The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Applicable regulations and legislation may include:
• road transport law, for example:
  o legislation and related regulations applicable to riding and using motorcycles in relevant state or territory
  o motorcycle rider learner permit, rider licence requirements and issue procedures applicable in relevant state or territory
  o occupational health and safety legislation in relevant state or territory
  o equal opportunity legislation in relevant state or territory
  o workplace relations legislation in relevant state or territory

Safe riding principles include:
• requirements of safe riding
• abiding by the road laws
• importance of cooperation with other road users
• importance of motivation to riding safely, which includes values, emotions and personal needs
• safe riding policies
• correct riding position
• appropriate navigational skills, including ability to plan a trip
• road safety issues
• management of fatigue, alcohol, drugs and medication
• rules and regulations applicable to safe riding
• implications of unsafe riding behaviours

Principles behind low-risk riding include:
• specific factors that constitute an actual risk of a collision
• factors contributing to the formation of opinions
• beliefs about low-risk riding
• road safety issues
• human psychological and physiological aspects
Characteristics of clients may include information in relation to:

- gender
- age (within regulatory guidelines)
- riding experience, including learner rider, mature age rider being re-tested, overseas rider and experienced rider being rehabilitated after an accident
- educational background and general knowledge
- social and economic background with diverse attitudes
- effects of prior and current learning
- individual learning styles
- novice rider’s beliefs about capacity for learning to ride, i.e. their self-efficacy
- client motivation
- client’s capacity to self-monitor own learning and riding

Communication may include:

- oral, aural or signed communication
- written communication

Factors that affect client’s progress may include:

- level of confidence
- effects of previous and current learning
- decision making skills in a range of riding situations
- self-esteem and peer pressure on client
- external expectations of client performance, e.g. parents/guardians
- optimism bias (tendency to view negative incidents such as road accidents as unlikely to happen to them; overestimation of riding ability; and underestimation of accident risk)
- causal attribution (explains that a rider’s actions often depend upon their interpretation of the cause of events, limiting the ability to make objective risk assessments and resulting in a tendency to blame external causes)

Resources may include:

- training materials and publications
- location
- personnel
- OH&S and other workplace resource requirements
- enterprise/industry standard operating procedures
- funding for training facilities, resources and staff

Road users may include:

- pedestrians
- cyclists
- drivers or riders of trams and trains, and motor vehicles, including motorcycles, light vehicles and heavy vehicles
Specific needs may relate to:
- age (within regulatory guidelines)
- disability (within regulatory guidelines)
- language, literacy and numeracy needs
- those requiring refresher training

Training delivery and riding may be undertaken in/at:
- a range of motorcycle types
- restricted spaces
- open roads, e.g. freeways, main and busy roads, country roads and suburban roads
- controlled or open environments
- a simulated environment
- a range of weather conditions
- day or night

Training delivery methods and practice may include:
- facilitation of small group discussions
- demonstrations
- explanations
- problem solving
- mentoring
- coaching while riding (an individual rider or a group of riders, in a public street and off-street training environments)
- instructor promotion of forms of self-awareness, i.e. self-efficacy and self-monitoring by novice rider
- commentary riding
- working in a team with other instructors
- combination of the above

Training sessions may include:
- one-to-one demonstration
- small group demonstration (2 to 6 persons)

Training assessment may include:
- affective, e.g. satisfaction with the program
- cognitive, e.g. knowledge and skills gain
- psychomotor skills, e.g. ability to change gear smoothly
- modification of techniques based on client feedback, e.g. by use of client feedback sheets

Training support may include:
- language and literacy specialists
- training and assessment partners
- trainers, teachers and assessors

Variables for achieving competency may include:
- participant characteristics
- resources, e.g. time, location, space, people and costs
Workplace documents and procedures may include:

- company/enterprise/organisational procedures and policies
- record of clients’ riding skills, knowledge and abilities
- standards and certification requirements
- quality assurance procedures and checklists
- emergency procedures

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - compliance with appropriate legislative, regulatory and procedural requirements relating to safe motorcycle riding
  - identification of hazards and human factors that may impact on riding situations and implementation of responsive safe motorcycle riding practices
  - recognition of road signs and signals, and implementation of pertinent action to enable safe motorcycle riding

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment
  - access to an appropriate range of riding environments and situations
- In both real and simulated environments, access is required to:
  - relevant and appropriate resources and/or motorcycles
  - applicable documentation, including riding procedures, legislation, regulations and safe riding policies
- Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed
- Access to assessment support must be provided when required
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation.
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests, including how to:
  - explain
  - describe
  - interpret
  - convey understanding
- Practical assessment should occur:
  - through direct observation of performance, riding tasks and/or simulation exercises
  - in an appropriate range of situations in a variety of riding environments
  - in adverse riding conditions
- In all cases where practical assessment is used, it will be combined with targeted questioning to assess the underpinning knowledge.
- Assessment method may include consideration of third-party reports and authenticated prior achievements.
TLIO1007C 

Respond to cash-in-transit security incidents

Unit Descriptor
This unit involves the skills and knowledge required to respond effectively to cash-in-transit security incidents, including identifying the nature of potential security threats, selecting the appropriate emergency actions to be applied, and reporting the incident. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant sections of the regulations of the relevant state/territory authorities concerned with the secure delivery of valuables, secured products, documents and materials.

Work is performed under general or limited supervision. It involves the application of the basic security principles, routine procedures and regulatory requirements to respond to cash-in-transit security incidents.

Competency Field
O – Security

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify the nature of potential security threats

1.1 Threats or potential threats are identified, assessed and categorised as possible, actual, or false alarms
1.2 Appropriate agencies and branches are alerted to potential security threat, with all relevant details and requests for supportive action being detailed

2 Select emergency actions to be applied

2.1 Range of emergency actions are identified and analysed
2.2 Security threat and appropriate emergency plans are matched
2.3 Emergency actions are invoked in accordance with emergency procedures and in consideration of own safety, safety of the security team, members of the public and the consignment
2.4 Emergency actions are modified consistent with changes within the emergency environment

3 Report incident

3.1 Reporting arrangements are completed according to enterprise procedures
3.2 Police or other emergency services are provided with reports as required
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory regulations and requirements pertaining to revenue protection
- Relevant OH&S and environmental protection procedures and guidelines
- Organisational policies and procedures
- Risks and hazards when providing revenue protection within a transport system and related precautions to control the risk
- Organisation's transport services
- Complementary transport services
- Fare structures
- Concessional privileges
- Timetables
- Typical problems that can occur when responding to cash-in-transit incidents and appropriate action that can be taken to prevent or solve them
- Customer service requirements

Required skills:
- Communicate effectively with others when responding to cash-in-transit incidents
- Read and interpret instructions, procedures and information relevant to cash-in-transit incidents
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to cash-in-transit incidents
- Operate electronic communication equipment to required protocol
- Calculate fares
- Work collaboratively with others when responding to cash-in-transit incidents
- Resolve conflict situations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when responding to cash-in-transit incidents in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when responding to cash-in-transit incidents
- Deploy staff
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when responding to cash-in-transit incidents
- Monitor work activities in terms of planned schedule
- Manage stress
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate barriers
• Validate tickets
• Apply basic mechanical skills
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments and weather conditions
• by day or night
Customers may be: • internal or external
Hazards may include: • vehicular and pedestrian traffic
• firearm handling
• persons with felonious intent
• uneven ground, steps, road surfaces
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature
Consultative processes may involve: • clients
• private security personnel
• public sector security personnel
• police
• security consultants
• other employees and supervisors
• management
• other professional or technical staff
Incidents may include: • actual or potential breaches of security arrangements
Contingency actions may be: • as documented or adapted within scope of authority
Communication may include: • mobile and fixed phones
• radio
• oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- firearms
- two-way radios

Information/documents may include:

- workplace procedures and policies
- operations manuals and job specifications
- relevant manufacturers specifications
- competency standards and training materials
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- licensing and permits for firearms and security occupations
- relevant Australian Standards and certification requirements
- relevant state/territory privacy legislation
- relevant state/territory firearms legislation
- state/territory OH&S regulations and legislation, including manual handling regulations
- licensing requirements for driving and carrying particular classes of goods
- relevant state/territory road rules and traffic acts

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria.
unit

of this unit and include demonstration of applying:
o the underpinning knowledge and skills
o relevant legislation and workplace procedures
o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
o relevant and appropriate materials and/or equipment, and/or
o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
o through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
**TLIO1107C**

**Provide revenue protection measures**

**Unit Descriptor**

This unit involves the skills and knowledge required to provide revenue protection measures during transport operations, including preparing for revenue protection activities and implementing revenue protection procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Work must be carried out in compliance with the relevant regulations related to the protection of transport revenue.

Work is performed under some supervision, generally within a team environment. It involves the application of routine procedures and regulatory requirements to the provision of revenue protection measures.

**Competency Field**

O – Security

---

**ELEMENT**

Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

**1 Prepare for revenue protection activities**

1.1 Strategies to check customer ticketing are planned

1.2 Resources to implement ticket checks are arranged to suit anticipated passengers numbers

1.3 Queuing systems and barriers are set up to ensure ticket checks are comprehensive

1.4 Staff are allocated to planned activities according to organisation procedures and policy

1.5 Staff are briefed on strategies for checking customers' tickets

**2 Implement revenue protection procedures**

2.1 Ticket checks are conducted against organisational requirements

2.2 Fares are collected or infringement notices are issued

2.3 Use of concession, special and privilege passes is monitored for compliance with organisational policies

---

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant state and territory regulations and requirements pertaining to revenue protection
- Relevant OH&S and environmental protection procedures and guidelines
- Organisational policies and procedures
• Risks and hazards when providing revenue protection within a transport system and related precautions to control the risk
• Organisation's transport services
• Complementary transport services
• Fare structures
• Concessional privileges
• Timetables
• Typical problems that can occur when providing revenue protection measures and appropriate action that can be taken to prevent or solve them
• Customer service requirements

**Required skills:**
• Communicate effectively with others when providing revenue protection measures
• Resolve conflict situations
• Read and interpret instructions, procedures and information relevant to the provision of revenue protection measures
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the provision of revenue protection measures
• Operate electronic communication equipment to required protocol
• Calculate fares
• Work collaboratively with others when providing revenue protection measures
• Deploy staff
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when providing revenue protection measures in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when providing revenue protection measures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the provision of revenue protection measures
• Monitor work activities in terms of planned schedule
• Manage stress
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate barriers
• Validate tickets
• Apply basic mechanical skills
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• in a range of work environments and weather conditions
• by day or night

Revenue protection policy implementation could mean:
• company procedures
• sale of tickets
• confiscation of invalid tickets
• identification confirmation
• checking of concessional, special and privilege passes

Staff allocation could be to:
• comply with company procedures
• the organisation's embarking and disembarking points
• the transportation units

Resources to monitor fare compliance may include:
• company procedures
• barrier equipment
• timetable and transport system information
• tickets
• automatic ticket collection equipment
• radio
• fare schedule
• infringement notice

Strategies for the checking of ticketing can include:
• company procedures
• continuous checking
• random checking
• casual checking

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Information/documents may include:
- workplace policies and procedures
- customer requests books
- safeworking forms
- dangerous goods manifests
- relevant regulations concerning revenue protection within transport systems
- competency standards and training materials
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- security and emergency procedures

Applicable regulations and legislation may include:
- relevant state/territory regulations and legislation concerned with revenue protection within transport systems
- relevant state/territory OH&S regulations and legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIO1207C Manage disruptive and/or unlawful behaviour

Unit Descriptor
This unit involves the skills and knowledge required to manage disruptive and/or unlawful behaviour on transport systems, including monitoring passenger behaviour, identifying and attending to disruptive/unlawful activity, taking appropriate action to control disruptive/unlawful behaviour, and reporting and documenting incident(s). Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations of the relevant state/territory authorities related to the management of disruptive and/or unlawful behaviour on transport systems.

Work is performed individually, but skills are required to work within a team environment. It involves the application of routine procedures and regulatory requirements to the management of disruptive and/or unlawful behaviour on transport systems.

Competency Field
O – Security

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Monitor passenger behaviour
1.1 Facilities and transportation units under surveillance are regularly monitored to identify and record inappropriate behaviour
1.2 Potential problem situations are quickly identified and steps taken to defuse the situation in accordance with agreed procedures
1.3 Incidents which breach legislation are identified and appropriate action is taken
1.4 Surveillance equipment is operated within legal and workplace parameters

2 Identify and resolve disruptive/unlawful activity
2.1 The nature of disruptive or unlawful behaviour is accurately assessed and, if possible, conflict is resolved using relevant conflict resolution strategies
2.2 Procedures are followed to isolate the offender(s) and minimise disruption to other passengers where appropriate
2.3 Assistance is sought from other staff and external support services where necessary
2.4 The situation is resolved and follow-up action is implemented according to the appropriate workplace rules, regulations and
3 Take action to control unlawful behaviour

3.1 Assistance is sought from other staff and external support services where necessary
3.2 The nature of the offence and the consequences of the behaviour are clearly communicated to the offender
3.3 Staff involvement in the apprehension of offenders is undertaken within legal and workplace parameters

4 Report and document incident(s)

4.1 Incidents are reported using the appropriate document format in accordance with workplace policies and procedures
4.2 All documentation is drafted in accordance with workplace rules, regulations and guidelines

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory regulations and requirements pertaining to the management of disruptive and unlawful behaviour on transport systems
- Relevant OH&S and environmental protection procedures and guidelines
- Risks and hazards when managing disruptive behaviour on a transport system and related precautions to control the risk
- Transport services provided
- Procedures for the management of disruptive and unlawful behaviour
- Legal and workplace parameters with regard to unlawful behaviour
- By-laws and service rules as they apply to disruptive behaviour on transport systems
- Common law as it applies to disruptive and unlawful behaviour on transport systems
- Customer service requirements
- Typical problems that can occur when managing disruptive and unlawful behaviour on transport systems and appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate and negotiate effectively with others when managing disruptive and unlawful behaviour on transport systems
- Resolve conflict situations
- Read and interpret instructions, procedures, guidelines and information relevant to the management of disruptive and unlawful behaviour on transport systems
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing disruptive and unlawful behaviour on transport systems
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when managing disruptive and unlawful behaviour on transport systems in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when managing disruptive and unlawful behaviour on transport systems
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the management of disruptive and unlawful behaviour on transport systems
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use equipment, processes and procedures
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted in: • in a range of work environments and weather conditions
• by day or night

Customers may be: • internal or external

Facilities and transportation units may include: • stations/interchanges/stops
• carriages
• buses/coaches
• amenities
• depots/other transport facilities
• cafeterias
• toilets
• ticket offices
Problems may include
- arguments
- hostilities
- fare evasion
- verbal abuse
- physical abuse
- graffiti
- lack of compliance with no smoking signs
- lack of compliance with transport regulations
- drunken behaviour

Equipment may include:
- video/audio equipment
- security services (internal or external)
- warning lighting
- security mirrors
- alarms

Contingency processes may involve:
- notification of external agencies where necessary e.g. police, security guards etc.
- assistance from other staff if necessary

Customer safety surveillance may include:
- foot patrol
- automatic camera monitoring
- local and remote monitoring
- vehicle patrol

Consultative processes may involve:
- customers
- private and public sector security personnel
- police
- security consultants
- other employees and supervisors
- management

Communication in the work area may include:
- mobile and fixed phones
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- firearms
- two-way radios

Information/documents may include:
- workplace procedures, regulations, guidelines practices and policies
- job specifications
- organisation insurance requirements
- reports of incidents
- documentation and records of security breaches
- conflict resolution documentation
- relevant manufacturers specifications for equipment used
- competency standards and training materials
- codes of practice and regulations concerning transport security
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency response procedures
- rules and regulations in regard to disruptive/unlawful behaviour

Applicable regulations and legislation may include:
- state/territory OH&S regulations and legislation concerning transport security
- relevant Australian Standards and certification requirements
- relevant state/territory privacy legislation
- relevant state/territory firearms legislation
- licensing and permits for firearms and security occupations
- relevant state/territory road rules and traffic acts

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIO1307C** Administer the security of assets and facilities

**Unit Descriptor**
This unit involves the skills and knowledge required to administer the security of assets and facilities in the transport and distribution industry, including assessing asset security requirements, developing and implementing asset security programs, and monitoring and evaluating asset security programs. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant regulations of the relevant state/territory authorities related to the administration of assets and facilities in the transport and distribution industry.

Work is performed under some supervision, generally within a team environment.

Work involves the application of routine procedures and regulatory requirements to the administration of the security of assets and facilities in the transport and distribution industry.

**Competency Field**
O – Security

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Assess security requirements**

1.1 Adequacy of insurance cover is determined

1.2 Adequacy of physical protection over assets and facilities is determined

1.3 Methods to improve security requirements are assessed and recommended

1.4 Breakdowns/breaches of security are recorded and reported

2 **Develop and implement security programs**

2.1 Staff are consulted regularly regarding security programs

2.2 Improvements to security procedures are documented, trialed, refined and implemented

2.3 Input is given to assist in the preparation of coronial reports and enquires

2.4 Statements are gathered and reports prepared which assist in the issuance of summonses

3 **Monitor and evaluate security programs**

3.1 Reports and statements produced where security has broken down or has been breached, are analysed and conclusions documented
3.2 Security procedures are regularly monitored to ensure their implementation
3.3 Security systems are regularly tested and evaluated to ensure operational effectiveness

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory regulations and requirements pertaining to the administration of the security of assets and facilities in the transport and distribution industry
- Relevant OH&S and environmental protection procedures and guidelines
- Risks and hazards when administering the security of assets and facilities, and related precautions to control the risk
- Relevant operational procedures for accessing, storing, using and securing resources
- Stock handling procedures
- Basic financial procedures
- Relevant operational procedures relating to the administration of the security of assets and facilities
- Types and levels of insurance cover
- Risk management policies
- Reporting procedures
- Corporate organisation chart
- Basic legal rights and responsibilities
- Typical problems that can occur when administering the security of assets and facilities and appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate and negotiate effectively with others when administering the security of assets and facilities
- Read and interpret instructions, procedures, information and signs relevant to the administration of the security of assets and facilities
- Interpret and follow operational instructions and prioritise work
- Complete documentation and records related to the administration of the security of assets and facilities
- Operate electronic communication equipment to required protocol
- Gather, collate and present data when administering the security of assets and facilities
- Work collaboratively with others when administering the security of assets and facilities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when administering the security of assets and facilities in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when administering the security of assets and facilities
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Audit the security of assets and facilities
• Select and use appropriate computer and office equipment when administering the security of assets and facilities
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  in a range of work environments and weather conditions
  • by day or night

Customers may be:  • internal or external

Equipment may include:  • insurance notes and information
  • organisation security procedures
  • documentation of physical protection facilities
  • security programs

Coding identification of assets may include:  • stocktakes
  • assets register (coded and labelled)
  • monitoring insurance requirements

Regular insurance assessments may include:  • conditions of insurance
  • insurance assessment of premises
  • monitoring insurance requirements

Work organisation procedures and practices may include:  • financial/administrative procedures
  • security procedures
Consultative processes may involve:

- private and public sector security personnel
- police
- security consultants
- other employees and supervisors
- management

Communication in the work area may include:

- mobile and fixed phones
- radio
- oral, aural or signed communications

Consultative processes may involve:

- private and public sector security personnel
- police
- security consultants
- other employees and supervisors
- management

Communication in the work area may include:

- mobile and fixed phones
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- workplace procedures
- established procedures
Information/documents may include:

- workplace procedures, regulations, guidelines practices and policies
- organisation security reports
- coronial reports and enquiries
- event statements
- summonses
- assets register
- organisation insurance requirements
- relevant manufacturers specifications and guidelines
- codes of practice and regulations concerning transport and distribution assets
- job specifications
- competency standards and training materials
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency response procedures

Applicable regulations and legislation may include:

- state/territory OH&S regulations and legislation concerning transport and distribution assets
- relevant Australian Standards and certification requirements
- relevant state/territory insurance legislation
- relevant state/territory legislation relevant to asset security

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  • relevant and appropriate materials and/or equipment, and/or
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  • through appropriately simulated activities at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace
TLIO1507B Maintain security of railway property and revenue

Unit Descriptor
This unit involves the skills and knowledge required to maintain the security of railway property and revenue in accordance with regulatory and workplace requirements, including monitoring and maintaining security of railway property, securing cash revenue, and securing railway property. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace requirements and relevant regulations.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures when maintaining the security of railway property and revenue as part of workplace activities in the transport and allied industries.

