allocating work
 - reviewing and evaluating processes and products

- performing trials
- interpreting data
- analysing results
- reporting processes
- quality practices
- workplace procedures
- recording and reporting practices.
-

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in contributing to the development of products or processes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

Release 1. Supersedes and is equivalent to LMTGN4008A Analyse product and determine machine settings

Application

This unit of competency covers the skills and knowledge required to identify and specify product and material characteristics and to specify machine settings and modifications for product change.

The unit of competency applies to examining sample material and product characteristics and determining machine settings or modifications that are required.

This unit of competency is applicable to all sectors of the textiles clothing and footwear (TCF) industry.

Work may involve discretion and judgment, for both self and others, in planning and selecting processes, procedures or outcomes.

Products and materials include those typically used within each sector of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to determine machine settings	2.1	Analyse pattern or product specifications
		2.2	Prepare and use measuring or testing equipment to identify characteristics or specifications of product and material
		2.3	Analyse product and material specifications to determine production parameters
3	Analyse machine requirements	3.1	Determine machine requirements and limitations relative to required specifications
		3.2	Determine machine WHS requirements
		3.3	Translate product and material specifications into machine settings and configurations
4	Specify machine settings and modifications	4.1	Establish modification requirements to meet workplace procedures and specified outcomes and seek approval, where required
		4.2	Assess modifications or adaptations in accordance with relevant procedures and specifications

- 4.3 Evaluate machine modifications and confirm they meet requirements
- 4.4 Check machine settings and modifications against specification prior to machine setting
- 4.5 Record machine settings and modifications and communicate them to appropriate team members

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Machine settings include, but are not limited to, one or more**
- mechanical devices and tools, such as cams, gears, trip tags and pin boards

of the following:

- microprocessor and computer-controlled machine settings

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTGN4008A Analyse product and determine machine settings

Assessment Requirements for MSTGN4008 Analyse product and determine machine settings

Modification History

Release 1. Supersedes and is equivalent to LMTGN4008A Analyse product and determine machine settings

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- confirming product and material specifications to determine production parameters for at least two (2) TCF products
- calculating and interpreting technical data to interpret specifications for machine settings
- determining product requirements and limitations of identified machine/s
- carrying out modifications or customisation, as required
- determining, recording and communicating machine settings for at least two (2) products to appropriate people
- complying with relevant workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- material and product characteristics
- measuring, calculating and testing procedures
- machine and equipment specifications and settings
- setting and adjustment requirements
- relevant technical specifications manuals
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in analysing product and determining machine settings, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN4009 Design production tooling

Modification History

Release 1. Supersedes and is equivalent to LMTGN4014A Design production tooling

Application

This unit of competency covers the skills and knowledge required to design tooling required for producing textile, clothing or footwear (TCF) products.

This unit of competency applies to the design of tooling to meet specific manufacturing requirements using manual or computer-aided design (CAD) systems.

This unit of competency is applicable to all sectors of the TCF industry.

Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes. The unit of competency can refer to workplace and client initiated ideas or requests.

The size and work organisation within enterprise will determine the range of interaction with other areas.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Determine job requirements | 1.1 | Follow standard operating procedures (SOPs) |
| | | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare for design of production tooling | 2.1 | Define and clarify tooling requirements |
| | | 2.2 | Interpret specifications and design parameters |
| | | 2.3 | Develop engineering or design specifications for tooling, including items to be produced internally or by external suppliers |
| | | 2.4 | Use manual or CAD system according to workplace procedures and requirements of brief |
| 3 | Contribute to development of design or engineering specifications | 3.1 | Liaise with relevant personnel to confirm and prepare specification details in accordance with enterprise procedures, including required standards of construction and overall quality |
| | | 3.2 | Provide tooling brief to engineering and external supplier, as required |
| | | 3.3 | Liaise and communicate effectively with the component supplier and engineering area to manufacture knives or tooling |
| | | 3.4 | Document procedure and maintain records |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Relevant personnel include, but are not limited to, one or more of the following:

- prototype or sample maker
- engineering
- management
- external supplier

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling

- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTGN4009 Design production tooling

Modification History

Release 1. Supersedes and is equivalent to LMTGN4014A Design production tooling

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- defining requirements and developing accurate specifications
- using manual or computer-aided design (CAD) systems as required by context
- assessing technical requirements and providing tooling brief on at least two (2) occasions
- liaising and communicating effectively with relevant personnel
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- interpretation of specifications and the requirements of tooling design
- features of required manual or CAD design system
- roles of relevant personnel or work areas including prototype or sample maker, engineering, management and external supplier
- product construction and materials used in product production
- quality requirements
- materials used in product production
- workplace procedures and reporting processes
- work health and safety (WHS) practices, including hazard identification and control measures
- recording and reporting practices.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in designing production tooling, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN4010 Implement and monitor WHS and environmental systems in the workplace

Modification History

Release 1. Supersedes and is equivalent to LMTGN4010A Implement and monitor OHS in the workplace

Application

This unit of competency covers the knowledge and skills required to implement and monitor work health and safety (WHS) and environmental policies, procedures and programs in the relevant work area.

This unit of competency applies to implementing and monitoring WHS and environmental policies and procedures within an identified work area in an operational or production setting. Work may require discretion and judgement, for both self and others, in planning and selecting processes, procedures or outcomes.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in a variety of environments including operational workplace activities, restricted spaces, hazardous, controlled or exposed conditions, day or night operations in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|----------|---|---|
| 1 | Prepare to implement WHS and environmental policies and procedures | 1.1 Identify WHS and environmental legislative and regulatory policies and procedures relevant to workplace context |
| | | 1.2 Confirm policies and codes of practice relevant to work role |
| | | 1.3 Locate sources of information on relevant WHS and environmental policies and codes of practice |
| | | 1.4 Analyse the work environment to identify hazards, assess risks and judge when intervention to control risks is necessary |
| | | 1.5 Locate or prepare information on workplace WHS and environmental policies, procedures and programs in a suitable format |
| 2 | Communicate WHS and environmental policies and procedures | 2.1 Provide information to the work group about WHS and environmental policies, procedures and programs |
| | | 2.2 Provide information about identified hazards and the outcomes of risk assessment and risk control procedures |
| | | 2.3 Explain procedures to manage identified hazards and the outcomes of risk assessment and risk control procedures |
| | | 2.4 Implement and monitor workplace practices for consultation over WHS and environmental issues to ensure that all members of the work group have the opportunity to contribute |
| | | 2.5 Promptly deal with and resolve issues raised through consultation or refer to the appropriate personnel for resolution in accordance with workplace procedures |
| | | 2.6 Inform work group promptly about outcomes of consultation over WHS and environmental issues. |
| 3 | Implement and monitor practices | 3.1 Identify and report existing and potential hazards in the work area so that risk assessment and risk control |

- | | | | |
|---|---|-----|---|
| | for identifying hazards and assessing and controlling risks | | procedures can be applied |
| | | 3.2 | Implement work procedures to control risks and monitor work group to ensure procedures are followed |
| | | 3.3 | Monitor existing risk control measures and report results regularly in accordance with workplace procedures |
| | | 3.4 | Identify any inadequacies in existing risk control measures or resource allocation in accordance with the hierarchy of control and report to designated personnel |
| 4 | Implement and monitor the practices for dealing with hazardous events | 4.1 | Assess the resources needed to apply different risk control measures and make recommendations to management |
| | | 4.2 | Implement workplace procedures for dealing with hazardous events whenever necessary to ensure that prompt control action is taken |
| | | 4.3 | Investigate hazardous events to identify their cause in accordance with investigation procedures |
| | | 4.4 | Implement control measures to prevent recurrence and minimise risks of hazardous events based on the hierarchy of control (if within scope of responsibilities and competencies) or refer to designated personnel |
| 5 | Implement and monitor practices for providing training and maintaining records | 5.1 | Identify WHS and environmental training needs and specify gaps between competencies required and those held by work group members |
| | | 5.2 | Make arrangements in consultation with relevant parties for fulfilling identified WHS and environmental training needs in both on and off the job training programs |
| | | 5.3 | Complete accurate WHS and environmental records for work area in accordance with workplace and legal requirements |
| | | 5.4 | Aggregate information from area WHS and environmental records, identify hazards and monitor risk control procedures within work area, according to workplace practices |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Participative arrangements include, but are not limited to, one or more of the following:

- formal and informal meetings
- WHS committees
- WHS representatives
- suggestions, requests, reports and concerns put forward by employees

Identifying hazards includes, but is not limited to, one or more of the following:

- checking machinery/equipment and/or work area before and during work
- workplace inspections
- housekeeping
- audits

- job and work system assessment
- reviews of WHS records and registers
- maintenance of plant and equipment

WHS and environmental training includes, but is not limited to, one or more of the following:

- induction training
- specific hazard training
- specific task or equipment training
- emergency or evacuation training
- safe handling of materials
- disposal of chemical and hazardous substances
- recycling

WHS practices

- WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and includes one or more of the following:
 - manual handling techniques
 - SOPs
 - personal protective equipment (PPE)
 - safe materials handling
 - taking of rest breaks
 - ergonomic arrangement of workplaces
 - following marked walkways
 - safe storage of equipment
 - housekeeping
 - reporting accidents and incidents
 - other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTGN4010 Implement and monitor WHS and environmental systems in the workplace

Modification History

Release 1. Supersedes and is equivalent to LMTGN4010A Implement and monitor OHS in the workplace

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures and safe work practices
- applying relevant standards
- analysing the work environment to identify hazards, assess risks and judge when intervention to control risks is necessary
- locating, interpreting and applying relevant information, including work health and safety (WHS) and environmental legislation and codes of practice
- applying organisational management systems and procedures to implement and monitor WHS and environmental policies and workplace procedures
- applying risk management procedures, including hazard identification, risk assessment and risk control
- implementing procedures to deal with hazardous events and taking action to prevent recurrence
- identifying training needs, encouraging participation and arranging for training, where required, to deal with workplace WHS and environmental issues
- providing at least three (3) examples of oral or written communication that encourages consultation, conveys information and provides feedback in written and /or oral form on WHS and environmental systems, in an identified workplace
- analysing relevant workplace data and documenting practices in an identified workplace or production operation to identify hazards, assess and mitigate risks, evaluate the effectiveness of risk control measures and implement environmental management strategies.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- the provisions of WHS and environmental legislation, regulations and codes of practice
- principles and practices of effective WHS and environmental management relevant to work context and role, such as:

- environmental protection
- waste reduction
- waste disposal
- pollution control
- recycling
- workplace WHS and environmental management systems, policies and procedures
- the characteristics and composition of the workforce that may impact on WHS management
- WHS practices, including hazard identification and control measures
- measures to maintain healthy environment and reduce waste relevant to context (reduce, re-use and recycle)
- risks and risk control relevant to the workplace
- risk control measures, including:
 - elimination of the risk
 - engineering controls
 - administrative controls
 - personal protective equipment
- sources of information suitable for communicating WHS and environmental information
- resources for assessing and providing training in WHS and environmental practices
- forms of Information, such as:
 - printed information
 - oral presentation
 - instructions
 - diagrams
 - brochures
 - signs
 - illustrations
 - flow charts
 - film or video presentations
 - web links
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in implementing and monitoring WHS and environmental systems, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN4011 Coordinate the quality system and procedures

Modification History

Release 1. Supersedes:

- LMTGN4011A Coordinate the quality system and procedures - Equivalent
- LMTLA4001A Monitor compliance with industry standards and regulations - Not equivalent
-

Application

This unit of competency covers the skills and knowledge required to coordinate the implementation of quality procedures and a quality assurance system within a work area of a textiles, clothing and footwear (TCF) enterprise.

The unit of competency applies to coordinating quality practices, maintaining work quality, and contributing to quality improvement of team/section output.

This unit of competency is applicable to all sectors of the TCF industry.

Work requires initiative and judgement to take appropriate action and may be conducted in large scale production or small business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare quality system framework in work area	2.1	Confirm, document and communicate quality assurance policy for work area to all levels of the workplace
		2.2	Confirm the organisation business goals and key quality performance indicators including product quality and process efficiency
		2.3	Develop and maintain quality assurance system for work in accordance with WHS practices
3	Implement structured training program in accordance with quality system requirements	3.1	Develop a quality implementation plan
		3.2	Communicate quality performance indicators and quality assessment system to relevant personnel
		3.3	Analyse roles and duties of relevant personnel and identify training needs in relation to quality
		3.4	Identify training needs and organise suitable training programs to meet these needs
		3.5	Assess effects of training on quality outcomes and take further action, if necessary, to address quality performance
		3.6	Maintain training records
4	Evaluate the	4.1	Conduct regular audits of the work area's quality system,

quality system	policies and procedures
4.2	Develop new procedures or work instructions, as required
4.3	Implement and monitor improvements in the quality system

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Quality assurance systems include, but are not limited to, one or more of the following:

- identification and elimination of hazards and other WHS risk factors
- setting the procedures to eliminate faults and

Developing a quality system framework includes, but is not limited to, one or more of the following:

- variation
- setting procedures to achieve set standards of quality and efficiency
- testing of textiles, fabrics, dyes, colour fastness finishes, yarns or other materials or finished TCF products
-
- developing sampling techniques which reflect the needs of the work area
- establishing or maintaining quality circles or other relevant aspects of quality assurance systems for the work area
- organising facilitation for monitoring of work teams to ensure compliance with standards
- establish strategies for communicating quality information with work teams
-

Preparing a quality implementation plan includes, but is not limited to, the following:

- identifying quality documentation requirements, including records of improvement plans and initiatives
- preparing and maintaining documentation relating to process improvement, quality outcomes and standards
- establishing and maintaining document control system
-

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes:

- LMTGN4011A Coordinate the quality system and procedures - Equivalent

Assessment Requirements for MSTGN4011 Coordinate the quality system and procedures

Modification History

Release 1. Supersedes:

- LMTGN4011A Coordinate the quality system and procedures - Equivalent
- LMTLA4001A Monitor compliance with industry standards and regulations - Not equivalent
-

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other workplace documentation
- applying relevant standards
- determining quality indicators to support the organisation's business goals, and establishing a quality implementation plan to measure product quality and process efficiency
- completing a training needs analysis for at least two (2) workers in an identified production environment, maintaining training records, monitoring quality performance of work teams and ensuring compliance
- communicating effectively within the workplace to provide training and inform relevant personnel about quality assurance system and procedures
- collecting and analysing quality data to evaluate and assess effectiveness of quality system and procedures
- implementing quality improvement strategies
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- principles of quality and the application and delegation of responsibilities within quality systems
- organisation quality systems and appropriate national and international quality standards and protocols
- enterprise SOPs
- the organisation business goals and key performance indicators (KPIs)
- principles of policy and procedure development and process improvement

- data management and documentation
- training procedures
- appropriate quality methodologies to measure quality of TCF production processes and quality improvement strategies
- sampling techniques for TCF products
- work health and safety (WHS) and environmental aspects of production and quality processes
- workplace practices and reporting processes
- relevant WHS legislation and codes of practice
- hazard identification and control measures associated with managing quality system and procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in coordinating the quality system and procedures, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN4012 Fabricate or machine tooling

Modification History

Release 1. Supersedes and is equivalent to LMTGN4012A Fabricate or machine tooling

Application

This unit of competency covers the skills and knowledge required to fabricate or machine tooling for applications within an enterprise.

The unit of competency applies to activities associated with the forming and shaping of tools. Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| | | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| | | | |
| 2 | Prepare tooling requirements | 2.1 | Determine tooling requirements, measurements and limitations are according to design specifications provided |
| | | 2.2 | Seek clarification related to tooling application, where required |
| | | 2.3 | Select appropriate machines and equipment for the tasks |
| | | 2.4 | Prepare and adjust machines and equipment, as necessary, for operation according to standard operating procedures |
| | | | |
| 3 | Form or shape tool | 3.1 | Select, mark or otherwise prepare tooling material for fabrication and machining |
| | | 3.2 | Make allowances for shrinkage, thicknesses, templates, gauges and inside or outside measurements |
| | | 3.3 | Perform fabrication or machining procedures in accordance with WHS practices and workplace procedures |
| | | 3.4 | Check completed tooling conforms to design specifications |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Tooling includes, but is not limited to, one or more of the following:

- cutting knives
- punch dies

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTGN4012A Fabricate or machine tooling

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTGN4012 Fabricate or machine tooling

Modification History

Release 1. Supersedes and is equivalent to LMTGN4012A Fabricate or machine tooling

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and specifications
- applying relevant standards
- establishing tooling requirements
- operating machines or equipment appropriately
- fabricating or machining tooling accurately on at least two (2) occasions
- liaising with engineer or external supplier
- communicating effectively with design team and customers
- checking outcomes against quality standards and specifications
- applying work health and safety (WHS) policies in work operations
- maintaining accurate records, document and transfer information
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- procedures for set up and operation of machinery
- procedures for forming and shaping
- relevant standards
- quality requirements
- materials used in production
- WHS and environmental aspects of relevant enterprise activities
- workplace procedures and reporting processes
- relevant WHS legislation and codes of practice
- WHS practices, including hazard identification and control measures
- recording and reporting practices
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in fabricating machine tooling, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN4013 Manage technical processes

Modification History

Release 1. Supersedes and is equivalent to LMTGN4013A Manage technical processes

Application

This unit of competency covers the skills and knowledge required to manage the technical processes, particularly in the preparation of chemicals, monitoring production stages and measuring specified process parameters.

This unit of competency applies to managing the technical processes for hide, skin and leather, fibres, yarns or fabrics and textile products, including the handling, preparing, using and storing of chemicals. Judgement may be required in planning and selecting appropriate processes or procedures for self and others.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Technical processes can relate to processes for tanning or processing hides, skins or leather, manufacturing fibres, yarns or fabrics, and dyeing finishing or printing textile products.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|---|--|---|
| 1 | Determine job requirements | <p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p> |
| 2 | Prepare to manage technical process | <p>2.1 Interpret resources and procedures requirements of technical process</p> <p>2.2 Confirm schedules and technical resources with relevant personnel</p> <p>2.3 Clarify process and safety requirements, where necessary</p> <p>2.4 Allocate roles and responsibilities for work activities</p> |
| 3 | Implement technical process | <p>3.1 Monitor technical process and where required provide guidance</p> <p>3.2 Monitor process parameters to ensure conformance to requirements</p> <p>3.3 Monitor safety associated with the process, including chemical handling</p> |
| 4 | Resolve process problems | <p>4.1 Facilitate meetings or discussions to identify methods to solve process problems</p> <p>4.2 Use knowledge of process improvement and technical systems to systematically identify and resolve process problems</p> <p>4.3 Recommend and document preferred option to resolve</p> |

		the problem
	4.4	Facilitate implementation of the recommended problem resolution option
5	Monitor process improvements and variations	
	5.1	Monitor process improvements and variations to ensure outcome meets specifications, production schedule and workplace requirements
	5.2	Collate and analyse data to evaluate the effectiveness of process improvements or variations
	5.3	Record and report outcomes to relevant personnel

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Process parameters include, but are not limited to, one or more of the following:

- speed
- temperature
- pressure
- chemical values
- time
- volume
- quantities
- pH Baume (BE)
- concentration

Chemical processes include, but are not limited to, one or more of the following:

- chemical preservation
- wool removal and skin pickle (wool off)
- soak, scour, bleach, pickle and sytan (wool on)
- chemical preparation
- tannage
- drum processes (bovine and hair off)
- preparation to crust (rewet and dyehouse processing)
- finishing leather and woolskin (coatings)
- dyeing and colouration
- application of finishes
- fabric formation
- textile finishing processes

Work activities include, but are not limited to, one or more of the following:

- work allocation
- process monitoring
- solving process problems
- reviewing and evaluating process
- monitoring safety

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE

- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTGN4013 Manage technical processes

Modification History

Release 1. Supersedes and is equivalent to LMTGN4013A Manage technical processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting resources and procedures requirements of technical process, and confirming schedules and technical resources with relevant personnel
- allocating tasks and roles to relevant personnel and matching personnel to tasks and roles
- facilitating problem solving associated with process variations
- analysing process parameters
- monitoring safety, including chemical handling
- monitoring process improvements and variations to ensure outcome meets specifications, production schedule and workplace requirements
- collating and analysing data to evaluate the effectiveness of process improvements or variations
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product and technical processes and equipment and resources
- technical processes of relevant sector: for tanning or processing hides, skins or leather; manufacturing fibres, yarns or fabrics; and dyeing finishing or printing textile products
- technical and specified process parameters
- characteristics of raw materials and their properties
- processing, measurement, matches (dyes and finishes)
- monitoring processes and procedures
- quality standards and manual handling procedures
- work health and safety (WHS) and environmental aspects of relevant processes, including use of chemicals
- workplace procedures and reporting and documentation processes and procedures

- chemical processes relating to production
- WHS practices, including hazard identification and control measures
- safe handling of chemicals
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in managing technical processes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN5001 Participate in production planning processes

Modification History

Release 1. Supersedes and is equivalent to LMTGN5001B Participate in production planning processes

Application

This unit of competency covers the skills and knowledge required to participate in production planning processes.

Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes. Production plans are used to guide production according to enterprise needs.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Determine job requirements	1.1 Follow standard operating procedures (SOPs)
	1.2 Comply with work health and safety (WHS) requirements at all times
	1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
	1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
2 Confirm production requirements	2.1 Confirm projected requirements regarding stock supplies, product quantities, quality and delivery schedules
	2.2 Resolve any identified issues and problems concerning projected requirements, in collaboration with relevant personnel
	2.3 Determine requirements for implementing organisational systems
	2.4 Comply with relevant workplace procedures
3 Gather specific production information	3.1 Obtain and confirm specific information relating to production capacity
	3.2 Gather and interpret details of production line requirements regarding batch or run sizes and other relevant information to prepare production plan
	3.3 Identify and confirm resources, supply requirements, availability of machines and personnel
4 Participate in planning meetings and record outcomes	4.1 Confirm specific requirements for meetings
	4.2 Prepare production data and other planning information
	4.3 Contribute and discuss information according to meeting procedures
	4.4 Take follow-up action on meeting outcomes

- 4.5 Maintain production planning records and prepare reports, where necessary

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards includes:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Production requirements include, but are not limited to, the following:

- stock supplies
- product quantities
- quality
- delivery schedules

Organisational systems

- just in time (JIT)

- include, but are not limited to, one or more of the following:**
- value-added modelling (VAM)
 - quick response
 - quality management systems
 - team processes
 - benchmarking

- Product data includes, but is not limited to, one or more of the following:**
- plant layout
 - machine operating manuals and other equipment records
 - production data collected manually or electronically
 - quality specifications
 - drawings, sketches and other specifications

- Production planning includes, but is not limited to, one or more of the following:**
- establishing an overall plan for production and delivery
 - repetitive production runs
 - short runs
 - quick changes
 - a diversity of styles
 - indent orders
 - stock services replenishment

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following to:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

MSTGN5002 Coordinate quality assurance for TCF products and services

Modification History

Release 1. Supersedes and is equivalent to LMTGN5002B Coordinate quality assurance for textiles clothing and footwear products and services

Application

This unit of competency covers the skills and knowledge required to coordinate quality assurance of textiles, clothing and footwear (TCF) products and services.

The unit of competency applies to coordinating quality assurance to ensure goods and services meet quality standards. Supplier in this unit may refer to a supplier to the organisation, or where the organisation is the supplier.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Review own or supplier quality assurance process | 2.1 | Assess and evaluate own or supplier capability and quality system |
| | | 2.2 | Evaluate processes for production and delivery of goods or services |
| | | 2.3 | Make recommendations concerning ability to comply with quality standards according to WHS practices and, where relevant, quality accreditation requirements |
| 3 | Establish quality assurance agreement with supplier or customer | 3.1 | Identify and document specifications of goods and services to be supplied |
| | | 3.2 | Confirm precise quality requirements with supplier or customer |
| | | 3.3 | Negotiate agreed quality assurance system and delivery dates |
| | | 3.4 | Establish and agree on verification method and systems and procedures for dispute settlement. |
| | | 3.5 | Determine recording system for products or services that ensures traceability, where required |
| 4 | Check and record quality performance | 4.1 | Work with relevant personnel to establish procedures to check that materials or products conform to quality standards |
| | | 4.2 | Coordinate checks of quality of materials, services or equipment delivered |
| | | 4.3 | Initiate corrective action where applicable, to obtain or |

- maintain desired quality
- 4.4 Maintain records of quality assurance process and prepare reports according to workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Quality standards include, but are not limited to, one or more of the following:

- materials
- component parts
- final products
- services
- production processes

- Quality assurance includes, but is not limited to, three or more of the following:**
- monitoring conformance with specifications
 - reporting of variances
 - consulting and liaising with suppliers and other functional areas
 - evaluating supplier capabilities
 - preparing reports and other documentation
 - monitoring and reviewing procedures
 - inspections
 - audits of compliance with quality control guidelines

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTGN5002 Coordinate quality assurance for TCF products and services

Modification History

Release 1. Supersedes and is equivalent to LMTGN5002B Coordinate quality assurance for textiles clothing and footwear products and services

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- establishing quality assurance expectations for at least three (3) products or a small range by documenting specifications of goods and services to be supplied, confirming precise quality requirements with supplier or customer, and negotiating agreed quality assurance system and delivery dates
- liaising with suppliers and customers to negotiate agreement for all aspects of the quality process, including dispute resolution processes, for at least three (3) products or a small range
- documenting all quality assurance agreements, specifications, standards and service requirements
- coordinating quality assurance process, measurements and visual inspections of materials, component parts and final products to check products or services conform to specifications and quality standards
- taking required action to address any breaches of quality assurance agreements
- maintaining records of quality assurance process for at least three (3) products or a small range, and preparing reports according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- quality standards, codes of practice, policies and procedures
- production processes, materials and products
- characteristics of materials, products services and equipment provided by external suppliers
- appropriate quality methodologies, their capabilities, limitations and applicability
- relevant measurement techniques and quality checking procedures
- mechanism for dispute resolution and effective communication skills

- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in coordinating quality assurance for textiles clothing and footwear products and services, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTGN5003 Work with international TCF supply chains

Modification History

Release 1. Supersedes and is equivalent to LMTGN5003B Work with international textiles, clothing and footwear supply chains

Application

This unit of competency covers the skills and knowledge required to work with international textiles, clothing and footwear (TCF) supply chains.

The unit of competency applies to working with international suppliers and customers of goods and services, according to established contractual agreements. Work involves the application of initiative and judgement, and sensitivity to cultural or language differences.

This unit of competency is applicable to all sectors of the TCF industry.

Working with international suppliers and customers includes implementing import and export practices, building commercial relationships, and working effectively with local customs, communications and industry work practices.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to work with international supply chain	<p>2.1 Identify members in the international supply chain for products or services within area of responsibility</p> <p>2.2 Determine value added by each supplier</p> <p>2.3 Identify supplier characteristics and practices, and any acute or chronic issues affecting suppliers</p> <p>2.4 Identify import and export regulations and practices of relevant country</p> <p>2.5 Research local customs and workplace practices and identify relevant factors affecting supply chain operations</p> <p>2.6 Access and assess information on local industry markets and conditions and identify transportation and shipping practices</p>
3	Confirm relationships with international suppliers or customers	<p>3.1 Review past relations with suppliers or customers to identify relationship history</p> <p>3.2 Confirm specifications for international contracts</p> <p>3.3 Identify quality assurance processes and confirm communication channels</p> <p>3.4 Establish and maintain ongoing communication to foster positive commercial relations</p>

- | | | | |
|---|--|-----|---|
| | | 3.5 | Identify and adhere to relevant Australian and international export and import regulations |
| 4 | Monitor international supply operations | 4.1 | Check compliance of international suppliers or customers with specified contractual requirements |
| | | 4.2 | Communicate and monitor required quality standards |
| | | 4.3 | Identify, report and record non-compliance and investigate to determine causes |
| | | 4.4 | Seek feedback from overseas contact |
| 5 | Contribute to implementing and recording improvements to global production operations | 5.1 | Review outcomes of monitoring and feedback |
| | | 5.2 | Identify opportunities for corrective or preventative action to improve commercial relationship with international suppliers or customers |
| | | 5.3 | Recommend and activate corrective or preventative action, where appropriate. |
| | | 5.4 | Communicate changes to relevant personnel in a logical and easily understood manner |
| | | 5.5 | Monitor changes to confirm production efficiency improves |
| | | 5.6 | Maintain international production and supply documentation, monitor records and prepare reports, where necessary |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Specifications include, but are not limited to, the following:

Contractual requirements in relation to:

- delivery dates
- costs and procedures for variations to costs
- amount and type of product to be delivered
- quality of product to be supplied
- transportation details
- regulations to be adhered to
- dispute mechanisms

Value added includes, but is not limited to, one or more of the following:

- contribution to the customer
- additional benefits and features compared with other suppliers
- technical benefits and features
- location benefits and features
- aesthetic benefits and features
- information benefits and features

Issues affecting suppliers include, but are not limited to, one or

- labour force
- delivery and distribution

more of the following:

- resource availability
- expertise
- technology
- communication
- WHS
- quality
- documentation
- reliability
- environment
- trade agreements
- political situation or sensitivities

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTGN5003B Work with international textiles, clothing and footwear supply chains

Assessment Requirements for MSTGN5003 Work with international TCF supply chains

Modification History

Release 1. Supersedes and is equivalent to LMTGN5003B Work with international textiles, clothing and footwear supply chains

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards, and relevant Australian and international export and import regulations
- detailing a range of members in the international supply chain able to provide the required products or services for at least three (3) products or a small range within area of responsibility
- investigating, interpreting, recording and using data about international supply chain characteristics and operations, supplier characteristics and practices, import and export regulations, local customs and workplace practices of at least two (2) relevant countries
- identifying any acute or chronic issues affecting suppliers
- establishing and maintaining ongoing communication with international supply chains to foster positive commercial relations with international supply chains to establish specifications and monitor product quality
- checking compliance against specified requirements, identifying whether production meets workplace standards and dealing with non-compliance according to specifications
- identifying opportunities for corrective or preventative action to improve commercial relationship with international suppliers or customers
- maintaining international production and supply documentation, monitoring records and preparing reports, where necessary.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- production control and efficiency processes
- product and process specifications
- practices and procedures for international supply arrangements
- quality assurance processes
- production processes

- international regulations, pricing structures, import and export factors, production times, quality assurance factors, and production and marketing arrangements
- communication and negotiation skills to deal with international and domestic supply arrangements
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in working with international textiles, clothing and footwear supply chains, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN5004 Manage installation and commissioning of equipment and systems

Modification History

Release 1. Supersedes and is equivalent to LMTGN5004A Manage installation and commissioning of equipment and systems

Application

This unit of competency covers the skills and knowledge required to manage the installation and commissioning of equipment and systems used in a textiles, clothing and footwear (TCF) workplace.

The unit of competency applies to the managing the installation and commissioning of equipment where significant judgement is required in planning, technical or supervisory activities related to operations or processes. The work may involve individual and team-related activities, and can include liaison with specialist technicians or contractors. Work may be conducted in a large scale production or small business situation in a TCF sector.

This unit of competency is applicable to all sectors of the textile clothing and footwear industry.

The unit of competency may relate to onshore or offshore applications. It includes all local requirements and may include establishing a new production line.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to manage installation and commissioning of equipment	2.1	Identify and confirm items to be included in work plan and specification document
		2.2	Draw up work plan for installation and commissioning of equipment and systems, including management and reporting procedures
		2.3	Prepare specification document according to workplace and/or manufacturer practices
3	Manage and monitor contract arrangements	3.1	Coordinate contract arrangements for the installation and commissioning of equipment/systems, including all legal, insurance and safety requirements, in accordance with workplace and/or legislative procedures
		3.2	Monitor contract arrangements to ensure they comply with requirements and deal with variations according to agreed strategy
		3.3	Gather information to establish schedule and maintain budget forecasts
		3.4	Monitor deviation from performance targets and, if necessary, take corrective action
		3.5	Assess scheduling and budgeting processes to determine whether variations or alternative plans are indicated

- | | | | |
|---|--|-----|--|
| 4 | Assess and report on installation | 4.1 | Determine legal, environmental and WHS requirements related to installation and commissioning of equipment/systems |
| | | 4.2 | Manage the application of technical skills by other personnel to ensure compliance |
| | | 4.3 | Assess completed work to confirm all specifications have been incorporated |
| | | 4.4 | Prepare report on work completed in accordance with workplace procedures |
| | | 4.5 | Maintain records of installation and commissioning activities, in accordance with workplace procedures |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling

- WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Equipment and systems include, but are not limited to, one or more of the following:**
- microprocessor or computer control
 - production and facility equipment used within the enterprise
- Workplace practices include one or more of the following:**
- workplace practices relating to managing installation and commissioning of equipment and systems
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards and federal or state/territory legislation
 - standard work practices
 - reporting verbally or in writing
 - oral, written or visual communication
 - being responsible for the maintenance of own work quality and contributing to the quality improvement of team or section output, where necessary
 - safety, environmental, housekeeping and quality practices as specified by machine and equipment manufacturers, regulatory authorities and the organisation
- WHS practices include one or more of the following:**
- use of PPE
 - safe materials handling practices
 - taking of rest breaks
 - ergonomic arrangement of workplaces
 - following marked walkways
 - storage of equipment
 - workstation housekeeping
 - cleaning of equipment
 - workers' compensation legislation

MSTGN5005 Provide global operations support

Modification History

Release 1. Supersedes and is equivalent to LMTGN5005A Provide global operations support

Application

This unit of competency covers the skills and knowledge required to provide support to local and international production and marketing operations in a textiles, clothing and footwear (TCF) enterprise operating in local, national and global contexts.

This unit of competency is applicable to all sectors of the TCF industry.

The unit of competency applies to global production and/or marketing operations where judgement may be required in planning and selecting appropriate processes or procedures for self and others within routine and non-routine situations. Work may be conducted in a large scale production or small business situation in a TCF sector and in a variety of environments, including operational workplace activities, restricted space, hazardous, controlled or exposed conditions.

The unit of competency may apply to daily or production run applications. It includes repetitive production runs, short runs and quick changes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to provide support to global operations	<p>2.1 Gather and analyse information on global markets and global production operations in accordance with workplace practices</p> <p>2.2 Investigate sourcing of equipment, materials and staffing in consultation with overseas contacts</p> <p>2.3 Check quality standards and safe work practices to ensure compliance</p> <p>2.4 Make recommendations on production or marketing requirements in accordance with workplace practices</p> <p>2.5 Organise machine operations, staff and production processes needed for offshore operations, in collaboration with overseas contacts, to meet production requirements</p>
3	Assist in implementing global production operations and process improvements	<p>3.1 Identify, specify and implement requirements for efficient global production, in collaboration with Australian and overseas contacts, and in accordance with workplace practices</p> <p>3.2 Check compliance of global production operations with specified requirements in collaboration with overseas contacts</p> <p>3.3 Identify, report, record and investigate non-compliance to determine causes</p>

- | | | | |
|---|--|-----|---|
| | | 3.4 | Use outcomes of monitoring activities and feedback from overseas production staff to identify and implement actions to prevent or correct non-compliance |
| | | 3.5 | Communicate changes to relevant personnel in a logical and easily understood manner |
| | | 3.6 | Monitor changes to confirm improvement to production efficiency |
| 4 | Review global marketing strategies and policies | 4.1 | Interpret outcomes of research and analysis of global marketing data and make recommendations on opportunities and strategies |
| | | 4.2 | Prepare reports on marketing opportunities and strategies and present to relevant persons in the workplace |
| | | 4.3 | Provide assistance to marketing managers in Australia and overseas to implement global marketing strategies and policies |
| | | 4.4 | Review feedback on marketing performance in accordance with workplace practices |
| 5 | Implement and document improvements to global marketing performance | 5.1 | Identify opportunities for improvements in global marketing strategies in collaboration with others, and make recommendations to relevant workplace personnel |
| | | 5.2 | Implement approved improvements to global marketing in accordance with workplace practices |
| | | 5.3 | Maintain global production and marketing coordination, monitor records and prepare reports, where necessary, in accordance with workplace practices |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Organisation systems include, but are not limited to, one or more of the following:

- just in time (JIT)
- value-added modelling (VAM)
- quick response
- quality circles
- team processes
- benchmarking

Assessment Requirements for MSTGN5005 Provide global operations support

Modification History

Release 1. Supersedes and is equivalent to LMTGN5005A Provide global operations support

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying sources of equipment, materials and staffing for global production, in consultation with overseas contacts
- organising machine operations, staff and production processes needed for offshore operations, in collaboration with overseas contacts, to meet production requirements
- checking overseas quality standards and safe work practices, and implementing opportunities to prevent or correct non-compliance
- liaising with offshore contacts on production/marketing matters, and identifying and implementing opportunities to improve global marketing strategies and outcomes
- communicating in a logical and easy to understand manner
- interpreting outcomes of research and analysis of global marketing data, and providing assistance to marketing managers in Australia and overseas to implement global marketing strategies and policies
- implementing and documenting improvements to global marketing performance
- maintaining global production and marketing coordination, monitoring records and preparing reports, where necessary, in accordance with workplace practices.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- production control and efficiency processes
- quality assurance processes
- production processes
- work health and safety (WHS) and environmental aspects of relevant enterprise activities
- workplace procedures and reporting processes
- international regulations, pricing structures and import/export factors
- production times, quality assurance factors and production/marketing

- global marketing opportunities and improvement strategies
- global production operations and/or marketing arrangements
- relevant WHS legislation, regulatory requirements and codes of practice
- workplace procedures
- report and documentation requirements.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in providing global operations support, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

MSTGN5006 Plan and organise non-routine testing

Modification History

Release 1. Supersedes and is equivalent to LMTGN5010A Plan and organise non-routine testing

Application

This unit of competency covers the skills and knowledge required to plan and organise non-routine testing within the enterprise.

The unit of competency applies to non-routine testing associated with the product and process development for textile production.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities and can include liaison with specialist technicians.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTX4003 Perform routine textile testing and analyse results

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Plan or develop tests	2.1	Obtain relevant information to establish criteria for tests
		2.2	Develop or plan test to meet criteria, including testing at set stages if required
3	Organise non-routine tests	3.1	Confirm requirements, as necessary
		3.2	Obtain and prepare equipment and resources required to perform the tests
		3.3	Test raw material, yarn, chemical mix or finished fabric against specified quality standards using prescribed testing procedures and in accordance with WHS practices and workplace procedures
4	Analyse, interpret and report results	4.1	Collate and analyse results of the tests
		4.2	Interpret analysis to determine performance and acceptability for production
		4.3	Prepare reports to document test and outcomes

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Non-routine tests include, but are not limited to, one or more of the following:

- tests performed in a laboratory environment to laboratory level standards
- destructive testing

Tests include, but are not limited to, one or more of the following:

- evenness testing
- moisture content
- dry fastness
- fibre construction
- fibre identification and quantitative analyses
- moisture retention
- wicking

Equipment and resources include, but are not limited to, one or more of the following:

- weighing scales
- rulers templates
- strength testers
- conditioners or dryers

- single yarn testers
- abrasion testers
- pilling box
- chemicals

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and includes one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTGN5006 Plan and organise non-routine testing

Modification History

Release 1. Supersedes and is equivalent to LMTGN5010A Plan and organise non-routine testing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- establishing criteria for tests and developing and planning tests to suit criteria
- conducting at least three (3) tests on each of a variety of textile, clothing and footwear (TCF) materials according to identified project, such as raw material, yarn, chemical mix or finished fabric, against specified quality standards
- using prescribed testing procedures and in accordance with work health and safety (WHS) practices against specified quality standards
- collating, analysing and interpreting tests to assess suitability for production
- maintaining accurate records and reporting test outcomes
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- the elements and principles of testing and how they can be used to assist in assessing the quality of raw materials/products in the textile industry
- analysis and interpretation of test results
- product and process specifications
- raw materials and their properties
- colour chemistry
- safety and environmental aspects of relevant enterprise activities
- non-routine testing
- WHS practices, including hazard identification and control measures
- quality practices
- workplace practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:
- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in planning and organising non-routine testing, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN5007 Prepare procedures and specifications for TCF operations

Modification History

Release 1. Supersedes and is equivalent to LMTGN5007A Prepare procedures and specifications for textiles, clothing and footwear operations

Application

This unit of competency covers the skills and knowledge required to prepare and confirm workplace procedures for use in a textiles, clothing and footwear (TCF) workplace.

This unit of competency is applicable to all sectors of the TCF industry.

The unit of competency applies to preparing and confirming workplace procedures and manuals in a TCF production workplace where judgement may be required in planning and selecting appropriate processes or procedures for self and others. Work may be conducted in a large scale production or small business situation in any TCF sector.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Plan to prepare procedures and specifications for TCF operations**
 - 2.1 Identify and assemble information required for SOPs for the TCF operation
 - 2.2 Establish and confirm specification requirements and format and interpret TCF formulas and terminology
 - 2.3 Analyse information needs of audience or team members

- 3 **Prepare specifications**
 - 3.1 Write specifications in an appropriate format for the TCF operation to ensure requirements can be met
 - 3.2 Incorporate special requirements into the specifications
 - 3.3 Write specifications in a manner that is clear and understood in the workplace

- 4 **Prepare SOPs or manuals**
 - 4.1 Collect, review and interpret information needed to establish the operating procedures or manual is in accordance with WHS procedures
 - 4.2 Prepare documentation to formalise processes for achieving the enterprise objectives
 - 4.3 Assign or delegate responsibility for all updates and changes to the procedures or manuals

- 5 **Review procedures and specifications against standards and maintain**
 - 5.1 Monitor compliance with the procedures and specification requirements in relation to the required application
 - 5.2 Assess, report and act on results according to workplace

records

procedures

- 5.3 Maintain records of procedures and specifications and prepare associated reports, where necessary, in accordance with workplace procedures
- 5.4 Make presentations on production performance and developments at management meetings

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Preparation specifications include, but are not limited to, the

- assembling information and confirming requirements

following:

- documentation preparation
- review of procedures
- consultation with other personnel, equipment/machine suppliers and customers

Procedures and specifications include, but are not limited to, one or more of the following:

- enterprise or client standards
- established processes
- industry standards
- workplace regulations
- work practices

Assessment Requirements for MSTGN5007 Prepare procedures and specifications for TCF operations

Modification History

Release 1. Supersedes and is equivalent to LMTGN5007A Prepare procedures and specifications for textiles, clothing and footwear operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- assembling information and specification requirements
- interpreting and analysing information for use in procedures or manuals
- writing procedures and specifications with respect to customer or workplace needs on at least two (2) occasions
- confirming accuracy and appropriateness of prepared procedures or manuals
- ensuring work health and safety (WHS) policies and statutory regulations are appropriately addressed in procedures or manuals
- delegating responsibility for maintaining document accuracy
- reviewing effectiveness of procedures and specifications against standards
- presenting reports on production performance and developments to management, as required
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- specific TCF production operations, technology and skills
- enterprise systems and requirements
- industry standards, regulations and terminology
- WHS and environmental aspects of production processes
- standards for job instructions, specifications, SOPs, patterns, charts and tickets
- order forms and other applicable reference material
- workplace policies/procedures and reporting processes
- relevant WHS legislation and codes of practice
- reporting or recording processes

- relevant regulatory requirements and codes of practice
- hazard identification and control measures associated with preparing procedures and specifications.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in preparing procedures and specifications for textiles, clothing and footwear operations, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN5008 Identify opportunities in the TCF market

Modification History

Release 1. Supersedes and is equivalent to LMTGN5008A Identify opportunities in the textiles, clothing and footwear market

Application

This unit of competency covers skills and knowledge required to conduct market research into textiles, clothing and footwear (TCF) markets and identify opportunities for improving the performance or outcomes of a TCF product.

The unit of competency applies to enterprises involved in the supply of products and services within the TCF industry.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTGN4004 Analyse TCF merchandising and marketing principles

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Conduct market research	1.1	Select target for market research and develop research parameters
		1.2	Plan and document market research activity and evaluation strategy
		1.3	Conduct research into TCF market and document outcomes and apply ethical standards
		1.4	Analyse research findings and identify potential opportunities
2	Analyse TCF market opportunities	2.1	Analyse research findings on domestic and global trends to assess potential opportunities
		2.2	Conduct feasibility studies to assess opportunities
		2.3	Discuss opportunities with team members and members of the TCF supply chain to gain feedback
		2.4	Develop concepts to explore TCF opportunities
3	Conduct tests on TCF concepts	3.1	Conduct tests on materials, fabrics, products or processes to assess viability of concepts
		3.2	Apply technical knowledge of TCF materials and production processes to test rigor of concepts
		3.3	Develop sample products to test concepts with key personnel and target market
4	Prepare a strategic plan	4.1	Develop a strategic plan, including budget, to explore TCF market opportunities
		4.2	Present plan to key personnel to gain feedback and support
		4.3	Consider and incorporate feedback, where appropriate, and finalise strategic plan

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Target includes, but is not limited to, one or more of the following:

- garments, textiles or other TCF products
- TCF supply chain components
- market segments

Mediums used for market research includes but is not limited to, one or more of the following:

- On line surveys
- Postal surveys
- Client interviews formal / in formal
- Supplier interview formal / informal
- Telephone surveys

- Industry workshop
- Focus groups
- Social media platforms
- Trade magazines

TCF supply chain includes, but is not limited to, one or more of the following:

- suppliers of raw materials
- spinners, wool processors and technical textile processors
- textile production enterprises
- patternmakers, machinists, designers and garment assembly enterprises
- producers of footwear, headwear and millinery or fashion accessories
- quality assurers
- suppliers of testing expertise and processing
- distributors
- outworkers
- sales and marketing suppliers
- point of sale merchandisers
- wholesale and retail outlets
- media and promoters
- packaging suppliers
- warehousing

Technical knowledge includes, but is not limited to, the following:

- properties and performance characteristics of fibres, fabrics and yarns and other materials used in the TCF product
- quality indicators for fabric, such as colour steadfastness, shrinkage, durability and grain
- processes used to produce TCF product and impacts on raw materials
- costs associated with materials and production processes
- limitations of TCF materials
- limitations of production processes for TCF products

Sample products include, but are not limited to, one or more of the following:

- short runs
- fabric samples
- prototype products
- textile samples

- design samples
- demonstrations
- trials

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTGN5008A Identify opportunities in the textiles, clothing and footwear market

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTGN5008 Identify opportunities in the TCF market

Modification History

Release 1. Supersedes and is equivalent to LMTGN5008A Identify opportunities in the textiles, clothing and footwear market

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures and safe work practices and other reference material
- applying relevant standards
- planning and conducting market research and analysing research findings on domestic and global trends to assess potential opportunities
- conducting feasibility studies to assess opportunities and consult with team members and members of the TCF supply chain to gain feedback
- developing concepts for at least three (3) products or a small range to explore TCF opportunities, and conducting tests on materials, fabrics, products or processes to assess viability of concepts
- developing at least three (3) sample products or a small range to test concepts with key personnel and target market
- developing a strategic plan, including budget, to explore TCF market opportunities
- seeking and incorporating feedback where appropriate and finalising strategic plan.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- domestic TCF market trends
- global TCF market trends
- interrelationship between local and global markets
- opportunities in marketing products in the TCF Industry
- limitations of the collection of market research data
- ethical standards when collecting and collating market research data, such as:
 - confidentiality
 - discretion
 - respecting copyright and patents
 - trust

- fairness
- respect for others
- respect for privacy
- not sharing another's private information
- different target markets and the opportunity to identify niche markets
- formal report writing when undertaking strategic plan
- test procedures to assess quality of materials and products
- properties and performance characteristics of fibres, fabrics and yarns and other materials used in the TCF product
- quality indicators for fabric, such as colour steadfastness, shrinkage, durability and grain
- processes used to produce TCF product and impacts on raw materials
- costs associated with materials and production processes
- limitations of TCF materials
- limitations of production processes for TCF products
- work health and safety (WHS) practices, including hazard identification and control measures
- quality practices
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in identifying opportunities in the textiles, clothing and footwear market at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN5009 Develop and test TCF products or processes

Modification History

Release 1. Supersedes and is equivalent to LMTGN5011A Develop and test textile, clothing and footwear products or processes

Application

This unit of competency covers the skills and knowledge required to develop and test a textiles, clothing and footwear (TCF) product or process to achieve required specifications.

The unit of competency applies to the development of a new product or production process or the significant modification of an established product or process to meet design and quality specifications. Routine or non-routine testing procedures must be implemented to test that the development achieves specifications. This unit of competency may involve the development and testing of a prototype or sample product or the design of a manufacturing process or production equipment.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Pre-requisite Unit

MSTTX4003 Perform routine textile testing and analyse results

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Interpret development specifications	2.1	Interpret development need and parameters
		2.2	Obtain and interpret design and quality specifications appropriate to the TCF product or process from data sheets, production schedules process specifications or the client
		2.3	Interpret specifications applying to TCF materials or TCF production processes
		2.4	Interpret, use and apply TCF industry terminology relating to raw materials and processing
		2.5	Use information resources to clarify specifications, as required
3	Develop TCF product or process design	3.1	Conduct research to identify development options and examine relevance for specific TCF application
		3.2	Develop preliminary design to explore options with key personnel
		3.3	Apply feedback to reassess ideas and produce detailed design concept according to required specifications
		3.4	Clarify details of design concept
4	Test product or	4.1	Determine appropriate processes to test the design

	process design concept		concept in a TCF context, including testing of materials, processes and specifications
		4.2	Undertake and document calculations to determine test time, volume and temperatures
		4.3	Develop test procedures and specifications
		4.4	Select and prepare test equipment, tools and materials and work area according to test specifications
		4.5	Undertake test according to test procedures and WHS practices
5	Interpret and document test results and confirm design	5.1	Document, check and validate test results in accordance with test specifications
		5.2	Discuss test results with key personnel, examine new information and assess implications for identified product or process
		5.3	Use information from development and testing of TCF product or process to modify and improve design specifications
		5.4	Use test results to adjust manufacturing process or identify suitable TCF materials
		5.5	Document improved design and specifications

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Parameters include, but are not limited to, the following:

- cost
- timing
- location
- material use
- product function
- product performance
- special features

Clarify details of design concept includes, but is not limited to, the following:

- specify and document materials, processes, equipment and other required elements in design
- undertake and verify calculations
- conduct risk analysis to identify possible problems and develop contingency plans
- identify issues to assess feasibility of design and note for testing
- identify strengths and weaknesses of design and note for testing

Undertake test procedures includes, but is not limited to, the following:

- monitor test process to ensure compliance to test specifications
- document all deviations from test procedures and identify cause
- clean and restore test equipment, tools and materials

Calculations include, but are not limited to, one or more of the following:

- percentages
- volumes
- mass

Key personnel include, but are not limited to, one or more of the following:

- supervisors
- team leaders
- trainers
- engineers
- textile mechanics
- production personnel
- design personnel
- quality personnel
- sales and marketing personnel

Appropriate processes include, but are not limited to, one or more of the following:

- development of a prototype
- development of a sample
- demonstration
- routine tests
- non-routine tests

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTGN5009 Develop and test TCF products or processes

Modification History

Release 1. Supersedes and is equivalent to LMTGN5011A Develop and test textile, clothing and footwear products or processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting design and quality specifications appropriate to at least one (1) TCF product or process from data sheets, production schedules process specifications or the client
- conducting research to identify development options, examining relevance for specific TCF application and developing preliminary design to explore options with key personnel
- developing test procedures and specifications and undertaking test according to test procedures and work health and safety (WHS) practices
- using information from development and testing of TCF product or process to modify and improve design specifications and adjust manufacturing process or identify suitable TCF materials
- documenting improved design and specifications.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- textile industry terminology
- international and Australian specification Standards
- TCF production processes, such as:
 - design
 - weaving
 - knitting
 - washing
 - bleaching
 - dyeing
 - tufting
 - assembly

- finishing
- printing
- TCF materials
 - fibres
 - yarns
 - fabrics
 - dyes and chemicals
 - leather
 - technical textiles
- TCF products
- systems and formula used in textile calculations
- routine and non-routine TCF tests
- TCF test equipment and tools
- test materials
- quality practices
- workplace procedures
- practices for recording and reporting
- WHS practices and procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in developing and testing textile, clothing and footwear products or processes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN6001 Develop and implement a sales or marketing strategy for fashion or textile items

Modification History

Release 1. Supersedes and is equivalent to LMTGN6001B Develop and implement a sales or marketing plan

Application

This unit of competency covers the skills and knowledge required to develop and implement a sales and marketing strategy for a textile, clothing and footwear (TCF) product or process.

The unit of competency applies to the development and implementation of a sales and marketing strategy for a design, product or range, or the design of a manufacturing process for TCF products, in a domestic or international market.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Significant judgement is required in planning, technical or supervisory activities related to operations or processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----------|--|-----|--|
| 1 | Prepare to develop a sales or marketing strategy | 1.1 | Define and analyse business goals and objectives to assist in formulating a sales and marketing strategy |
| | | 1.2 | Research market trends and analyse issues related to workplace |
| | | 1.3 | Analyse production and marketing practices, and workplace procedures, and their effects on workplace |
| | | 1.4 | Determine strategic direction in line with aims of business, customer requirements, market position, sales objectives, opportunities and resources available |
| | | 1.5 | Identify and prioritise sales and marketing strategies in order to optimise sales and profit |
| | | | |
| 2 | Develop a sales or marketing strategy | 2.1 | Use business resources and appropriate personnel to optimise research and scope potential components of a sales or marketing strategy |
| | | 2.2 | Determine components of the strategy and a time frame to optimise its effectiveness |
| | | 2.3 | Liaise with relevant personnel and seek external specialist advice, where applicable |
| | | 2.4 | Develop strategy which reflects overall business directions, characteristics of the market, long and short-term objectives and budget |
| | | | |
| 3 | Implement and monitor sales or marketing strategy | 3.1 | Coordinate relevant personnel to implement sales and marketing strategy |
| | | 3.2 | Establish monitoring procedures to assess effect of strategy on business outcomes within identified timeframes |
| | | 3.3 | Measure and monitor financial and other relevant data against objectives to identify if progress is made towards achieving target |

		3.4	Monitor implementation of strategy to establish overall performance
4	Review and report on sales or marketing strategy	4.1	Maintain records of sales or marketing strategy activities and prepare reports
		4.2	Conduct review of sales and marketing strategy outcomes and assess results
		4.3	Develop proposals to modify sales or marketing strategy, as necessary, to reflect dynamics of market place
		4.4	Prepare report on sales or marketing strategy outcomes and recommendations for presentation to management meetings

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - standard operating procedures (SOPs)
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling

- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Market includes, but is not limited to, one or more of the following:

- local markets
- national markets
- global markets

Production and marketing practices include, but are not limited to, one or more of the following:

- import and export of materials, components or complete products
- direct marketing
- wholesale and retail store distribution
- exhibitions, shows and events

Develop a sales and marketing strategy includes, but is not limited to, the following:

- analysis of business goals and market trends
- marketing strategy options
- monitoring and measuring of financial data
- review procedures and liaison with other departments

Assessment Requirements for MSTGN6001 Develop and implement a sales or marketing strategy for fashion or textile items

Modification History

Release 1. Supersedes and is equivalent to LMTGN6001B Develop and implement a sales or marketing plan

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting and analysing goals and market trends
- determining strategic direction in line with aims of business, customer requirements, market position, sales objectives, opportunities and resources available
- developing a strategy which reflects overall business directions, characteristics of the market, long and short-term objectives and budget, for at least one (1) fashion or textile item
- coordinating personnel to implement the strategy
- establishing monitoring procedures to assess effect of strategy on business outcomes within identified timeframes
- measuring and monitoring financial and other relevant data against objectives
- reviewing and proposing changes to modify sales or marketing strategy
- preparing report on sales or marketing strategy outcomes and recommendations, according to workplace procedures, for presentation to management meetings.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- the industry, including markets, local and global trends and how these impact on the workplace
- workplace products
- key elements of production capability in terms of its implications for sales and marketing strategy
- components of sales or marketing strategies
- sourcing procedures

- range of distribution channels (e.g. direct marketing, chain stores, niche markets)
- strengths, weaknesses, opportunities and threats (SWOT) analysis techniques
- requirements of workplace policies and procedures, structure and technical competency in relation to a sales or marketing strategy
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in developing and implementing a sales or marketing strategy for fashion or textile items, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN6002 Manage quality system and procedures

Modification History

Release 1. Supersedes and is equivalent to LMTGN6002A Manage quality system and procedures

Application

This unit of competency covers the skills and knowledge required to manage a quality system and procedures for textile, clothing and footwear (TCF) products and services

The unit of competency applies to management of a quality system and procedures where work requires initiative and judgement to take appropriate action and structure a quality system to support effective business operation.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Implement quality assurance system**
 - 2.1 Establish, document and communicate quality assurance policy to all levels of the workplace
 - 2.2 Develop sampling techniques that reflect needs of workplace and product
 - 2.3 Establish or maintain quality circles and other relevant aspects of quality assurance systems
 - 2.4 Organise facilitation for monitoring work teams to ensure compliance with standards
 - 2.5 Identify quality standards and regulations and determine relevance to specific products
 - 2.6 Develop and maintain quality assurance system

- 3 **Plan development of quality procedures**
 - 3.1 Assess strategic planning to facilitate achievement of quality policy
 - 3.2 Determine and allocate resources to meet requirements
 - 3.3 Determine external quality assessment requirements
 - 3.4 Determine quality procedure and product performance requirements through consultation with internal and external groups
 - 3.5 Plan development of procedures to ensure quality system is maintained and WHS practices are accommodated

- 4 **Establish implementation**
 - 4.1 Establish implementation strategies to meet workplace objectives

	and review strategies	4.2	Undertake or arrange reviews of quality system at appropriate intervals and initiate appropriate action to ensure its continuity, suitability and effectiveness
5	Evaluate system implementation and maintain records	5.1	Evaluate implementation of system and assess its effectiveness and level of support for internal improvement programs
		5.2	Assess results, authorise changes to system and take necessary action
		5.3	Maintain records and prepare reports

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Quality standards and regulations include, but are not limited to, the following:

- sizing
- labelling
- fire rating
- Australian Standards

Quality assurance systems include, but are not limited to, the following:

- developing and managing the system
- planning procedures development
- conducting audits and monitoring performance

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTGN6002 Manage quality system and procedures

Modification History

Release 1. Supersedes and is equivalent to LMTGN6002A Manage quality system and procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- demonstrating practices to ensure relevant personnel are aware of quality assurance system and procedures, on at least two (2) occasions
- identifying quality standards and regulations and determining relevance to at least two (2) specific products or processes
- establishing implementation strategies to meet workplace objectives for an identified timeframe
- determining quality procedure and product performance requirements through consultation with at least (1) one internal and one (1) external group
- undertaking or arranging reviews of quality system at appropriate intervals and initiating appropriate action to ensure its continuity, suitability and effectiveness
- evaluating implementation of quality system and procedures for a given timeframe, and assessing its effectiveness and level of support for internal improvement programs
- applying workplace procedures to quality management
- maintaining records and preparing reports.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- principles of quality management and their application
- quality systems, such as:
 - quality assurance
 - quality control
 - quality inspection
 - quality improvement
 - total quality control

- delegation of responsibilities within quality systems
- appropriate quality methodologies, their capabilities, limitations, applicability and contribution to outcomes
- quality standards, codes of practice, policies and procedures
- production processes, materials and products
- characteristics of materials, products services and equipment provided by external suppliers
- appropriate quality methodologies, their capabilities, limitations and applicability
- relevant sampling and measurement techniques and quality checking procedures
- mechanism for dispute resolution and effective communication skills
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in managing quality system and procedures, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN6003 Research and evaluate processes and products

Modification History

Release 1. Supersedes and is equivalent to LMTGN6003B Research and evaluate processes and products

Application

This unit of competency covers the skills and knowledge required to research and evaluate processes and products in a textiles, clothing and footwear (TCF) enterprise.

The unit of competency applies to researching and evaluating new processes and products to inform business opportunities.

This unit of competency is applicable to all sectors of the TCF industry.

Work is performed under limited guidance in line with a broad plan or strategy. Significant judgement is required in planning, design, technical or supervisory activities related to products or processes. Work responsibilities will vary in scope according to size of the workplace, range of products, specialisation in the workplace and workplace quality standards.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Identify global and domestic trends	2.1	Research and forecast global and domestic trends in relation to identified processes and products
		2.2	Investigate developments in technology and digital capabilities to ensure all possibilities are considered
		2.3	Identify implications of global and domestic trends on local industry
3	Determine manufacturing capabilities or implications	3.1	Identify manufacturing capabilities for identified products and/or process in consultation with relevant personnel
		3.2	Consider issues, such as human resources, materials, financial restraints, equipment capabilities, timelines, efficiency, workplace procedures and WHS practices
		3.3	Interpret specifications and establish availability of resources
		3.4	Determine options or requirements for external resources to undertake parts of work when defining production capabilities

4	Contribute to strategic planning	4.1	Clarify planning parameters, in consultation with production development, sales and marketing team, management and client, where required
		4.2	Establish, analyse and interpret procedures, where required
		4.3	Develop a strategy plan and critical path plan, when necessary
		4.4	Identify and consider resources required and constraints when formulating strategic plan for new products or processes
5	Prepare reports and presentations	5.1	Identify and compile relevant information
		5.2	Check data for accuracy and relevance, when required
		5.3	Prepare reports and presentations

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output

- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Trends include, but are not limited to, one or more of the following:

- global design trends
- domestic design trends
- forecasting
- developments in technology
- market forces
- export and import practices
- regulations
- supply of raw materials

Manufacturing capabilities include, but are not limited to, one or more of the following:

- materials
- equipment
- human resources
- financial restraints
- timelines
- efficiency
- production priorities

Strategic planning includes, but is not limited to, one or more of the following:

- consultation with a range of individuals and departments, including:
 - production
 - product development
 - sales and marketing team
 - management
 - client

Reports include, but are not limited to, one or more of the following:

- informal
- formal for presentation at meetings

Assessment Requirements for MSTGN6003 Research and evaluate processes and products

Modification History

Release 1. Supersedes and is equivalent to LMTGN6003B Research and evaluate processes and products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- investigating developments in technology and digital capabilities and identifying implications of global and domestic trends on local industry for at least one (1) product or process
- identifying manufacturing capabilities for at least one (1) product or process in consultation with relevant personnel, interpreting specifications and establishing resources are available
- consulting with production development, sales and marketing team, management and client where required, to clarify parameters and establish procedures
- developing a strategy plan specifying resources required, and a critical path plan where necessary
- compiling relevant information and preparing reports for presentation to relevant personnel, to evaluate products or processes.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product processes
- product and process development procedures
- machine and equipment, resource and skill capabilities within the workplace
- links across the industry, global and local trends
- research sources
- quality standards and practices
- work health and safety (WHS) practices, including hazard identification and control measures
- workplace practices

- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency researching and evaluating processes and products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN6004 Negotiate and manage contracts to produce finished design products

Modification History

Release 1. Supersedes and is equivalent to LMTGN6004B Negotiate and manage contracts to produce finished design products

Application

This unit of competency covers the skills and knowledge required to negotiate and manage design production contracts.

The unit of competency applies to contracts which may include local or overseas supply or production of materials, components, complete products or accessories, used to produce finished design products. It may also be applied to contracts providing distribution and transportation or sales and marketing services.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work includes establishing performance standards and monitoring procedures to ensure contract specifications are achieved.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Establish contract requirements	<p>1.1 Identify contract requirements in collaboration with appropriate personnel and workplace procedures</p> <p>1.2 Establish key criteria to define contract parameters</p> <p>1.3 Preview previous contracts to guide preparation of contract and selection of contractors</p> <p>1.4 Prepare contract detailing required products and/or services and advertise or circulate in relevant media</p>
2	Confirm contract agreement	<p>2.1 Review and shortlist contract applications according to ability to provide goods or services to required standards</p> <p>2.2 Select contract supplier and negotiate and confirm contract agreement</p> <p>2.3 Confirm quality and performance standards</p> <p>2.4 Confirm documentation, communication and performance monitoring processes with contract supplier</p> <p>2.5 Develop risk management plan</p> <p>2.6 Complete procurement documentation</p>
3	Implement and manage contract agreement	<p>3.1 Monitor performance to ensure standards and targets are being achieved</p> <p>3.2 Identify and address inconsistencies and missed targets to re-establish required performance levels</p> <p>3.3 Consult appropriate personnel to assist in monitoring performance of contract suppliers</p> <p>3.4 Identify and implement improvement opportunities,</p>

- where possible
- 3.5 Update documentation, as required, throughout implementation of contract
 - 3.6 Manage supplier payments according to contract agreement
- 4 **Evaluate contract implementation and maintain records**
- 4.1 Evaluate implementation and effectiveness of contract in meeting contract requirements and assess quality outcomes
 - 4.2 Identify and record any improvements to contracting procedures for later use
 - 4.3 Provide feedback to supplier
 - 4.4 Prepare records and maintain reports

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping

- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Contract requirements include, but are not limited to, one or more of the following:

- supply of goods or components
- production of goods or components
- sales and marketing services
- transport and distribution services

Appropriate personnel include, but are not limited to, one or more of the following:

- business development staff
- management
- specialist personnel, such as operations managers, marketing executives and procurement officers
- production personnel
- designers
- quality assurance officers

Key criteria includes, but is not limited to, three or more of the following:

- domestic or overseas suppliers
- technology requirements
- product specification
- process specification
- quantity specifications
- quality specifications
- stakeholder interests
- timing
- budget
- transportation and shipping
- other special requirements

Unit Mapping Information

Assessment Requirements for MSTGN6004 Negotiate and manage contracts to produce finished design products

Modification History

Release 1. Supersedes and is equivalent to LMTGN6004B Negotiate and manage contracts to produce finished design products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- communicating within the workplace, including liaising with other departments and, where relevant, overseas personnel to establish contract criteria
- determining contract and quality requirements and advertising or circulating in relevant media
- reviewing and selecting contractor and preparing contract detailing required products and/or services
- monitoring performance of contractor and suppliers and applying methods to eliminate causes of unsatisfactory performance
- evaluating implementation and effectiveness of contract in meeting contract requirements and assessing quality outcomes
- evaluating and assessing effectiveness of contract process and identifying improvements to contracting process
- preparing report and maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- principles of quality management, their application and delegation of responsibilities within a contract
- documentation procedures for contracts
- research techniques
- workplace procurement practices and procedures
- legal requirements for contracting
- performance monitoring and management methods
- strategic planning

- financial and accounting issues
- quality standards and practices
- work health and safety (WHS) practices, including hazard identification and control measures
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in negotiating and managing contracts to produce finished design products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN6005 Manage production processes

Modification History

Release 1. Supersedes and is equivalent to LMTGN6005A Manage production processes

Application

This unit of competency covers the skills and knowledge required to manage a production facility in a textiles, clothing and footwear (TCF) workplace.

This unit of competency applies to managing production in a TCF workplace where judgement is required in planning, technical or supervisory activities related to operations or processes in substantially non-routine situations.

The unit of competency is applied under limited guidance in line with a broad plan, budget or strategy as part of the major functional area or in highly specialised situations requiring a range of skills.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Review production scheduling | 1.1 | Review production schedule to determine effective machinery operation, time and cost efficiency in the use of facilities, and suitable use of personnel |
| | | 1.2 | Make recommendations for improvement or change, as appropriate |
| | | 1.3 | Modify schedule according to recommendations or in line with production requirements and workplace procedures, as required |
| 2 | Facilitate resolution of work flow problem | 2.1 | Facilitate meetings to identify methods to solve process or work flow problems |
| | | 2.2 | Use knowledge of process improvement and efficient production techniques and systems to assist in identifying and resolving process or work flow problems |
| | | 2.3 | Recommend and document preferred option to resolve the problem |
| | | 2.4 | Contribute to implementing the recommended problem resolution option, in accordance with work health and safety (WHS) practices |
| 3 | Monitor production improvements or variations | 3.1 | Monitor improvements or variations to production to ensure outcome meets specifications, production schedule and workplace requirements |
| | | 3.2 | Collate and analyse data to evaluate the effectiveness of production improvements or variations |
| | | 3.3 | Make decisions on improvements or variations to production within limits of management responsibility |
| 4 | Create records and reports | 4.1 | Maintain management records and prepare reports, where necessary |
| | | 4.2 | Make presentations on production performance and |

developments at management meetings

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Production schedule includes, but is not limited to, one or more of the following:

- electronic or hard copy format
- written text
- tables of numeric data
- graphics
- charts
- graphs

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures

specific to the tasks described by this unit, and includes one or more of the following:

- manual handling techniques
- SOPs
- personal protective equipment (PPE)
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Workplace organisation systems include one or more of the following:

- just in time (JIT)
- value-added modelling (VAM)
- quick response
- quality circles
- team processes
- benchmarking

Assessment Requirements for MSTGN6005 Manage production processes

Modification History

Release 1. Supersedes and is equivalent to LMTGN6005A Manage production processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting and analysing data for production planning
- reviewing production schedule to determine effective machinery operation, time and cost efficiency in the use of facilities, and suitable use of personnel
- using knowledge of process improvement and efficient production techniques and systems to assist in identifying and resolving process or work flow problems
- communicating effectively within the workplace, including liaising with other departments, to monitor efficiency of production and resolve workflow problems
- monitoring improvements or variations to production to ensure outcome meets specifications, production schedule and workplace requirements
- collating and analysing data to evaluate the effectiveness of production improvements or variations and assessing work health and safety (WHS) compliance
- maintaining records and preparing reports for presenting information to relevant personnel.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- management and production processes, machines and production software
- workplace and work organisation systems
- enterprise products and material or fabric structure
- work flow control techniques and methods to resolve associated work flow problems
- WHS and environmental aspects of relevant enterprise activities
- workplace procedures and reporting or recording processes
- relevant regulatory requirements and codes of practice
- hazard identification and control measures associated with managing production operations.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in managing production processes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN6006 Map and establish TCF supply chain process

Modification History

Release 1. Supersedes and is equivalent to LMTGN6006A Map and establish textiles, clothing or footwear supply chain process

Application

This unit of competency covers skills and knowledge required to map and establish a supply chain process for a textiles, clothing or footwear (TCF) operation.

The unit of competency applies to enterprises working with domestic or international suppliers and customers in the supply or receipt of products and services within the TCF industry. Work involves the application of initiative and judgement to build an effective supply chain.

Work includes building commercial relationships, and working effectively within sector or enterprise conditions, import/export regulations, resource requirements, and responding to industry work practices.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTGN4006 Apply TCF market supply systems

Competency Field

Generic

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Identify supply requirements	<p>2.1 Confirm projected requirements for TCF stock supplies, product quantities, quality and delivery schedules</p> <p>2.2 Document identified issues and problems concerning projected requirements</p> <p>2.3 Identify and confirm resources, supply requirements, availability of machines and personnel</p> <p>2.4 Identify regular and occasional supply needs and document conditions</p> <p>2.5 Determine the flow rate for each category of TCF product</p>
3	Determine enterprise requirements for suppliers	<p>3.1 Establish business conditions for supply arrangements in consultation with senior management</p> <p>3.2 Confirm specifications for raw materials, products and production processes</p> <p>3.3 Establish testing procedures to confirm product and material quality</p> <p>3.4 Analyse import and export rules and regulations for international sources to determine effect on supply</p>

- conditions
- 3.5 Establish communication and documentation protocols
- 4 **Establish supply chain process**
- 4.1 Obtain and confirm specific information relating to TCF supply chain capacity
- 4.2 Establish internal processes to ensure receipt and supply of TCF products meet enterprise conditions, quality standards and resource requirements
- 4.3 Collect and analyse information to assess purchasing organisation's viability
- 4.4 Obtain terms of payment offered by each buyer, negotiate for advantage and analyse for impact on finances
- 4.5 Conduct ongoing research to assess new trends and conditions that may influence supply and demand in the TCF industry
- 5 **Establish ongoing monitoring arrangements for the supply chain**
- 5.1 Maintain documentation, TCF production planning records and prepare reports to ensure supply chain information is accurate and current
- 5.2 Analyse performance indicators to assess supply efficiency
- 5.3 Act to remedy poor performance areas
- 5.4 Incorporate strategies into the TCF supply chain plan to ensure positive performance
- 5.5 Use appropriate electronic and digital tools and communication systems

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Flow rate includes one or more of the following:

- just in time (JIT)
- flow demand from customers
- required of suppliers
- unitisation

Identified issues and problems include, but are not limited to, one or more of the following:

- production schedule changes
- material or resource availability
- equipment maintenance requirements
- high demand
- low demand
- changes to design
- faults

Business conditions include, but are not limited to, one or more of the following:

- contract conditions
- supply priorities
- communication channels

- authority protocols
- verification
- payment

Unit Mapping Information

Assessment Requirements for MSTGN6006 Map and establish TCF supply chain process

Modification History

Release 1. Supersedes and is equivalent to LMTGN6006A Map and establish textiles, clothing or footwear supply chain process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- preparing a map of all components and personnel in TCF supply chain systems for an identified enterprise, and confirming resources, supply requirements, and availability of machines and personnel
- preparing a map of the supply needs of the TCF enterprise and identifying internal processes that ensure receipt and supply of TCF products meet enterprise conditions, quality standards and resource requirements
- analysing import and export rules and regulations for international sources to determine effect on supply conditions
- monitoring supply chain, analysing performance and establishing testing procedures to confirm product and material quality
- conducting ongoing research to assess new trends, conditions and relationships that may influence supply and demand in the TCF industry
- using appropriate TCF industry terminology and technology to prepare a database, spreadsheet or table to record details of relationships and supply chain process for an identified enterprise
- maintaining documentation, TCF production planning records and preparing reports to ensure supply chain information is accurate and current.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- components of TCF supply chain, such as:
 - product flow
 - raw material
 - production

- distribution
- marketing
- customers
- business support and administrators
- characteristics of a broad range of fibres, fabrics and fashion and textile products
- information resources on fibres and fabrics
- TCF production processes
- test procedures to assess quality of materials and products
- electronic and digital tools used in TCF supply chain
- electronic and digital communication and recording tools appropriate for TCF supply chain
- information on TCF trends and conditions test procedures to assess quality of materials and products
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in mapping and establishing TCF supply chain process, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTHL2001 Undertake receipt, storage, handling and preservation of materials or products

Modification History

Release 1. Supersedes and is equivalent to LMTHL2001A Undertake receipt, storage, handling and preservation of materials or products

Application

This unit of competency covers the skills and knowledge required to perform the tasks to receive, store, handle and preserve materials or products used in the hide, skin and leather industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, job sheets or work instructions
- 2 **Receive goods**
- 2.1 Check dockets, tags or other identification to confirm receipt of correct items
 - 2.2 Store chemicals, consumables, equipment and other non-hide or skin goods received in accordance with WHS practices and workplace procedures
 - 2.3 Transfer skins or hides to an appropriate area for processing or storage
- 3 **Preserve and store skins or hides**
- 3.1 Assess preservation of skins or hides by salting or other designated method
 - 3.2 Prepare skins or hides for storage or transport using relevant manual handling procedures
 - 3.3 Store skins or hides in accordance with procedures
 - 3.4 Maintain records to expedite movement of the skins or hides through the various phases of treatment
- 4 **Pack, store or distribute end product**
- 4.1 Check paperwork to confirm instructions
 - 4.2 Assess packing of end product according to workplace procedures for handling of finished goods
 - 4.3 Transfer products to be stored to designated location using correct manual handling practices
 - 4.4 Coordinate despatch orders to meet delivery or collection timetables
 - 4.5 Maintain records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Receive goods includes one or more of the following:

- skins and hide
- chemicals
- consumables
- equipment

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and includes one or more of the following:

- manual handling techniques
- PPE

- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTHL2001A Undertake receipt, storage, handling and preservation of materials or products

Assessment Requirements for MSTHL2001 Undertake receipt, storage, handling and preservation of materials or products

Modification History

Release 1. Supersedes and is equivalent to LMTHL2001A Undertake receipt, storage, handling and preservation of materials or products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- checking dockets, tags or other identification to confirm receipt of correct items
- storing chemicals, consumables, equipment and other non-hide or skin goods received in accordance with work health and safety (WHS) practices and workplace procedures
- using correct manual handling techniques
- preserving skins or hides in accordance with specifications and procedures
- maintaining accurate records for movement of skins or hides
- packing, storing and distributing end product in accordance with procedures and order specifications
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product processes and equipment
- characteristics and hazards of chemicals and other materials delivered to the enterprise
- receipt, storage, handling and preservation procedures
- quality standards and manual handling procedures
- WHS and environmental aspects of relevant organisation processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in undertaking receipt, storage, handling and preservation of materials or products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTHL2002 Perform fellmongering processes

Modification History

Release 1. Supersedes and is equivalent to LMTHL2002A Perform fellmongering processes

Application

This unit of competency covers the skills and knowledge required to perform fellmongering tasks associated with woolskin activities in the hide, skin and leather industry, including effective use of related equipment.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in

		accordance with SOPs
	1.4	Identify job requirements from specifications, job sheets or work instructions
2	Prepare woolskins for wool removal	2.1 Identify or confirm appropriate woolskin process
	2.2	Assess hair loosening by machine or by manual process using sweating, enzyme or chemical painting processes
	2.3	Check effectiveness of wool removal at completion of process
3	Pull wool	3.1 Assess preparation for manual or machine operation
	3.2	Remove wool from skins by machine or manually
	3.3	Check outcome of the process to ensure effectiveness
	3.4	Direct wool and skins to correct areas for next process or storage
4	Maintain records	4.1 Maintain documentation at each stage of the process to expedite movement through the various phases of treatment
	4.2	Complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of

the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Machines include the following:

- hair loosening
- wool removal
- pulling wool

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and includes one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTHL2002 Perform fellmongering processes

Modification History

Release 1. Supersedes and is equivalent to LMTHL2002A Perform fellmongering processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- identifying and performing woolskin preparation on at least two (2) occasions
- conducting sweating, enzyme, or chemical painting processes in accordance with procedures on at least two (2) occasions
- using machine or manual processes to loosen and pull wool to meet specifications on at least two (2) occasions
- documenting all stages of the process
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product processes and equipment
- characteristics and hazards of chemicals and other materials used on woolskins or in the process
- preparation procedures and fellmongering procedures
- quality standards and manual handling procedures
- work health and safety (WHS) and environmental aspects of relevant organisation processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in performing fellmongering processes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTHL2003 Operate machines to prepare hides or skins for tanning

Modification History

Release 1. Supersedes and is equivalent to LMTHL2003A Operate machines to prepare hides or skins for tanning

Application

This unit of competency covers the skills and knowledge required to perform the tasks associated with operating and carrying out operator maintenance of machines used for preparing hides and skins for tanning.