Competency Field
O – Security

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Monitor and maintain the security of railway property

1.1 Security procedures for the workplace are correctly followed
1.2 Team members are informed of workplace security procedures
1.3 Team members are provided with feedback in regard to the implementation of security procedures
1.4 The security of railway property is monitored and situations, behaviour or other evidence indicating a possible breach of security are recorded and reported in accordance with workplace procedures and relevant regulatory requirements
1.5 Matters that may potentially affect railway security are reported in accordance with workplace procedures and policy

2 Secure cash revenue

2.1 Reconciliation procedures are followed and full and correct documentation is provided
2.2 Legal and regulatory requirements for stock and cash handling are followed
2.3 Security of cash, cash registers and keys are maintained in accordance with workplace procedures and policy

3 Secure railway

3.1 All moveable items are identified and secured in accordance
3.2 Risks of theft are identified and measures are taken to minimise theft of easily stolen railway property in accordance with workplace procedures.

3.3 Records of action taken to secure railway property are maintained in accordance with workplace requirements.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations and codes of practice relevant to maintaining the security of railway property and revenue.
- Relevant OH&S procedures and guidelines.
- Workplace procedures and policies for maintaining the security of railway property and revenue.
- Workplace security layout.
- Workplace security systems and requirements.
- Cash-handling procedures.
- Insurance and public liability implications.
- Equipment and materials used when maintaining the security of railway property and revenue, and precautions and procedures that should be followed in their use.
- Problems that may occur when maintaining the security of railway property and revenue and appropriate action that can be taken to resolve the problems.
- Documentation, reporting and record requirements.
- Communication and negotiation requirements when maintaining the security of railway property and revenue.

Required skills:

- Communicate, consult and negotiate effectively with others when maintaining the security of railway property and revenue.
- Read and interpret instructions, procedures, information and manuals relevant to the security of railway property and revenue.
- Interpret and follow operational instructions and prioritise work.
- Complete documentation related to the security of railway property and revenue.
- Operate electronic communication equipment to required protocol.
- Work collaboratively with others when maintaining the security of railway property and revenue.
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others.
- Promptly report and/or rectify any identified problems that may arise when maintaining the security of railway property and revenue in accordance with regulatory requirements and workplace procedures.
• Implement contingency plans for unanticipated situations that may occur when maintaining the security of railway property and revenue
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant equipment and materials when maintaining the security of railway property and revenue
• Adapt to differences in equipment in accordance with standard operating procedures
• Monitor performance of security equipment and take appropriate action if required
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  • by day or night
                          • in a range of work environments
                          • in restricted spaces
                          • in exposed conditions
                          • in controlled or open environments

Work may involve exposure to:  • chemicals
                                   • dangerous or hazardous substances
                                   • movements of equipment, goods and vehicles

Resources may include:  • security documentation
                         • security instruments

Work organisation procedures and practices may include:  • financial/administrative procedures
                                                       • security procedures

Consultative processes may involve:  • private and public sector security personnel
                                        • police
                                        • security consultants
                                        • other employees and supervisors
                                        • management
Communication in the work area may include:

- phone
- fax
- email/internet
- electronic data interchange (EDI)
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace security procedures, regulations, guidelines practices and policies
- job specifications and induction materials
- work orders and operational manuals
- workplace security reports
- workplace cash-handling requirements
- event statements
- assets register
- organisation insurance requirements
- relevant manufacturers specifications and guidelines
- codes of practice and regulations concerning transport and distribution assets
- competency standards and training materials
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency response procedures

Applicable regulations and legislation may include:

- state/territory OH&S regulations and legislation concerning railway security
- relevant Australian Standards and certification requirements
- relevant state/territory insurance legislation
- relevant state/territory legislation relevant to asset security
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIO1607B Apply and monitor workplace security procedures

Unit Descriptor
This unit involves the skills and knowledge required to apply and monitor security procedures in workplaces in the postal, warehousing, stevedoring, transport, distribution and allied industries in accordance with workplace and regulatory requirements. This includes checking and monitoring personnel and goods entering the worksite, carrying out surveillance of work areas, dealing with security incidents and emergencies, and completing required reports and surveillance documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the security procedures in the workplace.

Work is performed under some supervision, generally within a team environment.

Work involves the application of workplace procedures and regulatory requirements to security operations as part of work activities in the postal, warehousing, stevedoring, transport, distribution and allied industries.

Competency Field
O – Security

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Check and monitor personnel and goods entering the existing worksite

1.1 The entry and/or exit of personnel and vehicles are checked in accordance with workplace operational procedures and statutory authority regulations to prevent improper entry or unlawful removal of goods and cargo

1.2 Potential breaches of security which may cause goods to be at risk are observed and reported promptly to designated personnel in accordance with workplace procedures

2 Carry out surveillance of work areas

2.1 Surveillance of work areas is in accordance with workplace procedures and regulatory requirements

2.2 Breaches of security are identified and action is initiated and/or the incident reported in accordance with workplace procedures and regulatory requirements

3 Deal and write reports

3.1 Security incidents/emergencies are dealt with in accordance
on security incidents
emergencies

3.2 Appropriate police/security/emergency services are contacted, if required, in accordance with workplace procedures
3.3 Written reports of incidents/emergencies communicate intended message in accordance with workplace requirements

4 Complete required
documentation

4.1 Surveillance documentation and reports are completed and files despatched in accordance with workplace procedures and regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to the security arrangements during the transfer of cargo, freight and mail
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace security procedures and policies when transferring cargo/freight/mail
- Focus of operation of work systems, equipment, management and site operating systems for the secure transfer of cargo/freight/mail
- Security problems that may occur when transferring cargo, freight and mail and appropriate action that can be taken to resolve or avoid the problems
- Site layout and operating procedures
- Types of hazardous cargo and special handling procedures
- The marking and numbering systems for cargo/freight/mail
- Relevant bond, quarantine or other legislative requirements

Required skills:
- Communicate effectively with others when applying and monitoring security procedures for cargo, freight and mail
- Read and interpret instructions, procedures and information relevant to the security of cargo, freight and mail
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the security of cargo, freight and mail
- Receive, acknowledge and send messages with available communications equipment
- Work collaboratively with others when applying and monitoring security procedures for cargo, freight and mail
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when applying and monitoring security procedures for cargo, freight and mail in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when applying and monitoring security procedures for cargo, freight and mail
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements.
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify, select and use relevant equipment, processes and procedures when maintaining security during the transfer of cargo, freight and mail
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Workplaces may comprise:
• large, medium or small worksites

Customers may be:
• internal or external

Work may be conducted in:
• limited or restricted spaces
• exposed conditions
• controlled or open environments

Hazards may include:
• vehicular traffic and pedestrians
• dust and vapours
• chemicals and hazardous or other dangerous materials
• humidity, air temperature
• lighting conditions
• movements of equipment, goods, and materials
• noise

Security procedures for high value goods may include:
• identification codes/marks/numbers identified and recorded
• goods to be secured are tallied
• storage location matches product characteristics including fire risks, weather damage or requirements workplace
• reporting of shortages and damage
Recording procedures for the receipt/delivery of cargo/freight/mail etc. may include:

- carrier and vehicle registration
- cargo/freight/mail, including marks/numbers/identification codes
- cargo/freight/mail documentation
- number of pallets
- gate pass and time of exit

Documentation may include:

- export receipt advice
- customs clearance
- gate pass/VMO clearance

Depending on workplace context, authorised personnel seeking entry to terminal/wharf/workplace may include:

- carriers
- customs
- officers of the Australian Quarantine and Inspection Service
- port authority
- shipping agents
- employees of related industries
- work crews
- union representatives
- contractors
- site visitors
- contractors
- official representatives

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Surveillance areas may include:

- buildings, gates and perimeter fence
- personnel and property are authorised to be in a secured area
- customers, visitors and contractors are safe
- monies, premises and equipment are secure

Information/documents may include:

- workplace policies, operating procedures and practices
- goods identification numbers and codes
- manifests, consignment notes, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the secure transfer of cargo/freight/mail/parcels including ADG Code
- dangerous goods declarations and material safety data sheets (where applicable)
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and/or/client instructions'
- HAZCHEM chart/MSDS
- safety observation feedback program
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the transfer of cargo/freight/mail
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIO1707A Manage security of storage facilities

Unit Descriptor
This unit involves the skills and knowledge required to manage security of storage facilities. It includes assessing security risks; specifying security requirements; and implementing, monitoring and reviewing storage security plan. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Competency Field
O – Security

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Assess security risks
1.1 Records of security breaches, thefts and damage are reviewed to identify past security incidents of storage facilities
1.2 Assessment of potential risks to the security of stock, personnel, facilities, information and equipment are made, considering both internal and external factors
1.3 Discrepancies between identified risk and current security of storage facilities are noted

2 Specify security requirements
2.1 Decisions and adjustments to equipment and procedures regarding security for the facilities are made based on risk assessment
2.2 Questions and feedback from stakeholders are sought and responded to promptly
2.3 A finalised storage security plan offering optimal security of storage facility is devised taking into all feedback and assessments of security risks

3 Implement storage security plan
3.1 Storage security plan is implemented with appropriate workplace personnel informed
3.2 Competency needs for staff to implement security plan is addressed with allocation of training
3.3 Equipment and needs for improvements are allocated and/or obtained
3.4 Storage security plan, policies and procedures are trialled in
conjunction with a system for feedback to identify and suggest further improvements

4 Monitor and review storage security plan performance

4.1 Security reports are collated and categorised
4.2 Reports are compared to identify any trends in breaches
4.3 Security procedures are modified to rectify any gaps identified

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations, codes of practice and legislative requirements relevant to the planning and management of security procedures within a workplace
- Relevant OH&S and environmental procedures and regulations
- Licence and permit requirements relevant to security procedures
- Relevant Australian Standards and certification requirements
- Workplace procedures for the planning and management of security procedures
- Problems that may occur during the planning and management of security procedures and action that can be taken to resolve the problems
- Risks and hazards related to the planning and management of security procedures and ways of controlling the risks involved
- Business policies for security provision, including out-sourcing of components of operations and engaging additional resources
- Focus of operation of security systems, resources, management and workplace operating systems
- Resource availability including the competencies of individuals in the team/group

Required skills:
- Communicate effectively with others when completing work activities to ensure security approaches are understood and implemented
- Complete documentation related to work activities including documentation of loss, damage or other security issue
- Work collaboratively with others in order to enhance security awareness
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Monitor work activities in terms of planned schedule
- Monitor performance of equipment or technology designed to enhance security
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Regular insurance assessments may include:
- conditions of insurance
- insurance assessment of premises
- monitoring insurance requirements

Security coding for the identification of assets may include:
- stocktakes
- assets register (coded and labelled)

Worksite environment may involve:
- twenty-four hour operation
- single and multi-site location
- large, medium and small workplaces
- security may be provided by internal or contract staff

Depending on the organisation concerned, workplace procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- police
- security consultants
- relevant authorities, government departments and institutions
- other employees and supervisors
- suppliers of security equipment
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
Documentation and records may include:

- insurance notes and information
- documentation of physical protection facilities
- security programs operations manuals, job specifications and procedures and induction documentation
- supplier and/or client instructions
- relevant OH&S and environmental protection regulations
- workplace policies and procedures related to ADG code
- dangerous goods declarations and material safety data sheets, where applicable
- relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:

- relevant planning and management of security procedures within a workplace
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIO1807A Manage compliance with customs excise

Unit Descriptor
This unit involves the skills and knowledge required to manage compliance with customs excise. It includes determining the rate of excise under the Customs Tariff Act 1995; determining any conditions and exceptions which apply to goods; interpreting concessional rates of duty; calculating duty amount; and following documentation requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the logistics industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Competency Field
O – Security

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine the rate of excise under the Customs Tariff Act 1995

1.1 Classification of the goods are made according to the Customs Tariff Act 1995
1.2 Those goods which incur a customs excise are identified
1.3 The appropriate rate of excise is determined and applied to the goods

2 Determine any excise conditions and exceptions which apply to the goods

2.1 Tariff classification is applied to the goods
2.2 Determination is made as to whether the goods qualify for preferential treatment under free trade agreements and other preferential trade agreements
2.3 Special duty rates for the goods are determined
2.4 Determination is made regarding what types of duty applies to the goods

3 Interpret concessional rates of duty according to the Customs Tariff Act 1995

3.1 Interpretative rules of Schedule 2 of the Customs Tariff Act 1995 are applied
3.2 Duty concession AusIndustry assistance schemes are applied to the goods
3.3 The relevant tariff concession order is interpreted

4 Calculate duty amount

4.1 The duty amount payable is calculated
4.2 Accuracy of the duty calculation is verified
4.3 INCOTERMS 2000 relevant to the invoice are identified
4.4 Determination is made as to whether and when duty is payable

5 Follow documentation requirements
5.1 Relevant documentation is passed on to the client
5.2 Completed documentation is retained by relevant personnel in the enterprise in accordance with the requirements of Customs and related legislation and workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Customs Tariff Act 1995 and regulations as they relate to refunds, remissions and drawbacks
• The structure and application of anti-dumping laws in Australia
• Differences between the Tariff Concession (TCS) from the By-Law System and other industry assistance initiatives
• The use of the Penalties and Infringement Notice Scheme
• The various forms and functions of securities and temporary importations
• Recovery of shortpaid duties
• The procedures in Payments Under Protest
• Seizure, Forfeiture and Condemnation as it relates to customs clearance practices
• Requirements for preferential treatment of goods under free trade agreements or preferential trade agreements
• Sources of information on new developments in customs clearance practices
• Ways of learning the skills and knowledge required for new developments in customs clearance practices
• Procedures for operating electronic communications equipment
• Requirements for completing relevant documentation
• Code of practice for working collaboratively with others
• Steps involved in planning the work activities

Required skills:
• Negotiate, communicate and liaise effectively with customers and others
• Select and use relevant computer/communication/office equipment when carrying out customs clearance operations
• Read and interpret instructions, procedures and information relevant to customs clearance practices
• Complete documentation related to work activities
• Work collaboratively as part of a customs broking team
• Present information using appropriate media and technology
• Identify, interpret and learn skills and knowledge required for relevant new developments in freight services
• Plan and organise work activities when carrying out customs clearance operations
• Deal with routine issues that may arise when carrying out customs clearance operations
• Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Implement contingency plans for unplanned events

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Depending on the organisation concerned, workplace procedures may be called:
• standard operating procedures (SOPs)
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Communication in the work area may include:
• phone
• electronic data interchange (EDI)
• fax
• email
• internet
• RF systems
• oral, aural or signed communications

Consultative processes may involve:
• other employees and supervisors
• relevant authorities and institutions
• management and union representatives
• industrial relations and OH&S specialists
Documentation and records may include:

- customs and related legislation
- other regulatory requirements pertaining to border clearance functions
- relevant sections of the Australian Customs Manual
- dumping commodities register
- manifests, cartnotes, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for border clearance functions
- workplace procedures and policies
- client instructions
- regulations and codes of practice relevant to ADG code, including safeworking and local authority regulations and procedures
- relevant OH&S and environmental protection regulations
- dangerous goods declarations and material safety data sheets, where applicable
- relevant Australian Standards and certification requirements
- workplace relations regulations

Applicable legislation and regulations may include:

- Australian Customs Tariff Act 1995
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- workplace relations regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge
assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIO1907A  

**Apprehend offenders**

**Unit Descriptor**

This unit covers the knowledge and skills required to determine offences committed under relevant public transport legislation. It includes preparing for operational activities; carrying out ticket checks; observing and/or detecting offences; performing an arrest; gathering evidence for reports and records; and completing, reviewing and submitting required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Work involves the duties and tasks applicable to authorised officers working on public trams, trains and buses.

**Competency Field**

O – Security

---

**ELEMENT**

Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for operational activities

1.1 Participation in briefing meetings on operational duties is undertaken and appropriate instructions are received and correctly interpreted in performing the duties of an authorised officer

1.2 All equipment and operational documentation required for operational duties are obtained before commencement, in accordance with policy and procedures

2 Carry out ticket check

2.1 Vehicle or operational area is entered in accordance with policy and procedures

2.2 Ticket issuing and validating equipment are checked to ensure correct operation and relevant faults and malfunctions are recorded and/or reported in accordance with policy and procedures

2.3 Where appropriate, passengers are advised that a ticket inspection will commence, in accordance with policy and procedures

2.4 Tickets are inspected in accordance with policy and procedures, relevant acts and/or regulations either independently or in collaboration with other authorised officers

3 Observe and/or detect offence

3.1 Ticket irregularities are detected in accordance with policy and procedures
3.2 Other offences as specified in the relevant acts and/or regulations are observed and recorded, as appropriate

3.3 Offenders are questioned to ascertain if a reportable offence has occurred

3.4 Decisions are made on appropriate action in accordance with the relevant acts and/or regulations and policy and procedures

3.5 Appropriate actions are carried out in accordance with policy and procedures

4 Perform arrest

4.1 Assessments are carried out to ensure the arrest is warranted and can be made in accordance with the relevant act and/or regulations and policy and procedures

4.2 Assistance, where required, is sought in a timely manner in accordance with policy and procedures

4.3 Arrests are carried out with regard to all legal and organisational policy and procedures

4.4 Offenders are detained in accordance with the relevant Act and/or regulations and policy and procedures, prior to hand over to police

5 Gather evidence for reports and records

5.1 Appropriate evidence is collected and or recorded in accordance with the principles of the 'points of proof' for the offence concerned

5.2 Offenders are questioned, to collect additional information for the reports

5.3 Exhibits relevant to the offence are collected and attached to the reports

6 Complete required reports and records

6.1 Field reports of non compliances are compiled in accordance with policy and procedures

6.2 Relevant information and offences, observations and conversations are recorded in accordance with policy and procedures.