The unit of competency applies to tanning that may be conducted in restricted spaces or exposed conditions or controlled or open environments.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, job sheets or work instructions

- 2 **Operate machine to prepare hides or skins for tanning**
 - 2.1 Identify and assess all necessary settings and preparation for machine operation in accordance with specifications and SOPs
 - 2.2 Start machine in accordance with SOPs
 - 2.3 Feed hides or skins through the machine in the appropriate manner and in accordance with procedures
 - 2.4 Direct hides or skins to correct area for next process
 - 2.5 Clean and maintain work area around the machine
 - 2.6 Stop or shut down equipment in accordance with procedures

- 3 **Monitor product quality**
 - 3.1 Identify and apply quality requirements for the hides or skins for all stages of the process
 - 3.2 Check quality visually and continuously to ensure standard is maintained
 - 3.3 Recognise and isolate any deviations from normal
 - 3.4 Report variations to product quality in accordance with procedures

- 4 **Carry out operator maintenance**
 - 4.1 Identify and report minor running problems according to workplace and equipment manufacturer procedures
 - 4.2 Report major machine and equipment or product faults
 - 4.3 Perform minor maintenance and cleaning in accordance

with manufacturer specifications and SOPs

5	Dispose of waste materials	5.1	Apply industry standard and workplace procedures to minimise waste
		5.2	Dispose of machine waste in accordance with environmental and workplace procedures
6	Communicate process information	6.1	Complete records and other documentation, where required
		6.2	Transfer information regarding production status and problems between changes in shifts, where required
		6.3	Maintain documentation at each stage of the process to expedite movement of the hides or skins through the various phases of treatment

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output

- housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Preparation for machine operation includes one or more of the following:**
- pre-start visual checks, including safety requirements
 - basic maintenance checks and product setting requirements
 - start-up procedures
 - machine cleaning
- Machines include one or more of the following:**
- fleshing
 - splitting
 - scudding of hides or skins
- Equipment includes one or more of the following:**
- electronic monitoring and metering systems
 - manual chart recording systems
 - hand tools
 - laboratory testing and sampling equipment
- WHS practices**
- WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:
- manual handling techniques
 - PPE
 - safe materials handling
 - ergonomic arrangement of workplaces
 - following marked walkways
 - safe storage of equipment
 - housekeeping
 - reporting accidents and incidents
 - other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTHL2003 Operate machines to prepare hides or skins for tanning

Modification History

Release 1. Supersedes and is equivalent to LMTHL2003A Operate machines to prepare hides or skins for tanning

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- interpreting specifications and setting machine for operation
- operating machine and feeding hides or skins in accordance with procedures on at least two (2) occasions
- identifying and applying quality requirements for the hides or skins, and checking quality visually and continuously to ensure standard is maintained for all stages of the process
- recognising and isolating deviations from normal in accordance with specifications and procedures
- identifying minor running problems and reporting major machine, equipment or product faults
- applying workplace and industry standards to minimise and dispose of waste
- completing records and documentation
- transferring information regarding production status and problems between changes in shifts, where required
- maintaining documentation at each stage of the process to expedite movement of the hides or skins through the various phases of treatment.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product processes and equipment
- characteristics and hazards of chemicals and other materials used on hides and skins or in the process
- machine preparation and operation procedures
- maintenance procedures and specifications
- quality standards and manual handling procedures

- work health and safety (WHS) and environmental aspects of relevant processes, particularly waste disposal
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in operating machines to prepare hides or skins for tanning, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTHL2004 Sort, grade or class hides, skins or leather

Modification History

Release 1. Supersedes and is equivalent to LMTHL2012A Sort, grade or class hides, skins or leather

Application

This unit of competency covers the skills and knowledge required to grade, sort or class hides, skins and leather to ensure quality of process is maintained.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in

			accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Inspect hides, skins or leather	2.1	Assess and examine hides, skins or leather to determine preservation requirements, as necessary
		2.2	Monitor effect of processes on hides, skins or leather
3	Sort, grade or class hides, skins or leather	3.1	Inspect hides, skins or leather visually for defects, where applicable
		3.2	Assess tactile inspection to determine softness and thickness
		3.3	Sort, grade and class hides, skins or leather according to requirements
4	Inspect and grade finished product	4.1	Inspect finished product for quality
		4.2	Grade product into relevant classification
		4.3	Arrange transfer of finished product to storage area or warehouse
5	Maintain records	5.1	Complete documentation associated with tasks to meet required workplace procedures
		5.2	Add labels, tags or other identification to skins, hides or leather, as required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Sorting, grading or classing includes one or more of the following:

- preparing or tanning hides or skins
- crusting and finishing hides, skins or leather
- transferring finished product
- handling hides, skins and leather

Tactile inspection includes the following:

- softness
- thickness

WHS practices WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment

- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTHL2004 Sort, grade or class hides, skins or leather

Modification History

Release 1. Supersedes and is equivalent to LMTHL2012A Sort, grade or class hides, skins or leather

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- sorting, grading, or classing hides, skin, and leather to required standard and specifications on at least two (2) occasions
- observing colour variations in hides, skins or leather and identifying defects
- performing tactile inspection for softness and thickness in accordance with procedures
- carrying out safe handling techniques and procedures
- monitoring quality requirements for each stage of the process and grading product into relevant classification
- recognising and reporting non-conforming outcomes
- arranging transfer of finished product to storage area or warehouse
- adding labels, tags or other identification to skins, hides or leather, as required
- completing documentation associated with tasks to meet required workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product processes and machines
- preservation requirements
- procedures for sorting, grading, and classing
- quality standards and manual handling techniques and procedures
- work health and safety (WHS) and environmental aspects of relevant organisation processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in sorting, grading or classing hides, skins or leather, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTHL2005 Trim hides, skins or leather

Modification History

Release 1. Supersedes and is equivalent to LMTHL2011A Trim hides, skins or leather

Application

This unit of competency covers the skills and knowledge required for the range of trimming tasks that are performed to support the production processes in the processing of hide, skin and leather conducted in restricted spaces or exposed conditions or controlled or open environments.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	Prepare equipment	2.1	Select knives and check their condition for suitability
		2.2	Sharpen or prepare knives, as required
3	Trim materials	3.1	Confirm with operator or supervisor trimming requirements for required task or process
		3.2	Assess trimming requirements in accordance with workplace procedures
		3.3	Monitor and dispose of waste in accordance with environmental and workplace procedures
4	Clean and store equipment	4.1	Clean equipment in readiness for next application
		4.2	Store equipment after use in accordance with procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment

the following:

- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Trimming operations include one or more of the following:

- preparation for tannage (sheepskin, bovine and calf skin)
- preparation to crust (flesh split, grain split and sheepskin)
- finishing

Sharpened or prepared includes the following:

- cleaning
- honing or sharpening

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTHL2005 Trim hides, skins or leather

Modification History

Release 1. Supersedes and is equivalent to LMTHL2011A Trim hides, skins or leather

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures and safe work practices, industry codes and standards
- using personal protective equipment (PPE), where required
- applying relevant standards
- selecting, sharpening and preparing knives applicable to the required task
- trimming materials in accordance with procedures on at least two (2) occasions
- monitoring and disposing of waste in accordance with environmental procedures
- cleaning, maintaining and storing equipment appropriately.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of PPE
- relevant Australian Standards
- industry and product processes and equipment
- trimming requirements
- procedures for knife handling, sharpening, and storing
- processes for waste monitoring
- quality standards and manual handling procedures
- work health and safety (WHS) and environmental aspects of relevant processes, particularly working with sharp objects
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in trimming hides, skins or leather, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTHL2006 Use drum or vessel to prepare or tan hides or skins

Modification History

Release 1. Supersedes and is equivalent to LMTHL2006A Use drum or vessel to prepare or tan hides or skins

Application

This unit of competency covers the skills and knowledge required to perform the range of activities associated with using drums or vessels in the preparation and tanning processes for hides or skins.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- | | | | |
|---|--|-----|---|
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, job sheets or work instructions |
| 2 | Prepare and load drum or vessel | 2.1 | Determine drum or vessel loads and batches by counting, weight, volume or other defined method |
| | | 2.2 | Assemble and make ready hides or skins to be prepared or tanned to be loaded into drum or vessel |
| | | 2.3 | Use relevant manual handling procedures to load drum or vessel with hides or skins |
| 3 | Use drum or vessel to prepare or tan hides or skins | 3.1 | Assess between load service of equipment in accordance with manufacturer and workplace procedures |
| | | 3.2 | Assess preparation and filling of drum or vessel |
| | | 3.3 | Select and use formulations or additives, as required |
| | | 3.4 | Operate and use drum or vessel in accordance with operator instructions and SOPs |
| | | 3.5 | Follow schedules for the particular process |
| 4 | Monitor drum or vessel process | 4.1 | Check and monitor drum or vessel use for correct function |
| | | 4.2 | Monitor process parameters in terms of temperature, time and chemical values |
| | | 4.3 | Recognise, isolate and report any deviations from normal |
| 5 | Unload drum or vessel | 5.1 | Unload hides or skins using relevant manual handling techniques |
| | | 5.2 | Direct hides or skins to correct area for next process |
| | | 5.3 | Control handling of process liquid or effluent in |

accordance with environmental and workplace procedures

- 6 **Maintain records**
- 6.1 Maintain documentation, as required
 - 6.2 Complete records, in accordance with workplace requirements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Tanning activities

- delimiting

include one or more of the following:

- bating
- pickling
- tanning

Preparation methods include one or more of the following:

- counting
- weight
- volume
- other defined method
- reversal of preservation
- washing
- liming
- scouring
- bleaching

Equipment includes one or more of the following:

- electronic monitoring and metering systems
- manual chart recording systems
- basic hand tools
- laboratory testing and sampling equipment

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTHL2006A Use drum or vessel to prepare or tan hides or skins

Assessment Requirements for MSTHL2006 Use drum or vessel to prepare or tan hides or skins

Modification History

Release 1. Supersedes and is equivalent to LMTHL2006A Use drum or vessel to prepare or tan hides or skins

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- determining loads and batches and load drum or vessel on at least two occasions
- carrying out between load servicing, filling drum or vessel and adding formulations and additives
- following schedules for the process
- checking and monitoring correct function and process parameters ensuring product meets specifications
- recognising and isolating deviations from normal in accordance with procedures
- loading and unloading hides or skins using relevant manual handling techniques
- directing hides or skins to correct area for next process
- controlling handling of process liquid or effluent in accordance with environmental and workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product processes and equipment
- calculating drum or vessel loads and batches:
 - weight
 - volume
 - counting
- procedures and requirements for preparation and loading
- characteristics ,hazards and applications of dyes, formulations and additives used in tanning process
- types and applications of formulations and additives
- monitoring processes and operator instructions

- quality standards and manual handling procedures
- work health and safety (WHS) and environmental aspects of relevant processes, including effluent handling and disposal
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in using drum or vessel to prepare or tan hides or skins, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTHL2007 Operate machines to crust hides, skins or leather

Modification History

Release 1. Supersedes and is equivalent to LMTHL2007A Operate machines to crust hides, skins or leather

Application

This unit of competency covers the skills and knowledge required to perform the tasks associated with operating and conducting operator maintenance of machines used for crusting hides, skins or leathers.

It applies to tasks conducted in restricted spaces or exposed conditions or controlled or open environments.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	Operate machine to crust hides, skins or leather	2.1	Identify and assess all necessary settings and preparation for machine operation in accordance with specifications and SOPs
		2.2	Start machine in accordance with SOPs
		2.3	Feed hides, skins or leather through the machine in the appropriate manner and in accordance with procedures
		2.4	Direct hides or skins to correct area for next process
		2.5	Clean and maintain work area around the machine
		2.6	Stop or shut down equipment in accordance with procedures
3	Monitor product quality	3.1	Identify and apply quality requirements for the hides or skins for all stages of the process
		3.2	Check quality visually and continuously to ensure standard is maintained
		3.3	Recognise and isolate any deviations from normal
		3.4	Report variations to product quality in accordance with procedures
4	Carry out operator maintenance	4.1	Identify and report minor running problems according to workplace and equipment manufacturer procedures
		4.2	Report major machine and equipment or product faults
		4.3	Perform minor maintenance and cleaning in accordance with manufacturer specifications and SOPs

5	Dispose of waste materials	5.1	Minimise waste through the correct application of industry standards and workplace procedures
		5.2	Dispose of machine waste in accordance with environmental and workplace procedures
6	Communicate process information	6.1	Complete records and other documentation, where required
		6.2	Transfer information regarding production status and problems between changes in shifts, where required
		6.3	Maintain documentation at each stage of the process to expedite movement of the hides or skins through the various phases of treatment

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping

- tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Settings and preparation for machines include one or more of the following:**
- pre-start visual checks, including safety requirements
 - basic maintenance checks and product setting requirements
 - start-up procedures and feeding rate
 - machine cleaning
- Equipment includes one or more of the following:**
- electronic monitoring and metering systems
 - manual chart recording systems
 - basic hand tools
 - laboratory testing and sampling equipment
- Processes include one or more of the following:**
- samming
 - splitting
 - shaving
 - setting/samming (striking out)
 - softening (vibration staking and drumming)
 - buffing
- WHS practices**
- WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:
- manual handling techniques
 - personal protective equipment
 - safe materials handling
 - ergonomic arrangement of workplaces
 - following marked walkways
 - safe storage of equipment
 - housekeeping
 - reporting accidents and incidents
 - other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTHL2007 Operate machines to crust hides, skins or leather

Modification History

Release 1. Supersedes and is equivalent to LMTHL2007A Operate machines to crust hides, skins or leather

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- interpreting specifications and setting machine for operation
- operating machine and feeding hides or skins in accordance with procedures on at least two (2) occasions
- identifying and applying quality requirements for the hides or skins for all stages of the process
- recognising and isolating deviations from normal in accordance with specifications and procedures
- identifying and reporting minor running problems or major machine and equipment or product faults according to workplace and equipment manufacturer procedures
- performing minor maintenance and cleaning in accordance with manufacturer specifications and SOPs
- identifying minor running problems and reporting major machine, equipment or product faults
- applying workplace procedures and industry standards to minimise and dispose of machine waste in accordance with environmental and workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product processes and equipment
- characteristics and hazards of chemicals and other materials used on hides and skins or in the process
- procedures for machine preparation and operation
- maintenance procedures and specifications
- quality standards and manual handling procedures

- work health and safety (WHS) and environmental aspects of relevant processes, particularly waste disposal
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in operating machines to crust hides, skins or leather, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Drying operations include one or more of the following:

- preservation
- preparation to crust (air dry, hang, toggle, paste, vacuum, radio frequency and Seco-Therm)
- dried crust (stretching, toggle, Dyna-vac and vacuum)
- finishing (drying finish coating, base and top [air-drying and radiation])

Equipment adjustments include one or more of the following:

- time
- temperature
- conditions

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces

- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTHL2009 Perform drying operations

Modification History

Release 1. Supersedes and is equivalent to LMTHL2009A Perform drying operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- loading hides, skins, or leather onto racks or other drying apparatus
- adjusting equipment in accordance with procedures
- assessing drying operations in accordance with workplace procedures and, where applicable, ensuring timing, temperature and conditions are appropriate for the operation, on at least two (2) occasions
- removing and unloading hides, skins, or leather using appropriate manual handling techniques
- directing items to next stage of process
- recognising and isolating deviations from normal in accordance with procedures
- ensuring appropriate control of drying process to meet specifications
- maintaining documentation to expedite movement of the hides, skins and leather through the various phases of treatment
- completing records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- drying operations:
 - preservation
 - preparation to crust (air dry, hang, toggle, paste, vacuum, radio frequency and Seco-Therm)
 - dried crust (stretching, toggle, Dyna-vac and vacuum)
 - finishing (drying finish coating, base and top [air-drying and radiation])
- industry and product processes and equipment
- procedures and requirements for preparation and loading
- adjustment requirements; including timing, temperature, and conditions

- monitoring processes and operator instructions
- quality standards and manual handling procedures
- work health and safety (WHS) and environmental aspects of relevant processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in performing drying operations, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTHL2010 Finish hides, skins or leather

Modification History

Release 1. Supersedes and is equivalent to LMTHL2010A Finish hides, skins or leather

Application

This unit of competency covers the skills and knowledge skills required to perform the range of activities associated with the various finishing processes for hides, skins or leather, including machine finishing and manual application.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in

- accordance with SOPs
- 1.4 Identify job requirements from specifications, job sheets or work instructions
- 2 **Prepare for finishing task**
- 2.1 Obtain and check equipment and other necessary requirements for functionality
- 2.2 Prepare hides, skins or leather to be finished
- 2.3 Select, obtain and mix coating/s to be applied in accordance with workplace and suppliers instructions or procedures, where required
- 3 **Operate machines to finish hides, skins or leather, where applicable**
- 3.1 Identify and assess all necessary settings and preparation for machine operation in accordance with specifications and SOPs
- 3.2 Operate machine in accordance with manufacturer instructions and SOPs, and report any malfunctions
- 3.3 Feed hides, skins or leather through or into the machine in the appropriate manner and in accordance with procedures
- 3.4 Remove hides, skins or leather from machine using correct manual handling techniques, where required
- 3.5 Direct hides, skins or leather to the correct area for next process or storage
- 3.6 Clean and maintain work area around the machine
- 4 **Apply finishing coats by hand, where applicable**
- 4.1 Apply bottom, effect and top coats manually in accordance with specifications and procedures
- 4.2 Direct hides, skins or leather to correct area for drying process or storage
- 4.3 Clean and store equipment
- 5 **Monitor product**
- 5.1 Identify and apply quality requirements for the hides,

	quality		skins or leather for all stages of the process
		5.2	Check quality visually and continuously to ensure standard is maintained
		5.3	Recognise, isolate and report any deviations from normal in accordance with procedures
6	Dispose of waste materials	6.1	Minimise waste through correct application of workplace procedures
		6.2	Dispose of machine waste in accordance with environmental and workplace procedures
7	Communicate process information	7.1	Transfer information regarding production status and problems between changes in shifts, where required
		7.2	Maintain documentation to expedite movement of the hides, skins and leather through the various phases of treatment
		7.3	Complete records in accordance with workplace procedures, as required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs

- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Prepare for finishing includes one or more of the following:

- confirming requirements and instructions
- checking equipment serviceability
- preparing the hides, skins or leather
- obtaining and mixing the coatings

Equipment includes one or more of the following:

- electronic monitoring and metering systems
- manual chart recording systems
- basic hand tools
- laboratory testing and sampling equipment

Apply finishing coat by machine includes one or more of the following:

- mechanical application (roller coating, curtain coating and laminating - film application)
- applying heat or pressure (iron, embossing, plate, burnishing, polishing and glazing)
- softening processes (staking and drumming)
- wool finishing (combing and polishing, and clipping)
- colour mixing and matching (mixer)

Apply finishing coats by hand includes one or more of the following:

- padding
- spraying
- brushing

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTHL2010A Finish hides, skins or leather

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTHL2010 Finish hides, skins or leather

Modification History

Release 1. Supersedes and is equivalent to LMTHL2010A Finish hides, skins or leather

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- mixing and applying coatings in accordance with specifications
- interpreting specifications and setting machine for finishing operation
- operating machine and feeding hides or skins in accordance with procedures on at least two (2) occasions
- applying bottom, effect and top coats manually in accordance with specifications and procedures on at least two (2) occasions
- directing hides, skins or leather to correct area for drying process or storage
- monitoring product quality and recognising and isolating deviations from normal in accordance with specifications and procedures
- cleaning and storing equipment
- minimising and disposing of waste in accordance with environmental and workplace procedures
- transferring production status and problems information between changes in shifts, where required
- maintaining documentation to expedite movement of the hides, skins and leather through the various phases of treatment and completing records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- industry and product processes and equipment
- preparation procedures and requirements
- characteristics, uses and hazards, of coatings and related materials
- monitoring processes and operator instructions
- quality standards and manual handling procedures

- work health and safety (WHS) and environmental aspects of relevant processes, including handling and using coatings and waste disposal
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in finishing hides, skins or leather, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTHL3001 Determine suitability of hide, skin and leather for leather goods

Modification History

Release 1. Supersedes and is equivalent to LMTHL3001A Determine suitability of hide, skin and leather for leather goods

Application

This unit of competency covers the skills and knowledge required to determine the suitability of hides, skins and leathers for the production of leather goods. It includes the impact of slaughter and dressing techniques, preservation methods and industry classification systems.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, job sheets or work instructions
- 2 **Inspect hide, skin or leather**
- 2.1 Identify type and different uses and characteristics of species
 - 2.2 Identify performance characteristics
 - 2.3 Identify grading and classification system
 - 2.4 Identify faults on the hide, skin or leather
 - 2.5 Conduct inspection to determine quality of hide, skin or leather in accordance with procedures
- 3 **Identify techniques that impact on suitability for use**
- 3.1 Identify slaughter and dressing techniques
 - 3.2 Identify impact of slaughter and dressing techniques on hide, skin and leather quality
 - 3.3 Identify effects of slaughter and dressing techniques on suitability for use in leather manufacturing
- 4 **Identify preservation and storage methods**
- 4.1 Identify preservation methods for hide, skin and leathers
 - 4.2 Identify and describe storage requirements
 - 4.3 Interpret effects of incorrect preservation and storage
- 5 **Determine suitability for production**
- 5.1 Confirm quality requirements for production
 - 5.2 Determine suitability of hide, skin and leather for production requirements
 - 5.3 Complete documentation and maintain accurate records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Species include one or more of the following:**
- calf
 - cow hide
 - kid
 - goat
 - buffalo
 - kangaroo
 - reptile
 - sheep
 - ostrich
 - emu
 - pig

- deer

Characteristics include the following:

- stretch
- size
- grain
- nap
- substance
- hair follicle

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTHL3001 Determine suitability of hide, skin and leather for leather goods

Modification History

Release 1. Supersedes and is equivalent to LMTHL3001A Determine suitability of hide, skin and leather for leather goods

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs) safe work practices, industry codes and standards
- applying relevant standards
- identifying at least three (3) species types, uses and performance characteristics
- identifying common faults found on hides, skins and leather
- identifying impact of slaughter and dressing techniques and preservation methods on quality of product
- determining suitability of identified product for production
- identifying preservation and storage methods for hide, skin and leathers, and identifying effects of incorrect preservation and storage
- confirming quality requirements and suitability of hide, skin and leather for production
- completing documentation and maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- leather industry processes and equipment
- slaughter and dressing techniques
- faults:
 - marks
 - scars
 - cuts
- preservation methods
- performance characteristics:
 - stretch
 - abrasion
 - wearability

- absorbency
- durability
- elasticity
- heat sensitivity
- shrink resistance
- strength
- industry grading and classification systems
- impact on slaughter and dressing techniques on suitability of hides, skin and leather
- impact on preservation and industry classification systems on suitability of hides, skin and leather
- characteristics of species hides and skin:
 - stretch
 - size
 - grain
 - nap
 - substance
 - hair follicle
- faults commonly found in hides, skins and leather
- relevant federal and state or territory legislative or regulatory requirements
- quality practices and procedures
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in determining suitability of hide, skin and leather for leather goods, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTHL3002 Determine tanning requirements for hide, skin and leather

Modification History

Supersedes and is equivalent to LMTHL3002A Determine tanning requirements for hide, skin and leather

Application

This unit of competency covers the skills and knowledge required to determine tanning requirements for various hides, skins and leathers used in the production of leather goods, and includes colour and colour penetration, chemicals and chemical mixing and problem solving.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, job sheets or work instructions
- 2 **Confirm quality**
- 2.1 Confirm type and characteristics of hide, skin and leather
 - 2.2 Confirm grading and quality of hide, skin and leather
 - 2.3 Assess hide, skin and leather for tanning
- 3 **Confirm processing requirements**
- 3.1 Identify and confirm customer requirements
 - 3.2 Obtain processing details from production information
 - 3.3 Determine loads and batches according to processing requirements
 - 3.4 Identify production planning priorities
 - 3.5 Confirm processing requirements for tanning
 - 3.6 Identify appropriate PPE and apparatus for handling and mixing tanning chemicals
 - 3.7 Determine processes for minimising and disposing of waste in accordance with environmental and workplace procedures
- 4 **Determine tanning specifications**
- 4.1 Identify chemicals and requirements used for tanning in hide, skin and leather manufacture
 - 4.2 Identify colour penetration for different grades of hide, skin and leather
 - 4.3 Determine and mix chemicals for dyeing
 - 4.4 Determine methods for tanning hide, skin and leather
 - 4.5 Determine tanning finishing requirements

		4.6	Develop specifications for tanning
5	Communicate information	5.1	Identify and report problems affecting hide, skin or leather tanning or quality
		5.2	Complete records and other documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Tanning activities include one or more of

- delimiting
- bating

the following:

- pickling
- tanning

Species include one or more of the following:

- calf
- cow hide
- kid
- goat
- buffalo
- kangaroo
- reptile
- sheep
- ostrich
- emu
- pig
- deer

Chemicals include one or more of the following:

- acids
- alkalis
- sulphide
- enzymes
- fungicides
- surfactants
- chromium
- peroxide
- dithionite
- aldehydes
- solvents
- sulphur dioxide

Processing requirements include the following:

- machinery and equipment
- dye quantities
- finishing techniques
- storage of tanned hide, skin and leather
- drying methods
- hide, skin and leather use

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or

more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTHL3002 Determine tanning requirements for hide, skin and leather

Modification History

Supersedes and is equivalent to LMTHL3002A Determine tanning requirements for hide, skin and leather

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- confirming grading and quality of hide, skin and leather and assessing hide, skin and leather for tanning, on at least two (2) occasions
- determining loads and batches according to processing requirements
- identifying and confirming customer requirements and planning tanning operations on at least two (2) occasions
- identifying chemicals and requirements used for tanning in hide, skin and leather manufacture, colour penetration for different grades of leather, and mixing chemicals for dyeing, on at least two (2) occasions
- identifying appropriate personal protective equipment (PPE) and apparatus when handling and mixing tanning chemicals
- determining methods for tanning hide, skin and leather and tanning finishing requirements
- determining processes for minimising and disposing of waste in accordance with environmental and workplace procedures
- identifying and reporting problems affecting hide, skin or leather tanning or quality
- completing records and other documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of PPE
- relevant Australian Standards
- Industry and product processes and equipment
- determining specifications
- hide, skin and leather characteristics:
 - stretch
 - size
 - grain

- nap
- substance
- hair follicle
- types and application of formulations and additives
- colour mixing and penetration
- monitoring process and operator instructions
- quality practices and procedures
- work health and safety (WHS) and environmental aspects of processes relating to leather manufacturing
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in determining tanning requirements for hide, skin and leather, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTLA2001 Apply infection control policies and procedures in laundry operations

Modification History

Release 1. Supersedes and is equivalent to LMTLA2011A Apply infection control policies and procedures in laundry operations

Application

This unit of competency covers the skills and knowledge required to ensure that laundry operations comply with infection control policies and procedures.

The unit of competency applies to preparing and processing laundry items in accordance with industry and organisational policies and procedures relating to infection control.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to apply infection control policies	2.1	Collect and sort linen in accordance with organisational guidelines
		2.2	Communicate constructively to achieve planned outcomes in relation to infection risks, waste management and hygiene issues
		2.3	Complete required documentation
3	Clean and disinfect equipment and surfaces	3.1	Select and prepare appropriate cleaning products, disinfectants and cleaning equipment
		3.2	Clean and disinfect equipment and surfaces in accordance with infection control guidelines and scheduled cleaning routines
		3.3	Practise standard precautions and follow organisational infection control policy and procedures
		3.4	Store equipment correctly
		3.5	Maintain personal hygiene
		3.6	Where appropriate, adhere to one way work flows from clean to dirty zones
4	Identify and respond to infection risks	4.1	Identify infection risks, apply standard precautions, and implement appropriate response within own role and responsibility to maintain a clean environment
		4.2	Place appropriate signs as and where appropriate
		4.3	Maintain awareness of common infection risks and wear PPE in accordance with standard precautions

- 4.4 Follow risk control and risk containment procedures for specific risks, when required
- 4.5 Remove spillages in accordance with organisational policy and procedure

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Sort linen includes:

- wearing and using appropriate personal protective equipment when handling soiled linen
- segregating, containing, storing and transporting waste according to organisational policy and procedures.
- disposing of waste safely according to established

- organisational and legislative requirements
 -
- Waste includes one or more of the following:**
- clinical and related wastes
 - cytotoxic waste
 - sharps
 - radioactive waste
 - general waste
 - food wastes
 - human or animal tissue
 - hazardous substances
- Disposal requirements include one or more of the following:**
- determined by government, including local government requirements
 - determined by organisational policy
 - landfill
 - flushing into sewerage system
 - incineration
 - licensed microwave disinfection
- Infection control guidelines include one or more of the following:**
- organisation's infection control policy and procedure manual
 - standard and additional precautions
 - codes of practice
 - relevant Australian Standards
 - National Health and Medical Research Council (NHMRC) guidelines
 - local government ordinances
 - safety data sheets (SDS) for chemical use
 - food safety plan
- Personal hygiene includes the following:**
- using standard and additional infection control procedures, when required
 - maintaining cleanliness of work clothes
 - maintaining personal hygiene
 - covering open-skin areas with an occlusive dressing
 - following hand washing procedures
 - checking appropriate PPE prior to use
 - wearing PPE correctly
 - undertaking immunisation in accordance with organisational policy

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTLA2011A Apply infection control policies and procedures in laundry operations

Assessment Requirements for MSTLA2001 Apply infection control policies and procedures in laundry operations

Modification History

Release 1. Supersedes and is equivalent to LMTLA2011A Apply infection control policies and procedures in laundry operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- complying with relevant standards
- complying with all infection control guidelines relating to specific work roles, safe waste handling and management procedures
- applying personal hygiene and environmental practices
- applying standard and additional precautions, as required, to identify and respond to infection risks
- using technology to work safely and competently
- communicating constructively to achieve planned outcomes in relation to infection risks, waste management and hygiene issues
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- organisation's infection control policy as it relates to specific work role
- processes of how infection is spread
- infection control guidelines
- PPE:
 - eye and face protection
 - gloves
 - impermeable gowns
 - masks
 - hair protection or covering
 - overshoes or safety footwear
 - aprons

- infection risks in a laundry environment, and specifically in own workplace:
 - sharps
 - waste
 - human waste and human tissue
 - body fluids
 - personal contact with infectious patients
 - stagnant water
 - stock, including food which has passed 'used-by' dates
 - animals, insects and vermin
 - incorrect concentration of disinfectants and chemicals
- types of waste in laundry environment
- responses to infection risks:
 - incident reporting
 - cleaning
 - removal of waste or spillage
 - following standard and additional precautions
 - containment or elimination of the risk
 - using PPE
 - following specified organisational procedures
 - seeking advice from or reporting to an appropriate person
- personal hygiene practices
- precautions against infection risk:
 - consistently following correct hygiene procedures
 - selecting and using equipment and disinfectants
 - following correct hand washing techniques
 - correctly using PPE
 - following procedures appropriate to the cleaning area and purpose
 - minimising disruption to the work environment
 - minimising infection risks and hazards for self and others
 - using appropriate chemicals for cleaning and disinfection
- waste disposal practices:
 - lockable bins
 - special containers
 - trolley
 - bags
 - suitable vehicle
- cleaning equipment:
 - buckets
 - mops and brushes
 - mechanical cleaning equipment

- organisation's waste management policy and procedures
- applicable work health and safety (WHS) policy and practice in relation to infection risks, hygiene, waste
- relevant safety data sheets (SDS)
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in applying infection control policies and procedures, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- | | | | |
|---|--|-----|--|
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare for wash | 2.1 | Identify and follow production schedule and work load priorities |
| | | 2.2 | Confirm washing machine loads and washing requirements |
| | | 2.3 | Prepare laundry chemicals for use |
| | | 2.4 | Identify and follow washing sequences for a given process or product |
| | | 2.5 | Undertake safety procedures, including the use of PPE when handling soiled product |
| | | 2.6 | Access operator manuals as required |
| 3 | Operate automatic washing extractor | 3.1 | Load automatic washing machine with correct weight according to workplace procedures |
| | | 3.2 | Dose and apply laundry chemicals, and select program according to load requirements |
| | | 3.3 | Operate washing machine in accordance with operating instructions |
| | | 3.4 | Monitor washing machine operation and identify and report any inconsistencies |
| | | 3.5 | Unload washing machine using correct manual handling techniques, where required |
| 4 | Operate manual washing extractor | 4.1 | Load manual washing extractor with correct weight according to workplace procedures |
| | | 4.2 | Dose and apply laundry chemicals according to load requirements |
| | | 4.3 | Operate washing machine in accordance with operating instructions |
| | | 4.4 | Monitor washing machine operation and identify and |

- report any inconsistencies
- 4.5 Unload washing using appropriate manual handling techniques, where required
- 5 **Complete wash**
- 5.1 Transfer washing to next operation
- 5.2 Clean up spills and conduct housekeeping to maintain work area standards
- 5.3 Complete standardised documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards

- the relevant industry or Australian Standards that are

include: current at the time this unit is being undertaken

Washing requirements include one or more of the following:

- chemical types and dosage
- temperature settings
- water levels
- washing extractor program settings

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTLA2002A Operate washing machines

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTLA2002 Operate washing machines

Modification History

Release 1. Supersedes and is equivalent to LMTLA2002A Operate washing machines

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- complying with relevant standards
- interpreting production schedules and work load priorities
- interpreting and applying washing specifications
- calculating correct chemical dosage
- using washing machines safely and efficiently on at least two (2) occasions
- using and handling chemicals safely
- applying workplace procedures
- receiving and transferring information
- maintaining documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- manual and automatic machine operation and program selection
- characteristics and hazards of chemicals and dispensing systems
- safe handling of laundry chemicals
- work health and safety (WHS) and environmental aspects related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials
- workplace procedures
- WHS practices, including hazard identification and control measures
- procedures for clean-up of spills
- quality practices
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in operating washing machines, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLA2003 Control washing extractor operation

Modification History

Release 1. Supersedes and is equivalent to LMTLA2003A Control washing extractor operation

Application

This unit of competency covers the skills and knowledge required to determine requirements for wash loads, control and monitor washing machine operation, and processing the product.

The unit of competency applies to controlling washing machine operation and involves chemical dispensing and monitoring procedures to required specifications.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTLA2002 Operate washing machines

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to control washing extractor operation	2.1	Identify laundry operating procedures, production schedule and work load priorities
		2.2	Determine washing extractor loads by counting, weight, volume or classification
		2.3	Operate weighing machines and determine size of load by reading indicator scales
		2.4	Select washing sequences for a given process or product
		2.5	Select chemical dispensing for chemical dosing system, where relevant
		2.6	Determine washing requirements for specific loads
		2.7	Access operator manuals, as required, and identify workplace procedures
3	Monitor washing	3.1	Monitor washing machine operation for correct water, temperature and chemical levels
		3.2	Monitor chemicals and dosing system for correct operation
		3.3	Monitor program operation to ensure correct function
		3.4	Report washing extractor operational faults
		3.5	Complete required documentation
4	Finalise product and check procedures	4.1	Classify product and sort according to finishing requirements
		4.2	Direct product to correct area for finishing

- 4.3 Review and check all procedures
- 4.4 Check work area for maintenance to housekeeping standards

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS procedures

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Washing requirements include the following:**
- chemical dosage or formula settings
 - washing extractor program settings

Procedures include one or more of the following:

- chemical specifications, handling and use
- machines manual over-riding technology application
- identification of faults
- manual handling for loading and unloading machines
- safe use of machines
- quality control requirements
- working in confined spaces

Required documentation includes one or more of the following:

- information on wash load, program settings and chemical dosage
- completion of standardised forms
- information on wash efficiencies, such as wash times
- faults or inconsistencies

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTLA2003A Control washing extractor operation

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTLA2003 Control washing extractor operation

Modification History

Release 1. Supersedes and is equivalent to LMTLA2003A Control washing extractor operation

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- complying with relevant standards
- interpreting production schedules and work load priorities
- selecting and preparing chemicals
- determining wash load requirements and extractor settings to suit load characteristics
- controlling and monitoring process operation on at least two (2) occasions
- using machines and related equipment, including dispensing and dosing systems, according to workplace procedures
- using protective equipment
- classifying and sorting product
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- workplace procedures and policies
- machine operation, program selection and monitoring procedures:
 - chemical specifications, handling and use
 - machines manual over-riding technology application
 - identification of faults
 - manual handling for loading and unloading machines
 - safe use of machines
 - quality control requirements
 - working in confined spaces
- level of operator responsibility for equipment maintenance and monitoring
- characteristics and hazards of chemicals and dispensing systems

- work health and safety (WHS) and environmental aspects related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials
- safety data sheets (SDS)
- quality practices
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in controlling washing extractor operations, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLA2004 Perform linen rewash

Modification History

Release 1. Supersedes and is equivalent to LMTLA2004A Perform linen rewash

Application

This unit of competency covers the skills and knowledge required to identify stains and select rewash methods for linen to meet laundry specifications and quality requirements.

This unit applies to product rewash procedures and operating machines. It involves chemical dispensing and monitoring procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTLA2002 Operate washing machines

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- | | | | |
|---|--|-----|---|
| | requirements | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to perform linen rewash | 2.1 | Identify laundry operating procedures and workplace procedures |
| | | 2.2 | Follow steps for identifying the stained product |
| | | 2.3 | Identify stains and classify into categories |
| | | 2.4 | Determine rewash requirements for the identified stain and product type |
| 3 | Carry out rewash procedure | 3.1 | Assess preparation for rewash in accordance with laundry machine operation procedures |
| | | 3.2 | Prepare chemical products and use according to supplier and laundry requirements and apply prewash, as required |
| | | 3.3 | Operate machine in accordance with manufacturer and workplace procedures |
| | | 3.4 | Monitor washing extractor operation to ensure correct function |
| | | 3.5 | Identify and report operating faults |
| 4 | Complete rewash | 4.1 | Record data and store in accordance with industry and workplace procedures |
| | | 4.2 | Transfer linen to next operation |
| | | 4.3 | Maintain work area housekeeping standards |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Laundry machines include one or more of the following:

- microprocessor or computer controlled
- automatic washing extractors
- manual washing extractors
- continuous batch washers
- weighing machines
- chemical dosing equipment

Procedures include one or more of the following:

- chemical specifications, handling and use
- machines manual over-riding technology application
- identification of faults
- manual handling for loading and unloading machines

- safe use of machines
- quality control requirements
- working in confined spaces

Assessment Requirements for MSTLA2004 Perform linen rewash

Modification History

Release 1. Supersedes and is equivalent to LMTLA2004A Perform linen rewash

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- complying with relevant standards
- recognising, identifying and assessing the range of common stains normally encountered
- using machines and related equipment, including dispensing and dosing systems according to directions
- selecting and determining appropriate rewash requirements for at least two (2) applications
- preparing and using chemicals safely
- completing linen rewash safely and efficiently, to quality standards, on at least two (2) occasions
- monitoring process operation
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- characteristics of stains, their relevant identification procedures and removal techniques
- machine operation, program selection and monitoring procedures:
 - manual handling
 - safe handling of chemicals
 - preparation of chemical products
 - preparation of dispensing systems
 - quality control requirements
- characteristics and hazards of chemicals and dispensing systems
- infection control policies and procedures
- workplace procedures
- work health and safety (WHS) and environmental aspects related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials

- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in performing linen rewash, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLA2005 Operate hydro extractor

Modification History

Release 1. Supersedes and is equivalent to LMTLA2005A Operate hydro extractor

Application

This unit of competency covers the skills and knowledge required to operate hydro extractors throughout the hydro extraction process to meet laundry specifications and quality requirements.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare equipment for operation	2.1	Perform laundry operating procedures for hydro machine start-up and stopping in accordance with manufacturer and workplace requirements
		2.2	Follow all workplace and safety procedures relating to safe machine operation
		2.3	Access operator manuals, as required
3	Operate hydro extraction machine	3.1	Load machines according to type and laundry loading procedures
		3.2	Monitor machines during operation to ensure correct balance is maintained
		3.3	Load and unload machines using appropriate manual handling techniques or by correctly operating ancillary equipment for loading and unloading
		3.4	Identify and report operating faults
		3.5	Complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures

- requirements prescribed by legislation, awards,

include one or more of the following:

- agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS procedures

Australian Standards includes

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Laundry machines include one or more of the following:

- ancillary equipment for hydro extraction machine such as manual loading and spring loaded trolleys
- membrane press
- hydraulic rams
- conveying equipment
- transfer equipment

Laundry operating procedures include the following:

- manual handling
- safe handling of chemicals
- preparation of chemical products
- preparation of dispensing systems
- quality control requirements
- classification of products
- safety checks

Unit Mapping Information

Assessment Requirements for MSTLA2005 Operate hydro extractor

Modification History

Release 1. Supersedes and is equivalent to LMTLA2005A Operate hydro extractor

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures and safe work practices
- applying relevant standards
- using extractors and related equipment on at least two (2) occasions
- identifying operational faults
- classifying and sorting product
- maintaining quality requirements for each stage of the process
- receiving and transferring information
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian standards
- laundry machines
- machine operation and monitoring procedures
- level of operator responsibility for equipment maintenance and monitoring
- work health and safety (WHS) and environmental aspects related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials
- laundry operating procedures
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in operating hydro extractor, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLA2006 Perform conditioning and drying processes

Modification History

Release 1. Supersedes and is equivalent to LMTLA2006A Perform conditioning and drying processes

Application

This unit of competency covers the skills and knowledge required for conditioning and drying products according to laundry procedures and quality requirements.

The unit of competency applies to operating machines for the conditioning and drying processes, and preparing for the finishing process.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for conditioning and drying process**
- 2.1 Interpret and follow production schedule and workload priorities
 - 2.2 Follow schedules for cleaning dryer filters
 - 2.3 Perform procedures for drying machine start-up in accordance with manufacturer specifications and workplace procedures
 - 2.4 Access operator manuals, as required
 - 2.5 Classify and sort product according to finishing requirements
- 3 **Operate dryer**
- 3.1 Implement appropriate laundry operating procedures
 - 3.2 Follow drying programs for given product type and size of load
 - 3.3 Load and unload dryers using manual handling techniques or by correctly operating loading and unloading equipment
 - 3.4 Select appropriate cycle, timing and temperature for loads, where required
 - 3.5 Operate and monitor dryer in accordance with operating instructions and follow product cool down procedures
 - 3.6 Identify and report dryer operating faults and complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Machines include one or more of the following:

- dryers
- loading and unloading equipment
- conveyors
- transfer equipment

Drying program includes the following:

- drying cycles
- temperature
- time

Laundry operating procedures include the following:

- manual handling techniques
- laundry procedures for loading and unloading
- machine safety checks
- auto lint filters
- spontaneous combustion prevention
- identification of faults

- safe use of machines
- quality control requirements

Assessment Requirements for MSTLA2006 Perform conditioning and drying processes

Modification History

Release 1. Supersedes and is equivalent to LMTLA2006A Perform conditioning and drying processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- interpreting production schedules and work load priorities
- using drying machines and related equipment on at least two (2) occasions
- classifying and sorting product
- loading machine appropriately and selecting appropriate program
- monitoring process operation and identifying faults
- implementing laundry operation and workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian standards
- machine operation, program selection, and monitoring procedures
- laundry operating procedures
- level of operator responsibility for equipment maintenance and monitoring
- characteristics and hazards of working with heat and steam
- procedures for product cool down and minimisation of spontaneous combustion
- work health and safety (WHS) and environmental aspects of related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in performing conditioning and drying processes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLA2007 Finish products for despatch

Modification History

Release 1. Supersedes and is equivalent to LMTLA2007A Finish products for despatch

Application

This unit of competency covers the skills and knowledge required to operate finishing equipment, inspect products and fold and prepare finished products for despatch.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Operate finishing equipment**
 - 2.1 Perform laundry operating procedures and monitor operations
 - 2.2 interpret production schedules and work load priorities
 - 2.3 Classify product and sort according to finishing and rework requirements
 - 2.4 Prepare products for finishing in accordance with product requirements
 - 2.5 Feed product into finishing equipment manually or by using proper aids
 - 2.6 Monitor machines and adjust in accordance with specified workplace procedures and consistent with operators' skill level
 - 2.7 Identify and report operating faults
- 3 **Inspect products**
 - 3.1 Identify products that do not meet quality standards and reject or return for rework
 - 3.2 Identify damaged or torn products for repair or return
 - 3.3 Rewash, repair or deposit condemned product in appropriate container
 - 3.4 Complete records
- 4 **Prepare finished products for despatch**
 - 4.1 Check storage equipment
 - 4.2 Fold and pack product to meet workplace requirements
 - 4.3 Classify products and store products for distribution in allocated area
 - 4.4 Maintain finished product records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Finishing equipment includes one or more of the following:

- roller or chest ironer
- towel folder or team folder
- tunnel finishers or steam tunnel
- stacker or feeder
- trouser toppler
- trouser legger
- dolly
- puffer
- dry press
- hand iron
- hot head press
- coat press

- feeding equipment
- single or multi roller iron

Laundry operating procedures include the following:

- manual handling techniques
- machine operation
- procedure for coding and rewash
- reporting procedures for faults and safety checks
- classification of products (code, number, tying, wrapping and customer)
- machines manual over-riding technology application
- identification of faults
- manual handling for loading and unloading machines
- safe use of machines
- quality control requirements

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTLA2007A Finish products for despatch

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTLA2007 Finish products for despatch

Modification History

Release 1. Supersedes and is equivalent to LMTLA2007A Finish products for despatch

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- interpreting production schedules and work load priorities
- classifying and sorting product
- applying workplace and laundry operating procedures
- operating at least 2 types of finishing equipment relevant to work role on at least two (2) occasions
- inspecting product to meet quality requirements
- finishing and folding product
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian standards
- machine operation, program selection and monitoring procedures
- level of operator responsibility for equipment maintenance and monitoring
- work health and safety (WHS) and environmental aspects related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials
- workplace procedures
- laundry operating procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in finishing products for despatch, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLA2008 Repair damaged laundry items

Modification History

Release 1. Supersedes and is equivalent to LMTLA2008A Repair damaged laundry items

Application

This unit of competency covers the skills and knowledge required to perform repairs on laundry items.

The unit of competency applies to operating machines and related mending equipment, and performing repairs.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for repair operations**
 - 2.1 Identify required laundry repair operations
 - 2.2 Set up workstation in accordance with workplace procedures and requirements
 - 2.3 Set up equipment in accordance with specification for the work
 - 2.4 Check product for repair or condemning
- 3 **Make repairs to damaged laundry items**
 - 3.1 Determine repair requirements for damaged products and perform repairs in accordance with required specifications
 - 3.2 Consult specialists or appropriate personnel on repair requirements, where necessary
 - 3.3 Operate equipment in accordance with manufacturer specifications and workplace procedures
 - 3.4 Identify and report operating faults and maintain records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Laundry repair operations include one or more of the following:

- repairing and resizing
- recycling
- condemning articles
- recoding
- repairs on theatre linen
- manual handling techniques
- safe use of machines and related equipment
- reporting procedures for faults and safety checks
- quality assurance
- relevant industry or Australian Standards

Equipment includes one or more of the following:

- sewing machine
- marking machine
- heat seal machine
- overlocker
- button sewing machine
- darning machine
- stud machine
- vulcaniser
- thermal patching machine
- other related equipment/machines

Repair requirements include

- machine sewing

- one or more of the following:**
- hand sewing
 - heat seating or patching
 - remarking products
 - resizing

Assessment Requirements for MSTLA2008 Repair damaged laundry items

Modification History

Release 1. Supersedes and is equivalent to LMTLA2008A Repair damaged laundry items

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- using at least two (2) types of repair equipment according to specifications
- selecting equipment for specific tasks
- identifying, grading, and classifying repair requirements
- performing repairs on at least two (2) laundry items
- maintaining records
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant industry or Australian Standards
- range of laundry repair operations
- equipment to repair laundry items
- machine and equipment applications, operation monitoring and adjustment procedures
- fibres and fabrics
- repair requirements, techniques and procedures
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in repairing damaged laundry items, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLA2009 Inspect, fold and pack theatre linen

Modification History

Release 1. Supersedes and is equivalent to LMTLA2009A Inspect, fold and pack theatre linen

Application

This unit of competency covers the skills and knowledge required for the final checking and inspection of clean theatre linen to ensure customer requirements and quality standards have been met.

The unit of competency applies to the inspection, folding and packing of theatre linen. It includes the sorting, folding and packing processes.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to inspect, fold and pack theatre linen**
- 2.1 Identify special instructions or requirements and laundry operating procedures
 - 2.2 Prepare machines and equipment
 - 2.3 Apply and maintain hygiene and infection control in theatre linen and environmental standards for packing
 - 2.4 Check clean theatre linen and identify non-conformance to standards
 - 2.5 Classify reject linen for rework, rewash or condemning, as required
- 3 **Pack product for despatch**
- 3.1 Fold product according to hospital theatre specifications and relevant Australian Standards
 - 3.2 Apply hospital and laundry linen coding systems and determine package content requirements
 - 3.3 Check packaging and storage equipment for cleanliness
 - 3.4 Configure packs according to hospital theatre and laundry procedures
 - 3.5 Wrap packs according to hospital theatre requirements and specifications
 - 3.6 Assess final finish, confirm quality, and record and document packed product according to requirements
- 4 **Despatch product**
- 4.1 Determine protective covering requirements for products
 - 4.2 Load products into transport equipment using safe manual handling techniques

4.3 Assign orders according to transport requirements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Special instructions or requirements include the following:

- packaging requirements, including configuration, wrapping and labelling
- final finishing instructions for theatre packs
- rework classification or instructions

Laundry operating procedures include the following:

- hospital theatre pre-pack specifications
- reject classifications

- coding systems
- manual handling techniques
- safe use of machines and related equipment
- reporting procedures for non-conformance, faults and safety checks

Non-conformance to standards includes one or more of the following:

- grease
- stains
- lint
- identifying markers
- damage
- inferior quality
- wear

Machines and equipment include one or more of the following:

- light intensifying table
- thermal patching machine
- de-linting equipment
- paper bags, laminate bags, non-linen wraps, linen wraps, indicator tape, markers, tags and plastic dust wrappers
- heat sealers

Assessment Requirements for MSTLA2009 Inspect, fold and pack theatre linen

Modification History

Release 1. Supersedes and is equivalent to LMTLA2009A Inspect, fold and pack theatre linen

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- complying with relevant standards
- identifying and confirming inspection requirements
- folding, packing and despatching products according to procedures on at least two (2) occasions
- recognising non-conformances and classifying reject linen for rework
- applying infection control and laundry operating procedures
- maintaining quality requirements for each stage of the process
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant industry or Australian Standards
- laundry operation procedures:
 - hospital theatre pre-pack specifications
 - reject classifications
 - coding systems
 - manual handling techniques
 - safe use of machines and related equipment
 - reporting procedures for non-conformance, faults and safety checks
- inspection techniques and procedures
- inspecting, folding and packing machines and equipment
- procedures for folding and packing articles
- hospital theatre linen specifications
- procedures for tracking product
- processes for classification of products for re-work
- transport equipment:

- trolleys
- bins
- baskets
- racks
- vehicles
- cages
- quality and environmental standards and specifications
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in inspecting, folding and packing theatre linen, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLA2010 Prepare products for storage or despatch

Modification History

Release 1. Supersedes and is equivalent to LMTLA2010A Prepare products for storage or despatch

Application

This unit of competency covers the skills and knowledge required to compile, pack and consign orders according to transportation or storage requirements.

The unit of competency applies to operating procedures, including packing, storage, despatch and inspecting equipment prior to packing.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

Pre-requisite Unit

Nil

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for despatch**
 - 2.1 Identify operating procedures that are required
 - 2.2 Check records, where relevant, to ensure requirements are met
 - 2.3 Compile orders to customer specifications and requirements
 - 2.4 Coordinate orders to meet delivery or collection timetables
 - 2.5 Monitor schedules and adjust in response to operational variations
- 3 **Pack product for delivery or collection**
 - 3.1 Inspect transport or storage equipment prior to packing to ensure it meets cleanliness specifications
 - 3.2 Follow packing sequences and workplace procedures
 - 3.3 Package products to meet laundry and client requirements
 - 3.4 Implement final inspection in accordance with quality standards, and identify and report packaging issues
- 4 **Process documentation and store products**
 - 4.1 Check orders, despatch, storage and other related documentation
 - 4.2 Complete documentation, as required
 - 4.3 Store products in an appropriate location in accordance with workplace procedures and relevant Australian Standards
 - 4.4 Assign orders according to storage and transport requirements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Transport or storage equipment includes one or more of the following:**
- trolleys
 - bins
 - baskets
 - racks
 - vehicles
 - weighing machines
 - conveyor equipment
 - tying, wrapping, banding and hanging equipment (including heat shrink equipment)
 - auto ID equipment and bar coding equipment
 - folding equipment
 - shelving

- cages
- linen covers

Assessment Requirements for MSTLA2010 Prepare products for storage or despatch

Modification History

Release 1. Supersedes and is equivalent to LMTLA2010A Prepare products for storage or despatch

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- complying with relevant standards
- confirming and checking orders and requirements on at least two (2) occasions
- preparing, packing and storing products ready for despatch on at least two (2) occasions
- handling products appropriately
- selecting and using transport and storage equipment required for job role
- meeting customer and enterprise specifications/requirements
- locating, communicating and applying relevant information
- maintaining quality requirements for each stage of the process
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant industry or Australian Standards
- operating procedures:
 - packaging
 - cleaning
 - storage
 - transport
 - manual handling techniques
 - safe use of machines and related equipment
 - inspecting equipment prior to packing
- procedures for preparing product:
 - care requirements
 - packaging
 - correct labelling and identification

- procedures for packing and handling
- timetables for delivery and collection
- storage and despatch requirements
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:

satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

have vocational competency in preparing products for storage, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLA3001 Perform advanced laundry operations

Modification History

Release 1. Supersedes and is equivalent to LMTLA3001A Perform advanced laundry operations

Application

This unit of competency covers the skills and knowledge required to use advanced technologies in laundry operations.

The unit of competency applies to preparation, control and monitoring of continuous batch or tunnel washer, and interpreting and addressing minor operational problems and faults. It includes determining the order of washing, controlling and monitoring continual batch washers, processing of product to laundry specifications and identifying common operational faults.

This unit does not cover skills required for entering and conducting checks or repairs inside continual batch washers. Work required inside the machine requires a current permit for working in confined spaces.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare for wash	<p>2.1 Identify type of continuous batch washer and operational requirements</p> <p>2.2 Determine production schedule and work load priorities</p> <p>2.3 Conduct equipment start-up checks and identify functions of associated equipment segments</p>
3	Operate continuous batch washer	<p>3.1 Follow operator instructions and start up machine</p> <p>3.2 Load conveyor and interpret weigh scale</p> <p>3.3 Achieve correct weight according to product classification and machine manufacturer specification and start washing operations</p> <p>3.4 Conduct loading, unloading and transfer of laundry according to operational procedures using manual handling techniques, where automatic systems are not in place</p>
4	Monitor and finalise washing	<p>4.1 Monitor tunnel washer operation and all associated computerised equipment and systems to ensure all processes are functioning accurately</p> <p>4.2 Interpret operational faults identified by computer equipment and address, document and report according to workplace procedures</p>

- 4.3 Remove final load, confirm completion of work load and shut down washer
- 4.4 Complete shutdown maintenance according to operating procedure
- 4.5 Meet all housekeeping requirements and complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Associated equipment segments include the

- sorting area
- dryers

following:

- press
- conveyors
- computerised equipment

Types of continuous batch/tunnel washers include the following:

- top washer transfer
- bottom washer transfer
- middle transfer

Operational faults include one or more of the following:

- conveyor jam
- dryer out of synchronisation
- weighing mechanism out of alignment
- press malfunctions
- drying temperature
- safety gate locking
- missed pockets
- chemical faults

Shutdown maintenance includes the following:

- clean lint bags
- collect dropped linen
- clean work area

Assessment Requirements for MSTLA3001 Perform advanced laundry operations

Modification History

Release 1. Supersedes and is equivalent to LMTLA3001A Perform advanced laundry operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- applying operational and safety procedures for the safe and efficient operation of continuous batch washing equipment
- interpreting production schedules and work load priorities
- classifying and sorting wash load, weighing appropriately and selecting appropriate washing conditions and programs on at least two (2) occasions
- preparing chemicals safely (where automatic systems are not in place)
- controlling and monitoring process operation on at least two (2) occasions
- interpreting computer fault readings and addressing common operational problems
- ensuring wash loads and associated chemicals meet requirement for continuous loading
- using machines and related equipment, including dispensing and dosing systems according to workplace requirements on at least two (2) occasions
- safely removing wet washing from continuous conveyor
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant industry or Australian Standards
- mechanical function and key features of continuous batch washing machines
- functional differences between continual and ordinary washers, their advantages and disadvantages
- classification of laundry and relevant program selection
- work load requirements for continuous batch washing
- monitoring procedures
- requirements for maintaining optimum dip levels
- level of operator responsibility for equipment maintenance and monitoring

- characteristics and hazards of chemicals and dispensing systems
- hazards associated with the removal of wet laundry from continuous conveyor
- common operational faults and their cause and required action
- work health and safety (WHS) and environmental aspects related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials
- workplace policies and procedures
- quality practices
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in performing advanced laundry operations, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLA3002 Determine linen rental requirements

Modification History

Release 1. Supersedes and is equivalent to LMTLA3002A Determine linen rental requirements

Application

This unit of competency covers the skills and knowledge required to determine linen rental requirements for a client.

The unit of competency applies to selecting appropriate linen rental product and volume, ensuring the efficient scheduling of pickup and delivery timetables, and monitoring rental procedures. It includes identifying quality standards and laundry processing requirements.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Laundry operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to provide linen rental	2.1	Identify typical linen requirements for types of businesses
		2.2	Identify client and quality standards of the clients' industry
		2.3	Determine volume of linen and duration of rental period required
		2.4	Consider function, style and cost requirements to determine preferred linen for client
		2.5	Select linen and document requirements
3	Coordinate delivery and collection timetables	3.1	Check selected linen against stock availability and ordering requirements
		3.2	Identify and confirm pickup and delivery details
		3.3	Finalise linen order and schedule
		3.4	Confirm orders and delivery and collection requirements with client and document correctly
4	Complete linen rental	4.1	Confirm orders and delivery and collection requirements with production supervisors
		4.2	Calculate linen rental costs and provide for client consideration
		4.3	Confirm linen rental terms and conditions with the client
		4.4	Finalise linen rental orders and schedules and document according to workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Typical linen requirements include one or more of the following:

- bedding and bathroom linen for motels
- table and kitchen linen for a restaurant
- hospital linen
- institution linen

Linen quality standards include one or more of the following:

- guidelines or linen conventions for a particular industry
- guidelines or linen conventions for a particular industry sector or service level
- requirements of similar or known enterprises

- Pickup and delivery details include the following:**
- required volume and client location
 - production and ordering requirements
 - pickup and delivery schedule

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTLA3002A Determine linen rental requirements

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTLA3002 Determine linen rental requirements

Modification History

Release 1. Supersedes and is equivalent to LMTLA3002A Determine linen rental requirements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- complying with relevant standards
- identifying and confirming client requirements on at least two (2) occasions
- calculating required volume and frequency of linen order
- calculating accurate costing
- coordinating despatch, delivery and collection timetables on at least two (2) occasions
- documenting rental orders and schedules on at least two (2) occasions
- communicating effectively with clients and production personnel to confirm orders and delivery and collection requirements
- finalising linen rental orders and schedules, and documenting according to workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- types and functions of various linen for table, bed, bath and kitchen use:
 - colour
 - size
 - weight
 - warmth
 - fibre
 - design
 - stain resistance
 - durability
- quality standards for linen use in the hospitality and health industries

- hygiene and infection control guidelines
- laundry processing requirements
- numeracy and calculations for volume, size and weight
- ordering and scheduling guidelines
- despatch and receipt procedures
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in determining linen rental requirements, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG2001 Cut by machine

Modification History

Release 1. Supersedes and is equivalent to LMTLG2001A Cut by machine

Application

This unit of competency covers the skills and knowledge required to carry out preparation activities, select and cut materials by machine to specifications and workplace standards.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Set up workstation**
 - 2.1 Set up workstation in accordance with specifications and workplace procedures
 - 2.2 Prepare cutting equipment in accordance with manufacturer instructions
 - 2.3 Select tools and cutting equipment as appropriate to job allocation
 - 2.4 Check and take appropriate action in case of wear and tear, especially in relation to knives and boards
 - 2.5 Keep records in accordance with procedures
- 3 **Assess materials**
 - 3.1 Assess the material against specification to determine best clicking approach
 - 3.2 Lay out materials for single or upper multiple cutting to meet specifications
 - 3.3 Interpret work ticket
 - 3.4 Size, mark and count cut pieces using colour coding or workplace identification systems
 - 3.5 Stamp cut pieces according to work ticket and specifications
 - 3.6 Sort materials according to colour and shade and other specifications
 - 3.7 Check materials in relation to directional stretch and strength to determine best clicking approach
- 4 **Operate machine**
 - 4.1 Start up and shut down machines following enterprise operator procedures
 - 4.2 Clean, turn and maintain cutting board regularly
 - 4.3 Check striker plate regularly for distortion and damage and report irregularities

- 4.4 Carry out minor machine maintenance
- 5 **Cut materials**
 - 5.1 Select clicking knives according to job specifications and size requirements
 - 5.2 Adjust pressures on press for knife sizes and shapes in accordance with procedures
 - 5.3 Recognise and refer problems or faults with press, patterns, knives and cutting boards for repair or correction
 - 5.4 Follow work ticket specifications according to pieces and pairs
 - 5.5 Minimise wastage of material when using clicking knives and patterns in accordance with specifications and procedures
 - 5.6 Identify faults and position patterns accordingly
 - 5.7 Cut parts to workplace quality standards in relation to material flaws
 - 5.8 Select, colour or grain pieces to match workplace quality standards
 - 5.9 Cut pieces and panels to achieve best yield according to appropriate allowance
 - 5.10 Identify distortions and defects on press cutting boards and take appropriate action
- 6 **Check finished product**
 - 6.1 Check finished product against workplace quality standards
 - 6.2 Complete workplace documentation, as required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- tasks related to environmental protection, waste disposal, pollution control and recycling
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- SOPs
- work instructions, oral, written and visual communication
- taking of rest breaks

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Materials include three or more of the following:

- suede
- suede split
- PU coated splits
- PU coated non-woven fabrics
- corrected grains
- leather linings
- leathers:
 - buffalo
 - cow
 - calf
 - kid
 - deer
 - kangaroo
 - fish
 - reptiles
 - emu

Machines include one

- swing beam press

or more of the following:

- travelling head press
- full beam press
- automated presses

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTLG2001A Cut by machine

Assessment Requirements for MSTLG2001 Cut by machine

Modification History

Release 1. Supersedes and is equivalent to LMTLG2001A Cut by machine

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- preparing workstation and work prior to commencing operations
- operating at least two (2) machines in accordance with procedures
- applying cutting techniques on at least five (5) different pieces using at least three (3) types of material or leather
- undertaking maintenance of machines to manufacturer specifications
- interpreting work specifications and patterns
- selecting colour or grain pieces to match workplace quality standards
- cutting pieces and panels to achieve best yield according to appropriate allowance
- identifying distortions and defects on press cutting boards and taking appropriate action.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- fabric range and general qualities of leather
- characteristics of different leathers and other materials
- relevant cutting machines, including swing beam press, travelling head press, full beam press and automated presses
- quality standards and handling procedures
- work health and safety (WHS) and environmental aspects of relevant product assembly processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in cutting by machine, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG2002 Sew leather by machine

Modification History

Release 1. Supersedes and is equivalent to LMTLG2002A Sew leather by machine

Application

This unit of competency covers the skills and knowledge required to sew leather pieces by machine.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare work pieces**
 - 2.1 Receive and check work bundle and assess any follow-up action
 - 2.2 Assess quality of received component parts
 - 2.3 Lay out work pieces in the correct sequence in accordance with specifications
- 3 **Prepare workstation**
 - 3.1 Set up workbench and seating to achieve operator comfort and to minimise fatigue
 - 3.2 Clean and check machines in accordance with SOPs
 - 3.3 Keep records in accordance with procedures
- 4 **Set up machine**
 - 4.1 Set up and adjust machine in accordance with manufacturer instructions, workplace requirements and specifications for the work
 - 4.2 Select threads according to specifications
 - 4.3 Check needle types, attachments and parts, and change worn needles and parts, as necessary
 - 4.4 Set and test stitch length against specifications
 - 4.5 Set tension according to specifications
 - 4.6 Test machine for correct operations
- 5 **Perform machine sewing**
 - 5.1 Select pieces according to size, colour and style
 - 5.2 Position materials to achieve required specifications, including quality and to minimise stretch
 - 5.3 Machine seams to achieve specified results
 - 5.4 Trim threads, as required

		5.5	Check the performance of the machine regularly for signs of faulty operations and take appropriate action
6	Conduct final quality check for operations	6.1	Check final product to ensure workplace quality requirements are met
		6.2	Deal with production faults in accordance with procedures
7	Despatch completed work	7.1	Bundle, stack, store or despatch component parts
		7.2	Record production faults, as required
		7.3	Complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling

- WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Machines include one or more of the following:**
- a range of plain machines
 - computerised stitching machines
- Materials include one or more of the following:**
- leathers:
 - buffalo
 - cow
 - calf
 - kid
 - deer
 - kangaroo
 - fish
 - reptiles
 - emu
 - pigskin
 - suede
- WHS practices**
- WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:
- manual handling techniques
 - PPE
 - safe materials handling
 - ergonomic arrangement of workplaces
 - following marked walkways
 - safe storage of equipment
 - housekeeping
 - reporting accidents and incidents
 - other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTLG2002 Sew leather by machine

Modification History

Release 1. Supersedes and is equivalent to LMTLG2002A Sew leather by machine

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- handling and receiving pieces
- checking work against ticket information and workplace standards
- preparing workstation and work prior to commencing operations
- operating at least one (1) type of machine where positioning of the work may be controlled by machine guides or work markers
- selecting pieces according to size, colour and style and positioning materials to achieve required specifications, quality and to minimise stretch
- machining seams on at least ten (10) leather items to achieve specified results
- recording faults and maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- assembly processes and machines requiring the positioning, feeding and handling of work pieces
- machine operating procedures for plain and computerised stitching machines
- characteristics of typical fabrics, threads, and other materials used
- quality standards and handling procedures
- work health and safety (WHS) and environmental aspects of relevant assembly processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in sewing leather by machine, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG2003 Perform table work

Modification History

Release 1. Supersedes and is equivalent to LMTLG2003A Perform table work

Application

This unit of competency covers the skills and knowledge required to assemble leather components and products using largely manual table production processes.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare work pieces	2.1	Receive and check work bundle and assess any follow-up action
		2.2	Assess quality of received component parts
		2.3	Lay out work pieces in the correct sequence in accordance with specifications
3	Prepare workstation	3.1	Position self to achieve operator comfort and to minimise fatigue
		3.2	Clean and check tools in accordance with SOPs
		3.3	Keep records in accordance with procedures
4	Carry out bench work activities	4.1	Perform folding and turning operations to specifications
		4.2	Join parts, panels and pieces, as required
		4.3	Use adhesives to achieve specifications
		4.4	Perform other table work operations, including punching, riveting and the application of studs, according to style and to achieve quality requirements, as required
5	Finish work	5.1	Perform finishing operations to specifications
		5.2	Check finished product against specifications
		5.3	Report faults and return product for rework or repair in accordance with workplace procedures and quality measures
6	Despatch completed work	6.1	Bundle, stock, store or despatch component and products
		6.2	Record production faults, as required

6.3 Complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Tools include one or more of the following:

- leather scissors
- leather marker
- beating hammer
- turning bone

Operations include one or more of the

- simple folding
- beading and joining where straight work is produced

following:

- attachments to components:
 - side fittings and rivets
 - insertion of accessories
 - trimmings
- fault marking
- applying adhesives
- other bench work operations at the preparatory or finishing stage

Finishing operations include one or more of the following:

- clipping
- sorting
- spotting
- attaching labels

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTLG2003 Perform table work

Modification History

Release 1. Supersedes and is equivalent to LMTLG2003A Perform table work

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- checking work against ticket information and workplace standards
- preparing workstation and work prior to commencing operations
- carry out bench work activities to fabricate leather products to specifications for at least ten (10) items
- using a range of table-based operations and finishing processes according to style and quality requirements
- checking finished product against specifications, reporting faults and returning product for rework or repair
- despatching completed work and maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- manual assembly processes for leather goods
- table operations:
 - simple folding
 - beading and joining where straight work is produced
 - attachments to components:
 - side fittings and rivets
 - insertion of accessories
 - trimmings
 - fault marking
 - applying adhesives
 - other bench work operations at the preparatory or finishing stage
- finishing operations:
 - clipping
 - sorting
 - spotting

- attaching labels
- characteristics of leathers, fabrics and other materials used in leather goods production
- quality standards and leather handling procedures
- work health and safety (WHS) and environmental aspects of relevant production and assembly processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in performing table work, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG2004 Operate leather production machines

Modification History

Release 1. Supersedes and is equivalent to LMTLG2004A Operate leather production machines

Application

This unit of competency covers the skills and knowledge required to produce leather goods components and products using leather production machines.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Determine job requirements	1.1	Follow standard operating procedures (SOPs)
	1.2	Comply with work health and safety (WHS) requirements at all times
	1.3	Use appropriate personal protective equipment (PPE) in

- accordance with SOPs
- 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare work pieces**
- 2.1 Receive and check work bundle and assess any follow-up action
- 2.2 Assess quality of received component parts
- 2.3 Lay out work pieces in the correct sequence in accordance with specifications
- 3 **Prepare workstation**
- 3.1 Position self to achieve operator comfort and to minimise fatigue
- 3.2 Clean and check machines in accordance with SOPs
- 3.3 Keep records in accordance with procedures
- 4 **Set up machine**
- 4.1 Set up and adjust machine in accordance with manufacturer instructions, workplace requirements and specifications for the work
- 4.2 Check dies, knives, attachments and parts and change, as necessary
- 4.3 Select and adjust guides, as appropriate
- 4.4 Set temperature according to specifications, as required
- 4.5 Test machine for correct operation
- 5 **Perform machine operation**
- 5.1 Select pieces in accordance with specifications
- 5.2 Position pieces on machine, as appropriate
- 5.3 Operate machine in accordance with machine and workplace standards
- 5.4 Check finished product against specifications

- | | | | |
|---|--------------------------------|-----|---|
| | | 5.5 | Check the performance of the machine regularly for signs of faulty operations and take appropriate action |
| 6 | Despatch completed work | 6.1 | Bundle, stack, store or despatch pieces |
| | | 6.2 | Record production faults, as required |
| | | 6.3 | Complete records |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Machines include three or more of the following:**
- branding machines
 - embossing machines
 - folding machines
 - beading machines
 - piping machines
 - stamping machines
 - punching or perforating machines
 - seam rubbers machines
 - buffing machines

- WHS practices**
- WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:
- manual handling techniques
 - PPE
 - safe materials handling
 - ergonomic arrangement of workplaces
 - following marked walkways
 - safe storage of equipment
 - housekeeping
 - reporting accidents and incidents
 - other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTLG2004 Operate leather production machines

Modification History

Release 1. Supersedes and is equivalent to LMTLG2004A Operate leather production machines

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- applying relevant standards
- handling and receiving a variety of leather and fabrics and checking work against ticket information and workplace standards
- preparing workstation and work prior to commencing operations
- applying machine operation techniques on at least three (3) different machines to defined procedures, including some work positioning but where ultimate precision is assisted by machine guide or work marker
- carrying out leather production machine tasks to meet specifications on at least ten (10) items
- checking finished product against specifications and reporting production faults
- despatching completed work and maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- processes for leather goods assembly
- procedures for operating leather production machines
- characteristics of typical leathers, fabrics, threads, and other materials used in leather goods production
- quality standards and leather handling procedures
- work health and safety (WHS) and environmental aspects of relevant production and assembly processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in operating leather production machines, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG2005 Split leather pieces

Modification History

Release 1. Supersedes and is equivalent to LMTLG2005A Split leather pieces

Application

This unit of competency covers the skills and knowledge required to split leather pieces using a skiving or splitting machine and associated equipment.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- | | | | |
|---|----------------------------------|-----|---|
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare work pieces | 2.1 | Receive and check work bundle and assess any follow-up action |
| | | 2.2 | Assess quality of received component parts |
| | | 2.3 | Lay out work pieces in the correct sequence in accordance with specifications |
| 3 | Set up machine | 3.1 | Position self to achieve operator comfort and to minimise fatigue |
| | | 3.2 | Clean and check machines in accordance with SOPs |
| | | 3.3 | Set up, start up and shut down splitting machine and associated equipment, and carry out basic maintenance SOPs and safety requirements |
| 4 | Perform machine operation | 4.1 | Determine correct weights using machine adjustments |
| | | 4.2 | Position pieces on machine, as appropriate |
| | | 4.3 | Place matrix pattern on leather piece in accordance with specifications |
| | | 4.4 | Split cut pieces to correct weights using machine adjustments |
| | | 4.5 | Use weight gauges and micrometer in accordance with procedures |
| | | 4.6 | Check finished pieces against specifications |
| | | 4.7 | Check the performance of the machine regularly for signs of faulty operations and take appropriate action |
| 5 | Despatch completed work | 5.1 | Bundle, stack, store or despatch pieces |
| | | 5.2 | Record production faults, as required |

5.3 Complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Leather pieces include one or more of the following:

- leather
- synthetics

WHS practices: WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTLG2005A Split leather pieces

Assessment Requirements for MSTLG2005 Split leather pieces

Modification History

Release 1. Supersedes and is equivalent to LMTLG2005A Split leather pieces

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures and safe work practices, industry codes and standards
- checking work against ticket information and workplace standards and preparing workstation and work prior to commencing operations
- setting up splitting machine and associated equipment
- carrying out basic maintenance in accordance with sops
- applying splitting machine operation techniques, on at least five (5) occasions, to carry out splitting operation tasks to correct weights and meet specifications on a range of leather pieces
- using weight gauges and micrometer to check finished pieces against specifications
- checking the performance of the machine regularly for signs of faulty operations and taking appropriate action
- despatching completed work and maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- procedures for operating splitting machine
- characteristics of a limited range of typical leathers and synthetics used in leather goods production
- quality practices and procedures
- work health and safety (WHS) and environmental aspects of relevant production and assembly processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in splitting leather pieces, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG2006 Identify materials used in leather goods production

Modification History

Release 1. Supersedes and is equivalent to LMTLG2006A Identify materials used in leather goods production

Application

This unit of competency covers the skills and knowledge required to identify and describe materials used in the production of leather goods.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Determine job requirements	1.1	Follow standard operating procedures (SOPs)
	1.2	Comply with work health and safety (WHS) requirements at all times
	1.3	Use appropriate personal protective equipment (PPE) in

			accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Identify materials used in leather goods	2.1	Identify materials used in leather goods production
		2.2	Identify types and sources of materials
		2.3	Identify generic and trade names for materials
3	Determine uses of materials for leather goods production	3.1	Identify uses of materials for leather goods production
		3.2	Identify handling and care requirements for materials
4	Determine performance of materials for leather goods	4.1	Identify physical properties of materials
		4.2	Identify and describe performance characteristics of materials
		4.3	Interpret types of surface finishes used on materials
5	Identify common faults, problems and surface defects of materials	5.1	Identify common faults, problems and surface defects of materials
		5.2	Interpret possible causes for common faults, problems and surface defects
		5.3	Identify workplace quality practices relating to faults, problems and surface defects

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Leather goods include one or more of the following:

- footwear
- handbags and accessories
- wallets, purses and belts
- saddles and saddlery components and products
- clothing
- headwear and millinery
- textile product components

Materials include one or more of the following:

- leather:
 - calf
 - cow hide
 - kid
 - suede
 - goat
 - buffalo
 - kangaroo
 - reptile
 - sheep

- ostrich
- emu
- pig
- adhesives and chemicals:
 - polyurethane adhesives
 - rubber cement
 - methyl ethyl ketone
 - halogenation solvent
 - dichloromethane
 - petrol
 - methylated spirits
 - solvent-based spray finishes
 - solvent-based emulsions
- fabrics:
 - satin
 - silk
 - taffeta

Performance characteristics include one or more of the following:

- stretch
- abrasion
- wearability
- absorbency
- durability
- elasticity
- heat sensitivity
- shrink resistance
- strength

Faults, problems or defects include one or more of the following:

- marks
- scars
- cuts

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling

- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTLG2006 Identify materials used in leather goods production

Modification History

Release 1. Supersedes and is equivalent to LMTLG2006A Identify materials used in leather goods production

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- identifying a range of materials used in leather goods production
- identifying the range of uses of materials for leather goods production and their handling and care requirements
- identifying performance characteristics of at least five (5) different leather and material samples
- identifying common faults, problems and surface defects of materials and how to deal with them
- maintaining accurate records.

Knowledge Evidence

- Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:
- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- handling procedures for materials
- types of materials:
 - types of leather
 - adhesives
 - fabrics
- performance characteristics:
 - size
 - grain
 - nap
 - substance
 - hair follicle patterns of leather
 - stretch

- abrasion
- wearability
- absorbency
- durability
- elasticity
- heat sensitivity
- shrink resistance
- strength
- common faults, problems and defects
- quality standards and practices
- work health and safety (WHS) and environmental aspects of relevant production and assembly processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in identifying materials used in leather goods production, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG2007 Skive leather pieces

Modification History

Release 1. Supersedes and is equivalent to LMTLG2000A Skive leather pieces

Application

This unit of competency covers the skills and knowledge required to skive leather pieces by machine, including the use of skiving operations and the determination of the required skiving process.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures, under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in

- accordance with SOPs
- 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare work pieces**
- 2.1 Receive and check work bundle and assess any follow-up action
- 2.2 Assess quality of received component parts
- 2.3 Lay out work pieces in the correct sequence in accordance with specifications
- 3 **Set up machine**
- 3.1 Position self to achieve operator comfort and to minimise fatigue
- 3.2 Clean and check machine in accordance with SOPs
- 3.3 Select appropriate skiving technique to reflect work specifications
- 3.4 Follow skive knife sharpening procedures to manufacturer specifications and in accordance with SOPs
- 3.5 Set up, start up and shut down skiving machine and associated equipment, and carry out basic maintenance following SOPs and safety requirements
- 4 **Perform machine operation**
- 4.1 Position pieces on machine, as appropriate
- 4.2 Operate skiving machine following SOPs and safety requirements
- 4.3 Check finished product against specifications
- 4.4 Check the performance of the machine regularly for signs of faulty operations and take appropriate action
- 5 **Despatch completed work**
- 5.1 Bundle, stack, store or despatch pieces in accordance with workplace requirements

- 5.2 Record production faults, as required
- 5.3 Complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE

- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTLG2007 Skive leather pieces

Modification History

Release 1. Supersedes and is equivalent to LMTLG2000A Skive leather pieces

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- interpreting work specifications and patterns
- operate skiving machine on at least two (2) occasions, following SOPs and safety requirements
- using appropriate skiving techniques to reflect work specifications
- checking the performance of the machine regularly for signs of faulty operations and taking appropriate action
- using a range of leathers, including quality leather
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- procedures for operating skiving machines
- characteristics of typical leathers, fabrics, threads, and other materials used in leather goods production
- quality standards and leather handling procedures
- material flaws of leather, including veins, growth marks, ticks and scars
- work health and safety (WHS) and environmental aspects of relevant production and assembly processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in skiving leather pieces, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG3001 Make a prototype

Modification History

Release 1. Supersedes and is equivalent to LMTLG3001A Make a prototype

Application

This unit of competency covers the skills and knowledge to design processes leading to the making of a prototype for marketing purposes and must reflect fashion trends and the enterprise focus of manufacture.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- 1.4 Identify job requirements from customer requirements, specifications, drawings, job sheets or work instructions
- 2 **Design or modify existing model**
 - 2.1 Set up workstation in accordance with specifications and workplace procedures
 - 2.2 Design components to conform with model, using computer-aided design (CAD) or manual technique with reference to all relevant operations
 - 2.3 Select materials, trims and colours
 - 2.4 Produce models from appropriate materials to specifications
 - 2.5 Ensure ongoing liaison occurs with relevant departments in workplace to ensure workability and marketability of design and availability of materials and resources, including workforce skills
- 3 **Produce prototype**
 - 3.1 Modify or design existing model to translate design concept into 3-D
 - 3.2 Coordinate making of prototype using sample patterns, relevant designed components and all relevant manufacturing processes
- 4 **Test prototype**
 - 4.1 Liaise with other relevant departments in relation to practicality of design and cost of production, and predicted commercial success
 - 4.2 Review prototype with customer specifications and customer, as appropriate
 - 4.3 Make corrections, as necessary
 - 4.4 Make samples for marketing or testing
- 5 **Produce patterns**
 - 5.1 Create standard or master pattern from the mean form
 - 5.2 Dissect standard to produce all working patterns, making adjustments for enterprise procedures and materials used

to create patterns

- 5.3 Derive patterns from the master pattern allowing for adjustments, as required
- 5.4 Prepare and store documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Leather products include one or more of the following:

- clothing
- bags
- accessories
- saddles and saddlery components

Australian Standards

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

include:**WHS practices**

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTLG3001 Make a prototype

Modification History

Release 1. Supersedes and is equivalent to LMTLG3001A Make a prototype

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- planning and coordinating complicated designs, that consist of at least four (4) components, and prototype operations in line with specifications, customer requirements and work deadlines
- preparing equipment and work prior to commencing operations
- using computer-aided design (CAD) or manual techniques to design components to conform with model
- selecting appropriate materials
- liaising with other relevant departments to determine practicality of design, cost of production and predicted commercial success
- producing prototypes for at least two (2) different products, using appropriate manufacturing processes over the full range of operations
- reviewing prototype with customer specifications and customer
- making samples for marketing and testing and correcting, as necessary
- producing working patterns for at least two (2) different leather products.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- manufacturing focus of the enterprise
- manufacturing capacity, skill capacity, and tool or equipment base of workplace
- materials and properties and their reaction to manufacturing processes
- pattern design and prototype construction
- CAD and manual techniques used in the design phase
- quality standards and handling procedures
- work health and safety (WHS) and environmental aspects of relevant processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in making a prototype, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG3002 Cut leather by hand

Modification History

Release 1. Supersedes and is equivalent to LMTLG3002A Cut leather by hand

Application

This unit of competency covers the skills and knowledge required to cut leather by hand and includes simple and complicated pattern pieces, and a range of leather qualities.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Set up workstation**
 - 2.1 Set up workstation according to specifications
 - 2.2 Select and prepare cutting equipment and patterns according to specified work and sizes, and manufacturer instructions
 - 2.3 Collect, sort and lay out materials in preparation for cutting
 - 2.4 Clean and maintain cutting board routinely
 - 2.5 Maintain records
- 3 **Assess leather**
 - 3.1 Assess the leather for scars, marks and faults that impact on cutting
 - 3.2 Assess and sort leather to comply with requirements of different jobs and pattern pieces
- 4 **Cut leather by hand**
 - 4.1 Identify problems or faults with patterns, knives and cutting boards and refer for repair
 - 4.2 Use cutting knives and patterns to minimise waste
 - 4.3 Identify scars, marks and fault areas of high-quality leather and position patterns accordingly
 - 4.4 Position patterns to allow for identified flaws, nap of suede or other grain or print characteristics of leather
 - 4.5 Use cutting techniques to match pattern shape, size and leather quality
 - 4.6 Cut pieces precisely to size, and colour coded, and size and colour matched
- 5 **Check finished product**
 - 5.1 Check finished products against job specifications and workplace standards

5.2 Address fault or irregularities

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Leather includes one or more of the following:

- buffalo
- cow
- calf
- kid
- kangaroo
- deer
- fish
- reptile

- emu

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTLG3002 Cut leather by hand

Modification History

Release 1. Supersedes and is equivalent to LMTLG3002A Cut leather by hand

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- planning and coordinating complicated cutting operations
- preparing equipment and sorting materials before commencing operations
- applying techniques over the full range of cutting operations to meet specifications
- identifying scars, marks and fault areas in different types and grades of leather, and position patterns accordingly
- using cutting techniques to match pattern shape, size and leather quality for a range of materials
- cutting at least ten (10) pieces precisely to size, colour coded, and size and colour matched
- checking finished products against job specifications and workplace standards and rectifying redeemable faults.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- equipment required for both complicated and uncomplicated cutting operations
- cutting board maintenance
- leather types, their qualities and principles of cutting
- enterprise standards
- quality standards and practices
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in cutting leather by hand, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG3003 Sew leather by hand

Modification History

Release 1. Supersedes and is equivalent to LMTLG3003A Sew leather by hand

Application

This unit of competency covers the skills and knowledge required to sew panels or pieces of leather by hand. It involves a range of techniques, including stitching of seams, reinforcements, general repairs and new work, on a range of leather pieces.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- | | | | |
|---|--------------------------------|-----|---|
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare work pieces | 2.1 | Receive, check pieces and assess any follow-up action in accordance with workplace procedures, including quality checks |
| | | 2.2 | Assess quality of received component parts or pieces |
| | | 2.3 | Lay out work pieces in accordance with workplace procedures and specifications |
| 3 | Prepare workstation | 3.1 | Set up workbench and seating to achieve operator comfort and to minimise fatigue |
| | | 3.2 | Keep records in accordance with procedures |
| | | 3.3 | Select threads according to specifications |
| | | 3.4 | Check and change needle types as necessary |
| | | 3.5 | Determine stitch length and tension according to manufacturing schedule |
| 4 | Perform hand sewing | 4.1 | Select pieces according to size, colour and style |
| | | 4.2 | Sew seams by hand to achieve specified results and quality expectations |
| | | 4.3 | Trim threads, where required |
| | | 4.4 | Reinforce products according to style |
| | | 4.5 | Perform decorative hand stitching in accordance with specifications |
| | | 4.6 | Assess final quality check for hand sewing operation against specifications |
| 5 | Despatch completed work | 5.1 | Bundle, stack, store or despatch completed component parts, panels or pieces |

5.2 Record production faults

5.3 Complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Decorative hand stitching includes one or more of the following:

- fancy and mock stitching
- cable stitching
- glove stitching
- top stitching

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTLG3003A Sew leather by hand

Assessment Requirements for MSTLG3003 Sew leather by hand

Modification History

Release 1. Supersedes and is equivalent to LMTLG3003A Sew leather by hand

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting specifications of needles, threads and materials, and setting up material for hand sewing
- selecting pieces according to size, colour and style and determining thread and stitch length to meet specifications
- performing hand sewing to sew seams using a variety of stitches to achieve specified results and quality expectations on at least five (5) samples
- reinforcing products according to style
- performing decorative hand stitching on at least three (3) samples in accordance with specifications
- inspecting completed work to determine quality, identify faults and determine required action
- despatching completed work and maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- principles and techniques of hand sewing, including various types of stitches used
- range of needles, threads and associated tools used in hand sewing, and their appropriateness for particular applications
- materials specifications and material sewing characteristics
- relevant quality standards for hand sewing
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- general housekeeping policies and procedures
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in sewing leather by hand, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG3004 Apply finishes to leather products

Modification History

Release 1. Supersedes and is equivalent to LMTLG3004A Apply finishes to leather products

Application

This unit of competency covers the skills and knowledge required to apply structural or design finishes to leather products after production operations are completed.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for finishing of leather product**
 - 2.1 Interpret and confirm design features and specifications for leather product with customer or product specifications
 - 2.2 Confirm finishing process required for leather product
 - 2.3 Check leather product for quality and conformity to specifications
 - 2.4 Prepare tools and equipment required for finishing processes
 - 2.5 Prepare leather product for finishing
- 3 **Conduct finishing process**
 - 3.1 Undertake finishing process according to specifications and procedures
 - 3.2 Monitor process to ensure product specifications and quality standards are achieved
 - 3.3 Check product during and on completion of finishing process
 - 3.4 Identify finish faults
 - 3.5 Apply environmental requirements and procedures concerned with waste, pollution and recycling of materials at all stages of the process
 - 3.6 Identify and correct minor product process and equipment faults to meet specified requirements, where necessary
 - 3.7 Report or document details of major equipment or product faults in accordance with procedures
- 4 **Complete leather finish**
 - 4.1 Check product finish against quality standards and product specifications
 - 4.2 Conduct finish tests, as required

- 4.3 Complete cleaning of area to ensure work environment is maintained in a safe and productive manner
- 4.4 Complete production records and other documentation
- 4.5 Prepare finished product for customer

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Design features include the following:**
- stitching and embroidery
 - carved or engraved patterns
 - attachments, such as studs, buckles and reinforcements
 - plaits and roping

- printing and stamping

Finishing processes include five or more of the following:

- printing
- coating
- brushing
- padding
- mending
- carving
- stamping
- stitching
- application of fire retardant treatment
- plaiting
- roping
- other finishes designed to achieve a specific effect on leather products

Leather products include one or more of the following:

- clothing, bags and other accessories
- saddles and saddlery components

WHS practice:

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTLG3004 Apply finishes to leather products

Modification History

Release 1. Supersedes and is equivalent to LMTLG3004A Apply finishes to leather products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- confirming finishing requirements for leather product
- operating and monitoring tools and equipment for finishing process according to workplace procedures
- conducting at least five (5) different finishing processes to specifications on a variety of samples
- demonstrating all five (5) identified design features on one (1) or more samples
- recognising, rectifying and reporting faults or problems
- conducting finish testing and confirming compliance with design specifications
- completing production records and other documentation, and preparing finished product for customer.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- working properties and characteristics of leather
- finishing processes and procedures
- finish tests:
 - strength
 - durability
 - colour fastness
 - fire retardation
- safe operation of finishing tools and equipment
- typical fault conditions and related fault finding procedures:
 - holes
 - creases and folds
 - marks or cuts

- impressions
- inconsistent coverage
- faulty stitching
- equipment maintenance and repair techniques
- quality standards and practices
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in applying finishes to leather products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG3005 Grade leather

Modification History

Release 1. Supersedes and is equivalent to LMTLG3005A Grade leather

Application

This unit of competency covers the skills and knowledge required to assess, grade and sort leather products to specifications and workplace standards.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Assess leather	2.1	Assess sections and quality within a hide and identify faults or discrepancies and variance in quality of materials supplied
		2.2	Assess leather for use in production
		2.3	Check leather against specifications
3	Grade and sort skins	3.1	Grade skins according to workplace grading standards
		3.2	Grade each hide according to proportion of defects in relation to whole size
		3.3	Sort skins for their suitability for particular styles
4	Calculate allowance	4.1	Calculate allowance manually or by computer on available materials and product to workplace standards
		4.2	Match leather against work specifications and issue to clicker

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures • requirements prescribed by legislation, industry codes and

- include one or more of the following:**
- standards, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Assessment of leather includes one or more of the following:**
- weight
 - substance
 - colour
 - shading
 - softness
 - stretch
 - thickness
- Grading includes one or more of the following:**
- surface
 - finish
 - blemishes
 - substance
 - sorting skins in regard to:
 - size and shape
 - colour
 - types of defects
- WHS practices**
- WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:
- manual handling techniques
 - PPE
 - safe materials handling
 - ergonomic arrangement of workplaces

- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTLG3005 Grade leather

Modification History

Release 1. Supersedes and is equivalent to LMTLG3005A Grade leather

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, including industry codes and standards
- planning and coordinating complicated grading operations
- preparing equipment and work before commencing operations
- handling and receiving and assessing a range of leather to work specifications
- identifying faults or discrepancies in leather
- grading at least ten (10) hides according to proportion of defects in relation to whole size
- sorting skins for their suitability for particular styles
- calculating allowances manually or by computer
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- equipment required grading operations
- assessment of incoming leather in terms of weight, substance, colour, shading, softness, stretch and thickness
- international, national and workplace grading standards
- leather types
- quality standards and practices
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in grading leather, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG3006 Apply pattern specifications to saddlery products

Modification History

Release 1. Supersedes and is equivalent to LMTLG3006A Apply pattern specifications to saddlery products

Application

This unit of competency covers the skills and knowledge required to apply pattern specifications to the production of saddlery products.

The unit applies to the interpretation of pattern specifications; checking against client needs; modifying the pattern, where necessary, and applying the pattern to the production of a saddlery product, such as a saddle, bridle or saddle blanket.

It applies to individuals working largely independently and being accountable for own results, including:

- carrying out assigned tasks
- coordinating processes
- setting and working to deadlines.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Determine pattern requirements	<p>2.1 Access information about customer requirements</p> <p>2.2 Interpret pattern specifications for identified saddlery product and compare with customer, industry and quality requirements</p> <p>2.3 Identify customisation requirements and any additional expertise required for production</p> <p>2.4 Customise pattern from existing pattern, as appropriate</p> <p>2.5 Identify leather requirements and pattern specifications from customer</p>
3	Prepare for production	<p>3.1 Set up work area in accordance with specifications and workplace procedures</p> <p>3.2 Identify production tasks, and select and prepare tools and equipment</p> <p>3.3 Select leather, and check for quality and faults</p>
4	Produce saddlery product	<p>4.1 Conduct sequence of operations to produce saddlery product</p> <p>4.2 Test stitching for strength and accuracy and trim product</p> <p>4.3 Apply embossing and other design elements</p>

- 4.4 Identify any faults or differences from specifications and repair or resolve
- 5 **Finish production**
- 5.1 Finish product by hand or machine
 - 5.2 Check product satisfies quality specifications and review with customer to ensure customer satisfaction
 - 5.3 Finalise production and complete housekeeping and relevant documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- PPE
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards

- the relevant industry or Australian Standards that are current

include: at the time this unit is being undertaken

Leather requirements include one or more of the following:

- type of leather
- grade of leather
- size of hide
- performance and functional requirements of leather

WHS practices WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTLG3006 Apply pattern specifications to saddlery products

Modification History

Release 1. Supersedes and is equivalent to LMTLG3006A Apply pattern specifications to saddlery products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- interpreting specifications and identifying customisation requirements
- preparing at least two (2) customised patterns from existing patterns to meet client requirements
- completing sequence of operations on leather to produce saddlery product
- using tools and equipment for saddlery work according to work health and safety (WHS) requirements
- applying embossing and other design elements, and finishing at least two (2) saddlery products according to specifications
- identifying faults and making good
- testing and checking final saddlery product for quality and customer satisfaction
- completing housekeeping and relevant documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- features and requirements of saddlery products:
 - saddles
 - bridles
 - saddle blanket
- pattern modification techniques, procedures and tools
- structure and divisions of hides and the functions of different types of leather
- production tasks:
 - measuring
 - marking
 - cutting

- stitching
- embossing
- cutting
- polishing
- creasing
- staining
- finishing
- methods for examining leather for faults and quality
- quality standards of the enterprise and the industry
- tools and equipment for making saddlery products
- stitching techniques and equipment
- PPE required in saddlery
- care, adjustment and sharpening of traditional hand cutting tools
- procedures for laying out, marking, cutting and trimming of leather
- quality standards and handling procedures
- workplace operations and reporting procedures
- WHS practices, including hazard identification and control measures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in performing pattern specifications for saddlery products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTLG3007 Assemble saddle components

Modification History

Release 1. Supersedes and is equivalent to LMTLG3007A Assemble saddle components

Application

This unit of competency covers the skills and knowledge required to fit, shape and assemble saddle components, including fitting a saddle tree.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within industry codes, standards and defined procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Leather production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- 1.4 Identify job requirements from customer requirements, specifications, drawings, job sheets or work instructions
- 2 **Interpret shaping and fitting requirements**
 - 2.1 Gather and record information about customer requirements for fitting and shaping
 - 2.2 Identify saddle tree requirements
 - 2.3 Identify fitting and shaping requirements
 - 2.4 Identify attachments and additional features
 - 2.5 Identify and document ordering requirements for saddle tree or associated materials and equipment
 - 2.6 Document and check all identified requirements against original customer requirements, and place any required orders
- 3 **Prepare to fit and assemble saddle**
 - 3.1 Identify all assembly tasks
 - 3.2 Obtain, modify or construct saddle tree to meet customer requirements
 - 3.3 Prepare materials and equipment for saddle assembly
 - 3.4 Identify and prepare saddle components
 - 3.5 Set up work area in accordance with task requirements and workplace procedures
- 4 **Fit and assemble saddle**
 - 4.1 Check saddle tree for quality and against horse dimensions and undertake further fitting consultation with client or supervisor, if required
 - 4.2 Apply saddle pieces and padding onto tree
 - 4.3 Fix padding into position and join saddle pieces
 - 4.4 Fix attachments and additional features into position
 - 4.5 Dry shaped saddle

- | | | | |
|---|---------------------------------|-----|---|
| 5 | Complete saddle assembly | 5.1 | Check assembly of saddle to ensure requirements are met and undertake further consultation with client or supervisor, if required |
| | | 5.2 | Check saddle for quality and correct assembly and address any defects and make modifications, as required |
| | | 5.3 | Review saddle assembly with customer or supervisor to ensure requirements are met |
| | | 5.4 | Finalise assembly and housekeeping |
| | | 5.5 | Complete all required documentation |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- PPE
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Information requirements include one or more of the following:

- breed and size of horse for saddle
- physical characteristics of horse (e.g. high-withered, short-backed and flat-backed)
- horse riding tasks (e.g. cutting, racing and working)
- weight requirements
- padding requirements

Additional features include one or more of the following:

- desired leather stain
- decorative elements
- accessories
- dyeing
- stamping
- lacing

Preparation includes one or more of the following:

- cleaning
- checking for foreign objects
- sharpening (tools)
- checking for faults or damage

Checking saddle tree includes the following:

- making sure the gullet is clear of the horse's backbone
- checking the tree is soundly constructed
- checking the tree is of suitable composition and weight for the intended purpose
- checking the tree is aligned to specified swell and canter

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping

- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTLG3007A Assemble saddle components

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTLG3007 Assemble saddle components

Modification History

Release 1. Supersedes and is equivalent to LMTLG3007A Assemble saddle components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- interpreting and applying saddle specifications from customer requirements
- identifying faults and quality of leather
- obtaining or modifying mould for shaping
- using saddlery tools and equipment and undertaking assembly techniques to assemble at least two (2) saddle components
- fixing padding into position and joining saddle pieces
- fixing additional attachments and features into position
- checking saddle for quality and correct assembly, addressing any defects and making modifications as needed
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- features and purposes of different types of saddles
- fitting and shaping requirements for different horse breeds and riding requirements
- meaning of terms used in the fitting and shaping of saddles
- horse anatomy, as relevant to saddle fitting
- saddle components, attachments and common additional features
- attachments:
 - plates
 - rings
 - ties
 - stirrups
- saddle trees, their materials and how they are made and adjusted
- work area set-up for saddle assembly

- assembly tasks:
 - obtaining, making and adjusting the saddle tree
 - marking
 - stitching
 - adding attachments
 - padding
 - shaping
 - fitting of saddle horn, bridle and rings
 - polishing
 - creasing
 - staining
 - finishing
- leather performance and handling requirements
- methods for examining saddles for faults and quality
- tools and equipment for making saddlery products
- materials and equipment:
 - mould or stand
 - drying or curing equipment
 - wetting agents
 - stitching tools
 - threads
 - padding
 - measuring tape
 - assembly instructions or specifications
- stitching techniques and equipment
- attachments used in saddlery
- padding materials and procedures for applying
- quality standards of the enterprise and the industry
- work health and safety (WHS) and environmental aspects of relevant processes
- relevant federal and state or territory legislative or regulatory requirements
- required documentation:
 - shaping procedure/modifications applied
 - adjustments
 - customer order information
- recording and reporting procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in assembling saddle components, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTMF4001 Select and adjust prefabricated footwear-related orthoses

Modification History

Release 1. Supersedes and is equivalent to LMTMF4001A Select and adjust pre-fabricated footwear-related orthoses

Application

This unit of competency covers the skills and knowledge required to select and adjust prefabricated footwear-related orthoses.

The unit of competency applies to activities associated with selecting and adjusting prefabricated footwear-related orthotics. Work is generally conducted in a small business situation. Work role may include that of sole practitioner or working directly with medical grade footwear practitioners.

Footwear-related orthotic devices concerned with correcting the foot problem are limited to drop foot splints, ankle or foot orthoses (AFO), ankle braces, and so on. Certain specific construction tasks associated with the fabrication may be delegated to other people, such as footwear technicians or skilled tradespeople.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Medical grade footwear

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Clarify assessments and prescriptions	<p>1.1 Review assessments and prescriptions to confirm that all required information has been provided prior to selection and modification of prefabricated orthoses</p> <p>1.2 Consult other parties, if necessary, to clarify or provide additional information</p>
2 Determine resources required to modify orthoses	<p>2.1 Confirm availability of materials and equipment to modify stock and prefabricated orthoses</p> <p>2.2 Assess characteristics of prefabricated orthoses against specifications</p> <p>2.3 Select materials to modify existing orthoses to match design requirements</p> <p>2.4 Obtain and clarify instructions and requirements for prefabricated orthoses</p> <p>2.5 Taking accurate measurements</p> <p>2.6 Identify and confirm costs and timelines</p>
3 Select orthoses	<p>3.1 Select appropriate tools and techniques needed to adjust orthoses to ensure achievement of design</p> <p>3.2 Select existing orthoses for repeat client if only minor design changes are required</p> <p>3.3 Adjust orthoses to accommodate client foot shape, alignment and specific footwear designs</p> <p>3.4 Check shapes of orthoses to assess effect on footwear and function</p>
4 Adjust and finish orthoses	<p>4.1 Review orthoses, match against footwear and make adjustments, as required</p> <p>4.2 Finish off orthoses to meet established quality standards</p> <p>4.3 Communicate and interact effectively with clients, component suppliers and in the workplace</p>

- 4.4 Determine modifications required to the shoe to allow for orthoses, as required
- 4.5 Maintain client files and complete administrative tasks

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Materials include one or more of the following:

- metals
- thermoplastic
- thermoset
- leather
- appropriate textiles

- interfaces
- appropriate padding
- reinforcement
- soling and related materials
- fastening or closing devices and other specific items such as adhesives

Tools and techniques include one or more of the following:

- hand and machine tools
- cam
- mechanical duplicators
- pour techniques
- a variety of combinations
-

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- personal protective equipment (PPE)
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTMF4001 Select and adjust prefabricated footwear-related orthoses

Modification History

Release 1. Supersedes and is equivalent to LMTMF4001A Select and adjust pre-fabricated footwear-related orthoses

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- reviewing client specifications and measurements
- obtaining and clarifying instructions and requirements for prefabricated orthoses
- assessing characteristics of prefabricated orthoses against specifications
- adjusting orthotics and determining modifications required to the shoe to meet specifications and quality standards on at least three (3) occasions
- identifying special construction details and constraints
- taking accurate measurements
- identifying and confirming costs and timelines
- communicating and interacting effectively with clients, component suppliers and in the workplace
- applying work health and safety (WHS) policies in work operations
- maintaining client files and accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- the elements and principles of medical grade orthotic and footwear design and how they can be used to meet specified requirements
- applied biomechanical, kinesiology and pathology of the foot, the variables in, and effects of, physical force systems (orthoses and footwear) on the body range and characteristics of prefabricated orthotic devices
- footwear construction and standards, terminology, diagnostic and definitive constructions, modification processes, materials and tools and equipment used
- WHS and environmental aspects of relevant workplace activities

- relevant WHS legislation, regulatory requirements, copyright obligations and codes of practice
- WHS practices, including hazard identification and control measures
- quality practices
- workplace practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in selecting and adjusting prefabricated footwear-related orthoses, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTMF4002 Conduct medical grade footwear assessments for clients with footwear-related medical conditions

Modification History

Release 1. Supersedes and is equivalent to LMTMF4002A Conduct medical grade footwear assessments for clients with footwear-related medical conditions

Application

This unit of competency covers the skills and knowledge required to conduct medical grade footwear assessments for clients with footwear-related medical conditions (includes up to medium complexity and risk conditions).

The unit of competency encompasses skills and knowledge used in the collection and analysis of information from clients, carers and health or medical professionals. It applies to assessing the foot or foot-related condition to provide the necessary information to develop and modify medical grade footwear and orthoses. Foot conditions include those of medium complexity and risk only.

Work is generally conducted in a small business situation and the work role may include:

- sole practitioner
- member of a team of medical grade footwear specialists
- member of an enterprise or regional health care team or working in association with other allied health or medical professionals.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Medical grade footwear

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Provide potential client with information about services and products	1.1	Outline services and products and provide general estimates of costs of services and products
		1.2	Present possible subsidised funding options for services and products to client
		1.3	Provide client with estimate of time required to conduct assessment and the general procedures associated with the assessment
		1.4	Advise client on general and medical documentation and footwear and orthoses required for assessment
		1.5	Negotiate and confirm suitable appointment time and location for assessment
		1.6	Establish client's current walking condition and need for assistance in attending assessment
2	Interpret prescription or referral information	2.1	Review prescriptions and referrals to determine action to be taken
		2.2	Contact health and medical professionals or agencies to clarify issues or to obtain further information
3	Obtain pertinent personal and medical information from client	3.1	Obtain general health status and personal information to establish client profile
		3.2	Obtain detailed information regarding client medical history and present health status and condition
		3.3	Record information accurately and completely to assist in determining possible plans of action
4	Observe general physical and emotional state of client and implement	4.1	Determine degree of mobility and level of assistance and support required by client
		4.2	Minimise client discomfort by providing walking aids or transport devices, as required

- | | | | |
|---------------------------|---|---|---|
| supportive actions | 4.3 | Use a friendly and empathic communication style to reassure client and reduce anxiety or stress | |
| | 4.4 | Note other physical characteristics of client that may have an affect on future plans of action | |
| | 4.5 | Maintain assessment environment to comply with professional and accepted community standards for client comfort and privacy | |
| | 4.6 | Consult other suitably qualified professionals, if necessary, to discuss concerns or issues arising from client's physical or emotional state | |
| 5 | Identify client's needs and expectations | 5.1 | Identify client lifestyle and work needs |
| | | 5.2 | Identify client personal short and long-term goals |
| | | 5.3 | Discuss client expectations related to services and products to be provided, and reach agreement between client and service provider |
| | | 5.4 | Answer client questions about short and long-term improvement in condition honestly and frankly |
| | | 5.5 | Determine client's general suitability for service and products and discuss options with client and medical and health professionals, as required |
| 6 | Conduct physical assessment of foot and lower limb | 6.1 | Carry out physical examination of foot and lower limb and compare prescription and referral information compared with findings, if appropriate |
| | | 6.2 | Identify presence and extent of medical conditions of foot and lower limb, including any skin conditions that may affect the provision of any medical grade footwear and orthoses |
| | | 6.3 | Assess range of motion of foot and lower limb, function of muscles and joints, status of joints, and other factors and abnormalities, which affect the functioning of the foot, against established norms |
| | | 6.4 | Record information accurately and completely |

- | | | | |
|---|--|-----|--|
| 7 | Carry out measurements on foot, footwear and orthoses | 7.1 | Select appropriate measurement techniques based on client's presenting medical problem and work health and safety (WHS) practices |
| | | 7.2 | Take direct and representation measurements related to shape and size of foot |
| | | 7.3 | Perform gait analysis to obtain baseline data of client's walk pattern and comparison to average healthy parameters |
| | | 7.4 | Use supplementary measurement techniques to confirm primary findings or to provide additional data |
| | | 7.5 | Conduct trial fit using commercial or client footwear |
| | | 7.6 | Examine footwear and orthoses and take measurements, as necessary |
| | | 7.7 | Record measurements within prescribed levels of accuracy |
| | | 7.8 | Analyse data derived from measurements and record results in client file using established procedures |
| 8 | Work collaboratively with other health professionals | 8.1 | Recognise and acknowledge roles and functions of other service providers within accepted ethical standards |
| | | 8.2 | Consult health care professionals and other service providers, as appropriate, and in accordance with relevant legislation, for information, advice, assistance or cooperation |
| | | 8.3 | Advise clients fully on indications and reasons for referral |
| | | 8.4 | Document client consent to release relevant information to other professionals or service providers |
| | | 8.5 | Provide client information to other health professionals or service providers, in accordance with medico-legal requirements and ethics related to confidentiality |
| | | 8.6 | Communicate outcome of referral process to initiating practitioner and service provider, orally or in writing |

- 9 **Develop a management plan and seek approval of client and other parties to implement plan**
- 9.1 Analyse all information provided by client, health professionals or agencies, and analyse and prioritise measurements to provide the basis for the plan of action
 - 9.2 Formulate a plan of action and present options to the client, in consultation with carers, health professionals or agencies, where necessary
 - 9.3 Allocate client sufficient time to consult with other parties to make an informed decision about proposed plan of action
 - 9.4 Develop specifications that reflect the client needs, current medical condition and feasibility to produce footwear or orthoses
 - 9.5 Reach agreement with client, and other parties if necessary, regarding costs, timelines and payment schedules to implement plan of action
 - 9.6 Prior to commencement of any stage of the plan of action, provide client with a briefing to ensure complete understanding of processes, procedures and expected outcomes

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)

- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Medium complexity and risk foot conditions include one or more of the following:

- the client is suffering foot-related pain or discomfort
- ulceration is not present
- there is only a single risk factor

Risk factors include one or more of the following:

- age
- systemic problems such as diabetes (insulin dependent)
- haemophilia
- peripheral vascular disease
- neuropathy
- ulcers
- missing toes
- lower limb amputations
-

Clients include one or more of the following:

- those referred for assessment by medical or health care professionals
- those making direct contact

Assessment includes one or more of the following:

- initial meeting of client and practitioner
- ongoing during development of medical grade footwear and orthoses
- as part of follow-up or regular client review

Need for assistance in attending assessment includes one or more of the following:

- language interpreters or other facilitators experienced in sign language or the use of communication devices used by physically or intellectually impaired people
- walking aids or transport devices, such as walking sticks, frames or wheelchairs

Assessment environment includes one or more of the following:

- on-site at workplace
- in a hospital or community health care centre
- at a residential aged care or disability facility
- at client or carer home

Allied health professionals include one or more of the following:

- podiatrists
- physiotherapists
- community health nurses

Medical professionals include one or more of the following:

- general practitioners
- specialist medical practitioners
- surgeons
- radiologists

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- personal protective equipment (PPE)
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTMF4002A Conduct medical grade footwear assessments for clients with footwear-related medical conditions

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTMF4002 Conduct medical grade footwear assessments for clients with footwear-related medical conditions

Modification History

Release 1. Supersedes and is equivalent to LMTMF4002A Conduct medical grade footwear assessments for clients with footwear-related medical conditions

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- communicating with clients and carers in a manner consistent with the client level of understanding of processes and procedures
- liaising and consulting with medical and allied health professionals
- conducting physical examinations of the foot and lower limbs and obtaining measurements
- performing gait analysis, including:
 - comparison to average healthy parameters
 - identification of common problems and consequences
- recording and documenting measurements and other test results
- using problem-solving approach to make decisions related to medical grade footwear or orthoses options
- developing a plan of action and management plan
- complying with the principles and standards of 'duty of care' and observing ethical standards of client confidentiality
- following up and reviewing client's progress
- performing administrative tasks associated with maintaining client records, financial record keeping, and filing and storing client's foot tracings, impressions or casts
- establishing and maintaining effective working relationships with clients, colleagues and other health and medical professionals
- identifying limitation of own knowledge and skills and making referral to more appropriate service providers, as required
- using clear, accurate and relevant oral and written communication which meets professional and ethical standards
- achieving multi-disciplinary collaboration and input, when necessary
- recognising primary accountability and responsibility for client
- applying work health and safety (WHS) policies in work operations

- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- problem-solving approach to carry out assessments of clients with foot-related medical conditions based on an appropriate level of anatomy and physiology knowledge
- client medical condition classification system for determining medical grade footwear and orthotic options (common medical conditions include orthopaedic, vascular, neurological and degenerative)
- principles of biomechanics and kinesiology that directly influence the design and development of medical grade footwear and orthoses
- foot bones, including names, locations and functions
- foot and leg muscle groups and how they work and the effect of paralysis on muscle groups
- types of common skin injuries and the indications that, if present, require referral to another health professional
- healthy and abnormal gait patterns, the consequences of abnormal gait, including basic knowledge of lower back problems
- common surgical and physiotherapy procedures and their consequences for the provision of medical grade footwear and orthoses
- measurement techniques, including:
 - direct measurements (rulers and tape measures and representation)
 - footprints (tracing ink pressure and draw in landmarks)
 - casts (plaster impression and foam)
 - foot tracing (90, 60 and 45 degrees)
 - indirect scale - footwear scales (Brannock devices)
- shoe fittings (commercial and own), extra non-footwear measures - pressures (pressure footprints)
- measurement equipment, such as scanners, computerised and video gait pattern analysers, and other new technologies
- principles of medical grade footwear design and how they can be used to meet individual client requirements
- general and medical grade footwear construction techniques, materials and tools and equipment used
- Australian Standards or industry standards used in the construction of footwear
- follow-up and ongoing review process
- practitioner and client relationship and factors that can affect this relationship
- services provided by medical and allied health professionals
- available prefabricated footwear
- WHS and environmental aspects of enterprise production processes

- operation of state/territory and federal government departments (e.g. Department of Veterans' Affairs) and state/territory health agencies relevant to medical grade footwear operations
- health insurance funds and reimbursement or supplementary paying schemes, including Aids and Appliances Program, Department of Veterans' Affairs, workers' compensation and Brotherhood of St Laurence
- health insurance and funding
- industry and workplace codes of practice
- multi and cross-disciplinary principles and practices
- relevant codes of practice and regulations governing other practitioners, allied health professionals and service providers
- roles, capabilities and limitations of appropriate medical and allied health professionals, other practitioners, community resources and services
- range of services capable of being supplied by other professionals and service providers
- personal, professional and medico-legal accountability
- maintenance of client and colleague confidentiality
- team and group leadership and group dynamics
- community expectations of practitioners
- documentation requirements
- conflict resolution techniques
- individual attributes and differences affecting the practitioner and client relationship, regulatory requirements, copyright obligations and codes of practice
- WHS practices, including hazard identification and control measures
- quality practices
- workplace practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in conducting medical grade footwear assessments, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTMF4003 Modify medical grade footwear

Modification History

Release 1. Supersedes and is equivalent to LMTMF4003A Modify medical grade footwear

Application

This unit of competency covers the skills and knowledge required to modify medical grade footwear to meet changed foot conditions.

This unit of competency applies to activities associated with maintaining or modifying medical grade footwear. The unit of competency relates to modifying and repairing footwear for medical grade applications generated by direct contact by client, referral or prescription. Significant judgement is required in planning, design, technical or supervisory activities related to products or processes.

Work is generally conducted in a small business situation. Work role may include:

- sole practitioner
- member of a team of medical grade footwear specialists
- member of an enterprise or regional health care team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Medical grade footwear

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Review medical grade footwear	<p>1.1 Review modification requirements and specifications to confirm required information has been provided prior to modification</p> <p>1.2 Examine footwear to determine modification specification is suitable and practical</p> <p>1.3 Communicate effectively with the client to obtain clear and precise information about problems with the footwear</p>
2 Determine resources required to modify or repair medical grade footwear	<p>2.1 Evaluate footwear modification requirements and identify solutions to solve a variety of design and modification problems</p> <p>2.2 Select compatible and durable modification techniques</p> <p>2.3 Select materials to make modifications and repairs to match medical grade footwear design requirements</p> <p>2.4 Identify any special construction details and constraints</p>
3 Make modifications or repairs	<p>3.1 Check equipment to confirm it complies with manufacturer operating instructions and use hand tools and machinery to undertake modifications</p> <p>3.2 Store and use modification and repair compounds such as glues and resins in accordance with work health and safety (WHS) practices and manufacturer guidelines</p> <p>3.3 Prepare footwear appropriately for modification</p> <p>3.4 Conduct modification to comply with specifications or requirements</p>
4 Finish medical grade footwear	<p>4.1 Review detailed information from final fitting to initiate changes to footwear if required</p> <p>4.2 Finish off, add final components and do final check of product to ensure it complies with established quality standards prior to delivery to client</p>

4.3 Maintain client files and complete administrative tasks

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Materials include one or more of the following:

- conventional leathers
- textiles
- plastic sheeting
- padding
- reinforcement
- sole and related materials
- fastening or closing devices, such as:
 - Velcro

- laces
- buckles
- other items such as adhesives and threads

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- personal protective equipment (PPE)
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTMF4003A Modify medical grade footwear

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTMF4003 Modify medical grade footwear

Modification History

Release 1. Supersedes and is equivalent to LMTMF4003A Modify medical grade footwear

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- interpret order forms and specifications defining footwear modification requirements
- identifying any special construction details and constraints
- selecting suitable materials and techniques to modify footwear
- resolving a variety of design and modification problems
- performing a full range of standard orthopaedic footwear modifications in relation to footwear problem on at least two(2) occasions
- communicating effectively with clients
- applying work health and safety (WHS) policies in work operations
- completing a final check of product to ensure it complies with established quality standards prior to delivery to client
- maintaining client files and completing administrative tasks.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- full range of procedures to review footwear
- assessment criteria to determine modification requirements of new and old footwear (design, fit/size, structure, features, function and technical)
- full range of modification designs and their purposes in relation to footwear problems
- procedures for making modifications or repairs, including inclusion and allowance for orthoses, newness of materials and tissue tolerance
- applied anthropometrics of the foot, the variables in and effects of physical force systems (orthoses and footwear) on the body and dimensional, shape and other physical characteristics of commercial footwear
- footwear construction and standards, terminology, diagnostic and definitive constructions, modification processes, materials and tools and equipment used

- other practitioners in the field and in major related fields, including their roles, capabilities and limitations
- WHS and environmental aspects of relevant workplace activities
- WHS practices, including hazard identification and control measures
- quality practices
- workplace practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in modifying medical grade footwear, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTMF4004 Select and adjust prefabricated medical grade footwear and accessories

Modification History

Release 1. Supersedes and is equivalent to LMTMF4004A Select and adjust pre-fabricated medical grade footwear and accessories

Application

This unit of competency covers the skills and knowledge required to select and adjust prefabricated medical grade footwear and accessories. Foot conditions that apply are those of low complexity and risk.

Footwear-related medical conditions covered by this unit are those that can be assisted by medical grade footwear. Discretion, initiative and judgement may be demonstrated on the job in own work, either individually or in a team environment. Work is generally conducted in a small business situation.

Work role may include that of sole practitioner or working directly with medical grade footwear practitioners, or in a retail situation. General information may be obtained from client or other parties in relation to perceived problems with the footwear.

Application of prefabricated footwear and accessories is concerned with foot-related medical conditions that cannot be assisted by footwear available from normal retail outlets.

The extent and nature of adjustments are dependent on the specifications and client requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Medical grade footwear

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|---|---|--|
| 1 | Clarify assessments and prescriptions | <p>1.1 Check assessments, prescriptions and referrals to confirm that all required information has been provided, as required</p> <p>1.2 Consult other parties, if necessary, to clarify or provide additional information</p> <p>1.3 Refer client to other medical, health and medical grade footwear practitioners, if required</p> |
| 2 | Determine medical grade footwear requirements | <p>2.1 Discuss requirements with client or others as appropriate, and reach agreement</p> <p>2.2 Select appropriate range and style of prefabricated medical grade footwear and accessories</p> <p>2.3 Specify construction, materials and style of prefabricated medical grade footwear to match client requirements</p> <p>2.4 Order prefabricated medical grade footwear from appropriate suppliers and confirm availability within specified timelines</p> |
| 3 | Select medical grade footwear to match client requirements | <p>3.1 Select prefabricated medical grade footwear to meet client requirements</p> <p>3.2 Assess mechanical, dimensional and therapeutic factors of medical grade footwear</p> <p>3.3 Prepare job sheets and specifications defining adjustments and modifications to prefabricated footwear and accessories, as required</p> <p>3.4 Identify and confirm costs and timelines</p> <p>3.5 Determine requirements for adjustment and modification</p> |

- of prefabricated medical grade footwear
- 3.6 Use hand tools and machinery to undertake adjustments, as required
- 4 **Undertake modification and fit of footwear and accessories**
- 4.1 Arrange for fitting of prefabricated medical grade footwear and accessories
- 4.2 Select and fit insoles to footwear, where required
- 4.3 Make other modifications, as necessary, to the prefabricated medical grade footwear
- 4.4 Conduct administrative tasks associated with the purchase and adjustment of prefabricated medical grade footwear and related accessories
- 4.5 Maintain client files

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping

- tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Footwear types and adjustments include one or more of the following:**
- a range of styles and types (e.g. slip-on, court, boot, sandal and inner shoe)
 - range of adjustment:
 - on-site: fit (e.g. stretch footwear, apply insole and adjust accessory, as required)
 - off-site: shoe repairer
- Reasons to refer client to other practitioner include one or more of the following:**
- infections
 - open wounds, including ulcers
 - injuries or sprains
 - suspected disease
 - prefabricated shoe that is unlikely to attain a satisfactory outcome
- Prefabricated medical grade footwear includes one or more of the following:**
- footwear with additional depth and width
 - semi-orthopaedic footwear
 - post-operative shoes
 - ready-made
 - therapeutic footwear to client measurements and requirements
- Accessories include one or more of the following:**
- insoles
 - arch supports
 - toe buds
 - corn pads
 - bunion shields
- Selection criteria for choosing medical grade footwear and accessories includes one or more of the following:**
- design style: court, boot, rigid, flexible and low trim line
 - size: to specific benchmarks, such as width, length, toe angle and arch
 - structure: heel height and width, counter stability and

sole flexibility

- features: for individual needs and use, e.g. cushion sole
- function: fit, walk and stairs

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- personal protective equipment (PPE)
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Assessment Requirements for MSTMF4004 Select and adjust prefabricated medical grade footwear and accessories

Modification History

Release 1. Supersedes and is equivalent to LMTMF4004A Select and adjust pre-fabricated medical grade footwear and accessories

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- evaluating, addressing and solving a variety of prefabricated footwear and accessory problems
- communicating effectively with the client to obtain clear and precise information about problems with the footwear
- preparing job sheets and specifications defining adjustments and modifications to prefabricated medical grade footwear and accessories, as required
- selecting and adjusting prefabricated medical grade footwear accessories, foot orthoses and semi-orthopaedic footwear and orthoses to complement footwear, on at least three (3) occasions
- conducting fittings and making appropriate adjustments to meet client needs
- conducting administrative tasks associated with the purchase and adjustment of prefabricated medical grade footwear and related accessories
- maintaining client files.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- range and characteristics of prefabricated medical grade footwear and accessories and how they can be used to meet specified footwear problems
- relative clinical, practical and other advantages and disadvantages of prefabricated footwear
- awareness of the implications of the use of stockings, bandages and orthotic devices
- awareness of gait and the implications it may have on footwear
- applied anthropometrics of the foot, the variables in and effects of physical force systems (orthotic and footwear) on the body and dimensional, shape and other physical characteristics of pre-fabricated footwear

- assessment criteria to select prefabricated footwear and accessories, including knowledge of when referral to other practitioners is necessary
- assessment criteria to select prefabricated orthoses
- assessment criteria to determine adjustment requirements of new and existing prefabricated footwear (design, fit and size, structure, features, functional and technical)
- other practitioners in the field and in major related fields, including, roles, capabilities and limitations
- footwear construction and standards
- terminology
- diagnostic and definitive constructions
- modification processes
- materials and tools and equipment used
- full range of procedures to adjust prefabricated footwear
- limitation of own knowledge and skills and awareness of more appropriate service providers for client referral
- work health and safety (WHS) and environmental aspects of relevant workplace activities
- WHS practices, including hazard identification and control measures
- quality practices
- workplace practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in selecting and adjusting prefabricated medical grade footwear and accessories, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML1001 Make a simple headpiece

Modification History

Release 1. Supersedes and is equivalent to LMTML1001A Make a simple headpiece

Application

This unit of competency covers skills and knowledge required to design and make a simple headpiece or hair accessory, using a limited range of materials and trims.

Work should be conducted in a highly supervised context, such as VET in Schools, and may involve individual and team-related activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- | | | | |
|---|---|-----|---|
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to make a simple headpiece | 2.1 | Research designs for simple headpieces or hair accessories according to set criteria |
| | | 2.2 | Select a design suitable for production and confirm suitability of design with supervisor |
| | | 2.3 | Identify millinery materials required for chosen design |
| | | 2.4 | Source materials and production resources |
| | | 2.5 | Prepare workstation and equipment according to production requirements and workplace procedures |
| 3 | Produce a simple headpiece | 3.1 | Prepare headpiece foundation |
| | | 3.2 | Prepare millinery materials and components |
| | | 3.3 | Observe WHS practices in the use of adhesives and size |
| | | 3.4 | Combine components and foundation by sewing, gluing, bonding or wiring, as required |
| | | 3.5 | Trim and finish headpiece or hair accessory |
| 4 | Complete production | 4.1 | Check headpiece or hair accessory against design and production requirements |
| | | 4.2 | Pack headpiece, and store or label for display, sale or transfer |
| | | 4.3 | Complete production process, housekeeping and required documentation |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

Research includes one or more of the following:

- fashion magazines
- internet
- the work of national and international designers
- costume and millinery collections in museums
- the headwear of different countries and cultures
- adaptations from other design forms

Simple headpiece or hair accessory includes one or more of the following:

- 'fascinators'
- embellished headbands
- embellished hair combs
- embellished hair clips
- embellished hair pins and slides
- embellished hat pins
- bandannas or scarves

Design and production requirements include one or more of the following:

- the required quantity or dimensions of the materials required for the design
- the techniques required to produce the simple headpiece
- the amount of time available to produce the simple

headpiece

- Resource requirements include one or more of the following:**
- the availability of specialised equipment to produce the simple headpiece
 - the budget allocated for sourcing of materials

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTML1001A Make a simple headpiece

Assessment Requirements for MSTML1001 Make a simple headpiece

Modification History

Release 1. Supersedes and is equivalent to LMTML1001A Make a simple headpiece

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- conducting research to select appropriate designs for simple headpieces according to set criteria
- listing materials and components required for production
- identifying production requirements
- handling and manipulating a variety of millinery materials and components
- applying sewing, gluing, bonding or wiring techniques, as required, to make at least two (2) simple headpieces
- completing production and checking a simple headpiece to meet requirements
- complying with production and documentation requirements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- researching and selecting simple headpiece designs
- simple headpiece and hair accessory foundations
- hair combs
- head bands
- hair clips
- canvas shapes
- sinamay shapes
- hair slides
- hat pins
- handling requirements of selected millinery materials and components, such as:
 - millinery foundations
 - wire
 - canvas
 - sinamay

- felt pieces
- straw pieces
- braids
- ribbons
- beads
- flowers
- feathers
- net
- fashion fabrics
- adhesives
- size
- commercial trims
- sewing, gluing, bonding or wiring techniques
- production requirements
- set criteria, such as:
 - price point or budget
 - gender
- resource requirements for production of a simple headpiece/hair accessory
- hazard identification and control measures associated with adhesives and size
- workplace procedures
- documentation requirements:
 - list and cost of materials and components
 - collating of research findings.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in making a simple headpiece, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTML2001 Identify materials used in millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML2001A Identify materials used in millinery

Application

This unit of competency covers the skills and knowledge required to identify materials and components used in the production of millinery.

The unit of competency applies to the production of millinery, headpieces and hair accessories.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|-------------------------------------|-----|--|
| 1 | Identify millinery materials | 1.1 | Identify traditional pre-formed materials used in the production of millinery and headwear |
|---|-------------------------------------|-----|--|

- 1.2 Identify contemporary materials and millinery foundation and support materials
 - 1.3 Identify components used in the production of millinery and headwear
 - 1.4 Identify non-traditional materials suitable for millinery and headwear
 - 1.5 Identify chemical-free alternatives to adhesives and size traditionally used in millinery
 - 1.6 Interpret material labels and information and workplace procedures
- 2 **Identify the characteristics of millinery materials**
- 2.1 Identify and describe physical construction and composition of millinery materials
 - 2.2 Identify composition of the adhesives and sizing and safe handling requirements
 - 2.3 Identify limitations of materials for use in millinery
 - 2.4 Identify physical characteristics and compatibility of materials
 - 2.5 Identify equipment required for using millinery materials
 - 2.6 Identify suitability of materials to the design, function and cost requirements of millinery item

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- personal protective equipment (PPE)
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

Traditional pre-formed materials include one or more of the following:

- hoods
- capelines
- felts
- straws (panama, parasal and sisal)

Contemporary materials include one or more of the following:

- sinamay
- crinoline
- braids
- xian
- toyo
- hide, skin, leather and fur

Foundation and support materials include one or more of the following:

- leno
- capnet
- canvas
- fusing

Non-traditional materials include one or more of the following:

- recycled materials
- plastics
- composites

Physical construction includes one or more of the following:

- woven
- non-woven
- felted

Assessment Requirements for MSTML2001 Identify materials used in millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML2001A Identify materials used in millinery

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- identifying a range of traditional and non-traditional materials suitable for the production of millinery
- interpreting material labels and information and workplace procedures
- describing the composition, construction and characteristics of millinery materials on at least two occasions
- identifying suitability of materials to the design, function and cost requirements of millinery items.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- the composition of materials and components used in the production of millinery items
 - natural
 - synthetic
 - man-made
 - animal
 - vegetable
 - mineral
 - chemical
- materials and components suitable for the design and production of millinery items:
 - traditional and non-traditional materials used in millinery construction
 - contemporary materials
 - foundation and support materials
 - adhesives
 - wire
 - fishing line
 - plastic tubing
 - sizing
 - canvas

- sinamay
- felt pieces
- straw pieces
- braids
- ribbons
- lace
- buttons
- beads
- flowers
- feathers
- net
- fashion fabrics
- physical characteristics:
 - soft
 - pliable
 - hard
 - rigid
- the suitability of materials and components for use in the production of millinery items
- chemical-free alternatives to adhesives and size
- identification and control measures associated with the use of solvent-based substances (adhesives and size) in millinery
- chemical-free alternatives to the use of solvent-based adhesives and size
- limitations of millinery material.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in identifying materials used in millinery, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTML2002 Make flat patterns for millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML2002A Make flat patterns for millinery

Application

This unit of competency covers the skills and knowledge required to construct flat patterns for millinery using measurements, mathematical calculations and geometry.

The unit of competency applies to the construction of flat patterns onto paper or cardboard based on taken and calculated measurements.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to make millinery patterns**
 - 2.1 Identify pattern pieces and the measurements required for pattern
 - 2.2 Select model to suit design specifications
 - 2.3 Take measurements, make calculated measurements, document and check for accuracy
 - 2.4 Select manual or electronic construction method to suit pattern
 - 2.5 Select and prepare patternmaking tools and equipment
- 3 **Construct millinery pattern**
 - 3.1 Construct patterns using millinery flat pattern construction principles
 - 3.2 Apply measurements and calculations to construct pattern
 - 3.3 Check pattern pieces for accuracy, including seam allowances, ease allowance, proportion and seam match
 - 3.4 Make a test toile to check that design requirements are met
 - 3.5 Modify or alter patterns according to results from the test toile
- 4 **Finalise millinery patterns**
 - 4.1 Label pattern pieces, including grain lines, notches, pattern information and cutting instructions
 - 4.2 Complete pattern specification sheet according to workplace requirements and procedures
 - 4.3 File final patterns or pass on to the next operation
 - 4.4 Complete all required documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Taken measurements include one or more of the following:**
- head size
 - ear-to-ear measurements
 - front-to-back measurements
 - linear
 - circular

- Calculated measurements include one or more of the following:**
- radius
 - circumference
 - diameter
 - ratios
 - division
 - percentages and fractions

Electronic methods include the following:

- use of computer-aided design (CAD) programs
- electronic equipment

Unit Mapping Information

Assessment Requirements for MSTML2002 Make flat patterns for millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML2002A Make flat patterns for millinery

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- identifying pattern pieces and measurements required for a millinery design
- taking measurements and calculating measurements using set formulae
- selecting model to suit design specifications
- using flat patternmaking and pattern construction methods to develop at least two (2) patterns for millinery
- making toile to test patterns
- producing accurate final flat patterns that meet design and size requirements
- completing pattern specification sheet
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- requirements of the design and production of millinery
- models:
 - client
 - house model
 - millinery block
 - mannequin
- tools and equipment:
 - computer-aided design (CAD) system
 - square ruler
 - compass, protractor
 - tape measure
 - French curve
 - mitre ruler
 - triangles

- hole punch
- scissors
- simple mathematical calculations using set formulae
- simple geometric principles for constructing circles, squares, rectangles and angles
- millinery flat pattern construction principles:
 - circular principles
 - angular principles
 - constructing and modifying arcs
 - square blocking
 - pivoting
 - contour sectioning
 - cut and spread
- design and size requirements
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in making flat patterns for millinery, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML2003 Produce and attach millinery trims

Modification History

Release 1. Supersedes and is equivalent to LMTML2003A Produce and attach millinery trims

Application

This unit of competency covers the skills and knowledge required to produce and attach millinery trims.

The unit of competency applies to producing and attaching decorative and functional trims for individual millinery items according to design requirements.

Work is conducted according to defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to construct trims for millinery items	2.1	Interpret trim design and specifications for finished product
		2.2	Confirm material requirements
		2.3	Determine sequence for the production and attachment of trim
		2.4	Prepare materials by cutting, stiffening or shaping, according to design requirements
		2.5	Perform required measurements to confirm quantities and sizing of trim features
3	Construct millinery trim	3.1	Follow workplace procedures
		3.2	Form, sew, staple or glue trims in preparation for attachment to millinery item
		3.3	Prepare or produce trim features
4	Finalise and check millinery trim	4.1	Prepare adhesives and attachments
		4.2	Attach trim to millinery item, as required, to reflect design
		4.3	Check trimmed or finished article meets specifications, including safety of potentially dangerous items

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Potentially dangerous items include one or more of the following:

- wiring
- pins
- staples
- flower or trim wires
- dyes
- hat elastic

Unit Mapping Information

Assessment Requirements for MSTML2003 Produce and attach millinery trims

Modification History

Release 1. Supersedes and is equivalent to LMTML2003A Produce and attach millinery trims

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- using millinery trims, tools and equipment
- preparing trim components
- positioning and attaching trims to produce the required outcome on at least two (2) millinery items
- maintaining accurate records
- recognising non-conforming outcomes
- checking trimmed or finished article meets specifications, including safety of potentially dangerous items
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- millinery processes and equipment
- the composition of materials and components used in the production of millinery items:
 - natural
 - synthetic
 - man-made
 - animal
 - vegetable
 - mineral
 - chemical
- materials and components suitable for the design and production of millinery items:
 - traditional and non-traditional materials used in millinery construction
 - contemporary materials
 - foundation and support materials
 - adhesives

- wire
- fishing line
- plastic tubing
- sizing
- canvas
- sinamay
- felt pieces
- straw pieces
- braids
- ribbons
- lace
- buttons
- beads
- flowers
- feathers
- net
- fashion fabrics
- physical characteristics:
 - soft
 - pliable
 - hard
 - rigid
- trims, including fabric types, variety, their application and attachment methods:
 - ribbon
 - braid
 - fabric
 - flowers
 - badges
 - buttons
 - studs
 - eyelets
 - fastenings
 - elastic
 - cords
 - feathers
- inspection and checking procedures
- quality standards and practices
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in producing and attaching millinery trims, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML2004 Produce felt for millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML2004A Produce felt

Application

This unit of competency covers the skills and knowledge required to produce felt suitable for millinery.

The unit of competency applies to the selection and preparation of fibres for making felt to use in millinery.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to produce felt for millinery**
 - 2.1 Determine design and production requirements
 - 2.2 Consider use of new or recycled fibres or traditional fibres and select fibres appropriate for the production of felt
 - 2.3 Check fibres for quality and characteristics according to production requirements
 - 2.4 Identify and follow workplace procedures, including safe handling and processing of fibres, associated dyes and detergents
 - 2.5 Prepare suitable work area, materials and equipment, and resource requirements
- 3 **Prepare fibres for felt production**
 - 3.1 Wash and dye fibres according to design and production requirements
 - 3.2 Card and comb fibres and dry fibres, as required
 - 3.3 Transfer fibres to area for next process
- 4 **Undertake felting process**
 - 4.1 Place and layer fibres, alternating direction with each layer
 - 4.2 Place fibres onto a suitable frame or surface to be saturated with soapy water and agitated
 - 4.3 Remove fibres from frame or surface, hand rub and shrink as required
 - 4.4 Dry fibres in preparation for blocking and shaping
 - 4.5 Repeat wash if the felting is unsuccessful

- | | | | |
|---|---------------------------------|-----|--|
| 5 | Finalise felting process | 5.1 | Check felt against design and production requirements |
| | | 5.2 | Transfer felt to appropriate area for next process or pack and store |
| | | 5.3 | Dispose of all waste, and complete housekeeping and required documentation |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Felting resource requirements include one or more of the following:

- well-ventilated and lit work area
- access to hot and cold water
- facilities and equipment for cutting
- equipment for combing and carding
- facilities and equipment for washing, and using

- chemicals and dyes
- facilities and equipment for drying
- appropriate dye stuffs and chemicals
- PPE
- specification information

Felting materials and equipment include one or more of the following:

- washing equipment
- soaking equipment
- detergents and scourers
- cards and combs
- dyes
- frames
- drying machine
- PPE

Unit Mapping Information

Assessment Requirements for MSTML2004 Produce felt for millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML2004A Produce felt

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting felt design and production requirements
- selecting appropriate fibres
- conducting felt production and dyeing activities on at least two (2) occasions
- producing felt to design and production requirements on at least two (2) occasions
- applying workplace procedures
- disposing of all waste, and completing housekeeping and required documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- design and production requirements for the use of felt in millinery:
 - customer specifications
 - cost
 - quantity
 - quality
 - colour
 - tools and equipment
 - specific expertise
 - raw materials
- new, recycled or traditional fibres appropriate for the production of felt:
 - natural
 - synthetic
 - man-made
 - animal
 - vegetable
- quality and characteristics of various fibres used in the production of felt

- handling requirements for the preparation of fibres
- resource requirements for the preparation of fibres and the production of felt
- practices for packing, labelling and storing prepared fibres and finished felt
- types of frames or equipment suitable for the production of felt:
 - wooden
 - metal
 - plastic
- requirements for rubbing and matting fibres for felt production
- housekeeping requirements of the workplace
- documentation requirements relevant to the production of felt:
 - batch number and date
 - record of preparation and production techniques used
 - customer order information
 - requirements for next stage of production
 - dye recipe
- practices for recording and reporting
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in producing felt for millinery, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML2005 Place and cut millinery patterns

Modification History

Release 1. Supersedes and is equivalent to LMTML2005A Place and cut millinery patterns

Application

This unit of competency covers the skills and knowledge required to place and cut millinery patterns from millinery materials.

The unit of competency applies to selecting and using patterns, shapes or templates to cut millinery materials. Millinery materials include millinery fabrications, and cutting equipment will vary according to the requirements of the millinery item.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to cut millinery patterns**
 - 2.1 Select and prepare tools, equipment and work area according to workplace procedures
 - 2.2 Select and prepare millinery patterns and materials
 - 2.3 Check patterns and materials against specifications and quality standards
 - 2.4 Identify special placement and cutting requirements of materials
 - 3 **Lay out millinery materials and patterns**
 - 3.1 Lay out a single ply of materials in accordance with specifications and placement and cutting requirements
 - 3.2 Lay out multiple plies of materials in accordance with specifications and placement and cutting requirements
 - 3.3 Manipulate patterns according to specifications
 - 3.4 Transfer pattern shapes to material ready for cutting
 - 4 **Cut out millinery shapes and finalise work**
 - 4.1 Cut material using cutting equipment suited to the requirements of the millinery item
 - 4.2 Cut straight lines, curves and angles accurately and smoothly
 - 4.3 Inspect cut pieces for quality and rectify cutting faults

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Selected and checked includes one or more of the following:

- collating pieces
- checking for completeness
- interpreting labelling
- interpreting markings
- identifying notches
- interpreting cutting instructions

Quality standards include one or more of the following:

- fabric faults
- smooth cutting
- notches cut
- correct grain
- shapes match
- nap correct

Special placement and cutting requirements include one or more of the following:

- handling
- directional (nap, grain and irregularities in thickness and colour of fabrication)

- stretch and stability
- print placement and matching

Unit Mapping Information

Assessment Requirements for MSTML2005 Place and cut millinery patterns

Modification History

Release 1. Supersedes and is equivalent to LMTML2005A Place and cut millinery patterns

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- selecting and identifying millinery patterns, shapes and templates
- selecting appropriate millinery materials and fabrications
- laying out millinery materials and fabrications in accordance with specifications and placement and cutting requirements
- placing patterns and templates on millinery materials and fabrications on at least two (2) occasions
- cutting straight lines, concave and convex curves, obtuse and acute angles, on at least two (2) occasions, according to requirements
- recognising and rectifying cutting faults to satisfy quality standards.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- range of millinery materials, fabrications and their characteristics:
 - linings
 - millinery fabrications
 - foundation fabrics
 - flat materials
 - moulded materials
 - interlinings and interfacings
 - woven
 - non-woven
 - knitted
 - trimming materials
 - single ply
 - multiple plies
 - given specifications

- pattern shapes for millinery
- tools and equipment used in millinery patternmaking:
 - pins
 - marking pencil or pen
 - fabric weights
- millinery pattern specification sheets
- manipulation:
 - grain
 - matching material pattern
 - nap
 - efficient yield
- placing patterns on material to meet specifications and requirements:
 - pinning
 - outlining
 - using pattern weights
- using cutting equipment:
 - scissors
 - roller blade cutter
 - Stanley knife
 - electric cutter
 - cutting mat
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in placing and cutting millinery patterns, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML2006 Make millinery with flat pattern components

Modification History

Release 1. Supersedes and is equivalent to LMTML2010A Make millinery with flat pattern components

Application

This unit of competency covers the skills and knowledge required to perform the tasks associated with making or copying millinery from a flat pattern.

The unit of competency applies to making millinery using flat pattern components. It involves the use of non-critical fabrics, including natural and synthetic materials.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to make millinery**
- 2.1 Confirm pattern requirements and identify construction requirements
 - 2.2 Prepare materials for millinery product
 - 2.3 Check pattern to confirm sizing and make minor adjustments to the pattern, where required
 - 2.4 Check fabric or material for faults to ensure conformance to standards
 - 2.5 Lay up fabric or material for cutting, as required
- 3 **Cut material or fabric to pattern**
- 3.1 Select cutting tools and equipment appropriate for the fabric
 - 3.2 Cut laid-up material or fabric to meet the pattern specifications
 - 3.3 Inspect cut work to ensure it conforms to work specification
 - 3.4 Rectify and report faults, where required
- 4 **Fuse and sew millinery**
- 4.1 Match millinery pieces and sew or fuse to meet the requirements of the pattern specifications
 - 4.2 Assess millinery machine operation in accordance with workplace procedures
 - 4.3 Inspect sewn or fused pieces to confirm quality and conformance to specifications
 - 4.4 Identify faults and take appropriate action to meet quality standards

- 4.5 Undertake recording and reporting, as required, according to workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Fabric or materials include one or more of the following:**
- their application in millinery manufacture
 - composition
 - effects of temperature and steam
 - non-critical fabrics
 - natural materials
 - synthetic materials

- Millinery machines and equipment include one or**
- standard sewing machine
 - overlocker

more of the following:

- seamer
- iron
- press
- hot glue gun
- scissors
- measuring tools

Unit Mapping Information

Assessment Requirements for MSTML2006 Make millinery with flat pattern components

Modification History

Release 1. Supersedes and is equivalent to LMTML2010A Make millinery with flat pattern components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- confirming pattern requirements and identifying construction requirements
- preparing and handling millinery materials
- safely using cutting implements and sewing machines
- using patterns to set out and cut materials on at least two (2) occasions
- checking and adjusting pattern as required to meet requirements
- matching millinery pieces and sewing or fusing to meet the requirements of the pattern specifications on at least two (2) occasions
- identifying faults, non-conforming materials or components and making required adjustments to meet quality standards
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- industry and product processes and equipment
- materials and their application in millinery manufacture, including their composition and effects of temperature and steam:
 - non-critical fabrics
 - natural materials
 - synthetic materials
- pattern sizing and adjustment
- machine operation
- inspection and checking procedures
- quality standards
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in making millinery with flat pattern components, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML2007 Block and shape millinery by hand

Modification History

Release 1. Supersedes and is equivalent to LMTML2007A Block and shape millinery by hand

Application

This unit of competency covers the skills and knowledge required to perform blocking and shaping processes of millinery by hand. It includes selecting and, where applicable, modifying the block.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

- | | | | |
|---|---|-----|---|
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to block and shape millinery by hand | 2.1 | Confirm blocking and shaping requirements to ensure correct design application |
| | | 2.2 | Assemble and prepare selected materials ready for preparation process |
| | | 2.3 | Select block to suit design |
| | | 2.4 | Adapt block, where necessary, to ensure correct application |
| 3 | Block millinery | 3.1 | Prepare fibre or material and process over steam vent ensuring safe processes are followed |
| | | 3.2 | Pre-block hood to pre-stretch the fibres, if required |
| | | 3.3 | Perform final blocking to shape the secondary components, including brim, collar line or to obtain particular indentation |
| | | 3.4 | Allow hood to dry on the block, either naturally or by artificial means |
| | | 3.5 | Add stiffening to the hat, where required, before being removed |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of

the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Block machines and equipment include one or more of the following:

- block
- steamer
- pins
- cord
- hot block
- iron
- hat stretcher
- cutting tools

Assessment Requirements for MSTML2007 Block and shape millinery by hand

Modification History

Release 1. Supersedes and is equivalent to LMTML2007A Block and shape millinery by hand

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- confirming blocking and shaping requirements to ensure correct design application
- assembling and preparing selected materials ready for preparation process
- selecting appropriate block and adapting, if required, to meet requirements
- preparing fibre or material and processing over steam vent and ensuring safe processes are followed, on at least two (2) occasions
- operating machines or equipment, including steam equipment, used within the enterprise, on at least two (2) occasions
- pre-blocking hood to pre-stretching the fibres, if required
- performing final blocking to shape the secondary components, including brim, collar line or to obtain particular indentation on at least two (2) occasions
- allowing hood to dry on the block, either naturally or by artificial means
- adding stiffening to the hat, where required.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- industry and product processes and equipment
- manual use of blocks
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in blocking and shaping millinery by hand, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML2008 Assemble simple blocked millinery components

Modification History

Release 1. Supersedes and is equivalent to LMTML2008A Assemble simple blocked millinery components

Application

This unit of competency covers the skills and knowledge required to prepare and assemble blocked millinery components.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under some supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs

		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to assemble components	2.1	Confirm requirements for assembling headwear components
		2.2	Identify and obtain millinery components to be used
		2.3	Pin, tack or otherwise prepare components for assembly
3	Assemble millinery components	3.1	Sew or glue millinery components together by hand or machine to meet design requirements
		3.2	Inspect assembled components to ensure work meets workplace procedures and quality standards
		3.3	Identify non-conformance to standards and rectify, as required
		3.4	Report and record faults according to workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE

- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Millinery components include one or more of the following:

- woven straw
- straw braid
- fabrics
- fur
- skin
- fel

Machines and equipment include one or more of the following:

- standard sewing machine
- overlocker
- hot glue gun
- wiring machine
- iron
- steamer

Assessment Requirements for MSTML2008 Assemble simple blocked millinery components

Modification History

Release 1. Supersedes and is equivalent to LMTML2008A Assemble simple blocked millinery components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- confirming requirements for assembling headwear components
- obtaining the millinery components to be used
- preparing components and materials for assembly
- pin, tack or otherwise prepare components for assembly
- selecting and using a variety of attachment methods
- sewing at least two (2) millinery components by hand or machine or glue together to meet design requirements
- inspecting assembled components to ensure work meets workplace procedures and quality standards
- operating machines and equipment safely, including heat and steam equipment used within the enterprise, on at least two (2) occasions
- recognising faults or non-conforming outcomes and rectifying as required
- applying workplace procedures
- recording and reporting outcomes.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- industry and product processes and equipment
- materials and their application in millinery manufacture, including their composition and effects of temperature and steam
- blocked millinery components:
 - woven straw
 - straw braid
 - fabrics
 - fur
 - skin

- felt
- assembly or attachment methods:
 - hand sew
 - machine sew
 - glue
 - fuse
- inspection and checking procedures
- workplace procedures
- reporting and recording practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in assembling simple blocked millinery components, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTML2009 Apply millinery sewing and adhesion techniques

Modification History

Release 1. Supersedes and is equivalent to LMTML2009A Apply millinery sewing and adhesion techniques

Application

This unit of competency covers the skills and knowledge required to select and apply appropriate sewing and adhesion techniques to millinery construction and finishing processes.

The unit of competency applies to identifying and applying a variety of hand sewing techniques used in millinery for joining, attaching components, attaching trims and finishing processes, and the safe use of millinery adhesives where appropriate.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- | | | |
|---|-----|---|
| requirements | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 Prepare to apply hand sewing and adhesion techniques | 2.1 | Identify hand sewing techniques and millinery adhesives, and their application processes to millinery design and construction |
| | 2.2 | Select threads and needles for the millinery application |
| | 2.3 | Apply sewing techniques to millinery materials and components |
| | 2.4 | Select adhesives that are compatible to the millinery materials and millinery application |
| | 2.5 | Follow manufacturer instructions for the use and application of adhesives |
| 3 Use sewing and adhesion techniques to finish millinery | 3.1 | Select sewing or adhesion techniques according to finishing requirements of millinery design |
| | 3.2 | Prepare millinery components for finishing. |
| | 3.3 | Finish millinery for presentation or despatch |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Hand sewing techniques include one or more of the following:

- buttonhole stitch
- backstitch
- tacking
- straight hemming
- slip stitch
- stab stitch
- darning
- diagonal basting
- lacing stitch
- glove-stitch
- catch stitch

Millinery application processes include one or more of the following:

- attaching wire
- brim edge-finishing
- applying linings
- applying head ribbons
- joining leather, felt and canvas
- attaching trims
- attaching labels
- adhesion techniques where hand sewing cannot be used effectively

- Compatible includes one or more of the following:**
- interpreting manufacturer advice on the chemical composition of the adhesive in order to determine the suitability of the adhesive to the millinery materials and the purpose for which it needs to be applied
 - testing the adhesive on a sample of the millinery materials to which it is to be applied

Assessment Requirements for MSTML2009 Apply millinery sewing and adhesion techniques

Modification History

Release 1. Supersedes and is equivalent to LMTML2009A Apply millinery sewing and adhesion techniques

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, manufacturer instructions
- selecting and applying appropriate millinery hand sewing techniques according to the needs of the design on at least two (2) occasions
- selecting and using millinery adhesives according to manufacturer instructions and workplace procedures on at least two (2) occasions
- testing compatibility and suitability of millinery adhesives to millinery materials
- following manufacturer instructions for the use and application of millinery adhesives
- finishing millinery using appropriate millinery hand sewing and adhesion for presentation or despatch.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- millinery hand sewing techniques:
 - buttonhole stitch
 - backstitch
 - tacking
 - straight hemming
 - slip stitch
 - stab stitch
 - darning
 - diagonal basting
 - lacing stitch
 - glove-stitch
- millinery adhesives
- millinery application processes:
 - attaching wire

- brim edge-finishing
- applying linings
- applying head ribbons
- joining leather, felt and canvas
- attaching trims
- attaching labels
- adhesion techniques where hand sewing cannot be used effectively
- threads and needles used in hand sewing for millinery
- hazard identification and control measures associated with using and storing millinery adhesives
- finish procedures:
 - attaching labels and tags
 - adjusting the positioning of trims
 - attaching trims
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in applying millinery sewing and adhesion techniques, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML3001 Make flat patterns from hat blocks

Modification History

Release 1. Supersedes and is equivalent to LMTML3001A Make flat patterns from hat blocks

Application

This unit of competency covers the skills and knowledge required to make flat patterns from hat blocks.