7 Review and submit all required documentation

7.1 All required documentation is checked for content, relevance and validity in accordance with policy and procedures

7.2 All field reports of offences are checked to see if all sections are completed to ensure the sufficiency, accuracy and integrity of the evidence

7.3 All reports and documentation are lodged in accordance with policy and procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislation and regulations, including case law
- Standard operating procedures and policies for apprehending offenders
- Principle of ‘points of proof’
- Code of conduct for the apprehension of offenders
- Procedures for checking tickets and validating machines
- Ways of observing and detecting offences
- Options available following observation and detection of offences
- Procedures for the use of the phonetic alphabet
- Procedures for completing all required documentation

Required skills:
- Communicate effectively with others when apprehending offenders
- Access, read, interpret and apply instructions, regulations and standard operating procedures relevant to apprehending offenders in a transport context
- Complete reports, records and other documentation related to apprehending offenders in a transport context
- Work in accordance with instructions
- Interact with customers
- Work collaboratively with others including requesting assistance to restrain an offender
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Observe passengers carrying out suspected offensive activities and decide whether or not they should be apprehended
- Promptly solve and/or report any identified problems when apprehending offenders in a transport context
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail
- Maintain currency on all operational procedures
- Apply legal arrest and detention techniques
- Use reasonable force when apprehending offenders in a transport context
- Use the phonetic alphabet
- Apply personal safety techniques
- Select and utilise equipment and communication technology required when apprehending offenders in a transport context
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Briefing may include:
- required operational duties for the shift
- special instructions
- updates on legislation
- enforcement directives as announced

Equipment may include:
- ticket issuing and validating equipment
- portable ticket readers

Operational documentation may include:
- mobile communication equipment
- official identification
- official notebook and report of non-compliance
- fares and travel guide
- ticket manual

Operational area may include:
- designated areas in railway stations
- on board trains, trams and buses
- tram and bus stops

Relevant acts and/or regulations may include:
- transport act and legislation
- regulations under the act
- OH&S legislation
- privacy legislation

Detected may include:
- checking tickets
- observing offenders committing offences
- acting on information received

Offences may include:
- offences under the relevant legislation
- ticket irregularities
- behavioural irregularities
- vandalism
- fraud
- theft
- assault
- criminal damage
Action may include:

- reported offence
- direct offender to buy or validate ticket
- direct offender to leave premises
- remove offender from vehicle
- give a warning
- contact police
- arrest offender

Reports may include:

- details of offence
- details of offender
- reason for offence
- details of journey
- other pertinent details
- details of the corroborator
- police details when in attendance
- accompanying offenders

Documentation/records may include:

- code of conduct
- company policies and procedures
- departmental directives
- operational procedures
- official notebook
- ticket manual

Applicable legislation, regulations and codes may include:

- transport legislation and associated regulations
- relevant case law
- code of conduct

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
o relevant and appropriate materials and/or equipment, and/or
o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
o through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
TLIO207D  Follow security procedures

Unit Descriptor
This unit involves the skills and knowledge required to follow security procedures in the transport and logistics industries, including checking and maintaining the security of any goods and cargo; ensuring the security of any passengers, workplace personnel and visitors; identifying and reporting any security threats or situations; and completing all required security records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable security regulations and the relevant sections of a transport organisation's workplace security program and procedures.

Work is performed under some supervision generally within a team environment. It involves the application of an organisation's workplace security program and procedures and regulatory requirements to ensure that appropriate security procedures are followed when carrying out work activities in the transport, distribution, logistics and allied industries.

Competency Field
O – Security

ELEMENT  PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Maintain security of goods and cargo (where applicable)
1.1 Where applicable, goods and cargo are secured within specified locations, transport vehicles, vessels or aircraft as per workplace security procedures and applicable security regulations
1.2 Seals, tamper proof packaging, locks and other security measures on goods or cargo are checked and maintained as per workplace security procedures
1.3 Signs of pillaging, theft and interference are recognised and reported
1.4 Signs of suspicious goods and cargo are recognised and reported promptly to designated personnel
1.5 Any breaches of security requirements are reported promptly to designated personnel as per workplace security procedures

2  Maintain security of passengers, workplace personnel and visitors
2.1 Where applicable, security checks of passengers, workplace personnel and visitors are carried out as per workplace security program and procedures and within limits of role and responsibilities
2.2 Precautions and measures aimed at protecting the security of passengers, workplace personnel and visitors are followed as per workplace security requirements and applicable security regulations.

2.3 Signs of security threats are recognised and investigated as per workplace security requirements.

2.4 Signs of suspicious behaviour of passengers or other personnel are recognised and reported promptly to designated personnel.

2.5 Any breaches of security requirements for passengers, workplace personnel and visitors are reported promptly to designated personnel in accordance with workplace procedures.

3 Identify a security threat or situation

3.1 Security threat or situation is promptly identified and assessed and response is prioritised in accordance with the workplace security program and procedures.

3.2 Implications of the security threat or situation are evaluated in accordance with workplace security program and procedures.

3.3 Relevant personnel are alerted to the security threat or situation as required within workplace security procedures and program.

3.4 Communications are maintained with relevant personnel to determine appropriate course of action.

4 Respond to a security threat or situation

4.1 Response to an identified security threat or situation is in accordance with workplace security procedures, received instructions, regulatory requirements and emergency response plan where relevant.

4.2 Security threats or incidents are handled appropriately in accordance with established response plan and within limits of responsibility and duty of care.

4.3 Responsibilities are fulfilled in accordance with the workplace security program and regulatory requirements.

4.4 Assistance is provided in controlling the site both prior to and following arrival of security and/or emergency services.

4.5 In the case of a security threat or emergency, assistance is provided to other staff and emergency services personnel conducting an initial survey of the scene.

4.6 Directions of the controlling security/emergency authority are followed and all possible assistance is provided in response to those directions.

5 Maintain security records

5.1 Records of security checks and precautions are kept as per workplace procedures.

5.2 Reports of security incidents or threats are completed in accordance with workplace requirements and applicable.
security requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable transport security legislation including relevant international, national, state and territory acts, regulations codes and/or guidelines
- Relevant workplace security program and policies and procedures for responding to security threats, situations and emergencies
- Relevant quarantine and bond regulations and requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Security threats and incidents that may occur in transport, logistics and allied industries, and related roles and responsibilities of personnel when reporting them and responding to them
- Applicable measures for the securing of transport terminals, storage facilities, vehicles, trains, aircraft and/or vessels
- Signs of pillaging, theft and interference with goods, cargo and mail
- Signs of suspicious behaviour of passengers and other personnel
- Precautions and procedures aimed at protecting the security of passengers, workplace personnel and visitors
- Focus of operation of work systems, equipment, management and site operating systems when carrying out operations in the transport and logistics industries
- Security problems that may occur when carrying out operations in the transport and logistics industries and action that can be taken to address and resolve the problems
- Relevant documentation and reporting requirements
- Layout of worksite, vehicle, vessel, train or aircraft and operating procedures
- Procedures for operating any electronic communications equipment with required protocol

Required skills:
- Communicate effectively with others when following security procedures
- Read and interpret instructions, procedures, applicable regulatory requirements, labels, markings, ID cards and other information relevant to workplace security in the transport and logistics industries
- Complete required documentation and reports related to security procedures
- Work collaboratively with others when following security procedures
- Identify and solve and/or report problems that arise when following security procedures
- Modify activities depending on differing workplace contexts, risk situations and environments
- Adapt to differences in equipment, facilities, cargo and passengers
- Apply procedures for security checks and precautions as per limits of role and responsibilities
- Recognise signs of pillage, theft and interference with goods, cargo and mail
- Recognise signs of security threats and situations
• Promptly report and/or rectify any identified problems that may arise when following security procedures in accordance with regulatory requirements and workplace procedures
• Follow security threat/incident response plan and procedures
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant communications and other equipment required when following security procedures
• Select and use required personal protective clothing and equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Transport and logistics enterprises may involve:
• warehousing and distribution
• road transport
• rail transport
• aviation
• maritime
• freight forwarding and customs broking
• multimodal transport and logistics

Work may be conducted:
• in a range of work environments by day or night, including in large, medium or small transport terminals and storage facilities and on vehicles, trains, aircraft and vessels

Security procedures may be aimed at preventing or identifying:
• persons trespassing on security zones and restricted areas
• carriage or storage of prohibited goods
• the carriage of improvised explosive devices in cargo and mail
• smuggling of goods
• pillage, theft and interference with cargo, goods and mail
• acts or threats of terrorism
• hijacking of a vehicle, train, aircraft or vessel
• extortion
• assault
• fraud
• vandalism and graffiti
Security measures may include:
- security guards at access points and gates to secured areas
- locked doors, gates and fences
- use of personal electronic access cards
- recording of carrier and vehicle registration details at gates and checkpoints
- bag check points
- escorts for visitors in restricted areas
- access control into and out of restricted security areas
- use of ID cards
- video surveillance equipment
- X-ray screening of baggage, cargo and goods
- ETD screening of passengers, baggage, cargo and goods
- screening of passengers using handheld and walk through magnetometers

Communication in the work area may include:
- phone
- radio
- fax
- email
- electronic data transfer (EDI)
- internet
- oral, aural or signed communications

Personal protection equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the organisation concerned workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information and documents may include:

- Australian transport security legislation and regulations
- Australian and international codes of practice and regulations relevant to the secure transport of passengers and the transfer and storage of cargo and goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- workplace security program and related policies and procedures
- workplace standard operating procedures and policies
- signs and instructions pertaining to security matters
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- tickets, labels, manifests, bar codes, and container identification/serial numbers (as applicable)
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)

Applicable legislation, regulations and codes may include:

- Australian transport security legislation and regulations
- Australian and international codes of practice and regulations relevant to the secure transport of passengers and the transfer and storage of cargo and goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- export/import/quarantine/bond regulations
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
Resources for assessment include:
- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIO307C Undertake loading and unloading in a designated secured environment

Unit Descriptor
This unit involves the skills and knowledge required to undertake loading and unloading of cash-in-transit in a designated secured environment, including selecting loading site, undertaking load transfer, and completing required transfer documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant sections of the regulations of the relevant state or territory authorities concerned with the secure delivery of valuables, secured products, documents and materials.

Work is performed under general supervision. It involves the application of the basic principles, routine procedures and regulatory requirements to the transfer of cash in transit in designated secured environments.

Competency Field
O – Security

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Select loading site
1.1 Plans of site access, exit points and key physical features are identified
1.2 Site for goods transfer is selected in accordance with security plan and with due regard for own safety, safety of security team, members of the public and consignment
1.3 Loading site(s) mandated by customer and/or specific loading and unloading requirements are identified and assessed for accessibility and security
1.4 Alternative sites are identified where pre-determined site is assessed as inappropriate
1.5 Proposed changes to loading site(s) are referred to management personnel and authorisation sought where appropriate

2 Undertake load transfer
2.1 Permission to enter and exit loading area (where required) is obtained in accordance with enterprise procedures
2.2 Security procedures, including positioning of personnel, travelling across public areas, and carrying/loading techniques, are undertaken in accordance with operational plan and regulatory requirements
2.3 Contingency plans are identified and confirmed with other team members
2.4 The environment is constantly monitored to maintain a safe working environment
2.5 Goods are identified and details are verified and checked for conformity with manifest
2.6 Non-conforming consignments are documented and reported in accordance with enterprise procedures
2.7 Load characteristics are identified and considered when determining appropriate loading and unloading procedures
2.8 Load handling demonstrates compliance with (any) loading regulations and workplace safety requirements
2.9 Consignment is delivered/stored and secured in accordance with operational plan, enterprise procedures and regulatory requirements

3 Complete transfer documentation
3.1 Details of consignment delivery are verified by client or client representative
3.2 Transfer documentation is completed in accordance with enterprise procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory permit and licence regulations and requirements
- OH&S procedures and guidelines concerning the lifting and movement of loads
- Risks and hazards when transferring cash-in-transit and related precautions to control the risk
- Operational procedures for identification of security risks
- Contingency planning relating to managing and controlling security risks
- Requirements for approved work procedures and relevant equipment
- Housekeeping standards procedures required in the workplace
- Typical problems that can occur when loading and unloading cash-in-transit in a designated secured environment and appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate effectively with others when loading and unloading cash-in-transit in a designated secured environment
- Read and interpret instructions, procedures, information and labels relevant to the loading and unloading of cash-in-transit in a designated secured environment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the loading and unloading of cash-in-transit in a designated secured environment
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when loading and unloading cash-in-transit in a designated secured environment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems or incidents that may occur when loading and unloading cash-in-transit in a designated secured environment in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during loading and unloading cash-in-transit in a designated secured environment
• Plan own work including predicting consequences and identifying improvements
• Apply relevant agreements, codes of practice or other legislative requirements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use equipment, processes and procedures
• Adapt to differences in equipment in accordance with standard operating procedures
• Safely use correct manual handling techniques
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• in a range of work environments and weather conditions
• by day or night

Customers may be:
• internal or external

Hazards may include:
• vehicular and pedestrian traffic
• firearm handling
• persons with felonious intent
• uneven ground, steps, road surfaces
• contamination of, or from, materials being handled
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature
Consultative processes may involve:

- clients
- private security personnel
- public sector security personnel
- police
- security consultants
- other employees and supervisors
- management
- other professional or technical staff

Consignment risk may include:

- staff fidelity
- other theft
- loss through negligence

Communication in the work area may include:

- mobile and fixed phones
- radio
- oral, aural or signed communications

Security systems/devices may include:

- two key safes
- ATM vaults
- surveillance cameras
- VCRs
- alarm systems
- access control systems
- time delay devices

Secured environment may be:

- on or off normal site of operations

Security arrangements are varied in line with:

- workplace policies and procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- firearms
- two-way radios
Information documents may include:

- workplace procedures and policies
- job specifications
- relevant manufacturers specifications
- competency standards and training materials
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory OH&S regulations and legislation, including manual handling regulations
- relevant Australian Standards and certification requirements
- relevant state/territory privacy legislation
- relevant state/territory firearms legislation
- licensing and permits for firearms and security occupations
- licensing requirements for driving and carrying particular classes of goods
- relevant state/territory road rules and traffic acts

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
TLIO307C  Undertake loading and unloading in a designated secured environment

- access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIO407D Conduct control procedures for transferring explosives and dangerous/hazardous/high risk goods

Unit Descriptor
This unit involves the skills and knowledge required to conduct safety and hazard control procedures for transferring dangerous goods including clarifying movements of explosives, hazardous or high risk goods; implementing safety and hazard control procedures for loading, unloading or goods movement activities; and reviewing and completing goods transfer operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant state/territory regulations concerning the transfer of dangerous goods, hazardous substances and high risk goods and involves the application of routine procedures and relevant regulatory requirements.

Work is performed under general supervision.

Competency Field
O – Security

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Clarify movements of explosives and dangerous, hazardous or high risk goods

1.1 Schedule details, nature of risk, special precautions and procedures are clarified with line managers or supervisory staff

1.2 Information is collected/checked against workplace procedures and relevant regulatory framework

1.3 Activities requiring special approvals or workplace procedure changes are identified and approvals obtained

1.4 Safety and hazard control procedures are communicated to relevant parties

2 Implement safety and hazard control procedures for loading, unloading or goods movement activities

2.1 Transfer operations are conducted in accordance with workplace procedures and relevant legislation

2.2 Advice is provided to relevant emergency response groups (internal and/or external) or other affected personnel or contractors

2.3 Procedures to control movement of equipment and personnel within the goods movement area affected by the risks are implemented

2.4 Safety and hazard control procedures are monitored and
maintained with action taken to modify procedures where necessary (in accordance with scope of authority)

2.5 Goods are moved within relevant workplace procedures and statutory regulations

3 Review and complete goods transfer operation

3.1 Completed activities are checked against operational plan
3.2 Relevant documentation is completed
3.3 Specialised equipment used for the process is maintained and stored
3.4 Worksite is checked and returned to operational status

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state and territory mass and loading and other relevant regulations, codes and permit requirements as they apply to the transfer of explosives and dangerous/hazardous/high risk goods
- OH&S procedures and guidelines concerning the transfer of explosives and dangerous/hazardous/high risk goods
- Risks when transferring explosives and dangerous/hazardous/high risk goods and related precautions to control the risk
- Workplace procedures and policies for the transfer of explosives and dangerous/hazardous/high risk goods
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Housekeeping standards procedures required in the workplace
- Methods of securing a vehicle following the loading of explosives and dangerous/hazardous/high risk goods
- Relevant permit and licence requirements
- Typical problems that can occur when transferring explosives and dangerous/hazardous/high risk goods and appropriate action that can be taken to prevent or solve them

Required skills:

- Communicate effectively with others when controlling the transfer of explosives and dangerous/hazardous/high risk goods
- Read and interpret instructions, procedures, information and signs relevant to the transfer of explosives and dangerous/hazardous/high risk goods
- Identify goods coding, markings and, where applicable, emergency information panels for the mode of transport/storage selected
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the transfer of explosives and dangerous/hazardous/high risk goods
- Operate electronic communication equipment to required protocol
• Estimate the mass, volume and special handling requirements of a load
• Work collaboratively with others when controlling the transfer of explosives and
dangerous/hazardous/high risk goods
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour
and interactions with others
• Promptly report and/or rectify any identified problems that may occur when controlling the
transfer of explosives and dangerous/hazardous/high risk goods in accordance with regulatory
requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when controlling the
transfer of explosives and dangerous/hazardous/high risk goods
• Recognise hazards and apply precautions and required action to minimise, control or
eliminate hazards that may exist during the transfer of explosives and
dangerous/hazardous/high risk goods
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and
environments
• Work systematically with required attention to detail without injury to self or others, or
damage to goods or equipment
• Identify and correctly use equipment required to load explosives and
dangerous/hazardous/high risk goods
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S
standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and
situations that may affect performance.

Operations may be conducted: • in a range of work environments and weather conditions
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Vehicle refers to: • all applicable transportation modes

Transfer of dangerous goods/
hazards substances and high risk
goods may require: • special precautions and handling procedures as specified
by the manufacturer
Hazards in the work area may include exposure to:

- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spills, leakages, ruptures
- dust/vapours
- ignition sources

Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- mask or respirator and breathing apparatus
- high visibility clothing

Load restraint systems are:

- as detailed in the National Load Restraint Guide

Transport documentation may include:

- Initial Emergency Response Guide
- Emergency Procedure Guide
- descriptions for explosives and dangerous goods/hazards substances and high risk goods (i.e. class, and division, shipping name, UN number, current ADG declarations, material safety data sheets, etc.)