The unit of competency applies to interpreting a millinery design or rough millinery sketch, selecting a block suitable for the design or sketch, and developing flat patterns by directly using the 3-D hat block.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTML2002 Make flat patterns for millinery

MSTML2007 Block and shape millinery by hand

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to make flat patterns from hat blocks**
 - 2.1 Set up workstation according to workplace procedures and select millinery tools and equipment
 - 2.2 Analyse design information and interpret specifications to identify component shapes of the millinery item
 - 2.3 Determine hat blocks needed to achieve the crown and brim shapes of the design
 - 2.4 Select hat blocks according to design and head size
 - 2.5 Prepare hat blocks
 - 2.6 Select and prepare medium to be used for making the patterns

- 3 **Develop and test millinery patterns**
 - 3.1 Apply medium to hat blocks
 - 3.2 Mark millinery design lines onto pattern medium according to specifications of millinery design
 - 3.3 Check design proportions in relation to millinery design and placement of the hat on the head
 - 3.4 Cut first patterns by applying patternmaking techniques for millinery
 - 3.5 Test and check patterns by making a mock-up or toile in paper or other millinery foundation material
 - 3.6 Make full patterns suitable for single layer cutting or the hat

- | | | | |
|---|--------------------------|-----|--|
| 4 | Finalise patterns | 4.1 | Adjust patterns, where necessary, to comply with design and size |
| | | 4.2 | Finalise patterns and add cutting instruction, grainline and notches |
| | | 4.3 | Check patterns against quality criteria and workplace procedures |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Medium includes one or more of the following:

- paper that is cut and spread or lapped to fit the 3-D shape of the hat block
- buckram that is moistened, blocked and dried on the hat block ready for marking the design lines onto the 3-D shape
- leno used as buckram

- vylene used as paper
- adhesive paper tape that is layered over plastic cling-film already covering the hat block

Checking patterns includes :

- accuracy of patterns
- proportion
- shape
- head size and fit
- ease and comfort
- placement on head (front view, back view, left and right profiles)
- suitability of chosen millinery materials and fabrications

Finalising patterns includes :

- transferring patterns to final paper format
- adding and checking seam allowances
- labelling
- markings
- cutting instructions
- notches
- meeting quality criteria, such as:
 - checking seam lengths
 - accurate measurements
 - specifications

Assessment Requirements for MSTML3001 Make flat patterns from hat blocks

Modification History

Release 1. Supersedes and is equivalent to LMTML3001A Make flat patterns from hat blocks

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting design sketch or illustration, analysing design information and interpreting specifications to identify component shapes of the millinery item
- determining and preparing suitable blocks to meet design and head size
- marking millinery design lines onto pattern medium according to specifications of millinery design
- using millinery tools and equipment to cut first patterns
- developing mock-up to test patterns using techniques according to workplace procedures
- adjusting patterns, where necessary, to comply with design and size
- finalising at least two (2) patterns and adding cutting instruction, grain line and notches
- checking patterns against quality criteria and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting design sketch or illustration, analysing design information and interpreting specifications to identify component shapes of the millinery item
- determining and preparing suitable blocks to meet design and head size
- marking millinery design lines onto pattern medium according to specifications of millinery design
- using millinery tools and equipment to cut first patterns
- developing mock-up to test patterns using techniques according to workplace procedures
- adjusting patterns, where necessary, to comply with design and size
- finalising at least two (2) patterns and adding cutting instruction, grain line and notches
- checking patterns against quality criteria and workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in making flat patterns from hat blocks, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTML3002 Block and shape complex millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML3002A Block and shape complex millinery

Application

This unit of competency covers the skills and knowledge required to block and shape complex millinery shapes using millinery materials and hat blocks.

The unit of competency applies to selecting brim and crown hat blocks appropriate to the complex millinery shape and design, and using manual moulding and shaping operations to block the shapes in suitable millinery materials.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTML2007 Block and shape millinery by hand

MSTML3004 Identify performance and handling requirements of millinery materials

by hand

- 4.3 Add stiffening to the blocked shapes, where required, according to the performance characteristics of the millinery materials
- 4.4 Conduct work according to workplace procedures
- 4.5 Prepare blocked shapes for the next step in the millinery production process

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Complex shapes include one or more of the following:

- a combination of unusual and contrasting shapes
- intricate and complex silhouette
- 3-D shapes
- 2-D shapes

- harmonious shapes
- contrasting shapes
- concave shapes
- convex shapes
- curvilinear shapes
- combinations of shapes

Prepare millinery materials includes one or more of the following:

- confirming the selection of materials according to the design
- confirming that selected materials are suited to the blocking and shaping process
- cutting materials to a manageable size, if required
- identifying handling and performance characteristics of the millinery materials
- steaming and/or moistening the materials according to identified handling and performance characteristics of the materials

Assessment Requirements for MSTML3002 Block and shape complex millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML3002A Block and shape complex millinery

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- analysing a millinery design to determine crown and brim shapes and shapes of other components
- assessing suitability of millinery materials and components to the blocking and shaping operations required of the millinery design
- identifying performance characteristics and handling of the selected millinery materials and components
- preparing and manipulating traditional and non-traditional millinery materials to produce required shapes using hat blocks
- using manual initial and final blocking and shaping techniques with hat blocks to achieve at least two (2) complex millinery shapes
- finalising complex blocked shapes for millinery with an intricate and complex silhouette on at least two (2) occasions
- preparing blocked shapes for the next step in the millinery production process
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- the performance characteristics and handling of millinery materials
- industry and product processes and equipment
- preparation of hat blocks:
 - modifying the shape or head size of existing blocks
 - cleaning and removing any unwanted previous markings
 - applying a protective covering to the hat block
 - selecting a spinner or stand for the hat block
- environmental aspects associated with the use of millinery solvents and adhesives
- measures associated with the use of millinery solvents and adhesives

- performance characteristics and handling of the selected millinery materials and components
- complex millinery shapes:
 - a combination of unusual and contrasting shapes
 - intricate and complex silhouette
 - 3-D shapes
 - 2-D shapes
 - harmonious shapes
 - contrasting shapes
 - concave shapes
 - convex shapes
 - curvilinear shapes
 - combinations of shapes
- blocked secondary components:
 - trims
 - functional extensions (e.g. collars)
 - aesthetic extensions
- suitability of millinery materials and components to the blocking and shaping operations required of the millinery design
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in blocking and shaping complex millinery, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML3003 Make millinery using patterns derived from hat block

Modification History

Release 1.1. Data entry errors re listed prerequisites corrected - MSTCL2001 replaced with MSTFD2006. Prerequisites attached to MSTML3001 included in list. Equivalent.

Release 1. Supersedes and is equivalent to LMTML3003A Make millinery using patterns derived from hat block

Application

This unit of competency covers the skills and knowledge required to place flat patterns derived from a hat block, onto millinery material, cut out and make the millinery.

The unit of competency applies to situations where the cutting and making of the millinery item will be from a set of patterns that have been developed for a one-off item of model millinery.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTFD2006 Use a sewing machine for fashion design

MSTML3001 Make flat patterns from hat blocks

MSTML2002 Make flat patterns for millinery

MSTML2005 Place and cut millinery patterns

MSTML2007 Block and shape millinery by hand

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to make millinery	<p>2.1 Select and prepare millinery tools, equipment and work area according to workplace procedures</p> <p>2.2 Select and collate patterns and materials or fabrications, according to specifications</p> <p>2.3 Collect materials and fabrications and check for quality, width and pressing and steaming requirements</p> <p>2.4 Confirm cutting requirements with design specification and pattern information</p>
3	Place millinery patterns and cut out pattern shapes	<p>3.1 Spread materials or fabrications single layer, and adjust according to pattern requirements</p> <p>3.2 Check materials or fabrications for faults and take required action to eliminate or isolate faults</p> <p>3.3 Place full patterns on materials or fabrications according to specifications, ensuring that left and right side patterns are according to requirements of an asymmetric design, if relevant</p> <p>3.4 Mark pattern shapes on materials and fabrications according to requirements of the material and job</p>

- 3.5 Cut materials and fabrications using cutting equipment in accordance with requirements for the operation
 - 3.6 Inspect cut work, identify any faults and take appropriate action to ensure the cut pieces meet the required quality standards
- 4 **Assemble and finish millinery**
- 4.1 Plan assembly process and lay out work pieces in sequence
 - 4.2 Set up machinery for assembly process and operate in accordance with type of operation, fabric and workplace procedures
 - 4.3 Join cut pieces together in accordance with work plan and quality standards, and reject or correct faults
 - 4.4 Block and mould sewn millinery and size according to specifications
 - 4.5 Trim millinery according to design requirements.
 - 4.6 Apply labels and complete records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions

- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Patterns include the following:

- flat patterns
- a full set of patterns to be cut single layer

Materials or fabrications include one or more of the following:

- traditional and non-traditional millinery material
- pre-formed and flat
- linings
- interlinings
- interfacings
- natural, synthetic and composite
- woven, non-woven and knitted

Placing full patterns includes one or more of the following:

- considering material grain, stretch, nap, texture, print, irregularities and efficient usage
- identifying right and left side patterns for asymmetric designs
- identifying reverse side and face side of materials or fabrications for placement of pattern pieces
- placing each pattern on a single layer of material or fabrication
- identifying the correct fabric for each pattern piece where multiple materials or fabrications are to be used in the one millinery item

Marking pattern shapes includes one or more of the following:

- attaching patterns to materials or fabrications using pins or tacks
- outlining patterns on materials or fabrications using chalk or pencil

Unit Mapping Information

Release 1.1. Data entry errors re listed prerequisites corrected - MSTCL2001 replaced with MSTFD2006. Prerequisites attached to MSTML3001 included in list. Equivalent.

Release 1. Supersedes and is equivalent to LMTML3003A Make millinery using patterns derived from hat block

Links

Assessment Requirements for MSTML3003 Make millinery using patterns derived from hat block

Modification History

Release 1.1. Data entry errors re listed prerequisites corrected - MSTCL2001 replaced with MSTFD2006. Prerequisites attached to MSTML3001 included in list. Equivalent.

Release 1. Supersedes and is equivalent to LMTML3003A Make millinery using patterns derived from hat block

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- selecting and preparing pattern and materials or fabrications according to specifications
- collecting materials and fabrications and checking for quality, width, and pressing and steaming requirements
- confirming cutting requirements with design specification and pattern information
- marking pattern shapes on materials and fabrications according to requirements of the material and job
- cutting out materials or fabrications
- preparing and using sewing machinery
- assembling cut pieces for at least two (2) millinery items according to plan
- finishing at least two (2) millinery with trims and labels according to specifications
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- specifications:
 - material
 - quantity
 - machinery type
 - design
- millinery tools and equipment:
 - pins
 - marker pens and pencils

- tape measure
- wire
- fabric weights
- hat blocks
- steaming equipment
- tape and cord
- needles
- thread
- shapes, labelling and markings for millinery patterns
- cutting tools and equipment:
 - dressmakers shears
 - electric cutters or blades
 - roller blade
 - Stanley knives
- sewing machinery:
 - lockstitch
 - zigzag
 - leather sewer
 - special attachments
- quality procedures
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in making millinery using patterns derived from hat block, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML3004 Identify performance and handling requirements of millinery materials

Modification History

Release 1. Supersedes and is equivalent to LMTML3004A Identify performance and handling requirements of millinery materials

Application

This unit of competency covers the skills and knowledge required to identify performance and handling requirements of traditional and non-traditional millinery materials.

The unit of competency applies to materials used in the production of millinery and the skills and knowledge required to guide the selection of millinery material suitable to various millinery applications.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTML2001 Identify materials used in millinery

Competency Field

Millinery

Unit Sector

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

Performance characteristics include two or more of the following:

- abrasion
- wearability
- absorbency
- durability
- elasticity
- heat sensitivity
- colour fastness
- strength

Performance testing includes one or more of the following:

- testing to meet established outcomes for traditional millinery materials in accordance to site policies and procedures:
 - light
 - heat

- steam
- application of adhesives
- application of size (stiffener)
- strength
- drape ability
- resilience

Quality indicators include one or more of the following:

- finish
- composition
- structure
- weight
- density or evenness of density
- even print or dye colour
- resilience
- suitability or workability for application
- grain
- texture

Compatibility of materials and implications for millinery construction include one or more of the following:

- identifying if the composition of the millinery materials causes limitations to usage or application
- identifying if the structure of the millinery materials causes limitations to usage or application

Assessment Requirements for MSTML3004 Identify performance and handling requirements of millinery materials

Modification History

Release 1. Supersedes and is equivalent to LMTML3004A Identify performance and handling requirements of millinery materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures and safe work practices and other reference material
- identifying the structure and composition of traditional and non-traditional millinery materials
- identifying common problems and faults of materials
- identifying material quality using established quality indicators and testing fabric performance
- conducting performance testing of millinery materials on at least two (2) occasions
- testing and identifying at least two (2) performance characteristics of traditional and non-traditional millinery materials
- identifying quality indicators of millinery materials
- using performance characteristics to describe appropriate uses of millinery materials
- identifying material finishes and implications for handling, care, cleaning and construction for at least two (2) types of millinery materials.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- traditional and non-traditional millinery materials:
 - woven and non-woven materials
 - natural and synthetic materials
 - flat or moulded materials
 - composite materials
 - foundation materials
 - linings
 - covering fabrics
 - trims
 - components (wire, ribbon and feathers)

- performance characteristics of millinery materials:
 - abrasion
 - wearability
 - absorbency
 - durability
 - elasticity
 - heat sensitivity
 - colour fastness
 - strength
- handling requirements of millinery materials
- care and cleaning of millinery materials
- finishes:
 - colouration
 - brushing
 - sizing
 - decorative surface finishes for aesthetics
 - floating threads or fibres
- quality practices
- relevant Australian Standards
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in identifying performance and handling requirements of millinery materials, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTML3005 Assemble complex blocked millinery components

Modification History

Release 1. Supersedes and is equivalent to LMTML3006A Assemble complex blocked millinery components

Application

This unit of competency covers the skills and knowledge required to assemble complex blocked millinery shapes and components that require the selection and application of advanced millinery assembly and construction techniques.

The unit of competency applies to assembling combinations of complex blocked millinery shapes, such as hand-blocked crown and brim shapes, resulting in unique millinery with an intricate silhouette.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTML3002 Block and shape complex millinery

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to assemble complex blocked millinery components**
 - 2.1 Relate blocked primary and secondary components to design specification
 - 2.2 Collate blocked components and adjust according to design of unusual and contrasting blocked shapes
 - 2.3 Perform adjustments to each component by trimming or adding extensions
 - 2.4 Select construction components and millinery assembly techniques according to the design and handling characteristics of the millinery materials, components, trims and the requirements of the design
 - 2.5 Plan sequence of operations

- 3 **Assemble and trim blocked components**
 - 3.1 Pin components, tack or otherwise ready items to assemble
 - 3.2 Apply millinery hand sewing or machine construction techniques to assemble components
 - 3.3 Inspect assembled components to ensure desired proportion and conformance with design specification
 - 3.4 Apply functional and aesthetic trims to the millinery according to the design and specification

- 4 **Finish millinery and maintain records**
 - 4.1 Steam, brush or mould the final shape
 - 4.2 Attach labels and tags
 - 4.3 Select and apply techniques to finish the millinery for

- presentation or despatch
- 4.4 Maintain finished millinery and conformance records and reports
- 4.5 Photograph finished millinery for recording purposes

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Primary and secondary components include the following:

- crown
- brim
- collar and extension
- sideband
- tip
- lining
- headband

- trim

Collated and adjusted proportion includes one or more of the following:

- temporarily assembling by pinning or tacking all components to check compliance with design
- temporarily assembling by pinning or tacking all components to check proportion on client, house model or visual merchandising prop

Unit Mapping Information

Assessment Requirements for MSTML3005 Assemble complex blocked millinery components

Modification History

Release 1. Supersedes and is equivalent to LMTML3006A Assemble complex blocked millinery components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting design specification for handling and assembling complex blocked millinery shapes
- selecting and applying appropriate millinery assembly techniques to combinations of unusual and contrasting blocked shapes
- selecting construction components and millinery assembly techniques according to the design and handling characteristics of the millinery materials, components, trims and the requirements of the design
- applying millinery hand sewing or machine construction techniques to assemble components and apply trims for at least two (2) complex millinery items
- inspecting assembled components to ensure desired proportion and conformance with design specification
- applying functional and aesthetic trims to the millinery according to the design and specification
- maintaining the integrity of the millinery design when assembling complex blocked millinery components
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- performance characteristics and handling of hand-blocked millinery materials and components
- millinery hand sewing and machine sewing assembly techniques
- construction components
- advanced construction and assembly techniques
- millinery adhesion techniques
- millinery trimming and finishing techniques

- measures associated with the use and storage of solvent-based millinery adhesives and stiffeners
- finishing processes:
 - steam, brush or mould the final shape
 - attaching labels and tags
 - techniques to finish the millinery for presentation or despatch
 - maintaining finished millinery and conformance records and reports
 - photographing finished work
 - preparing for storage, display or despatch
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in assembling complex blocked millinery components, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML4001 Undertake specific millinery construction techniques

Modification History

Release 1. Supersedes and is equivalent to LMTML4001A Undertake specific millinery construction techniques

Application

This unit of competency covers the skills and knowledge required for specific millinery construction using wire, blocks, less common materials and shapes, and a range of joining techniques to develop fashion hats and headwear.

The unit of competency applies to a range of construction techniques using common and uncommon materials. It encompasses general millinery construction techniques. Work requires individuals to demonstrate discretion, judgement and problem-solving skills in the construction of millinery items.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Determine job requirements	1.1 Follow standard operating procedures (SOPs)
	1.2 Comply with work health and safety (WHS) requirements at all times
	1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
	1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
2 Prepare to undertake specific millinery construction techniques	2.1 Use advanced wire shaping techniques and manipulate wire to create foundations for closed headwear, tiaras and abstract or complex shapes
	2.2 Join, cover and shape wire to meet complex design requirements and produce headwear, as required
	2.3 Shape and assemble uncommon materials to make headwear, trims and components according to design requirements
	2.4 Source alternative materials and prepare, as required
3 Assemble blocked headwear components	3.1 Use multiple blocks in single headwear designs, as required
	3.2 Build upon blocks to create specified shape and adapt blocks to create desired effect
	3.3 Block and shape headwear by hand to create desired effect
	3.4 Assemble converse and concave shaped components and headwear pieces
	3.5 Use advanced fabric covering techniques in headwear and suitable equipment to assemble components
4 Check and finalise headwear	4.1 Fit headwear, identify modifications and modify headwear using required techniques

- 4.2 Inspect headwear components for quality and conformance to specifications and client satisfaction
- 4.3 Identify faults and take appropriate action to ensure quality standards are met
- 4.4 Implement recording and reporting practices according to workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Materials and components include one or more of the following:

- traditional and non-traditional materials used in millinery construction
- contemporary materials
- foundation and support materials
- adhesives

- wire
- fishing line
- plastic tubing
- sizing
- canvas
- sinamay
- felt pieces
- straw pieces
- braids
- ribbons
- lace
- buttons
- beads
- flowers
- feathers
- net
- fashion fabrics

Composition of materials and components includes one or more of the following:

- natural
- synthetic
- man-made
- animal
- vegetable
- mineral
- chemical

Specific millinery construction processes include one or more of the following:

- attaching wire to complex shapes
- using advanced wire-shaping techniques
- using multiple blocks
- brim edge-finishing
- applying linings
- applying head ribbons
- joining leather, felt and canvas
- attaching trims
- attaching labels
- adhesion techniques where hand sewing cannot be used effectively

Block machines and equipment include one or more of the

- block
- steamer

following:

- pins
- cord
- hot block
- iron
- hat stretcher
- cutting tools

Complex shapes include one or more of the following:

- a combination of unusual and contrasting shapes
- intricate and complex silhouette
- 3-D shapes
- 2-D shapes
- harmonious shapes
- contrasting shapes
- concave shapes
- convex shapes
- curvilinear shapes
- combinations of shapes

Assessment Requirements for MSTML4001 Undertake specific millinery construction techniques

Modification History

Release 1. Supersedes and is equivalent to LMTML4001A Undertake specific millinery construction techniques

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- identifying the characteristics and potential use of a wide range of common and uncommon materials
- using wire to create foundations for at least five (5) different complex designs
- shaping and assembling at least five(5) uncommon materials to construct headwear, trims and components according to design requirements
- using converse and concave shaped components and advanced fabric covering techniques in headwear to meet requirements of at least three (3) complex millinery designs
- using a combination of blockings in a single millinery design
- adjusting and manipulating blocks to achieve abstract designs
- identifying faults or non-conforming materials or components
- modifying and adjusting components to meet specifications
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- millinery policies, standards and guidelines, industry codes of practice, legislative and regulatory requirements
- a range of textiles and materials, including their composition and the stretch quality of fabrics
- standard and non-standard millinery shapes and designs
- standard and less common materials and components suitable for the specific construction techniques, such as:
 - traditional and non-traditional materials used in millinery construction
 - contemporary materials
 - foundation and support materials

- adhesives
- wire
- fishing line
- plastic tubing
- sizing
- canvas
- sinamay
- felt pieces
- straw pieces
- braids
- ribbons
- lace
- buttons
- beads
- flowers
- feathers
- net
- fashion fabrics
- millinery production tools and equipment
- millinery application procedures:
 - attaching wire
 - brim edge-finishing
 - applying linings
 - applying head ribbons
 - joining leather, felt and canvas
 - attaching trims
 - attaching labels
 - adhesion techniques where hand sewing cannot be used effectively
- millinery hand sewing techniques:
 - buttonhole stitch
 - backstitch
 - tacking
 - straight hemming
 - slip stitch
 - stab stitch
 - darning
 - diagonal basting
 - lacing stitch
 - glove-stitch
 - catch stitch

- sewing, gluing, bonding or wiring techniques
- millinery accessories
- quality inspection procedures
- style options, fashion trends and total look concepts
- safety aspects relating to equipment operation
- millinery manufacture and construction techniques
- complex blocking techniques
- complex wire manipulation techniques
- historical development of various fashion styles
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in specific millinery construction techniques, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML4002 Rejuvenate millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML4002A Rejuvenate millinery

Application

This unit of competency covers the skills and knowledge required to clean, repair, re-style and re-size hats.

The unit of competency applies to identifying suitable techniques for rejuvenating millinery to achieve desired outcomes for clients. It encompasses knowledge of a wide range of materials and their response to treatment, and an ability to use a range of cleaning and repair techniques.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- | | | |
|---|-----|---|
| requirements | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 Prepare to rejuvenate millinery | 2.1 | Identify client rejuvenation requirements, including priorities, preferences, budget and timelines |
| | 2.2 | Identify suitable procedure for rejuvenation, discuss initial pricing and confirm with the client |
| | 2.3 | Obtain agreement to continue with millinery service and document client requirements |
| | 2.4 | Prepare materials, equipment and headwear for selected rejuvenation procedure |
| 3 Clean headwear to meet client requirements | 3.1 | Examine headwear item and select cleaning process most suitable to requirements |
| | 3.2 | Recognise pest damage and infestation and select process for cleaning |
| | 3.3 | Use cleaning processes and agents to clean headwear to organisational standards and as agreed to with client |
| 4 Repair and curate headwear to meet client requirements | 4.1 | Examine damage to headwear and select appropriate processes for repair |
| | 4.2 | Repair headwear according to organisational standards and as agreed to with client |
| | 4.3 | Identify vintage and style characteristics of headwear and determine curating requirements considering fabric, age and features of the item |
| | 4.4 | Undertake curating processes to ensure optimal condition of the headwear item is achieved |

- | | | | |
|---|--|-----|---|
| 5 | Re-style headwear to meet client requirements | 5.1 | Confirm process for re-styling the headwear item based on client sketches or models to present design concepts |
| | | 5.2 | Prepare materials, equipment and headwear item for re-styling, including development of pattern prices, if required |
| | | 5.3 | Re-style headwear according to organisational standards and as agreed to with client, using blocks or patterns, if required |
| 6 | Re-size headwear to new specifications | 6.1 | Examine material and design of headwear to determine suitable process for re-sizing |
| | | 6.2 | Take required measurements for re-sizing and document specifications |
| | | 6.3 | Implement re-sizing techniques according to the client needs and in consideration of fabrics, design and other materials |
| | | 6.4 | Check headwear to ensure that item design and strength are maintained after resizing process |
| 7 | Finish headwear and finalise service | 7.1 | Finish headwear according to workplace procedures |
| | | 7.2 | Check headwear to ensure quality standards are met |
| | | 7.3 | Use effective interpersonal skills to present to the client |
| | | 7.4 | Complete and maintain details of finished article and client records according to workplace procedures |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Rejuvenation requirements include the following:

- cleaning
- repairing
- re-styling
- re-sizing
- curating
-

Finish headwear includes the following:

- satisfy design specifications and client requirements
- brush, steam or press for presentation, as necessary
- conform to client needs and expectations
- conform to workplace quality standards

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTML4002A Rejuvenate millinery

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTML4002 Rejuvenate millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML4002A Rejuvenate millinery

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting rejuvenation requirements
- preparing materials, equipment and headwear for selected rejuvenation procedure
- applying all five (5) rejuvenation techniques
- using effective interpersonal skills to communicate with client
- finishing headwear according to quality standards
- presenting completed item to client
- completing and maintaining details of finished article and client records according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- selection of appropriate rejuvenation techniques:
 - cleaning
 - repairing
 - re-styling
 - re-sizing
 - curating
- vintage and style characteristics of headwear
- industry and product processes and equipment for rejuvenating hats
- materials, equipment and headwear for selected rejuvenation
- a range of textiles and materials, including their response to cleaning and manipulation techniques
- styles of hats from a range of eras
- measurements for resizing
- cleaning processes and agents to clean headwear
- repair processes:
 - sewing or stitching

- patching
- repairing or reattaching brimming
- attaching clips, decorations, straps, bows and buckles
- re-colouring patches
- replacing fabric and attachments
- curating techniques
- resizing techniques:
 - stretching
 - adding inserts
 - replacing or re-sizing elastic, brims or fasteners
 - remodelling
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in rejuvenating millinery, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML4003 Present and display millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML4003A Present and display millinery

Application

This unit of competency covers the skills and knowledge required to prepare and display millinery with consideration to display techniques, lighting, layout and cataloguing.

This unit of competency applies to identifying presentation objectives, and planning and organising displays using a range of presentation tools and techniques.

Work requires individuals to demonstrate discretion, judgement and problem-solving skills in the presentation and display of millinery items.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to present and display millinery**
 - 2.1 Confirm presentation requirements
 - 2.2 Develop plan to meet presentation requirements
 - 2.3 Select headwear to meet presentation objectives and finish to presentation standard
 - 2.4 Make adjustments to headwear, as required, for presentation
 - 2.5 Arrange suitable storage or delivery of headwear

- 3 **Arrange presentation**
 - 3.1 Design overall presentation and effect
 - 3.2 Determine display and lighting requirements
 - 3.3 Select and prepare layout tools and equipment
 - 3.4 Prepare layout and presentation to display hats and achieve desired effect
 - 3.5 Prepare presentation to comply with quality standards and workplace procedures

- 4 **Catalogue headwear**
 - 4.1 Identify method of cataloguing
 - 4.2 Prepare labels for individual hats
 - 4.3 Prepare a catalogue of the millinery presentation
 - 4.4 Document the process and maintain documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures includes one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Presentation requirements include:

- clarifying audience and objectives of presentation
- identifying presentation facilities and equipment
- identifying type of presentation
- identifying presentation conditions
- confirming available resources

Display requirements include:

- designing placement and display of headwear presentation
- preparing display models for individual hats
- selecting display techniques for individual hats
- identifying additional prop requirements

Lighting requirements include one or more of the

- obtaining lighting equipment and operators
- selecting suitable lighting techniques to meet

following:

- presentation objectives
- selecting lighting techniques appropriate for presentation type and conditions
- selecting lighting techniques appropriate for individual hat displayed
- checking power sources
- obtaining lighting equipment

Assessment Requirements for MSTML4003 Present and display millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML4003A Present and display millinery

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- developing plans for millinery presentations
- preparing hats and display items
- arranging suitable storage or delivery of headwear
- selecting headwear to meet presentation objectives, making adjustments to headwear, as required, and finishing to presentation standard
- arranging suitable storage or delivery of headwear
- selecting and preparing display and lighting techniques, layout tools and equipment to display hats and achieve desired effect
- preparing a presentation of millinery items to demonstrate at least seven (7) different designs, and comply with quality standards and workplace procedures
- identifying method of cataloguing, preparing labels for individual hats and preparing a catalogue of the millinery presentation
- documenting the process and maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- millinery policies, standards and guidelines, industry codes of practice, legislative and regulatory requirements
- industry, workplace and product processes and equipment in displaying hats and headwear
- cataloguing requirements in presenting millinery
- a range of lighting, layout and display techniques
- different types of presentations
- design techniques
- historical context of fashion style to be presented
- quality practices
- workplace practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in presenting and displaying millinery, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML4004 Manage millinery procurement and cost millinery products

Modification History

Release 1. Supersedes and is equivalent to LMTML4004A Manage millinery procurement and cost millinery products

Application

This unit of competency covers the skills and knowledge required to locate and procure materials from millinery supply chains or alternative sources, estimate preliminary pricing and calculate sale price of completed items.

This unit of competency encompasses broad knowledge of materials used in producing millinery items and research and documentation skills. Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to procure and cost millinery items**
- 2.1 Administer stock-take to assess current and future millinery supply needs
 - 2.2 Identify quantity and special features of millinery supplies
 - 2.3 Document millinery supply requirements
 - 2.4 Note special orders and timing requirements from specification sheets
- 3 **Identify millinery supply resources and estimate price**
- 3.1 Identify required millinery supply resources
 - 3.2 Establish relationships with millinery suppliers and other relevant businesses to facilitate the procurement of millinery supplies
 - 3.3 Document details of procurement suppliers and characteristics
 - 3.4 Make initial price estimation on millinery orders and advise client
 - 3.5 Document estimated price
- 4 **Procure millinery supplies**
- 4.1 Arrange procurement of common and uncommon use items with consideration to price efficiency, delivery reliability and suitability for desired outcome
 - 4.2 Prepare documents and process to procure millinery supplies in accordance with workplace procedures
 - 4.3 Document pricing
 - 4.4 Manage payment of millinery suppliers according to workplace procedures

5	Calculate sale price and manage financial records	5.1	Calculate costs of millinery raw materials, labour and additional expenses incurred in production of the item, according to workplace procedures and government taxation regulations
		5.2	Calculate total price and prepare client invoice according to workplace procedures and government taxation regulations
		5.3	Document procurement and business expenses
		5.4	Document invoicing and client sales
		5.5	Document financial transactions, process and manage according to workplace procedures and government taxation regulations

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste

disposal, pollution control and recycling

Millinery suppliers include one or more of the following:

- local millinery suppliers
- national millinery suppliers
- international millinery suppliers
- online auctions for millinery suppliers
- web based millinery suppliers
- suppliers for uncommonly used millinery items
- researching and identifying alternatives for unavailable or high price millinery items
- suppliers of items for specific orders to meet the timing and material needs of the client

Initial price estimation includes:

- using construction design specifications to identify raw materials required
- using supplier documentation to estimate pricing on raw materials
- using workplace procedure and personal experience to estimate labour requirements
- identifying additional expenses incurred in producing the item
- determining government taxation requirements
- providing initial price estimation, which reflects total estimated price for specific order, to the client

Procurement practices include, but are not limited to, the following:

- millinery pricing
- information required for procurement transactions
- labour charges
- business pricing principles
- product alternatives
- lead time on orders

Assessment Requirements for MSTML4004 Manage millinery procurement and cost millinery products

Modification History

Release 1. Supersedes and is equivalent to LMTML4004A Manage millinery procurement and cost millinery products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- conducting and recording stock-take of supplies
- identifying and recording millinery requirements
- assessing and comparing suppliers on price, reliability, efficiency and product quality of desired products
- negotiating price with suitable suppliers and clients and purchasing required items according to organisational procedures
- making preliminary price estimates on at least two (2) products to be made
- calculating costs of millinery raw materials, labour and additional expenses incurred in production of at least two (2) items, according to workplace procedures and government taxation regulations
- calculating sale prices of items
- maintaining financial records
- assessing supplier efficiency and product quality
- documenting procurement transactions, procurement and business expenses, invoicing and client sales
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- millinery policies, standards and guidelines, industry codes of practice, legislative and regulatory requirements
- industry, workplace and production processes
- a range of textiles and materials used in millinery items
- local, national and international industry suppliers
- procurement practices, including:
 - millinery pricing

- information required for procurement transactions
- labour charges
- business pricing principles
- product alternatives
- lead time on orders
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in managing millinery procurement and costing, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML4005 Undertake initial millinery consultation, subsequent fittings and finishing

Modification History

Release 1. Supersedes and is equivalent to LMTML4005A Undertake initial millinery consultation, subsequent fittings and finishing

Application

This unit of competency covers the skills and knowledge required to conduct initial client assessment, determine client needs and expectations, and provide subsequent fittings to ensure client satisfaction.

This unit of competency applies to all service interaction with clients, including interviewing, assessing needs and expectations, making recommendations, fitting items and maintaining documentation. It encompasses skills required to prepare the finished product for presentation to the client.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

Establishing client needs includes:

- using interpersonal skills to greet client
- establishing initial millinery needs
- explaining the millinery process to client
- encouraging client to express and clarify requirements and expectations, including priorities, preferences, budget

and timelines

Millinery consultation includes:

- assessing client facial features, including shape and hairstyle
- ascertaining intended use of millinery product
- discussing materials, styles and millinery features with the client
- using millinery models to demonstrate different millinery styles
- discussing cost estimates with the client
- recording size requirements

Assessment Requirements for MSTML4005 Undertake initial millinery consultation, subsequent fittings and finishing

Modification History

Release 1. Supersedes and is equivalent to LMTML4005A Undertake initial millinery consultation, subsequent fittings and finishing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- establishing client needs and expectations and obtaining agreement to continue with millinery service
- conducting at least two (2) initial millinery consultations, using props and demonstration to help interpret and clarify client needs and expectations
- using total look styling concepts to assess client profile, make recommendations, provide style options and negotiate to reach agreement with client
- selecting appropriate materials and styles, patterns and sketches to make recommendations to client
- confirming order according to workplace procedures and arranging fittings, timelines and payment
- apply sizing systems and principles to head measurements
- using professional judgement, discretion, problem solving and interpersonal skills to discuss construction progress with client
- fitting headwear, seeking feedback and negotiating adjustments and modifications to the design on at least two (2) occasions
- finishing headwear according to workplace standards and client requirements on at least two (2) occasions
- presenting completed item to client
- recording product and client details according to workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- millinery policies, standards and guidelines, industry codes of practice, legislative and regulatory requirements
- industry, workplace and product processes

- a range of textiles and materials, including their composition and the stretch quality of fabrics
- millinery production tools and equipment
- millinery pricing
- information required for complete consultation
- style options, fashion trends and total look concepts
- protocol regarding headwear and dress style for specific occasions
- sizing systems and principles for head measurements
- millinery manufacture techniques
- agreement requirements with client:
 - millinery style
 - materials
 - features
 - costs
 - timeframe
- finishing techniques:
 - brushing
 - steaming
 - pressing
 - attaching elastic
 - labelling
 - adjusting the positioning of trims
- body language
- documentation and transfer of information
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in millinery consultation, fitting and finishing, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTML4006 Sketch and prepare millinery fashion designs

Modification History

Release 1. Supersedes and is equivalent to LMTML4006A Sketch and prepare millinery fashion designs

Application

This unit of competency covers the skills and knowledge required to sketch initial hat designs and develop detailed designs to confirm client order and determine construction requirements.

The unit of competency applies to identifying design requirements and developing detailed sketches and designs to meet quality and client requirements. It encompasses design and drawing skills.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to illustrate millinery designs	2.1	Select millinery designs and shapes to be illustrated
		2.2	Obtain sketching materials
		2.3	Explain sketching objectives to the client
3	Sketch millinery designs	3.1	Produce millinery sketch in 3-D format
		3.2	Depict millinery sketch in correct proportion to the head and body
		3.3	Sketch front, back and side views, and sketch details of complex designs
		3.4	Explain features of sketch and provide alternative sketches, if necessary
		3.5	Demonstrate discretion, judgement and problem-solving skills in the production of millinery designs
4	Prepare millinery designs	4.1	Develop detailed production sketch that includes construction details
		4.2	Consider relationship to hair, figure, face and garment style in the design of millinery
		4.3	Ensure material selected has appropriate characteristics for millinery design
		4.4	Ensure combination of materials selected are appropriate for millinery design
		4.5	Experiment with alternatives and research, if necessary

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Millinery design sketches include the following:

- front, back and side views
- details of complex designs
- 3-D format
- correct proportion to the head and body
- relationship to hair, figure, face and garment style

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- selecting appropriate materials
- providing at least two (2) quality 3-D millinery sketches for at least two (2) range of styles to meet design requirements
- depicting millinery sketch in correct proportion to the head and body
- sketching front, back and side views, and sketch details of complex designs
- explaining features of sketch and provide alternative sketches if necessary
- preparing detailed construction design and identifying construction requirements in design
- proportioning designs appropriately, including head, body and garment illustrations in sketch designs
- demonstrating discretion, judgement and problem-solving skills in the production of millinery designs
- ensuring combination of materials selected are appropriate for millinery design and experiment with alternatives if necessary
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- millinery policies, standards and guidelines, industry codes of practice, legislative and regulatory requirements
- industry, workplace and product processes
- a range of textiles and materials, including their composition and the stretch quality of fabrics
- standard and non-standard millinery shapes and designs
- millinery accessories
- appropriate detail required for sketches
- style options

- total look concepts
- current fashions
- dress styles for specific occasions
- detail requirement for designs
- historical context of millinery requirements
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in sketching and preparing millinery fashion designs, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML4007 Make millinery patterns

Modification History

Release 1. Supersedes and is equivalent to LMTML4007A Make millinery patterns

Application

This unit of competency covers the skills and knowledge required to develop patterns to create individual hats that meet specified design requirements.

This unit of competency applies to confirming design requirements, developing and testing patterns and recording pattern specifications.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|---|
| 1 | Determine job | 1.1 | Follow standard operating procedures (SOPs) |
|---|----------------------|-----|---|

- | | | | |
|---|---|-----|--|
| | requirements | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to make millinery patterns | 2.1 | Interpret and clarify design and construction specifications to confirm millinery requirements |
| | | 2.2 | Obtain and prepare equipment and materials according to workplace procedures |
| | | 2.3 | Obtain suitable pattern templates, if appropriate |
| | | 2.4 | Explore construction requirements and test, if necessary |
| | | 2.5 | Determine steps required to create new pattern |
| 3 | Produce millinery pattern | 3.1 | Use precise design specifications as pattern instruction |
| | | 3.2 | Apply patternmaking principles and pattern construction methods |
| | | 3.3 | Apply the selected techniques to make pattern with consideration for cost efficiencies |
| | | 3.4 | Check pattern pieces for accuracy to include seam allowance and seam match, pattern shape and notching |
| 4 | Test millinery patterns | 4.1 | Mark out prototype or toile and cut with consideration to fabric cost efficiencies |
| | | 4.2 | Assemble prototype or toile to test feasibility |
| | | 4.3 | Test final patterns comply with design criteria and specifications, and assess accuracy and completeness |
| | | 4.4 | Label and notch final patterns |

- | | | | |
|---|-------------------------------------|-----|---|
| 5 | Record design specifications | 5.1 | Establish customer and design requirements and enter on specification sheet |
| | | 5.2 | Estimate and record material or fabric usage |
| | | 5.3 | Record labour time |
| | | 5.4 | Maintain accurate records and file patterns |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Millinery requirements includes:

- identifying design lines and features
- applying headwear sizing systems and principles
- determining appropriate pattern making method
- considering trims, finishings and fabric
- considering material characteristics and performance in

- relation to the design
- obtaining further detail if necessary

Pattern testing includes:

- determining effect of grain line on material usage, silhouette and handling
- identifying construction problems and where relevant, recommend alternative constructions
- making pattern adjustments as required
- carrying out alterations to meet fitting requirements

Assessment Requirements for MSTML4007 Make millinery patterns

Modification History

Release 1. Supersedes and is equivalent to LMTML4007A Make millinery patterns

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting and clarifying design and construction specifications to confirm millinery patternmaking requirements, and entering on specification sheet
- preparing for patternmaking activity and applying patternmaking principles and pattern construction methods
- producing at least two (2) patterns according to design requirements, selected techniques and cost efficiencies
- checking pattern pieces for accuracy, including seam allowance and seam match, pattern shape and notching
- marking out and cutting prototype or toile with consideration to fabric cost efficiencies
- assembling prototype or toile to test feasibility, and testing final patterns comply with design criteria and specifications
- assessing accuracy and completeness
- labelling and notching final patterns
- estimating and recording material or fabric usage and labour time
- recording pattern specifications, maintaining accurate records and filing patterns.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- millinery policies, standards and guidelines, industry codes of practice, legislative and regulatory requirements
- industry, workplace and production processes
- a range of textiles and materials, including their composition and the stretch quality of fabrics
- standard and non-standard millinery shapes and designs
- millinery production tools and equipment
- headwear sizing systems
- patternmaking principles and pattern construction methods

- millinery accessories
- millinery patternmaking requirements:
 - identifying design lines and features
 - applying headwear sizing systems and principles
 - determining appropriate patternmaking method
 - considering trims, finishings and fabric
 - considering material characteristics and performance in relation to the design
 - obtaining further detail, if necessary
- prototype, toile and pattern testing techniques
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

MSTML4008 Undertake couture millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML4008A Undertake couture millinery

Application

This unit of competency covers the skills and knowledge required to produce one-off hats to meet specific client needs. It encompasses and builds on customer service skills to conduct thorough assessments of needs, and production skills to deliver specially made products.

The unit of competency applies to interviewing customers, making recommendations, assessing needs and expectations, designing and producing one-off millinery items, fitting and finishing items to customer satisfaction.

Responsibility is taken for the maintenance of own work quality and requirement to contribute to the quality improvement of organisation, where necessary.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| | | 5.3 | Provide trims, additional and alternative features for consideration |
| | | 5.4 | Assist client to review headwear, decide on any modifications and confirm design |
| | | 5.5 | Address client concerns and resolve according to workplace policies and procedures |
| | | 5.6 | Make appointment for final presentation to the client |
| 6 | Finish headwear and present to client | 6.1 | Finish headwear according to client requirements, modifications and workplace procedures |
| | | 6.2 | Check headwear to ensure it conforms with client requirements and quality standards |
| | | 6.3 | Use effective interpersonal skills to present to the client and ensure satisfaction |
| | | 6.4 | Complete and maintain details of finished article and client records according to workplace procedures |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

Millinery consultation includes:

- assessing client facial features, including shape and hairstyle
- ascertaining intended use and desired effect of millinery product
- discussing materials, styles and millinery features with the client
- using millinery models and props to demonstrate different millinery styles
- discussing cost estimates with the client
- recording size requirements

Assessment Requirements for MSTML4008 Undertake couture millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML4008A Undertake couture millinery

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- accurately identifying client needs, expectations and desired outcome
- providing high-level and relevant millinery advice
- using millinery props, models and sketches to establish client needs
- using effective and professional interpersonal skills to establish relationship with the client and provide high-level, individualised customer service
- demonstrating discretion, judgement and problem-solving skills in the establishment and delivery of millinery orders
- effectively negotiating order details and price with the client for couture millinery on at least two (2) occasions
- conducting millinery fitting and identify required adjustments
- finishing headwear according to workplace standards and client requirements and presenting to client on at least two (2) occasions
- presenting completed item to the client
- applying workplace procedures
- recording client details and maintaining records according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- pricing millinery items
- appropriate millinery materials
- millinery styles
- body language
- customer focused communication to meet client expectation and satisfaction
- documentation
- sketching techniques to portray images to clients
- millinery patternmaking for one-off items
- finishing techniques:

- brushing
- steaming
- pressing
- attaching elastic
- labelling
- adjusting the positioning of trims
- documentation and record keeping according to workplace procedures records.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in couture millinery, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML4009 Modify millinery blocks to make new shapes

Modification History

Release 1. Supersedes and is equivalent to LMTML4009A Modify millinery blocks to make new shapes

Application

This unit of competency covers the skills and knowledge required to modify existing millinery blocks to make new shapes.

The unit of competency applies to selecting an existing millinery block, suitable materials and equipment, and adding these materials to the block to make a new shape to use in blocking millinery materials for a given design.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to modify millinery blocks	2.1	Interpret design to determine the hat block shape required
		2.2	Determine whether more than one block shape is required for the design
		2.3	Document the shapes required for the design
		2.4	Select and prepare equipment, materials and workstation
		2.5	Select hat blocks that will be used in the modification
3	Modify block	3.1	Prepare block to be modified according to design and/or specifications
		3.2	Plan modifications and prepare block
		3.3	Modify the block using the selected materials according to workplace procedures and requirements of the materials
4	Finalise modified block	4.1	Check proportions and styling of modified hat block against design requirements
		4.2	Check quality, durability and accuracy of modifications
		4.3	Perform any necessary adjustments

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Preparing block includes one or more of the following:

- cleaning and washing hat block
- removing any previous modifications from hat block
- checking compatibility if several hat blocks are to be used for the one modification
- covering or protecting hat block with plastic film

Planning modifications includes one or more of the following:

- drawing or marking onto the hat block the new shape
- measuring
- checking the plan against design
- determining permanency of modification
- determining effect on original shape of hat block

Quality, durability and accuracy of modifications include one or more of the following:

- smoothness
- firmness
- relationship to hat design required
- compatibility of hat block shapes to each other

- head size
- proportion

Assessment Requirements for MSTML4009 Modify millinery blocks to make new shapes

Modification History

Release 1. Supersedes and is equivalent to LMTML4009A Modify millinery blocks to make new shapes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting design sketch to determine the hat block shape or shapes required
- selecting and preparing block/s to be modified according to design and/or specifications
- selecting and preparing millinery equipment, hat block/s for modification and modification materials
- modifying at least two (2) hat blocks using the selected materials according to workplace procedures and requirements of the materials
- performing quality checks and adjustments
- checking proportions and styling of modified hat block against design requirements
- checking quality, durability and accuracy of modifications.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- measurement taking
- proportion
- millinery materials and equipment:
 - hat blocks
 - plastic film
 - cord
 - cutting tools
 - pins
 - drawing equipment
- block shapes:
 - crown
 - brim
 - section

- collar
- blocking techniques
- quality standards
- modification materials:
 - putty
 - flexible rubber or plastic shapes, such as hoses
 - buckram
 - plaster
 - improvised materials, such as papier-mâché and found objects
- requirements of modification materials:
 - manufacturer instructions
 - access to water
 - consistency of mix
 - hardening or drying time
- quality practices
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in modifying millinery blocks, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTML4010 Make couture trims

Modification History

Release 1. Supersedes and is equivalent to LMTML4010A Make couture trims

Application

This unit of competency covers skills and knowledge required to make unique trims for model and couture millinery.

The unit of competency applies to analysing a trim design and making individual trims from traditional and non-traditional materials and components to complement the overall millinery design.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTCL2016 Trim headwear

MSTML3004 Identify performance and handling requirements of millinery materials

Competency Field

Millinery

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to make couture trims**
 - 2.1 Analyse millinery design to determine and confirm trim requirements
 - 2.2 Apply workplace procedures
 - 2.3 Select quality materials for trim
 - 2.4 Test and confirm performance and handling characteristics of selected materials
 - 2.5 Confirm material selection with design or designer

- 3 **Prepare materials to make trim**
 - 3.1 Cut materials to required or manageable size
 - 3.2 Dye or tint materials, as required
 - 3.3 Embellish materials, as required
 - 3.4 Shape or mould and stiffen materials, as required

- 4 **Make couture trim**
 - 4.1 Plan construction of trim
 - 4.2 Form and construct trim and check design proportions
 - 4.3 Secure trim form and trim components
 - 4.4 Finish couture trim according to design requirements and workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Couture trims include one or more of the following:

- complex trims that require dexterity and intricate material manipulation skills
- hand and machine stitching
- intricate folded ribbon trims and bows
- tooled flowers
- folded fabric flowers
- manipulated lace motifs and braids
- manipulated beaded motifs and braids
- bias cut pleated or folded features
- intricate tassels
- sculpted feathers
- wired trims
- dyeing and colouring

Materials include one or more of the following:

- ribbons
- lace
- traditional and non-traditional millinery materials
- woven and non-woven textiles
- wire
- lace
- dyes
- threads
- beads and buttons
- feathers
- braid

Unit Mapping Information

Assessment Requirements for MSTML4010 Make couture trims

Modification History

Release 1. Supersedes and is equivalent to LMTML4010A Make couture trims

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- analysing a millinery design to identify the couture trim
- selecting materials for the trim according to the requirements of the agreed design, and performance and handling characteristics of the materials
- testing and confirming performance and handling characteristics of selected materials
- confirming material selection with design or designer
- preparing and manipulating a variety of millinery materials to make at least two (2) intricate and unique couture trims
- finishing the couture trim to design requirements
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- environmental aspects associated with the use of millinery solvents and adhesives
- hazard identification and control measures associated with the use of millinery solvents and adhesives
- variety of materials to make millinery trims:
 - ribbons
 - lace
 - traditional and non-traditional millinery materials
 - woven and non-woven textiles
 - wire
 - lace
 - dyes
 - threads
 - beads and buttons
 - feathers
 - braid

- variety of trims:
 - complex trims that require dexterity and intricate material manipulation skills
 - hand and machine stitching
 - intricate folded ribbon trims and bows
 - tooled flowers
 - folded fabric flowers
 - manipulated lace motifs and braids
 - manipulated beaded motifs and braids
 - bias cut pleated or folded features
 - intricate tassels
 - sculpted feathers
 - wired trims
 - dyeing and colouring
- performance and handling characteristics of millinery materials
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in making couture trims for millinery, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD4001 Produce knitted textile samples

Modification History

Release 1. Supersedes and is equivalent to LMTTD4001A Produce knitted textile samples

Application

This unit of competency covers the skills and knowledge required to perform knitting techniques to produce knitted design samples.

The unit of competency applies to interpreting design specifications, and using knitting machine to produce fabrics or knitted product samples such as garments, bags or shawls.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to produce knitted textile samples**
 - 2.1 Analyse pattern requirements and discuss design specifications with appropriate personnel to confirm production requirements
 - 2.2 Identify desired effects of knitting and select appropriate knitting structure and technique to match required outcome
 - 2.3 Select materials and yarns, quantities and knitting techniques according to design requirements
- 3 **Produce knitted design sample**
 - 3.1 Set up workstation, tools and equipment according to specifications and workplace procedures
 - 3.2 Check yarns to be knitted against quality standards
 - 3.3 Undertake knitting techniques to meet design specifications for sample and according to workplace procedures
 - 3.4 Monitor knitting techniques and outcomes throughout to identify production faults
- 5 **Complete production process**
 - 5.1 Rectify knit faults and production problems or reproduce sample according to modifications
 - 5.2 Finish knitted sample according to design specifications
 - 5.3 Document modifications and processes
 - 5.4 Examine outcomes with appropriate personnel and discuss and document possible modifications to design

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Production requirements include three or more of the following:

- shaping
- hems
- tension
- stitches
- patterning
- striping
- weaving
- tuck and slip
- colour
- pattern
- size
- stitch gauge
- tension

Appropriate personnel include one or more of the following:

- trainers
- colleagues
- mentors
- designers
- pattern makers
- members of the design team

Knitting techniques include two or more of the following:

- flat knitting
- circular knitting
- sock knitting
- weft knits
- warp knits
- plain, purl, double and tricot knit
- jacquard

Materials and yarns include one or more of the following:

- cotton
- buttons and components
- wool
- nylon
- acrylic
- polypropylene
- polyester cotton
- viscose
- blends

Sample includes one or more of the following:

- complete garment
- sample fabrics

Knitting tools and equipment include one or more of the following:

- knitting machines
- punch card
- blocking board
- double bed colour changer
- sewing machine
- overlocker
- garter bar and deco

Knit faults and production problems include one or more

- holes
- foreign matter
- creasing

of the following:

- lines
- runs
- machine or equipment faults

Unit Mapping Information

Assessment Requirements for MSTTD4001 Produce knitted textile samples

Modification History

Release 1. Supersedes and is equivalent to LMTTD4001A Produce knitted textile samples

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- checking operational readiness of equipment
- analysing design specifications and interpreting production requirements
- preparing yarn and thread for production
- monitoring production
- recognising and rectifying faults or problems as required
- producing at least two (2) different types of knitted samples according to design specifications
- monitoring own work and conducting quality check of sample outcome
- maintaining accurate records
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- knit modification techniques
- knitting machine techniques
- yarn characteristics
- typical fault conditions
- fault-finding procedures
- types and styles of knitted fabrics
- simple equipment maintenance techniques
- quality practices
- workplace practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in producing knitted textile samples, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD4002 Prepare stencils and screens for textile printing

Modification History

Release 1. Supersedes and is equivalent to LMTTD4013A Prepare stencils and screens for textile printing

Application

This unit of competency covers the skills and knowledge required to prepare screen print design samples for textiles.

The unit of competency applies to the use of stencil, or silk-screen printing techniques to produce designs and artwork for textiles to be used for garments, textile products, furnishing fabrics or accessories or public art commissions.

Screen printing involves the use of manual techniques, tools and equipment.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to prepare stencils and screens**
 - 2.1 Analyse design specifications and confirm stencil requirements with appropriate personnel
 - 2.2 Set up workstation, tools and equipment according to specifications and workplace procedures
 - 2.3 Identify desired effects of screen printing and select appropriate conversion technique to achieve required design outcome
 - 2.4 Prepare and label layouts and select media to prepare stencils
 - 2.5 Complete stencils and check against design

- 3 **Prepare screens**
 - 3.1 Select screen types and mesh for appropriate substrates
 - 3.2 Prepare screens for stencil process and check against quality standards
 - 3.3 Expose stencil masters according to industry specifications
 - 3.4 Develop screen images, dry and finish
 - 3.5 Apply screen preparation according to workplace procedures

- 4 **Test screens and stencil quality**
 - 4.1 Print strike off and check against design specifications to ensure quality standards are met
 - 4.2 Identify screen and stencil faults and determine causes

- 4.3 Apply modifications to screens, as required, using appropriate techniques, processes or materials
- 4.4 Complete screens and prepare for production processes
- 4.5 Examine outcomes and check against specifications with appropriate personnel

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Appropriate personnel include one or more of the following:

- trainers
- colleagues
- mentors
- designers
- members of the design team

Conversion techniques include one or more of the following:

- basic stencils
- hand cut and hand drawn stencils
- photosensitive stencils
- autographic
- digitally generated stencils
- multi-coloured separations

Finish includes one or more of the following:

- touch up and tape, as required
- wash image clean and dry
- check for pinholes
- clean wash out of image

Tools and equipment include one or more of the following:

- rulers and tape measures
- light boxes
- graph paper
- photocopier
- overhead projector
- photocopier
- computer equipment
- computer-aided design (CAD) software
- tables

Screen and stencil and production faults include one or more of the following:

- uneven screen coating
- incorrectly stretched screen mesh
- poorly registered artwork/separations
- inaccurate repeat measurements
- incorrect exposure time used
- wet coating trough causing pinholes
- warped screen frames
- insufficient print paste used
- off printing
- poorly developed image
- poor quality colour separations
- stencil opacity insufficient

Assessment Requirements for MSTTD4002 Prepare stencils and screens for textile printing

Modification History

Release 1. Supersedes and is equivalent to LMTTD4013A Prepare stencils and screens for textile printing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- preparation of stencils on at least two (2) occasions for use with textile printing
- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- using tools and equipment associated with screen printing
- analysing design specifications and interpreting production requirements
- identifying and addressing faults
- determining requirements of design and conversion to print
- making minor adjustments to equipment
- using printing techniques to test screens and stencil quality
- finalising screens ready for production
- evaluating own work, consulting relevant personnel and conducting quality checks
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics of stencil and screen types :
 - timber, steel and aluminium framed
 - butt, mitre, nailed, glued, screwed and welded
 - rectangle, rotary, hat and flat bed
- specific design and printing practices
- design types:
 - repeat patterns
 - border designs
 - placement prints
 - engineered designs
 - banners
- printing processes and practices

- different types of screens and meshes:
 - mesh types:
 - material
 - nylon
 - polyester
 - metal
 - colour:
 - white
 - yellow
 - red
 - size
 - mono or multi-filament
- screen preparation:
 - checking for mesh tension
 - degreasing
 - haze removing
 - registration marks applied
 - coating
 - different types of medium
 - ruby litho
 - designers opaque
 - ink
 - black wax crayon
 - digital prints
 - drafting film
 - pen
- conversion techniques
- stencil and printing techniques
- screen and stencil and production faults
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in preparing stencils and screens for screen printing, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD4003 Produce woven textile samples

Modification History

Release 1. Supersedes and is equivalent to LMTTD4003A Produce woven textile samples

Application

This unit of competency covers the skills and knowledge required to perform weaving techniques to produce woven design samples.

The unit of competency applies to interpreting design specifications, and using weaving looms to produce sample woven products.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to produce woven textile samples**
 - 2.1 Analyse design specifications and pattern for woven product and discuss with appropriate personnel to confirm production requirements
 - 2.2 Identify desired effects of weaving and select appropriate weaving technique to achieve required outcome
 - 2.3 Select yarns, quantities and equipment according to design requirements
- 3 **Produce woven design sample**
 - 3.1 Set up workstation, tools and equipment according to specifications for work
 - 3.2 Check yarns to be woven against quality standards
 - 3.3 Undertake weaving techniques to meet design specifications for sample and according to workplace procedures
 - 3.4 Monitor weaving techniques and outcomes throughout to identify production faults
- 4 **Check quality of sample**
 - 4.1 Check completed sample against design specifications and pattern to ensure quality standards are met
 - 4.2 Identify weaving faults and production problems and determine causes
 - 4.3 Analyse weaving process, technique and materials used to determine necessary modifications to weaving techniques, processes or patterns
- 5 **Complete production**
 - 5.1 Rectify weaving faults and production problems or reproduce sample according to modifications

process	5.2	Finish woven sample according to design specifications
	5.3	Examine outcomes with appropriate personnel and discuss and document possible modifications to design
	5.4	Complete required documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Appropriate personnel include one or more of the following:

- trainers
- colleagues
- mentors
- designers
- patternmakers
- members of the design team

- Yarns include one or more of the following:**
- singles yarns
 - plied yarns:
 - wool
 - cotton
 - silk
 - novelty
 - synthetics
 - metallics
 - unspun fleece
 - rovings
 - rag strips
 - hand spun
 - ribbon
 - silk tops
 - nylon filament

- Sample includes one or more of the following:**
- complete woven product
 - sample weave

- Weaving tools and equipment include one or more of the following:**
- 4-shaft Loom
 - shuttles (stick, rag and ski)
 - warping boards
 - cross sticks
 - scissors
 - measuring tape

MSTTD4004 Produce woven tapestry samples

Modification History

Release 1. Supersedes and is equivalent to LMTTD4004A Produce woven tapestry samples

Application

This unit of competency covers the skills and knowledge required to perform tapestry techniques to produce tapestry design samples.

The unit of competency applies to interpreting design specifications and using tapestry looms and techniques to produce tapestry design samples.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

- weaving
- tuck and slip
- colour
- pattern
- size

- tension

Appropriate personnel include one or more of the following:

- trainers
- colleagues
- mentors
- designers
- members of the design team

Tapestry techniques include two or more of the following:

- hitching on and off
- plain weave in open and closed passes
- high and low turns
- weaving of simple shapes, such as triangles, curves and circles
- hatching methods (e.g. regular and random)
- colour blending and tonal gradation
- half passing
- joins
- soumak, knot and surface texture

Yarns include one or more of the following:

- weft yarns:
 - wool
 - cotton
 - silk
 - novelty yarns
- warp yarns:
 - cotton
 - seine
 - twine

Sample includes one or more of the following:

- complete tapestry
- sample tapestry

Tapestry tools and equipment include one or more of the following:

- tapestry loom
- bobbins
- scissors
- plumb bob
- cotton
- seine

- twine
- weft yarn
- marking pen
- ruler
- masking tape
- tapestry needles
- table
- chair

 - 4.7 Complete required documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

Appropriate personnel include one or more of the following:

- trainers
- colleagues
- mentors
- designers
- members of the design team

Stencil types include one or more of the following:

- basic stencils
- hand cut and hand drawn stencils
- photosensitive stencils
- autographic
- digitally generated stencils

Meshes include one or more of the following:

- mesh types:
 - material
 - nylon
 - polyester
 - metal
- colour:
 - white
 - yellow
 - red
 - size
- mono or multi-filament

Screen printing tools and equipment include three or more of the following:

- squeegees
- blocks
- lino
- brushes
- knives
- bucket, sink or container
- mixers
- rulers and tape measures
- screen-cleaning equipment and chemicals
- vacuum boards
- carousel
- printing tables with registration systems
- exposure unit
- scales high pressure hose
- screen coaters

- fans
- blow dryers
- light box
- slide projector
- overhead projector
- photocopier
- computer equipment
- computer-aided design (CAD) software

Printing problems and production faults include two or more of the following:

- uneven screen coating
- incorrectly stretched screen mesh
- poorly registered print
- inaccurate repeat measurements
- poor squeegee action
- insufficient print paste used
- off printing
- poor preparation of substrates
- inappropriate fixing of dyes and pigments
- poorly exposed screen
- poor quality colour separations

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTD4005A Produce screen printed textiles

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTTD4005 Produce screen printed textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTD4005A Produce screen printed textiles

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- analysing design specifications and interpreting production requirements
- identifying and addressing faults
- determining effects of printing on woven and non-woven substrates
- making minor adjustments to equipment
- using printing techniques to achieve design effects on samples
- producing screen printed designs on at least three (3) different textiles
- analysing printing process, technique and medium used to determine necessary modifications to printing techniques, processes or materials
- examining outcomes with appropriate personnel and documenting possible modifications to design
- completing required documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics of fabrics
- information resources on fibres and fabrics
- printing techniques:
 - registered techniques:
 - multi-coloured
 - print rail
 - registration lays
 - placement printing
 - flatbed repeat printing
 - wet-on-wet
 - flood coat
 - dry pull

- specific design and printing practices
- screen preparation:
 - reclaim
 - de-grease
 - wash and dry
 - apply emulsion
 - registration
 - attach master and expose to light source
- printing processes and practices
- different types of screens and meshes:
 - timber, steel and aluminium framed
 - butt, mitre, nailed, glued, screwed and welded
 - rectangle, rotary, hat and flat bed
- different types of medium:
 - inks
 - dyes
 - specialist inks
 - binders
 - extenders
 - reducers
 - additives
 - thermoset
 - sublimation
- woven and non-woven substrate characteristics
- stencil and printing techniques and equipment
- textile substrates:
 - knitted fabric
 - felt
 - woven fabrics, such as wool, cotton, linen and silk
 - t- shirts
- substrate preparation:
 - laundering
 - pre-shrinking
 - dying
 - pressing
 - stretching
 - stapling to print table
- design outcomes:
 - repeat patterns
 - border designs

- placement prints
- engineered designs
- banners
- finishing:
 - touch up and tape, as required
 - wash image clean and dry
 - curing and heat setting
 - hemming
 - labelling
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in producing screen printed textiles, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD4006 Source textile materials and resources

Modification History

Release 1. Supersedes and is equivalent to LMTTD4006A Source textile materials and resources

Application

This unit of competency covers the skills and knowledge required to source materials and resources that are required for production of textiles.

The unit of competency includes skills and knowledge required to locate and compare materials and resources needed for production.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to source textile materials and resources**
 - 2.1 Identify required resources and apply research skills to locate textile resources
 - 2.2 Develop a shortlist of preferred suppliers that meet criteria and document details
 - 2.3 Analyse order and supply conditions and compare
 - 2.4 Confirm communication channels for supplier and establish communication processes for business operation
- 3 **Compare supply costs**
 - 3.1 Analyse capacity of suppliers to meet price and quality requirements and compare
 - 3.2 Identify costs, including hidden costs of purchases
 - 3.3 Compare costs of purchasing direct from overseas suppliers, contractors or manufacturers, to purchasing from local suppliers
 - 3.4 Identify and compare payment options offered by suppliers
 - 3.5 Document findings according to workplace procedures
- 4 **Order and receive textile materials and resources**
 - 4.1 Select suppliers for supply of materials and resources based on their ability to meet required specifications and competitiveness
 - 4.2 Complete orders and place with suppliers according to own and supplier business requirements
 - 4.3 Monitor orders and follow up to ensure that conditions will be met

- 4.4 Receive orders and check quality and content against documentation
- 4.5 Process invoices for payment

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Resources includes:

- materials required for production of textile products from production specifications
- expertise required for production and assess in-house availability of skills
- supply criteria in order to meet production requirements
- researching textile suppliers in Australia and overseas
- range of textile services provided by suppliers and compare with supply criteria and production

- Order and supply conditions include two or more of the following:**
- specifications
 - minimum order requirements for suppliers
 - lead times
 - capacity of suppliers to meet order and delivery requirements
 - shipping and freight options
- Materials include one or more of the following:**
- knitted fabrics, including weft knits and warp knits
 - woven fabrics, including plain, twill, satin, doggy and jacquard
 - non-woven fabrics, such as felts, nets, braids, bonded and lace
 - raw materials
 - yarns
 - man-made materials
 - recycled materials
 - dyes
 - trims
 - screens
- Suppliers include one or more of the following:**
- wholesalers
 - importers
 - mills
 - jobbers
 - converters
- Hidden costs include one or more of the following:**
- minimum order requirements
 - shipping
 - wastage
 - quality
 - tariffs or duties

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTD4006A Source textile materials and resources

Assessment Requirements for MSTTD4006 Source textile materials and resources

Modification History

Release 1. Supersedes and is equivalent to LMTTD4006A Source textile materials and resources

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- identifying production resources used in the design and development of textiles
- undertaking research to identify and evaluate at least two (2) suppliers of textile materials and resources
- accessing and comparing Australian and overseas supply chains
- making comparisons based on quality, availability, cost and time requirements
- undertaking ordering of production requirements
- monitoring and receiving orders to ensure supply meets quality standards and order conditions
- applying workplace procedures
- maintaining records of suppliers.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- materials and resources required for production
- role of shipping and customs agents
- information resources on materials, resources and suppliers:
 - yellow pages
 - internet
 - trade directories
 - trade shows
 - networks
 - agents
 - trade magazines
- criteria for making comparisons
- supply criteria:

- availability of raw materials
- timelines
- quality standards
- colour
- quantity
- reliability
- communication channels
- reputation
- price
- delivery schedule
- computer operations and internet research processes
- workplace practices and procedures for purchasing and receiving
- requirements of operations, such as:
 - development of textile product patterns
 - finishing
 - dyeing
 - knitting
 - weaving
 - illustration
 - tapestry
- local, national and international supply sources
- communication channels
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in sourcing textile materials and resources, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD4007 Analyse textile design influences

Modification History

Release 1. Supersedes and is equivalent to LMTTD4007A Analyse textile design influences

Application

This unit of competency covers the skills and knowledge required to analyse influences on textile design and production.

The unit of competency applies to research and analysis of historical and contemporary influences on textile designs and products and production processes. It includes principles and elements of design and characteristics of colour.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Analyse key influences on textile designs**
- 2.1 Identify significant historical events that have influenced textile design and analyse their effects
 - 2.2 Identify significant cultural influences on the development of textile design and analyse their effects
 - 2.3 Analyse contemporary influences on textile design
 - 2.4 Identify characteristics represented in textiles
 - 2.5 Analyse changes to production processes, including the effects of new and emerging technologies on textile designs
- 3 **Identify features of the design process**
- 3.1 Identify steps in responding to a design brief
 - 3.2 Identify commercial considerations in producing a design
 - 3.3 Identify elements of design
 - 3.4 Identify principles of design
- 4 **Source information on textile designs and products**
- 4.1 Identify possible sources of information on textile designs and products and determine means of accessing information
 - 4.2 Use information gathering tools according to workplace procedures
 - 4.3 Assess information for reliability to inform design processes
- 5 **Analyse textile**
- 5.1 Identify purpose and key features of textile product

	construction techniques	5.2	Describe desired effects of design features
		5.3	Describe production techniques applied to create design features
		5.4	Identify use of production techniques in contemporary designs
6	Identify characteristics of colour and prepare colour chart	6.1	Investigate colour and identify dimensions
		6.2	Identify relationship between value and intensity and paint a colour chart
		6.3	Prepare colour wheel and shade scale according to colour mixing principles
		6.4	Implement colour matching of garment and garment items for production
		6.5	Inspect colour charts or check against quality standards and make any changes or adjustments, as required
		6.6	Complete documentation relating to colour charts
7	Analyse influences on future directions in textiles	7.1	Identify new or emerging textiles and examine features, benefits and likely uses
		7.2	Analyse trends and influences to identify possible changes in textile production and demand
		7.3	Identify and access sources of information relating to future directions and innovations in textile design to maintain currency of industry knowledge
		7.4	Present research information using industry appropriate presentation, communication tools and formats

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures includes one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- personal protective equipment (PPE)
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Design process includes one or more of the following:

- awareness level understanding of the process to respond to a work brief
- researching sources of information
- creating art and design work, including prototypes and first drafts
- using design tools, such as illustrations, software programs and modelling materials
- awareness of commercial concepts, such as:
 - type of production
 - costs
 - timing
 - equipment (available and needed)
 - marketing and sales
 - availability of raw materials and required resources

Tools include one or more of the following:

- audio visual equipment
- computer and web technologies
- telephone
- fax machine

Purpose includes one or more of the following:

- artistic or creative
- decorative
- cultural
- environmental
- functional

Dimensions of colour include the following:

- value and tone
- hue
- chroma/intensity/clarity/saturation

Unit Mapping Information

Assessment Requirements for MSTTD4007 Analyse textile design influences

Modification History

Release 1. Supersedes and is equivalent to LMTTD4007A Analyse textile design influences

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- identifying the principles and elements of design
- using a variety of different sources, tools and technology to research information on textile design influences
- accessing and evaluating research information from at least six (6) different types of sources
- analysing influences on textile production techniques
- preparing colour charts that support textile design for at least two (2) items or products
- identifying emerging or future directions for textiles, their uses and textile production
- identifying and accessing sources of information relating to future directions and innovations in textile design to maintain currency of industry knowledge
- presenting research information using industry appropriate presentation, communication tools and formats.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- impact of key historical events, cultural influences and contemporary influences
- historical events, such as:
 - wars
 - social change
 - technological developments (e.g. industrial revolution)
 - changes in global manufacturing, design and trade
- cultural influences, such as:
 - weaving of the Pueblo Indians
 - African textiles
 - Indonesian textiles (e.g. Batik and Ikat)
 - tapestries from Scandinavia
 - medieval textiles
 - Indian textiles (e.g. block printing and tie-dying)
- contemporary influences on textiles, such as:

- invention of new technologies
- innovations in design and production
- contemporary art movements
- fashion trends
- personal influences, such as career development and early influences
- the supply and availability of raw materials
- economic factors related to industry
- climate
- image of certain textiles
- trend patterns of different textiles
- recycling and sustainability
- characteristics represented in textiles, such as:
 - gender
 - nationality
 - religious status or affiliation
 - political status or affiliation
 - social or economic status
 - personal achievements
 - lineage
- textile production processes and impact of changes in technology
- elements of design:
 - line
 - shape and silhouette
 - colour
 - texture
 - value
- principles of design:
 - repetition
 - pattern
 - gradation
 - rhythm
 - radiation
 - harmony
 - contrast
 - dominance
 - proportion
 - balance
 - unity
- sources of information on textiles and textile products
- textile construction and production techniques

- characteristics of colour
- new and emerging textiles and trends in textile design
- research techniques:
 - library
 - internet
 - journals and periodicals
 - books
 - reference manuals
 - television shows
 - documentaries
 - museums
 - galleries
 - workshops or studios
 - textile producers
 - yarn suppliers
 - industry councils or bodies
 - other industry professionals
- industry appropriate presentation media, communication tools and techniques
- communication tools:
 - inspiration board
 - storyboard
 - personal presentation
 - demonstration
 - models
 - samples
 - multimedia tools
 - print and audio tools
 - demonstration or exhibition:
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in textile design influences, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD4008 Present and promote textile design concepts

Modification History

Release 1. Supersedes and is equivalent to LMTTD4008A Present and promote textile design concepts

Application

This unit of competency covers the skills and knowledge required to present and promote textile design concepts to clients or other industry professionals.

The unit of competency applies to using a range of communication and presentation skills and tools to present and promote textile design concepts to clients or other industry professionals.

The unit of competency applies to work in a production environment where design decisions impact on the work and where design concepts must be communicated to other industry professionals with a view to gaining agreement for further development.

Work is supervised and may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

- | | | |
|---|--|---|
| 1 | Determine job requirements | 1.1 Follow standard operating procedures (SOPs) |
| | | 1.2 Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions |
| | | |
| 2 | Prepare to present design concepts | 2.1 Analyse design brief to identify purpose of textile product and performance requirements |
| | | 2.2 Identify other key requirements for textile product |
| | | 2.3 Analyse priorities of client or industry professionals |
| | | 2.4 Identify purpose of presentation and select form of communication to maximise impact of design |
| | | 2.5 Negotiate presentation details to enable sufficient time for preparation |
| | | |
| 3 | Develop visual tools to communicate textile design concepts | 3.1 Identify sources of design ideas and the application of design principles to the textile design |
| | | 3.2 Develop inspiration or storyboards to visually demonstrate the process of design development and the key features of the design |
| | | 3.3 Select or develop other visual tools to positively demonstrate key features of textile design |
| | | |
| 4 | Prepare for presentation | 4.1 Select and prepare resources required for presentation |
| | | 4.2 Prepare presentation area as appropriate for audience needs and resource requirements, and according to workplace procedures |
| | | 4.3 Plan presentation to meet key objectives and client priorities |

- | | | | |
|---|-----------------------------|-----|---|
| 5 | Conduct presentation | 5.1 | Use effective presentation skills to explain benefits and features of design concepts and promote the product |
| | | 5.2 | Explain production techniques and considerations for developing textile product |
| | | 5.3 | Seek feedback on design concept, consider appropriate modifications to the design and respond positively |
| | | 5.4 | Seek client's commitment to design concept or further development and confirm |
| | | 5.5 | Document process and outcomes of the presentation |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS Practices

Textile products include one or more of the following:

- tapestry
- knitted fabric or items
- woven fabric or items
- screen printed fabric or items
- experimental textile effects

Key requirements include one or more of the following:

- budget
- size specifications
- style requirements
- use of colour
- use of raw materials
- deadline
- production techniques

Industry professionals include one or more of the following:

- senior designers and patternmakers
- management
- buyers
- media
- curators
- marketing departments

Visual tools include one or more of the following:

- material samples
- product samples
- colour charts
- sketches or pictures
- finished products

Resources include one or more of the following:

- PowerPoint projector
- photocopies of graphs and other information
- whiteboard or drawing board
- feedback forms
- pens
- charts
- samples and swatches to be handed out
- photographs
- brochures

Unit Mapping Information

Assessment Requirements for MSTTD4008 Present and promote textile design concepts

Modification History

Release 1. Supersedes and is equivalent to LMTTD4008A Present and promote textile design concepts

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting and responding to a design brief
- applying principles of design to design concept
- analysing design features and relating to needs and interests of audience
- collecting, creating and collating information, including inspiration and storyboards
- planning presentation to meet client needs, timeframe, location and resources
- presenting information to meet needs of audience and promote positive response
- applying appropriate verbal and non-verbal communication techniques
- seeking feedback and answering questions
- documenting process and outcomes.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- elements of design:
 - line
 - shape and silhouette
 - colour
 - texture
 - value
- principles of design:
 - repetition
 - gradation
 - rhythm
 - radiation
 - harmony
 - contrast

- dominance
- proportion
- balance
- unity
- a range of textiles and their characteristics
- interests and communication needs of industry professionals
- a range of communication tools for presentation of design concepts
- principles and methods for composing inspiration boards
- key elements and approaches to storyboard composition
- principles of effective presentation and communication
- purpose of presentation:
 - to sell textile product
 - to sell design concept for textile product
 - to gain agreement for further development
 - to test textile design and gain feedback
 - to inform of intended processes
 - to promote talents and abilities of self or enterprise
 - to showcase textile products or resources
 - to demonstrate textile production processes
- communication tools:
 - written materials
 - pictures, diagrams, sketches and storyboards
 - audio-visual materials
 - demonstration, samples
 - verbal presentation (one on one or group contexts)
 - electronic tools
- goals and aspirations of audience
- priorities for client:
 - appealing to target market
 - price range
 - market position
 - construction strategies
 - promotion opportunities
 - themes
 - corporate goals
 - timing
 - international textile influences
 - usability for mass media
 - performance
 - quality

- uniqueness
- creativity
- role of design features and benefits
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in presenting and promoting textile design concepts, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD4009 Assist in the development of textile designs

Modification History

Release 1. Supersedes and is equivalent to LMTTD4009A Assist in the development of textile designs

Application

This unit of competency covers the skills and knowledge required to assist with the development of designs for textiles products.

The unit of competency applies to assisting others to develop design concepts for textile products according to a specified brief. Work includes research, creation or adaptation of designs, and preparation of design concepts for presentation.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- | | | | |
|---|---|-----|---|
| | requirements | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to develop textile designs | 2.1 | Interpret design brief and clarify purpose of textile product |
| | | 2.2 | Determine design requirements from brief |
| | | 2.3 | Identify design constraints |
| | | 2.4 | Analyse examples of textile products that meet aspects of the design brief to clarify design objectives |
| | | 2.5 | Discuss brief with team members and establish design priorities |
| 3 | Analyse technical requirements of design brief | 3.1 | Research trends in yarns and raw materials used in similar textile products and compare against design requirements |
| | | 3.2 | Assess technical requirements associated with textile production processes, within specified guidelines and according to workplace procedures |
| | | 3.3 | Identify any additional expertise required for project |
| | | 3.4 | Identify impacts of materials and processes on design |
| 4 | Contribute to design concepts | 4.1 | Develop preliminary concepts with others to explore possibilities |
| | | 4.2 | Use storyboards, sketches or other tools used for textile designs to develop designs |
| | | 4.3 | Apply principles of design and elements of design to development of design ideas |
| | | 4.4 | Contribute ideas and discuss with team members to |

		enhance success of project
	4.5	Examine design ideas against design brief and select design for further development
	4.6	Develop sample textile product to test design concept
5	Assist in the preparation of presentation materials	
	5.1	Select techniques for presenting textile product design
	5.2	Develop support materials with team members to demonstrate features and benefits of textile design
	5.3	Document design details

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Textile products include one or more of the following:

- tapestries
- knitted products
- woven products
- screen printed products
- carpets

Research trends include one or more of the following:

- performance
- colour
- availability
- care and maintenance requirements

Design requirements include two or more of the following:

- purpose
- design specifications, such as colour, yarn type, size and patterns
- production effects, such as warp, weft and tuft
- quality standards
- budget
- timeline
- pattern or images
- reproducibility
- uniqueness

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTD4009A Assist in the development of textile designs

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTTD4009 Assist in the development of textile designs

Modification History

Release 1. Supersedes and is equivalent to LMTTD4009A Assist in the development of textile designs

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- researching textile material and process trends
- assessing technical requirements of textile brief
- assisting with the preparation of preliminary design concepts
- developing at least two (2) sample textile product to test design concept
- producing sketches and other support materials manually or using computer-aided design (CAD) systems
- developing support materials with team members to demonstrate features and benefits of textile design
- documenting design details.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- the elements and principles of design and how they are used to create good design in the textiles industry
- elements of design:
 - line
 - shape and silhouette
 - colour
 - texture
 - value
- principles of design:
 - repetition
 - gradation
 - rhythm
 - radiation

- harmony
- contrast
- dominance
- proportion
- balance
- unity
- global and local trends
- textile product construction
- research sources
- colour or colour mix and interpretation
- fabrics, fibres, yarns, accessories and their properties and characteristics
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in development of textile designs, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD4010 Apply manipulation techniques to create experimental textile samples

Modification History

Release 1. Supersedes and is equivalent to LMTTD4010A Apply manipulation techniques to create experimental textile samples

Application

This unit of competency covers the skills and knowledge required to use manipulation techniques to create a variety of different effects using fabrics, fibres and other materials for 2-D and 3-D design effects.

The unit of competency applies to the manipulation of a range of fibres, fabrics and other material used in the production of garments, accessories, interior and exterior applications, commissioned textiles and objects.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to apply manipulation techniques**
 - 2.1 Identify types of manipulation
 - 2.2 Describe effects of manipulation on different materials
 - 2.3 Describe processes used to achieve different manipulations
 - 2.4 Prepare tools and equipment to apply a range of manipulation techniques

- 3 **Identify uses of manipulation in design process**
 - 3.1 Describe uses of manipulation to inform and inspire design
 - 3.2 Describe role of manipulation as a production tool
 - 3.3 Describe effect of manipulation on the design

- 4 **Manipulate textiles to produce work sample**
 - 4.1 Apply manipulation techniques to a variety of textiles and textile products
 - 4.2 Analyse process to assess outcome
 - 4.3 Modify manipulation, as required
 - 4.4 Produce work samples of manipulated textiles
 - 4.5 Implement workplace procedures in manipulation of fabrics
 - 4.6 Use industry appropriate tools to document techniques to manipulate textiles and their effects, and retain for future reference

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Types of manipulation include three or more of the following:

- crushing
- heat application
- tucking
- pleating
- shrinking
- dyeing
- off loom weaving
- painted and printed warps
- tie dye techniques
- felt making
- paper making
- embroidery

- knotting
- looping

Materials include two or more of the following:

- knitted fabrics, including weft knits and warp knits
- woven fabrics, including plain, twill, satin, dobby and jacquard
- non-woven fabrics, such as felts, nets, braids, bonded and lace
- raw materials
- yarns
- man-made materials
- recycled materials

Tools and equipment include one or more of the following:

- poles for Shibori
- looms floor and table
- paper making kits
- tables and chairs
- access to wet areas
- dye pots hot and cold

Industry appropriate documentation techniques include one or more of the following:

- photographic display
- storyboards
- collection of samples
- filmed demonstration
- electronic data
- written documentation
- instructions
- formulae/recipes
- file notes

Assessment Requirements for MSTTD4010 Apply manipulation techniques to create experimental textile samples

Modification History

Release 1. Supersedes and is equivalent to LMTTD4010A Apply manipulation techniques to create experimental textile samples

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures and safe work practices
- undertaking a minimum of three (3) types of manipulation to create 2-D and 3-D design effects, on at least two (2) occasions
- undertaking manipulations on a range of fabrics and fibres with different characteristics
- creating work samples of manipulated textiles
- analysing performance characteristics
- using tools and equipment associated with manipulating fabrics
- documenting process and outcomes using industry appropriate tools
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- uses and performance characteristics of fibres and fabrics
- information resources on fibres and fabrics
- types of manipulation and effects on materials
- material used in the production of garments, accessories, interior and exterior applications, commissioned textiles and objects
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in applying manipulation techniques to create experimental textile samples, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD4011 Estimate costs for development of textile designs

Modification History

Release 1. Supersedes and is equivalent to LMTTD4011A Estimate costs for development of textile designs

Application

This unit of competency covers the skills and knowledge required to estimate costs associated with the development and production of textile designs.

The unit of competency applies to cost estimating for development of designs for textile products, including sample production.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to estimate costs**
 - 2.1 Analyse product and design specifications and determine yarn and other material requirements
 - 2.2 Analyse production requirements to determine impact on material selection and costs
 - 2.3 Identify costing factors to consider when purchasing materials for textile products and related production requirements
 - 2.4 Identify market forces that affect costing for the textiles industry and consider in line with purchasing requirements
- 3 **Calculate material costs for producing textile products**
 - 3.1 Estimate costs of materials for textile sample production
 - 3.2 Compare similar products from different price points within textiles industry and identify any production differences
 - 3.3 Identify hidden costs in sample production
 - 3.4 Calculate differences in costs for sample and bulk production and compare
 - 3.5 Document material cost estimate details for textile production
- 4 **Determine labour costs for producing textile products**
 - 4.1 Identify labour required for textile product production
 - 4.2 Calculate labour costs for production of sample and bulk production and compare
 - 4.3 Identify different methods of utilising labour in the textile industry and compare

		4.4	Document labour cost estimate details for textile production
5	Complete cost estimate	5.1	Use production specifications and information to identify components of costing sheets
		5.2	Develop costing sheets for sample or bulk production to meet textile industry standards
		5.3	Check costing sheets against production requirements and budget information and complete according to industry standards and workplace procedures
		5.4	Finalise cost estimates, communicate with relevant personnel and complete all documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste

- disposal, pollution control and recycling
 - WHS practices
- Costing factors include the following:**
- variable costs (e.g. materials)
 - fixed costs (e.g. overheads)
 - profit
 - industry and quality standards
- Hidden costs include one or more of the following:**
- sample textiles not included in costing of bulk production
 - equipment costs for short runs
 - labour costs for short runs
- Different methods of utilising labour include one or more of the following:**
- subcontractors
 - offshore production
- Components of costing sheets include the following:**
- date
 - style/design number
 - dimension
 - extras (e.g. printing and embroidery)
 - labour
 - freight and shipping
 - packaging
 - overheads
 - labels
 - yarn type
 - dye or colour

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMSTTD4011A Estimate costs for development of textile designs

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTTD4011 Estimate costs for development of textile designs

Modification History

Release 1. Supersedes and is equivalent to LMTTD4011A Estimate costs for development of textile designs

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- accessing and interpreting information related to production of textiles, including materials and labour costs
- identifying costing factors, including industry and quality standards
- performing calculations for all costs, including cost of sample and bulk production, material cost estimates and different sources of labour, on at least two (2) occasions
- comparing and analysing costing information and evaluating information to develop cost estimates in line with requirements
- developing costing sheets for sample or bulk production to meet textile industry standards
- checking costing sheets against production requirements and budget information, and completing according to industry standards and workplace procedures
- finalising cost estimates, communicating with relevant personnel and completing all documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- industry standards for costing specifications
- costing components:
 - raw materials
 - printing
 - machinery and equipment
 - labour
 - overheads
 - extras (e.g. trims, fibres and dyes)
 - other materials required for production
- textile products:
 - tapestries

- knitted products
- woven products
- screen printed products
- carpets
- pattern or design terminology
- style features
- market forces:
 - market demand for textile products (e.g. one-offs, samples and large scale production)
 - supply of raw materials
 - international competition
- quality standards and practices
- sequence of operations
- production requirements:
 - timelines
 - budget
 - quality standards
 - quantity
 - performance
 - use of machinery and processes
- labour requirements, such as:
 - designers
 - machinists
 - weavers
 - knitters
 - screen printers
 - dyers
 - patternmakers
 - quality controllers
 - quality control
 - packaging
 - marketing and sales
 - transportation
 - machine operators
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in estimating costs for development of textile designs, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD4012 Analyse use of colour in textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTD4012A Analyse use of colour in textiles

Application

This unit of competency covers the skills and knowledge required to analyse and apply colour theory to the design process for textile products.

The unit of competency applies to the analysis of colour theory principles and elements, and experimentation with colour to inform textile design process and produce new colour schemes.

Work is supervised and may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTGN2011 Identify fibres, fabrics and textiles used in the TCF industry

MSTTD4002 Prepare stencils and screens for textile printing

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Determine job requirements | 1.1 | Follow standard operating procedures (SOPs) |
| | | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| | | | |
| 2 | Prepare to analyse use of colour | 2.1 | Examine effects of colour dimensions |
| | | 2.2 | Identify relationship of colour theory to textile design process |
| | | 2.3 | Analyse visual or optical effects of colour |
| | | 2.4 | Collect and compare samples of textile products that demonstrate different visual effects, and apply workplace procedures |
| | | 2.5 | Analyse effects of colour used in textiles |
| | | | |
| 3 | Analyse suitable colour combinations to use in textile design | 3.1 | Develop colour combinations using computer software or manual processes |
| | | 3.2 | Use colour wheel and colour charts to assist colour investigations |
| | | 3.3 | Identify and illustrate new colour schemes |
| | | | |
| 4 | Explore colour in textile design | 4.1 | Identify different colour uses and compare for impact |
| | | 4.2 | Investigate colour forecasting options |
| | | 4.3 | Document colour investigations for future reference |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Dimensions of colour include the following:

- value or tone
- hue
- chroma/ intensity/ clarity/saturation

Visual or optical effects include two or more of the following:

- size
- density
- value
- visual mixing
- simultaneous contrast
- motion
- texture

Colour combinations include

- complementary or contrasting

- two or more of the following:**
- analogous or harmonious
 - triad
 - monochromatic

Unit Mapping Information

Assessment Requirements for MSTTD4012 Analyse use of colour in textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTD4012A Analyse use of colour in textiles

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- identifying uses of colour in textile designs
- preparing and using colour wheels and colour charts for at least two (2) textile samples
- using appropriate tools and equipment
- collecting and comparing at least ten (10) samples of textile products that demonstrate different visual effects
- using at least three (3) pieces of fabric to colour match all components to complement, such as zip, buttons, threads, linings and other appropriate trims
- documenting colour investigations for future reference
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- colour wheels and colour charts
- dimensions of colour
- visual or optical effects of colour
- uses of colour in textile designs
- characteristics of different fibres and fabrics
- tools and equipment for experimenting with colour
- workplace procedures
- documentation and record keeping.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in analysing use of colour in textiles, at least to the level being assessed, with relevant industry knowledge and experience.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD5001 Design and produce knitted textile products

Modification History

Release 1. Supersedes and is equivalent to LMTTD5001A Design and produce knitted textile products

Application

This unit of competency covers the skills and knowledge required to develop designs and produce knitted textile products to meet a specified design brief.

This unit of competency applies to interpreting and analysing a design brief and developing a design for a knitted product, such as a garment, furnishing, accessories or fabric. The design brief may be determined by a client, trainer or supervisor and may be applied to a particular context within the textile industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTD4001 Produce knitted textile samples

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to design and produce knitted textile products**
 - 2.1 Interpret design requirements and specifications from brief and analyse elements of design
 - 2.2 Develop design to meet design brief and in accordance with principles of design and product purpose
 - 2.3 Use communication tools to present knit design for feedback
 - 2.4 Respond to feedback, adjust design accordingly and confirm design for production
 - 2.5 Plan production of knitted design sample

- 3 **Produce knitted design sample**
 - 3.1 Set up workstation, tools and equipment according to specifications
 - 3.2 Check yarns to be knitted against quality standards
 - 3.3 Undertake knitting techniques to meet design specifications for sample and according to workplace procedures
 - 3.4 Check knitted sample to ensure it meets quality standards

- 4 **Evaluate design and production processes**
 - 4.1 Assess knitted sample against design specifications, pattern and design brief
 - 4.2 Identify knit faults and recognise design or production problems
 - 4.3 Analyse design and evaluate to identify opportunities for

- improvement
- 4.4 Evaluate production process to identify opportunities for improvement
- 4.5 Document process and improvements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Knitted products include one or more of the following:

- garments
- home furnishings
- accessories (e.g. scarves and bags)
- jacquard fabrics

Plan production includes the

- identifying technical aspects of production

following:

- completing specification sheet to guide production
- undertaking calculations to determine material and yarn quantities
- developing knit pattern
- selecting and preparing materials, tools and equipment required for production

Technical aspects include one or more of the following:

- lace patterns
- cut and sew techniques
- row knitting
- punch card lace
- computer cards

Materials and yarns include one or more of the following:

- cotton
- buttons and components
- wool
- nylon
- acrylic
- polypropylene
- polyester
- cotton
- viscose
- blends
- silks
- linen
- lurex

Knitting sample includes one or more of the following:

- complete garment
- sample fabrics

Knitting tools and equipment include one or more of the following:

- knitting machines
- punch card
- blocking board
- double bed colour changer
- sewing machine
- overlocker
- garter bar and deco
- computer cards

- Knitting techniques include one or more of the following:**
- flat knitting
 - circular knitting
 - sock knitting
 - weft knits
 - warp knits
 - plain, purl, double and tricot knit
 - jacquard

- Analyse and evaluate design includes one or more of the following:**
- skill and efficiency
 - variation of knit effects
 - compatibility of finishing procedures to design function
 - quality
 - suitability of materials

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTD5001A Design and produce knitted textile products

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTTD5001 Design and produce knitted textile products

Modification History

Release 1. Supersedes and is equivalent to LMTTD5001A Design and produce knitted textile products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- analysing and interpreting design brief
- developing design to meet design brief and in line with principles of design and product purpose
- using communication tools to present knit design for feedback
- evaluating and modifying designs
- determining production requirements
- using knitting tools and equipment with a variety of yarn types
- producing at least two (2) textile design products to meet design specifications
- evaluating quality, identifying faults, addressing design and production problems and determining opportunities for improvement
- documenting process and improvements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- elements of knitting design:
 - line
 - shape and silhouette
 - colour
 - texture
 - value
- principles of design:
 - repetition
 - gradation
 - rhythm
 - radiation

- harmony
- contrast
- dominance
- proportion
- balance
- unity
- information resources on fibres and fabrics
- knit modification techniques
- knitting machine techniques
- yarn characteristics
- typical fault conditions:
 - holes
 - foreign matter
 - creasing
 - lines
 - runs
- fault-finding procedures
- types and styles of knitted fabrics
- simple equipment maintenance techniques
- specification sheets:
 - budget
 - type of product
 - style requirements (yarns, fibres, colours and knitting technique)
 - application
 - timeline
 - design restrictions or conditions
 - yarn costs
 - weight and drape of fabric
 - colour ways
 - fashion trends
- communication tools:
 - inspiration board
 - storyboard
 - design concepts
 - research information
 - multimedia tools
 - yarn samples
 - colour chips
 - colour and fashion forecasting references
 - illustrations

- production sketches
- quality practices
- workplace practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in designing and producing knitted textile products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD5002 Design and produce woven tapestry products

Modification History

Release 1. Supersedes and is equivalent to LMTTD5002A Design and produce woven tapestry products

Application

This unit of competency covers the skills and knowledge required to develop designs and produce woven tapestry products to meet a specified design brief.

This unit of competency applies to interpreting and analysing a design brief and developing a design for woven tapestry products, such as miniatures, large commissions, shaped tapestries, interior or exterior applications, domestic objects and wall pieces.

The design brief may be determined by a client, trainer or supervisor and may be applied to a particular context within the textile industry. The design brief includes specifications for the woven tapestry product and design may be developed using manual or computer-aided design (CAD) tools.

Work may be conducted in small to large-scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTD4004 Produce woven tapestry samples

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to design and produce woven tapestry products	<p>2.1 Interpret design requirements and specifications from brief and analyse elements of design</p> <p>2.2 Develop design to meet design brief and in line with principles of design and product purpose</p> <p>2.3 Use communication tools to present tapestry design for feedback</p> <p>2.4 Respond to feedback, adjust design accordingly and confirm design for production</p> <p>2.5 Plan production of woven tapestry design sample</p>
3	Produce woven tapestry design sample	<p>3.1 Set up workstation, tools and equipment according to specifications</p> <p>3.2 Check yarns to be woven against quality standards</p> <p>3.3 Undertake tapestry techniques to meet design specifications for sample and according to workplace procedures</p> <p>3.4 Check tapestry sample to ensure it meets quality standards, including colour density, yarn suitability and warp to weft ratio</p>
4	Evaluate design	<p>4.1 Assess tapestry sample against design specifications,</p>

and production processes

- cartoon and design brief
- 4.2 Identify tapestry faults and recognise design or production problems
 - 4.3 Analyse design and evaluate to identify opportunities for improvement
 - 4.4 Evaluate production process to identify opportunities for improvement
 - 4.5 Document process and improvements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Tapestry products include

- miniatures

one or more of the following:

- large commissions
- shaped tapestries
- interior or exterior applications
- domestic objects
- wall pieces
- home furnishings

Plan production of woven tapestry design sample includes:

- identifying technical aspects of production
- completing specification sheet to guide production
- undertaking calculations to determine yarn quantities
- developing tapestry cartoon
- selecting and preparing materials, tools and equipment required for production

Sample tapestry includes one or more of the following:

- complete tapestry
- sample tapestry

Yarns include one or more of the following:

- weft yarns:
 - wool
 - cotton
 - silk
 - novelty yarns
- warp yarns:
 - cotton
 - seine
 - twine

Tapestry tools and equipment include one or more of the following:

- loom
- bobbins
- scissors
- cotton
- seine
- twine
- weft yarn
- plumb bob
- spirit level
- marking pen
- ruler
- masking tape

- tapestry needles
- CAD programs
- computer equipment

Tapestry weaving techniques include one or more of the following:

- hitching on and off
- plain weave in open and closed passes
- high and low turns
- weaving of simple shapes (triangles, curves and circle)
- hatching methods, regular and random
- colour blending and tonal gradation
- half passing
- joins
- soumak, knot and surface texture

Analyse and evaluate design includes one or more of the following:

- skill and efficiency
- variation of tapestry effects
- compatibility of finishing procedures to design function
- quality
- suitability of materials

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTD5002A Design and produce woven tapestry products

Assessment Requirements for MSTTD5002 Design and produce woven tapestry products

Modification History

Release 1. Supersedes and is equivalent to LMTTD5002A Design and produce woven tapestry products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- analysing and interpreting design brief
- developing design to meet design brief and in line with principles of design and product purpose
- using communication tools to present tapestry design for feedback
- evaluating and modifying designs
- determining production requirements
- producing at least two (2) tapestry design products to meet design specifications
- using a variety of yarn types
- assessing tapestry against design specifications, cartoon and design brief
- evaluating quality, identifying faults, addressing design and production problems and determining opportunities for improvement
- documenting process and improvements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- elements of tapestry design:
 - line
 - shape and silhouette
 - colour
 - texture
 - value
- principles of design:
 - repetition
 - gradation
 - rhythm

- radiation
- harmony
- contrast
- dominance
- proportion
- balance
- unity
- characteristics of yarns
- information resources on fibres and fabrics
- historical tapestry techniques
- contemporary trends in tapestry
- tapestry modification techniques
- tapestry techniques
- typical tapestry fault conditions:
 - shrinkage or ballooning of edges
 - exposure of warp
 - holes
 - foreign matter
- fault-finding procedures
- types and styles of tapestries
- simple equipment maintenance techniques
- specification sheets:
 - budget
 - type of product
 - style requirements (yarns, fibres and colours)
 - application
 - timeline
 - design restrictions or conditions
 - yarn costs
 - weight and drape of fabric
 - colour ways
 - fashion trends
- communication tools:
 - inspiration board
 - storyboard
 - design concepts
 - research information
 - multimedia tools
 - yarn samples
 - colour chips

- colour and fashion forecasting references
- illustrations
- production sketches
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in designing and producing woven tapestry products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD5003 Design and produce woven products

Modification History

Release 1. Supersedes and is equivalent to LMTTD5003A Design and produce woven products

Application

This unit of competency covers the skills and knowledge required to develop designs and produce woven products to meet a specified design brief.

This unit of competency applies to interpreting and analysing a design brief and developing a design for woven products, such as garments, textile products or accessories, and fabrics.

The design brief may be determined by a client, trainer or supervisor and may be applied to a particular context within the textile industry. The design and subsequent calculations and analyses may be undertaken manually or by using computer-aided design (CAD) programs.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTD4003 Produce woven textile samples

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to design and produce woven products	<p>2.1 Interpret design requirements and specifications from brief and analyse elements of design</p> <p>2.2 Develop design to meet design brief and in line with principles of design and product purpose</p> <p>2.3 Use communication tools to present woven design for feedback</p> <p>2.4 Respond to feedback, adjust design accordingly and confirm design for production</p> <p>2.5 Plan production of woven design sample</p>
3	Produce woven design sample	<p>3.1 Set up workstation, tools and equipment according to specifications</p> <p>3.2 Check yarns to be woven against quality standards</p> <p>3.3 Undertake weaving techniques to meet design specifications for sample and according to workplace procedures</p> <p>3.4 Check woven sample to ensure quality standards are met, including testing for accuracy of pattern repeat, colour or placement and yarn suitability</p>
4	Evaluate design	<p>4.1 Assess woven sample against design specifications,</p>

and production processes

- pattern and design brief
- 4.2 Identify weaving faults and recognise design or production problems
- 4.3 Analyse design and evaluate to identify opportunities for improvement
- 4.4 Evaluate production process to identify opportunities for improvement
- 4.5 Document process and improvements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Woven products include one

- garments

or more of the following:

- textile products
- fabrics
- home furnishings
- accessories (e.g. scarves and bags)
- jacquard fabrics

Plan production of woven design sample includes:

- identifying technical aspects of production
- completing specification sheet to guide production
- undertaking calculations to determine yarn quantities
- developing pattern to achieve specifications
- selecting and preparing materials, tools and equipment required for production

Weaving technical aspects include one or more of the following:

- balance and set requirements
- density requirements
- ends per inch
- total number of ends
- number of shafts required
- number of weft colours used
- number of warp colours used
- conversion to peg plan

Yarns include one or more of the following:

- singles yarns
- plied yarns:
 - wool
 - cotton
 - silk
 - novelty
 - synthetics
 - metallics
 - unspun fleece
 - rovings
 - rag strips
 - hand spun
 - ribbon
 - silk tops
 - nylon filament

Woven sample includes one

- complete woven product

or more of the following:

- sample weave

Weaving tools and equipment include one or more of the following:

- six and eight shaft loom
- warping mills
- fly shuttles
- double beam looms
- jacquard looms
- dobby looms
- counter-marche looms
- draw looms
- CAD equipment

Weaving techniques include one or more of the following:

- plain weave
- twill weave
- satin or sateen weave
- double weaves
- brocade weaves
- warp faced weaves
- weft faced weaves

Analyse and evaluate design includes one or more of the following:

- skill and efficiency
- variation of warp treatments
- variation treadlings
- compatibility of finishing procedures to design function
- quality
- suitability of materials

Assessment Requirements for MSTTD5003 Design and produce woven products

Modification History

Release 1. Supersedes and is equivalent to LMTTD5003A Design and produce woven products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- analysing and interpreting design brief
- developing design to meet design brief and in line with principles of design and product purpose
- using communication tools to present woven design for feedback
- evaluating and modifying designs
- determining production requirements
- producing at least two (2) woven design products to meet design specifications
- using a variety of yarn types
- testing accuracy of weaving pattern
- evaluating quality and addressing design and production problems
- evaluating quality, identifying faults, addressing design and production problems and determining opportunities for improvement
- documenting process and improvements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- elements of woven design:
 - line
 - shape and silhouette
 - colour
 - texture
 - value
- principles of design:
 - repetition
 - gradation

- rhythm
- radiation
- harmony
- contrast
- dominance
- proportion
- balance
- unity
- characteristics of yarns
- information resources on fibres and fabrics
- computer-aided design (CAD) applications
- weaving modification techniques
- weaving loom techniques
- weaving looms and equipment
- typical fault conditions:
 - incorrect warp tension
 - broken warp threads
 - incorrect beating of weft
 - incorrect threading, tie-up, treadling of design
 - incorrect use of materials
 - incorrect use of equipment
 - holes
 - foreign matter
 - creasing
 - lines
 - runs
- fault-finding procedures
- types and styles of woven fabrics
- simple equipment maintenance techniques
- specification sheets:
 - budget
 - type of product
 - style requirements (yarns, fibres and colours)
 - application
 - timeline
 - design restrictions or conditions
 - yarn costs
 - weight and drape of fabric
 - colour ways
 - fashion trends

- communication tools:
 - inspiration board
 - storyboard
 - design concepts
 - research information
 - multimedia tools
 - yarn samples
 - colour chips
 - colour and fashion forecasting references
 - illustrations
 - production sketches
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in designing and producing woven products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD5004 Design and produce experimental textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTD5004A Design and produce experimental textiles

Application

This unit of competency covers the skills and knowledge required to apply experimental processes to design and produce original textiles in response to a design brief.

The unit of competency applies to developing creative and original design concepts using manipulation techniques to create different effects on fibres, fabrics and other materials.

The design brief may be applied to a particular context within the textile industry. The design and subsequent calculations and pattern development may be created manually or by using computer-aided design (CAD) programs.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

		5.5	Finalise modifications and design and document all processes and improvements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE

- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Research includes one or more of the following:

- library
- internet
- journals
- articles
- visits to galleries and museums
- technical files
- visual diary work

Explore design ideas includes one or more of the following:

- using CAD or other design tools
- developing design concepts
- reviewing against requirements
- considering application, principles of design and elements of design

Experimental textiles include one or more of the following:

- wearable products
- garments
- accessories
- domestic textile products
- giftware
- small and large scale interior/exterior applications
- public art pieces
- commissioned objects
- conceptual pieces for exhibition
- 2-D and 3-D functional and non-functional objects
- commissioned objects

Materials include one or more of the following:

- knitted fabrics, including knit weave and patterned knits, warp knits and weft knits
- woven fabrics, including plain, twill, satin, dobby and jacquard
- non-woven textiles, such as felts, nets, braids, bonded, paper and cardboard
- raw materials
- yarns
- man-made materials
- recycled materials

Appropriate personnel include one or more of the following:

- clients
- supervisor
- trainer or mentor
- designers
- production supervisors
- colleagues and other workers
- curators
- gallery owners
- architects
- interior designers

Tools and equipment include one or more of the following:

- screens
- squeegees
- exposure unit
- printing tables or work tables
- chairs
- dye pots (hot and cold)
- hot plates
- access to wet areas
- shibori poles
- needle and thread
- cutting mats and rules
- knives, secateurs and other cutters
- power tools
- hand tools
- looms and frames
- knitting machines and accessories
- linker
- overlocker
- sewing machine
- iron
- ironing board
- printing press
- mounting and display equipment

Manipulation techniques include one or more of the following:

- crushing
- heat application
- tucking
- pleating
- shrinking
- dyeing
- off loom weaving
- weaving on made frames
- painted and printed warps
- tie dye techniques
- sculptural techniques
- beading
- embroidery
- macramé
- crochet
- folding
- cutting

- reconstruction
- assemblage
- knotting
- looping
- felt making
- basket making
- papermaking
- bookmaking

Analyse and evaluate design includes one or more of the following:

- skill and efficiency
- variation of manipulation effects
- quality
- suitability of materials

Assessment Requirements for MSTTD5004 Design and produce experimental textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTD5004A Design and produce experimental textiles

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- conducting research to generate and explore design ideas
- selecting design concept and communication tools to present design concept to appropriate personnel for feedback
- responding to feedback and modifying design concept as required
- determining effects of manipulating textiles and other materials
- undertaking 2-D and 3-D manipulation techniques to achieve design effects for at least two (2) samples and according to workplace procedures
- determining production requirements
- evaluating and modifying design and manipulation process
- exploring modifications to design or process using computer-aided design (CAD) or other design tools and communicating with appropriate personnel
- finalising modifications and design and documenting all processes and improvements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- uses and performance characteristics of fibres, fabrics and other materials
- elements of design:
 - line
 - shape and silhouette
 - colour
 - texture
 - value
- principles of design:
 - repetition
 - gradation

- rhythm
- radiation
- harmony
- contrast
- dominance
- proportion
- balance
- unity
- role of manipulation as a production tool
- effect of manipulation on textiles and materials
- tools and equipment associated with manipulating fabrics and other materials
- design tools:
 - sketches
 - illustrations
 - models
 - samples
 - fibres and fabrics
- effects of manipulation on design
- requirements of design brief:
 - purpose
 - design specifications, such as colour, yarn type, size and patterns
 - quality standards
 - budget
 - timeline
 - pattern or images
 - reproducibility
 - uniqueness
- information resources on fibres, fabrics and other materials
- communication tools:
 - inspiration board
 - storyboard
 - design concepts
 - research information
 - multimedia tools
 - yarn samples
 - colour chips
 - colour and fashion forecasting references
 - illustrations
 - production sketches
- quality practices

- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in designing and producing experimental textiles, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD5005 Design and produce printed textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTD5005A Design and produce printed textiles

Application

This unit of competency covers the skills and knowledge required to apply complex textile printing techniques and processes when interpreting and responding to a specified design brief.

The unit of competency applies to a design brief that may be applied to a particular context within the textile industry. The design brief includes specifications for the printed product and may be created manually or by using computer-aided design (CAD) programs.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Develop print design	2.1	Determine design brief and analyse requirements and specifications to determine parameters for printed textile
		2.2	Select dyes or pigments, colours and fabric substrates to meet design brief
		2.3	Conduct research to generate and explore design ideas
		2.4	Select design concept and communication tools to present design concept to appropriate personnel for feedback
		2.5	Respond to feedback and modify design concept, as required
3	Prepare for print production	3.1	Source and prepare materials and equipment required for production
		3.2	Identify technical aspects of production
		3.3	Complete specification sheet to guide production
		3.4	Select artwork or develop for screen printing applications on textiles
		3.5	Select and prepare fabrics, colour separations and stencils
4	Produce printed product	4.1	Create sample to test accuracy of colour separations, repeat pattern colour, placement and registration
		4.2	Analyse and evaluate sample and modify technical or design elements, as required, to meet design specifications
		4.3	Use tools and equipment to print final product according

to workplace procedures

4.4 Monitor printing to identify and resolve problems or faults

4.5 Document processes and effects to ensure exact outcome can be replicated

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Appropriate personnel include one or more of the following:

- clients
- supervisor
- trainer or mentor
- designers
- production supervisors
- colleagues and other workers

- Materials for printing include one or more of the following:**
- appropriate textile substrates (cotton, wool, silk and hemp)
 - appropriate stencil materials (hand cut, photographic, acetate and digital)
 - dyes and pigments

- Equipment for printing includes one or more of the following:**
- screens
 - squeegees
 - exposure tables
 - printing tables

- Analyse and evaluate design includes one or more of the following:**
- skill and efficiency
 - material requirements calculations
 - finishing procedures
 - design resolution
 - quality
 - suitability of materials

- Products for printing include one or more of the following:**
- garments
 - furnishing fabrics
 - domestic textile products
 - accessories
 - giftware
 - fabrics

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTD5005A Design and produce printed textiles

Assessment Requirements for MSTTD5005 Design and produce printed textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTD5005A Design and produce printed textiles

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- analysing design requirements or parameters
- creating and producing at least two (2) print designs
- applying screen printing techniques
- testing and evaluating design in sample production
- using tools and equipment associated with printing fabric substrates
- resolving design and production problems
- creating sample to test accuracy of colour separations, repeat pattern colour, placement and registration
- analysing and evaluating sample and modifying technical or design elements as required to meet design specifications
- using tools and equipment to print at least two (2) printed textiles according to workplace procedures
- monitoring printing to identify and resolve problems or faults
- documenting processes and effects to ensure exact outcome can be replicated.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- research and sources of design inspiration:
 - library
 - internet
 - journals
 - articles
 - visits to galleries and museums
 - technical files
 - visual diary work
- uses and characteristics of fabrics, fibres and yarns and fabric substrates

- principles and elements of design
- exploration of design ideas, such as:
 - using computer-aided design (CAD) or other design tools
 - developing design concepts
 - reviewing against requirements
 - considering application, principles of design and elements of design
- effect of printing on textiles and materials
- technical aspects of printing on textiles:
 - specific screen and mesh selection
 - stencil types
 - pre-production processes
 - screen reclamation
 - appropriate dyes or pigments for substrates
 - appropriate finishing techniques (steaming, heat setting, washing and sewing)
 - appropriate quality processes (wash tests, light fastness and rub testing)
 - screen faults (pin holes and poor image)
- tools and equipment associated with printing fabrics and other materials
- textile printing techniques
- requirements or parameters:
 - purpose
 - design specifications, such as colour, yarn type, size and patterns
 - quality standards
 - budget
 - timeline
 - pattern or images
 - reproducibility
 - uniqueness
- specifications:
 - budget
 - type of product
 - style requirements, colours and printing technique
 - application
 - timeline
 - design restrictions or conditions
 - yarn type
 - fabric substrate
- communication tools:
 - inspiration board
 - storyboard
 - design concepts

- research information
- multimedia tools
- yarn samples
- colour chips
- information resources on fibres, fabrics, materials and printing
- effects of printing on design
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in designing and producing printed textiles, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD5006 Exhibit textile designs or products

Modification History

Release 1. Supersedes and is equivalent to LMTTD5006A Exhibit textile designs or products

Application

This unit of competency covers the skills and knowledge required to plan, prepare and set up exhibits of textile products.

This unit of competency applies to planning and undertaking an exhibition of textile products, such as fabrics, tapestries, woven or knitted products or conceptual pieces. Products may be exhibited in local outlets, such as galleries, shops, art centres or client premises, and may include digital folios and displays.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- | | | | |
|---|--|-----|--|
| | requirements | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to exhibit textiles | 2.1 | Determine exhibition requirements |
| | | 2.2 | Investigate suitable locations for exhibition in line with types of displays, size and scope of exhibition and needs of target audience |
| | | 2.3 | Document requirements |
| | | 2.4 | Plan exhibition |
| | | 2.5 | Consult appropriate personnel to ensure plans are viable and resolve any planning issues |
| | | 2.6 | Finalise plans to ensure all obligations and considerations are addressed |
| 3 | Prepare works for exhibition | 3.1 | Select and prepare textile products with a variety of treatments or manipulation effects for exhibition |
| | | 3.2 | Identify, document and implement suitable method of cataloguing, labelling, pricing and selling products for display |
| | | 3.3 | Oversee transfer, installation, hanging and arranging of works to ensure presentation and aesthetic requirements are achieved, and according to workplace procedures |
| | | 3.4 | Resolve problems arising during set-up and document for future reference |
| 4 | Exhibit products and evaluate event | 4.1 | Introduce and explain exhibition to the audience using appropriate communication tools and techniques |
| | | 4.2 | Monitor audience response to exhibition, and encourage and respond to feedback |
| | | 4.3 | Close exhibition, assess finances, and coordinate dismantling and transfer of displays and equipment |

- 4.4 Finalise event with venue management, including payment arrangements
- 4.5 Evaluate overall effectiveness of exhibition
- 4.6 Document evaluation of exhibition to inform future exhibition planning

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Textile products include, but are not limited to, two or more of the following:

- wearable products
- garments
- accessories
- domestic textile products
- giftware

- small and large scale interior/exterior applications
- public art pieces
- commissioned objects
- conceptual pieces for exhibition
- 2-D and 3-D functional and non-functional objects

Treatments include, but are not limited to, one or more of the following:

- crushing
- heat application
- tucking
- pleating
- shrinking
- dyeing
- off loom weaving
- weaving on made frames
- painted and printed warps
- tie dye techniques
- sculptural techniques
- beading
- embroidery
- macramé
- crochet
- folding
- cutting
- reconstruction
- assemblage
- knotting
- looping
- felt making
- basket making
- papermaking
- bookmaking

Exhibitions include one or more of the following:

- permanent
- temporary
- travelling
- small
- developed in-house or by outsiders
- hired

Exhibition locations include one

- markets

or more of the following:

- galleries
- shops
- art centres
- websites
- trade shows
- client premises

Resource requirements for exhibition include one or more of the following:

- requirements for transfer of display material
- tools, equipment and materials required for installation, presentation and removal of displays and exhibitions
- lighting needs
- personnel hire
- props
- models
- digital display equipment, including computer monitors, display screens and projectors
- printing and graphics
- catering
- promotional material
- audio visual requirements
- publicity
- websites

Appropriate personnel include one or more of the following:

- trainer
- customers
- sales outlet
- colleagues
- mentor
- curator
- industry representatives
- technicians
- gallery owner
- shop owner

Obligations and considerations include one or more of the following:

- legal, ethical and cultural protocols
- legal obligations
- commissions
- opening night obligations

Evaluating exhibition includes one more of the following:

- analysing audience response to presentation
- choice of products
- display methods
- choice of location
- financial arrangements
- marketing and promotion

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTD5006A Exhibit textile designs or products

Assessment Requirements for MSTTD5006 Exhibit textile designs or products

Modification History

Release 1. Supersedes and is equivalent to LMTTD5006A Exhibit textile designs or products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- planning and designing an exhibition involving at least three (3) different textile treatments or manipulation effects and at least two (2) types of textile products, in an identified location
- researching and assessing resource requirements, locations and exhibition obligations
- resolving planning and resource issues
- communicating, consulting and negotiating with industry professionals and personnel
- managing all aspects of exhibition, including personnel, logistics and financial processes
- identifying, documenting and implementing suitable method of cataloguing, labelling, pricing and selling products for display
- overseeing transfer, installation, hanging and arranging of works, and closure of presentations
- closing exhibition, assessing finances, and coordinating dismantling and transfer of displays and equipment
- finalising event with venue management, including payment arrangements
- evaluate overall effectiveness of exhibition and documenting evaluation of exhibition to inform future exhibition planning.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- location of local galleries and outlets
- planning procedures:
 - determining exhibition and marketing content
 - selecting products to be exhibited
 - determining and sourcing resource requirements
 - determining exhibition schedules and timelines
 - consulting venue management and sourcing bookings
 - preparing relevant promotional material

- designing floor plans to maximise visual display and appearance
- exhibition requirements:
 - objectives of exhibition
 - target audience
 - products to be exhibited
 - appropriate means of display
 - size or scope of exhibition
- products for exhibition:
 - finished textile products
 - accessories
 - garments
 - lengths of fabric
 - interior applications
 - conceptual pieces
 - functional and non functional objects
 - digital folios and displays
- cataloguing methods
- promotional material:
 - invitations
 - labelling
 - media releases
 - photography
 - product information
 - display props
 - fliers
 - signage
 - website
 - email newsletter
- digital display techniques
- needs of target audience:
 - accessible access
 - hearing interpreter
 - size of visual items and print to adapt to vision impairment
 - exceptions to 'do not touch' requests
 - cultural protocols
- accessibility requirements
- lighting, layout and display techniques
- different methods of presentation
- communication tools and techniques
- sales practices

- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in exhibiting textiles designs or products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD5007 Develop textile designs using computer-based design programs

Modification History

Release 1. Supersedes and is equivalent to LMTTD5007A Develop textile designs using computer based design programs

Application

This unit of competency covers the skills and knowledge required to use a range of computer-based design programs, equipment and computing technology to generate, produce and manufacture designs for textile products.

The unit of competency applies to the creation of designs and production specifications for woven, knitted or printed textiles, tapestries and experimental textile products using computer-based design programs and equipment.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to use computer-based design tools**
 - 2.1 Analyse design brief and interpret textile design specifications
 - 2.2 Identify product considerations and production requirements
 - 2.3 Identify and plan work using suitable programs and equipment

- 3 **Use design tools**
 - 3.1 Use design programs and equipment to create, modify and edit required designs and production specifications
 - 3.2 Use design programs and equipment to test designs, patterns and production specifications according to workplace procedures
 - 3.3 Present outputs to appropriate personnel to assess accuracy and completeness and modify, as required

- 4 **Assess design results and maintain systems**
 - 4.1 Assess outputs generated using electronic design programs against design specifications and production requirements
 - 4.2 Make improvements, as required
 - 4.3 Create, store, organise and protect designs, patterns or production specifications according to workplace procedures
 - 4.4 Use, maintain and store design programs and equipment according to workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Design specifications include one or more of the following:

- colour
- style details
- fabric, fibre and quantity
- production requirements
- special effects or features
- quality criteria
- sizing
- finishing details
- presentation

Product considerations include one or more of the following:

- product outcome or end-use of woven fabrics, tapestry works, knitted fabrics and digitally-printed fabrics
- quality standards
- colours and trends

- environmental factors

Programs and equipment include at least four or more of the following:

- computer
- software programs (e.g. Illustrator, Photoshop, Scotweave, Lectra, WeaveMaker, and DesignerKnit)
- internet
- hardware peripherals
- colour scanners
- laser or inkjet printers (film output and film separations)
- digital printers
- drawing tablets
- data projector
- specialised equipment:
 - direct digital textile printer
 - industrial knitting machine
 - electronic jacquard loom
 - networked file storage and back-up devices
 - trade journals and trend information

MSTTD5008 Develop textile designs and specifications

Modification History

Release 1. Supersedes and is equivalent to LMTTD5008A Develop textile designs and specifications

Application

This unit of competency covers the skills and knowledge required to develop textile designs and specifications for production.

This unit of competency applies to developing a design, and testing and analysing the design specifications for textile materials or products, including fibres, fabrics, yarns and finished products.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to develop textile designs and specifications	2.1	Interpret requirements of design brief and identify purposes and end user of textile product
		2.2	Consider additional factors and determine materials for use in design
		2.3	Confirm design specifications and propose initial design concept from brief
3	Develop textile design	3.1	Use design processes to evaluate options and further develop initial design concept
		3.2	Test design concept with client to refine options
		3.3	Use appropriate communication tools to present selected design for approval
		3.4	Respond to feedback and modify design concept to make improvements, as required
		3.5	Confirm and document approved design
4	Calculate production requirements	4.1	Determine appropriate formulas for calculating yarn requirements
		4.2	Undertake calculations using computer software or manual processes
		4.3	Analyse data, and determine and document yarn requirements
5	Produce and test sample	5.1	Produce textile sample according to design specifications and workplace procedures
		5.2	Examine sample and determine accuracy of calculations
		5.3	Analyse production process to determine improvements

- 5.4 Undertake routine testing to assess sample meets quality requirements and industry standards
 - 5.5 Analyse results of sample testing to determine performance and acceptability for production
 - 5.6 Document outcomes, consult client and appropriate personnel and record feedback
- 6 **Prepare product specifications**
- 6.1 Analyse sample to develop pattern specifications for finished textile design product
 - 6.2 Determine production processes including technical aspects and prepare production plans
 - 6.3 Confirm final product specifications with appropriate personnel and complete all documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal,

- pollution control and recycling
 - WHS practices
- Textile products include one or more of the following:**
- fashion items and accessories
 - textile furnishings, artwork and fabric
 - canvas and PVC goods, such as:
 - covers for machinery, vehicles and equipment
 - different types of tarpaulins and canopies
 - heavy duty or protective work wear
 - straps, belts and fittings
 - tool and equipment bags
 - leather goods, such as:
 - welders blankets and jackets
 - riggers belts and frogs
 - tool, equipment and instrument bags, pouches and covers
 - holders and holsters
 - washers and gaskets
 - protective clothing
 - other textile products
- Yarns include one or more of the following:**
- ring spun
 - open-ended spun
 - air jet spun
 - friction spun
- Fibres include one or more of the following:**
- polyester
 - cotton
 - wool
 - viscose rayon
- Tests include one or more of the following:**
- microscopic analysis
 - chemical analysis
 - evenness testing
 - moisture content
 - dry-fastness
 - tensile-strength
 - elongation
 - tearing strength

- crease recovery
- dimensional stability

Finished products include one or more of the following:

- socks
- sweaters
- towels
- sheets
- blankets
- carpets
- rope and twine
- mops
- industrial textiles

Assessment Requirements for MSTTD5008 Develop textile designs and specifications

Modification History

Release 1. Supersedes and is equivalent to LMTTD5008A Develop textile designs and specifications

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- confirming design specifications and proposing initial design concept on at least two (2) occasions
- using design processes to evaluate options and test design concept with client to refine options
- responding to feedback, modifying design concept to make improvements, as required, and confirm and document approved design
- using relevant computer program or manual process to calculate production requirements
- producing at least two (2) textile samples according to design specifications and workplace procedures, and checking production processes
- undertaking routine testing of samples and analysing results to determine performance, quality standards and acceptability for production
- documenting outcomes, consulting client and appropriate personnel and recording feedback
- developing pattern specifications for finished textile design product, determining production processes and preparing production plans
- confirming final product specifications with appropriate personnel and completing all documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles and elements of design
- design process includes:
 - application of elements and principles of design
 - development of inspiration boards and storyboards
 - assessment of fibres and fabrics
 - review of relevant products, such as product sample designs

- characteristics of yarns
- information resources on fibres and fabrics
- elements and principles of testing
- textile design requirements:
 - budget
 - type of industry and industry standards
 - style
 - colour
 - function
 - performance
 - quality
 - dimension
 - timeline
 - design restrictions or conditions
- additional factors affecting design:
 - trends
 - yarn availability
 - production issues
 - resource availability or limitations
 - production costs
- textile materials and products and their properties
- standards for specifications
- product specifications:
 - construction
 - dimensions
 - strength
 - shrinkage
- testing equipment:
 - microscopes
 - weighing scales
 - rulers
 - templates
 - strength testers
 - conditioners
 - dryers
 - abrasion testers
 - pilling testers
- textile performance tests
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in developing textile designs and specifications, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD5009 Produce printed designs on woven and non-woven substrates

Modification History

Release 1. Supersedes and is equivalent to LMTTD5011A Produce printed designs on woven and non-woven substrates

Application

This unit of competency covers the skills and knowledge required to apply screen printing techniques to produce designs on woven and non-woven substrates.

The unit of competency applies to the use of stencil, or silk-screen printing techniques to produce designs and artworks for woven and non-woven substrates and textiles, to be used for garments, textile products or accessories. Screen printing involves the use of manual techniques, tools and equipment.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to print designs**
 - 2.1 Analyse design specifications and discuss with appropriate personnel to confirm production requirements
 - 2.2 Identify desired effects of screen printing and select appropriate printing technique to achieve required outcome
 - 2.3 Select woven and non-woven substrates and quantities according to design requirements
 - 2.4 Select stencil techniques, stencil types, masters, screen types, meshes and medium according to requirements of printing technique and design

- 3 **Apply screen printing procedure**
 - 3.1 Set up workstation, tools and equipment according to specifications for work
 - 3.2 Check woven or non-woven substrates to be printed against quality standards
 - 3.3 Prepare stencil masters, meshes and screens for printing according to requirements for selected printing technique
 - 3.4 Apply screen printing techniques to meet design specifications for sample and according to workplace procedures
 - 3.5 Finish screen print and complete housekeeping

- 4 **Check and finalise printing**
 - 4.1 Check completed print meets design specifications and quality standards
 - 4.2 Identify printing faults and production problems, and

- determine causes
- 4.3 Determine and apply necessary modifications to printing techniques, processes or materials
 - 4.4 Check and confirm outcomes with appropriate personnel
 - 4.5 Complete required documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Appropriate personnel include one or more of the following:

- trainers
- colleagues
- mentors
- designers
- members of the design team

Printing techniques include one or more of the following:

- registered techniques:
 - tabs
 - multi-coloured
 - print rail
 - registration lays
 - placement printing
 - flatbed repeat printing
 - off-contact
 - wet-on-wet
 - flood coat
 - dry pull

Stencil types include one or more of the following:

- basic stencils
- photosensitive stencils
- hand cut and hand drawn stencils
- digitally-generated stencils
- autographic

Screen types include one or more of the following:

- timber, steel and aluminium framed
- butt, mitre, nailed, glued, screwed and welded
- rectangle, rotary, hat and flat bed

Meshes include one or more of the following:

- mesh types:
 - material
 - nylon
 - polyester
 - metal
 - colour:
 - white
 - yellow
 - red
 - size
 - mono or multi-filament

Screen preparation includes one or more of the

- reclaim
- de-grease
- wash and dry

following:

- apply emulsion
- attach master and expose to light source

Finish includes one or more of the following:

- touch up and tape, as required
- wash image clean and dry

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTD5011A Produce printed designs on woven and non-woven substrates

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTTD5009 Produce printed designs on woven and non-woven substrates

Modification History

Release 1. Supersedes and is equivalent to LMTTD5011A Produce printed designs on woven and non-woven substrates

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting design brief to identify desired effects of screen printing, and selecting appropriate printing techniques, tools and equipment
- performing screen printing techniques to meet design specifications and achieve design effects and according to workplace procedures, on at least two (2) occasions
- checking completed print meets design specifications and quality standards, and identifying printing faults and production problems, and their causes
- applying necessary modifications to printing techniques, processes or materials and confirming outcomes with appropriate personnel
- completing required documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics of fabrics
- information resources on fibres and fabrics
- specific design and printing practices
- screen printing tools and equipment:
 - squeegees
 - blocks
 - lino
 - brushes
 - knives
 - bucket, sink or container
 - mixers
 - rulers and tape measures
 - screen-cleaning equipment and chemicals

- vacuum boards
- carousel
- printing tables with registration systems
- vacuum print tables
- exposure unit
- scales high pressure hose
- screen coaters
- fans
- blow dryers
- light box
- slide projector
- overhead projector
- photocopier
- computer equipment
- computer-aided design (CAD) software
- printing processes and practices
- different types of screens and meshes
- different types of medium:
 - inks
 - dyes
 - specialist inks
 - binders
 - extenders
 - reducers
 - additives
 - evaporative
 - catalytic
 - thermoset
 - sublimation
- woven and non-woven substrate characteristics:
 - knits
 - felt
 - ceramic
 - vinyl
 - wool
 - silk
 - cotton
- stencil and printing techniques and problems
- printing problems and production faults:
 - uneven screen coating

- incorrectly stretched screen mesh
- poorly registered print
- inaccurate repeat measurements
- poor squeegee action
- insufficient print paste used
- off printing
- poor preparations of substrates
- inappropriate fixing of dyes and pigments
- poorly exposed screen
- poor quality colour separations
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in producing printed designs on woven and non-woven substrates, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD5010 Produce computer-aided textile design folios

Modification History

Release 1. Supersedes and is equivalent to LMTTD5010A Produce computer aided textile design folios

Application

This unit of competency covers the skills and knowledge required to use computer-aided design (CAD) programs to produce textile design folios.

The unit of competency applies to creative and technical skills to plan and create textile design folios, and develop and manipulate folio content. Folio requirements are determined in consultation with the client and through analysis of design specifications.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTGN2009 Operate computing technology in a TCF workplace

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to produce design folios**
 - 2.1 Consult client to review the textile design specifications and determine folio requirements
 - 2.2 Analyse and determine purpose and type of digital folio in line with objectives and audience requirements
 - 2.3 Identify and analyse design themes and styles of textile design in line with folio objectives
 - 2.4 Determine preliminary planning, and explore options for content and presentation
 - 2.5 Confirm folio objectives and document

- 3 **Plan folio presentation**
 - 3.1 Determine folio parameters and specifications and use planning processes according to the needs of the folio
 - 3.2 Select and prepare CAD software, programs and equipment according to specifications and workplace procedures
 - 3.3 Determine editing and layout requirements and select relevant applications
 - 3.4 Develop folio plan and confirm presentation with client or relevant personnel

- 4 **Use electronic tools to create folio**
 - 4.1 Use design programs and equipment to create design folio
 - 4.2 Apply editing software to edit and manipulate folio content to effectively illustrate features of the textile materials, designs and products
 - 4.3 Assess folio against requirements and objectives and present to appropriate personnel for review

- 4.4 Identify and implement improvements and finalise folio
- 4.5 Store design folio, organise and file to enable retrieval as required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Textile designs include one or more of the following:

- woven textile designs
- knitted textile designs
- non-woven textile designs
- domestic and industrial products

Folio parameters include one or more of the following:

- file size
- layout

- method or program used to present folio to an audience
- folio storage and retrieval needs
- web-based folio requirements

Folio specifications include one or more of the following:

- image types and size
- text types and size
- theme
- colour schemes
- multimedia content
- graphics
- animation
- audio

Equipment include one or more of the following:

- desk top computer
- notebook computers
- laptop
- ipad

Electronic tools include one or more of the following:

- colour scanners
- laser or inkjet printers (film output, film separations)
- drawing tablets
- data projector
- networked file storage and back up devices
- digital cameras

Modification History

Release 1. Supersedes and is equivalent to LMTTD5010A Produce computer aided textile design folios

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- consulting with client and relevant personnel
- determining folio objectives and specifications
- selecting and using appropriate computer-aided design (CAD) and editing programs and equipment
- presenting features of textile materials and designs using electronic tools
- planning, developing and producing at least two (2) design folios in line with objectives and requirements
- using editing software to edit and manipulate folio content to effectively illustrate features of the textile materials, designs and products
- organising, storing and maintaining folio
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of design and layout
- CAD and editing software
- equipment and program features
- tools and procedures for editing
- objectives and techniques applied in folio development
- features of textile materials and designs
- quality standards
- workplace procedures
- practices for documenting and reporting on textile designs.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in producing computer-aided textile design folios, at least to the level being assessed, with relevant industry knowledge and experience.

MSTTD6001 Research commercial development of textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTD6001A Research commercial development of textiles

Application

This unit of competency covers the skills and knowledge required to research and evaluate textiles for fashion, furnishings, accessories and exhibition, and make recommendations to guide the commercial development of textile products.

The unit of competency applies to activities associated with researching and evaluating quality, processing, finish, use, properties and performance of materials, partially finished and finished textile products. Findings should be used to make recommendations to guide commercial development of materials and products.

Work is performed in line with a broad plan or strategy. Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to research commercial development of textiles**
 - 2.1 Establish objectives for conducting research in line with business goals
 - 2.2 Establish criteria and parameters for research and develop research plan
 - 2.3 Conduct research into textiles

- 3 **Research textile products**
 - 3.1 Analyse products that incorporate textiles and their current uses in the marketplace
 - 3.2 Research performance characteristics of textile products and analyse to determine quality
 - 3.3 Use a range of routine and non-routine tests to gather data on product quality
 - 3.4 Identify factors influencing quality of textile products
 - 3.5 Identify and examine product faults and determine causes
 - 3.6 Research global and domestic implications for use of textile products

- 4 **Evaluate findings and make recommendations**
 - 4.1 Analyse research findings and prioritise according to their significance to research objectives and criteria
 - 4.2 Review methodology to identify any potential influences on findings
 - 4.3 Analyse findings to identify products with most potential for commercial development and further review
 - 4.4 Analyse features and benefits, and disadvantages or

- risks, of selected findings
- 4.5 Prepare a report, including visual and graphical illustration to summarise aspects of research
 - 4.6 Make recommendations and document how findings apply to commercial gain

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Research includes one or more of the following:

- textile properties, qualities, aesthetic and performance characteristics
- primary uses of textiles
- new and emerging textiles and textile processing techniques
- global and domestic trends in using textiles

Textiles include one or more of the following:

- routine and non-routine tests to gather data on textiles
- natural fibres, such as cotton, wool, silk and linen
- synthetic fibres, such as:
 - polyamide and polyester
 - acrylic
 - lycra
 - rayon
 - acetate
- natural and synthetic single-yarn fabrics and blends, including:
 - knitted fabrics, such as weft knits and warp knits
 - woven fabrics, such as plain, twill, satin, dobby, jacquard and pile
 - non-woven fabrics, such as felts, nets, braids, bonded and composite
 - emerging smart fabrics
 - raw materials
 - new and emerging textiles
 - yarn

Routine tests include one or more of the following:

- visual checking
- colour matching
- weighing and height
- weight and thickness measuring
- moisture measuring
- measuring rubbing fastness
- stretch
- wear
- cracking
- colour
- gloss
- softness
- handle
- texture
- light and colour fastness
- heat fastness
- tensile characteristics
- flexibility

Non-routine tests include the following:

- tests performed in a laboratory environment to laboratory level standards

Unit Mapping Information

Assessment Requirements for MSTTD6001 Research commercial development of textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTD6001A Research commercial development of textiles

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- planning and conducting research into textiles and textile products in line with business goals
- establishing criteria and parameters for research and developing research plan
- conducting research into textiles, analysing products that incorporate textiles, and researching performance characteristics of at least one (1) sample range of textile products to determine quality
- investigating global and domestic implications for use of textile products
- using a range of routine and non-routine tests to gather data on product quality to identify factors influencing quality of textile products
- analysing findings to identify products with most potential for commercial development and analysing features, benefits and disadvantages or risks, of selected findings
- preparing a 2000-3000 word report in appropriate format, including visual and graphical illustrations and recommendations indicating how findings apply to commercial opportunities and gain.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- sources of information
- qualities and properties of textiles:
 - firmness
 - softness
 - hand
 - weight
 - grain or gauge
 - drape
 - porosity

- covering power
- count
- light penetration
- commercial relevance or objectives for research
- research methodology
- research criteria:
 - scope of research
 - required documentation
 - required research verification
 - research methodologies
 - timing
 - commercial constraints or requirements
- relevant legislation, codes of practice, copyright obligations, policies and procedures
- textile and product testing procedures
- performance characteristics:
 - stretch
 - abrasion
 - wearability
 - absorbency
 - durability
 - elasticity
 - heat sensitivity
 - shrink resistance
 - ease of care
 - drape quality
 - colour fastness
 - strength
- report writing
- report structure:
 - title page
 - table of contents
 - summary
 - introduction
 - theories and hypotheses
 - body (findings and conclusions)
 - methodology
 - test results
 - recommendations
 - references
 - appendixes

- glossary
- report content:
 - text
 - graphs
 - charts
 - tables
 - diagrams
- quality practices
- workplace procedures
- recording and reporting practices.
-

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in researching commercial development of textiles, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD6002 Apply electronic systems to textile design and production

Modification History

Release 1. Supersedes and is equivalent to LMTTD6002A Apply electronic systems to textile design and production

Application

This unit of competency covers the skills and knowledge required to apply electronic systems to textile design and production processes.

The unit of competency applies to the developing intricate textile designs with multiple features using computer-based design programs that enable technically accurate reproduction of the design. Design specifications and patterns will be calculated using appropriate software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTD5007 Develop textile designs using computer-based design programs

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to apply electronic systems to design and production	2.1	Interpret design brief to determine design criteria
		2.2	Research trends, themes and influences in textile design and evaluate in line with brief
		2.3	Evaluate complexity of design in terms of intricacy and range of features
		2.4	Set up workstation according to workplace procedures, and create preliminary design concept images using relevant electronic system
		2.5	Develop design concept using computer-aided design (CAD) system
3	Present and confirm design	3.1	Produce design image output that accurately documents intricate design features, scale and dimension and incorporates design elements
		3.2	Produce storyboards and present using CAD processes
		3.3	Present design to client or appropriate personnel for review and make modifications
4	Determine design specifications and machine settings	4.1	Calculate yarn and material requirements for design draft using CAD system
		4.2	Confirm specifications in line with textile design requirements and save
		4.3	Produce patterns
		4.4	Calculate machine settings and calibrate with direct interface to textile production machinery, where appropriate
5	Finalise design	5.1	Confirm design and specifications with client or

production personnel and save modifications, where necessary

5.2 Finalise and save production plans and specifications

5.3 Save final design and specifications as hard copy and incorporate into digital folio

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Textile design includes one or more of the following:

- knitting
- weaving
- tapestry

Design concepts include but not

- scale and dimensional aspects

limited to one or more of the following:

- design features
- colour palettes
- texture and pattern effects

Electronic systems include one or more of the following:

- Prima Vision
- Corel Draw
- AVL Multi-Colour or Colour-In
- Weavemaker Pro
- Swift Weave
- Design a Weave
- Pro Weave
- Scotweave
- Adobe Illustrator
- Photoshop
- Colour Matters
- Nedgraphics

Design criteria includes but not limited to the following:

- styles
- colours
- trends
- budget
- purpose or function
- target market
- size and scale of product

Specifications include but not limited to one or more of the following:

- warp and weft settings
- numbers of shafts and treadles
- block and mirror selection
- thread instructions
- scale
- yarn specifications
- colour allocation
- colourways
- shaping
- structure

Assessment Requirements for MSTTD6002 Apply electronic systems to textile design and production

Modification History

Release 1. Supersedes and is equivalent to LMTTD6002A Apply electronic systems to textile design and production

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures and safe work practices
- applying design process to interpret design brief, researching trends, themes and influences and producing intricate designs to scale using at least two (2) electronic systems
- producing design image output that accurately documents intricate design features, scale and dimension and incorporates design elements
- developing and presenting storyboards to client or appropriate personnel for review, using computer-aided design (CAD) processes
- presenting design to client or appropriate personnel for review and making modifications
- determining design specifications and machine settings
- using CAD to calculate yarn and material requirements, confirm specifications and produce patterns
- calculating machine settings and calibrating with direct interface to textile production machinery where appropriate
- confirming design and specifications with client or production personnel and saving modifications, where necessary
- finalising and saving production plans and specifications
- saving final design and specifications as hard copy and incorporating into digital folio.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- industry and product processes
- product and process development procedures
- specifications:
 - warp and weft settings
 - numbers of shafts and treadles
 - block and mirror selection

- thread instructions
- scale
- yarn specifications
- colour allocation
- colourways
- shaping
- structure
- principles and elements of design
- CAD system applications and operation
- networked computer operation
- associated computer input and output devices
- patternmaking processes
- textile production processes and practices
- textile production machinery
- operation of interfaced machinery settings
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in applying electronic systems to textile design and production, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD6003 Develop a textile product range

Modification History

Release 1. Supersedes and is equivalent to LMTTD6003A Develop a textile product range

Application

This unit of competency covers the skills and knowledge required to develop a textile product range and present the range to the client.

This unit of competency applies to the development of a textile product range based on a client brief, and presentation of the designed range to the client for acceptance.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to develop a textile product range**
 - 2.1 Analyse product development brief to determine design requirements and intended purpose of product range
 - 2.2 Recognise and analyse design elements, themes and initial concepts
 - 2.3 Analyse profile of target market population to determine particular product requirements and market trends
 - 2.4 Determine styles, colours and types of yarn required
 - 2.5 Investigate product development factors
- 3 **Develop textile product range**
 - 3.1 Develop concepts in line with brief to explore design options
 - 3.2 Determine textile product range options
 - 3.3 Estimate costs of proposed range
 - 3.4 Consult with design team to refine product design and range options
 - 3.5 Review preliminary plans and make modifications, as required
 - 3.6 Draw product range designs and complete documentation
- 4 **Present textile product range for approval**
 - 4.1 Present designs for full textile product range to client using a range of presentation tools, and in line with workplace procedures
 - 4.2 Explain features, costs and benefits of proposed designs to the client in line with initial design brief
 - 4.3 Respond to feedback from client and make modifications, as required
 - 4.4 Review product range to confirm acceptance of proposed designs

4.5 Finalise development process and complete relevant documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Textile product range includes one or more of the following:**
- industrial products (e.g. protective textiles)
 - household products (e.g. tableware, manchester and cleaning cloths)
 - leisure products (e.g. camping and outdoor equipment)
 - artworks
 - fabrics
 - fashion accessories

- Design requirements include**
- end uses of product

- three or more of the following:**
- budget requirements
 - production requirements
 - timelines
 - client requirements
 - workplace requirements
 - quality requirements
 - style and feature requirements

- Product development factors include but not limited to the following:**
- textile design trends and their relationship to product development
 - existing themes and their relationship to product development
 - yarn and material suppliers
 - availability, suitability and costing of resources
 - supply chains for product range to provide information about product development, production and sales flows

- Costs include but not limited to the following:**
- materials
 - resources
 - labour
 - overheads
 - other production costs

- Presentation tools include one or more of the following:**
- storyboards
 - models
 - computer-aided drawings
 - textile or yarn samples

Unit Mapping Information

Assessment Requirements for MSTTD6003 Develop a textile product range

Modification History

Release 1. Supersedes and is equivalent to LMTTD6003A Develop a textile product range

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- interpreting and applying design brief requirements, design elements, concepts and themes, and intended purpose of product range
- analysing profile of target market population to determine particular product requirements and market trends
- determining styles, colours and types of yarn required
- consulting with design team to refine product design and range options, review preliminary plans and make modifications, as required
- drawing product range designs and completing documentation
- making cost calculations and estimates for a range of at least ten (10) items
- presenting designs for full textile product range of at least ten (10) items to client using a range of presentation tools, and in line with workplace procedures
- explaining features, costs and benefits of proposed designs to the client in line with initial design brief
- responding to feedback from client, making modifications, as required, and reviewing product range to confirm acceptance of proposed designs
- finalising development process and complete relevant documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- elements and principles of design
- trends in industry, and global and local trends
- range of yarns, including weight and other characteristics
- research sources
- measuring and costing of textile materials and yarns
- legislation, regulatory requirements, copyright obligations and codes of practice
- quality practices
- workplace procedures

- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in developing a textile product range, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTD6004 Create and produce textile designs for commercial production

Modification History

Release 1. Supersedes and is equivalent to LMTTD6004A Create and produce textile designs for commercial production

Application

This unit of competency covers the skills and knowledge required to design and produce textile products for commercial production.

The unit of competency applies to analysing market opportunities and developing a design brief, leading to development of product design and production of textile product sample.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile design and development

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to produce textile designs for commercial production	2.1	Analyse commercial textile markets
		2.2	Develop design concepts
		2.3	Evaluate commercial production factors and conduct scoping
		2.4	Confirm brief
3	Present textile designs for approval	3.1	Draft textile product designs in line with brief and production estimates and complete documentation
		3.2	Present designs to appropriate personnel using a range of presentation tools
		3.3	Review textile designs and make modifications, as required
		3.4	Accept and confirm final textile design and complete relevant documentation
4	Produce textile design sample	4.1	Obtain and test components and resources required for design
		4.2	Identify technical aspects of production
		4.3	Complete specification sheet and develop production plan to guide production
		4.4	Produce textile sample according to plan and workplace procedures
5	Test product sample to evaluate design and production	5.1	Evaluate textile sample against design specifications and design brief
		5.2	Test textile sample to ensure it meets quality and performance standards

processes	5.3	Evaluate design to determine any necessary modifications	
	5.4	Evaluate production process to determine necessary improvements	
	5.5	Confirm overall evaluation and document process and improvements	
6	Finalise textile design	6.1	Consult with design team and production personnel to evaluate and process textile sample design
		6.2	Incorporate modifications to design and production
		6.3	Confirm and document final design

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

- WHS practices

Research market includes, but is not limited to, one or more of the following:

- commercial and design objectives of the client or workplace
- commercial textile markets
- current and emerging product trends and technologies
- commercial opportunities for textile designs

Market research includes one or more of the following:

- analysis of target market characteristics
- sample testing
- discussions with retailers and suppliers
- discussions with staff and management
- review of media portrayals
- review of fashion shows
- review of current pricing strategies and price points of products

Design concepts include, but are not limited to, one or more of the following:

- applying information from market analysis to develop commercial product ideas
- consulting with design team to analyse and refine product ideas and develop a design brief
- testing design brief with appropriate personnel and market research activities
- confirming design brief and specifications for product development
- documenting brief and specifications
- developing design concepts in line with design brief

Commercial production factors include, but are not limited to:

- determining scope of commercial production
- researching and evaluating means of production
- consulting commercial manufacturer or appropriate personnel to determine production requirements
- estimating and comparing costs associated with commercial production
- comparing and analysing commercial production variables to inform final product design

Means of commercial production include one or more of the following:

- offshore production
- onshore production
- large or long runs

- one-off runs

Appropriate personnel include one or more of the following:

- managers, directors
- trainer
- mentor
- design team
- production supervisors
- business development staff
- marketing and sales staff
- clients

Assessment Requirements for MSTTD6004 Create and produce textile designs for commercial production

Modification History

Release 1. Supersedes and is equivalent to LMTTD6004A Create and produce textile designs for commercial production

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- analysing commercial textile markets to identify commercial opportunities
- applying principles and elements of design and developing a design brief for at least two (2) textile designs for commercial production
- evaluating commercial production factors
- developing specification sheet and creating production plan
- producing sample to test design concept and plan
- communicating with a range of industry experts and personnel to evaluate product and process and confirm they comply with design brief
- processing textile design with any necessary modifications to product or process
- confirm final design and finalise documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- commercial markets for textile production
- elements and principles of design
- market research practices and information sources
- scoping processes to identify:
 - target market
 - features and benefits
 - timing
 - economic and social expectations
 - scale of production
- processes in commercial textile design development
- textile production techniques and specifications
- costs:

- labour
- overheads
- materials
- tooling
- equipment
- yarns
- dyes
- other chemicals or materials
- relevant legislation and codes of practice
- presentation tools:
 - storyboards
 - models
 - computer-aided drawings
 - textile or yarn samples
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in creating and producing textile designs for commercial production, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2001 Despatch products

Modification History

Release 1. Supersedes and is equivalent to LMTTF2001A Despatch products

Application

This unit of competency covers the skills and knowledge required to prepare products for despatch from the workshop or loft.

The unit of competency applies to handling and despatching various products using relevant manual or powered equipment. Discretion, initiative and judgement must be demonstrated on the job in own work, either individually or in a team environment. Work may involve referral of matters to other workplace personnel.

Work may be conducted in small to large scale enterprises, in a variety of environments, such as operational indoor and outdoor workplaces and in hazardous or exposed conditions, and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- | | | | |
|---|--|-----|---|
| | requirements | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to despatch products | 2.1 | Prepare work area, tools and equipment according to WHS and workplace procedures |
| | | 2.2 | Read and follow workplace procedures and instructions |
| | | 2.3 | Locate and identify required products in storage area |
| | | 2.4 | Lift products in accordance with WHS legislation and workplace manual handling procedures |
| | | 2.5 | Transport products from storage area to despatch area using appropriate equipment and in accordance with established workplace procedures |
| | | 2.6 | Obtain assistance to lift or transport products, as necessary |
| 3 | Inspect products and complete documentation | 3.1 | Lay out products and inspect to verify that work has been performed to specification |
| | | 3.2 | Carry out quality assurance checks, including operational checks of moving components, such as ropes, pulleys and zippers |
| | | 3.3 | Report inconsistencies or other problems to supervisor |
| | | 3.4 | Complete documentation in accordance with workplace procedures |
| 4 | Despatch products | 4.1 | Check labels and tags or add, if required |
| | | 4.2 | Fold, bag or otherwise prepare products for pick-up or despatch |
| | | 4.3 | Confirm despatch instructions and despatch product, or store in readiness for pick-up or despatch |
| | | 4.4 | Clean and store tools and equipment, and maintain work |

area to ensure safe and efficient despatch operations

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Prepare work area, tools and equipment includes the following:

- clearing and cleaning work area to prepare for despatch and handling processes
- *preparing tools and equipment*
- examining tools and equipment for damage or missing components or other defects (including frayed power cords where applicable)
- checking extension power cables for knots and insulation damage
- connecting electrical tools to power supply

- using safety equipment during tool operation in accordance with *WHS practices*

Tools and equipment include one or more of the following:

- manual or powered lifting/hoisting equipment
- hand trucks and other manual or powered equipment for transporting products
- manual or powered packaging equipment, including:
 - nailing
 - stapling
 - banding machines

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2001 Despatch products

Modification History

Release 1. Supersedes and is equivalent to LMTTF2001A Despatch products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- locating and interpreting product specifications and descriptions
- folding or packing products according to specifications
- despatching products on at least three (3) occasions according to workplace procedures
- operating manual and powered handling, packaging and despatch equipment
- maintaining product handling and packaging equipment and work area
- applying quality standards relevant to handling, packaging and despatch procedures
- complying with all relevant safety requirements including safe use of manual and powered tools and equipment
- documenting actions taken and maintaining relevant work records according to workplace procedures
- reporting inconsistencies or other problems
- maintaining work area and handling and packaging equipment, so products can be prepared for despatch safely and efficiently.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- processes for packaging; including product folding techniques
- principles of operating product handling and packaging equipment
- the range products manufactured or serviced by the workplace
- specifications of relevant materials and equipment
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- loading, delivery, and pick-up procedures
- power sources, such as single phase, three phase and weather-protected outlets
- general housekeeping policies and procedures
- WHS practices, including hazard identification and control measures

- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in despatching products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2002 Cut, bend and shape metal

Modification History

Release 1. Supersedes and is equivalent to LMTTF2017A Cut, bend and shape metal

Application

This unit of competency covers the skills and knowledge required to cut prescribed lengths of metal bar stock and to bend the lengths into various shapes by hand or with the aid of formers.