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits
- ADG declarations
Consultative processes may involve may involve:
- other employees and supervisors
- suppliers, potential customers and existing clients
- management and union representatives
- industrial relations, Occupational Health and Safety specialists, other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Safety equipment on vehicle may include:
- fire extinguishers
- portable warning devices
- eye wash kit
Information/documents may include:

- Safe Working Load (SWL) and Working Load Limit (WLL)
- manifests, bar codes, goods and product identification
- manufacturers specifications, instructions and labelling advice including material safety data sheets
- workplace procedures and policies for the transfer of explosives and dangerous/hazardous/high risk goods
- goods identification numbers and codes, including IMDG markings and HAZCHEM signs
- supplier and/or client instructions
- operations manuals, job specifications and induction documentation
- competency standards and training materials
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant Australian Standards for the types of explosives and dangerous/hazardous/high risk goods concerned
- relevant state/territory environmental protection legislation
- workplace relations regulations
- equal opportunity and affirmative action legislation
- equal opportunity legislation
- relevant state/territory OH&S legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - assessing operational suitability of equipment and vehicles pertinent to transfer of explosives and dangerous/hazardous/high risk goods
  - estimating weight and dimensions of load and any special handling requirements
  - determining (any) required permits
  - identifying hazards and implementing safety and hazard control procedures and requirements to minimise risks when transferring explosives and dangerous/hazardous/high risk goods
  - selecting appropriate equipment and work systems to enable safe, efficient work

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIO407D Conduct control procedures for transferring explosives and dangerous/hazardous/high risk goods
TLIO5020A Advise on and manage security and safety in international freight transport

Unit Descriptor
This unit involves the skills and knowledge required to advise customers on security and safety requirements within international freight transport and manage the security and safety arrangements for international freight. This includes assessing international freight transport security and safety risks; specifying international transport security and safety requirements; implementing transport security and safety plans and policies; and monitoring and reviewing security and safety system performance. International freight forwarding covers the importing, exporting and transiting of freight. There are no specific licensing or certification requirements applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for persons involved in advising on and managing security and safety in international freight transport as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Competency Field
O – Security

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Assess international freight transport security and safety risks

1.1 Records of international freight transport security and safety breaches, thefts, accidents and damage are reviewed to identify past security and safety incidents

1.2 Assessment of potential risks to the security and safety of freight, personnel, facilities, information and equipment are made, considering both internal and external factors

1.3 Relative risks from a range of sources are assessed and compared with existing security and safety measures

1.4 Discrepancies between identified risk and current security and safety processes are noted

2 Specify international freight transport security and safety requirements

2.1 Decisions and adjustments to security and safety equipment,
facilities and services are made based on risk assessment in relation to benefits to the freight forwarding customer and the freight forwarding organisation

2.2 Transport security and safety plans including performance indicators are prepared in accordance with workplace and regulatory requirements, and circulated for feedback prior to implementation

2.3 Security and safety arrangements for international freight forwarding activities are documented, and implementation strategies are established as per the freight forwarding organisation’s transport security and safety plans and transport security and safety regulations

2.4 Questions and feedback from stakeholders are responded to promptly and, where appropriate, incorporated in the plans

3 Implement transport security and safety plans and policies

3.1 Priorities for implementation are identified, and management and workplace personnel are informed

3.2 Competency needs for the work are identified, and staff allocated and/or trained and assessed to meet those needs

3.3 Equipment and facilities are allocated and/or obtained

3.4 Workplace personnel and equipment are organised to meet requirements ensuring that work loads are balanced and other workplace activities are met

3.5 Operating procedures and methods are explained to freight forwarding and security and safety personnel, and follow-up communication methods are used to ensure that freight transport and storage security and safety requirements are applied as per the transport security and safety security plans and policies

3.6 Advice is provided to customers on security and safety matters during international freight forwarding projects in accordance with the freight forwarding organisation’s transport security and safety plans and policies

3.7 International freight transport security and safety plans, policies and procedures are implemented in the course of freight forwarding duties and functions

4 Monitor and review system performance

4.1 Reports on security and safety incidents in international freight transport and related action are collated and categorised

4.2 Reports are compared to identify any trends in security and safety incidents and breaches

4.3 International freight transport security and safety policies and procedures are amended and trialled to improve performance
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, conventions, codes of practice and legislative requirements relevant to the planning and management of international freight transport security and safety procedures both within a freight forwarder’s workplace and in other organisations in the international freight transport supply chain
- International and Australian transport security initiatives and regulations related to the importing, exporting and transiting of goods, including aviation and maritime security
- Licence and permit requirements relevant to international freight transport security and safety procedures
- Relevant Australian and international standards and certification requirements
- Definition of transport security in the context of the international freight transport supply chain
- The importance of security and safety in the international transport supply chain
- Security and safety programs and systems in the international freight transport supply chain
- Security and safety measures required when working as an international freight forwarder
- Definition of safety in the context of the international freight transport supply chain
- Safety in the international transport supply chain
- Requirements and procedures for the protection and well-being of employees/workers and other personnel in the transport supply chain
- Requirements and procedures for the protection of the environment
- Requirements and procedures for the protection against fire
- Procedures for the planning and management of international freight transport security and safety
- Problems that may occur during the planning and management of international freight transport security and safety, and action that can be taken to prevent or resolve the problems
- Risks and hazards related to the planning and management of international freight transport security and safety, and ways of controlling the risks involved
- Business policies for security provision, including out-sourcing of components of operations and engaging additional resources
- Sources of information on security and safety in international freight transport
- Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
- Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
- Relevant workplace documentation procedures

Required skills:
• Communicate effectively with others when planning and managing international freight transport security and safety procedures, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)

• Read and interpret instructions, procedures, operational data and regulatory requirements relevant to the planning and management of international freight transport security and safety procedures

• Complete documentation and records related to the planning and management of international freight transport security and safety

• Provide leadership and work collaboratively with others when planning and managing international freight transport security and safety procedures

• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

• Promptly report and/or rectify any identified problems that may arise when planning and managing international freight transport security and safety procedures in accordance with regulatory requirements and workplace procedures

• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities

• Plan and organise systems and activities, and prioritise work

• Implement contingency plans for unplanned events including a breach of the security and safety procedures

• Modify activities depending on differing operational contingencies, risk situations and environments

• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

• Select and apply appropriate technology, information systems and procedures

• Adapt to differences in equipment in accordance with standard operating procedures

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**International freight transport includes:**

• the importing of goods
• the exporting of goods
• the transiting of goods

**Work may be undertaken:**

• in various work environments in the international freight transport supply chain including the freight forwarding organisation

**Operations may be conducted:**

• by day or night
• in any weather conditions
Worksite environment may involve:
- twenty-four hour operation
- different time zones
- single and multi-site location both in Australia and overseas
- large, medium and small workplaces

Security services may be provided:
- by internal or contract staff
- by other suitably qualified personnel in the supply chain such as in warehouses, distribution centres, seaports, airports, freight terminals, transit points, vessels, aircraft and road and rail vehicles

Security risks that may occur during an international freight forwarding project include but are not limited to:
- breaches of security (e.g. tampering with locks, packaging etc.)
- theft and pilfering
- fraud
- terrorism
- revolution
- war

Safety risks that may occur during an international freight forwarding project include but are not limited to:
- transport accident
- faulty packaging, loading or stowage of cargo
- leaks of dangerous gases, powders, biological agents and liquids
- incorrect handling of cargo
- use of inappropriate or faulty cargo handling equipment
- explosion or fire
- damage to the cargo
- natural disasters (e.g. flood, fire, storm, tsunami, earthquake etc.)
- injury to workers or members of the public arising from an accident during the handling or transport of the international freight

Regular insurance assessments may include:
- conditions of insurance
- insurance assessment of premises
- monitoring insurance requirements

Work organisation procedures and practices may include:
- security procedures
- safety procedures
- freight forwarding procedures
- financial/administrative procedures
Sources of information required to perform international freight forwarding functions may include:

- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail

Consultative processes may involve:

- internal and contract security and safety staff
- security and safety consultants
- relevant authorities, government departments and institutions
- police and emergency services
- other employees and supervisors
- management
- industrial relations, security and safety (OH&S) specialists
- other professional or technical staff
Information/documents may include but are not limited to:

- Australian and international codes of practice, conventions and regulations relevant to the planning and management of international freight transport security and safety
- documentation of physical protection facilities
- workplace security and safety procedures and policies
- insurance notes and information
- documentation of physical protection facilities
- security and safety programs and related operations manuals
- job specifications and procedures and induction documentation
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- communications technology equipment and/oral, aural or signed communications
- emergency procedures
- relevant competency standards and training materials
- customer service and quality assurance standards and procedures

Applicable legislation and regulations may include:

- Australian and international regulations, conventions and codes of practice for the safe and secure international transport of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - assessing international freight transport
security and safety risks
• specifying international transport security and safety requirements
• implementing transport security and safety plans and policies
• monitoring and reviewing security and safety system performance

Context of and specific resources for assessment
• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through activities in an appropriately simulated environment at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIO507C  Plan and manage security procedures for the enterprise

Unit Descriptor
This unit involves the skills and knowledge required to plan and manage security procedures for the workplace in accordance with relevant regulatory requirements and workplace procedures, including assessing security risks, specifying security requirements, implementing the security plan, and monitoring and reviewing the system performance. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant Australian and international regulations, standards and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field
O – Security

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Assess security risks
1.1 Records of security breaches, thefts and damage are reviewed to identify past security incidents
1.2 Assessment of potential risks to the security of stock, personnel, facilities, information and equipment are made, considering both internal and external factors
1.3 Relative risks from a range of sources are assessed and compared with existing security measures
1.4 Discrepancies between identified risk and current security processes are noted
2 Specify security requirements

2.1 Decisions and adjustments to security equipment, facilities and services are made based on risk assessment in relation to benefits to the organisation

2.2 Security organisational arrangements are documented and implementation strategies are established

2.3 A finalised security plan including performance indicators is prepared in accordance with workplace requirements and circulated for feedback prior to implementation

2.4 Questions and feedback from stakeholders are responded to promptly and, where appropriate, incorporated in the plan

3 Implement security plan

3.1 Priorities for implementation are identified and management and workplace personnel are informed

3.2 Competency needs for the work are identified and staff allocated and/or trained and assessed to meet those needs

3.3 Equipment and facilities are allocated and/or obtained

3.4 Workplace personnel and equipment are organised to meet requirements ensuring that work loads are balanced and other workplace activities are met

3.5 Workplace security policies and procedures are amended and trialed to improve performance

3.6 Operating procedures and methods are explained to workplace personnel and follow-up communication methods are used to ensure that work requirements are applied

4 Monitor and review system performance

4.1 Security reports are collated and categorised

4.2 Reports are compared to identify any trends in breaches

4.3 Security procedures are modified to rectify any gaps identified

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, codes of practice and legislative requirements relevant to the planning and management of security procedures within a workplace
- Relevant OH&S and environmental protection procedures and regulations
- Workplace procedures for the planning and management of security procedures
- Problems that may occur during the planning and management of security procedures for transport and logistics enterprises and action that can be taken to resolve the problems
- Risks and hazards related to the planning and management of security procedures and ways of controlling the risks involved
- Business policies for security provision, including out-sourcing of components of operations and engaging additional resources
Focus of operation of security systems, resources, management and workplace operating systems
- Transport and equipment applications, capacities, configurations, safety hazards and control mechanisms
- Regulatory, licence and permit requirements relevant to security procedures
- Relevant Australian Standards and certification requirements
- Workplace policies including issue resolution and grievance procedures
- Resource availability including the competencies of individuals in the team/group
- The application of current competencies within functional activity
- Relevant workplace documentation procedures

**Required skills:**
- Communicate effectively with others when planning and managing security procedures for transport and logistics enterprises
- Read and interpret instructions, procedures, operational data and regulatory requirements relevant to the planning and management of security procedures for transport and logistics enterprises and convey that information to team members
- Complete documentation and records related to the planning and management of security procedures for transport and distribution enterprises
- Provide leadership and work collaboratively with others when planning and managing security procedures for transport and distribution enterprises
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when planning and managing security procedures for transport and distribution enterprises in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan and organise systems and activities, and prioritise work
- Implement contingency plans for unplanned events which may include a breach of the security procedures
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and apply appropriate technology, information systems and procedures
- Adapt to differences in equipment in accordance with standard operating procedures
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: • in various work environments in the warehousing, storage, transport and distribution industries

Customers may be: • internal or external

Operations may be conducted: • by day or night

The workplace environment may involve: • twenty-four hour operation
 • single and multi-site location
 • large, medium and small workplaces

Security may be provided: • by internal or contract staff

Security coding for the identification of assets may include: • stocktakes
 • assets register (coded and labelled)

Regular insurance assessments may include: • conditions of insurance
 • insurance assessment of premises
 • monitoring insurance requirements

Work organisation procedures and practices may include: • financial/administrative procedures
 • security procedures

Consultative processes may involve: • internal and contract security staff
 • police
 • security consultants
 • relevant authorities, government departments and institutions
 • other employees and supervisors
 • management
 • industrial relations and OH&S specialists
 • other professional or technical staff

Communication in the work area may include: • mobile and fixed phones
 • radio
 • oral, aural or signed communications
 • fax
 • email
 • electronic data transfer of information
 • mail
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- codes of practice and regulations relevant to the planning and management of security procedures
- workplace security procedures and policies
- insurance notes and information
- documentation of physical protection facilities
- security programs operations manuals, job specifications and procedures and induction documentation
- supplier and/or client instructions
- Australian and International standards, criteria and certification requirements
- communications technology equipment and/oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation and regulations may include:

- regulations and codes of practice relevant to the planning and management of security procedures
- relevant Australian Standards and certification requirements
- relevant state/territory OH&S and environmental protection legislation in terms of duties of employers, employees, suppliers and contractors
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
**demonstrate competency in this unit**

- requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIO607D Plan and manage security procedures for transferring and transporting dangerous goods

Unit Descriptor
This unit involves the skills and knowledge required to plan and manage security procedures for transferring and transporting dangerous goods in accordance with relevant regulatory requirements and workplace procedures, including the current ADG Code. This includes clarifying the movements of hazardous or high risk goods; implementing procedures for loading, unloading or goods movement activities; checking and monitoring personnel and goods within the work area; coordinating responses on security incidents/emergencies; carrying out surveillance of work areas; and reviewing and completing goods transfer operations in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant Australian regulations, standards and codes of practice, including the ADG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

Competency Field
O – Security

ELEMENT
Elements describe the essential outcomes of a unit of competency.

1 Clarify movements of hazardous or high risk goods

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1.1 Transport schedule details, nature of risk, special precautions and procedures are planned with line managers, supervisory staff and loaders

1.2 Where applicable, appropriate permits and licences for transfer site/transport route are obtained/confirmed or
exemptions sought

1.3 Potential risks or hazards are identified, assessed and processes planned to manage risk

1.4 Information collected is checked against workplace procedures and relevant regulatory framework

1.5 Activities requiring special approval or workplace procedure changes are authorised and/or approvals obtained

1.6 Security procedures are communicated to relevant parties

2 Implement procedures for loading, unloading or goods movement activities

2.1 Advice is provided to relevant emergency response groups (internal and/or external) or other affected personnel or contractors

2.2 Procedures to control movement of equipment and personnel within the goods movement area in relation to the identified risks are initiated

2.3 Security procedures are monitored and maintained with action taken to modify procedures when necessary

2.4 Goods are moved within relevant enterprise procedures and statutory regulations

3 Check and monitor personnel and goods within the work area

3.1 Personnel and vehicles are checked in accordance with enterprise operational procedures and statutory authority regulations

3.2 Receival and delivery of consignment is recorded in accordance with enterprise operational procedures to ensure identification of carrier, vehicle, consignment, receiver and documentation

4 Coordinate responses on security incidents/emergencies

4.1 Security incidents are dealt with in accordance with statutory authority regulations and workplace operational procedures

4.2 When reports of incidents are communicated, the intended message is transmitted in a concise style that conforms to enterprise policy

4.3 Potential security risks are observed and reported in accordance with operational procedures

5 Carry out surveillance of work areas

5.1 Surveillance of work areas is in accordance with workplace operational procedures and regulatory requirements

5.2 Buildings and vehicles are appropriately secured

5.3 Personnel and vehicles are authorised to be in a secured area in accordance with workplace security procedures

5.4 Checks are made to ensure that storage areas and consignments are secure

5.5 Measures are taken to confirm that equipment is secure in accordance with workplace procedures
6 Review and complete goods transfer operation

6.1 Activities completed are checked against operational plan
6.2 Relevant documentation is completed
6.3 Specialised equipment used for the process is maintained and stored
6.4 Worksite is checked and returned to operational status

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulations and codes concerning the handling, transfer and transport of dangerous goods, including the current Australian Dangerous Goods Code
- Licence and permit requirements applicable to dangerous goods and hazardous substances
- Application of relevant Australian and international standards and associated certification requirements
- Relevant OH&S and environmental protection procedures and regulations
- Workplace procedures for planning and managing security for transferring and transporting dangerous goods and hazardous substances
- Security problems that may occur when transferring and transporting dangerous goods and hazardous substances and action that can be taken to report or resolve the problems
- Hazards that may exist when transferring and transporting dangerous goods and hazardous substances and ways of controlling the risks involved
- Focus of operation of work systems, resources, management and workplace operating systems
- Equipment applications, capacities, configurations, safety hazards and control
- Quality and customer service standards, policies and procedures
- Resource availability including the competencies of individuals in the team/group
- The application of current competencies within functional activity
- Relevant workplace documentation procedures
- Visual inspection procedures

Required skills:
- Communicate effectively with others when planning and managing security procedures for the transfer and transport of dangerous goods and hazardous substances
- Read and interpret instructions, procedures, information and regulations relevant to the planning and managing of security procedures for the transfer and transport of dangerous goods and hazardous substances
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the planning and managing of security procedures for the transfer and transport of dangerous goods and hazardous substances
- Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when planning and managing security procedures for the transfer and transport of dangerous goods and hazardous substances
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems when planning and managing security procedures for the transfer and transport of dangerous goods and hazardous substances in accordance with regulatory requirements and workplace procedures
• Identify the factors in work schedules, time and resource requirements (including sourcing expertise external to the work team) when planning and managing security procedures for the transfer and transport of dangerous goods and hazardous substances
• Implement contingency plans for unanticipated situations that may occur when planning and managing security procedures for the transfer and transport of dangerous goods and hazardous substances
• Suggest improvements to housekeeping and workplace operations and negotiate changes
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan and organise systems and activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Provide customer and client service
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and apply appropriate technology, information systems and procedures
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: • in various work environments in the warehousing, storage, transport and distribution industries

Customers may be: • internal or external

Operations may be conducted: • by day or night

The workplace environment may involve: • twenty-four hour operation • single and multi-site location • large, medium and small workplaces
Indications of potential security risks may include:

- consignment is unsealed
- consignment in unusual position
- consignment displays evidence of having been tampered with
- loose goods in the consignment
- consignment presents a potential fire hazard
- signs of possible security breaches

Plans for dangerous goods transfer/loading operations may encompass consideration of:

- approved transfer site
- positioning of vehicle
- safe operating procedures
- specification of required personal protection and emergency equipment
- specification of required transfer equipment/assemblies
- permitted ullage and filling ratios and/or carrying capacities
- segregation and/or storage requirements
- emergency/incident procedures
- customer requirements

Planning processes may require:

- application of problem solving and contingency management skills

Security arrangements may be:

- routine or established for particular purposes

Classes of dangerous goods are as:

- defined in the respective Australian Codes

Standard placarding, marking and signage for identified dangerous goods are as:

- required in the respective Australian Codes, including HAZCHEM codes

Hazards may include:

- hazardous or dangerous materials/goods
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spill, leakages, ruptures
- dust/vapours
- ignition, fire and explosion

Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting, transfer and/or handling equipment
- incident/accident/breakdown procedures
- additional gear and equipment
- authorities and permits
- noise restrictions
- hours of operation

Consultative processes may involve:

- employees, supervisors and managers
- suppliers, potential customers and existing clients
- equipment manufacturers and suppliers
- contractors
- regulatory authorities and internal and external emergency services
- dangerous goods and OH&S specialists
- industrial relations specialists
- other professional or technical staff

Communications systems may involve:

- fixed and mobile telephone
- radio
- fax
- email
- electronic data transfer of information
- mail and internal memo

Personal protective equipment may include but is not limited to:

- gloves
- safety clothing
- safety glasses
- safety headwear and footwear
- two-way radios
- face mask and respirators
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Documentation/records may include:

- Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances
- Goods identification numbers and codes, including ADG and IMDG markings and HAZCHEM signs
- Relevant codes of practice, including the Australian Dangerous Goods Code, the Australian Explosives Code, the Industry Safety Code, and National Standards for Manual Handling
- Manifests, bar codes, goods and container identification/serial number
- Manufacturers specifications, instructions and labelling advice including material safety data sheets
- Workplace operating procedures, maintenance schedules and policies
- Operations manuals, job specifications and procedures and induction documentation
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
- Supplier and/or client instructions
- Relevant Australian Standards, criteria and certification requirements
- Communications technology equipment and oral, aural or signed communications
- Quality assurance and customer service standards and procedures
- Emergency procedures
- Relevant competency standards and training materials
- QA plans, data and document control
- Conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- regulations and codes of practice related to loading/unloading of goods and manual handling including relevant road rules and mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant Australian Standards
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- transport licence or permit requirements and associated mass and loading regulations
- patent or copyright arrangements
- relevant workplace relations legislation
- equal opportunity legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - assessing security risks arising from the nature of the load
  - planning and implementing procedures for the safe and efficient loading/unloading and movement of dangerous goods
  - demonstrating knowledge of security procedures required if security measures change
  - determining (any) required permits and licensing requirements
identifying job and site hazards and planning work to minimise risks
selecting appropriate equipment and work systems to maintain the security of loads within requirements for safe handling and protection of goods, transport, personnel and the public

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIO707C Undertake emergency response action to a security threat

Unit Descriptor
This unit involves the skills and knowledge required to undertake emergency action to a potential security threat, including selecting emergency actions to be applied, maintaining communications, and reporting the incident in accordance with established procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant sections of the regulations of the relevant state/territory authorities concerned with the secure delivery of valuables, secured products, documents and materials.