Work may involve interaction with other people in the workplace, including supervisors and production personnel. Work may be conducted in a variety of environments, such as operational indoor or outdoor workplaces and hazardous or exposed conditions

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for cutting, bending and shaping metal**
- 2.1 Read and interpret workplace procedures and instructions
 - 2.2 Establish safe working environment
 - 2.3 Obtain specifications of material to be used and shape to be formed
 - 2.4 Plan sequence of task operations and calculate required length of material
 - 2.5 Select appropriate section material to meet specification, and choose suitable length of material stock for cutting to minimise waste
 - 2.6 Move material to be cut to work area
 - 2.7 Prepare appropriate hand and power tools
- 3 **Prepare for cutting process**
- 3.1 Mark out cutting points on material and select appropriate cutting equipment
 - 3.2 Check area to ensure equipment doesn't become entangled or damaged during operation
 - 3.3 Secure material to prevent movement
- 4 **Cut material and informally check product**
- 4.1 Use safety equipment in accordance with WHS requirements when using cutting equipment
 - 4.2 Select and install appropriate consumables as to manufacturers requirements
 - 4.3 Set and operate equipment in accordance with accepted industry and WHS practices
 - 4.4 Cut material to correct length and remove burrs or rough edges by brushing, grinding or filing

- 4.5 Inspect cut sections to verify that their size and condition meets specifications and relevant workplace and industry quality standards
- 5 **Prepare for forming process**
 - 5.1 Plan sequence of forming operations and select appropriate forming equipment
 - 5.2 Check forming equipment for damage or operating defects
 - 5.3 Select and set appropriate formers
- 6 **Form material and informally check product**
 - 6.1 Place metal section in former and secure, as necessary
 - 6.2 Heat metal section to facilitate bending, as necessary
 - 6.3 Hot or cold bend the metal section around formers or hand form to required specification
 - 6.4 Descal or otherwise finish formed product after forming
 - 6.5 Inspect formed product to verify that it meets specifications and relevant workplace and industry quality standards
- 7 **Maintain work area and equipment**
 - 7.1 Clean work area and stow tools and electrical equipment away safely
 - 7.2 Comply with environmental regulations to reuse, recycle or dispose of materials as required
 - 7.3 Clean and maintain cutting and forming equipment in accordance with workplace requirements and manufacturer specifications
 - 7.4 Perform programmed maintenance which is within the operator's area of responsibility
 - 7.5 Inform supervisor of any abnormal conditions needing maintenance or repair

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Hand tools include one or more of the following:

- hammers
- punches
- vices
- clamps
- jigs
- formers
- hand drills
- hacksaws
- files
- tongs
- wire brushes plus gloves
- goggles and other safety equipment

- Power tools include one or more of the following:**
- power hacksaws
 - portable electric drills
 - portable sanders and wire brushes
 - guillotine
 - abrasive disk cutting equipment
 - gas cutting equipment

WHS practices WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2002 Cut, bend and shape metal

Modification History

Release 1. Supersedes and is equivalent to LMTTF2017A Cut, bend and shape metal

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- complying with all relevant safety requirements applicable to the safe use of cutting and bending equipment
- interpreting work orders
- interpreting equipment and materials specifications and instructions needed for the cutting and forming processes
- setting up cutting and forming equipment
- performing cutting process using at least three (3) different tools or equipment according to workplace procedures, on at least three (3) different products
- performing forming processes according to workplace procedures on at least three (3) products
- inspecting completed work to assess quality
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- documenting and communicating work related information including reporting faults and other problems
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- specific work health and safety (WHS) requirements associated with cutting and heating equipment
- common metals and basic sections used in fabrication work
- metal cutting processes
- metal grinding and dressing processes
- metal forming processes

- the range of cutting and forming equipment, hand tools and power tools used in cutting and forming processes and their appropriateness for particular applications
- power sources, such as single phase, three phase and weather-protected outlets
- operating principles of tools and equipment used in cutting, dressing and forming metals, including abrasive cutting wheels, gas equipment, grinding wheels, guillotines and power hacksaws
- hazards associated with powered machinery and gas equipment
- materials and equipment specifications
- environmental requirements of relevant industry and workplace procedures
- general housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in cutting, bending and shaping metal, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2003 Use canvas and sail production tools

Modification History

Release 1. Supersedes and is equivalent to LMTTF2018A Use canvas and sail production tools

Application

This unit of competency covers the skills and knowledge required to safely use a range of commonly used hand and power tools in the manufacture of canvas and sail products.

This unit of competency applies to the use of hand, electrical, air and gas energised tools on a range of canvas and sail products and equipment. Work may involve interaction with other people in the workplace including supervisors and production personnel. Work may be conducted in a variety of environments, such as:

- indoor workplaces
- outdoor workplaces
- on site

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|---|
| 1 | Determine job | 1.1 | Follow standard operating procedures (SOPs) |
|---|----------------------|-----|---|

- requirements**
- 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to use canvas and sail production tools**
- 2.1 Read and interpret workplace procedures and instructions
 - 2.2 Determine nature of work to be performed, including processes, materials and working environment in which tools are to be used
 - 2.3 Select appropriate tools for the work tasks to be performed
 - 2.4 Check tools and set for use
- 3 **Prepare safe work area for using tools**
- 3.1 Establish safe working environment for using tools
 - 3.2 Plan work with tools to maximise safety, productivity and environmental requirements
 - 3.3 Eliminate solvents and other sources of flammable or explosive vapours and remove flammable materials which might catch fire if tools likely to produce sparks or flame are used
 - 3.4 Identify suitable electrical power outlets, if required
 - 3.5 Clear and clean work area to provide work table or benches free of obstructions and allow clear access to machines and equipment
 - 3.6 Use barriers or screens to keep other personnel at a safe distance or to shield them from sparks, arc flashes, debris, dust or noise
 - 3.7 Use suitable floor insulation or residual current devices where electrical tools are to be used in conditions which could present a shock hazard
 - 3.8 Check emergency shutdown is provided for tool

- | | | | |
|---|-------------------------------------|-----|--|
| 4 | Prepare work piece | 4.1 | Mount work piece correctly in, or aligned to, the tool or machine to be used |
| | | 4.2 | Anchor work piece securely, where necessary, to prevent movement |
| 5 | Use tools | 5.1 | Use safety equipment and tools in accordance with industry, WHS and workplace procedures |
| | | 5.2 | Safely connect electrical tools to power supply, and gas or air hoses to gas/air supplies |
| | | 5.3 | Follow start-up and shutdown procedures safely when using electrical or gas operated tools |
| | | 5.4 | Set mechanical tool settings, electrical settings and gas pressures |
| | | 5.5 | Locate tools in safe positions when not in use |
| | | 5.6 | Monitor tool operation and discontinue use if abnormal operation or other problems are detected |
| | | 5.7 | Inspect work to verify tool use meets specifications and relevant industry and workplace quality standards |
| 6 | Maintain tools and work area | 6.1 | Clean work area, and clean and store tools, extension cables and hoses in accordance with industry, WHS and workplace procedures |
| | | 6.2 | Report abnormal tool operation or other problems in accordance with established workplace procedures |
| | | 6.3 | Perform programmed maintenance of tools which is within the operator's responsibility |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Australian Standards includes:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Materials include one or more of the following:**
- steel
 - aluminium
 - bronze
 - stainless steel
 - wood
 - plastic
 - canvas

- Tools include one or more of the following:**
- hand tools:
 - measuring equipment
 - spanners
 - pliers
 - screwdrivers
 - knives
 - scissors
 - hacksaws
 - hammers
 - chisels
 - files

- pop riveting machines
- staple guns
- lifting and hoisting equipment
- air-powered tools:
 - drills
 - air wrenches
 - spray guns
 - air nozzles
 - buffing machines
 - air compressors
- gas burning tools:
 - oxy-acetylene welding equipment
 - butane or propane torches
- electrical power tools:
 - electric drills (bench and portable)
 - pop riveting machines
 - staple guns
 - sanders
 - angle grinders
 - bench grinders
 - electric shears and knives
 - heat lamps
 - arc welders
 - plastic welding machines
 - electric winches

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents

- environmental practices

Unit Mapping Information

Assessment Requirements for MSTTF2003 Use canvas and sail production tools

Modification History

Release 1. Supersedes and is equivalent to LMTTF2018A Use canvas and sail production tools

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- complying with all relevant safety requirements applying to the use of hand tools on at least two (2) occasions
- complying with all relevant safety requirements applying to electrical, air, and gas energised tools on at least two (2) occasions
- interpreting work orders relevant to the selection and use of tools on at least five (5) occasions
- interpreting specifications and instructions relating to the materials and equipment on which the tools are to be used
- preparing work environment for safe and effective tool use, setting up tools for safe and effective use, and demonstrating emergency shutdown of tools, on at least two (2) occasions
- performing work processes according to work health and safety (WHS) and machine specifications for a range of standard tools, including at least six (6) hand tools and four (4) power tools, subject to workplace requirements
- monitoring tool operation to check correct operation during use
- inspecting completed work to verify correct tool operation and use
- documenting and communicating work-related information, including reporting of faults and other problems
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- working with materials, such as:
 - steel

- aluminium
- bronze
- stainless steel
- wood
- plastic
- canvas
- hazards associated with tools using electricity, gas or compressed air
- specific WHS requirements associated with hand tools and electrical and gas energised tools
- the range of hand, electrical, air and gas energised tools relevant to work performed in the canvas and sail industry
- principles of operating tools and equipment used in the industry and their appropriateness for particular applications
- power sources such as single phase, three phase and weather-protected outlets
- general properties and working characteristics of materials and used in the canvas and sail industry
- environmental requirements of relevant industry and workplace procedures
- general housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in using canvas and sail production tools, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2004 Add reinforcements and attachments

Modification History

Release 1. Supersedes and is equivalent to LMTTF2004A Add reinforcements and attachments

Application

This unit of competency covers the skills and knowledge required to add reinforcing materials and attachments to canvas and sail products.

The unit of competency applies to the addition of accessories, attachments and reinforcement.

Work may be conducted in small to large scale enterprises in a variety of environments, such as operational indoor and outdoor workplaces or hazardous or exposed conditions, and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- requirements**
- 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to add reinforcements and attachments**
- 2.1 Read and interpret workplace procedures and instructions for adding the accessories, attachments and reinforcements
 - 2.2 Determine work plan and sequence work to maximise safety and productivity
 - 2.3 Establish safe working environment and identify suitable electrical power outlets, as required
 - 2.4 Select and prepare appropriate hand and power tools for the job
- 3 **Mark out work piece for addition of required items**
- 3.1 Set out work piece and obtain assistance in handling the work piece, as necessary
 - 3.2 Obtain items to be added, check for correct features and operation, and prepare for fitting or attachment
 - 3.3 Locate datum points in accordance with work instructions
 - 3.4 Mark out the locations of accessories, attachments, reinforcements or openings on the work piece in accordance with work instructions
- 4 **Fit accessories**
- 4.1 Insert or fit items in accordance with workplace requirements, customer requirements and accepted industry practice
 - 4.2 Attach reinforcements and attachments using appropriate equipment in accordance to suppliers requirements
 - 4.3 Apply knowledge of fitting accessories and attachment processes to insert or attach items including zippers, straps, buckles, eyelets, shorteners, lugs, webbing and velcro tags in accordance to suppliers requirements

- | | | | |
|---|--|-----|--|
| | | 4.4 | Apply environmental protection, waste disposal, pollution control and recycling procedures |
| 5 | Check quality and finalise operations | 5.1 | Inspect completed work informally to check that it meets the acceptable standard |
| | | 5.2 | Arrange re-work or other appropriate action as required |
| | | 5.3 | Label or tag completed product and complete any necessary documentation in accordance with workplace practices |
| | | 5.4 | Clean and store tools and equipment, and maintain work area to ensure safe and efficient operations |
| | | 5.5 | Perform maintenance which is within operator's responsibility |
| | | 5.6 | Inform supervisor of any abnormal conditions needing maintenance or repair |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of

team or section output

- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Equipment include one or more of the following:

- drills
- electric staple guns
- pop-riveting guns
- lifting and hoisting equipment
- measuring equipment
- spanners
- pliers
- screwdrivers
- knives
- scissors
- hacksaws
- hammers
- files

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2004 Add reinforcements and attachments

Modification History

Release 1. Supersedes and is equivalent to LMTTF2004A Add reinforcements and attachments

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- complying with all relevant safety requirements, including safe use of hand and power tools and electrical equipment
- interpreting work orders, including simple drawings and attachment instructions
- following basic installation information relating to attachments and reinforcing materials
- performing preparation and simple marking out of work piece for addition of specified items, and fitting specified items according to required procedures, on at least three (3) products
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- using relevant chemicals and cleaning agents and applying environmental protection, waste disposal, pollution control and recycling procedures
- documenting and communicating work-related information, including tagging and reporting of faults and other problems
- maintaining accurate records
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- typical attachments and fastening devices used in the canvas and sail industry and the ways in which they may be used and fitted
- typical reinforcing devices, screening materials and clear panel materials, including zippers, straps, buckles, eyelets, shorteners, lugs, webbing, velcro tags and other items used in the canvas and sail industry
- fitting accessories and attachment processes, including stitching, riveting and welding

- typical hand tools and power tools used in fitting accessories, attachments and reinforcements
- power sources, such as single phase, three phase and weather-protected outlets
- relevant quality standards for attachment of reinforcements and associated products
- environmental requirements of relevant industry and workplace procedures
- general housekeeping policies and procedures, relevant chemicals and cleaning agents and disposal of waste products
- quality practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in adding reinforcements and attachments, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2005 Translate information into measurements or diagrams

Modification History

Release 1. Supersedes and is equivalent to LMTTF2005A Translate information into measurements or diagrams

Application

This unit of competency covers the skills and knowledge required to translate information received orally and by other means on customer requirements into hard copy form for costing and production purposes.

Work may include interaction with enterprise clients either individually or in collaboration with other personnel from the operator's enterprise.

Work may be conducted in operational indoor or outdoor workplaces

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

- | | | |
|---|---|---|
| 1 | Prepare to translate information into measurements or diagrams | 1.1 Identify customer requirements from customer information |
| | | 1.2 Review customer information to ensure all required data is available |
| | | 1.3 Seek additional information, as needed |
| | | 1.4 Locate and interpret technical information about products, materials, equipment and operating procedures, as required, for processing customer request |
| | | 1.5 Follow workplace procedures and instructions |
| 2 | Identify components, products and services | 2.1 Develop concept of completed product or service |
| | | 2.2 Determine required accessories, attachments and other components |
| | | 2.3 Determine anchor points, and types and sizes of openings |
| | | 2.4 Identify potential difficulties or hazards associated with manufacture of the product or provision of the service |
| | | 2.5 Identify environmental features, regulations, insurance requirements, legal requirements and other factors which may affect the product or service to be provided |
| 3 | Develop graphical information to help define customer requirements | 3.1 Apply knowledge of customer requirements to produce freehand sketches or diagrams illustrating the customer's requirements |
| | | 3.2 Transfer dimensions and angles on to the sketch or diagram accurately |
| | | 3.3 Mark out positions of attachments, openings, fittings or inserts accurately and clearly |
| | | 3.4 Show positions of ropes, struts, retractors or supports clearly |
| | | 3.5 Develop and incorporate details of gussets, pockets, hips and other features in the sketches, diagrams or drawings |
| | | 3.6 Calculate dimensional allowances for cutting, rolled |

- edges, joins and reinforcements, and incorporate in the sketches, diagrams or drawings
- 3.7 Make provision for seams, joins and overlaps and check all dimensions and angles are accurate
- 3.8 Use tools, equipment and resources to WHS practices
- 3.9
- 4 **Finalise information**
- 4.1 Prepare final sketches, diagrams and drawings manually or using computer-aided design (CAD) system to confirm customer requirements and provide feedback to customer
- 4.2 Store information, sketches, diagrams and drawings according to workplace procedures
- 4.3 Pass on graphical information to personnel within the organisation responsible for further action

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication

Assessment Requirements for MSTTF2005 Translate information into measurements or diagrams

Modification History

Release 1. Supersedes and is equivalent to LMTTF2005A Translate information into measurements or diagrams

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- locating and interpreting technical information about products, materials, equipment and operating procedures
- complying with all relevant safety requirements, including safe use of measuring tools (including laser devices) and other equipment
- conceptualising customer needs from customer information
- interpreting specifications and instructions for products and materials offered to customers, and translating ideas into basic 3-D sketches and drawings for at least three (3) products
- clarifying customer instructions and providing feedback to customer
- making calculations and allowances as required to create accurate final drawings and diagrams for at least two (2) products, using manual or computer-aided design (CAD) programs to produce drawings, where possible
- documenting and communicating work related information
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- a range of common products and services offered by the workplace
- general operating principles of common products and equipment on offer
- common types of materials used in the industry and their applications
- limitations of canvas and other materials used
- common types of strengthening and fastenings
- measuring instruments and techniques
- mathematical processes

- plane geometry and plane geometrical shapes
- mathematical formulae (e.g. areas and volumes)
- engineering drawing principles and practices
- environmental requirements of relevant industry and workplace procedures
- general industry housekeeping policies and procedures
- work health and safety (WHS) practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in translating information into measurements or diagrams, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2006 Measure and scale geometric shapes

Modification History

Release 1. Supersedes and is equivalent to LMTTF2006A Measure and scale geometric shapes

Application

This unit of competency covers the skills and knowledge required to take accurate measurements and related information from customer information or actual objects or structures.

The unit of competency applies to taking accurate measurements, scaling shapes and applying related information using manual processes.

It may involve interaction with enterprise clients either individually or in collaboration with other personnel from the enterprise. Work may be conducted in operational indoor or outdoor workplaces

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures may require the exercise of discretion and judgement.

This unit may be assessed independently or in combination with other relevant units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTF2005 Translate information into measurements or diagrams

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Interpret information	1.1	Interpret drawings, sketches or diagrams provided by customer
		1.2	Read and apply workplace procedures and instructions
		1.3	Read established dimensions from supplied drawings or other information
		1.4	Consult customer to identify missing dimensions or other unknown aspects of the product
		1.5	Scale drawings or diagrams where necessary to obtain dimensions needed for production
		1.6	Select appropriate tools, equipment and resources
2	Obtain relevant dimensions from physical objects	2.1	Use manual measuring and scaling techniques
		2.2	Measure and record physical dimensions from buildings, architectural structures, vehicles, caravans, or marine craft, as appropriate
		2.3	Calculate or otherwise determine and record angles for future reference
		2.4	Identify and determine geometric shapes, establish positions of clear panels and record relevant information
		2.5	Apply work health and safety (WHS) practices during the gathering of measurements both on and off site
3	Record and communicate data	3.1	Record and store data using established workplace format and documentation
		3.2	Pass on data and associated information to personnel responsible for further action within the organisation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Tools, equipment and resources include one or more of the following:

- measuring equipment
- rules
- squares
- protractors
- calculators

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques

- SOPs
- personal protective equipment (PPE)
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2006 Measure and scale geometric shapes

Modification History

Release 1. Supersedes and is equivalent to LMTTF2006A Measure and scale geometric shapes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures and safe work practices and other reference material
- applying relevant standards
- conceptualising customer needs from customer information
- interpreting and using information from diagrams and drawings, and taking accurate measurements
- calculating surface areas and calculating measurements and scaling dimensions
- documenting and communicating measurements
- accurately calculating lengths subtended by angles
- accurately calculating angles and scaling drawings to obtain dimensions
- using manual measuring and scaling techniques for at least two (2) objects or structures with different geometrical shapes
- establishing positions of clear panels
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- range of products and services offered by the workplace
- operating principles of products and equipment on offer
- common types of materials used in the industry and their applications
- manual measuring and scaling techniques
- properties of canvas and textile materials used in the industry
- measuring instruments and techniques and scaling process
- mathematical processes and formulae for area and volume
- plane geometry and plane geometrical shapes
- meaning of engineering drawing symbols
- product construction processes commonly used in the industry

- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in measuring and scaling geometric shapes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- This unit may be assessed independently or in combination with other relevant units, for example *MSTTF2005 Translate information into measurements or diagrams*.

MSTTF2007 Produce patterns for 2-D products

Modification History

Release 1. Supersedes and is equivalent to LMTTF2007A Produce patterns for 2D products

Application

This unit of competency covers the skills and knowledge required to use a computer to develop 2-D patterns for the production of complex shapes in sails and canvas products, and to perform work-related calculations.

The unit of competency applies to the computerised development of 2-D drawings, computerised cutting of shapes using a plotting table, and calculation of material requirements and costing.

Work may be conducted in operational indoor workplaces using computers, plotters and associated software applications, including spreadsheets and computer-aided design (CAD).

This unit may require the interaction with customers, individuals delegated by the customer, and other personnel from the operator's workplace.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| 4 | Perform | <p>4.1 Use spreadsheets or other appropriate software applications to perform simple materials calculations,</p> |

	calculations		financial tasks and costing
		4.2	Develop and apply spreadsheets
		4.3	Save data, drawings and other outputs electronically and in hard copy form using established workplace file and documentation formats
5	Save, document and communicate data	5.1	Store other work-related information in accordance with established workplace procedures
		5.2	Pass on data and associated information to personnel responsible for further action within the organisation
		5.3	Exit software applications and close down and switch off computer

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

Australian Standards includes:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

WHS practices WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTF2007A Produce patterns for 2D products

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTTF2007 Produce patterns for 2-D products

Modification History

Release 1. Supersedes and is equivalent to LMTTF2007A Produce patterns for 2D products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- interpreting work orders, customer information and specifications for components that are to form part of finished products
- identifying appropriate computer applications and keying in required information or transferring from other sources to initiate design or production processes
- operating a desktop or laptop computer and relevant software to construct 2-D drawings, based on customer information, using appropriate software applications
- marking out and cutting shapes, such as 2-D component shapes, based on customer or workplace information, and cutting out using a plotting table and appropriate software applications on at least two (2) occasions
- using spreadsheets or other appropriate software applications to perform simple materials calculations, financial tasks and costing, according to workplace procedures
- saving data, drawings and other outputs electronically and in hard copy form using established workplace file and documentation formats
- checking finished product quality meets specifications
- documenting and communicating work-related information.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- range of products and services offered by the workplace
- product construction processes
- computer hardware
- software packages used in the workplace
- computer or plotter interfaces
- keyboard skills
- 2-D drawing and calculation processes

- mathematical processes and formulae, including for area and volume
- geometry and geometrical shapes
- principles and practices of engineering drawing
- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in producing patterns for 2-D products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2008 Use adhesives

Modification History

Release 1. Supersedes and is equivalent to LMTTF2008A Use adhesives

Application

This unit of competency covers the skills and knowledge required to select and safely use adhesives on canvas and sail products.

The unit of competency applies to the bonding of materials with adhesives on canvas and sail products. Work may be conducted in operational indoor or outdoor workplaces and hazardous or exposed conditions.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to use adhesives work area**
- 2.1 Prepare work area, tools and equipment
 - 2.2 Read and follow workplace procedures and instructions
 - 2.3 Determine nature of materials to be joined and obtain specified adhesives
- 3 **Prepare adhesives**
- 3.1 Select appropriate tools and materials to prepare work piece surfaces and application of adhesive
 - 3.2 Check adhesive manufacturer WHS requirements and take prescribed precautions before using adhesives
 - 3.3 Prepare adhesive to manufacturer instructions
- 4 **Apply adhesive and bond materials**
- 4.1 Prepare work piece surfaces for application of adhesive
 - 4.2 Anchor or otherwise stabilise work piece surfaces to be bonded
 - 4.3 Apply adhesive and join surfaces in accordance with recommended practice
 - 4.4 Allow joins to cure for specified time
 - 4.5 Apply heat to the work piece to assist in curing the joins in accordance with WHS practices, as required
 - 4.6 Remove work piece and informally inspect and test joins for strength
 - 4.7 Consult supervisor to verify results of inspection and take appropriate action to re-work or rectify, as necessary
- 5 **Document and complete**
- 5.1 Dispose of or store remaining adhesive in a safe, secure location

operations

- 5.2 Clean and store tools, electrical cords and equipment securely
- 5.3 Clean and maintain work area to ensure safe and efficient operations
- 5.4 Complete work records in accordance with workplace requirements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards includes:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Power tools includes one or more of the

- spray guns
- portable ventilation fans

- following:**
- hot air dryers
 - heat lamps

WHS practices WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2008 Use adhesives

Modification History

Release 1. Supersedes and is equivalent to LMTTF2008A Use adhesives

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- locating and interpreting technical information about canvas products, adhesives and equipment used in bonding processes
- complying with all relevant safety requirements, including safe use of adhesives, solvents, hand tools and electrical equipment
- using hand and power tools, as required, and following work orders and workplace procedures
- applying equipment and materials instructions applicable to the use of adhesives
- preparing product to be bonded and setting up adhesive application equipment
- performing at least three (3) bonding processes, checking result and taking necessary action to rectify, as required, on at least two (2) occasions
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- documenting and communicating work-related information, including reporting of faults and other problems.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- health, fire and explosion hazards associated with the use of volatile or toxic adhesives and solvents, and specific work health and safety (WHS) requirements regarding their use, safe handling and storage
- the range of canvas products in common use
- bonding principles and techniques
- commonly used glues, adhesives and solvents for bonding canvas and sail materials
- curing characteristics of commonly used adhesives and the effects of atmospheric conditions
- quality standards for bonding processes
- WHS and environmental requirements of relevant industry and enterprise procedures

- general housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in using adhesives, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2009 Identify and select canvas and sail materials

Modification History

Release 1. Supersedes and is equivalent to LMTTF2009A Identify and select canvas and sail materials

Application

This unit of competency covers the skills and knowledge required to identify and select appropriate materials to use in the manufacture of canvas or sail products.

This unit of competency applies to identifying, selecting and handling materials, and checking stock availability. Work may involve interaction with other people in the workplace including supervisors and production personnel. Work may be conducted in operational indoor or outdoor workplaces

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- requirements**
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Identify materials**
 - 2.1 Identify materials by appearance, texture, density, stock labels and product codes
 - 2.2 Check stock labels or tags against product codes and manufacturer specifications to confirm correct identification
 - 2.3 Read and apply workplace procedures and instructions
- 3 **Select materials**
 - 3.1 Select materials in accordance with job specifications, fitness for purpose and work order instructions
 - 3.2 Check materials stocks to ensure sufficient quantities of materials are available to meet job requirements
 - 3.3 Check materials to ensure they conform to specifications, descriptions and relevant quality standards
- 4 **Handle and store materials**
 - 4.1 Follow appropriate WHS practices and work procedures when examining stock in racks or shelves
 - 4.2 Follow safe working practices when handling or moving stock
 - 4.3 Use appropriate lifting equipment to lift heavy or awkward loads
 - 4.4 Use appropriate posture and lifting techniques for manual handling of materials
 - 4.5 Seek assistance in handling materials when necessary
 - 4.6 Store materials in accordance with workplace procedures and manufacturer recommendations

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Materials include the following:

- fibres and yarns used in canvas and sail making
- ropes
- dacron, nylon and composite sail cloths
- attachments (metal and non-metal)
- adhesives

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques

- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2009 Identify and select canvas and sail materials

Modification History

Release 1. Supersedes and is equivalent to LMTTF2009A Identify and select canvas and sail materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- locating and interpreting technical information about materials used in the canvas and sail making industry
- identifying at least five (5) examples of materials by appearance, texture, density and other relevant characteristics
- interpreting and applying work orders, materials specifications and instructions for storage, handling and use
- correctly identifying and handling at least five (5) textile materials used in the canvas and sail making industry
- selecting appropriate materials to meet specified job requirements
- complying with all relevant safety requirements including safe handling and storage of materials
- storing materials according to product requirements and workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- product construction principles and methods
- characteristics of a wide range of materials used in the canvas and sail industry
- industry applications of various materials
- relative advantages and disadvantages of various materials for particular applications
- joining characteristics of various materials
- materials labelling principles and practices, including 'care' labelling
- standard industry practices for storage and handling of materials
- relevant materials quality standards

- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- general housekeeping policies and procedures
- quality practices
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in identifying and selecting canvas and sail materials, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2010 Lay out and mark out canvas or sail materials

Modification History

Release 1. Supersedes and is equivalent to LMTTF2010A Lay out and mark out canvas or sail materials

Application

This unit of competency covers the skills and knowledge required to lay out and mark out materials for the manufacture of canvas or sail products.

Work may involve interaction with other people in the workplace, including supervisors and production personnel. Work may be conducted in operational indoor or outdoor workplaces.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for laying out and marking out processes**
- 2.1 Analyse specifications, drawings, sketches or diagrams to determine task requirements
 - 2.2 Determine amount of floor or table space required to lay out material
 - 2.3 Select and set up equipment needed for laying and marking out
 - 2.4 Determine and sequence steps in laying and marking out processes for maximum productivity
 - 2.5 Ensure there is adequate lighting for the laying and marking out processes
 - 2.6 Apply workplace procedures and instructions
- 3 **Lay out material**
- 3.1 Remove obstructions and debris from around work area, and clean work table or work surface
 - 3.2 Move material to the work area and spread out onto the work table or work surface
 - 3.3 Layer material according to requirements and anchor to prevent movement using appropriate devices and WHS work practices
 - 3.4 Place templates in position, if used
- 4 **Mark out required shapes and features**
- 4.1 Interpret dimensions and other relevant specifications and establish datum point
 - 4.2 Plot and mark out required shapes using manual or electronic processes to maximise use of material and minimise waste
 - 4.3 Make allowances for seams, joins, reinforced edges and other design features

- 4.4 Plot and mark positions of openings, inserts, gussets, reinforcing, attachments and other components
- 5 **Use plotting table**
 - 5.1 Check plotting table vacuum to ensure it reaches specified value
 - 5.2 Lay out material on table and check to ensure it is free of creases, folds or other conditions that would prevent it lying flat
 - 5.3 Check plotter slide for smooth travel
 - 5.4 Initiate appropriate software program and load or key in data required by software program
 - 5.5 Perform plotting processes and apply WHS practices
 - 5.6 Release vacuum when plotting process is complete, and complete relevant documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping

- tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Materials include one or more of the following:**
- fibres and yarns used in canvas and sail making
 - ropes
 - dacron, nylon and composite sail cloths
- WHS practices**
- WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:
- manual handling techniques
 - SOPs
 - PPE
 - safe materials handling
 - taking of rest breaks
 - ergonomic arrangement of workplaces
 - following marked walkways
 - safe storage of equipment
 - housekeeping
 - reporting accidents and incidents
 - environmental practices

Assessment Requirements for MSTTF2010 Lay out and mark out canvas or sail materials

Modification History

Release 1. Supersedes and is equivalent to LMTTF2010A Lay out and mark out canvas or sail materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- complying with all relevant safety requirements, including safe use of tools and equipment used in handling materials, laying out and marking out
- interpreting work orders
- interpreting drawings, diagrams and sketches defining the design to be marked out
- interpreting dimensions and other relevant specifications of components to be incorporated in marked out design
- plotting and marking out required shapes using manual or electronic processes to maximise use of material, minimise waste, and make allowances for seams, joins, reinforced edges and other design features
- using plotting table and associated computer equipment according to workplace procedures
- applying all required lay out and mark out techniques, on at least two (2) occasions, according to workplace requirements
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- documenting and communicating work-related information.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- measuring instruments and techniques
- mathematical processes, geometry and geometrical shapes
- engineering drawing principles and practices
- computer and appropriate software for sail making
- lay out and mark out principles and practices

- product construction processes
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- general industry housekeeping policies and procedures
- quality practices
- maintaining records
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in lay out and mark out canvas or sail materials, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTTF2011 Cut and shape canvas or sail materials

Modification History

Release 1. Supersedes and is equivalent to LMTTF2011A Cut and shape canvas or sail materials

Application

This unit of competency covers the skills and knowledge required to manually cut and shape fibrous materials used in canvas product and sail construction.

The unit of competency applies to cutting a range of materials, including canvas, PVC and clear plastic, into single piece shapes with straight or simple curved sides, such as for shorteners and lugs. Work may be conducted in a variety of environments, including operational indoor and outdoor workplaces.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to cut and shape materials	2.1	Read and interpret workplace procedures and instructions
		2.2	Prepare to perform work in accordance with defined procedures and methods either individually or in a team environment
		2.3	Identify statutory requirements, workplace insurance requirements, WHS practices, manual handling procedures and relevant health regulations relevant to the operation
3	Cut and shape material	3.1	Connect electric tools to power and use safely
		3.2	Use shears, trimmers, rotary cutting devices and dies to cut materials and form complex shapes in material
		3.3	Manipulate materials safely on cutting table or floor and separate product from waste material
		3.4	Remove finished panels and fold with correct sequence of folds to suit sewing stage, and store neatly for further processing
		3.5	Remove waste materials and separate for recycling or reuse
		3.6	Seek assistance to move finished products and waste material, if necessary
4	Check quality and finalise work	4.1	Inspect completed work to check that it meets the required standard
		4.2	Label or tag completed panels with job number, client, or other identification and complete any necessary documentation in accordance with workplace procedures

- 4.3 Clean work area and perform normal basic maintenance of cutting surface and cutting equipment, in accordance with workplace requirements and manufacturer specifications
- 4.4 Notify supervisor of any abnormal conditions requiring maintenance or repair

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Materials include the following:

- fibres and yarns used in canvas and sail making
- ropes
- dacron, nylon and composite sail cloths

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTTF2011 Cut and shape canvas or sail materials

Modification History

Release 1. Supersedes and is equivalent to LMTTF2011A Cut and shape canvas or sail materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- complying with all relevant safety requirements, including safe use of cutting and shaping equipment and associated hand and power tools
- interpreting work orders
- interpreting equipment and materials specifications and instructions needed for the cutting and shaping process
- preparing material to be cut and shaped and setting up cutting equipment according to workplace procedures
- performing all required cutting and shaping processes in appropriate sequence to quality standards for a variety of materials and sizes, on at least three (3) occasions
- performing basic operator maintenance of cutting equipment
- handling and disposing of waste according to environmental requirements
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- labelling completed panels, and documenting and communicating work-related information according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- hazards associated with cutting equipment used in cutting and shaping
- work piece construction principles and methods
- common materials used in the canvas and sail industry, and their cutting characteristics
- the range of cutting and shaping equipment, hand tools and power tools used in cutting and shaping processes and their appropriateness for particular applications
- operating principles of cutting and shaping equipment

- relevant quality standards for products of the cutting and shaping process
- standard industry practice for storage and safe disposal of materials used in cutting and shaping processes
- power sources, such as single phase, three phase and weather-protected outlets
- electrical isolation procedures for electrically powered cutting and shaping equipment
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- general housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in cutting and shaping canvas or sail materials, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2012 Stitch by hand

Modification History

Release 1. Supersedes and is equivalent to LMTTF2012A Stitch by hand

Application

This unit of competency covers the skills and knowledge required to stitch canvas and sail products by hand.

The unit of competency applies to standard stitching of damaged seams, gussets, reinforcements, general repairs or modifications, and new work. Work may be conducted in a variety of environments, such as operational indoor or outdoor workplaces or on site.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to stitch by hand**
- 2.1 Read and interpret workplace procedures and instructions and organise work to maximise safety and productivity
 - 2.2 Clear and clean work area and establish safe working environment
 - 2.3 Seek assistance to move and position work piece, if necessary
 - 2.4 Seek advice on appropriate thread to be used with regard to thread material, diameter of thread, tensile strength and colour
 - 2.5 Seek advice regarding appropriate needle to suit type of thread, type of stitch and material to be sewn
 - 2.6 Check condition of needle to ensure it is sharp, clean and free from rust and dirt
- 3 **Perform hand stitching**
- 3.1 Lay out material on working table or other suitable surface or support in situ in preparation for stitching process
 - 3.2 Choose appropriate type of stitch to suit the particular application
 - 3.3 Start stitching properly and perform hand stitching according to specifications
 - 3.4 Tie off last stitch, cut thread and inspect finished work to ensure it conforms to specification
- 4 **Check quality and finalise work**
- 4.1 Inspect completed work to verify that it meets job specifications and relevant workplace and industry quality standards
 - 4.2 Identify and mark any areas in need of re-work or rectification, perform re-work or arrange appropriate

action

- 4.3 Label or tag completed product and complete any necessary documentation in accordance with workplace procedures
- 4.4 Store needles and threads in a dry and safe place and dispose of worn or damaged needles in accordance with manufacturer recommendations and workplace procedures
- 4.5 Clean work area and place tools back in storage

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2012 Stitch by hand

Modification History

Release 1. Supersedes and is equivalent to LMTTF2012A Stitch by hand

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- complying with all relevant safety requirements, including safe use of needles and associated tools
- interpreting work orders
- interpreting standard specifications of needles, threads and materials used in the hand stitching process
- preparing and setting up material for hand stitching
- performing standard hand stitching processes on at least two (2) occasions
- inspecting completed work, checking quality and determining any rectification necessary
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- labelling or tagging work, and documenting and communicating work-related information, including reporting of faults and other problems, according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- hazards associated with hand stitching process
- standard hand stitching principles and techniques, including various types of stitches used
- the normal range of needles, threads and associated tools used in hand stitching and their appropriateness for particular applications
- materials specifications and material sewing characteristics
- quality standards applicable to hand stitching
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- general housekeeping policies and procedures
- quality practices
- workplace procedures

- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in stitching by hand, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2013 Waterproof canvas products

Modification History

Release 1. Supersedes and is equivalent to LMTTF2013A Waterproof canvas products

Application

This unit of competency covers the skills and knowledge required to restore the waterproof characteristics of older canvas products.

The unit of competency applies to the waterproofing of canvas products. Work may be conducted in a variety of environments, such as operational indoor or outdoor workplaces and hazardous or exposed conditions.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for waterproofing**
- 2.1 Read and interpret workplace procedures and instructions and establish a safe working environment
 - 2.2 Select waterproofing agents in accordance with job instructions
 - 2.3 Plan work to maximise safety and productivity and identify suitable electrical power outlets, if required
 - 2.4 Prepare tools and equipment appropriate for the job
- 3 **Identify condition of product to be waterproofed**
- 3.1 Lay out or hang out product and examine its condition
 - 3.2 Inspect product and identify areas of weakness or damage
 - 3.3 Report results of inspection to supervisor, and obtain authorisation for repairs or other treatment
 - 3.4 Complete workplace records regarding condition of product and authorisation for repair and treatment
- 4 **Repair product and apply waterproofing agent**
- 4.1 Perform repairs in accordance with authorisation and workplace procedures
 - 4.2 Isolate work area from other unprotected workers
 - 4.3 Hang product, if necessary, and clean it prior to waterproofing
 - 4.4 Apply waterproofing agent and allow to air dry
 - 4.5 Clean up spillage or excess waterproofing agent, and dispose of waste products in accordance with workplace procedures and environmental regulations
- 5 **Check quality of**
- 5.1 Test product to determine if waterproofing was effective

waterproofing and finalise work	5.2	Obtain supervisor's endorsement or approval for further treatment, if necessary, and reapply waterproofing agent
	5.3	Remove and fold product for storage or despatch, as required
	5.4	Complete documentation and clean and maintain waterproofing equipment in accordance with workplace requirements
	5.5	Clean work area, clean and return tools and equipment to safe storage, and perform normal basic maintenance, in accordance with workplace procedures and manufacturer specifications

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Hand and power tools include one or more of the following:

- brushes
- brooms
- rollers
- spray guns
- knives
- scissors
- sewing implements
- portable ventilation fans
- heat lamps

WHS practices WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2013 Waterproof canvas products

Modification History

Release 1. Supersedes and is equivalent to LMTTF2013A Waterproof canvas products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- complying with all relevant safety requirements, including safe use of waterproofing agents, hand and power tools, and electrical equipment
- interpreting work orders and following work instructions
- interpreting equipment and materials instructions for the waterproofing process
- preparing product to be waterproofed and setting up waterproofing equipment
- performing waterproofing process according to workplace procedures to meet quality standards on at least two (2) occasions
- testing product to determine if waterproofing was effective, and obtaining approval for further treatment, if necessary
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- documenting and communicating work-related information, including reporting of faults and other problems
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- specific work health and safety (WHS) requirements associated with the use of volatile or toxic products
- explosion and fire hazards associated with volatile solvents
- waterproofing principles and techniques
- types of canvas in common use
- waterproofing agents commonly used
- relevant quality standards for waterproofing processes
- environmental requirements of relevant industry and workplace procedures

- general housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in waterproofing canvas products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2014 Weld plastic materials

Modification History

Release 1. Supersedes and is equivalent to LMTTF2014A Weld plastic materials

Application

This unit of competency covers the skills and knowledge required to weld plastic materials within the safe operating parameters of the equipment used.

The unit of competency applies to hot air and hot wedge welding of plastic in the textile fabrication industry. Work may be conducted in a variety of environments, such as operational indoor or outdoor workplaces, and in hazardous or exposed conditions.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Select welding process and plan the work**
- 2.1 Read and interpret workplace procedures and instructions
 - 2.2 Determine nature of material to be welded and select an appropriate welding process
 - 2.3 Establish a safe working environment, identify suitable electrical power outlets and plan work to maximise safety and productivity
 - 2.4 Select appropriate hand-held or stationary manual welding equipment, check serviceability and follow correct 'on' procedures
 - 2.5 Select and prepare appropriate supplementary hand and power tools for the job
- 3 **Perform welding**
- 3.1 Prepare surfaces of material for welding
 - 3.2 Lay out material on working table or other suitable surface and anchor material to prevent movement
 - 3.3 Adjust equipment temperature to prescribed settings
 - 3.4 Lower screens or barriers, where fitted, prior to welding process
 - 3.5 Operate welding equipment in accordance with workplace procedures
 - 3.6 Examine weld area or test for correct fusion of materials, and remove work piece
- 4 **Check quality of weld and finalise work**
- 4.1 Inspect completed weld to verify that it meets the required standard
 - 4.2 Label or tag completed product and complete any necessary documentation in accordance with workplace procedures

- 4.3 Clean work area, clean and return tools and equipment to safe storage, and perform normal basic maintenance, in accordance with workplace requirements and manufacturer specifications

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Materials include one or more of the following:

- PVC
- vinyls
- clear plastics

- Welding equipment includes two or more of the following:**
- foot controlled welder
 - hand welder
 - hot air welder
 - hot wedge welder

- Hand and power tools include one or more of the following:**
- hammers
 - rasps
 - files
 - portable sanders

- WHS practices** WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:
- manual handling techniques
 - SOPs
 - PPE
 - safe materials handling
 - taking of rest breaks
 - ergonomic arrangement of workplaces
 - following marked walkways
 - safe storage of equipment
 - housekeeping
 - reporting accidents and incidents
 - environmental practices

Assessment Requirements for MSTTF2014 Weld plastic materials

Modification History

Release 1. Supersedes and is equivalent to LMTTF2014A Weld plastic materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- complying with all relevant safety requirements, including safe use of plastic welding equipment, hand and power tools and electrical equipment
- following work orders
- interpreting equipment and materials specifications and instructions needed for the plastic welding process
- preparing material to be welded and setting up welding equipment
- performing at least two (2) forms of welding of plastic materials to industry standards, quality and consistency, and testing for correct fusion of materials, on at least five (5) occasions
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- labelling or tagging materials, and documenting and communicating work-related information, including reporting of faults and other problems, according to workplace procedures

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- specific work health and safety (WHS) requirements associated with hot air and hot wedge welding
- hazards associated with heated plastics
- plastic welding principles and techniques
- general operating principles of plastic welding equipment
- a range of plastic welding equipment, hand tools and power tools commonly used in the plastic welding process and their appropriateness for particular applications
- power sources, such as single phase, three phase and weather-protected outlets
- materials and equipment specifications
- relevant quality standards for plastic welds

- WHS and environmental requirements of relevant industry and workplace procedures
- general housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in welding plastic materials, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2015 Install products on and off site

Modification History

Release 1. Supersedes and is equivalent to LMTTF2016A Install products on and off site

Application

This unit of competency covers the skills and knowledge required to install canvas and sail products both on site and off site.

The unit of competency applies to the installation, operation and maintenance of canvas and sail products and equipment both on and off site. Work may be conducted in a variety of environments, such as operational indoor, outdoor workplaces or on site

Work may require independence, discretion, judgement and acceptance of responsibility for overall work outcomes. Work may involve planning and coordination of tasks and processes, interaction with other enterprise personnel, enterprise clients, manufacturer representatives and other external personnel.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|---|-------------------------------------|---|
| 1 | Determine job requirements | <p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p> |
| 2 | Prepare for installation | <p>2.1 Read and interpret workplace procedures and instructions, including interpreting drawings and technical information to guide installation</p> <p>2.2 Plan task operation sequence, identify suitable electrical power outlets and equipment to work above ground, as required</p> <p>2.3 Arrange additional assistance, if required</p> <p>2.4 Select and prepare appropriate tools and prepare site</p> |
| 3 | Prepare to work above ground | <p>3.1 Select, secure and adequately support ladders or other devices, such as steps or bosun's chair, as required for the tasks</p> <p>3.2 Erect appropriate barriers and signs when working overhead</p> <p>3.3 Obtain assistance, as necessary, when working above the ground or deck</p> |
| 4 | Fit products | <p>4.1 Use appropriate marking tools and measuring equipment to mark out fitting positions</p> <p>4.2 Check products to be installed to ensure they meet specifications and are fit for their intended purpose</p> <p>4.3 Use appropriate ladders or other devices to gain height advantage</p> |

- | | | | |
|---|---|-----|--|
| | | 4.4 | Sequence all operations according to specifications and workplace procedures ,as required, to complete a normal installation |
| | | 4.5 | Apply appropriate WHS precautions and environmental practices during all phases of the installation |
| | | 4.6 | Work in cooperation with other team members, as required, to fit products |
| 5 | Inspect and check quality | 5.1 | Inspect completed work to verify that the products and installation work meet job specifications and relevant workplace and industry quality standards |
| | | 5.2 | Check that installation is correct, and that products fit and operate correctly |
| | | 5.3 | Determine if any re-work or rectification is required, undertake re-work or take other appropriate action |
| 6 | Provide customer information and finalise work | 6.1 | Supply customer with information on how to use product, as required |
| | | 6.2 | Demonstrate product to customer and answer questions within scope of own responsibility |
| | | 6.3 | Clean work area, clean and return tools to safe storage, and perform normal basic maintenance, in accordance with workplace procedures |
| | | 6.4 | Clean and stow away ladders, bosun's chair or other equipment |
| | | 6.5 | Complete project documentation and obtain customer signature, if required |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Products include one or more of the following:

- blinds
- awnings
- annexes
- sails

Tools include one or more of the following:

- hand tools:
 - hammers
 - punches
 - hand drills
 - saws
 - hacksaws
 - rasps
 - wire brushes
 - pop-rivets
 - expanding bolts
- power tools:
 - portable electric drills
 - routers
 - portable sanders

- abrasive disk cutting equipment
- electric punches

Normal installation includes one or more of the following

- using appropriate tools to drill and prepare locating holes
- safely lifting or lowering products into position
- using appropriate fastenings to attach or anchor product
- fitting pulleys or sheave blocks
- threading or attaching ropes or cables, as necessary
- fitting stays or other fastenings
- cleaning up work area after fitting

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2015 Install products on and off site

Modification History

Release 1. Supersedes and is equivalent to LMTTF2016A Install products on and off site

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- complying with all relevant safety requirements, including safe use of ladders, bosun's chair, load hoisting equipment and electrical equipment
- interpreting work orders, drawings and installation instructions
- complying with product and equipment specifications during installation
- performing normal installation and setting of products and equipment on at least two (2) occasions
- using relevant hand and power tools safely
- inspecting and testing operation of installed products and equipment
- specifying any rectification necessary
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- communicating effectively with client on installation process and product operation
- demonstrating products to customer, answering questions, completing project documentation and obtaining customer signature, if required, according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- electrical and general workplace hazards and means of identifying them
- operating principles of products and associated equipment to be installed
- the range of hand tools, power tools, measuring devices and other equipment used in the installation process, and their operating principles and appropriateness for particular applications
- power sources, such as single phase, three phase and weather-protected outlets
- format of product and equipment specifications

- setting and adjustment principles and processes for products and equipment being installed
- typical problems of products and associated equipment and their rectification procedures
- relevant product quality standards for products and equipment installed
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures, including use of equipment for working aloft
- general housekeeping policies and procedures
- mathematical processes used in the installation and checking processes
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in installing products on and off site, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2016 Inspect canvas or sail product

Modification History

Release 1. Supersedes and is equivalent to LMTTF2019A Inspect canvas or sail product

Application

This unit of competency covers the skills and knowledge required to inspect canvas or sail products prior to despatch to customers.

The unit of competency applies to workplace inspection processes of a range of non-complex 2-D canvas or sail products and equipment prior to despatch to customers. Discretion, initiative and judgment must be demonstrated on the job in own work, either individually or in a team environment and may involve referral of matters to other enterprise personnel.

Work may be conducted in a variety of environments, such as operational indoor or outdoor workplaces and hazardous or exposed conditions.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

demonstrate achievement of the element.

- | | | |
|---|--|--|
| 1 | Determine job requirements | 1.1 Follow standard operating procedures (SOPs) |
| | | 1.2 Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to inspect canvas or sail product | 2.1 Obtain relevant workplace and customer specifications for the product |
| | | 2.2 Identify applicable workplace and industry quality standards |
| | | 2.3 Clear and clean work area to be used for inspection in preparation for the inspection process |
| | | 2.4 Read and apply workplace procedures and instructions |
| | | 2.5 Prepare tools and measuring and marking equipment |
| 3 | Locate, transport and lay out product | 3.1 Locate and transfer completed product safely to the inspection area |
| | | 3.2 Lay out or hang product for inspection |
| | | 3.3 Seek assistance to handle product, if necessary |
| 4 | Inspect and finalise work | 4.1 Inspect product to verify that it meets job specifications and relevant workplace and industry quality standards |
| | | 4.2 Identify and mark any areas in need of re-work or rectification |
| | | 4.3 Isolate and report product needing re-work or other actions, as required |
| | | 4.4 Label and tag inspected product and fold or otherwise prepare products for storage or transport |
| | | 4.5 Complete documentation in accordance with workplace procedures |

- 4.6 Inform supervisor of any abnormalities indicating a need for maintenance or other action elsewhere in the workplace
- 4.7 Clean tools and equipment after use and store according to industry, WHS and workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Tools and equipment include one or more of the following:

- measuring tapes
- protractors
- callipers
- lifting and hoisting equipment

- pliers
- knives
- marking pens
- crayons

Electrical tools include one or more of the following:

- lifting and hoisting equipment
- inspection lamps
- electric staple guns

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2016 Inspect canvas or sail product

Modification History

Release 1. Supersedes and is equivalent to LMTTF2019A Inspect canvas or sail product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- performing inspection procedures on at least four (4) non-complex 2-D canvas or sail products and identifying faults or substandard work
- interpreting work instructions and inspection procedures
- interpreting workplace and customer specifications and relevant quality standards
- complying with all relevant safety requirements, including safe use of hand and power tools and electrical equipment
- documenting inspection results to verify that it meets job specifications and relevant workplace and industry quality standards, and reporting faults or abnormalities and rectification measures in accordance with workplace procedures
- labelling and tagging inspected product and folding or otherwise prepare products for storage or transport
- performing normal operator maintenance of work area and inspecting equipment to enable inspections to be conducted safely and efficiently
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- operating principles of measuring devices and other inspection equipment
- the range of materials, attachments and other components used by the workplace
- sail and canvas products produced by the workplace
- production processes, including forms of stitching and plastic welding
- power sources, such as single phase, three phase and weather-protected outlets
- materials, equipment and product specifications
- work health and safety (WHS) and environmental requirements of relevant industry and enterprise procedures

- general housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in inspecting canvas and sail products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF3001 Identify client and site requirements for installation of fabricated textile products

Modification History

Release 1. Supersedes and is equivalent to LMTTF3001A Identify client requirements (on site)

Application

This unit of competency covers the skills and knowledge required to establish and document client and site requirements for the installation of fabricated textile products.

The unit includes identifying client requirements and WHS and environmental issues from site inspection, using discretion, initiative and judgement on the job. Work may be conducted in a variety of environments, such as large to small scale enterprises, including indoor or outdoor operations.

All elements of this unit of competency are performed under the general guidance and review of a supervisor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

-
- | | | |
|---|--|--|
| 1 | Prepare to identify client's requirements on site | 1.1 Prepare inspection tools and equipment and arrange for visit on site |
| | | 1.2 Establish contact and apply communication skills to develop rapport with the client |
| | | 1.3 Provide personal identification and confirm purpose of visit |
| | | 1.4 Explain process for determining client's needs |
| | | 1.5 Obtain permission to inspect location, take measurements and gather relevant information |
| 2 | Obtain detailed information from client | 2.1 Use appropriate questioning techniques to identify client requirements and gather detailed information |
| | | 2.2 Present preliminary product information and discuss options with client |
| | | 2.3 Document client requirements |
| 3 | Conduct site inspection | 3.1 Arrange and adapt to work area, so that inspection can be conducted safely and efficiently |
| | | 3.2 Select ladders, steps or bosun's chair, as appropriate, to inspect site and take measurements, and use in accordance with work health and safety (WHS) practices |
| | | 3.3 Secure and adequately support ladder or other device |
| | | 3.4 Erect appropriate barriers and signs when operator is overhead |
| | | 3.5 Seek assistance, as necessary, when working above ground or deck |
| | | 3.6 Identify safe anchor points for products or other relevant architectural or marine structural equipment |
| | | 3.7 Take measurements and note special features likely to affect installation of products or their performance in service |
| | | 3.8 Take account of labour rates and costs of materials and equipment to estimate costs, and record results of inspection |

- | | | | |
|---|------------------------------------|-----|---|
| 4 | Conclude inspection on site | 4.1 | Replace items shifted or removed during the information gathering process |
| | | 4.2 | Return client equipment used in the inspection process |
| | | 4.3 | Notify client when operator is leaving the site |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Client's requirements include one or more of the following:

- types of materials
- types of products and equipment
- operating principles and mechanisms
- costs

- timelines
- colours
- size, dimensions and shape
- delivery and installation dates
- installation procedure to be followed
- crowd barriers or fencing

WHS practices include one or more of the following:

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- personal protective equipment (PPE)
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- additional licensing or permits
- environmental practices

Assessment Requirements for MSTTF3001 Identify client and site requirements for installation of fabricated textile products

Modification History

Release 1. Supersedes and is equivalent to LMTTF3001A Identify client requirements (on site)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- preparing tools and equipment for inspection, arranging visit on site, and conducting at least two (2) on-site inspections safely and efficiently to determine work requirements
- greeting client in an appropriate manner, identifying and confirming client needs, and demonstrating product knowledge
- taking measurements and noting site requirements likely to affect installation of products or their performance in service
- asking appropriate questions, clarifying information and providing feedback to client
- documenting and communicating work-related information including costs, measurements, specifications, client details and requirements
- complying with all relevant safety requirements, including safe use of ladders, steps, measuring tools (including laser devices), and other equipment
- concluding inspection on site according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- hazards associated with working at heights
- range of products and services offered by the workplace
- principles of operating products and equipment
- types of materials and their applications
- limitations of canvas and other materials used
- types of strengthening and fastenings
- the service life of different materials
- instruments and techniques for measuring
- mathematical processes

- mathematical formulae for areas and volumes
- labour rates and approximate costs of products and materials
- power sources, such as single phase, three phase and weather-protected outlets
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- general industry housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- client communication
- quality practices
- workplace practices
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in identifying client requirements on site, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF3002 Gain customer acceptance of service proposal

Modification History

Release 1. Supersedes and is equivalent to LMTTF3002A Gain customer acceptance of service proposal

Application

This unit of competency covers the skills and knowledge required to gain customer acceptance of a proposal to provide a product and service.

The unit of competency applies to establishing and documenting a proposal to meet customer requirements and obtaining agreement for work to proceed. Interaction with the customer is usually performed individually but may involve collaborative approach with other personnel from the operator's workplace.

Work may be conducted in a variety of environments, such as operational indoor, outdoor workplaces or on site.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Develop customer proposal	1.1	Review documentation to confirm all required information is available
		1.2	Establish customer requirements and determine products, processes and service for customer
		1.3	Identify alternatives and determine material and production costs
		1.4	Calculate costs for proposed service
		1.5	Assess timing, costs and service against customer requirements
		1.6	Develop proposal and document for customer
2	Present proposal to customer	2.1	Contact customer and present proposal in person, or by using digital technology or by other arranged means
		2.2	Provide customer with detailed information regarding products, processes and alternative solutions, which could satisfy customer requirements
		2.3	Discuss features and benefits of proposal with the customer
3	Seek customer acceptance	3.1	Respond to any customer concerns, seek customer approval and acceptance, and confirm agreement
		3.2	Identify any required changes to the proposal and modify proposal accordingly
		3.3	Obtain customer acceptance
4	Confirm service to be provided	4.1	Confirm customer address and contact details
		4.2	Establish agreement with the customer and obtain signature
		4.3	Confirm time, product and service to be provided and arrange delivery

- 4.4 Provide duplicate of proposal and agreement to customer for future reference
- 4.5 Obtain deposit, where applicable, or arrange other payment from customer
- 4.6 Provide customer receipt and record form of payment

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- work health and safety (WHS) practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Documentation includes one or more of the

- sketches, diagrams and maps
- dimensions and measurements
- documentation on customer requirements

following:

- Customer requirements include one or more of the following:**
- types of materials
 - types of products and equipment
 - operating principles and mechanisms
 - costs
 - timelines
 - colours
 - size, dimensions and shape
 - delivery and installation dates
 - installation procedure to be followed

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- personal protective equipment (PPE)
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF3002 Gain customer acceptance of service proposal

Modification History

Release 1. Supersedes and is equivalent to LMTTF3002A Gain customer acceptance of service proposal

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least three occasions and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- establishing customer requirements and determining products, processes and services for customer, on at least three (3) occasions
- calculating costs and identifying details of proposed products and services
- providing customer with detailed proposal in person, or electronically or other appropriate method
- answering customer queries to clarify or amend proposal if required
- developing written proposal for customer approval, incorporating all required details, including costs, products and services and timeframe
- establishing agreement with the customer and obtaining signature and deposit or arranging other payment
- completing required documentation for customer and own workplace according workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- workplace documentation and procedures for establishing agreements to provide services
- hazards associated with working at heights
- range of products and services offered by the enterprise
- principles of operating products and equipment
- types of materials and their applications
- limitations of canvas and other materials used
- types of strengthening and fastenings
- service life of different materials
- instruments and techniques for measuring

- mathematical processes
- mathematical formulas for area and volume
- labour rates and approximate costs of products and materials
- power sources such as single phase, three phase, and weather protected outlets
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- general industry housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- practices for documenting agreements and recording and reporting provision of products and services.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in gaining customer acceptance of service proposal, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF3003 Produce patterns for 3-D products

Modification History

Release 1. Supersedes and is equivalent to LMTTF3003A Produce patterns for 3D products

Application

This unit of competency covers the skills and knowledge required to use a computer to develop 3-D patterns for the production of complex shapes in sails and canvas products, and to perform work-related calculations.

The unit of competency applies to the computerised development of 3-D drawings, computerised cutting of shapes using a plotting table, calculation of material requirements and costing. Competence must be demonstrated working largely independently and being accountable for own results, including carrying out assigned tasks, coordinating processes and setting and working to deadlines.

Work is conducted in operational indoor workplaces, using computers, plotters and associated software applications, including spreadsheets and computer-aided design (CAD), involving a range of canvas and sail products.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTF2007 Produce patterns for 2-D products

Competency Field

Assessment Requirements for MSTTF3003 Produce patterns for 3-D products

Modification History

Release 1. Supersedes and is equivalent to LMTTF3003A Produce patterns for 3D products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- interpreting work orders and customer information
- interpreting specifications for components that are to form part of finished products
- identifying appropriate computer applications and keying in required information or transferring from other sources to initiate design or production processes
- operating a desktop or laptop computer and relevant software to produce at least two (2) patterns for 3-D products
- using spreadsheets or other appropriate software applications to perform complex materials calculations, financial tasks and costing
- operating a plotter to construct 3-D drawings, mark out templates, or cut complex shapes in material
- complying with all relevant safety requirements, including safe use of plotting tables for cutting out materials
- checking product quality
- making calculations and costings according to workplace procedures
- documenting, saving and communicating work-related data information according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- range of products and services offered by the workplace
- product construction processes
- computer hardware
- software packages used in the workplace
- computer or plotter interfaces
- 3-D drawing and calculation processes

- mathematical processes and formulae for area and volume
- geometry and geometrical shapes
- principles and practices of engineering drawing
- quality practices
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in producing patterns for 3-D products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF3004 Perform advanced welding of plastic materials

Modification History

Release 1. Supersedes and is equivalent to LMTTF3004A Perform advanced welding of plastic materials

Application

This unit of competency covers the skills and knowledge required to perform high frequency welding of plastic materials using equipment within the safe operating parameters of the equipment used.

The unit of competency applies to the welding of plastic in the textile fabrication industry. Work may be conducted in a variety of environments, such as operational indoor or outdoor workplaces, and hazardous or exposed conditions.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTF2014 Weld plastic materials

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare for welding**
 - 2.1 Read and interpret workplace procedures and instructions
 - 2.2 Determine nature of material to be welded and select an appropriate welding process
 - 2.3 Establish a safe working environment, identify suitable electrical power outlets and plan work to maximise safety and productivity
 - 2.4 Select appropriate hand-held or stationary manual welding equipment, check serviceability and follow correct 'on' procedures
 - 2.5 Select and prepare appropriate supplementary hand and power tools for the job

- 3 **Perform high frequency welding**
 - 3.1 Prepare surfaces of material for welding
 - 3.2 Lay out material on working table or other suitable surface and anchor material to prevent movement
 - 3.3 Adjust equipment temperature or operating frequency to prescribed settings
 - 3.4 Lower screens or barriers, where fitted, prior to welding process
 - 3.5 Keep operator and bystanders at an appropriate distance or suitably protected when high frequency welding is being undertaken
 - 3.6 Operate welding equipment in accordance with WHS and workplace procedures
 - 3.7 Examine weld area or test for correct fusion of materials,

- and remove work piece
- 3.8 Identify and address problems or faults
- 4 **Check quality of weld and finalise work**
- 4.1 Inspect completed weld to verify that it meets the required standard
- 4.2 Label or tag completed product and complete any necessary documentation in accordance with workplace procedures
- 4.3 Clean work area, clean and return tools and equipment to safe storage, and perform normal basic maintenance, in accordance with workplace requirements and manufacturer specifications

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Materials include the following:

- PVC
- vinyls
- clear plastics

Hand and power tools include the following:

- hammers
- rasps
- files
- portable sanders
- high frequency welder

WHS practices WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Unit Mapping Information

Assessment Requirements for MSTTF3004 Perform advanced welding of plastic materials

Modification History

Release 1. Supersedes and is equivalent to LMTTF3004A Perform advanced welding of plastic materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- complying with all relevant safety requirements, including safe use of plastic welding equipment, hand and power tools and electrical equipment
- following work orders
- interpreting equipment and materials specifications and instructions needed for the plastic welding process
- preparing material to be welded and setting up welding equipment
- using high frequency welder on at least five (5) products and performing welds, according to workplace requirements, with a satisfactory degree of quality consistency
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- documenting and communicating work-related information including reporting of faults and other problems
- labelling or tagging completed product and completing any necessary documentation in accordance with workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- specific work health and safety (WHS) requirements associated with hot air and hot wedge welding
- hazards associated with heated plastics
- plastic welding principles and techniques
- operations of a high frequency welder
- general operating principles of plastic welding equipment

- a range of plastic welding equipment, hand tools and power tools commonly used in the plastic welding process, and their appropriateness for particular applications
- operations of a high frequency welder
- power sources, such as single phase, three phase and weather-protected outlets
- materials and equipment specifications
- relevant quality standards for plastic welds
- WHS and environmental requirements of relevant industry and workplace procedures
- general housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in performing advanced welding of plastic materials, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF3005 Apply lofting skills to sail making

Modification History

Release 1. Supersedes and is equivalent to LMTTF3005A Apply lofting skills to sail making

Application

This unit of competency covers the skills and knowledge required to reproduce design lines onto sail cloth using manual techniques, for the purpose of sail making.

The unit of competency applies to a traditional sail making technique that does not require the use of computerised equipment.

The unit of competency applies to the laying out of sail cloth on a floor and reproducing in full scale, the 'line drawings' and 'table of offsets' supplied by the sail designer onto the fabric in order to achieve a pattern with a 3-D outcome.

Work may involve interaction with other people in the workplace, including supervisors and production personnel or sail designers.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under supervision of the sail designer.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Interpret lofting requirements	<p>2.1 Access sail design specifications and identify sail type</p> <p>2.2 Interpret design lines and table of offsets correctly, and identify sail features</p> <p>2.3 Identify lay-up specifications of sail cloth and determine amount of floor space is required to lay out sailcloth</p> <p>2.4 Select and set up equipment needed for lofting according to workplace procedures</p> <p>2.5 Determine steps in lofting processes and sequence for maximum productivity</p>
3	Lay out sail cloth	<p>3.1 Clean loft floor and check for foreign objects</p> <p>3.2 Lay out sail cloth correctly using proper handling techniques, according to WHS practices</p> <p>3.3 Check sail cloth for faults or inconsistencies and take appropriate action</p> <p>3.4 Check directional and topside layout of sail cloth, according to fabric cutting requirements and design specifications</p> <p>3.5 Brace sail cloth to the loft floor using appropriate method</p>
4	Create lofted lines	<p>4.1 Determine and create straight baseline using appropriate baseline marker</p>

- 4.2 Measure grid and line markings from line drawings and mark onto sail cloth square to the baseline
 - 4.3 Draw profile lines correctly
 - 4.4 Draw pattern from lofted lines directly onto sail cloth, with accurate allowances made for seams, joins, reinforced edges and other design features
- 5 **Complete lofting process**
- 5.1 Check pattern markings for accuracy of 3-D outcome against design specifications
 - 5.2 Identify faults in marking and record and correct inconsistencies with design specifications, if possible
 - 5.3 Label, fold, pack and load completed work correctly and transfer to next area for cutting, where appropriate
 - 5.4 Complete housekeeping and required documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping

- tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Sail types include one or more of the following:**
- one design
 - cruising
 - cruiser and racing
 - racing yacht
 - sails for a range of boat sizes
- Equipment includes one or more of the following:**
- marking chalk, tape, or other suitable implement for marking lines onto sail cloth
 - measuring tools
 - bracing materials
 - baseline marker
 - calculator
 - specifications charts
 - relevant plans and design drawings
- Lay-up includes the following:**
- cross-cut, radial and membrane panel layouts
- Sail features include one or more of the following:**
- luff curves
 - roach profiles
 - leech hollows
 - foot rounds
 - marking reef points
 - batten pockets
 - openings
 - inserts
 - gussets
 - reinforcing
 - attachments
- Sail cloth includes one or more of the following:**
- dacron
 - nylon
 - vinyl

- canvas
- wovens
- spinnaker
- laminet
- composite sailcloth

Required documentation includes the following:

- record of inconsistencies or faults
- record of adhesives, materials and processes used
- instructions for finishing
- time and date
- labelling
- packing or transfer information

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF3005 Apply lofting skills to sail making

Modification History

Release 1. Supersedes and is equivalent to LMTTF3005A Apply lofting skills to sail making

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- correctly interpreting sail design lines and table of offsets defining the pattern to be marked out for at least three (3) products of different types and sizes
- interpreting dimensions and other relevant specifications of components to be incorporated in pattern for at least three (3) sail products of different types and sizes
- selecting, preparing and using the range of lofting equipment on at least three (3) occasions for sails of different type and size to meet enterprise requirements
- applying proper handling techniques when laying out and transferring sail cloth
- identifying faults in marking, recording and correcting inconsistencies with design specifications, if possible
- measuring correctly and applying lay out, measuring and mark out techniques correctly on at least three sails (3) of different types and sizes
- checking work against information and specifications throughout lofting process, maximising material use and minimising waste
- complying with all relevant safety requirements, including safe use of tools and equipment used in handling materials, laying out and marking out
- completing housekeeping and required documentation according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- the reasons for using lofting
- maintenance of the loft floor
- sail types for various uses and boat sizes
- performance and handling requirements of sail cloths
- design lines and tables of offsets
- common sail features applied in sail making

- cross-cut, radial and membrane panel layouts
- sail cloths commonly used in sail making, and their performance factors
- steps involved in lofting process
- bracing methods and materials
- geometry and geometric drawing
- practices for laying out sail cloth
- practices for measuring and marking sail cloth
- equipment used for measuring and marking onto sail cloth
- quality standards for the sail making industry
- manual handling techniques
- labelling, folding, packing, and transferring requirements of lofted sail cloths
- product construction processes
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- general industry housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in applying lofting skills to sail making, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation, required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF3006 Cut and join sail panels

Modification History

Release 1. Supersedes and is equivalent to LMTTF3006A Cut and join sail panels

Application

This unit of competency covers the skills and knowledge required to cut and join sail panels for a range of sail types and sizes.

The unit of competency applies to the lay-up, marking, and cutting of sail panels using manual methods. The joining of panels will involve sewing and bonding techniques. Interpretation of sail designs and specification sheets is required.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under supervision of the sail designer.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Lay up, plot and mark sail	2.1	Interpret sail design specifications and clarify sail type, where necessary
		2.2	Interpret lay-up instructions and check sail cloth width and quality against lay-up instructions
		2.3	Plot lay marker on the sail cloth using manual techniques and copy mark on the sail cloth
		2.4	Check marker and lay alignment against design specifications and make adjustments, as required
		2.5	Store master copy of lay marker according to workplace procedures, as appropriate
3	Cut sail	3.1	Lay out sail cloth correctly using proper handling techniques
		3.2	Check sail cloth for faults or inconsistencies and take appropriate action
		3.3	Obtain and check cutting equipment according to specifications for work
		3.4	Cut sail cloth according to WHS and workplace procedures
		3.5	Inspect cut sail cloth, identify any faults and take appropriate action to ensure cut pieces meet required quality standards and design specifications
4	Join sail panels	4.1	Identify required joining technique according to design and sail specifications, and prepare work area and resource requirements
		4.2	Prepare, align, anchor or otherwise stabilise sail cloth surfaces for application of adhesive or sewing

- 4.3 Join sail panels according to design specifications, WHS and workplace procedures
 - 4.4 Monitor joining continuously for errors and to ensure correct alignment and integrity to design specifications
 - 4.5 Allow bonded joins to cure for specified time, using heat application, where appropriate
- 5 Finalise work**
- 5.1 Remove sail and inspect bonded or sewn joins, and test for strength and accuracy against design specifications
 - 5.2 Identify and address faults and inconsistencies or discrepancies with design
 - 5.3 Transfer sail to next area for finishing, and complete housekeeping and required production documentation
 - 5.4 Clean work area, clean and return tools and equipment to safe storage, and perform normal basic maintenance, in accordance with workplace requirements and manufacturer specifications

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**

Assessment Requirements for MSTTF3006 Cut and join sail panels

Modification History

Release 1. Supersedes and is equivalent to LMTTF3006A Cut and join sail panels

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- correctly interpreting sail design and lay-up instructions for at least three (3) sails types
- laying up, plotting and marking sail according to specifications
- correctly adjusting lay height and position of sail cloth and cutting sail cloth to lay
- selecting appropriate joining method on at least three (3) occasions to industry standards on different sail types or sizes
- checking work against information and specifications throughout sail making process
- identifying faults and inconsistencies in sailcloth, markings, and joined sails
- storing materials and equipment and disposing of wastes according to work health and safety (WHS) practices and industry regulations
- maintaining machines and work area
- documenting and transferring production information and maintaining accurate records according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- sail types for various uses and boat sizes
- cross-cut, radial and membrane panel layouts
- sail cloths commonly used in sail making, and their performance factors
- manual plotting and marking techniques
- manual handling techniques for sailcloth
- operating principles of sewing machines used in sail making
- needle, thread and stitch specifications
- adhesives used in sail making, and practices and procedures for application
- WHS and environmental and waste-management requirements of sail making industry
- curing requirements

- procedures for strength testing of joined sail cloth
- WHS practices, including hazard identification and control measures
- practices for recording and reporting
- workplace procedures.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in cutting and joining sail panels, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF3007 Manufacture textile structures

Modification History

Release 1. New unit

Application

This unit of competency covers the skills and knowledge required to fabricate and install outdoor protective textile covers to suit a range of purposes. The fabricated product may be designed to standard or customised requirements to fit a vehicle, building or frame structure.

The unit of competency applies to the design, marking out, manufacturing and fitting of the finished textile product. Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes.

Work may be conducted in a variety of environments, such as workshops and various on-site locations and may also involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

| 2 | Set up and plan job sequence | 2.1 | Plan task sequence and estimate time required to complete operations |
| | | 2.2 | Consult with supervisor or client to confirm and clarify production requirements |
| | | 2.3 | Determine materials, hardware and attachments required and calculate quantities |
| | | 2.4 | Determine and prepare appropriate workspace to conduct production process |
| | | 2.5 | Identify and set up all appropriate tooling and equipment |
| 3 | Carry out fabrication process | 3.1 | Operate equipment according to relevant SOPs |
| | | 3.2 | Lay out, mark and cut material to suit design and shape of product |
| | | 3.3 | Fabricate product using sewing, welding or gluing |
| | | 3.4 | Fit required attachments according to job specifications |
| | | 3.5 | Inspect product for quality or defects prior to installation |
| | | 3.6 | Complete work systematically with attention to detail without damage to goods and equipment |
| 4 | Fit or install fabricated product | 4.1 | Set up appropriate installation tooling and equipment |
| | | 4.2 | Install product according to job specifications |
| | | 4.3 | Inspect finished product to identify and make good any defects or minor adjustments |
| | | 4.4 | Clean and restore workspace, tools and equipment and maintain records, according to workplace procedures |

- 4.5 Comply with workplace procedures relating to environmental protection, waste disposal, pollution control and recycling

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS requirements

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Outdoor textile structures include one or more of the following:

- vehicles coverings
- shade sails
- awnings
- marine canopies
- blinds

Materials, hardware and attachments include one or more of the following:

-
- textiles
- canvas
- turnbuckles
- poles
- posts
- wire
- metal or aluminium frames
- tensioning hardware

Assessment Requirements for MSTTF3007 Manufacture textile structures

Modification History

Release 1. New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- interpreting drawings, diagrams, sketches and specifications
- constructing new or replacement textile structure with required materials, hardware and attachments according to relevant standards, on at least two (2) occasions
- complying with all relevant safety requirements in using tools and equipment for handling materials, laying out and marking out
- calculating material quantities, clarifying and checking measurements and task-related information, and measuring lay out and marking out accurately
- sequencing operations to meet specifications and using sewing, welding or gluing techniques, as required, to fabricate product
- fitting required hardware and attachments according to specifications
- fitting and installing product to meet design specifications and quality standards
- completing work systematically with attention to detail without damage to goods and equipment
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- textile characteristics
- production process and types of structures, such as:
 - vehicles coverings
 - shade sails
 - awnings
 - marine canopies
 - blinds

- measuring instruments and techniques
- material, hardware and attachments, such as:
 - textiles
 - canvas
 - turnbuckles
 - poles
 - posts
 - wire
 - metal or aluminium frames
 - tensioning hardware
- mathematical processes, geometry and geometrical shapes
- engineering drawing principles and practices
- safe use of tools and equipment used in handling materials, laying out and marking out
- lay out and mark out principles and practices
- factors affecting fabrication and product construction processes, including sewing, welding or gluing techniques
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- general industry housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- manufacturer specifications of tools and equipment
- fault identification in materials and textile products, and methods of repair
- identification of equipment faults and methods of repair
- safety and environmental aspects of relevant enterprise activities
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in manufacturing textile products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTN2001 Set up and operate a dry laid web forming machine

Modification History

Release 1. Supersedes and is equivalent to LMTTN2001B Set up and operate a dry laid web forming machine

Application

This unit of competency covers the skills and knowledge required to set up and operate dry laid web forming machines used to manufacture non-woven textiles.

The unit of competency covers the skills needed for initial start-up and product changeovers of dry laid web forming machines, including machine settings, first-off runs, adjustments and instructions to operators.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Technical textiles and non-wovens

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Set up and load dry laid web forming machine	2.1	Check specifications to identify requirements for production
		2.2	Check raw materials, containers and quantities
		2.3	Adjust machine settings to meet product requirements
		2.4	Clean area around machine during and on completion of setting and loading
3	Operate and monitor dry laid web forming machine	3.1	Start and stop dry laid web forming machine according to manufacturer instructions and job requirements
		3.2	Monitor machine operations to ensure safe and correct operation
		3.3	Sort waste and clean machine when required
		3.4	Identify, correct and report minor product, process and machine faults, where necessary, to meet specified requirements
		3.5	Operate machine according to WHS and workplace practices and report major machine faults
4	Check quality and complete dry laid web forming operations	4.1	Check formed web against quality standards and production requirements
		4.2	Identify, rectify or report web faults and non-conformances
		4.3	Despatch dry laid web to next manufacturing or packing process
		4.4	Clean area to maintain a safe and productive work environment
		4.5	Complete production records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

Australian Standards include:

- WHS practices
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Fibres include one or more of the following:

- fibre size:
 - length 30-80 mm
 - 1.1-8.0 dtex (diameter)
- fibre types:
 - rayon and other cellulosics
 - nylon
 - polyester
 - polypropylene
 - cotton

- wool
- glass
- bi-component

Dry laid web includes one or more of the following:

- web formed using any of the following techniques:
 - carded web (parallel laid)
 - carded web (cross laid)
 - carded web (random laid)
 - air laid staple fibre web
 - high-loft webs

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTN2001B Set up and operate a dry laid web forming machine

Assessment Requirements for MSTTN2001 Set up and operate a dry laid web forming machine

Modification History

Release 1. Supersedes and is equivalent to LMTTN2001B Set up and operate a dry laid web forming machine

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- checking machine safety equipment and reporting any faults
- preparing materials for web forming
- loading and unloading materials
- starting and stopping dry laid web forming machines according to specifications on at least two (2) occasions
- monitoring machine operations, including machine production readings, on at least two (2) occasions
- recognising, rectifying and reporting machine faults or problems as required
- maintaining clean machines and work environment, as required
- undertaking quality checks and recognising and responding to faulty product
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- fibre types, including:
 - rayon and other cellulose
 - nylon
 - polyester
 - polypropylene
 - cotton
 - wool
 - glass

- bi-component
- fibre characteristics, including:
 - absorbency
 - abrasion resistance
 - modulus
 - web 'handle'
 - moisture absorption
 - chemical and temperature resistance
 - melting point
 - fibre measuring units, including decitex and denier and fibre diameter - equation
 - fibre or filament crimp
- advantages of fibre opening and blending:
 - component independent system
 - guarantee a homogeneous mixture
 - constant performance
 - flexible operation
 - high degree of automation
 - working and stripping principles of carding
- different types of carded webs, such as:
 - parallel laid web
 - parallel laid web with spreading device
 - parallel laid web with scrambling
 - random laid web
 - random laid web with scrambling
 - layered and cross laid webs
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in setting up and operating a dry laid web forming machine, at least to the level being assessed, with relevant industry knowledge and experience.