Work is performed under general or limited supervision. It involves the application of the basic security principles, routine procedures and regulatory requirements to undertake appropriate emergency response action to a security threat.

Competency Field
O – Security

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Select emergency actions to be applied
1.1 Threats or potential threats are recognised
1.2 Where able, agency/branch/base and/or police are alerted to potential security threat with all relevant details and requests for supportive action being detailed
1.3 Range of emergency actions are identified and analysed
1.4 Security threat and appropriate emergency plans are matched
1.5 Emergency actions are invoked in accordance with emergency procedures and in consideration of own safety, members of the public and the consignment
1.6 Emergency actions are modified consistent with changes within the emergency environment

2 Maintain communications
2.1 Communication is maintained with agency/branch/base and relevant agencies/personnel in accordance with enterprise and emergency procedures
2.2 Information is conveyed in a clear, concise and accurate manner

3 Report incident
3.1 Reporting arrangements are completed according to enterprise
procedures
3.2 Police or other emergency services are provided with reports as required

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory permit and licence regulations and requirements
- Relevant OH&S procedures and guidelines
- Risks and hazards when transferring cash-in-transit and related precautions to control security threats
- Operational procedures for identification of security threats and undertaking emergency response
- Contingency planning relating to managing and controlling security threats
- Requirements for approved work procedures and relevant equipment
- Housekeeping standards procedures required in the workplace
- Typical problems that can occur when undertaking emergency response action to a security threat and appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate effectively with others when undertaking emergency response action to a security threat
- Read and interpret instructions, procedures, information and signs relevant to emergency response action to a security threat
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to emergency response action to a security threat
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when undertaking emergency response action to a security threat
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when undertaking emergency response action to a security threat in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when undertaking emergency response action to a security threat
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during emergency response action to a security threat
- Apply relevant agreements, codes of practice or other legislative requirements
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use equipment, processes and procedures
• Adapt to differences in equipment in accordance with standard operating procedures
• Safely use correct manual handling techniques
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• in a range of work environments and weather conditions
• by day or night

Customers may be:
• internal or external

Hazards may include:
• vehicular and pedestrian traffic
• firearm handling
• persons with felonious intent
• uneven ground, steps, road surfaces
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature

Consultative processes may involve:
• clients
• private security personnel
• public sector security personnel
• police
• security consultants
• other employees and supervisors
• management
• other professional or technical staff

Incidents may include:
• actual or potential breaches of security arrangements

Emergency actions are undertaken within:
• workplace policy and procedures

Communication may include:
• mobile and fixed phones
• radio
• oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- firearms
- two-way radios

Information/documents may include:

- workplace procedures and policies
- job specifications
- relevant manufacturers specifications
- competency standards and training materials
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- licensing and permits for firearms and security occupations
- relevant Australian Standards and certification requirements
- relevant state/territory privacy legislation
- relevant state/territory firearms legislation
- state/territory OH&S regulations and legislation, including manual handling regulations
- licensing requirements for driving and carrying particular classes of goods
- relevant state/territory road rules and traffic acts

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria.
unit of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIO807C  Implement cash-in-transit security procedures

Unit Descriptor
This unit involves the skills and knowledge required to implement cash-in-transit security procedures, including checking and monitoring personnel and goods within the work area, coordinating responses on security incidents/emergencies, and carrying out surveillance of work areas. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant sections of the regulations of the relevant state/territory authorities concerned with the secure delivery of valuables, secured products, documents and materials.

Work is performed under general or limited supervision. It involves the application of the basic principles, routine procedures and regulatory requirements to the transfer of cash-in-transit in unsecured environments.

Competency Field
O – Security

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Check and monitor personnel and goods within the work area

1.1 Personnel and vehicles are checked in accordance with workplace operational procedures and statutory authority regulations

1.2 Receival and delivery of consignment are recorded in accordance with workplace operational procedures to ensure identification of carrier, vehicle, consignment, receiver and documentation

1.3 Consignment content is checked to ensure that container seals are correctly applied and audit trail preserved prior to commencing operations

1.4 Discrepancies in consignments are reported in line with workplace procedures

2 Coordinate responses on security incidents/emergencies

2.1 Security incidents/emergencies are dealt with in accordance with statutory authority regulations and workplace operational procedures

2.2 When reports of incidents/emergencies are communicated, the intended message is transmitted in a concise style that conforms to workplace policy

2.3 Potential security risks are observed and reported in accordance with operational procedures
3 **Carry out surveillance of work areas**

3.1 Surveillance of work areas is carried out in accordance with workplace operational procedures and statutory authority regulations to ensure security requirements are fulfilled.

3.2 Equipment is checked and operated in accordance with workplace procedures and, where applicable, statutory regulations.

4 **Complete reports**

4.1 Reports of operations are completed within workplace procedures and timelines.

4.2 Incidents or occurrences are reported to authorities and workplace personnel in writing and verbally as appropriate.

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant state and territory permit and licence regulations and requirements related to the security of cash-in-transit.
- Relevant OH&S procedures and guidelines.
- Risks and hazards when transferring cash-in-transit and related precautions to control the risk.
- Operational procedures for identification of security risks.
- Details of work area, security procedures, personnel and consignment for delivery or collection.
- Contingency planning relating to managing and controlling security risks.
- Requirements for approved work procedures and relevant equipment.
- Housekeeping standards procedures required in the workplace.
- Typical problems that can occur when implementing cash-in-transit security procedures and appropriate action that can be taken to prevent or solve them.

**Required skills:**

- Communicate effectively with others when implementing cash-in-transit security procedures.
- Read and interpret instructions, procedures, information and signs relevant to cash-in-transit security procedures.
- Interpret and follow operational instructions and prioritise work.
- Complete documentation related to cash-in-transit security procedures.
- Operate electronic communication equipment to required protocol.
- Work collaboratively with others when implementing cash-in-transit security procedures.
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others.
- Promptly report and/or rectify any identified problems that may arise when implementing cash-in-transit security procedures in accordance with regulatory requirements and workplace procedures.
- Implement contingency plans for unanticipated situations that may arise when implementing cash-in-transit security procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Apply relevant agreements, codes of practice or other legislative requirements
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and correctly use equipment, processes and procedures
- Adapt to differences in equipment in accordance with standard operating procedures
- Safely use correct manual handling techniques
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**
- in a range of work environments and weather conditions
- by day or night

**Customers may be:**
- internal or external

**Security risks that may be observed and reported include:**
- consignment unsealed, in unusual position, or displays evidence of being tampered with
- loose goods
- suspicious persons or vehicles
- changes to physical environment
- potential fire hazards
- consignment subject to inclement weather
- inappropriate security maintenance requirements
- possible breakdown in security procedures

**Security requirements covered by surveillance activities may include:**
- clients are appropriately protected
- buildings, pavement routes, exits, entrances, thoroughfares and vehicles are secured
- personnel and vehicles have been checked for authorisation to be in secured area
- storage areas are secured
- consignment is secured
Security arrangements may be: • routine or established for particular purposes

Reporting may be: • verbally or in writing

Hazards may include: • vehicular and pedestrian traffic
• firearm handling
• persons with felonious intent
• uneven ground, steps, road surfaces
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature

Consignment risk may include: • staff fidelity
• other theft
• loss through negligence

Consultative processes may involve:
• clients
• private security personnel
• public sector security personnel
• police
• security consultants
• other employees and supervisors
• management
• union representatives
• industrial relations and OH&S specialists
• other professional or technical staff

Communication in the work area may include:
• mobile and fixed phones
• radio
• oral, aural or signed communications

Security systems/devices may include:
• two key safes
• ATM vaults
• surveillance cameras
• VCRs
• alarm systems
• access control systems
• time delay devices
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- firearms
- two-way radios

Information/documents may include:

- workplace procedures and policies
- operations manuals and job specifications
- relevant manufacturers specifications
- competency standards and training materials
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory OH&S regulations and legislation, including manual handling regulations
- relevant Australian Standards and certification requirements
- relevant state/territory privacy legislation
- relevant state/territory firearms legislation
- licensing and permits for firearms and security occupations
- licensing requirements for driving and carrying particular classes of goods
- relevant state/territory road rules and traffic acts

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria
TLIO807C Implement cash-in-transit security procedures

unit

of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIO907C  Test and inspect cash-in-transit security equipment

Unit Descriptor

This unit involves the skills and knowledge required to test and inspect cash-in-transit security equipment, including inspecting equipment and work area, checking the operational capability of the equipment, identifying and assessing the impact of faults on security requirements, and recording and reporting the results of inspection and testing. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

Work must be carried out in compliance with the relevant sections of the regulations of the relevant state/territory authorities concerned with the secure delivery of valuables, secured products, documents and materials.

Work is performed under general or limited supervision. It involves the application of the basic principles, routine procedures and regulatory requirements to the testing and inspection of cash-in-transit security equipment and systems.

Competency Field

O – Security

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Inspect equipment and work area

1.1 The equipment is checked prior to use in accordance with the manufacturer's safety checks, specifications and workplace procedures to ensure it is free from damage or faults that may limit operational capability

1.2 Work area is checked to ensure that it is safe and appropriate for the required task

2 Check equipment operational capability

2.1 Equipment and components are inspected in accordance with the manufacturer's specifications and workplace procedures and occupational health and safety requirements to ensure effective operation

2.2 Warning systems are checked for operational effectiveness

2.3 Inspection is conducted in accordance with maintenance schedule and degree of use

3 Identify and assess the impact of faults on security requirements

3.1 Equipment faults are identified and assessments made of the potential effect on the operation of the equipment for the required work

3.2 Non-serviceable equipment is tagged, reported to appropriate
personnel and/or processed for repair or disposal

3.3 Replacement(s) for non-serviceable equipment are obtained in accordance with workplace procedures

4 Record and report results of inspection and testing

4.1 Accurate reporting of the results of the inspection and testing is kept in accordance with statutory requirements, workplace policy and industry guidelines

4.2 Records are kept in accordance with workplace policy

4.3 Clear reference is made to any items which may affect the future safety of the equipment

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state and territory permit and licence regulations and requirements
- Relevant OH&S procedures and guidelines
- Risks and hazards associated with inspecting security equipment and systems and related precautions to control the risk
- Operational procedures for the testing and inspection of cash-in-transit security equipment and systems
- Contingency planning relating to managing and controlling security risks
- Requirements for approved work procedures and relevant equipment
- Housekeeping standards procedures required in the workplace
- Typical problems that can occur when testing and inspecting cash-in-transit security equipment and appropriate action that can be taken to prevent or solve them

Required skills:

- Communicate effectively with others when testing and inspecting cash-in-transit security equipment
- Read and interpret instructions, procedures, information and regulations relevant to the testing and inspecting of cash-in-transit security equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the testing and inspecting of cash-in-transit security equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when testing and inspecting cash-in-transit security equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems, faults or malfunctions that may be identified when testing and inspecting cash-in-transit security equipment in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Apply relevant agreements, codes of practice or other legislative requirements
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use and test security equipment and systems
• Adapt to differences in equipment in accordance with standard operating procedures
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures
• Safely use correct manual handling techniques
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments and weather conditions  
  • by day or night
Customers may be:  • internal or external
Security systems/equipment may include:  • surveillance cameras  
  • VCRs  
  • alarm systems  
  • access control systems  
  • time delay devices  
  • two key safes  
  • ATM vaults  
  • communication equipment  
  • personal protective equipment  
  • firearms
Consultative processes may involve:

- clients
- private security personnel
- public sector security personnel
- police
- security consultants
- other employees and supervisors
- management
- other professional or technical staff

Communication in the work area may include:

- mobile and fixed phones
- radio
- oral, aural or signed communications

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- firearms
- two-way radios

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace procedures and policies
- operations manuals and job specifications
- relevant manufacturers specifications and guidelines
- competency standards and training materials
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- state/territory OH&S regulations and legislation, including manual handling regulations
- relevant Australian Standards and certification requirements
- relevant state/territory privacy legislation
- relevant state/territory firearms legislation
- licensing and permits for firearms and security occupations
- licensing requirements for driving and carrying particular classes of goods
- relevant state/territory road rules and traffic acts

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
through appropriately simulated activities at the registered training organisation, and/or
in an appropriate range of situations in the workplace
TLIP1007C Assess lift requirements and provide quotation

Unit Descriptor
This unit involves the skills and knowledge required to assess job requirements for a lift using a mobile crane, and provide a quotation to a customer, including establishing customer requirements, determining the credit rating of customer, identifying the scope of the work, specifying job requirements and methods with customers, and documenting the quotation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed under general supervision. It involves the application of some judgement and routine principles and procedures to the assessment of lift requirements and the provision of a quotation for a mobile crane lift in a variety of operational contexts including specialised lifts.

Competency Field
P – Business Planning

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Establish customer requirements
1.1 Customer is addressed in a courteous and business-like manner
1.2 Customer requirements and degree of urgency are established promptly
1.3 Impact of relevant legislation or workplace policy for dealing with requirements, and ability to respond are identified
1.4 Service requests requiring additional research are allocated a priority and arrangements made for follow-up

2 Determine credit rating of customer
2.1 Customer's full credit details are taken to enable suitable reference checks to be made
2.2 Unclear or uncertain credit information is referred to management for decision prior to proceeding
2.3 When necessary, special payment arrangements are negotiated or service is refused according to workplace policy

3 Identify scope of work
3.1 Location, time, type of lift, type of crane and service needs are clarified
3.2 Need to refer job to supervisor is determined and
arrangements made according to workplace procedures

3.3 Suitability of available equipment, materials and personnel is established against customer's requirements

3.4 Need for permits, notifications and authorisations from authorities is identified

3.5 Special requirements for access and/or the lift are established and confirmed with the customer

3.6 Information regarding possible hazards is sought from customer and any hazards noted

3.7 Workplace records and rate schedules are used to determine applicable rate for customer

3.8 Suitable allowances for contingencies are provided based on findings from site inspection

4 Specify job requirements and methods with customers

4.1 Equipment, time and labour requirements to complete job safely and efficiently are established in line with legislative requirements and workplace procedures

4.2 Job requirements, proposed method for operation and costs are presented to customer with clear explanations of contingencies

4.3 Lift charts and drawings where applicable are used in clarifying job requirements to customer

4.4 Opportunities are provided for customer to seek clarification on costing and proposed methods

4.5 Quotation is followed up according to workplace procedures

4.6 Quotation is confirmed with customer and signed authorisation of quotation and relevant indemnity forms obtained in line with workplace policy and procedures

4.7 Agreed terms and conditions are included in the written quotation

5 Document quotation

5.1 Quotation format is in accordance with workplace requirements

5.2 Information is clear, concise and relevant

5.3 Copy of quotation is provided to client promptly

5.4 Quotation and related documentation is filed and other records updated accurately, legibly and promptly according to workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation

• Relevant OH&S and environmental procedures and regulations
• Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
• Company work procedures concerning the assessment of lift requirements and the provision of a quotation for a mobile crane lift
• Costing structures for mobile crane lifts
• Sources of information required to assess lift requirements and provide a quotation for a mobile crane lift
• Procedures and protocols for checking the credit rating of a customer
• Typical problems that may occur when assessing lift requirements and providing a quotation and appropriate related action and solutions
• Prioritising and multi-tasking work
• Focus of operation of work systems and equipment
• Operational procedures for crane crews

**Required skills:**
• Communicate effectively with others when assessing lift requirements and providing a quotation
• Read and interpret instructions, procedures, information and technical data relevant to the assessment of lift requirements and provision of a quotation
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the assessment of lift requirements and provision of a quotation
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when assessing lift requirements and providing a quotation
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems that may be identified when assessing lift requirements and providing a quotation in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when assessing lift requirements and providing a quotation
• Apply relevant agreements, codes of practice or other legislative requirements
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify and correctly assess requirements for equipment, processes and procedures needed during a lift
Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include movement of:
- equipment
- goods
- materials
- vehicular traffic

Customers may be:
- internal or external

Quotations may be provided for mobile crane lifts in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Specialised lifts may include:
- large surface areas—pools
- tilt-up panels
- drive-in movie screens
- tree removal and replacement
- bridge beams
- multiple crane lifts
- passing loads to other cranes
- tailing out of loads
- turning loads over
- lifting high value goods
- recovery work
- specialised operations—drag lines
- clam shell
- pile driving
- barge work
- work involving work box duties
Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- crane and equipment manufacturers specifications and guidelines
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to specialised mobile crane operations
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
demonstrate competency in this unit

requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIP107C Develop plans to meet customer and organisation needs

Unit Descriptor
This unit involves the skills and knowledge required to develop plans to meet customer and organisation needs, including contributing to strategic planning, analysing market needs, contributing to business documentation, and communicating on planning matters with other members of the organisation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work is performed under limited or minimum supervision with general guidance on progress and outcomes of work. It involves discretion and judgement for self and others in developing plans to meet customer and organisation needs.

A range of opportunities may be used to develop the workplace and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives.

Work involves responsibility for the development of work plans and the provision of leadership of others either individually or in teams.

Competency Field
P – Business Planning

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Contribute to strategic planning
1.1 A contribution is made to a shared vision and values for the workplace by assisting the examination of future opportunities and directions and their use in the shaping of business goals and objectives
1.2 A contribution is made to strategic planning by assisting in the investigation of the business environment of the workplace

2 Analyse market needs
2.1 Customer needs are researched and the outcomes analysed and interpreted to establish business options and opportunities
2.2 Opportunities are identified for product and service enhancement through an analysis of existing and potential market opportunities and the development of strategies to strengthen the workplace's market focus in suitable directions

3 Contribute to business
3.1 Contributions are made to the preparation of the workplace's
3.2 All workplace insurance needs are identified and suitable cover taken out

4 Communicate to other members of the organisation

4.1 The outcomes of the planning process are communicated to appropriate persons in the organisation and feedback mechanisms used to ensure continuous improvement of the planning process and outcomes

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the development of plans to meet customer and organisation needs, including: strategic planning, tactical planning and quality improvement of services/operations/products
- Relevant workplace business management policies and practices, including requirements for the maintenance of security and confidentiality
- Insurance requirements relevant to business operations
- Focus of operation of business planning systems and resources
- Resource availability including the processing capacity of equipment and software systems for planning activities
- Typical problems that can occur when developing plans to meet customer and organisation needs and related appropriate action that can be taken

Required skills:

- Communicate and negotiate effectively with others when developing plans to meet customer and organisation needs
- Read and interpret instructions, procedures, information and signs relevant to the development of plans to meet customer and organisation needs
- Interpret and follow operational instructions and prioritise work
- Survey and assess organisation and customer requirements
- Complete documentation related to the development of plans to meet customer and organisation needs
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when developing plans to meet customer and organisation needs
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when developing plans to meet customer and organisation needs in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when developing plans to meet customer and organisation needs
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
- single and multi-site locations
- large, medium and small companies

Services, products, risks, work systems and requirements may:
- potentially vary across different sections of the workplace

Operations involve:
- internal and external customer contact and coordination

Plans may include:
- operational plans
- marketing plans
- financial plans

Consultative processes may involve:
- other employees and supervisors
- customers and suppliers
- management and union representatives
- industrial relations and OH&S specialists
- other professional or technical staff, contractors and maintenance personnel

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:
- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures
Information/documentation may include:

- procedures for the development of workplace plans and budgets
- customer/client instructions and assessed requirements
- legislation, regulations and related documentation relevant to business operations
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- insurance requirements
- relevant agreements, codes of practice including the National Standards for Services and Operations
- manufacturers/suppliers specifications, advice, recommended procedures, policies and instructions
- reports of accidents and incidents within regulatory requirements and workplace procedures
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- quality assurance procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements
- taxation and trading regulations relevant to business operations
- relevant insurance regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIP1107C** Develop and evaluate strategies for transport and distribution enterprises

**Unit Descriptor**
This unit involves the skills and knowledge required to develop and evaluate strategies for transport and distribution enterprises in accordance with relevant regulatory requirements and workplace procedures. This includes analysing the enterprises internal and external operating environment, developing strategies to maximise outcomes for the enterprise, implementing and evaluating strategies, and responding to changes within the transport and distribution environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work activities must be carried out in compliance with the relevant Australian and international regulations, standards and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

**Competency Field**
P – Business Planning

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Analyse the enterprise's internal and external operating environment**

1.1 The effectiveness of the enterprise's principal services, products and competitive advantages are identified and confirmed through market analysis

1.2 External factors, including legislative requirements, changes to technology, domestic and international market variability and political constraints impinging upon the operation of the enterprise are researched and analysed

1.3 Impending changes to internal operations or the external environment are determined
1.4 An analysis is undertaken of the enterprise's capacity to operate within the defined environment, outlining opportunities to improve market share and/or positioning.

1.5 Recommendations for changes to workplace structure, systems, procedures, workforce composition, market orientation and the like are generated and documented in consideration of internal and external analysis and the enterprise's goals and values.

2 Develop strategies to maximise outcomes for the enterprise

2.1 Recommendations for changes to the enterprise's operations are assessed for feasibility and for cost-benefit from both a short- and long-term perspective.

2.2 Capability and capacity of the enterprise to facilitate changes within financial and time constraints are assessed and documented.

2.3 Recommendations and supporting documentation are circulated for agreement to relevant personnel.

2.4 Strategies to implement agreed recommendations are generated and documented.

2.5 Support processes, including the allocation of human, physical and financial resources, the designation of timelines and the setting of the culture and climate of the enterprise, are undertaken.

3 Implement and evaluate strategies

3.1 Performance benchmarks for measuring the effectiveness of the change strategies are implemented.

3.2 Responsibilities for implementing the change strategies are clearly defined and allocated to designated personnel.

3.3 Implementation processes are monitored and, where required, adjustments to the strategies are made.

3.4 Performance of the enterprise in relation to the identified benchmarks is regularly monitored and reviewed and adjustments made where required.

3.5 Individuals/teams are kept informed of progress in the implementation of change.

4 Respond to changes within the transport and distribution environment

4.1 The nature, extent and impact of any issues or changes upon the operations of the enterprise are identified.

4.2 Relevant information is processed to establish priorities and responses for dealing with issues or changes.

4.3 Strategies are generated/adjusted and controlled to meet changes in the transport and distribution environment.

4.4 Liaison is initiated and maintained with organisations/individuals affected by changed operational practice.
4.5 Actions undertaken are clearly documented and filed

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international regulations, codes of practice and legislative requirements relevant to workplace operations
- Relevant OH&S and environmental protection procedures and regulations
- Workplace processes for development and evaluation of strategies for an enterprise
- Problems that may occur during the development and evaluation of strategies for an enterprise and action that can be taken to report or resolve the problems
- Hazards and risk that may exist when developing and evaluating strategies for an enterprise and ways of controlling the risks involved
- Focus of operation of competitor and internal business systems, resources, management and workplace operating systems
- Current and future market initiatives including new technologies, products and processes
- Market and other external environmental factors including the regulatory environment
- Organisational strengths and weaknesses including the competencies of individuals in the team/group
- Application of relevant Australian and international standards and associated certification requirements
- Resource availability including the competencies of individuals in the team/group
- The application of current competencies within functional activity
- Relevant workplace documentation procedures

Required skills:
- Communicate effectively with others when developing and evaluating strategies for an enterprise
- Read and interpret business and market data, regulatory requirements and other planning information relevant to the development and evaluation of strategies for an enterprise
- Prioritise work and coordinate self and others in relation to workplace activities
- Complete documentation related to the development and evaluation of strategies for an enterprise
- Operate electronic communication equipment to required protocol
- Provide leadership and work collaboratively with others when developing and evaluating strategies for an enterprise
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when developing and evaluating strategies for an enterprise in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when developing and evaluating strategies for an enterprise
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan and organise business systems and activities
• Monitor work activities in terms of planned schedule
• Modify activities to cater for variations in workplace contexts and environment
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and apply appropriate technology, information systems and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: in various work environments in the warehousing, storage, transport and distribution industries

Customers may be: internal or external

Transport and distribution operations may be conducted: by day or night, in all weather conditions

The workplace environment may involve: twenty-four hour operation, single and multi-site locations, large, medium and small workplaces

Analysis of strategic directions for enterprise will entail: short- and long-term perspectives

Planning information may be generated from a wide range of sources, including: analysts, authorities, clients, state and Commonwealth governments, industry forums, peak industry bodies, internal personnel
Strategies must consider issues such as:

- workplace productivity
- culture
- technology implications
- cost-benefit
- issues of change management

External consultants may be engaged in:

- development, implementation and evaluation processes

Workplace systems may include:

- transport and distribution policies, protocols and procedures
- communications systems
- scope of workplace operations
- authorities and permits
- hours of operation
- relevant regulations

Consultative processes may involve:

- employees, supervisors and managers
- suppliers and current or potential clients
- contractors
- market analysts
- relevant authorities, government departments and institutions
- representatives of other enterprises and organisations
- industrial relations and OH&S specialists
- other professional, maintenance or technical staff

Communications systems may involve:

- fixed and mobile telephone
- radio
- fax
- email
- electronic data transfer of information
- mail and internal memo
- RF systems

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Documentation/records may include:

- Australian and international codes of practice and regulations relevant to workplace operations
- Australian and international regulations and codes of practice for the handling, storage, transfer and transport of dangerous goods and hazardous substances, including the ADG and IDG Code
- workplace operating procedures and policies
- operations manuals, job specifications and procedures and induction documentation
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
- supplier and/or client instructions
- audit reports concerning quality, OH&S, environment, operations, customer service
- Australian and international standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- regulations and codes of practice relevant to business operations
- Australian and international regulations and codes of practice for the handling, storage, transport and transfer of dangerous goods and hazardous substances
- relevant Australian and international standards and certification requirements
- relevant state/territory trade practices legislation
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant licence or permit requirements and associated regulations
- patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIP1307A**  Implement and monitor logistics planning and process

**Unit Descriptor**
This unit involves the skills and knowledge required to implement and monitor logistics planning and process. It includes planning an efficient logistics operation; developing a contingency management strategy; producing operational schedules; and monitoring and coordinating systems for logistics operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

**Competency Field**
P – Business Planning

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Plan efficient logistics operation</td>
<td>1.1 Relevant Australian and international codes and regulations and workplace policies for logistics operation are identified</td>
</tr>
<tr>
<td></td>
<td>1.2 Specifications and/or requirements for task outcomes are obtained, interpreted and, where necessary, clarified and applied to the development of a work plan</td>
</tr>
<tr>
<td></td>
<td>1.3 Preliminary schedules are matched against operational capacity and capability of available transport systems, equipment and staff</td>
</tr>
<tr>
<td></td>
<td>1.4 Strategies to address identified deficiencies in operational capability and availability are undertaken in accordance with workplace procedures</td>
</tr>
<tr>
<td>2 Develop contingency management strategy</td>
<td>2.1 Sequence of required activities is identified in accordance with company requirements</td>
</tr>
<tr>
<td></td>
<td>2.2 Typical problems that may arise with logistics operations are identified and strategies for dealing with them determined</td>
</tr>
<tr>
<td></td>
<td>2.3 Contingency management strategies for identified issues/incidents are established and evaluated including reference to previous scenarios of similar nature</td>
</tr>
<tr>
<td>3 Produce operation</td>
<td>3.1 Resources are arranged in association with relevant Australian</td>
</tr>
</tbody>
</table>
Implement and monitor logistics planning and process

3.2 Australian and international regulatory requirements, codes of practice and workplace procedures are identified and accounted for in operational schedule

3.3 Records are stored in accordance with workplace procedures

4 Monitor and coordinate systems for logistics operations

4.1 Outcomes are checked and compared with planned objectives, task instructions and specifications to ensure all requirements are met

4.2 Non-compliance with quality standards, planned processes or regulatory requirements is identified and appropriate action is initiated to report and rectify any identified problems

4.3 Customer concerns and suggestions for service improvements are acted upon in accordance with workplace procedures

4.4 Any changes in Australian and international regulations and codes of practice relevant to export logistics are monitored, identified and appropriate action is initiated to ensure ongoing compliance of export logistics processes and systems

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of national and state or territory regulatory requirements and codes of practice as they relate to the level and type of logistics operations undertaken by the enterprise
- Relevant OH&S and environmental procedures and regulations
- Australian and international regulatory, permit and licence requirements relevant to logistics
- Broad principles of supply chain management
- Business policies and plans including procedures for outsourcing components of operations and engaging additional resources
- Workplace policies including issue resolution and grievance procedures
- Coaching and mentoring approaches to support team members to share knowledge and skills

Required skills:
- Read and interpret local and international transport schedules, regulatory requirements, customer instructions, and workplace procedures and manuals
- Identify and solve problems that may arise during the planning and management of export logistics
- Provide leadership to others
- Plan and organise logistics operations
- Select and apply appropriate application of technology, information and communication systems and procedures
- Complete documentation related to work activities
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Develop and document contingency plans as part of the planning process
- Modify activities depending on differing operational contingencies, risk situations and environments

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Consultative processes may involve:**
- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- customers and agents

**Documentation and records may include:**
- regulations and codes of practice relevant to ADG code, including safeworking and local authority regulations and procedures
- relevant OH&S and environmental protection regulations
- workplace policies and procedures related to ADG code
- quality assurance procedures
- dangerous goods declarations and material safety data sheets, where applicable
- goods manifest
- relevant Australian Standards and certification requirements

**Applicable legislation and regulations may include:**
- Australian Marine Orders and the International Maritime Dangerous Goods Code
- Dangerous Goods by Air regulations
- Australian and International Explosives Codes
- transport licence/permit requirements
- export/import/quarantine/bond requirements
- Marine/Aviation Orders
- equal opportunity, equal employment opportunity and affirmative action
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Facilitate and capitalise on change in the workplace

Unit Descriptor
This unit involves the skills and knowledge required to facilitate and capitalise on change and innovation in the workplace, including participating in planning for the introduction of change, developing creative and flexible approaches to solutions to change-related problems, and managing emerging challenges and opportunities in the workplace. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work is performed under limited or minimum supervision with general guidance on progress and outcomes of work. It involves discretion and judgement for self and others in facilitating and capitalising on change and innovation in the workplace.

A range of opportunities may be used to support the development of changes to work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives by the work area and the individuals and teams within it.

Work involves responsibility for facilitating change in the workplace and the provision of leadership of others either individually or in teams.

Competency Field
P – Business Planning

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Participate in planning the introduction of change
1.1 Opportunities are taken to respond to the changing needs of customers and the organisation
1.2 Effective contributions are made to the organisation's planning processes to introduce change
1.3 Plans to introduce change are made in consultation with affected individuals/groups
1.4 The organisation's objectives and plans to introduce change are explained clearly to individuals/teams

2 Develop creative and flexible approaches to solutions
2.1 Alternative approaches to managing workplace issues and problems are identified and analysed
2.2 Risks are assessed and action is taken to achieve a recognised benefit or advantage to the organisation
2.3 The workplace is managed in a way that promotes the
development of innovative approaches and outcomes

2.4 Creative and responsive approaches to resource management improves productivity and/or reduces costs in a competitive environment

3 Manage emerging challenges and opportunities

3.1 Individuals/teams respond effectively and efficiently to changes in the organisation's goals, plans and priorities
3.2 Coaching and mentoring assists individuals/teams develop competencies to handle change efficiently and effectively
3.3 Individuals/teams are kept informed of progress in the implementation of change
3.4 Recommendations for improving the methods/techniques to manage change are negotiated with designated persons/groups

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant and regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the facilitation and capitalisation of change in the workplace, including: risk management, problem solving, strategic planning, quality improvement, and customer service
- Relevant workplace business management policies and practices, including requirements for the maintenance of security and confidentiality
- Focus of operation of business planning systems and resources
- Resource availability including the processing capacity of equipment and software systems for planning activities
- Typical problems that can occur when planning and facilitating the introduction of changes and innovations in the workplace and related appropriate action that can be taken

Required skills:
- Communicate and negotiate effectively with others when planning and facilitating the introduction of changes and innovations in the workplace
- Read and interpret instructions, procedures and information relevant to the planning and facilitation of changes and innovations in the workplace
- Interpret and follow operational instructions and prioritise work
- Survey and assess organisation and customer requirements for change and innovation
- Complete documentation related to the planning and facilitation of changes and innovations in the workplace
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when planning and facilitating the introduction of changes and innovations in the workplace
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when planning and facilitating the introduction of changes and innovations in the workplace in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:

• single and multi-site locations
• large, medium and small companies

Services, products, risks, work systems and requirements may:

• potentially vary across different sections of the workplace

Change may include:

• new management
• new work practices
• new products or services
• changes in work locations
• changes in work structures
• new quality systems
• new training programs

Learning methods may include:

• mentoring
• coaching
• exchange/rotation
• action learning
• shadowing
• structured training programs

Relevant regulations/legislation may be related to:

• contract disputation
• confidentiality
• goods regulatory requirements
• probity
Consultative processes may involve:
- other employees and supervisors
- customers and suppliers
- management and union representatives
- industrial relations and OH&S specialists
- other professional or technical staff, contractors and maintenance personnel

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:
- procedures for the development of workplace plans and budgets
- customer/client instructions and assessed requirements
- legislation, regulations and related documentation relevant to business operations
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- insurance requirements
- relevant agreements, codes of practice including the National Standards for Services and Operations
- manufacturers/suppliers specifications, advice, recommended procedures, policies and instructions
- reports of accidents and incidents within regulatory requirements and workplace procedures
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- quality assurance procedures

Applicable regulations and legislation may include
- relevant regulations, standards and codes of practice
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements
- taxation and trading regulations relevant to business operations
- relevant insurance regulations
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIP307D  Implement, maintain and evaluate dangerous goods transport procedures within the workplace

Unit Descriptor
This unit involves the skills and knowledge required to implement, maintain and evaluate dangerous goods transport procedures within the workplace in accordance with relevant regulatory requirements and workplace procedures. This includes implementing a policy framework for the transport and storage of dangerous goods; establishing and maintaining procedures for identifying hazards and risks; establishing and maintaining assessment procedures for monitoring conformance and controlling risks; implementing and monitoring procedures for maintaining dangerous goods records; and evaluating the implementation of dangerous goods transport policies, procedures and programs within the workplace. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant Australian regulations, standards and codes of practice, including the current Australian Dangerous Goods Code (ADG Code).

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

Competency Field
P – Business Planning

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Implement a policy framework for the transport and storage of dangerous goods

1.1 Policies are developed to implement the current ADG Code and dangerous goods transport and storage regulations consistent with overall workplace policies

1.2 Responsibilities and duties for the transport and storage of...
dangerous goods are clearly defined, allocated and included in job descriptions and duty statements for all relevant positions

1.3 Licensing requirements for employees (where relevant) are confirmed

1.4 Consultative processes are developed and implemented

1.5 Emergency incident/accident procedures are developed and implemented

1.6 Information, instruction and training on dangerous goods transport and storage procedures are provided to enable employees to effectively implement the required systems and processes

2 Establish and maintain procedures for identifying hazards and risks

2.1 Hazards in the work area are identified and confirmed

2.2 Procedures for ongoing identification of hazards and risks are developed and integrated within work systems

2.3 Hazard identification is addressed at the planning, design and evaluation stages of any workplace change

2.4 A maintenance and inspection program is instituted to confirm that vehicles, equipment and storage areas comply with regulatory and enterprise requirements

3 Establish and maintain assessment procedures for monitoring conformance and controlling risks

3.1 Ongoing system for the control of risks, based on a hierarchy of control is developed and integrated within general work procedures

3.2 Measures to control assessed risks and monitor conformance are developed and implemented, in accordance with the current ADG Code, relevant dangerous goods transport regulations, code of practice and priorities identified in the workplace

3.3 Non-conformance is investigated and procedures for rectification instituted

3.4 Inadequacies in dangerous goods transport procedures are identified and measures are implemented to improve workplace practice

4 Implement and monitor procedures for maintaining dangerous goods records

4.1 A dangerous goods records system is established in accordance with relevant legislative framework

4.2 Accurate and legible records for operation within the workplace are completed in accordance with the current ADG Code, dangerous goods transport enterprise policies and legislative requirements

5 Evaluate the implementation of dangerous goods transport policies, procedures and programs is assessed

5.2 Improvements to dangerous goods transport procedures are
5.3 Compliance with the current ADG Code, dangerous goods transport regulations and codes of practice is assessed to ensure legal requirements are maintained as a minimum and exceeded where possible

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations and codes concerning the transport of goods and freight
- Current ADG Code and relevant Australian Standards applicable to dangerous goods and hazardous substances
- Relevant OH&S and environmental protection procedures and regulations
- Workplace processes for implementing, maintaining and evaluating dangerous goods transport procedures
- Problems that may occur during the transport of dangerous goods and hazardous substances and action that can be taken to report or resolve the problems
- Hazards that may exist during the transport of dangerous goods and hazardous substances and ways of controlling the risks involved
- Focus of operation of dangerous goods transport systems, resources, management and workplace operating systems
- Equipment applications, capacities, configurations, safety hazards and control
- Regulatory, licence and permit requirements for dangerous goods transport
- Quality and customer service standards, policies and procedures
- Application of relevant Australian and international standards and associated certification requirements
- Resource availability including the competencies of individuals in the team/group
- The application of current competencies within functional activity
- Relevant workplace documentation procedures

Required skills:

- Communicate effectively with others when implementing, maintaining and evaluating dangerous goods transport procedures
- Read and interpret instructions, procedures, information and manuals relevant to the implementation, maintenance and evaluation of dangerous goods transport procedures
- Manage and prioritise work and coordinate self and others in relation to workplace activities
- Complete documentation related to the implementation, maintenance and evaluation of dangerous goods transport procedures
- Operate electronic communication equipment to required protocol
- Provide leadership and work collaboratively with others when implementing, maintaining and evaluating dangerous goods transport procedures
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems, faults or malfunctions that may be identified when implementing, maintaining and evaluating dangerous goods transport procedures in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations when implementing, maintaining and evaluating dangerous goods transport procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Identify the factors in work schedules, time and resource requirements (including sourcing expertise external to the work team) when implementing, maintaining and evaluating dangerous goods transport procedures
• Plan and organise systems and activities
• Monitor work activities in terms of planned schedule
• Modify activities to cater for variations in workplace contexts and environment
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Provide customer and client service
• Select and apply appropriate technology, information systems and procedures
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: • in various work environments in the warehousing, storage, transport and distribution industries