-
- Assessment should occur in operational workplace situations. Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Set up and load spun bond web forming machine**
 - 2.1 Check specifications to identify requirements to produce filaments
 - 2.2 Check raw materials containers and quantities
 - 2.3 Adjust machine settings to meet product requirements
 - 2.4 Clean area around machine during and on completion of setting and loading

- 3 **Operate and monitor spun bond web forming machine**
 - 3.1 Start and stop spun bond web forming machine according to machine manufacturer instructions and job requirements
 - 3.2 Monitor machines to ensure operation is correct and safe
 - 3.3 Sort waste and clean machine, when required
 - 3.4 Identify, correct and report minor product, process and machine faults, where necessary, to meet specified requirements
 - 3.5 Operate machine according to WHS and workplace practices and report major machine faults

- 4 **Check web quality and complete operations**
 - 4.1 Check formed web against quality standards and production requirements
 - 4.2 Identify, rectify or report web faults and non-conformances
 - 4.3 Despatch spun bond web to bonding or finishing process
 - 4.4 Clean area to maintain a safe and productive work environment

4.5 Complete production records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Filaments include one or more of the following:

- continuous threads
- size - 1.1-8.0 dtex (diameter)
- different types, including polyester and polypropylene

Spun bond web forming machines include one or more of the following:

- extrusion and spinning
- attenuating
- orientation

- lay down
- web carrying
- web bonding machine

Spun bond web process includes the following:

- the melt spinning of polymers to produce continuous filaments (threads) of polymer
- threads are laid to form a web
- web is then bonded and finished

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

- maintaining clean machines and work environment, as required
- undertaking quality checks and recognising and responding to faulty product
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- operational variables, including:
 - polymer throughput
 - air throughput
 - spinneret configuration (hole size and distance to collector)
 - spinning, drawing and deposition options and techniques
 - bonding techniques and options
 - filament types, including:
 - polyester

- polypropylene
- filament characteristics, including:
 - spinnability
 - filament structure
 - filament crimp
- measuring units, including decitex and denier
- work health and safety (WHS) practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in setting up and operating a spun bond web forming machine, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. MSTTN2003 Use basic recognition techniques to identify technical and non-woven textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTN2003B Use basic recognition techniques to identify technical and non-woven textiles

Application

This unit of competency covers the skills and knowledge required to recognise the different types of technical textiles and non-woven materials, including component fibres and yarns. The unit includes underpinning knowledge on the difference between a woven or knitted technical textile and a non-woven textile.

The unit of competency applies to production of technical textiles and non-woven textiles, generally known in industry as non-wovens. The unit covers the recognition of textiles manufactured using natural or synthetic fibres or yarns. The recognition techniques do not require laboratory skills. The fibres forming the technical or non-woven textile may be a staple or continuous filament.

Technical textiles covered by this unit are textiles used for engineering, safety, agricultural, medical, and other specialised non-apparel furnishing and floor covering applications. Non-woven textiles covered by this unit may be made by mechanically, chemically or thermally interlocking layers or networks of fibres or filaments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Technical textiles and non-wovens

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify fibres, yarns and other raw materials	1.1	Use recognition techniques to identify natural and synthetic fibres and yarns
		1.2	Identify non-fibre-based materials used in manufacture of technical or non-woven product
2	Identify and classify technical and non-woven textiles	2.1	Examine material samples to distinguish and identify woven, knitted and non-woven textiles
		2.2	Identify the different methods of production for technical textiles and non-wovens
		2.3	Identify the range of applications for technical textiles and non-wovens
		2.4	Use appropriate tests to classify intermediate and final technical and non-woven textile product
		2.5	Conduct test according to work health and safety (WHS) and workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions

- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Fibres and yarns may be of natural or synthetic origin and include one or more of the following:

- spun
- ply
- combo
- blended
- crimped
- monofilament
- multifilament
- staple spun
- staple or continuous filaments
- fusible fibres
- bi-components
- co-polyesters

Non-fibre-based materials include one or more of the following:

- paper or other materials used in wrapping
- raw materials chemicals either in liquid, pellet or solid form
- catalyst chemicals
-

Applications include one or more of the following:

- medical
- hygiene
- sporting
- engineering
- safety
- transportation
- construction
- agricultural
- other
- as a stand-alone product
- incorporated into another product

Woven textile includes one or more of the following:

- textile fabric produced by interlacing two yarns of similar materials
- the yarns cross each other at right angles to produce the fabric

Knitted textile includes:

- fabric produced by interlocking a series of loops of one or more yarns

Non woven includes one or more of the following:

- manufactured sheet, web, batt or other product made up of directionally or randomly oriented fibres, or filaments bonded by friction, cohesion and/or adhesion, excluding paper
- mechanically, chemically or thermally interlocking layers or networks of fibres or filaments
- textiles based on a scrim (mesh into which fibres are inserted) or scrimless

Technical includes one or more of the following:

- textiles that have been manufactured for special performance properties and applications
- generally non-apparel, carpet or furnishing products unless a specific technical feature beyond what is normally found in clothing, carpet or furnishing products has been added, such as special fire-retardant clothing

Tests include one or more of the following:

- visual checking
- colour matching
- weighing
- dimensional measuring
- tests for moisture, stretch, gloss, texture, handle, tensile strength, stability, shrinkage, stretch and permeability
- results of calendaring
- application of surface finishes
- tests on raw materials, including fibres and yarns, intermediate and final fabrics

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk

reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- personal protective equipment (PPE)
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTTN2003 Use basic recognition techniques to identify technical and non-woven textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTN2003B Use basic recognition techniques to identify technical and non-woven textiles

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- identifying different methods of production to create technical textiles or non-wovens
- identifying at least five (5) examples each of natural and synthetic fibres and yarns
- identifying at least five (5) industry applications of technical textiles and non-wovens
- using a range of appropriate tests to differentiate between woven, knitted and non-woven textiles on at least five (5) samples
- identifying appropriate tests on at least five (5) samples to classify intermediate and final technical and non-woven textile product
- applying work health and safety (WHS) and workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- difference between woven, knitted and non-woven textiles
- different methods of production for technical textiles and non-wovens
- range of applications for technical textiles and non-wovens
- difference between natural and synthetic fibres
- range of tests to distinguish types of textiles and between intermediate and final technical textiles or non-wovens
- WHS practices, including hazard identification and control measures
- quality procedures
- workplace procedures.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in using basic recognition techniques to identify technical and non-woven textiles, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTN2004 Undertake web bonding processes

Modification History

Release 1. Supersedes and is equivalent to LMTTN2004B Undertake web bonding processes

Application

This unit of competency covers the skills and knowledge required to undertake web bonding processes.

The unit of competency applies to chemical, thermal, mechanical and latex bonding processes.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Technical textiles and non-wovens

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for web bonding**
 - 2.1 Check specifications to identify requirements for production
 - 2.2 Identify web bonding process, and where options exist, select correct web bonding process according to product requirements
 - 2.3 Check bonding raw material supply where appropriate
 - 2.4 Set machine controls to meet product requirements
- 3 **Undertake web bonding**
 - 3.1 Check formed web supply and speed conforms to specification
 - 3.2 Monitor web bonding process and adjust operational parameters to meet product requirements.
 - 3.3 Monitor machine operations to ensure safe and correct operation
 - 3.4 Identify, correct and report minor product, process and machine faults where necessary to meet specified requirements
 - 3.5 Operate machine according to WHS and workplace practices and report major machine faults
- 4 **Check quality and complete web bonding process**
 - 4.1 Check bonded web against quality standards and production requirements
 - 4.2 Identify, rectify or report bonded web faults and non-conformances
 - 4.3 Send bonded web for web conversion and finishing or next manufacturing or packing process
 - 4.4 Clean area to maintain a safe and productive work environment
 - 4.5 Complete production records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Web bonding processes include one or more of the following:

- chemical bonding:
 - solvent bonding
 - foam bonding
 - hydrogen bonding
 - print bonding
 - latex addition to formed web
 - inorganic binders
- thermal bonding (for fusible, bi-component and co-polyester fibres):

- calender bonding
- engraved calender bonding
- air bonding
- mechanical bonding:
 - needle punch
 - stitchbond
 - hydro-entanglement

Machine operations include one or more of the following:

- speed settings for web progression
- heat settings
- solution settings
- needle punch settings
- settings made using computer, mechanical and electronic controls

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTTN2004 Undertake web bonding processes

Modification History

Release 1. Supersedes and is equivalent to LMTTN2004B Undertake web bonding processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- interpreting production orders and schedules
- setting and checking machine settings to meet production requirements on at least two (2) occasions
- monitoring web bonding operations according to defined procedures and methods on at least two (2) occasions
- recognising, rectifying and reporting machine faults or problems as required
- making minor adjustments
- checking product samples against quality standards and responding to faulty product
- loading and unloading products
- completing records accurately and completely
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- web bonding processes, including chemical bonding (e.g. foam, spray or print bonding), thermal bonding and mechanical bonding
- chemical bonding:
 - binding agent preparation and settings
- thermal bonding:
 - calender and air bonding for fusible, bi-component and co-polyester fibres
- mechanical bonding:
 - needle punch
 - stitchbond
 - hydro-entanglement

- work health and safety (WHS) practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in undertaking web bonding processes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTN2005 Undertake web conversion and finishing

Modification History

Release 1. Supersedes and is equivalent to LMTTN2005B Undertake web conversion and finishing

Application

This unit of competency covers the skills and knowledge required to undertake web conversion and finishing processes for non-woven textiles.

The unit of competency covers the skills needed to convert bonded web into product ready for finishing and packing processes, and to complete required finishing and packing processes.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Technical textiles and non-wovens

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for web conversion**
- 2.1 Check specifications to identify requirements for production
 - 2.2 Select web conversion and finishing process according to product specification
 - 2.3 Set web guides and tensions for product according to specifications
 - 2.4 Set machine controls to meet product requirements
- 3 **Undertake web conversion and finishing**
- 3.1 Check bonded web supply and speed for conformance to specification
 - 3.2 Monitor web conversion and finishing process and adjust operational parameters to meet product requirements
 - 3.3 Monitor machine operations to ensure safe and correct operation according to WHS practices
 - 3.4 Identify and rectify web or cylinder alignment problems
 - 3.5 Identify, correct or report other minor product process and machine faults, where necessary, to meet specified requirements
 - 3.6 Clean machine when required and report major machine faults
- 4 **Check quality and complete finished and converted web**
- 4.1 Check finished and converted web against quality standards and production requirements
 - 4.2 Identify, rectify or report faults and non-conformances
 - 4.3 Pack and label finished web or non-woven product according to order and product requirement
 - 4.4 Clean area to maintain a safe and productive work

environment

4.5 Complete production records

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Web conversion and finishing processes include one or more of the following:**
- web cutting, slitting and re-reeling
 - base web finishing (micro-crepeing)
 - base web finishing (coating)
 - base web finishing (extrusion coating)
 - base web finishing (flocking)
 - base web finishing (corona/plasma)
 - chemical finishing treatment

- coating of webs using closed and open systems
- chemical treatment, such as:
 - fluoro-chemical treatment for aqueous liquid repellency
 - silicone treatment for aqueous liquid repellency
 - anti-microbial treatment
 - flame retardency treatment
 - micro-encapsulation

Machine operations include one or more of the following:

- computer
- mechanical
- electronic controls

Web guides and tensions include one or more of the following:

- mechanical
- electronic
- pneumatic

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTTN2005 Undertake web conversion and finishing

Modification History

Release 1. Supersedes and is equivalent to LMTTN2005B Undertake web conversion and finishing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- interpreting production orders and schedules
- setting and checking machine settings to meet production requirements on at least two (2) occasions
- setting web guides and tensions on at least two (2) occasions
- monitoring web conversion and finishing operations according to defined procedures and methods on at least two (2) occasions
- making minor adjustments
- recognising, rectifying and reporting machine faults or problems, as required
- maintaining clean machines and work environment, as required
- checking product samples against quality standards
- loading and unloading products
- completing records accurately and completely
- applying workplace procedures
- applying work health and safety (WHS) practices in work operations.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- web conversion and finishing processes, including effect of process on web and desired performance of finished product
- web guides and tensions relevant to workplace procedures
- machine operations relevant to workplace procedures
- safe handling requirements for chemicals
- WHS practices, including hazard identification and control measures
- quality practices

- workplace practices
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in undertaking web conversion and finishing, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTN2006 Identify purpose and performance outcomes of technical textile product

Modification History

Release 1. Supersedes and is equivalent to LMTTN2006B Identify purpose and performance outcomes of technical textile product

Application

This unit of competency covers the skills and knowledge required to identify the purpose and desired performance characteristics of a technical textile or non-woven product.

The unit of competency applies to the identification of the purpose and performance characteristics of textiles that have been manufactured for special technical purposes. A technical textile may be produced by a technical finish on a normal yarn or fabric or composed of a specially made technical yarn or fabric.

The unit of competency applies to employees who are required to have a basic understanding of the product being manufactured, such as team leaders and senior operators with responsibility for explaining the enterprise's products to visitors and other employees. The unit does not cover knowledge of the technical textile requiring special scientific or engineering study.

A technical textile is generally not clothing, carpet or a furnishing product unless a specific technical feature beyond what is normally found in clothing, carpet or furnishing has been added. An example would be special fire-retardant clothing.

Applications of technical textiles may be for medical, hygiene, sporting, transportation, construction, agricultural and other purposes. The technical textile may be used as a stand-alone product or incorporated into another product. The technical textile application may occur as a result of new materials, new processes and new applications that result in the textile having the desired technical performance characteristic.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTN2003 Use basic recognition techniques to identify technical and non-woven textiles

Competency Field

Technical textiles and non-wovens

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify purpose and performance of technical textile	1.1	Identify a range of applications for technical textiles
		1.2	Identify the technical purpose of technical textiles
		1.3	Identify industry and commercial applications of technical textiles
		1.4	Identify performance features of technical textiles and special conditions of use
		1.5	Identify performance or quality standards relating to technical textiles
2	Identify process used to generate technical textile performance features	2.1	Identify manufacturing process of technical textile products
		2.2	Identify the impact of quality on production processes
		2.3	Identify testing procedures used to assess quality or performance of technical textile products

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Applications industries and sectors include one or more of the following:

- transport
- industrial products and components
- medical and hygiene products
- domestic equipment and furnishing (e.g. fibrefill and insulation applications)
- clothing components (e.g. threads and interlinings)
- agriculture, horticulture and fishing
- construction and engineering
- packaging and containment
- sport and leisure equipment and performance fabric and clothing
- geo-textiles
- protective and safety clothing and textiles
- monofilament fibres for computer technologies

Technical effects include one or more of the following:

- abrasion resistance
- low or high permeability to gases and liquids
- flame retardant
- low flammability
- resistance to chemicals
- protection against sunlight caused weathering
- oxidation resistance
- fire resistance or protection
- water-repellent finish
- anti-static finish
- anti-microbial and anti-fungal property
- non-shrink properties
- electrical conductivity or insulation
- phase change as in fibres that can alter according to external conditions such as temperature
- conversion of light to heat
- bio compatibility
- digital operations

Processes include one or more of the following:

- plaiting
- knotting
- weaving
- warp and weft knitting
- stitchbonding
- braiding
- dry laid and spun bond non-woven manufacturing
- calendering
- raising
- cropping
- compressive shrinking
- heat setting
- coating
- laminating
- fusing

Tests include one or more of the following:

- visual checking
- colour matching
- weighing
- dimensional measuring
- tests for moisture, stretch, gloss, texture, handle, tensile strength, stability, shrinkage, stretch and permeability

- results of calendaring
- application of surface finishes
- tests on raw materials, including fibres and yarns, intermediate and final fabrics

MSTTN2007 Conduct technical textile mechanical finishing processes

Modification History

Release 1. Supersedes and is equivalent to LMTTN2007B Conduct technical textile mechanical finishing processes

Application

This unit of competency covers the skills and knowledge to conduct technical textile mechanical finishing processes.

The unit of competency applies to finishing processes used in the production of technical textiles. Processes may include heat setting, scouring, calendering, singeing, impregnation, raising, cropping and compressive shrinkage.

Technical textiles are textile products that have been manufactured for special technical performance and applications. Clothing, carpet or furnishing textile products are generally not regarded as a technical textile unless a specific technical feature beyond what is normally found in clothing, carpet or furnishing has been added. An example would be special fire-retardant clothing.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MSTTN2007 Conduct technical textile mechanical finishing processes

Modification History

Release 1. Supersedes and is equivalent to LMTTN2007B Conduct technical textile mechanical finishing processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- safely setting up and operating technical textile mechanical finishing machines on at least three (3) occasions
- setting and checking machine settings to meet production requirements on at least three (3) occasions
- monitoring machine to ensure optional production on at least three (3) occasions
- recognising, rectifying and reporting machine faults or problems, as required
- checking product samples, machine and process against quality standards
- despatching textile to next operation
- completing records accurately and completely
- applying workplace procedures
- applying work health and safety (WHS) practices in work operations.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- mechanical processes used within an enterprise for technical textile finishing operations
- quality standards and technical textile handling procedures
- WHS practices
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

MSTTN2008 Conduct heat setting on technical textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTN2008B Conduct heat setting on technical textiles

Application

This unit of competency covers the skills and knowledge required to conduct heat-setting processes on technical textiles. Technical textiles are textile products that have been manufactured for special technical performance and applications.

The unit of competency applies to heat-setting operations on technical textiles. Heat setting is mainly conducted on synthetic technical textiles especially nylon and polyester. Heat setting is a process designed to give a technical textile dimensional stability or other permanent characteristic through heat-induced molecular change.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Technical textiles and non-wovens

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare for heat-setting process**
 - 2.1 Make appropriate checks to ensure that textile fabric or web is ready for heat-setting process
 - 2.2 Prepare work area according to WHS practices and workplace procedures
 - 2.3 Prepare and adjust heat-setting machine according to specifications required for work
 - 2.4 Report and record problems according to workplace procedures

- 3 **Prepare technical textile for heat setting**
 - 3.1 Conduct appropriate pre-heat-setting tests on technical textile, as required
 - 3.2 Fix technical textile into position on heat setting machine or conveyor
 - 3.3 Check job or batch requirements

- 4 **Operate and monitor heat-setting machine**
 - 4.1 Set temperature to achieve quick and even heat over width of technical textile
 - 4.2 Set duration of heating process according to job requirements
 - 4.3 Set other controls, such as conveyor speed, moisture and fans, according to job and process requirements
 - 4.4 Monitor technical textile and machine during heat-setting process to ensure quality, and safe and efficient operation
 - 4.5 Identify machine or process faults and take required action

- 4.6 Remove technical textile from heat-setting machine and carry out dimensional and other tests, as required
- 4.7 Direct technical textile to next operation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Machines include one or more of the following:

- stenters
- drying, curing and heating ovens
- steamers
- humidifiers
- similar machines, including associated conveyors

WHS practices

-
- WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:
 - manual handling techniques
 - SOPs
 - PPE
 - safe materials handling
 - taking of rest breaks
 - ergonomic arrangement of workplaces
 - following marked walkways
 - safe storage of equipment
 - housekeeping
 - reporting accidents and incidents
 - other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTTN2008 Conduct heat setting on technical textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTN2008B Conduct heat setting on technical textiles

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- safely setting up and operating technical textile heat-setting machines and work area on at least three (3) occasions
- preparing and adjusting heat-setting machine according to specifications required for work on at least three (3) occasions
- monitoring technical textile and machine during heat-setting process to ensure safe and efficient operation on at least three (3) occasions
- removing technical textile from heat-setting machine and carrying out dimensional and other tests as required
- consistently achieving quality and production output requirements
- identifying and responding to machine or process faults
- following job specifications and orders
- applying workplace procedures
- maintaining records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- heat-setting principles, including potential for variation in outcomes caused by temperature, moisture and fibre or yarn stress
- heat-setting machines:
 - stenters
 - drying
 - curing and heating ovens
 - steamers
 - humidifiers

- similar machines, including associated conveyors
- machine operations relevant to workplace procedures
- process and machine faults
- work health and safety (WHS) practices

| | | 1.3 | Use appropriate personal protective equipment (PPE) in |

- accordance with SOPs
- 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for surface coating process**
- 2.1 Make appropriate checks to ensure that textile fabric is ready for surface coating process
- 2.2 Prepare work area according to WHS practices and workplace procedures
- 2.3 Obtain or prepare surface coating according to manufacturer instructions and specifications required for job
- 2.4 Report and record problems according to workplace procedures
- 3 **Prepare technical textile for surface coating**
- 3.1 Conduct appropriate tests on technical textile before application of surface coating, as required
- 3.2 Fix technical textile into position on machine or conveyor, as required
- 3.3 Check job or batch requirements
- 4 **Operate and monitor surface coating machine**
- 4.1 Load coating mix or transfer sheet into machine reservoir for pick-up by knife, coating roller, gravure roller, rotary screen, laminating or tie coat machine, where applicable
- 4.2 Set machine to correct heat, speed and thickness according to process and job requirements
- 4.3 Undertake and monitor coating process to ensure application is according to job requirements and manufacturer instructions
- 4.4 Remove coated technical textile from coating machine and conduct tests, as required
- 4.5 Direct coated technical textile to next operation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Surface coating processes include one or more of the following:

- lick roll
- knife coating
- gravure
- rotary screen
- hot melt
- transfer coating

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTN2009B Apply surface coating to technical textiles

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTTN2009 Apply surface coating to technical textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTN2009B Apply surface coating to technical textiles

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- safely setting up and operating technical textile surface coating machines and work area on at least two (2) occasions
- safely and accurately mixing and loading surface coating mixtures on at least two (2) occasions
- preparing and adjusting coating machine according to specifications required for work on at least two (2) occasions
- monitoring technical textile and machine during coating process to ensure safe and efficient operation on at least two (2) occasions
- consistently achieving quality and production output requirements
- identifying and responding to machine or process faults
- following job specifications and orders
- applying workplace procedures
- maintaining records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- chemical handling
- surface coating processes and materials
- machine operations relevant to surface coating and workplace procedures
- process and machine faults
- work health and safety (WHS) practices
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in applying surface coatings to technical textiles, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTN2010 Apply laminations or fusible interlinings to technical textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTN2010B Apply laminations and fusible interlinings to technical textiles

Application

This unit of competency covers the skills and knowledge required to apply laminations and fusible interlinings to technical textiles. Technical textiles are textile products that have been manufactured for special technical performance and applications

Techniques allow for the bonding of two textile fabrics to give increased stiffening or other enhanced technical performance in the final product. The unit of competency covers the use of solvent, powder or hot melt adhesives to achieve lamination or apply interlining.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Technical textiles and non-wovens

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare technical textile for laminating or application of fusible interlining**
 - 2.1 Make appropriate checks to ensure that textile fabrics are ready for laminating or application of fusible interlining
 - 2.2 Prepare work area according to WHS practices and workplace procedures
 - 2.3 Obtain or prepare solvent, powder or hot melt adhesive according to manufacturer instructions and specifications required for job
 - 2.4 Report and record problems according to workplace procedures

- 3 **Prepare technical textile for lamination or insertion of interlining**
 - 3.1 Conduct appropriate tests on technical textile before lamination or fusing of interlining, as required
 - 3.2 Fix technical textile into position on machine or conveyor, as required.
 - 3.3 Check job or batch requirements according to enterprise procedures

- 4 **Operate and monitor laminating or fusible interlining machine**
 - 4.1 Preform coating material into a continuous sheet for laminating to substrate either by application of heat or by use of an adhesive, as required
 - 4.2 Apply solvent, powder, hot melt adhesive or continuous lamination sheet to technical textile or fusible interlining
 - 4.3 Monitor coating process to ensure application is according to job requirements and manufacturer instructions
 - 4.4 Set machine variables according to process and job

requirements

- 4.5 Remove laminated or interlined technical textile from coating machine and conduct tests, as required
- 4.6 Direct technical textile to next operation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Machine variables include one or more of the following:

- setting of height adjustments
- setting of temperature and timer controls for heating and cooling elements
- setting of roller controls after heating zone for linear pressure

- level adjustments of calibrating rollers for precise calibration
- conveyor belt controls for speed and direction

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTTN2010 Apply laminations or fusible interlinings to technical textiles

Modification History

Release 1. Supersedes and is equivalent to LMTTN2010B Apply laminations and fusible interlinings to technical textiles

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- safely and accurately preparing and loading consumables on at least three (3) occasions
- safely setting and operating technical textile laminating or interlining machines on at least three (3) occasions
- monitoring coating process to ensure application is according to job requirements and manufacturer instructions on at least three (3) occasions
- removing laminated or interlined technical textile from coating machine and conducting tests, as required
- consistently achieving quality and production output requirements
- identifying and responding to machine or process faults
- following job specifications and orders
- applying workplace procedures
- maintaining records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- laminating process: the production of a textile by combining two or more fabrics using an adhesive
- adhesives (solvent, powder or hot melt adhesives)
- interlining processes: a fusible interlining is a fabric that has been coated with an adhesive coating, which under the influence of heat and pressure will melt and form a bond with any other fabric that is pressed against it
- machine operations relevant to workplace procedures
- process and machine faults
- work health and safety (WHS) practices

- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in applying laminations and fusible interlinings to technical textiles, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTN2011 Undertake fibre blending and feeding for non-woven technical production processes

Modification History

Release 1. Supersedes and is equivalent to LMTTN2011B Undertake fibre blending and feeding for non-woven technical production processes

Application

This unit of competency covers the skills and knowledge required to undertake fibre blending and feeding for non-woven technical production processes.

The unit of competency applies to the preparation and blending of natural or synthetic fibres for feeding into a carding machine. Fibres may be natural or synthetic and are used in a non-woven textile production process.

Work is conducted according to defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Technical textiles and non-wovens

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

- essential outcomes. demonstrate achievement of the element.
- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
 - 2 **Check and identify raw fibres**
 - 2.1 Check production specifications to identify fibres required for carding operation
 - 2.2 Check raw fibres comply with fibre production specification
 - 2.3 Carry out checks, as necessary, to determine compliance with production requirements
 - 2.4 Report non-conforming or defective fibre batches
 - 3 **Blend fibres**
 - 3.1 Select and blend fibres according to production specification
 - 3.2 Load additives, where required
 - 3.3 Load fibres into carding machine correctly
 - 3.4 Conduct and monitor blending to ensure blending consistency and feed uniformity, according to WHS practices
 - 3.5 Sort waste according to workplace procedures
 - 4 **Complete records**
 - 4.1 Complete production records or other documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Fibre production specifications include one or more of the following:

- fibre types:
 - rayon
 - nylon
 - polyester
 - polypropylene
 - cotton
 - wool
 - cellulose
 - glass
- fibre characteristics:
 - absorbency
 - abrasion resistance
 - modulus
 - web 'handle'
 - moisture absorption
 - chemical and temperature resistance

- size (diameter)
- fineness (decitex or denier)
- fibre crimp

Waste includes one or more of the following:

- processed burr
- contaminants
- processed sweepings
- non-conforming fibre materials
- machine waste (e.g. grease and oil)

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTN2011 Undertake fibre blending and feeding for non-woven technical production processes

Modification History

Release 1. Supersedes and is equivalent to LMTTN2011B Undertake fibre blending and feeding for non-woven technical production processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- checking production specifications to identify required fibres
- selecting and blending fibres according to production specification on at least three (3) occasions
- conducting and monitoring blending to ensure blending consistency and feed uniformity, according to work health and safety (WHS) practices, on at least three (3) occasions
- sorting waste according to workplace procedures
- following job specifications and orders
- applying workplace procedures
- maintaining records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- fibre types and basic characteristics
- blending and feeding processes
- technical specifications, manuals and operating instructions
- quality standards and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in undertaking fibre blending and feeding for nonwoven technical production processes, at least to the level being assessed, with relevant industry knowledge and experience.

MSTTX1001 Produce a simple textile fabric or product

Modification History

Release 1. Supersedes and is equivalent to LMTTX1001B Produce a simple textile fabric

Application

This unit of competency covers the skills and knowledge required to produce a simple fabric or product.

The unit of competency applies to the production of a simple fabric or product on commercial or craft level equipment for spinning, weaving, knitting or sewing operations.

Work is conducted under direction and does not involve a large scale production environment.

This unit of competency is designed for particular application in a highly supervised environment and is suitable for selection in a VET in Schools program or where access to volume production and commercial machines and processes are not an option.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| | | | |
| 2 | Prepare to produce a simple textile fabric or product | 2.1 | Identify design and method of production to create fabric or product |
| | | 2.2 | Identify and assess suitability of materials, tools and equipment to achieve plan |
| | | 2.3 | Identify and review pattern for production |
| | | 2.4 | Check and prepare work space, tools and equipment and identify any additional resources that may be required |
| | | | |
| 3 | Produce fabric or product | 3.1 | Use equipment to produce fabric or product according to plan and required workplace procedures |
| | | 3.2 | Identify and correct minor product process faults, where necessary |
| | | | |
| 4 | Complete production process | 4.1 | Unload product or remove it from equipment |
| | | 4.2 | Assess product against plan and rectify any faults. |
| | | 4.3 | Clean work space and equipment and store tools and equipment |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Design includes one or more of the following:

- yarn types, combinations and patterns
- tension
- size
- type of weave
- colour
- attachments and components

Equipment includes one or more of the following:

- manual spinning wheel
- hand loom
- knitting machine
- computer-aided design (CAD) and computer-aided manufacturing (CAM) tools
- sewing machine
- scissors

Materials include one or more of the following:

- wool
- cotton
- synthetic yarns, such as nylon, acrylic and rayon

- other materials used for textile production not requiring complex processing or handling

Assessment Requirements for MSTTX1001 Produce a simple textile fabric or product

Modification History

Release 1. Supersedes and is equivalent to LMTTX1001B Produce a simple textile fabric

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- checking equipment
- preparing yarn or materials for production
- loading and unloading materials according to equipment and workplace procedures
- starting up and shutting down equipment according to specifications and monitoring equipment operations
- using equipment to produce at least two (2) textile fabrics or products according to plan and required workplace procedures
- checking product against plan
- recognising and rectifying faults or problems as required
- cleaning equipment as required

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- techniques used for fabric or product production, such as spinning, weaving, felting, knitting and sewing
- thread tensioners and dynamics of thread movement and breakage
- equipment components
- typical fault conditions and related fault-finding procedures
- types and styles of yarns
- simple equipment maintenance techniques
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in producing a simple textile fabric, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX2001 Perform knitting operations

Modification History

Release 1. Supersedes and is equivalent to LMTTX2007B Perform knitting operations

Application

This unit of competency covers the skills and knowledge required to prepare, operate and monitor a knitting machine.

The unit of competency applies to the preparation, operation, monitoring and adjusting of a commercial knitting machine used in the production of knitted textile products.

Work is conducted according to defined procedures. Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare to perform knitting operations**
 - 2.1 Check specifications and machine settings to meet requirements for production and workplace procedures
 - 2.2 Identify, check and load yarns onto the knitting machine according to manufacturer specifications
 - 2.3 Report non-conforming materials and keep area around machine clean during setting and loading
- 3 **Operate and monitor machine**
 - 3.1 Start, stop and monitor knitting machine according to manufacturer requirements and workplace procedures
 - 3.2 Check and replace yarn supply to ensure continuous flow to machine
 - 3.3 Sort waste and identify, correct and report minor product process and machine faults
 - 3.4 Report major machine faults
 - 3.5 Check product against quality specifications and identify faults or non-conformance
 - 3.6 Rectify or report product faults
- 4 **Complete knitting process**
 - 4.1 Unload or remove product according to manufacturer specifications
 - 4.2 Despatch product to next process
 - 4.3 Clean and maintain work environment according to workplace procedures
 - 4.4 Complete production records and other documentation, as required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Product requirements for knitting include one or more of the following:

- flat knitting
- circular knitting
- colour
- pattern
- size
- stitch gauge
- tension
- weft knits
- warp knits
- plain, purl, double and tricot knit
- sock knitting

- full garment

Yarns for knitting include one or more of the following:

- wool
- nylon
- acrylic
- polypropylene
- polyester
- cotton
- viscose
- blends

Assessment Requirements for MSTTX2001 Perform knitting operations

Modification History

Release 1. Supersedes and is equivalent to LMTTX2007B Perform knitting operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- checking machine settings to meet production requirements
- loading yarns onto the knitting machine according to production requirements and manufacturer specifications
- operating and monitoring knitting machine according to defined procedures and methods, on at least two (2) occasions
- making minor adjustments
- checking product against quality standards
- loading and unloading products according to workplace procedures
- sorting waste, and recognising, rectifying and reporting machine or product faults or problems, as required
- despatching product to next process
- cleaning and maintaining work environment according to workplace procedures
- completing production records and other documentation, as required.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- procedures and guidelines for safe operation of knitting machine
- typical fault conditions and related fault-finding procedures
- types and styles of yarns used in knitted products
- faults in knitting
- machine maintenance and repair techniques
- technical specifications manuals
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in performing knitting operations, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX2002 Weigh and check textile materials and products

Modification History

Release 1. Supersedes and is equivalent to LMTTX2009B Weigh and check textile materials and products

Application

This unit of competency covers the skills and knowledge required to weigh and check textile materials and products.

The unit of competency applies to the preparation and weighing of fibre, yarns, raw materials and finished products, and checking that weights are accurately recorded. Work may be conducted under some supervision, in a variety of environments.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare for weighing and checking	2.1	Identify fibre, yarns, other materials and products to be weighed and take samples
		2.2	Organise appropriate weighing or measuring equipment and check calibration, as required
		2.3	Apply workplace procedures according to requirements of the work environment
3	Weigh and check materials and products	3.1	Weigh fibre, yarns, raw materials and products accurately, according to material handling and workplace procedures
		3.2	Record and document weights correctly
		3.3	Check yarns, raw materials and products for correct colour, blend and number, if appropriate
		3.4	Check weight of the fibres, yarns, raw materials and textile products against production order
4	Confirm documentation	4.1	Check fibres, yarn, raw materials and product weight, colour and order details against relevant documentation
		4.2	Rectify or report non-compliance, as required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Work environment includes one or more of the following:**
- operational workplace activities
 - restricted space
 - hazardous, controlled or exposed conditions

- Materials and products include one or more of the following:**
- yarns for tufting
 - spun cotton, worsted and woollen yarns
 - finished knitted garments
 - finished hosiery garments
 - non-woven raw materials and fabrics
 - finished fabrics used in textile printing
 - fabrics used in weaving, dyeing, knitting, tufting and finishing

- Equipment includes one or more of the following:**
- weighing machines
 - measuring machines
 - mixing machines

- Documentation includes one**
- production order

or more of the following:

- delivery documentation
- tickets or labels
- specification sheet

Unit Mapping Information

Assessment Requirements for MSTTX2002 Weigh and check textile materials and products

Modification History

Release 1. Supersedes and is equivalent to LMTTX2009B Weigh and check textile materials and products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- using machines and measuring equipment according to specifications on at least two (2) occasions
- calibrating equipment and confirming machines and equipment comply with operational specifications
- interpreting technical data
- recognising and responding appropriately to fault conditions
- testing and adjusting equipment
- weighing fibre, yarns, raw materials and products accurately, according to materials handling and workplace procedures, on at least two (2) occasions
- checking yarns, raw materials and products for correct colour, blend and number, if appropriate, on at least two (2) occasions
- checking weight of the fibres, yarns, raw materials and textile products against production order
- checking fibres, yarn, raw materials and product weight, colour and order details against relevant documentation
- rectifying or reporting non-compliance, as required.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- operation of weighing and measuring machines and equipment
- requirements for recording and documenting equipment readings
- care and maintenance of equipment
- technical specifications manuals
- quality standards and practices

- stores and procurement procedures
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in weighing and checking textile materials and products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX2003 Repair textile product

Modification History

Release 1. Supersedes and is equivalent to LMTTX2011B Repair textile product

Application

The unit of competency covers the skills and knowledge required repair final products, or products produced at different stages of production, to meet quality standards.

It involves the use of discretion, initiative and judgement on the job in own work.

The complexity and degree of responsibility is dependent on the size of the workplace, internal work organisation, materials being used, intricacy of design and means of construction.

The unit of competency may include machine and tool maintenance applicable to the repair task.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to repair textile product	2.1	Identify textile product fault and requirements for repair
		2.2	Document specifications for repair task
		2.3	Prepare textile product and required yarn, fabric or raw materials for repair
		2.4	Prepare machinery, tools and equipment and develop a repair plan
3	Undertake textile product repair	3.1	Undertake repair to restore textile product to the standard specified using a range of techniques and materials, as required
		3.2	Check textile product against specifications and appropriate quality standards, and make adjustments, as required
		3.3	Prepare textile product for storage or transfer to the appropriate work section
		3.4	Prepare required documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPS
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Textile products include one or more of the following:**
- carpet
 - fabric
 - knitted products
 - hosiery
 - non-woven fabrics
 - yarns

- Textile product faults include one or more of the following:**
- fault in yarn quality, ply and twist
 - poor quality of fabric or product
 - holes, cuts, breaks in yarn, fabric or product
 - inconsistent colouring
 - contaminants in the product
 - lines or marks in the product
 - incorrect yarn height

Machinery, equipment and tools include one or more of the following:

- mending guns
- hand pens
- needles
- sewing machines
- gluing equipment
- knives

Assessment Requirements for MSTTX2003 Repair textile product

Modification History

Release 1. Supersedes and is equivalent to LMTTX2011B Repair textile product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- assessing textile product for repair, identifying faults and documenting repair requirements
- preparing tools and equipment
- repairing at least two (2) textile products to restore to the standard specified using a range of techniques and materials, as required
- checking textile product against specifications and appropriate quality standards, and make adjustments, as required
- preparing textile product for storage or transfer to the appropriate work section
- preparing required documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- construction of product being repaired
- characteristics of materials used in product construction
- repair equipment and techniques and their application
- quality standards and practices
- workplace procedures
- recording and reporting practices

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in repairing textile products, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX2004 Conduct packaging or folding for textile production

Modification History

Release 1. Supersedes and is equivalent to LMTTX2013B Conduct packaging or folding for textile production

Application

This unit of competency covers the skills and knowledge required to conduct packaging or folding for textile production.

The unit of competency applies to the use of machines and processes to prepare textile products for warehousing or distribution. Machines may perform operations such as folding, ticketing, labelling and packaging.

The application of this competency is likely to involve repetitive work and requires a limited range of operations, such as loading and unloading machines, and placing tickets and labels on finished products.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare for packaging or folding	2.1	Check work against ticket information and workplace standards
		2.2	Lay out work pieces or materials in sequence
		2.3	Set up and prepare work area according to workplace procedures and set up machine or process
		2.4	Perform routine minor maintenance according to manufacturer specifications and report and record problems
		2.5	Report and record any problems
3	Complete packaging or folding tasks	3.1	Operate machine or conduct process to package or fold products
		3.2	Assess work to check it complies with quality standards and production specifications
		3.3	Identify, report and record any faults
		3.4	Despatch completed products
		3.5	Complete documentation, as required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Machines include one or more of the following:

- labelling machine or printer
- packaging machine
- stud machine
- folding machine

Routine minor maintenance includes one or more of the following:

- cleaning work area
- minor adjustments to machine settings or components
- oiling or lubricating

MSTTX2005 Access and use information resources for textile production operations

Modification History

Release 1. Supersedes and is equivalent to LMTTX2017B Access and use information resources for textile production operations

Application

This unit of competency covers the skills and knowledge required to access and use information resources for textile production operations.

The unit of competency applies to identifying and using relevant industry information to assist in carrying out textile production activities.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to use information resources	2.1	Identify information needs and confirm with appropriate personnel
		2.2	Identify and locate workplace information resources to assist in textile production operations
		2.3	Seek advice from appropriate personnel, where required, to locate and obtain information
		2.4	Check that information resources appropriate to work requirements and/or application are current and authentic
3	Access textile production information	3.1	Locate relevant information using simple search techniques
		3.2	Interpret symbols, codes, legends, abbreviations and textile production terminology correctly
		3.3	Access and interpret information and apply it appropriately
		3.4	Seek and obtain clarification or further explanation of information where required
		3.5	Note and summarise information, if necessary, for subsequent use
4	Use and store information resources	4.1	Use information resources to assist in textile production operations
		4.2	Where applicable, undertake work according to acquired information
		4.3	Store information resources appropriately to ensure security, prevention of damage, and retrieval
		4.4	Maintain currency of documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Information resources include one or more of the following:

- SOPs
- safety procedures
- job lists
- manufacturer manuals
- specifications
- textile production patterns and machine settings
- international and Australian Standards
- trade journals
- quality system documentation customer requirements

- workplace and site procedures and manuals
- industry manuals
- codes of practice
- awards
- legislation
- plans and diagrams
- log books
- hard copy or electronic data
- key personnel, supervisors, trainers and colleagues

Simple search techniques include one or more of the following:

- using index, table of contents, numbering and classification systems, computer database search or look-up, questioning and cross-referencing
- basic techniques to identify relevant information, including skimming and scanning, and identifying key words and ideas

Unit Mapping Information

Assessment Requirements for MSTTX2005 Access and use information resources for textile production operations

Modification History

Release 1. Supersedes and is equivalent to LMTTX2017B Access and use information resources for textile production operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- locating relevant standards
- locating and accessing sources of information to extend own skills and knowledge of textile production operations on at least two (2) occasions
- using a range of at least five (5) information resources
- checking currency and authenticity of information resources
- applying basic scanning techniques to locate required information
- seeking advice from appropriate personnel, where required, to locate, obtain or clarify information
- interpreting textile production terminology, symbols, abbreviations, codes and information relevant to work requirements
- applying information to own work
- storing information resources appropriately for retrieval and to ensure security, and prevention of damage
- maintaining currency of documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- information resources available in the workplace
- range of formats in which information is presented
- organisation of information by classification and cataloguing systems
- own work role and activities
- operating procedures for production machines or processes
- expertise of key personnel
- location of information resources
- quality standards and practices

- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in accessing and using information resources for textile production operations, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX2006 Undertake carding operations

Modification History

Release 1. Supersedes and is equivalent to LMTTX2019B Undertake carding operations

Application

This unit of competency covers the skills and knowledge required to undertake carding operations to process fibres for spinning operations or non-woven web forming operations.

The unit of competency applies to the preparation, operation, monitoring and adjusting of carding machines and equipment used to process fibres. Fibres may be natural or synthetic to be used in woven, knitted, tufted and non-woven products.

Work is conducted according to defined procedures. Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

- requirements at all times
- 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
- 2 **Prepare for carding**
- 2.1 Check production specifications to identify requirements for carding
 - 2.2 Receive fibres and set up for loading into feed sheet
 - 2.3 Set carding machine for operation and clean area around machine during and on completion of setting and loading
 - 2.4 Report non-conforming materials
- 3 **Operate and monitor carding machine**
- 3.1 Start and stop carding machine according to manufacturer requirements and monitor to ensure correct operation and workplace procedures
 - 3.2 Monitor blending to ensure blending consistency and feed uniformity
 - 3.3 Monitor carding operation to ensure correct feed rate and quality of web offtake
 - 3.4 Sort waste and apply environmental requirements
 - 3.5 Identify and correct minor faults, where necessary, to meet specified requirements, and report major machine faults
- 4 **Complete carding operations**
- 4.1 Check carded fibres against quality standards
 - 4.2 Unload or remove carded fibres according to manufacturer specifications and workplace procedures
 - 4.3 Send carded fibres for despatch or further processing.
 - 4.4 Clean and maintain work environment according to workplace procedures
 - 4.5 Complete production records and other documentation, as required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Machines and equipment for carding include one or more of the following:**
- burr handling systems
 - air filtration equipment
 - carding machine
 - doffer waste system
 - blending systems
 - compressed air

- Waste includes one or more of**
- processed burr

the following:

- contaminants
- processed sweepings
- machine waste

Assessment Requirements for MSTTX2006 Undertake carding operations

Modification History

Release 1. Supersedes and is equivalent to LMTTX2019B Undertake carding operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- checking machine settings to meet production requirements
- operating and monitoring carding machine involving defined procedures and methods on at least two (2) occasions
- making minor adjustments
- recognising, rectifying and reporting machine or product faults or problems as required
- monitoring blending to ensure blending consistency and feed uniformity
- monitoring carding operation to ensure correct feed rate and quality of web off-take
- sorting waste and observing environmental requirements
- checking product samples against standards
- loading and unloading products according to workplace practices and production requirements
- checking carded fibres against quality standards
- unloading or removing carded fibres according to manufacturer specifications and workplace procedures
- sending carded fibres for despatch or further processing
- cleaning and maintaining work environment according to workplace procedures
- completing production records and other documentation, as required.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- procedures and guidelines for safe operation of carding machine
- typical fault conditions and related fault finding procedures
- blending and carding processes
- air filtration and waste management systems
- machine maintenance and repair techniques

- technical specifications manuals
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in carding operations, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX2007 Operate a machine for intermediate production support

Modification History

Release 1. New unit

Application

This unit of competency covers the skills and knowledge required to set up, operate and monitor one type of machine used in a range of textile production operations.

The unit of competency applies to a limited range of machine skills on one machine or machine type and to undertaking operational support tasks directly related to the manufacture of textiles. It provides the skills and knowledge required to work under supervision within a production environment. The unit applies to breadth and depth of knowledge of machine production in a defined range of situations in a support role. It includes skills to solve a defined range of problems by applying known solutions.

The application of the unit of competency and the evidence requirements may focus on one or more industry sectors, workplace contexts and machine types and will be determined by operational conditions and production requirements.

Work is conducted according to defined procedures. Work may be conducted in small to large scale enterprises and may involve individual and team related activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|---|
| 1 | Determine job requirements | 1.1 | Follow standard operating procedures (SOPs) |
| | | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to operate one type of TCF machine | 2.1 | Check specifications to identify materials and process required |
| | | 2.2 | Identify machine processes and operational stages |
| | | 2.3 | Calculate and adjust machine settings to meet requirements for production |
| | | 2.4 | Identify and undertake preliminary operations, as required, and follow required procedures to prepare materials and equipment |
| | | 2.5 | Load materials for processing according to machine requirements and manufacturer specifications |
| | | 2.6 | Keep machine and components, and area around machine clean during preparation and loading and apply relevant WHS practices |
| | | 2.7 | Check machine safety equipment, and identify and recognise risks and potential hazards |
| 3 | Operate and monitor one type of machine | 3.1 | Start, operate, stop, re-start and monitor machine operations in accordance with manufacturer requirements to produce textile material or product |
| | | 3.2 | Monitor and coordinate materials according to enterprise procedures |
| | | 3.3 | Sort waste and clean machine according to enterprise procedures |

- | | | |
|---|---|--|
| | 3.4 | Identify and report minor faults in materials, process and machine, where necessary, to maintain quality standards |
| | 3.5 | Check machine in the event of stoppage and follow procedures for re-starting machine |
| | 3.6 | Report major machine or product faults |
| 4 | Complete and finalise operations | |
| | 4.1 | Unload or remove textile material or product according to manufacturer specifications and workplace procedures |
| | 4.2 | Check output of machine or product against quality specifications, identify and rectify routine faults or non-conformance and report according to workplace procedures |
| | 4.3 | Despatch product to next process according to production sequence |
| | 4.4 | Complete production records and other documentation, according to workplace procedures |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for

maintenance of own work quality and contribution to quality improvement of team or section output

- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Monitor and coordinate materials according to enterprise procedures may include but is not limited to:

- sorting waste and cleaning area to ensure work environment is maintained in a safe productive manner

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- hazard identification
- induction training
- hazard control
- risk assessment
- implementing risk reduction measures specific to the tasks
- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic conditions of workplace
- following marked walkways
- safe storage of equipment
- housekeeping to keep work area safe
- reporting accidents and incidents
- environmental practices
- safe disposal of chemical and hazardous substances

Assessment Requirements for MSTTX2007 Operate a machine for intermediate production support

Modification History

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- checking specifications for production and following workplace procedures
- identifying and undertaking preliminary operations according to enterprise requirements, and following required procedures to prepare materials and equipment for operations
- checking machine safety equipment, recognising risks and potential hazards, and reporting any faults
- loading and unloading materials according to machine and workplace procedures
- starting, operating, stopping, re-starting and monitoring machine operations in accordance with manufacturer requirements
- monitoring machine operations, coordinating materials, sorting waste and cleaning machine according to enterprise procedures
- identifying and reporting minor faults in materials, process and machine that may impact on machine operation or product quality
- reporting major machine or product faults
- operating at least one (1) machine or machine type to provide intermediate production support in accordance with manufacturer requirements, to produce textile material or product, on at least two (2) occasions
- checking output and identifying and reporting routine machine or product faults or problems, to meet quality standards
- despatching product to next process according to production sequence and following operations
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards

- at least one machine or machine type associated with textile production in an identified context, and the type of product they produce. Machine type may be selected from those listed in the following groups:
 - machines for knitting:
 - circular knitting machines
 - electronic and automatic flat knitting machines
 - machines for spinning:
 - spinning machines
 - drawing machines
 - roving machines
 - twisting machines
 - winding machines
 - carding machines:
 - burr handling systems
 - air filtration equipment
 - combs
 - doffer waste system
 - blending systems
 - compressed air and hydraulic systems
 - tufting looms:
 - winding machines
 - finishing equipment
 - other ancillary equipment
 - weaving machines:
 - weaving looms
 - broadloom
 - narrowloom
 - all shuttle types
 - Jacquard looms
 - microprocessor or computer controlled looms
 - dyeing machines
 - finishing machines
- procedures and guidelines for safe operation of machine
- material or product requirements for the machine operation
- operational sequence of machine and stages of operation
- textiles and products produced by textile production machines:
 - fibres, including polyester, cotton, wool, viscose and rayon
 - yarns, including ring spun, open-ended spun, air jet spun and friction spun
 - fabrics

- finished products of the identified machine type, for example socks, sweaters, towels, sheets, blankets, carpets, rope and twine, mops and industrial textiles
- typical fault conditions and related fault-finding procedures
- details of materials and processes associated with preparing the machine type for production
- types and characteristics of fibres, threads, yarns and other materials required for textile operations
- characteristics of quality and substandard products
- machine maintenance and repair techniques
- procedures for checking, reporting and re-starting after stoppage
- finishing processes
- technical specifications manuals
- quality standards and practices
- standards for clean and tidy working environment
- work health and safety (WHS) hazards and risks
- appropriate handling of waste
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in operating a machine for intermediate production support, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Assessment may relate to an identified sector, enterprise, process or machine type and function, according to job role.

MSTTX2008 Operate a machine for complex production operations

Modification History

Release 1. Supersedes:

- LMTTX2002B Prepare yarn for textile manufacturing
- LMTTX2003B Perform spinning operations
- LMTTX2004B Perform tufting operations
- LMTTX2005B Perform creeling operations
- LMTTX2006B Operate a weaving loom
- LMTTX2008B Apply finishing processes to textile production
- LMTTX2010B Load and operate dyeing equipment
- LMTTX2016B Perform knotting for weaving operations
- LMTTX2018B Re-start machine after stoppage

Not equivalent

Application

This unit of competency covers the skills and knowledge required to knowledge to set up, operate and monitor one or more machine used in a range of textile production operations.

The unit applies to the exercise of initiative, judgement and discretion in own work, for the operation of a complex machine or process, the operation of one or more than one type of machine, or the performance of a complex task or tasks on a machine.

The unit of competency applies to a range of complex operational tasks directly related to the manufacture of textiles or textile products. It provides the skills and knowledge required to operate one or more machines or machine types and undertake some complex tasks under supervision within a production environment. The unit applies to breadth and depth of knowledge of machine production in a range of situations. It includes skills to solve a defined range of non-routine problems by applying known solutions.

The application of the unit of competency and the evidence requirements may focus on one or more industry sectors, workplace contexts and machine types and will be determined by operational conditions and production requirements.

Work is conducted according to defined procedures. Work may be conducted in small to large scale enterprises and may involve individual and team related activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to operate one or more TCF machines or machine types	2.1	Coordinate preparations by confirming specifications, materials and machine type required for production
		2.2	Identify and undertake preliminary operations, and follow required procedures to prepare materials and equipment
		2.3	Load materials for processing according to machine requirements and manufacturer specifications
		2.4	Keep machine and components, and area around machine clean during preparation and loading and apply relevant WHS practices

- | | | | |
|---|---|-----|--|
| | | 2.5 | Identify, recognise and raise awareness of risks and potential hazards |
| 3 | Operate and monitor machine | 3.1 | Start, operate, stop, re-start and monitor machine operations in accordance with manufacturer requirements to produce textile material or product |
| | | 3.2 | Check machine in the event of stoppage and follow procedures for re-starting machine |
| | | 3.3 | Use initiative, judgement and discretion to monitor process and make adjustments in response to non-major and non-routine problems to maintain quality output |
| | | 3.4 | Perform maintenance according to workplace procedures |
| | | 3.5 | Report major machine or product faults and clean machine according to workplace procedures |
| | | 3.6 | Maintain work environment in a safe productive manner |
| 4 | Coordinate and monitor materials | 4.1 | Use initiative, judgement and discretion to identify non-conforming raw materials/yarns/fabrics and maintain material quality |
| | | 4.2 | Use initiative, judgement and discretion to monitor output and respond to non-routine problems |
| | | 4.3 | Perform operations related to materials as determined by enterprise requirements |
| 5 | Complete and finalise operations | 5.1 | Unload or remove textile material or product according to manufacturer specifications and workplace procedures |
| | | 5.2 | Check output of machine or product against quality specifications, identify and rectify faults or non-conformance and report according to workplace procedures |
| | | 5.3 | Despatch product to next process according to production sequence |
| | | 5.4 | Complete production records and other documentation, according to workplace procedures |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards includes:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Coordinate preparations includes but is not limited to one or more of the following:

- checking specifications to identify materials and process required
- identifying machine processes and operational stages
- coordinating a bank of machines according to operational requirements and workplace procedures

Operations related to materials may include but is not limited to:

- sorting, re-using and /or disposing of waste

WHS practices:

WHS practices must include hazard identification and

control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- hazard identification
- induction training
- hazard control
- risk assessment
- implementing risk reduction measures specific to the tasks
- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic conditions of workplace
- following marked walkways
- safe storage of equipment
- housekeeping to keep work area safe
- reporting accidents and incidents
- environmental practices
- safe disposal of chemical and hazardous substances

MSTTX2009 Perform industrial sewing on textile products

Modification History

Release 1. Supersedes and is equivalent to LMTTX2012B Perform industrial sewing on textile products

Application

This unit of competency covers the skills and knowledge required to perform industrial sewing on textile products.

The unit of competency applies to sewing operations to repair or finish textile products using a single machine or machines on a limited range of fabrics and textile products.

Work is conducted according to defined procedures. Tasks are preset and the operator must be able to work quickly and accurately to achieve required specifications.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to perform industrial sewing**
 - 2.1 Receive and check work and determine any follow-up action
 - 2.2 Lay out work in sequence
 - 2.3 Prepare workstation according to workplace procedures, clean and check machine
 - 2.4 Set up and adjust machine, needles, attachments and/or parts, and identify and report or replace worn or faulty items
 - 2.5 Keep a record of operations

- 3 **Sew textile product**
 - 3.1 Conduct sewing operations according to requirements to meet quality standards, speed of operations and workplace procedures
 - 3.2 Control machine speed and work handling according to the type of operations, fabrics and product type
 - 3.3 Check machine performance regularly and inspect finished work for signs of faulty operation
 - 3.4 Take required action to rectify faults according to workplace procedures

- 4 **Complete work**
 - 4.1 Inspect sewn components or textile products, check finished pieces against quality standards, identify any faults and take appropriate action
 - 4.2 Record results of inspection and any action to correct or reject faulty work
 - 4.3 Take and keep a record of preventative action to avoid any recurrence of defective work

- 4.4 Complete production records and packing slips
- 4.5 Direct completed work to the next operation or packing section

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Work for industrial sewing includes one or more of the following:

- pieces of material or fabric components
- yarns and threads
- finished textile products
- components of textile products

- faulty textile products
 - labels and tickets
 - finishing components and accessories
- Check machine performance includes the following:**
- checking that the work matches job specifications
 - checking that previous operations have been successfully completed
- Industrial machines include one or more of the following:**
- plain lockstitch sewing machine
 - three, four or five thread overlocker
 - zigzag sewing machine
 - blind hemming machines
- Set-up includes the following:**
- correct thread, needle size and type, needle guard, tension setting and attachments
- Needles include the following:**
- a variety of size and types, such as standard and ball point
- Operations include one or more of the following:**
- sewing techniques where the positioning, feeding and handling of work pieces involves some discretionary changes, contouring or critical stopping points or special handling skills to accommodate fabric variations
 - gathering, easing, tucking and stitching curves

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTX2012B Perform industrial sewing on textile products

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTTX2009 Perform industrial sewing on textile products

Modification History

Release 1. Supersedes and is equivalent to LMTTX2012B Perform industrial sewing on textile products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- checking work against job specifications and workplace practices
- preparing workstation and work before commencing sewing operations
- performing sewing operations on at least one (1) machine on at least five (5) textile samples or products
- performing sewing to meet requirements, quality standards, speed of operations and workplace procedures
- controlling machine speed and work handling according to the type of operations, fabrics and product type
- checking machine performance regularly and inspecting finished work for signs of faulty operation, and taking required action
- recognising, rectifying and reporting machine or product faults or problems, and any action to correct or reject faulty work
- keeping a record of preventative action to avoid any recurrence of defective work
- completing production records and packing slips
- directing completed work to the next operation or packing section.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- techniques in using and maintaining identified industrial sewing machine
- characteristics of fabrics and threads used in textile product
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in performing industrial sewing on textile products, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX3001 Identify quality and types of textile fibres, yarns and fabrics

Modification History

Release 1. Supersedes and is equivalent to LMTTX3001B Identify quality and types of textile fibres, yarns and fabrics

Application

This unit of competency covers the skills and knowledge required to identify the quality and types of fibres, yarns and fabrics used and produced in textile production.

The unit of competency applies to a range of natural and synthetic materials which may be used for knitted, tufted, woven or non-woven products. It includes conducting simple tests to identify yarn and fabric types and properties. Testing under this unit is for production purposes only and does not cover skills required for specialised testing.

Work may be conducted in small to large scale enterprises and may involve individual and team related activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- personal protective equipment (PPE)
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Identification methods include one or more of the following:

- visual inspection
- tactile analysis
- acetone
- burn test
- microscopy

Fabrics include one or more of the following:

- component fabrics used in making final textile products, for example, backing materials and linings or a final textile product
- knitted fabrics, including weft knits and warp knits
- woven fabrics, including plain, twill, satin, dobby and jacquard
- non-woven fabrics, including felts, nets, braids and bonded

Quality indicators include three or more of the following:

- straightness of grain
- even/uneven yarn
- slippage
- length of fibres
- pilling
- fabric resilience
- workability
- wash testing
- shade
- tensile properties
- handling

Faults include one or more of the following:

- ends out
- weft faults
- tucking
- unlevel
- bad edges
- thick and thin yarn
- colour or design faults

Performance testing includes two or more of the following:

- light
- heat
- chemical reaction
- absorbency

Finishes include one or more of the following:

- crease resistance
- fire retardency
- water proofing/resistance
- printing
- dyeing
- surface finishes
- lubricating
- waxing
- anti-static
- anti-pilling
- spot and stain resistant
- anti-slip
- mildew and rot proof finish

- permanent creasing or press
- shrink resistance
- mercerising
- moireing

Handling fabrics includes one or more of the following:

- cutting
- dyeing
- printing
- pressing
- lining
- assembling
- sewing
- packaging and storage

Production requirements include one or more of the following:

- sewing requirements, such as needle size and type, machine type and thread type
- binding, joining and fusing requirements
- lining and reinforcement
- seam types
- material form, such as yarn, top, piece and loose stock

Care and cleaning includes one or more of the following:

- dry cleaning
- washing
- drying
- ironing
- steam cleaning
- use of stain removers
- special requirements

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTX3001B Identify quality and types of textile fibres, yarns and fabrics

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTTX3001 Identify quality and types of textile fibres, yarns and fabrics

Modification History

Release 1. Supersedes and is equivalent to LMTTX3001B Identify quality and types of textile fibres, yarns and fabrics

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying performance characteristics of a sample of at least twelve (12) varied fibres, yarns and fabrics
- identifying common fibre and yarn faults and the problems they cause in fabric production or the finished product
- using quality indicators to determine fibre, yarn and fabric quality, identify quality faults and appropriate action to deal with faults, of an at least twelve (12) examples
- conducting performance testing of at least six (6) examples of fibre, yarn and fabric in accordance with workplace procedures
- checking fibres yarns and fabrics against quality standards
- distinguishing performance characteristics and appropriate uses of at least six (6) fabrics
- identifying at least four (4) fabric finishes relevant to an identified context and implications for care, handling and use
- determining the cleaning and labelling requirements of at least six (6) fabrics, according to workplace procedures and Australian Standards.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- types of fibre, yarn and fabric and their care requirements
- performance, uses and characteristics of fibres, yarns and fabrics:
 - stretch
 - abrasion resistance
 - wearability
 - absorbency
 - durability

- elasticity
- fineness
- heat sensitivity
- shrink resistance
- wrinkle recovery
- thermal properties (conductivity, ironing temperature and flammability)
- ease of care
- drape quality
- colour fastness
- strength
- information resources on fibres, yarn and fabrics
- quality indicators:
 - straightness of grain
 - even/uneven yarn
 - slippage
 - length of fibres
 - pilling
 - fabric resilience
 - workability
 - wash testing
 - shade
 - tensile properties
 - handling
- types of performance testing
- types of fabric finishes
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in identifying quality and type of fibres, yarns and fabrics, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX3002 Contribute to textile production process improvements

Modification History

Release 1. Supersedes and is equivalent to LMTTX3002B Contribute to textile production process improvements

Application

This unit of competency covers the skills and knowledge required to review production processes used in textile manufacture, and to contribute to identifying and implementing improvements.

The unit of competency applies to a range of textile production environments, including volume and custom production. Work is performed in a supervisory capacity and applies across the range of textile production processes. Skills and knowledge in textile production processes, tools, materials and equipment is essential.

Work may be self-directed and unsupervised.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|--|
| 1 | Determine job requirements | 1.1 | Follow standard operating procedures (SOPs) |
| | | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to identify process improvements | 2.1 | Identify key external and internal customers and their needs and expectations |
| | | 2.2 | Distinguish the contribution of textile production processes to the value chain |
| | | 2.3 | Identify key suppliers and their role in the value chain |
| | | 2.4 | Identify quality standards for critical points of the production process and production requirements |
| | | 2.5 | Review production operations |
| 3 | Assess improvement opportunities | 3.1 | Identify opportunities for improvement and make suggestions to improve operations |
| | | 3.2 | Test improvement in consultation with appropriate personnel and identify implications of improvement |
| | | 3.3 | Provide reports, records and recommendations for improvement |
| | | 3.4 | Determine a timeframe for implementing improvement |
| 4 | Implement improvement | 4.1 | Identify desired result of improvement and establish method of measuring outcome |
| | | 4.2 | Identify and implement methods of addressing any possible negative implications |
| | | 4.3 | Consult and work with appropriate personnel to |

- communicate and implement improvement
- 4.4 Monitor improvement and review outcomes with other team members to ensure improvement is implemented effectively and produces the desired outcomes
 - 4.5 Make adjustments to improvement, as required, and document improvement processes

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Textile production processes

- receiving and processing of fibres and yarns

include one or more of the following:

- identification of yarn and fibre quality
- specialist machine use, such as tufting, spinning and weaving
- repairs and alterations
- testing and inspecting
- despatch, storage and packing
- finishing processes

Reviewing production operations includes one or more of the following:

- identifying and reviewing housekeeping practices against workplace standards to assess conformity
- identifying and reviewing safety practices
- identifying production waste
- identifying methods of monitoring production outcomes
- assessing textile production outcomes against production goals, as required

Improvements include one or more of the following:

- production practices
- documentation
- supply
- despatch
- operator practices
- safety
- quality
- housekeeping

Tests include one or more of the following:

- trial
- verify
- pilot
- measure against research

Appropriate personnel include one or more of the following:

- managers
- supervisors
- colleagues
- specialist staff

Unit Mapping Information

Assessment Requirements for MSTTX3002 Contribute to textile production process improvements

Modification History

Release 1. Supersedes and is equivalent to LMTTX3002B Contribute to textile production process improvements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying key suppliers and quality standards for critical points of the production process and production requirements in an identified context
- reviewing textile production operations and identifying at least two (2) operations that have opportunity for improvement
- identifying and assessing at least two (2) improvement opportunities for one (1) or more of the production operations
- identifying desired result of improvements and establishing method of measuring outcome
- documenting and reporting recommendations for process improvement for an identified timeframe
- identifying and implementing methods of addressing any possible negative implications
- consulting and working with appropriate personnel to communicate and implement improvement
- monitoring improvement and reviewing outcomes with other team members to ensure improvement is implemented effectively and produces the desired outcomes
- making adjustments to improvement, as required, and documenting improvement processes.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- quality standards applying to textile handling procedures, construction processes and finished product
- production requirements:
 - timing requirements
 - quantity

- quality
- specific order requirements
- procedural requirements
- safety
- personnel
- resource use
- impact of incorrect production techniques
- sequence of operations in the production process
- production suppliers and value chain concepts:
 - suppliers of materials, yarns, fibres and fabrics
 - personnel, specialist support and contractors
 - despatch, warehousing and transport operators
 - publicity and promotional suppliers
 - machinery and equipment suppliers and repair contractors
- production waste:
 - unusable materials and off-cuts
 - delays
 - poor process design
 - inventory
 - inefficient performance of a process
 - making defective items
- quality tools and benchmarking procedures
- plan, do, check, act (PDCA) cycle
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in textile production process improvements, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX3003 Set up, adjust and maintain industrial sewing machines

Modification History

Release 1. Supersedes and is equivalent to LMTTX3017A Set up, adjust and maintain industrial sewing machines

Application

This unit of competency covers the skills and knowledge required to set up, adjust and maintain industrial sewing machines used in a textile enterprise.

The unit of competency applies to setting up industrial sewing machines for production, conducting sample runs, problem solving, repair, adjustment, preventative maintenance and testing of machines to ensure efficient working order. The unit covers operator controlled single station industrial sewing machines and high volume automatic and manually operated hem, selvedge and embroidery sewing machines.

Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes.

This unit does not cover all maintenance, repair and adjustment functions associated with industrial sewing machines. In particular, skills associated with general engineering (fitting), electrical and electronic systems, and fluid power systems, may be required according to the nature of the set-up, repair or adjustment, and the workplace practices of a particular enterprise.

Work may be conducted in a variety of environments, such as operational workplace activities, restricted space, hazardous, controlled or exposed conditions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to set up, adjust and maintain industrial sewing machines	<p>2.1 Interpret machine manufacturer specifications and work description from operator to determine optimum sewing machine settings for product and operator</p> <p>2.2 Select, prepare and use tools appropriate for the machine and task to set up machine for operation</p> <p>2.3 Set up machine according to required specifications, including fixing of required attachments and operating run at optimum quality and efficiency levels</p> <p>2.4 Thread and check needles and set tension for planned sewing operations</p> <p>2.5 Check lubrication prior to operation and instruct sewing machine operators of any special operating requirements</p>
3	Test industrial sewing machine settings	<p>3.1 Operate sewing machine in accordance with manufacturer and workplace instructions to test settings against specifications and operational standards</p> <p>3.2 Examine sewn product or sample to confirm desired sewing motion and stitch is achieved, and identify any</p>

		adjustments needed to machine settings
	3.3	Identify and document adjustments and adjust machine settings accordingly
4	Diagnose industrial sewing problems	4.1 Monitor industrial sewing machine operation to ensure it is efficient, safe and complies with workplace procedures
		4.2 Communicate with operator and assess sewn product to identify the nature and extent of sewing faults
		4.3 Analyse problems and faults to determine root cause and determine strategy for repair
5	Fix machine and communicate outcomes	5.1 Readjust settings, repair or replace faulty machine parts and return sewing machine to optimal performance
		5.2 Test sewing machine and produce sample to ensure problems have been fixed
		5.3 Maintain records and prepare reports, where necessary
		5.4 Document adjustments to machines and patterns and communicate to appropriate personnel
		5.5 Document operational instructions

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the

- requirements prescribed by legislation, awards, agreements and conditions of employment

following:

- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Industrial sewing machines include one or more of the following:

- lockstitch and chain stitch table mounted machines with power being from a motor mounted under the table and connected to the sewing machine by a pulley
- overlock table mounted sewing machines and sergers with power being from a motor mounted under the table and connected to the sewing machine by a pulley
- high volume automatic and manually operated hem, selvedge and embroidery sewing machines

Machine settings for sewing machine include one or more of the following:

- gaps
- tolerances
- clearances
- tension
- needle speed and timing
- direction
- other settings depending on the industrial sewing machine settings depending on the machine model and function and production requirements

Faults in sewing include one or more of the following:

- contamination
- incorrect thread tension
- mechanical breakdown
- electrical or electronic fault
- poor feeding and threading of needles
- dirty or oily marks on thread or fabric
- incorrect stitch

- thread, lint or debris in rotary hook, bobbin case, needleplate and feed dog, motor and oil reservoir
- puckering
- thread breakages
- uneven thread delivery including loop stitches and slip stitches
- poor lubrication and cooling resulting in needle overheating and fabric burn

Repairs in sewing include one or more of the following:

- correcting threading faults
- tensioning
- removal and replacement of faulty or worn parts
- setting of clearances, limits and fits
- re-setting or re-programming of controls and sensors
- repair or replacement of pneumatic or hydraulic components

Unit Mapping Information

Assessment Requirements for MSTTX3003 Set up, adjust and maintain industrial sewing machines

Modification History

Release 1. Supersedes and is equivalent to LMTTX3017A Set up, adjust and maintain industrial sewing machines

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, machine manufacturer specifications
- applying relevant standards
- interpreting production specifications accurately
- setting up industrial sewing machine with required equipment and attachments, and operating safely and correctly according to specifications
- monitoring industrial sewing machine operation to ensure it is efficient, safe and complies with workplace procedures
- performing at least four (4) sample runs of all stitching operations required for an identified garment, range or product and analysing results
- determining root cause and determining strategy for repair of sewing faults
- identifying and making appropriate readjustments
- maintaining records and preparing reports, where necessary
- documenting adjustments to machines and patterns and communicating to appropriate personnel
- documenting operational instructions.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- sewing methods and the various types of sewing operations, stitches, fabrics and knit effects
- threads
- pattern specifications
- factors affecting machine performance, including thread strength, dust and other contaminants, lubrication, needle condition, operator skill and ambient conditions
- industrial sewing machines:

- lockstitch and chain stitch table mounted machines with power being from a motor mounted under the table and connected to the sewing machine by a pulley
- overlock table mounted sewing machines and sergers with power being from a motor mounted under the table and connected to the sewing machine by a pulley
- high volume automatic and manually operated hem, selvedge and embroidery sewing machines
- machine manufacturer specifications and adjustment methods
- work health and safety (WHS) and environmental aspects of relevant enterprise activities
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in setting up, adjusting and maintaining industrial sewing machines, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX3004 Set up textile production machines for product change

Modification History

Release 1. Supersedes and is equivalent to LMTTX3004B Set up textile production machines for product change

Application

This unit of competency covers the skills and knowledge required to perform or coordinate the setting up of machines for production changes.

The unit of competency applies to the work involved with the setting of machines for product change, usually working independently and being accountable for own results, including carrying out assigned tasks, coordinating processes and setting and working to deadlines.

Work may be conducted in a variety of environments, such as operational workplace activities, restricted space, hazardous, controlled or exposed conditions.

Work may be self-directed and unsupervised. Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to set up or organise setting of machine | 2.1 | Interpret product specifications for correct machine setting requirements and to suit work environment |
| | | 2.2 | Convey specifications to appropriate personnel, where required |
| | | 2.3 | Set machine according to product specifications and manufacturer instructions and use cleaning agents and lubricants |
| 3 | Conduct sample or trial runs | 3.1 | Obtain or arrange materials or products to be used for sampling or trialling |
| | | 3.2 | Operate machine according to manufacturer requirements and workplace procedures |
| | | 3.3 | Produce specified sample and check to ensure it meets quality standards |
| | | 3.4 | Assess or organise quality testing, as required |
| 4 | Re-adjust or confirm machine settings | 4.1 | Interpret test results to determine adjustment requirements |
| | | 4.2 | Complete adjustment changes according to product and machine specifications |
| | | 4.3 | Document process and outcomes |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Machines include one or more of the following:

- knitting:
 - circular, straight bar and flat bed knitting machines
 - warp knitting and slitting machines
 - embroidering and multi-needle quilting machines
- dyeing and finishing:
 - batch preparation, dyeing and drying finishing
 - continuous preparation, dyeing and drying finishing
 - garment dyeing, drying and pressing
- hosiery:
 - circular knitting and sewing machines
 - presses

- packaging and slitting machines
- spinning:
 - cotton (cleaning, blending, carding, combing, drawing, roving, spinning, twisting and winding)
 - worsted (combing, gilling, drawing, roving, spinning, twisting and winding)
 - woollen (blending, carding, spinning, twisting and winding)
- textile printing and finishing:
 - colour mixing equipment
 - printing table machine
 - garment printing machines/equipment
 - automated flat screen, rotary screen and carpet printing machines
 - heat transfer printing equipment
 - screen preparation and manufacturing equipment
 - slitting machines
 - steaming and washing equipment
 - finishing equipment
- non-woven:
 - extruders
 - winders
 - carding, needling, bonding, lay-down, slitting and texturing and multi-needle quilting machines
- tufting:
 - tufting machines, including creels and mending frames, winding and beaming machines
- weaving:
 - weaving machines
 - looms
 - gaiting trucks and frames
 - accumulators tying-in, sizing, beaming, warping, slitting, drawing-in automatic and spool matching machines
- batching machines
- tufting: yarns for tufting
- spinning: spun cotton, worsted and woollen yarns
- knitting: finished knitted garments
- hosiery: finished hosiery garments
- non-woven: non-woven fabrics
- textile printing and finishing: finished fabrics used in textile

Materials or products include one or more of the following:

- printing
- dyeing and finishing: fabrics used in weaving, dyeing and finishing

Assessment Requirements for MSTTX3004 Set up textile production machines for product change

Modification History

Release 1. Supersedes and is equivalent to LMTTX3004B Set up textile production machines for product change

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting specifications for machine settings
- setting up machine according to specifications and using and disposing of a range of chemical cleaning agents, sealants and lubricants, on at least two (2) occasions
- arranging or conducting quality testing of samples
- operating and adjusting machines correctly on at least two (2) occasions
- producing specified sample and checking to ensure it meets quality standards
- analysing samples or test results
- interpreting test results to determine adjustment requirements
- completing adjustment changes according to product and machine specifications
- documenting process and outcomes.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- machine and equipment operation
- setting and adjustment requirements
- technical specifications manuals
- maintenance planning and workplace practices
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in setting up textile production machines, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX3005 Organise and interpret tests

Modification History

Release 1. Supersedes and is equivalent to LMTTX3005B Organise and interpret tests

Application

This unit of competency covers the skills and knowledge required to organise and interpret tests within the textile industry.

The unit of competency applies to organising a range of testing and sampling procedures and equipment, including evenness testing, moisture content, dry fastness, fibre construction, colour matching or other similar processes. Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to organise and interpret tests | 2.1 | Confirm sample of material or product for testing |
| | | 2.2 | Determine and confirm acceptance criteria for testing of sample |
| | | 2.3 | Confirm test requirements and set up relevant test equipment |
| | | 2.4 | Confirm calibration, as required, and organise tests to comply with requirements |
| 3 | Perform tests | 3.1 | Test material or product using selected test methods according to industry and workplace procedures |
| | | 3.2 | Collate and analyse test results |
| | | 3.3 | Interpret outcomes against process or product requirements |
| | | 3.4 | Review acceptance criteria and take appropriate action in response to test results, as required |
| | | 3.10 | |
| 4 | Conclude tests | 4.1 | Report outcomes and advise appropriate personnel |
| | | 4.2 | Prepare and file reports and documentation |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Test equipment includes one or more of the following:

- general laboratory equipment, such as:
- weighing scales
- ruler templates
- strength testers
- conditioners and dryers
- yarn testers
- abrasion testers
- pilling box
- lighting equipment used for colour testing
- other similar devices or equipment

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTX3005B Organise and interpret tests

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTTX3005 Organise and interpret tests

Modification History

Release 1. Supersedes and is equivalent to LMTTX3005B Organise and interpret tests

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, test methods
- applying relevant standards
- confirming sample of material or product for testing
- confirming test requirements and set up relevant test equipment
- testing material or product using selected test methods according to industry and workplace procedures on at least two (2) occasions
- collating and analysing test results
- ensuring tests are conducted against quality standards
- interpreting outcomes against requirements
- communicating effectively with design team and customers
- reporting outcomes and advising appropriate personnel
- preparing and filing reports and documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- methods and principles of testing and how they are used to assist in assessing the quality of raw materials/products in the textile industry
- types of tests
- analysis techniques
- product and process specifications
- raw materials and their properties
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in organising and interpreting tests, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX3006 Ensure efficient operation of textile machines

Modification History

Release 1. Supersedes and is equivalent to LMTTX3006B Ensure efficient operation of textile machines

Application

This unit of competency covers the skills and knowledge required to ensure efficient operation of textile machines.

The unit of competency applies to the routine monitoring, problem solving and maintenance of machines and equipment used in the textile industry.

It involves working with discretion, judgement and initiative on the job in own work, and may include liaison with specialist technicians, including mechanics and technicians and production supervisors.

The application of machine fault diagnosis is within the competency and scope of the operator. The unit does not cover complex problems requiring a textile mechanic.

Work may be conducted in a variety of environments, such as operational workplace activities, restricted space, and hazardous, controlled or exposed conditions.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to ensure efficient machine operation	2.1	Monitor and review machine performance and make necessary adjustments to ensure operations and product meet quality standards and workplace procedures
		2.2	Consult machine operator to assess machine operations and processes, and maintain records and documentation of machine performance
		2.3	Identify symptoms of machinery fault
		2.4	Visually inspect machine components and product to identify source of fault
		2.5	Refer to operating manuals or documentation, as required
3	Determine problem cause and solution	3.1	Determine possible causes of problem and gather further information to confirm or eliminate possible cause
		3.2	Consult appropriate personnel to confirm cause
		3.3	Determine immediate solution and trial or implement
		3.4	Determine permanent solution in consultation with appropriate personnel

4	Conduct routine checks of performance efficiency	4.1	Use appropriate hand tools and hand-held power tools to implement routine checks of machine performance and preventative maintenance strategy, in accordance with manufacturer instructions
		4.2	Assess and perform periodic servicing, such as lubrication and greasing, in accordance with manufacturer instructions
		4.3	Clean machine in accordance with manufacturer cleaning instructions and work environment
5	Perform preventative maintenance procedures	5.1	Inspect parts according to operating procedures and manufacturer instructions
		5.2	Maintain service and production records to assist with life cycle monitoring of parts and machine, as required
		5.3	Identify faulty parts for repair, replacement or adjustment and take necessary action
		5.4	Inspect, check and monitor replacement parts and consumables to ensure they comply with operational specifications

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions

- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Identify problems includes one or more of the following:

- identifying symptoms of machinery fault
- using visual inspection of machine and product to locate fault
- locating fault within section or component of machine
- referring to operating manuals or documentation for information, as required

Symptoms include one or more of the following:

- product does not meet specification
- machine is not operating to specification
- sounds not attributed to normal operation
- recurrent faults, such as yarn breaking

Machines include one or more of the following:

- knitting machines
- carding machines
- spinning machines
- weaving looms
- dyeing equipment
- tufting looms
- finishing equipment
- creeling and warping machines

Appropriate personnel include one or more of the following:

- textile mechanic
- supervisor
- senior operator

Immediate solutions include

- decommission machine

- one or more of the following:**
- change settings
 - adjust operation
 - perform temporary fix
 - refer to textile mechanic

- Parts and consumables include one or more of the following:**
- belts
 - globes
 - combs
 - other items that require periodic replacement as a result of normal machine and production operations

Assessment Requirements for MSTTX3006 Ensure efficient operation of textile machines

Modification History

Release 1. Supersedes and is equivalent to LMTTX3006B Ensure efficient operation of textile machines

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, manufacturer instructions'
- applying relevant standards
- operating machines correctly
- monitoring machine performance against specifications, undertaking minor adjustments, and maintaining records and documentation of machine performance, on at least two (2) occasions
- recognising, rectifying and reporting machine or product faults or problems on at least two (2) occasions
- using hand tools and hand-held power tools
- identifying and replacing replaceable parts and consumables used in normal machine operations
- performing periodic servicing, such as lubrication and greasing, in accordance with manufacturer instructions
- cleaning machine in accordance with manufacturer cleaning instructions and work environment
- communicating and cooperating with mechanics/technicians and production personnel
- identifying faulty parts for repair, replacement or adjustment and taking necessary action
- inspecting, checking and monitoring replacement parts and consumables to ensure they comply with operational specifications.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- procedures and guidelines for safe operation of machines
- typical fault conditions and related fault-finding procedures
- routine maintenance processes and practices
- preventative maintenance concepts

- root cause analysis concepts
- range and use of replacement parts and consumables
- operation of hand tools and hand-held power tools
- techniques to replace parts and consumables
- characteristics of materials and fibres
- technical specifications manuals
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in ensuring efficient operation of textile machines, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX3007 Prepare dyes for textile production

Modification History

Release 1. Supersedes and is equivalent to LMTTX3007B Prepare dyes for textile production

Application

This unit of competency covers the skills and knowledge required to prepare dyes for use in textile production.

The unit of competency applies to selecting and preparing dyes for dyeing textiles. Judgement may be required in planning and selecting appropriate processes or procedures for self and others.

Work may include liaison with specialist technicians from within the workplace and from external suppliers.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare for dye preparation**
 - 2.1 Confirm specifications and/or sample of textile material or product with originator or client
 - 2.2 Clarify end use and performance standards expected of finished product with appropriate personnel
 - 2.3 Analyse sample to determine type and composition using appropriate techniques, as required

- 3 **Perform preliminary selection and evaluation of dyes**
 - 3.1 Select potential dyes, chemicals and auxiliaries according to specifications and/or previous product dyeing references
 - 3.2 Identify expected textile production or reproduction processes based on preliminary dye selection, and advise appropriate personnel
 - 3.3 Determine preliminary dye selection for the sample of textile
 - 3.4 Trial dye selections and specification or recipe using laboratory-based production facilities, and evaluate results against requirements of originator or client
 - 3.5 Review dye selection or recipe for colour matching and re-test, as required
 - 3.6 Seek approval of preliminary dye specification by originator or client before implementing limited production run

- 4 **Test dyes and finalise specification or**
 - 4.1 Select appropriate sampling and testing techniques to evaluate product during limited production run
 - 4.2 Implement tests according to quality standards and

recipe

workplace procedures

- 4.3 Analyse results and review and retest preliminary dye selection/recipe, as required, to ensure colour matching and specifications are achieved
- 4.4 Check dye selection against original client specifications and requirements and workplace production requirements
- 4.5 Seek approval of colour specification by originator or client before implementing bulk production run and record process
- 4.6 Apply environmental requirements and procedures concerned with waste, pollution, storage and recycling of materials at all stages of the process

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

- WHS practices
- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken
- Textile materials or products include one or more of the following:**
- fibres, including polyester, cotton, wool, viscose and rayon
 - yarns, including ring spun, open-ended spun, air jet spun and friction spun
 - fabrics
 - finished products, including socks, sweaters, towels, sheets, blankets, carpets, rope and twine, mops and industrial textiles
- Tests include one or more of the following:**
- those associated with product or process development
 - colour fastness
 - shrinkage

Unit Mapping Information

Assessment Requirements for MSTTX3007 Prepare dyes for textile production

Modification History

Release 1. Supersedes and is equivalent to LMTTX3007B Prepare dyes for textile production

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying textile characteristics
- establishing and confirming criteria for tests
- developing and planning tests and ensuring tests and sampling techniques are conducted against quality standards
- collating, analysing and interpreting tests to ensure colour matching and specifications are achieved
- applying dye formulas and specifications to ensure colour matching and specifications are achieved on at least two (2) occasions
- checking dye selection against original client specifications and requirements and workplace production requirements
- seeking approval of colour specification by originator or client before implementing bulk production run and recording process
- applying environmental requirements and procedures concerned with waste, pollution, storage and recycling of materials at all stages of the process.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- fibres, yarns and end products and their properties
- dyestuffs and classes
- chemistry of dyes and relationship with processing and fastness properties
- dye specification or recipe:
 - application properties
 - fastness properties
 - reproducibility
 - suitability for production

- application methods
- environmental and safety factors
- dyeing processes and dyeing machinery
- relation between dyeing machinery and selection of dyestuffs/classes
- sampling and testing techniques:
 - use of laboratory equipment, pad mangles, rota dryers, mini-jets and pilot production plants
 - tests applicable to the dyeing of textiles
- relevant Australian and international testing Standards
- application of dyes in laboratory and production process
- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in preparing dyes for textile production, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTTX3008 Select raw materials

Modification History

Release 1. Supersedes and is equivalent to LMTTX3008B Select raw materials

Application

This unit of competency covers the skills and knowledge required to select raw materials for use in textile production.

The unit of competency applies to development, production and quality assurance activities associated with the selection and checking of raw materials for textile production. The work can include liaison with specialist technicians. Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes.

Work may be conducted in small to large scale enterprises and may involve individual and team related activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

MSTTX3009 Operate in a complex textile production environment

Modification History

Release 1. Supersedes and is equivalent to LMTTX3009B Operate in a complex textile production environment

Application

This unit of competency covers the skills and knowledge required to work in a textile production environment that requires the application of skills and knowledge across multiple production work areas.

The unit of competency applies to complex environments where the operator must demonstrate competence in the skill and knowledge of different production areas, consistent with the organisation's overall processes and quality systems.

The unit of competency builds upon technical skill and knowledge for operating machines or applying textile production processes, such as carding, spinning, knitting, tufting, weaving, finishing, dyeing and non-woven production processes, which are covered in other individual units.

Work may be conducted in small to large scale enterprises and may involve individual and team related activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with (SOPs)
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to operate in a complex textile production environment	2.1	Identify organisational structure and purpose and role of self or own team in the organisational structure
		2.2	Identify main production processes and quality systems across and within departments
		2.3	Identify the production functions of own work area including internal and external suppliers, and internal and external customers
		2.4	Identify main types of raw materials received by the organisation for processing
		2.5	Identify production processing stages and departments responsible for work flow through the organisation
3	Apply technical skills in own and additional departments	3.1	Demonstrate knowledge of key tasks performed in own and other departments within the organisation
		3.2	Identify the production functions of additional work areas, including internal and external suppliers, and internal and external customers
		3.3	Apply technical skills according to requirements of the production systems of the organisation
		3.4	Maintain responsibility for quality of own work according to workplace procedures in own and additional departments
		3.5	Work in cooperation with team members from other departments

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Organisational structure includes the following:

- allocation of production functions to departments
- supervisory and management arrangements
- allocation of support functions, including maintenance, materials storage, administration, security, and laboratory services

Production processes include one or more of the following:

- carding
- spinning

- sizing
- winding
- weaving
- tufting
- knitting
- dyeing
- finishing
- non-woven textile production process
- special production systems of manufacturing practice including:
 - just in time movement between departments and suppliers or customers
 - special housekeeping practices, for example 5S

Organisations include one or more of the following:

- an enterprise with a single site
- a factory location of a multi-site enterprise

Systems used to guarantee quality include one or more of the following:

- communication systems used to convey quality standards for different jobs to production operators
- technical resources and assistance available to production operators to help rectify problems
- location and availability of experts, such as textile mechanics and technicians
- sampling requirements for offline quality testing

Product flow includes the following:

- the receipt of source fibres, yarns or textile materials from suppliers
- the subsequent movement of the raw materials to the production areas of the organisation for processing
- automatic and manual handling systems
- job and order control at a level appropriate to production operators at the enterprise

Unit Mapping Information

Assessment Requirements for MSTTX3009 Operate in a complex textile production environment

Modification History

Release 1. Supersedes and is equivalent to LMTTX3009B Operate in a complex textile production environment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices and other reference material
- applying relevant standards
- identifying main production processes and quality systems across and within departments and own work area, including internal and external suppliers, and internal and external customers
- collecting samples and identifying all main types of raw materials received by the organisation for processing
- preparing a summary diagram or chart to identify production processing stages and departments responsible for work flow through the organisation
- listing key tasks performed in own and at least one (1) other department within the organisation
- detailing the production functions of at least one (1) additional work area, including internal and external suppliers, and internal and external customers
- maintaining responsibility for quality of own work according to workplace procedures in own and additional departments
- working in cooperation with team members from other departments.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- textile production processes used in the organisation
- technical processes and key tasks of two or more departments
- structure of organisation
- internal and external suppliers
- internal and external customers
- raw materials
- product flow

- quality standards and practices
- workplace organisation and procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in operating in a complex textile production environment, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX3010 Monitor textile production processes

Modification History

Release 1. Supersedes and is equivalent to LMTTX3010B Monitor textile production processes

Application

This unit of competency covers the skills and knowledge required to monitor textile production processes.

The unit of competency applies to ensuring that textile production outcomes are consistent with job specifications, identifying performance parameters, solving problems and conducting checks of performance efficiency.

The unit of competency involves working with discretion, judgement, and initiative on the job either individually or in a team environment, and may include liaison with specialist technicians, including textile mechanics or technicians and production supervisors.

Enterprises covered by this unit will process natural or synthetic source fibres, yarns or textile materials. Production processes covered include, but are not limited to, carding, spinning, knitting, tufting, weaving, finishing, dyeing and non-woven production processes.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to monitor textile production procedures	<p>2.1 Check job specifications for requirements including quantity, quality, colour and pattern</p> <p>2.2 Identify performance parameters to the extent required to be able to report known or suspected problems</p> <p>2.3 Monitor production processes to ensure consistency with specified outcomes and comply with workplace procedures</p> <p>2.4 Maintain job records and other documentation</p>
3	Determine problem cause and solution	<p>3.1 Identify problems and categorise as either machine or process faults</p> <p>3.2 Refer to operating manuals and documentation and determine possible causes of the problems</p> <p>3.3 Gather further information to confirm and eliminate possible causes</p> <p>3.4 Consult appropriate personnel to confirm causes</p> <p>3.5 Determine and trial immediate or short-term solution and/or determine permanent solution to eliminate the cause of the problem in consultation with appropriate personnel</p>

- | | | | |
|---|--|-----|--|
| 4 | Conduct regular checks of performance | 4.1 | Make regular checks of process operation and assess results against job specifications |
| | | 4.2 | Record results of checks and identify opportunities for process improvements |
| | | 4.3 | Communicate and document improvements |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Job specifications include

- customer orders

- one or more of the following:**
- pattern diagrams
 - colour charts
 - simple formulae
 - written and verbal instructions
 - drawings

- Performance parameters include the following:**
- processing time
 - acceptable error rate
 - wastage
 - noise
 - vibration

- Production processes include one or more of the following:**
- carding
 - spinning
 - sizing
 - winding
 - weaving
 - tufting
 - knitting
 - dyeing
 - finishing
 - non-woven textile production process
 - any special production systems of manufacturing practice, including:
 - just in time (JIT) movement between departments and suppliers or customers
 - special housekeeping practices, including 5S

- Appropriate personnel include one or more of the following:**
- internal technical specialists
 - supervisors
 - equipment manufacturer service personnel

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTX3010B Monitor textile production processes

Assessment Requirements for MSTTX3010 Monitor textile production processes

Modification History

Release 1. Supersedes and is equivalent to LMTTX3010B Monitor textile production processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, operating manuals
- checking job specifications for requirements including quantity, quality, colour and pattern
- identifying performance parameters
- monitoring production processes on at least two (2) occasions to ensure they are consistent with specified outcomes and comply with workplace procedures
- identifying major faults and out-of-specification performance
- maintaining job records and other documentation
- identifying faults and trialling immediate or short-term solution, and/or determining permanent solution to eliminate the cause of the problem in consultation with appropriate personnel
- making regular checks of process operation and assessing results against job specifications
- recording results of checks and identifying opportunities for process improvements
- communicating and documenting improvements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- textile production processes used in an enterprise
- range of problems and their solutions associated with textile production operations
- structure of organisation
- internal and external suppliers
- internal and external customers
- raw materials
- product flow
- quality standards and practices
- workplace procedures

- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in monitoring textile production processes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX3011 Set up, adjust and monitor a machine for TCF production

Modification History

Release 1. Supersedes:

- LMTTX3011A Set up, adjust and maintain circular knitting machines
- LMTTX3012A Set up, adjust and maintain flat knitting machines
- LMTTX3013A Set up, adjust and maintain spinning machines
- LMTTX3014A Set up, adjust and maintain carding machines
- LMTTX3015A Set up, adjust and maintain tufting looms
- LMTTX3016A Set up, adjust and maintain domestic sewing machines
- LMTTX3020A Identify and correct weaving process faults
- LMTTX3021A Apply knowledge of weaving processes to production requirements
- LMTTX3022A Set up and operate weaving looms for production

Not equivalent

Application

This unit of competency covers the skills and knowledge required to set up, adjust and monitor machines used in a textile enterprise. It includes set up for production and the conduct of sample runs, problem solving, repair and preventative maintenance.

This unit of competency applies to the operation of one or more machines and the repair, adjustment, maintenance and testing of the machine/s to ensure efficient working order. Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes.

The application of the unit and the evidence requirements may focus on one or more industry sectors or workplace contexts and will be determined by operational conditions and production requirements.

This unit does not cover all repair and adjustment functions associated with the machine operation. Skills not covered by this unit include repairs or adjustments associated with general engineering (fitting), electrical and electronic systems, and fluid power systems, according to the nature of the set up, repair or adjustment, and the workplace practices of a particular enterprise.

Work may be conducted in a variety of environments, such as operational workplace activities, restricted space, hazardous, controlled or exposed conditions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Prepare to set up, adjust and maintain machines	2.1	Interpret specifications and production requirements to determine required machine settings for textile product
		2.2	Interpret, reference and apply documentation relating to machine settings, operation and maintenance, according to the needs of the task
		2.3	Select, prepare and use tools appropriate for the machine and task to set up machine for operation
		2.4	Set up machine according to required specifications for operation or product change, including fixing required attachments and operation run at optimum quality and

- efficiency levels
- 2.5 Identify and undertake preliminary operations, as required, and follow required procedures to prepare materials and equipment
- 2.6 Instruct machine operators of any special operating requirements
- 3 **Test machine settings**
- 3.1 Start, operate, stop, re-start and monitor machine operations in accordance with manufacturer requirements to produce textile material or product
- 3.2 Operate machine in accordance with manufacturer and workplace instructions to test settings against specifications and operational standards
- 3.3 Examine textile materials, fibres, yarn, product or sample to identify required adjustments to machine settings or pattern specifications
- 3.4 Conduct or organise quality tests as required to ensure optimal production outcomes are achieved
- 3.5 Identify and document required adjustments, and adjust machine settings accordingly
- 4 **Diagnose problems**
- 4.1 Monitor machine operation to assess operational efficiency and safe operation in accordance with workplace procedures
- 4.2 Communicate with operator to identify the nature and extent of machine or faults
- 4.3 Assess product to identify faults, and examine textile product to assess possible impact on operational problems
- 4.4 Identify and analyse problems and faults to determine root cause
- 4.5 Establish fault diagnosis and determine strategy for repair, including replacement of yarn or parts, or refer to relevant personnel
- 5 **Operate machine and communicate**
- 5.1 Return machine to optimal performance through repair of faulty operation or replacement of fibres, yarn or

outcomes	machine parts
5.2	Test machine and produce sample to ensure problems have been fixed
5.3	Set machine to run at optimum quality and efficiency levels to produce required quantity and quality of product
5.4	Set electronic process monitoring safely and to correct functions, as required
5.5	Maintain records and prepare reports, where necessary
5.6	Document adjustments to machines and patterns and communicate to appropriate personnel
5.7	Document operational instructions

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal,

- pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

WHS practices:

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- hazard identification
- induction training
- hazard control
- risk assessment
- implementing risk reduction measures specific to the tasks
- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic conditions of workplace
- following marked walkways
- safe storage of equipment
- housekeeping to keep work area safe
- reporting accidents and incidents
- environmental practices
- safe disposal of chemical and hazardous substances

Unit Mapping Information

Release 1. Supersedes:

- LMTTX3011A Set up, adjust and maintain circular knitting machines
- LMTTX3012A Set up, adjust and maintain flat knitting machines
- LMTTX3013A Set up, adjust and maintain spinning machines
- LMTTX3014A Set up, adjust and maintain carding machines
- LMTTX3015A Set up, adjust and maintain tufting looms
- LMTTX3016A Set up, adjust and maintain domestic sewing machines
- LMTTX3020A Identify and correct weaving process faults
- LMTTX3021A Apply knowledge of weaving processes to production requirements

Assessment Requirements for MSTTX3011 Set up, adjust and monitor a machine for TCF production

Modification History

Release 1. Supersedes:

- LMTTX3011A Set up, adjust and maintain circular knitting machines
- LMTTX3012A Set up, adjust and maintain flat knitting machines
- LMTTX3013A Set up, adjust and maintain spinning machines
- LMTTX3014A Set up, adjust and maintain carding machines
- LMTTX3015A Set up, adjust and maintain tufting looms
- LMTTX3016A Set up, adjust and maintain domestic sewing machines
- LMTTX3020A Identify and correct weaving process faults
- LMTTX3021A Apply knowledge of weaving processes to production requirements
- LMTTX3022A Set up and operate weaving looms for production

Not equivalent

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, manufacturer operational guidelines
- applying relevant standards
- interpreting production specifications accurately
- performing sample runs and analysing results to ensure quality outcomes
- identifying and correcting product related faults and making repairs or corrections, within scope of own responsibilities and manufacturer operational guidelines
- identifying and making appropriate machine readjustments and repairs, according to own responsibilities, workplace procedures and manufacturer specifications, on at least two (2) occasions
- starting, operating, stopping, re-starting and monitoring at least one (1) machine in accordance with manufacturer requirements to produce textile material or product, on at least two (2) occasions
- determining root cause and solving operational problems or referring to relevant personnel
- setting and operating machine safely and correctly to run at optimum quality and efficiency levels to produce required quantity and quality of product
- applying work health and safety (WHS) and workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- setting up and adjustment requirements for the identified machine
- specifications for operation of particular machines
- textile production machines and equipment used in the enterprise:
 - machines for knitting :
 - circular knitting machines
 - electronic and automatic flat knitting machines
 - machines for spinning:
 - spinning machines
 - drawing machines
 - roving machines
 - twisting machines
 - winding machines
 - carding machines:
 - burr handling systems
 - air filtration equipment
 - combs
 - doffer waste system
 - blending systems
 - compressed air and hydraulic systems
 - tufting looms:
 - winding machines
 - finishing equipment
 - other ancillary equipment
 - domestic sewing machines:
 - lockstitch and chain stitch sewing machines
 - overlock sewing machines and sergers
 - high volume automatic and manually operated hem, selvedge and embroidery sewing machines
 - weaving machines:
 - weaving looms
 - broadloom
 - narrowloom
 - all shuttle types
 - Jacquard looms
 - microprocessor or computer-controlled looms

- dyeing machines
- finishing machines
- ancillary machines typically used in the textile production sector concerned, including:
 - production and service equipment used in the enterprise
 - loading and unloading equipment
 - labelling machine or printer
 - packaging machine
 - stud machine
 - folding machine
- typical products produced by textile production machine, including knitting, sewing, weaving, spinning, carding, tufting and finishing machines:
 - fibres, including polyester, cotton, wool, viscose and rayon
 - yarns, including ring spun, open-ended spun, air jet spun and friction spun
 - fabrics
 - finished products, including socks, sweaters, towels, sheets, blankets, carpets, rope and twine, mops and industrial textiles
- product specifications required for machine
- machine methods and the various types of effects they can produce
- sewing, knitting, weaving, spinning, carding methods and the various types of products and effects they can produce
- fibre types and their method of production
- fibre attributes and parameters
- yarn characteristics, twist and application
- yarn counts and quality indicators
- fabrics and knit effects
- production process and types of production
- pattern specifications
- factors affecting machine performance, including yarn strength, sizing and ambient conditions
- machine manufacturer specifications
- fault identification in materials and textile products, and methods of repair, including threading faults, joining of yarn and tensioning, and setting of clearances, limits and fits
- identification of machine faults and methods of repair, including removal and replacement of faulty or worn parts, and re-setting or re-programming of controls and sensors
- WHS and environmental aspects of relevant enterprise activities
- quality practices
- workplace procedures
- recording and reporting practices

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in setting up, adjusting and monitoring a machine for TCF production, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX3012 Identify and deal with mechanical and low voltage electrical faults in textile machinery

Modification History

Release 1. New Unit supersedes the following units:

- LMTTX3018A Undertake electronic fault finding on textile machinery
- LMTTX3019A Identify and correct mechanical faults in looms and other weaving equipment

Not equivalent

Application

This unit of competency covers the skills and knowledge required to identify and deal with routine mechanical and low voltage electronic faults in textile machinery. It includes repair or replacement of the faulty component or referral to other personnel.

The unit of competency applies to identifying and correcting mechanical faults and rectifying low voltage electrical problems in textile manufacturing machinery.

It does not include 240 Volt or higher equipment and circuits or higher level engineering skills. Work covered by engineering requirements and restricted electrical licences will require additional training to meet licence requirements.

Discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes.

Work may be conducted in a variety of environments including operational workplace activities, restricted space, hazardous, controlled or exposed conditions and day or night conditions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	Identify mechanical or low voltage electrical faults	2.1	Consult operator to determine machine operation and condition prior to breakdown
		2.2	Conduct visual check of textile machinery and product to identify any obvious damage or faulty components
		2.3	Consult engineering drawings, product specifications and operation manual, where necessary
		2.4	Use appropriate test equipment to test circuits, sensors and other components to determine if fault is electronic in nature
		2.5	Identify and isolate faulty components
3	Assess and correct mechanical faults	3.1	Use tools and equipment to adjust machine in accordance with workplace procedures
		3.2	Dismantle parts and assess for disposal, reconditioning or continued use
		3.3	Recondition parts where required or fit, adjust and test replacement parts according to manufacturer

		specifications and workplace requirements
	3.4	Check equipment for correct operation and advise operator of any special requirements as a consequence of the repair
	3.5	Assess machine condition and estimate schedule required for overhaul and recondition work
4	Assess and repair low voltage electrical faults	
	4.1	Assess condition of wiring and repair wiring faults according to workplace procedures
	4.2	Dismantle faulty system components according to manufacturer/site specifications and SOPs
	4.3	Assess and replace or adjust faulty electronic equipment components
	4.4	Consult and/or refer repair to relevant personnel, where required
5	Check textile equipment for correct operation	
	5.1	Operate equipment to determine if working correctly
	5.2	Produce sample, as required, to determine that all sensors work and program instructions and product specifications are followed
	5.3	Advise operator of any special requirements as a consequence of the repair
	5.4	Document repair or replacement according to standard procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Workplace procedures include one or more of the following:**
- requirements prescribed by legislation, awards, agreements and conditions of employment
 - SOPs
 - work instructions
 - PPE
 - oral, written and visual communication
 - quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
 - housekeeping
 - tasks related to environmental protection, waste disposal, pollution control and recycling
 - WHS practices

- Australian Standards include:**
- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

- Repair wiring faults includes one or more of the following:**
- isolating wiring faults
 - replacing cables/wires of appropriate size and insulation quality
 - preparing components, terminals and connections according to industry and enterprise requirements
 - preparing wiring terminations
 - testing circuit components for correct operation in accordance with standard operating procedures

- Machine settings include one or more of the following:**
- electronic settings
 - automated setting
 - mechanical settings

- WHS practices:** WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:
- manual handling techniques
 - SOPs
 - PPE
 - safe materials handling
 - taking of rest breaks

- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Unit Mapping Information

Assessment Requirements for MSTTX3012 Identify and deal with mechanical and low voltage electrical faults in textile machinery

Modification History

Release 1. New Unit supersedes the following units:

- LMTTX3018A Undertake electronic fault finding on textile machinery
- LMTTX3019A Identify and correct mechanical faults in looms and other weaving equipment

Not equivalent

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- correctly interpreting production specifications, schematics and manufacturer instructions of identified machinery
- using appropriate hand and power tools and test equipment
- fault-finding in low voltage electronic circuit and components
- identifying mechanical faults and determining appropriate repair strategies
- dismantling, repairing and/or replacing mechanical components of textile equipment according to manufacturer specifications and workplace procedures on at least two (2) occasions
- using test equipment to determine whether faults are electronic
- assessing and repairing wiring faults according to workplace procedures on at least two (2) occasions
- dismantling, replacing or adjusting electronic components of textile equipment according to manufacturer specifications and workplace procedures on at least two (2) occasions
- performing sample runs and analysing results to determine if equipment is working correctly
- identifying and making appropriate readjustments to electronic controls and systems
- undertaking or scheduling machine overhaul or reconditioning
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)

- relevant Australian Standards
- textile machinery:
 - spinning
 - carding
 - tufting
 - winding
 - weaving
 - knitting
 - dyeing
 - sewing
 - finishing
 - packing
- role and relationship of electronic components found in textile machinery input devices, programmable logic controllers (PLCs), computers and other processors, display devices, sensors, timers, cables and wiring, cable harnesses, control systems and loom operation
- textile terminology and textile processes
- setting up and adjustment requirements for the textile equipment in the enterprise and the range of textiles or garments produced
- machine components and maintenance schedule
- mechanical and electrical tools and equipment:
 - hand and power tools
 - analogue and digital measuring equipment
 - grinders
 - analogue and digital electronic measuring equipment
 - mechanical measuring equipment and gauges
- quality requirements for the enterprise and product
- equipment manufacturer specifications
- work health and safety (WHS) and environmental requirements for enterprise activities
- workplace procedures and reporting processes
- fibre and yarn characteristics affecting machine performance, for example, yarn strength, sizing, ambient conditions and count
- faults that are caused by electronic equipment, such as control systems and sensors
- operation of identified spinning, tufting, carding, knitting, sewing, dyeing, finishing and ancillary equipment
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator

- have vocational competency in Identifying and dealing with mechanical and low voltage electrical faults in textile machinery, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX4001 Interpret and apply textile calculations and specifications

Modification History

Release 1. Supersedes and is equivalent to LMTTX4001A Interpret and apply textile calculations and specifications

Application

This unit of competency covers the skills and knowledge required to interpret and apply calculations and specifications within a textile manufacturing environment.

The unit of competency applies to calculations and specifications to ensure specified job requirements and standards of quality and design are met.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job	1.1	Follow standard operating procedures (SOPs)
---	----------------------	-----	---

- | | | | |
|---|---|-----|--|
| | requirements | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with SOPs |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Prepare to apply textile calculations and specifications | 2.1 | Identify systems to document specifications |
| | | 2.2 | Identify techniques for converting specifications across systems for textile production |
| | | 2.3 | Interpret specifications applying to yarn analysis and fabric analysis |
| | | 2.4 | Identify, interpret and apply terminology used in the textile production industry relating to raw materials, specifications and processing |
| | | 2.5 | Interpret specifications to determine work requirements for textile operations |
| | | 2.6 | Use appropriate information resources and search techniques to clarify specifications |
| 3 | Perform textile calculations | 3.1 | Determine what calculations are required for specific production processes |
| | | 3.2 | Identify and apply formulas used to convert specifications to desired format |
| | | 3.3 | Identify and apply formulas and graphs appropriate for specified textile to calculate requirements for production |
| | | 3.4 | Check and verify calculations |
| | | 3.5 | Examine and validate deviations from expected outcomes with advice from appropriate information resources |
| 4 | Complete records | 4.1 | Document calculation records to agreed standards |
| | | 4.2 | Prepare documentation for testing or production processes |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Specifications applying to yarn analysis include one or more of the following:

- mean variation
- count or linear density
- ply
- dye weight
- moisture or regain
- winding speed

Specifications applying to fabric

- mass or unit area

analysis include one or more of the following:

- thread density
- dimensional change

Terminology includes one or more of the following:

- Australian Standards
- international standards
- industry standards

Formulas include the following:

- calculation of percentages
- calculation of fractions
- conversion between systems
- reading and constructing graphs

Resources and search techniques include one or more of the following:

- SOPs
- safety procedures
- job lists
- manufacturer manuals
- specifications
- textile production patterns and machine settings
- Australian and international Standards
- trade journals
- quality system documentation
- customer requirements
- workplace and site procedures and manuals
- industry manuals
- codes of practice
- awards
- legislation
- plans
- diagrams
- log books
- hard copy or electronic data
- key personnel, supervisors, trainers and colleagues
- using index, table of contents, and numbering and classification systems
- computer database search or look-up, questioning and cross-referencing
- basic techniques to identify relevant information, including skimming and scanning, and identifying key words and ideas

Specified textiles include one or more of the following:

- cotton
- wool
- mad-made fibres

Appropriate information resources include one or more of the following:

- supervisors
- managers
- trainers
- machine manuals

Unit Mapping Information

Release 1. Supersedes and is equivalent to LMTTX4001A Interpret and apply textile calculations and specifications

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSTTX4001 Interpret and apply textile calculations and specifications

Modification History

Release 1. Supersedes and is equivalent to LMTTX4001A Interpret and apply textile calculations and specifications

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying and interpreting specifications relevant to yarn requirements and textile processes
- interpreting and applying terminology used in the textile production industry relating to raw materials, specifications and processing
- determining what calculations are required for specific production processes
- using correct formulas to convert specifications to desired format
- identifying and applying formulas and graphs appropriate for specified textile to calculate requirements for production on at least two (2)
- checking, verifying and recording calculations
- recognising, rectifying and reporting deviations from specifications
- examining and validating deviations from expected outcomes with advice from appropriate information resources
- documenting calculation records to agreed standards
- preparing documentation for testing or production processes.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- textile industry terminology
- systems and formula used in textile calculations
- weight length ratio
- international specification standards
- practical application of calculations
- quality practices
- production processes

- resources and research techniques
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in interpreting and applying textile calculations and specifications, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX4002 Understand and apply textile science

Modification History

Release 1. Supersedes and is equivalent to LMTTX4002A Understand and apply textile science

Application

This unit of competency covers knowledge of the physical and chemical properties of textiles in processing applications.

This unit of competency applies to using knowledge and understanding of the physical and chemical properties of textiles and associated materials to design, treat and process textile materials. This includes the resultant effects on, and behaviours of, materials when subjected to various treatments.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTGN2011 Identify fibres, fabrics and textiles used in the TCF industry

MSTTX3001 Identify quality and types of textile fibres, yarns and fabrics

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Determine job requirements | 1.1 | Follow standard operating procedures (SOPs) |
| | | 1.2 | Comply with work health and safety (WHS) requirements at all times |
| | | 1.3 | Use appropriate personal protective equipment (PPE) in accordance with standard operating procedures |
| | | 1.4 | Identify job requirements from specifications, drawings, job sheets or work instructions |
| 2 | Identify the physical and chemical properties of textiles materials | 2.1 | Identify textile materials using specifications, work sheets or documentation |
| | | 2.2 | Seek advice from appropriate personnel to identify unknown textile material |
| | | 2.3 | Identify the physical properties of the textile material using product specifications, worksheets or documentation and research techniques |
| | | 2.4 | Identify the chemical properties of the textiles or textile material using product specifications, worksheets or documentation and research techniques |
| | | 2.5 | Undertake standard tests to establish or validate physical and chemical properties of textiles, where required |
| 3 | Determine effects of textile processes | 3.1 | Identify the characteristics and effect of physical and chemical properties on textiles |
| | | 3.2 | Identify the effects of treatment and textile processing on textile materials |
| | | 3.3 | Determine the behaviour or impact of treatment and textile processing on the physical and chemical properties of textile materials |
| | | 3.4 | Undertake standard tests to establish or validate effects of treatment and textile processing, where required |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Textile materials include the following:

- fibre (natural and man-made)
- yarns
- fabrics

Specifications include one or more of the following:

- shape
- length
- strength
- contour
- shrinkage
- weight or mass
- colour change and staining

- chemical concentration

Appropriate authorities include one or more of the following:

- supervisors
- managers
- trainers
- machine manual

Resources and search techniques include one or more of the following:

- SOPs
- safety procedures
- job lists
- manufacturer manuals
- specifications
- textile production patterns and machine settings
- international and Australian Standards
- trade journals
- quality system documentation
- customer requirements
- workplace and site procedures and manuals
- industry manuals
- codes of practice
- awards
- legislation
- plans

- hard copy or electronic data
- key personnel, supervisors, trainers and colleagues
- using index, table of contents, and numbering and classification systems
- computer database search or look-up, questioning and cross-referencing
- basic techniques to identify relevant information, including skimming and scanning, and identifying key words and ideas

Treatments include one or more of the following:

- washing
- drying and curing
- dying
- printing
- finishing using chemical and mechanical means
- heating

- stretching
- cutting
- spinning
- weaving
- stitching
- water proofing
- flame proofing
- colouring

Assessment Requirements for MSTTX4002 Understand and apply textile science

Modification History

Release 1. Supersedes and is equivalent to LMTTX4002A Understand and apply textile science

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying relevant textile processes and production procedures
- identifying physical and chemical properties of at least two (2) textile materials and the effects of textile processing on these properties
- determining potential impact of textile processes and production procedures on textiles and associated materials
- interpreting impact of textile processes and production procedures on textiles and associated materials accurately
- conducting tests to determine effects of textile processing, as required
- applying workplace procedures
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- textile industry terminology
- physical properties of textiles and associated materials
- chemical properties of textiles and associated materials:
 - fat content
 - chemical concentrations
- physical properties of textiles and other materials:
 - weight or mass
 - density
 - length
 - strength

- moisture content
- standard textile treatments and processing techniques:
 - various production processes
 - dyeing and colouration
 - special treatment or finishing
 - printing
 - use in textile products
- proofing techniques (e.g. water and flame)
- standard textile test procedures
- textile test equipment
- international or workplace specification standards
- quality criteria
- quality practices
- production processes
- enterprise lines of authority
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in applying textile science, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX4003 Perform routine textile testing and analyse results

Modification History

Release 1. Supersedes and is equivalent to LMTTX4003A Perform routine textile testing and analyse results

Application

This unit of competency covers the skills and knowledge required to undertake routine tests on textile materials and interpret test results accurately.

This unit of competency applies to testing textile materials to determine a range of outcomes such as fibre mass, shrinkage, length, density, abrasion, strength, colour performance, finish and other quality standards. Tests are undertaken and analysed in accordance with predetermined industry or enterprise test practices and procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTX4001 Interpret and apply textile calculations and specifications

MSTTX4002 Understand and apply textile science

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

complete procedures

- 4.2 Check and validate deviations in test results, record and report deviations using standard procedures
- 4.3 Check inconsistent test results for compliance with test specifications, and conduct tests again, as required
- 4.4 Record test results and clean test equipment and work area according to workplace procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Routine tests of textiles include

- fibre thickness

one or more of the following:

- fibre length
- linear density
- abrasion
- dimensional change
- chemical properties
- strength
- seam opening
- colour fastness (wash, perspiration, rubbing and light)
- mass per unit area

Industry and design specifications include one or more of the following:

- weight or mass
- density
- length
- contour
- constant rate of extension
- finish
- dimensional change

Test materials, tools and equipment include one or more of the following:

- spectrometer
- strength tester
- abrasion tester
- light exposure box
- washing machine

Analysis of test results includes the following:

- comparison to industry and Australian Standards
- standard and non-standard deviation
- compliance to specifications
- limits and tolerances

Information resources include one or more of the following:

- SOPs
- safety procedures
- job lists
- manufacturer manuals
- specifications
- textile production patterns and machine settings
- international and Australian Standards
- trade journals
- quality system documentation customer requirements
- workplace and site procedures and manuals
- industry manuals
- codes of practice
- awards
- legislation
- plans and diagrams
- log books
- hard copy or electronic data
- key personnel, supervisors, trainers and colleagues

Appropriate personnel include one or more of the following:

- supervisor
- quality manager
- trainer

Assessment Requirements for MSTTX4003 Perform routine textile testing and analyse results

Modification History

Release 1. Supersedes and is equivalent to LMTTX4003A Perform routine textile testing and analyse results

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying specifications, determining testing requirements for at least five (5) textiles, fibres, yarns or fabrics and selecting test methods
- determining materials, processes, equipment and timelines appropriate to the test requirements
- determining materials, processes, equipment and timelines appropriate to the test requirements
- preparing and calibrating materials, tools and equipment for testing and checking test environment meets specifications
- conducting routine tests on at least three (3) textile materials
- interpreting test specifications and outcomes accurately
- converting test specifications accurately, as required
- interpreting and assessing test results against industry and design specifications
- checking and validating deviations in test results, recording and reporting deviations using standard procedures
- checking inconsistent test results for compliance with test specifications, and conducting tests again, as required
- recording test results and cleaning test equipment and work area according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- textile industry terminology
- standard textile test procedures to determine properties, including weight, length ratio, fibre mass, shrinkage, chemical properties, fibre strength, seam opening, colour fastness properties, strength and abrasion

- textile test equipment
- international specification standards
- quality criteria
- quality practices
- production processes
- enterprise lines of authority
- workplace procedures
- recording and reporting practices

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in routine textile testing and analysis, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSTTX4004 Select dyes and develop dye specification and recipe for production

Modification History

Release 1. Supersedes and is equivalent to LMTTX4004A Select dyes and develop dye specification and recipe for production

Application

This unit of competency covers the skills and knowledge associated with selecting, developing and testing dyes, chemicals and auxiliaries, and developing a dye specification and recipe for the production of textiles.

This unit of competency applies to textile material and products for which product specifications are developed in the textile sector, including fibres, fabrics, yarns and finished products.

Judgement may be required in planning and selecting appropriate processes or procedures for self and others.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine job requirements	<p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p>
2	Prepare to develop dye specification and recipe	<p>2.1 Confirm specifications and/or sample of textile material product with originator and client</p> <p>2.2 Clarify and determine the end use and performance standards expected of finished product with appropriate personnel</p> <p>2.3 Analyse sample to determine type and composition using appropriate techniques, as required</p>
3	Perform preliminary and final tests of dyes	<p>3.1 Select dyes and chemicals and auxiliaries with reference to specifications and or previous product dyeing references</p> <p>3.2 Identify expected textile production and reproduction processes based on preliminary dye selection, and advise appropriate personnel</p> <p>3.3 Determine preliminary dye selection for the sample of textile and trial the preliminary recipe and specifications</p> <p>3.4 Select sampling and testing techniques appropriate to evaluation of product during limited production run</p> <p>3.5 Perform final selection and evaluation of dyes</p> <p>3.6 Comply with environmental requirements and workplace procedures at all stages of the process</p>
4	Confirm final dye specification and	<p>4.1 Seek approval of colour specifications by originator or client prior to production run</p>

recipe

- 4.2 Test samples from bulk production run using appropriate techniques
- 4.3 Analyse results and review, modify and re-test dye, as required
- 4.4 Develop, check and file dye specification and recipe in accordance with workplace procedures and industry and quality standards
- 4.5 Prepare reports and documentation
- 4.6 Monitor dye specification and recipe to ensure continuity and repeatability of colour and test results

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Yarns include one or more of the following:

- spun
- open-ended spun
- air jet spun
- friction spun

Fibres include one or more of the following:

- polyester
- cotton
- wool
- viscose rayon

Finished products include one or more of the following:

- socks
- sweaters
- towels
- sheets
- blankets
- carpets
- rope and twine
- mops and industrial textiles

Tests include one or more of the following:

- colour fastness testing
- shrinkage testing

Test equipment includes one or more of the following:

- laboratory equipment
- pad mangles
- rota dryers
- mini jets
- pilot production plants

Dye specification and recipe include the following:

- dye formulas
- application properties
- fastness properties and reproducibility
- suitability for production and application methods
- environmental and safety factors

Assessment Requirements for MSTTX4004 Select dyes and develop dye specification and recipe for production

Modification History

Release 1. Supersedes and is equivalent to LMTTX4004A Select dyes and develop dye specification and recipe for production

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying textile characteristics
- establishing and confirming criteria for tests
- setting up and calibrating test equipment
- developing, planning and conducting preliminary trial testing
- conducting tests in limited production run against specified quality standards
- collating, analysing and interpreting tests
- developing and confirming final dye formula and specifications on at least two (2) occasions
- testing samples from bulk production run using appropriate techniques
- analysing results and reviewing, modifying and re-testing dye, as required
- developing, checking and filing dye specification and recipe in accordance with workplace procedures and industry and quality standards
- preparing reports and documentation
- monitoring dye specification and recipe to ensure continuity and repeatability of colour and test results
- complying with environmental requirements and workplace procedures at all stages of the process.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- fibres, yarns and end products and their properties
- dye stuffs and classes
- chemistry of dyes and relevance to processing and fastness properties
- dyeing processes and dyeing machinery

- relation between dye machinery and selection of dye stuffs and classes
- tests applicable to the dyeing of textiles
- international testing standards
- application of dyes in laboratory and production process
- work health and safety (WHS) and environmental aspects of relevant workplace activities, including handling of chemicals and dangerous substances
- quality criteria
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in selecting dyes and developing dye specifications and recipe, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX4005 Undertake textile colouration and finishing

Modification History

Release 1. Supersedes and is equivalent to LMTTX4005A Undertake textile colouration and finishing

Application

This unit of competency covers the skills and knowledge associated with selecting and applying textile colourisation and finishing processes.

The unit of competency applies to colouration and finishing processes in a production environment, using standard procedures to meet predetermined design and quality specifications. Colouration and finishing processes may be undertaken on a wide range of fabric types as well as fibres, yarns or garments.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTX4002 Understand and apply textile science

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 **Determine job requirements**
 - 1.1 Follow standard operating procedures (SOPs)
 - 1.2 Comply with work health and safety (WHS) requirements at all times
 - 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
 - 1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

- 2 **Prepare to undertake colouration and finishing**
 - 2.1 Interpret design and textile property specifications that impact on colouration and finishing
 - 2.2 Identify technical aspects of production requirements
 - 2.3 Use colour charts and make calculations to determine colour formulas and production material quantities
 - 2.4 Determine materials, tools and equipment required for finishing process
 - 2.5 Confirm all specifications and calculations with appropriate personnel, as required

- 3 **Undertake colouration process**
 - 3.1 Set up equipment, tools and materials according to specifications for work and workplace procedures
 - 3.2 Check fabrics to be coloured against quality standards
 - 3.3 Use colouration techniques to produce sample pieces according to specifications
 - 3.4 Check coloured samples and adjust colour formula, if required, to meet specifications
 - 3.5 Undertake colouration techniques to meet design specifications and minimise impact on textiles

- 4 **Undertake finishing process**
 - 4.1 Set up equipment, tools and materials according to specifications for work and workplace procedures
 - 4.2 Check fabrics to be finished against quality standards
 - 4.3 Use finishing techniques to produce sample pieces according to specifications

		4.4	Check finishing samples and adjust finishing process, if required, to meet specifications
		4.5	Undertake finishing techniques to meet design specifications and minimise impact on textiles
5	Evaluate colouration and finishing processes	5.1	Assess samples against colouration and finish specifications
		5.2	Check colours and finish to identify any design or production problems
		5.3	Analyse product outcomes and identify opportunities for improvement
		5.4	Evaluate production process to identify opportunities for improvement
		5.5	Document formulas, processes and improvements and store information for later use

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to

- quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Specifications impacting on colouration include one or more of the following:

- type of fibres (plant, animal or synthetic)
- chemical properties
- physical properties
- fibre pre-treatments
- type of yarn
- type of fabric
- type of dye

Specifications impacting on finishing include one or more of the following:

- type of fibres (plant, animal or synthetic)
- chemical properties
- physical properties
- fibre pre-treatments
- type of fabric

Colouration and finishing techniques include one or more of the following:

- bleaching
- skein dyeing
- bath dyeing
- batch processing
- continuous and semi continuous dyeing
- drying and curing
- thermasol process

Resources and search techniques include one or more of the following:

- SOPs
- safety procedures
- job lists
- manufacturer manuals
- specifications
- textile production patterns and machine settings
- Australian and international Standards
- trade journals

- quality system documentation
- customer requirements
- workplace and site procedures and manuals
- industry manuals
- codes of practice
- awards
- legislation
- plans
- diagrams
- log books
- hard copy or electronic data
- key personnel, supervisors, trainers and colleagues
- using colour index, table of contents, and numbering and classification systems
- computer database search or look-up, questioning and cross-referencing
- basic techniques to identify relevant information, including skimming and scanning, and identifying key words and ideas

Appropriate personnel include one or more of the following:

- supervisor
- manager
- trainer
- designers

Unit Mapping Information

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a203ec5c-de7d-406b-b3e1-8f1a9b76e92e>

Assessment Requirements for MSTTX4005 Undertake textile colouration and finishing

Modification History

Release 1. Supersedes and is equivalent to LMTTX4005A Undertake textile colouration and finishing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying and selecting relevant textile colourisation and finishing processes required to achieve specifications
- determining potential impact of colourisation and finishing processes on textiles and associated materials
- determining standard procedures to overcome or minimise impact on textiles and associated materials
- conducting colourisation and finishing processes to achieve specification on at least two (2) occasions
- checking colouration and finishing samples and adjusting process, if required, to meet specifications
- recognising, rectifying and reporting deviations from specifications
- achieving colour matching and finishing outcomes that meet specifications and workplace procedures
- evaluating colouration and finishing processes
- documenting formulas, processes and improvements and store information for later use.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- textile industry terminology
- physical properties of textiles and associated materials
- chemical properties of textiles and associated materials
- tools and equipment:
 - dyes
 - chemical

- dyeing equipment
- finishing equipment
- standard textile colourisation processing techniques
- standard finishing techniques
- standard textile test procedures
- textile test equipment
- international specification standards
- quality criteria
- quality practices
- workplace procedures
- production processes
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in textile colouration and finishing, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTX5001 Determine textile finishing processes

Modification History

Release 1. Supersedes and is equivalent to LMTTX5001A Determine textile finishing processes

Application

This unit of competency covers the skills and knowledge required to determine appropriate textile finishing processes within a textile manufacturing environment.

The unit of competency applies to the selection of standard textile finishing processes within a textile manufacturing environment to ensure products and processes meet specifications, specified job requirements, and standards of quality and design. Finishing processes and procedures are documented using standard recording procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTTX4001 Interpret and apply textile calculations and specifications

MSTTX4002 Understand and apply textile science

Competency Field

Textile production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|---|---|--|
| 1 | Determine job requirements | <p>1.1 Follow standard operating procedures (SOPs)</p> <p>1.2 Comply with work health and safety (WHS) requirements at all times</p> <p>1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs</p> <p>1.4 Identify job requirements from specifications, drawings, job sheets or work instructions</p> |
| 2 | Interpret finishing specifications | <p>2.1 Interpret specifications applying to textile finishing process from data sheets, production schedules or process specifications</p> <p>2.2 Determine type, quantity and quality of materials required for the textile finishing, and test, as required, to confirm material specifications</p> <p>2.3 Identify and consider implications of specifications on process in determining process requirements</p> <p>2.4 Clarify specifications as required using appropriate information resources</p> |
| 3 | Determine procedures for textile finishing | <p>3.1 Identify finishing process most appropriate to required outcomes</p> <p>3.2 Select required equipment, tools and materials and evaluate for purpose</p> <p>3.3 Use appropriate calculations to determine material requirements</p> <p>3.4 Determine finishing procedures, formulas and relevant specifications, and document using standard procedures</p> |
| 4 | Confirm finishing | <p>4.1 Test and validate textile finishing procedures and formulas</p> <p>4.2 Identify and document deviations from specifications and conduct further testing to determine variations</p> |

required to procedures

- 4.3 Adjust finishing procedures and formulas, as required, to meet specifications
- 4.4 Document textile finishing procedures and communicate to appropriate personnel for future application

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- PPE
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Textile finishing processes include one or more of the

- colouration
- washing

following:

- bleaching
- curing
- heating
- raising
- cropping
- decatizing
- milling
- proofing

Materials used in textile finishing include one or more of the following:

- dyes
- bleaches
- chemicals
- pastes

Calculations include one or more of the following:

- ratio
- mass or weight
- volume
- time
- dimensions

Specifications applying to textile finishing include one or more of the following:

- percentage
- volumes
- mass
- heating and cooling rates
- length and width

Resources and search techniques include one or more of the following:

- standard operating procedures
- safety procedures
- job lists
- manufacturer manuals
- specifications
- textile production patterns and machine settings
- Australian and international Standards
- trade journals
- quality system documentation
- customer requirements
- workplace and site procedures and manuals
- industry manuals
- codes of practice

- awards
- legislation
- plans
- diagrams
- log books
- hard copy or electronic data
- key personnel, supervisors, trainers and colleagues
- using index, table of contents, and numbering and classification systems
- computer database search or look-up, questioning and cross-referencing
- basic techniques to identify relevant information, including skimming and scanning, and identifying key words and ideas

Assessment Requirements for MSTTX5001 Determine textile finishing processes

Modification History

Release 1. Supersedes and is equivalent to LMTTX5001A Determine textile finishing processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- interpreting specifications relevant to textile finishing from data sheets, production schedules or process specifications
- determining type, quantity and quality of materials required for the textile finishing, and testing, as required, to confirm material specifications
- determining finishing procedures, formulas and relevant specifications, and documenting using standard procedures, on at least two (2) occasions
- completing accurate textile calculations
- testing and validating textile finishing procedures and formulas
- identifying and documenting deviations from specifications and conducting further testing to determine variations required to procedures
- adjusting finishing procedures and formulas as required to meet specifications
- documenting textile finishing procedures and communicating to appropriate personnel for future application.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- textile industry terminology
- international specification standards
- textile, clothing and footwear (TCF) production processes
- TCF products and materials
- systems and formula used in textile calculations
- properties of materials
- finishing processes
- finishing equipment, tools and materials

- quality criteria
- quality practices
- workplace structures and communication channels
- workplace procedures
- practices for recording and reporting.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in textile finishing processes, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

PMASUP420 Minimise environmental impact of process

Modification History

Release 1. Supersedes and is equivalent to PMASUP420B Minimise environmental impact of process

Application

This unit of competency covers the skills and knowledge required to minimise the environmental impact of a plant and/or process. It applies to all resources used and products made by the plant, capital projects and improvements brought about by changes in work practices and procedures.

This unit of competency applies to experienced operators or those in similar roles who are required to apply in-depth knowledge of process and plant in order to develop practices or procedures for conserving resources and minimising pollution and waste that will deliver the most benefits.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Develop resource conservation practices and/or procedures	1.1	Identify the nature of resources used in the plant/process
		1.2	Identify the primary source of these resources
		1.3	Determine the impact of the depletion of these resources

- on the environment and society
- 1.4 Determine which resources will yield a greater benefit from their conservation
 - 1.5 Develop methods to reduce the consumption of these resources
 - 1.6 Complete required documentation to implement change
- 2 **Develop pollution minimisation practices and/or procedures**
- 2.1 Identify the nature of pollutants produced by the plant/process
 - 2.2 Determine the sources of these pollutants within the plant/process
 - 2.3 Determine the impact of these pollutants on the environment and society
 - 2.4 Determine which pollutant will yield a greater benefit from their reduction
 - 2.5 Develop methods to reduce the production of this pollutant
 - 2.6 Complete required documentation to implement change
- 3 **Develop waste minimisation practices and/or procedures**
- 3.1 Identify the nature of wastes produced by the plant/process
 - 3.2 Determine the sources of these wastes within the plant/process
 - 3.3 Identify the impact of these wastes on the environment and society
 - 3.4 Determine which wastes will yield a greater benefit from their reduction
 - 3.5 Develop methods to reduce the production of this waste
 - 3.6 Complete required documentation to implement change

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMASUP420B Minimise environmental impact of process

Links

Assessment Requirements for PMASUP420 Minimise environmental impact of process

Modification History

Release 1. Supersedes and is equivalent to PMASUP420B Minimise environmental impact of process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- examine plant records, data and operating procedures and practices to determine options for:
 - maximisation of product yield from raw materials
 - reduction in volume of pollutants made and/or reduction in concentration/intensity of pollutants made and/or reduction in emissions
 - minimisation of wastes
- determine relative benefits of the options and develop processes/procedures to achieve preferred options
- document preferred options and complete written and/or electronic records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- resources used by the plant and the impact on the environment and society of using resources
- nature and source of pollutants and waste materials produced by the plant
- nature and severity of the effect the pollutants and waste materials can have on the environment and society
- types of local conditions that can make environmental threats more ‘sensitive’
- pathways of entry to the environment from the plant
- process parameters and limits
- product specifications and tolerances
- principles of operation of plant/equipment
- science (e.g. physics, chemistry and biochemistry) relevant to the process, its materials and eco impacts
- regulatory framework
- organisation procedures, including those covering:
 - environmental management
 - safety, emergency and hazard control
 - procurement.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
 - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
 - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
 - relevant VET or other qualification/Statement of Attainment
 - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
 - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
 - being currently employed undertaking the type of work being assessed

- being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on-the-job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBWASTE302 Coordinate waste disposal

Modification History

Release 1. Supersedes and is equivalent to PMBWASTE302C Coordinate waste disposal

Application

This unit of competency covers the skills and knowledge required to coordinate waste disposal.

This unit of competency applies to experienced operators who are required to develop and implement procedures for waste disposal and recycling, retain waste contractors and solve problems within area of responsibility.

This unit of competency applies to an experienced operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Waste

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify	1.1	Identify waste products from the production process in
---	-----------------	-----	--

	requirements for waste and recyclable products		terms of the material type, toxicity, recyclability, flammability and reactivity
		1.2	Identify sources of waste and approved locations for storage of each waste type based on regulatory requirements and workplace approved policies and procedures
2	Develop waste and recycling procedures	2.1	Identify requirements for handling, disposing or recycling waste
		2.2	Develop storage and handling policies and procedures
		2.3	Publish and post waste management procedures in appropriate locations
		2.4	Identify and retain contractors for disposal of waste
		2.5	Train or arrange training for relevant employees in waste management procedures required by the organisation
3	Develop waste record systems	3.1	Instigate and monitor data collection methods to record wastage rates
		3.2	Produce and introduce appropriate proformas to record details of waste collection storage, recycling or waste disposal
		3.3	Establish and maintain reporting relationships among appropriate personnel and complete reports as required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of

the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling, hazardous materials and environmental protection
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Hazards Hazards must be identified and controlled. Identifying hazards requires consideration of:

- fumes/vapours
- weight, shape, volume of materials to be handled
- hazardous products and materials
- rotational equipment or vibration
- sharp edges, protrusions or obstructions

- slippery surfaces, spills or leaks
- smoke, dust or other atmospheric hazards
- high temperatures
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Problems Routine and non-routine problems must be resolved.

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

- variations in contractor/personnel performance
- atypical waste production situations
- emergency situations
- intermittent faults.

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Routine problems are predictable and have known solutions and include one or more of:

- hold-ups in waste removal

- environmental queries
- waste removal systems not working.

Unit Mapping Information

Assessment Requirements for PMBWASTE302 Coordinate waste disposal

Modification History

Release 1. Supersedes and is equivalent to PMBWASTE302C Coordinate waste disposal

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- identify existing policies and procedures relevant to waste disposal and recycling
- determine sources and quantities of waste
- plan the handling and storage of waste for recycling and disposal processes
- retain contractors to meet waste disposal/recycling requirements
- establish systems to record and report recycling and disposal of waste products
- develop and communicate procedures for handling and storage of waste for recycling and disposal
- determine training needs to support the procedures and provide/arrange for training
- monitor key variables, including:
 - amount and type of waste to be disposed of
 - numbers of personnel to be employed in the process and where
 - nature and type of the waste management process
 - types of records to be kept or documentation to be provided
 - activities of waste collection employees
 - variations to and changes to waste management systems
 - waste management/environmental issues
 - safety requirements
- distinguish between causes of problems, including:
 - operational problems
 - materials properties/variations/contamination
 - process abnormalities
 - procedural errors/performance issues
- recognise and prioritise problems requiring action
- resolve routine and non-routine problems
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including knowledge of:

- types of waste being produced in the work environment, materials characteristics
- common methods for disposal and/or recycling for types of waste being produced
- types and application of waste retrieval equipment, materials, processes and procedures
- function and principles of operation of waste equipment
- regulatory framework relevant to waste disposal and recycling in the work environment
- human resource practices which encourage and support staff to implement procedures
- dispute resolution procedures
- organisation policies and procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
 - their possible causes
 - potential consequences
 - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
 - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
 - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur using a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
 - walk-throughs
 - pilot plant operation
 - industry-based case studies/scenarios
 - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.

- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
 - relevant VET or other qualification/Statement of Attainment
 - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
 - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
 - being currently employed undertaking the type of work being assessed
 - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
 - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
 - conducting on the job training/assessments of the type of work being assessed
 - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

Unit Descriptor

Unit descriptor This unit describes the performance outcomes, skills and knowledge required to manage merchandise and store presentation.

Application of the Unit

Application of the unit This unit requires the team member to apply knowledge of store merchandising to plan and manage store advertising and promotions, manage store pricing policies and housekeeping. It includes interpretation of and compliance with store layout and visual merchandising policies, developing and implementing procedures to manage merchandise pricing, and managing all aspects of store housekeeping, including contingency procedures. This role applies to frontline retail managers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Manage store merchandising.	<p>1.1 Ensure layout and presentation support market position and promote customer flow according to store <i>visual merchandising policies and plans</i>.</p> <p>1.2 Develop and implement layout assessment checks.</p> <p>1.3 Define standards for visual presentations and displays and clearly communicate to all staff</p> <p>1.4 Consult floor staff to assess customer response to space allocations.</p>
2 Plan and manage store advertising and promotions.	<p>2.1 Manage and implement store policies and procedures, in regard to store <i>promotional activities</i>.</p> <p>2.2 Organise activities in line with anticipated or researched customer requirements.</p> <p>2.3 Manage <i>promotions</i> in order to achieve maximum customer impact.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.4 Negotiate arrangements with suppliers in regard to special promotional activities.</p> <p>2.5 Coordinate store activities to complement shopping centre or retail complex promotions.</p> <p>2.6 Develop and implement assessment checks to measure effectiveness of promotions, including layout, visual impact and customer response.</p> <p>2.7 Document and report on promotional activities.</p>
3 Manage store pricing policies.	<p>3.1 Maintain store pricing according to <i>organisation pricing policies and procedures</i> in regard to pricing.</p> <p>3.2 Maintain accurate information on pricing trends and changes and communicate to relevant staff.</p> <p>3.3 Develop and implement procedures for pricing according to store policies and <i>legislative requirements</i>.</p>
4 Manage housekeeping.	<p>4.1 Develop and implement store policies and procedures in regard to <i>store housekeeping and maintenance</i>.</p> <p>4.2 Develop and manage rosters or schedules, ensuring store housekeeping standards are monitored and maintained.</p> <p>4.3 Initiate <i>contingency plan</i> in the event of merchandise or store presentation problems.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- providing feedback on performance
- interpersonal communication skills to:
 - communicate store standards and expectations to staff
 - consult floor staff
 - negotiate arrangements with suppliers, through clear and direct communication
 - ask questions to identify and confirm requirements

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- roster development
- report writing
- literacy skills in regard to:
 - researching, analysing and interpreting a broad range of written material
 - preparing rosters
 - preparing reports
 - documenting results

The following knowledge must be assessed as part of this unit:

- store policies and procedures, in regard to:
 - layout and presentation
 - advertising and promotions
 - pricing or marking down of goods, including risk assessment
 - housekeeping for premises, fittings, fixtures and equipment
 - store merchandise and service range
 - store merchandising plan
 - range and availability of new products and services
 - customer demand and market trends
 - product quality standards
- OHS legislation and codes of practice
- relevant legislation and statutory requirements
- relevant industry codes of practice
- pricing procedures, including GST requirements
- principles and techniques in:
 - visual merchandising
 - project management

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- collaboratively plans layout and presentation of merchandise according to store policies and procedures
- assesses effectiveness of layout and presentation according to sales targets or predetermined objectives
- collaboratively plans, coordinates and implements advertising and promotions activities according to store policies and procedures
- assesses and reports on effectiveness of advertising and promotions to staff and management according to store policies and procedures
- collaboratively plans, coordinates and implements pricing activities according to store policies and procedures
- collaboratively plans, coordinates and implements housekeeping activities according to store policies and procedures and OHS legislation, regulations and codes of practice.

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail work environment
- relevant documentation, such as:
 - store policy and procedures manuals
 - store merchandising plan
 - legislation and statutory requirements
 - OHS legislation, regulations and codes of practice
- a work team.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- customer feedback
- answers to questions about specific skills and knowledge.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

EVIDENCE GUIDE

Assessing employability skills Employability skills are integral to effective performance in the workplace and are broadly consistent across industry sectors. How these skills are applied varies between occupations and qualifications due to the different work functions and contexts.

Employability skills embedded in this unit should be assessed holistically in the context of the job role and with other relevant units that make up the skill set or qualification.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Visual merchandising policies and plans may include:

- target market
- market research
- store image
- store layout and space availability
- seasonal lines
- pricing policy.

Promotional activities may involve:

- external and in-store activities
- corporate or locally based activities
- dealing with advertising agencies and consultants.

Promotions may include:

- advertising
- catalogues
- newspapers
- posters
- radio or TV
- suppliers

SIRXPDK001 Advise on products and services

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to develop product and service knowledge and provide information to customers.

This unit applies to individuals working in frontline customer service and sales roles in a diverse range of industry and business contexts. They operate with some independence under general supervision and guidance from others, and within established organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Product Knowledge

Unit Sector

Cross-Sector

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1. Develop product and service knowledge.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1. Identify and access sources of information on products and services.
- 1.2. Interpret information about availability, features and benefits of products and services.

- | | |
|----------------------------------|--|
| | 1.3. Compare products and services based on product information. |
| | 1.4. Identify and use opportunities to update knowledge for the product and service range. |
| 2. Respond to customer requests. | 2.1. Answer customer questions about products and services with current and accurate information. |
| | 2.2. Use questions to clarify customer information needs. |
| | 2.3. Explain product and service details using clear communication. |
| | 2.4. Source additional information when answer to customer request is unknown or refer to relevant colleagues. |
| 3. Enhance information provided. | 3.1. Identify situations where additional information may assist the customer. |
| | 3.2. Advise on alternative products or services that may meet customer needs when requested item is not available. |
| | 3.3. Recommend complementary products, specials, new lines and promotions to customers according to their needs. |

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS

DESCRIPTION

Numeracy skills to:

- interpret pricing information.

Unit Mapping Information

No equivalent unit.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=ca051b1b-5101-4ec2-ac1c-49699303188d>

Assessment Requirements for SIRXPDK001 Advise on products and services

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- access and interpret sources of information on four different products or services
- respond to four different customer inquiries for product or service information that individually or cumulatively require provision of information on all of the following:
 - features and benefits
 - price
 - alternative products or services
 - complementary products or services.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
 - interactions with customers
 - product or service pricing
- basic key aspects of legislation that impact provision of information for the product or service range:
 - Australian Consumer Law
 - product or service specific legislation
- interpersonal communication techniques:
 - active listening and questioning
 - communication methods which convey information clearly and concisely
- product and service information for the product or service range:
 - features and benefits
 - price
 - care and handling of products
 - availability
 - storage requirements, shelf life and use by date
 - warranties

- ingredients or materials contained in product
- origins
- alternative products and services
- complementary products and services.

Assessment Conditions

Skills must be demonstrated in a services industries environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- a product or service range
- sources of product information
- relevant documentation:
 - current plain English regulatory documents distributed by government regulators outlining factors that impact provision of information for the product or service range
 - price lists
 - organisational policies and procedures relevant to product and service advice
- customers; these can be:
 - customers in an industry workplace, or
 - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

TLIA2011 Package goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to package goods in accordance with regulatory and workplace requirements as part of work activities undertaken within the transport and logistics industry.

It includes selecting materials, packing, and labelling packaged products/loads to the required labelling standards.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Select materials and pack products

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Packaging specifications and order packaging documentation are correctly interpreted

- 1.2 Packaging technology suitable for the goods to be packed is selected
- 1.3 Packaging materials are identified and matched to specifications
- 1.4 Work plan is followed, materials are used economically and appropriate packaging is used to minimise loss and damage in transit or storage
- 1.5 Work is planned in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements
- 1.6 Completed packed goods are stacked to minimise damage from within and outside

2 Label packaged products/loads

- 2.1 Workplace labelling standards are identified
- 2.2 Appropriate goods handling, labelling and other identification symbols are used
- 2.3 Invoices and picking slips are attached as required
- 2.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA2011A Package goods.

Assessment Requirements for TLIA2011 Package goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- checking operation of packaging equipment in terms of service schedule and standard operating procedures
- communicating and working effectively with others when packaging goods
- completing documentation related to work activities when packaging goods
- estimating the size, shape and special requirements of goods and loads
- implementing contingency plans when packaging goods
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment performance when packaging goods
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting instructions, procedures and labels relevant to packaging goods
- selecting and using relevant communications, computing equipment and materials when packaging goods
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant to packaging goods
- documentation requirements for packaging goods, such as a workplan
- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for packaging goods
- problems that may occur when packaging goods and appropriate action that can be taken to resolve these problems
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- workplace procedures and policies for packaging goods.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

TLIA2013 Receive goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to receive goods in accordance with regulatory and workplace requirements as part of work activities undertaken within the transport and logistics industry.

It includes identifying workplace procedures and documentation requirements for receiving goods; checking and inspecting goods on arrival and completing workplace documentation; and unloading, unpacking and storing stock.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify workplace procedures and

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Workplace procedures for receiving goods are

- | | |
|--|--|
| documentation requirements for receiving goods | identified |
| | 1.2 Purpose of documents associated with receiving goods is interpreted |
| | 1.3 Workplace documentation requirements for receiving goods and reporting damage are identified |
| 2 Check and inspect goods on arrival and complete workplace documentation | 2.1 Procedures for checking goods against orders or manifests are identified and followed |
| | 2.2 Discrepancies and/or damaged goods are reported |
| | 2.3 Non-conforming goods are appropriately documented and despatched or stored in accordance with company procedures |
| 3 Unload, unpack and store stock | 3.1 Appropriate manual handling techniques and equipment are identified |
| | 3.2 Safe work procedures are used when unloading, unpacking and storing stock |
| | 3.3 Advice is sought on appropriate storage locations and requirements for particular products |
| | 3.4 Goods are unloaded and unpacked in accordance with workplace procedures |
| | 3.5 Assistance is sought from others as required to maintain safe and effective work |
| | 3.6 Directions are followed to store stock in appropriate areas |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

TLIA2020 Replenish stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to replenish stock in accordance with workplace requirements as part of work activities undertaken within the transport and logistics industry.

It includes applying product knowledge to participate in stock rotation activities, interpreting and filling replenishment requests, and completing all required stock replenishment tasks.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Participate in stock rotation activities

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Stock levels are counted against appropriate documentation

1.2 Stock levels are recorded and reported

1.3 Stocks are replenished, adjusted or rotated in accordance with

workplace procedures

- 1.4 Stock re-ordering processes are activated when appropriate
- 1.5 Routine and non-routine problems with products or storage systems are reported in accordance with workplace procedures

2 Interpret and fill replenishment request

- 2.1 Order request documentation is interpreted
- 2.2 Product/s in order are noted and workplace location/s are identified
- 2.3 Workplace and product knowledge is used to plan sequence of work
- 2.4 Appropriate materials handling equipment is selected in accordance with workplace procedures and timeframes, and work health and safety (WHS)/occupational health and safety (OHS) regulations
- 2.5 Required schedules for order movement and despatch or storage are identified

3 Complete stock replenishment

- 3.1 Products are sorted, assembled and consolidated in the appropriate storage areas
- 3.2 Work is checked in accordance with company procedures
- 3.3 Documentation and records are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA2020A Replenish stock.

TLIA2021 Despatch stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to despatch stock in accordance with codes/regulations and workplace requirements as part of work activities undertaken within the transport and logistics industry.

It includes analysing orders to identify work requirements, following workplace order picking processes to prepare goods for despatch, and completing despatch tasks in accordance with workplace procedures and schedules.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Analyse order to identify

1.1 Order request and consignment note documentation is

- work requirements** interpreted
- 1.2 Required schedules for despatch are identified
 - 1.3 Product(s) in order are identified
 - 1.4 Workplace and product knowledge is used to plan sequence of work
 - 1.5 Appropriate materials handling equipment is selected within required work health and safety (WHS)/occupational health and safety (OHS) regulations and timeframe for the despatch
- 2 Follow workplace order picking processes to prepare goods for despatch**
- 2.1 Goods for despatch are selected and checked against product knowledge, labels and other identification systems
 - 2.2 Products are sorted, assembled and consolidated
 - 2.3 Orders are secured and placed in storage/despatch zones, in accordance with schedule
 - 2.4 Order is checked against despatch schedule and order form
- 3 Complete despatch following workplace procedures and schedules**
- 3.1 Workplace records are completed, and labels and appropriate documentation are attached
 - 3.2 Load labels and documentation are checked and loading is organised in accordance with workplace procedures and Australian Dangerous Goods (ADG) Code as required
 - 3.3 Final check of load labels and documentation is completed in accordance with requirements
 - 3.4 Transportation requirements are communicated to driver as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

TLID2010 Operate a forklift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a forklift in compliance with the relevant state/territory authority licence requirements and regulations, in a variety of operational contexts.

It includes checking forklift condition, driving forklift to fulfil operational requirements, and monitoring and maintaining forklift performance and site conditions.

Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory work health and safety (WHS)/occupational health and safety (OHS) authority.

Operation of a forklift is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Check forklift condition

- 1.1 Condition of forklift is checked for compliance with WHS/OHS and workplace requirements for warning devices, manufacturer specifications and nature of load shifting task
- 1.2 Attachments are checked to ensure appropriate adjustment and operation
- 1.3 Mirrors and seats are adjusted for safe operation by driver
- 1.4 Logbooks are checked and appropriate workplace documentation is completed in accordance with workplace requirements

2 Drive forklift

- 2.1 Forklift is started, steered, manoeuvred, positioned and stopped in accordance with regulations and manufacturer instructions
- 2.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage
- 2.3 Operational hazards are identified and/or anticipated and avoided or controlled through defensive driving and appropriate hazard control techniques
- 2.4 Forklift is driven in reverse, maintaining visibility and achieving accurate positioning
- 2.5 Forklift is parked, shut down and secured in accordance with manufacturer specifications, regulations and workplace procedures

3 Operate forklift to handle loads

- 3.1 Lifting task to be undertaken is appropriately planned, and correct lifting truck and attachments are selected
- 3.2 Load is lifted, carried, lowered and set down in accordance with WHS/OHS legislation, manufacturer specifications and company procedures

4 Monitor site conditions

- 4.1 Hazards and traffic flow are identified when selecting the most efficient route and appropriate adjustments are made
- 4.2 Site conditions are assessed to enable safe operations and to ensure no injury to people or damage to property, equipment, loads or facilities occurs

5 Monitor and maintain forklift performance

- 5.1 Performance and efficiency of vehicle operation is monitored during use
- 5.2 Defective/irregular performance and malfunctions are reported to relevant personnel
- 5.3 Forklift records are maintained/updated in accordance with workplace procedures and legislative requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID2010A Operate a forklift.

Assessment Requirements for TLID2010 Operate a forklift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids, and carrying out lubrication processes
- communicating and working effectively with others
- completing relevant documentation
- ensuring forklift and its equipment are maintained in terms of service schedule and standard operating procedures
- identifying points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of forklift and its equipment, and taking appropriate action as required
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe operating strategies
- forklift controls, instruments and indicators, and their use
- forklift handling procedures
- high risk work licence requirements
- operating hazards and related defensive driving and hazard control techniques
- operational emergency procedures
- pre-operational checks carried out on forklift and related action
- principles of stress management when driving a forklift
- relevant duty of care requirements for operating a forklift
- relevant WHS/OHS and environmental procedures and regulations
- site layout and obstacles
- workplace operating procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