Customers may be: • internal or external

Operations may be conducted: • by day or night • in all weather conditions

The workplace environment may involve: • twenty-four hour operation • single and multi-site location • large, medium and small workplaces
### Plans for dangerous goods transport procedures may encompass consideration of:
- approved transfer site
- positioning of vehicle when loading/unloading
- safe operating and driving procedures
- specification of required personal protection and emergency equipment
- specification of required transfer equipment/assemblies
- permitted ullage and filling ratios and or carrying capacities
- segregation and/or storage requirements
- emergency/incident/breakdown procedures
- customer requirements

### Classes of dangerous goods are:
- as defined in the respective Australian codes

### Policies and procedures for the transportation of dangerous goods must:
- conform to relevant legislative framework and guidance material

### Hazards may include:
- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spill, leakages, ruptures
- dust/vapours

### Hazard management is consistent with:
- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

### Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised transfer/transport equipment
- incident/accident/breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits
Consultative processes may involve:
- employees, supervisors and managers
- supplier instructions
- equipment manufacturers and suppliers
- contractors
- industrial relations and OH&S specialists
- other professional or technical staff

Communications systems may involve:
- fixed and mobile telephone
- radio
- fax
- email
- electronic data transfer of information
- mail and internal memo

Personal protective equipment may include but is not limited to:
- gloves
- safety clothing
- safety headwear and footwear
- safety glasses
- two-way radios
- face mask, respirators and breathing apparatus
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Documentation/records may include:

- all relevant Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including the ADG Code
- goods identification numbers and codes, including current ADG code and IMDG markings and HAZCHEM signs
- relevant codes of practice, including the Australian Dangerous Goods Code, the Australian Explosives Code, the Industry Safety Code, and National Standards for Manual Handling
- manifests, bar codes, goods and container identification/serial number
- manufacturers specifications, instructions and labelling advice including material safety data sheets
- workplace operating procedures, maintenance schedules and policies
- operations manuals, job specifications and procedures and induction documentation
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
- supplier and/or client instructions
- relevant Australian Standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- quality assurance and customer service standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- regulations and codes of practice related to transport of goods and manual handling including relevant road rules and mass and loading regulations
- Australian and international regulations and codes of practice for the handling, transfer and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant Australian Standards
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- workplace relations regulations
- equal opportunity legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - implementing and monitoring policies and processes for the transport of dangerous goods
  - suggesting improvements to dangerous goods transport procedures and negotiating changes where required
  - demonstrating knowledge of the hierarchy of control and its implementation in the workplace
  - liaising with authorities, drivers, line managers and customers to ensure that policies and procedures are meeting required
needs
o identifying requirements of tasks and
organising planning, job completion and
evaluation stages
o mediating and resolving issues surrounding
the transport of dangerous goods,
maximising positive outcomes for the
workplace and the individuals within it

Context of and specific
resources for assessment

• Performance is demonstrated consistently over a period
of time and in a suitable range of contexts
• Resources for assessment include:
o a range of relevant exercises, case studies
and other simulated practical and knowledge
assessment, and/or
o access to an appropriate range of relevant
operational situations in the workplace
• In both real and simulated environments, access is
required to:
o relevant and appropriate materials and/or
equipment, and/or
o applicable documentation including
workplace procedures, regulations, codes of
practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a
registered training organisation
• As a minimum, assessment of knowledge must be
conducted through appropriate written/oral tests
• Practical assessment must occur:
o through appropriately simulated activities at
the registered training organisation, and/or
o in an appropriate range of situations in the
workplace
TLIP407C Develop a transport and distribution business plan

Unit Descriptor
This unit involves the skills and knowledge required to develop a business plan for an organisation or a discrete business unit in the transport, storage and distribution industries in accordance with relevant regulatory requirements and workplace procedures. This includes conducting a situational and market analysis, analysing the organisational environment, developing appropriate strategies, and implementing and evaluating the resulting business plan. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Business activities must be carried out in compliance with the relevant Australian and international regulations, standards and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

Competency Field
P – Business Planning

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Conduct a situational and market analysis
1.1 The transport and distribution business's principal services, markets, products and the factors that distinguish the business and contribute to its success are identified
1.2 The transport and distribution business/operating environment is defined and reviewed using information from staff members, customer feedback and external sources
1.3 Qualitative and quantitative market analysis data is documented
1.4 Target markets and relevant regulatory requirements are
1.5 Impact of transport and distribution business on market is recorded and projected change in market and/or services during the life of the plan is projected

1.6 Competitors, customer perceptions and market share of existing competitors operating in the transport and distribution industry are identified

1.7 Proposed business focus on specific target markets, pricing, sales and appeals are defined

1.8 Potential profitable opportunities are identified and documented

2 Analyse organisational environment

2.1 Current transport and distribution business operations, practices, work flow, equipment and facilities are analysed

2.2 Capability of the organisation in terms of technology, research, development and tools is outlined

2.3 Current resources and any resources that may be accessed to meet identified opportunities for business operations are evaluated

2.4 Developments in technologies predicted within the lifetime of the business plan are evaluated and analysed

2.5 Capability of the organisation in terms of staff, equipment, facilities, operational systems and financial status are assessed for strengths and weaknesses

2.6 Costs of making operational adjustments in relation to existing and new business to influence improved profitability and positioning are reviewed

2.7 Premises for decisions are documented, potential circumstances which may alter the environment are identified and contingency provisions are made

3 Develop strategies

3.1 Benchmark goals are documented and checked for realism in terms of internal and external environmental factors

3.2 Decisions and adjustments regarding resource allocation to various products and services are made, based on external and internal analyses

3.3 Organisational adjustments are documented and implementation strategies established

3.4 Projections of profit and loss or income statements per quarter until break-even point are constructed for the whole organisation and each cost centre

3.5 A finalised business plan including performance indicators is prepared in accordance with enterprise requirements and circulated to stakeholders

3.6 Questions and feedback from stakeholders are responded to promptly and, where appropriate, incorporated into the plan
4 Implement and evaluate business plan

4.1 Implementation plans for the management of workplaces, staff, business operation and operational systems are monitored and, where required, adjustments to the plans are made

4.2 Current and future marketing strategies and any areas of specialisation are detailed and implemented

4.3 Performance of the organisation in relation to the identified performance indicators are regularly monitored and reviewed

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international regulations, codes of practice and legislative requirements relevant to business operations
- Relevant OH&S and environmental protection procedures and regulations
- Workplace processes for the development of a transport and distribution business plan
- Problems that may occur during the development of a transport and distribution business plan and action that can be taken to report or resolve the problems
- Hazards that may exist in the operation of a transport and distribution business and ways of controlling the risks involved
- Focus of operation of competitor and internal business systems, resources, management and workplace operating systems
- Equipment applications, capacities, configurations, safety hazards and control
- Market and other external environmental factors including the regulatory environment
- Organisational strengths and weaknesses including the competencies of individuals in the team/group
- Application of relevant Australian and international standards and associated certification requirements
- Resource availability including the competencies of individuals in the team or group
- The application of current competencies within functional activity
- Relevant workplace documentation procedures

Required skills:

- Communicate effectively with others when developing a transport and distribution business plan
- Read and interpret business and market data, regulatory requirements and other planning information relevant to the development of a transport and distribution business plan
- Prioritise work and coordinate self and others in relation to workplace activities
- Complete documentation related to work activities and the development of a transport and distribution business plan
- Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when developing a transport and distribution business plan
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise during the development of a transport and distribution business plan in accordance with workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan and organise business systems and activities
• Monitor work activities in terms of planned schedule
• Modify activities to cater for variations in workplace contexts and environment
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and apply appropriate technology, information systems and procedures
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: • in various work environments in the warehousing, storage, transport and distribution industries

Customers may be: • internal or external

Transport and distribution operations may be conducted: • by day or night • in all weather conditions

The workplace environment may involve: • twenty-four hour operation • single and multi-site locations • large, medium and small workplaces

Business systems may include: • transport and distribution policies, protocols and procedures • communications systems • scope of workplace operations • authorities and permits • hours of operation • relevant regulations

The transport and distribution business plan may be: • developed for a whole organisation or a business unit within an organisation

Products may be: • goods and/or services
Consultative processes may involve:

- employees, supervisors and managers
- suppliers and current or potential clients
- relevant authorities, government departments and institutions
- representatives of other enterprises and organisations
- industrial relations and OH&S specialists
- other professional or technical staff

Communications systems may involve:

- fixed and mobile telephone
- radio
- fax
- email
- electronic data transfer of information
- mail and internal memo
- RF systems

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- Australian and international codes of practice and regulations relevant to business operations
- Australian and international regulations and codes of practice for the handling, storage, transfer and transport of dangerous goods and hazardous substances, including the ADG and IDG Code
- workplace operating procedures and policies
- operations manuals, job specifications and procedures and induction documentation
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- regulations and codes of practice relevant to business operations
- Australian and international regulations and codes of practice for the handling, storage, transport and transfer of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant licence or permit requirements and associated regulations
- patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIP507C  Manage workplace information

Unit Descriptor
This unit involves the skills and knowledge required to manage workplace information, including identifying and sourcing information needs; collecting, analysing and reporting information; using management information systems; contributing to the preparation of operational plans; and preparing resource proposals. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work is performed under limited or minimum supervision with general guidance on progress and outcomes of work. It involves the use of discretion and judgement for self and others when managing workplace information systems.

A range of opportunities may be used to develop the work area and to support the development of information systems and appropriate strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives by the work area and the individuals and teams within it.

Work involves responsibility for management of information processing and storage systems in the workplace and the provision of leadership of others either individually or in teams.

Competency Field
P – Business Planning

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and source information needs
1.1 The information needs of individuals/teams is determined and the potential sources of information are identified
1.2 Information held by the organisation is reviewed to determine suitability and accessibility
1.3 Arrangements are made to obtain information which is not available/accessiable within the organisation

2 Collect, analyse and report information
2.1 Collection of information is timely and relevant to the needs of individuals/teams
2.2 Information is in a format suitable for analysis, interpretation and dissemination
2.3 Information is analysed to identify and report relevant trends and developments in terms of the needs for which it was acquired
### 3 Use management information systems

3.1 Management information systems are used effectively to store and retrieve data for decision making
3.2 Technology available in the work area/organisation is used to manage information efficiently and effectively
3.3 Recommendations for improving the information system are submitted to designated persons/groups

### 4 Contribute to the preparation of operational plans

4.1 Individuals/teams are involved in the preparation of operational plans in ways which use their contribution effectively and gains their support for the outcomes
4.2 Operational plans are prepared and presented in accordance with the workplace's guidelines and requirements

### 5 Prepare resource proposals

5.1 Resource planning data is collected in consultation with colleagues, including those who have a specialist role in resource management
5.2 Estimates of resource needs and utilisation reflects the workplaces business plans and customer and supplier requirements
5.3 Proposals to secure resources are supported by clearly presented submissions describing realistic options, benefits, costs and outcomes

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

#### Required knowledge:
- Relevant regulatory and code requirements
- Relevant OH&S and environmental protection responsibilities, policies and procedures
- Workplace protocols and procedures for the management of workplace information
- Workplace business policies and plans as they relate to financial reporting and information system management and improvement
- Focus of operation of recording, reporting and statistical analysis systems and resources
- Resource availability including the processing capacity of equipment and software systems for statistical analysis of data
- Typical problems that can occur with the management of workplace information and related appropriate action that can be taken

#### Required skills:
- Communicate effectively with others when managing workplace information
- Read and interpret instructions and procedures relevant to the management of workplace information
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the management of workplace information
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when managing workplace information
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise during the management of workplace information in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and efficiently use information management systems and technologies
• Select and appropriately apply technology, information systems and procedures to workplace tasks
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:

- single and multi-site locations
- large, medium and small companies

Services, products, risks, work systems and requirements may:

- potentially vary across different sections of the workplace

Operations involve:

- internal and external customer and supplier contact and related information coordination

Information may be:

- in print or electronic form and may include forms, letters, memos, operational data, faxes, manifests, inventories, orders, invoices, freight documentation and other documents, records and data required within warehousing, stevedoring, transport & distribution operations

Communications systems may involve:

- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail
Consultative processes may involve:

- other employees and supervisors
- customers and suppliers
- management and union representatives
- industrial relations and OH&S specialists
- other professional or technical staff, contractors and maintenance personnel

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- workplace policies and procedures
- relevant contracts and agreements
- quality or enterprise work specifications and procedures
- manufacturers specifications and/or supplier's advice, recommended procedures, policies and instructions
- guidelines relating to minimising risks to the environment and compliance with OH&S requirements
- supplier and/or client instructions
- material safety data sheets
- relevant agreements and codes of practice
- legislation, regulations and related documentation, including regulations related to hazardous substances, dangerous goods and environment protection
- reports of accidents and incidents within regulatory requirements and enterprise procedures
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- quality assurance procedures
- workplace agreements and awards
- workers compensation
- emergency procedures
Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIP607C Establish international distribution networks

Unit Descriptor
This unit involves the skills and knowledge required to establish international distribution networks in accordance with workplace procedures. This includes sourcing potential networks, establishing potential service providers' profiles, and contracting suitable service providers. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant Australian and international regulations, standards and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

Competency Field
P – Business Planning

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Source potential networks
1.1 Current and required future enterprise distribution networks are identified
1.2 Potential agents, capable of servicing current or potential operations, are identified
1.3 Initial contact is undertaken with potential service providers
1.4 Information is sourced from potential service agents regarding their capacity, capability and viability to meet identified operations

2 Establish potential service provider's profile
2.1 Distributor's contact details, scope of operation(s) and cost and service standards are evaluated and documented
2.2 An assessment of the service provider's technostructures and
infrastructures is undertaken, including the compatibility of the system(s) to own operations
2.3 Service provider's current credit ratings are established in accordance with enterprise procedures
2.4 Security procedures for potential service providers are established in accordance with workplace requirements

3 Contract service providers

3.1 Terms of operation and performance standards are negotiated with selected service providers
3.2 Contracts are completed with selected service provider(s) within scope of authority
3.3 The performance of service providers is monitored against identified targets within the contract
3.4 Variances to contracts are renegotiated in accordance with statutory requirements and changes within the international and local trading environments
3.5 Contracts and ancillary documentation are stored in accordance with enterprise and regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international regulations, codes of practice and legislative requirements relevant to the establishment and maintenance of international distribution networks
- Australian Dangerous Goods Code and relevant Australian and international regulations and standards applicable to transport and distribution of dangerous goods and hazardous substances
- Relevant OH&S and environmental protection procedures and regulations
- Workplace policies and processes for the establishment of an international distribution network
- Problems that may occur during the establishment of an international distribution network and action that can be taken to report or resolve the problems
- Hazards and risks that may arise during the establishment of an international distribution network and ways of controlling the risks involved
- Focus of operation of distribution systems, resources, management and workplace operating systems
- Applicable contract law
- Relevant aspects of international and domestic trade operations
- Operational procedures for document control
- International legislation regarding carriage of goods
- Banking procedures and exchange rates
- Quality and customer service standards, policies and procedures
• Application of relevant Australian and international standards and associated certification requirements
• Resource availability including the competencies of individuals in the team/group
• The application of current competencies within functional activity

**Required skills:**
• Communicate and negotiate effectively with others when establishing an international distribution network
• Resolve issues and conflicts
• Read and interpret contracts, distribution specifications, regulatory requirements and customer instructions relevant to the establishment of an international distribution network
• Prioritise work and coordinate self and others in relation to workplace activities
• Complete documentation related to the establishment of an international distribution network
• Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when establishing an international distribution network
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise during the establishment of an international distribution network in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan and organise international distribution systems and projects
• Monitor work activities in terms of planned schedule
• Modify activities to cater for variations in workplace contexts and environment
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Assess logistics functions
• Negotiate and monitor contracts
• Select and apply appropriate computing and communications technology, information systems and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken:
• in various work environments in the warehousing, storage, transport and distribution industries

Customers may be:
• internal or external
Operations may be conducted:

- by day or night
- in all weather conditions

The workplace environment may involve:

- twenty-four hour operation
- single and multi-site locations
- large, medium and small workplaces

Requirements for work may include:

- limits of authority in relation to determination of contracts
- international codes of practice
- communications equipment
- international financial control and exchange regulations
- international markets
- authorities and permits

Consultative processes may involve:

- service providers
- other employees and supervisors
- financial and government institutions
- suppliers, potential customers and existing clients
- management and union representatives
- freight forwarding agencies and specialists
- custom brokers
- other professional or technical staff

Service providers will be:

- from a range of organisations and countries, and will differ significantly in their capability and capacity to undertake freight forwarding operations. Assessment should confirm the applicability of new providers to provide a quality, cost competitive service within agreed service parameters

Communications systems may involve:

- fixed or mobile telephone
- radio
- fax
- email
- electronic data transfer of information
- mail and internal memos
- RF systems

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Documentation/records may include:

- Australian and international codes of practice and regulations relevant to the international distribution of goods and freight
- Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including the ADG and IDG Code
- workplace operating procedures and policies
- contract documents
- insurance documentation
- operations manuals, job specifications and procedures and induction documentation
- manufacturers/suppliers specifications, instructions and labelling advice, including material safety data sheets
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport and distribution options
- client instructions
- relevant Australian and international standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- customer service and quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- regulations and codes of practice for the international transfer of freight
- Australian and international regulations and codes of practice for the handling and transfer of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- Australian and international insurance regulations and legislation
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
Contribute to the development of a workplace learning environment

Unit Descriptor

This unit involves the skills and knowledge required to contribute to the development of a workplace learning environment in accordance with workplace procedures. This includes creating learning opportunities, facilitating and promoting learning, and monitoring and improving learning effectiveness. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

Work must be carried out in compliance with the relevant Australian regulations, standards and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

Competency Field

P – Business Planning

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Create learning opportunities

1.1 Workplace environments which facilitate learning are developed and supported
1.2 Learning plans are developed as an integral part of individual/team performance plans
1.3 Learning plans reflect the diversity of needs and learning opportunities of individual employees and the enterprise
1.4 Individual/team access to, and participation in, learning opportunities is facilitated including both formal and informal learning opportunities
1.5 Negotiation with training and development specialists results in the planning and provision of learning which enhances the
operation of the workplace

2 Facilitate and promote learning

2.1 Workplace activities are used as opportunities for learning
2.2 Coaching and mentoring contributes effectively to development of workplace knowledge, skills and attitudes
2.3 The benefits of learning are shared with others in the team/workplace
2.4 Workplace achievement is recognised by timely and appropriate recognition, feedback and rewards

3 Monitor and improve learning effectiveness

3.1 Feedback from individuals/teams is used to identify and introduce improvements in future learning arrangements
3.2 Adjustments negotiated with training and development specialists result in improvements to the efficiency and effectiveness of learning
3.3 Records and reports of competency are documented and maintained within the workplace systems and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulations, codes of practice and legislative requirements
- Relevant OH&S and environmental protection procedures and regulations
- Workplace policies and processes for the development of a workplace learning environment
- Problems that may occur during the development of a workplace learning environment and action that can be taken to report or resolve the problems
- Business policies and plans including training and assessment
- Focus of operation of work systems, resources, management and workplace operating systems
- The application of current competencies within functional activity
- Application of relevant assessment guidelines and endorsed competency standards appropriate for the workplace
- Resource availability including the competencies of individuals in the team/group
- Quality and customer service standards, policies and procedures
- Relevant workplace documentation procedures

Required skills:
- Communicate effectively with others when developing a workplace learning environment
- Read and interpret competency standards, job specifications, training and assessment instructions and materials relevant to the development of a workplace learning environment
- Prioritise work and coordinate self and others in relation to workplace learning opportunities and activities
- Complete documentation related to developing a workplace learning environment
• Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when developing a workplace learning environment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise during the development of a workplace learning environment in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan and organise learning opportunities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply relevant assessment guidelines and endorsed competency standards appropriate for the workplace
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and apply appropriate technology, learning and assessment resources, information systems and procedures
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Learning activities may be: provided in various work environments in the warehousing, storage, transport and distribution industries

This unit operates in an environment where: workplace structures support workplace learning

Customers may be: internal or external

Operations may be conducted: by day or night

The workplace environment may involve:
- twenty-four hour operation
- single and multi-site locations
- large, medium and small workplaces
Workplace learning environment may involve:

- both internal and external competency-based learning opportunities
- structured and non-structured learning opportunities
- workplace on-the-job coaching and mentoring
- opportunities for the recognition of skills and knowledge gained through previous learning and experience

Consultative and learning processes may involve:

- employees, supervisors and managers
- training providers and assessors
- relevant authorities, government departments and institutions
- industrial relations and OH&S specialists
- other professional or technical staff

Communications systems may involve:

- fixed and mobile telephone
- radio
- fax
- email
- electronic data transfer of information
- mail and internal memo

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- codes of practice and regulations relevant to workplace operations
- workplace procedures and policies for creation of a workplace learning environment
- training manuals, job specifications and procedures and induction documentation
- relevant competency standards and assessment materials
- training materials and learning resources
- Australian and international standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- regulations and codes of practice relevant to workplace operations
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- regulations applicable to competency based training and assessment carried out within the Australian Quality Training Framework
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIP807C Manage a transport and distribution business unit

Unit Descriptor
This unit involves the skills and knowledge required to manage a transport and distribution business unit in accordance with relevant regulatory requirements and workplace procedures. This includes identifying the market for the business unit, setting transport and distribution business unit objectives, collecting information for business planning operations, establishing the resources required to achieve objectives, and managing business unit performance to achieve the required outcomes. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant Australian and international regulations, standards and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

Competency Field
P – Business Planning

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify market
1.1 Existing customers are identified and feedback gained regarding performance
1.2 Improvements are planned to increase service provision
1.3 Potential customers are identified and arrangements made to target potential customers

2 Set transport and distribution business
2.1 Goals for the transport and distribution business are identified in accordance with enterprise business plan
### Unit Objectives

2.2 Key performance indicators are defined and documented
2.3 A strategy to achieve transport and distribution business unit objectives in the short, medium and long term is prepared
2.4 Contingency plans are developed in the event that objectives need to be varied

### Collect Information for Business Planning Operations

3.1 Information on market competitors, potential opportunities and weaknesses of the business is collected, analysed and organised
3.2 Available resources are identified taking into account customer needs and the business objectives

### Establish Resources to Achieve Objectives

4.1 Financial flows are planned and scheduled
4.2 Information on-costs and resource utilisation is interpreted and budget requirements are identified
4.3 Staff and physical resource requirements are identified and costed to meet the business requirements
4.4 Job profiles are determined and resources are made available for training to meet business objectives
4.5 Transport and distribution business unit objectives and related policies and practices are explained to employees
4.6 Resource acquisition is managed to ensure business objectives are achieved

### Manage Business Unit Performance

5.1 Systems and processes are established to assess progress in achieving profit/productivity plans and targets
5.2 Systems for resource acquisition and usage are established
5.3 Financial information is analysed and interpreted to monitor profit/productivity performance
5.4 Systems and processes are monitored to establish whether resources are being used as planned
5.5 Problems with resource usage are investigated and rectified
5.6 Effective action is taken to reduce costs and enhance value to customers and/or enterprise
5.7 Recommendations for variations to operational plans are negotiated and approved by any relevant parties
5.8 Performance reports are generated in accordance with enterprise procedures

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
• Australian and international regulations, codes of practice and legislative requirements relevant to business unit activities
• Relevant OH&S and environmental procedures and regulations
• Workplace policies and processes for the management of a transport and distribution business unit
• Problems that may occur when managing a transport and distribution business unit and action that can be taken to report or resolve the problems
• Hazards and risks that may arise during the management of a transport and distribution business unit and ways of controlling the risks involved
• Business policies and priorities
• Market intelligence relevant to business operations
• Information on key competitors' operations, strengths and weaknesses
• Focus of operation of work systems, resources, management and workplace operating systems
• Quality and customer service standards, policies and procedures
• Application of relevant Australian and international standards and associated certification requirements
• Resource availability including the competencies of individuals in the team and group
• The application of current competencies within functional activity

**Required skills:**

• Communicate effectively with others when managing a transport and distribution business unit
• Read and interpret operational data, regulatory requirements, market intelligence, finance, budgetary information and business policies relevant to the management of a transport and distribution business unit
• Prioritise work and coordinate self and others in relation to business activities
• Complete documentation related to the management of a transport and distribution business unit
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when managing a transport and distribution business unit
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when managing a transport and distribution business unit in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when managing a transport and distribution business unit
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or
damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating
procedures
• Select and use required personal protective equipment conforming to industry and OH&S
standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The business unit may be:
• a complete small business enterprise
• a unit within a larger organisation, within the
warehousing, storage, transport and distribution
industries

This unit requires the application of:
• system management processes to ensure business
objectives are achieved

Customers may be:
• internal or external

Operations may be conducted:
• by day or night
• any weather conditions

The workplace environment may involve:
• twenty-four hour operation
• single and multi-site locations
• large, medium and small workplaces

Services, products, risks, work systems and requirements:
• potentially vary in different sections of the workplace

Consultative processes may involve:
• employees, supervisors and managers
• customers and suppliers
• relevant authorities, government departments and
institutions
• representatives of other enterprises and organisations
with an interest in the business activities of the
unit/organisation
• industrial relations and OH&S specialists
• other professional or technical staff
Communications systems may involve:
- fixed and mobile telephone
- radio
- fax
- email
- electronic data transfer of information
- mail and internal memo

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:
- Australian codes of practice and regulations relevant to business unit operations
- business policies and operating procedures
- operations manuals, job specifications and procedures and induction documentation
- supplier and/or client instructions
- relevant Australian Standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- regulations and codes of practice relevant to business unit operations
- relevant codes and regulations for the carriage and storage of hazardous substances and dangerous goods, where applicable
- relevant Australian Standards and certification requirements
- relevant trade practices legislation
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIPC107A  Demonstrate care and apply safe practices at work

Unit Descriptor
This unit covers the skills and knowledge required to understand, apply and satisfy safe work practices in an industry. It includes following workplace occupational health and safety (OH&S) procedures; maintaining personal well-being; reporting on safety of self and others; and dealing with emergency situations. It may apply to OH&S requirements and/or internal workplace policies and procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
The unit has applications across industries. When delivered/assessed as part of a qualification, the unit will be customised to ensure its relevance to the real or simulated work activities. The workplace environment may include a school classroom or workshop equipped with the appropriate workplace equipment, RTO premises, or an enterprise environment where a high level of supervision exists.

Competency Field
PC – Pathways Certificate

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Follow workplace OH&S procedures

1.1 Relevant OH&S, workplace hazard control procedures and safe work practices are identified, interpreted and applied to work
1.2 Workplace procedures for reporting hazards are identified and adhered to in a prompt and efficient manner
1.3 All relevant work activities are undertaken in a safe manner according to OH&S guidelines, enterprise policies and procedures
1.4 The work area is assessed regularly and procedures to report, remove or minimise potential hazards are followed
1.5 Personal protection clothing and equipment is correctly used in accordance with established safety and workplace procedures

2  Maintain personal well-being in the workplace

2.1 Risks to personal well-being which may affect safe performance in the workplace are identified and strategies to prevent them are put into place
2.2 Procedures for maintaining a tidy and clean personal work area are identified, interpreted and followed
3 Be aware of and report on safety of self and others

3.1 Situations which may endanger the individual or other workers are identified and corrected or reported
3.2 Incidents and injuries to self or others on the job are dealt with in a timely manner and reported to appropriate persons
3.3 Participative arrangements to foster safe working practices are contributed to, as appropriate

4 Deal with emergency situations

4.1 Emergency situations are recognised and required action is taken within scope of individual responsibility
4.2 Emergency procedures are followed in accordance with organisational procedures
4.3 Assistance from colleagues and/or other authorities is sought where appropriate

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Applicable national, state and territory regulations
• Procedures related to OH&S to be followed in the work area concerned
• Workplace hazards and ways to minimise or remove them
• Workplace equipment, materials, housekeeping equipment and the processes and precautions for their use
• Personal protective equipment relevant to the job and job context
• Appropriate hygiene and safety standards

Required skills:

• Use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
• Report workplace hazards and occupational health and safety incidents and related action
• Solve or report problems identified when dealing with safety hazards and applying appropriate hazard control procedures
• Use required personal protective equipment and clothing and other equipment required when following OH&S procedures
• Recognise limitations and ask for help
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Hazard control procedures may include:

- emergency, fire and accident procedures
- hazard identification and removal or, if this is not possible, establish a hazard control
- use of personal protective equipment
- relevant manufacturers guidelines relating to the operation and use of equipment
- OH&S regulations
- safe use of mechanical, pneumatic, hydraulic and/or electrical equipment
- safe use of chemicals and toxic substances
Workplace hazards may include:

- untidy work conditions including poor hygiene practices and unnecessary obstacles and equipment in work areas
- sharp instruments, knives or equipment
- noise
- hot substances and equipment (stoves, ovens, etc.)
- electricity and water
- electrical equipment
- being careless when using cutting equipment or dealing with heat or hot surfaces
- damaged equipment
- moving machinery
- materials handling
- gases and liquids under pressure
- working at heights
- confined spaces
- inappropriate lifting practices
- dangerous floor surfaces
- movements of equipment, goods, vehicles
- chemicals and other harmful substances including fumes and dust
- toxic substances
- damaged packing material and containers
- inflammable materials and fire hazards
- waste management and disposal
- extremes in weather conditions
- unsuitable lighting levels
- water hazards
- dangerous storage areas

Safe work practices may include, but are not limited to:

- manual handling procedures
- correct posture
- safe lifting and bending
- using appropriate personal protective equipment
- good hygiene and health maintenance
Risk to personal well-being are actions by an individual which affect their ability to work safely and may include:

- smoking, alcohol and drug use
- lack of sleep
- poor diet
- lack of exercise
- stress
- not using appropriate methods when lifting or moving heavy objects
- not wearing proper personal protective equipment

Personal protection clothing and equipment may include but are not limited to:

- gloves
- masks
- aprons
- hair covering
- uniform
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Appropriate persons may include:

- workplace personnel
- supervisors
- team leaders
- management
- OH&S personnel
- other persons authorised or nominated by the organisation

Emergency situations may include:

- accidents, including those that do not result in injury
- overheating equipment
- injuries such as cuts, scalds, burns
- health conditions such as fainting, asthma attacks, allergic reactions
- spills and leakages of harmful gas and liquids
- structural failures and breakages
- robbery
- fire
- flooding
- power failures or shorts
Participative arrangements may include:

- workplace meetings
- suggestion schemes
- regular communications with team leaders
- information sessions

Information and documents may include:

- applicable national, state and territory regulations
- standard operating procedures applicable to work role
- quality standards applicable to work role

Applicable legislation, regulations and codes may include:

- applicable national, state and territory regulations
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIPC207A  Adapt to work requirements in the transport and logistics industry

Unit Descriptor
This unit involves the skills and knowledge required to adapt to work requirements in the transport and logistics industry. It serves as an introduction to all sectors of the transport and logistics industry and includes the application of industry and workplace guidelines and procedures in a day-to-day work context as well as appropriate work behaviour. The elements of this unit should always be assessed in conjunction with other units that form part of a specified job function. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
As this unit provides an introduction to all sectors of the transport and logistics industry, it should be regarded as an integrating unit. When delivered/assessed as part of a qualification, the unit will be customised to ensure its relevance to the real or simulated work activities and related workplaces.

Training and assessment against this competency unit must incorporate all relevant legislative and regulatory requirements.

Competency Field
PC – Pathways Certificate

ELEMENT
PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Manage one's own learning
1.1 One's personal goals or vision are considered and articulated
1.2 Opportunities for learning new ideas and techniques in relation to personal goals are identified
1.3 Personal learning needs and skill gaps are recognised
1.4 Opportunities for skills development activities are identified in liaison with relevant personnel
1.5 A range of learning tools and practices are accessed and applied to the job
1.6 Advantage is taken of on-the-job and off-the-job learning opportunities

2 Adapt to and demonstrate appropriate work practice
2.1 Work requirements are identified and interpreted with advice from appropriate persons
2.2 Appropriate dress and behaviour is observed in the workplace
2.3 Work and personal priorities are identified and a balance is achieved
2.4 Time management strategies are applied to work duties
2.5 Interactions with others is tailored to take into account different backgrounds, cultures and languages

3 Work within organisational requirements

3.1 Organisational requirements and key activities of the workplace are identified
3.2 Relevant workplace policies and guidelines are identified and applied to work undertaken
3.3 The range of organisational and industry values are identified
3.4 Any uncertainties are discussed with key personnel and clarified

4 Identify industry products and services

4.1 The products provided by the industry are identified
4.2 The services provided by the industry are identified
4.3 Appropriate standards of customer service are identified across each industry
4.4 Quality standards for products and services as identified by the industry are clarified

5 Identify the sectors in the industry

5.1 The main sectors of the industry, their key activities and the way in which they inter-relate are identified
5.2 The roles and responsibilities of the industry sectors are clarified
5.3 Industry representatives and their roles are understood
5.4 Issues or events impacting on the industry are realised

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Current events, activities and products and services of the transport and logistics industry
• Workplace policies, procedures and guidelines
• Time management strategies and appropriate workplace etiquette
• Workplace equipment, tools and other technologies used in the transport and logistics industry, and where and how to obtain information and instructions on their safe use and basic care and servicing
• Learning opportunities in the workplace

Required skills:
• Use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
• Use workplace technology skills where appropriate or required
• Follow relevant OH&S and environmental protection procedures and responsibilities
• Use time management strategies
• Adapt and modify activities depending on differing workplace contexts and environment
• Apply relevant industrial or other legislative requirements
• Recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others
• Recognise limitations, ask for help and seek clarification or information about work requirements and procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Skill gaps are:
• a range of skills needed for the workplace or for a particular job which are currently not developed within an individual. They are different from an individual's 'personal learning needs' as they are skills specifically relevant and required for a particular job

Skill gaps may include:
• physical capacity skills
• workplace technology skills such as business equipment, computer technology, machinery, hand tools, knives, lifts, security systems
• numeracy skills
• customer service skills
• communication skills such as listening and understanding, speaking clearly/directly, reading, writing
• technical skills

Skill development activities may include:
• training courses
• IT courses
• human resources programs
• coaching and mentoring programs
• having access to a mentor for questions and advice
• having the chance to learn a new task or to operate a new piece of equipment or workplace technology
• participating in an external or internal training program

Learning tools and practices may include:
• learning through note taking
• reviewing manuals and training guides
• discussion
• practice
• observation
• trial and error
• or a combination of any of these
On-the-job opportunities may include:
- filling in for a co-worker in a new area
- going to talks or seminars arranged by the workplace
- shadowing another co-worker in a different area
- receiving on-the-job training and supervised practice

Off-the-job opportunities may include:
- taking a course with a training provider
- going to conferences or seminars
- going on site visits with supervisor
- participating in workplace social events
- participating in community events

Appropriate dress and behaviour may include:
- personal dress, presentation and hygiene
- demeanour and attitude displayed to customers and fellow employees

Time management strategies may include:
- goal setting
- prioritisation
- planning
- overcoming procrastination
- dealing with interruptions
- organising your work environment

Organisational requirements may include:
- organisational policies and guidelines
- common organisational practice
- performance plans
- OH&S policies, procedures and programs

Information and documents may include:
- applicable national, state and territory regulations
- standard operating procedures applicable to work role
- quality standards applicable to work role

Applicable legislation, regulations and codes may include:
- applicable national, state and territory regulations
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit:**
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
OTPC207A  Adapt to work requirements in the transport and logistics industry

© Commonwealth of Australia 2009
TLI07 Transport and Logistics Training Package (Version 3)
To be reviewed by 2010

unit

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIPC307A  Apply effective work practices

Unit Descriptor
This unit covers the skills and knowledge required to apply effective work practices in an industry. It includes planning, organising and completing work, communicating effectively, working with others, solving problems and adapting to changes. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

 Employability Skills
This unit contains employability skills.

 Application of the Unit
The unit has applications across industries and it should be regarded as an integrating unit. When delivered/assessed as part of a qualification, the unit will be customised to ensure its relevance to the real or simulated work activities and related workplaces.

 Competency Field
PC – Pathways Certificate

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan, organise and complete daily work
1.1 Work instructions and priorities are identified and interpreted in consultation with supervisor
1.2 An appropriate work plan or daily routine is determined and mapped out
1.3 Materials, resources or information needed to complete work is determined, collected, and organised
1.4 Work tasks are completed within designated timelines, quality standards, and instructions
1.5 Problems that arise are dealt with in a practical, timely and appropriate manner and assistance is sought when required
1.6 Feedback is sought on work performance and improvements are made as required

2 Communicate effectively
2.1 Appropriate lines of communication with supervisors, colleagues and customers are identified
2.2 Effective communication skills and numeracy skills are used to gather and convey information
2.3 Appropriate non-verbal behaviour is demonstrated

3 Work with others
3.1 Work roles of self and others in the workplace are identified
3.2 Individual responsibilities and duties to the team are undertaken in a positive manner and in a range of situations to promote cooperation and good relationships
3.3 Customers and colleagues who have diverse backgrounds are respected
4 Use workplace technology

4.1 Appropriate workplace technology is selected and used according to workplace and manufacturers guidelines and instructions

4.2 Workplace technology is inspected to ensure it is not damaged and is working properly and precautions are taken to reduce risks

4.3 Appropriate action is taken when problems with workplace technology occur

4.4 Workplace technology is cared for according to workplace and manufacturers guidelines and instructions

5 Solve work problems

5.1 Problems are identified and practical or creative solutions are developed within the scope of individual responsibility to rectify them

5.2 Assistance is sought from key personnel when appropriate

5.3 Workplace problems are reported as required using appropriate workplace procedures

6 Adapt to change

6.1 New work requirements or situations are identified, clarified and adapted to

6.2 A range of possible practical or creative options to deal with workplace challenges are considered

6.3 A willingness to be open to and trial new ideas and techniques is demonstrated

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Workplace procedures, policies and instructions
- Workplace structures and the roles and responsibilities of individuals and team/group members
- Basic mathematical operations and techniques
- Procedures for identifying and using relevant workplace technology when carrying out workplace calculations
- Typical problems in the workplace and appropriate action and solutions
- Systems and equipment used in the workplace and the instructions, processes and precautions for their use
- Basic principles of teamwork in the workplace

Required skills:
- Use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
• Follow relevant OH&S and environmental protection procedures and responsibilities
• Interpret and follow a designated work plan or set of instructions for a job
• Plan a daily routine to complete required workplace tasks
• Use time management strategies
• Work cooperatively and collaboratively with others to complete tasks
• Adapt and modify activities depending on differing workplace contexts and environment
• Use appropriate techniques to solve or report problems identified when completing work tasks
• Carry out calculations that may be required when completing work tasks, particularly including the four basic mathematical operations
• Take appropriate initiatives to deal with problems and to complete tasks
• Identify and correctly use equipment, tools and other technology required to complete workplace tasks
• Keep required records of workplace activities
• Apply relevant industrial or other legislative requirements
• Recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others
• Recognise limitations, ask for help and seek clarification or information about work requirements and procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work instructions may include:
- job sheets
- patterns
- plans
- drawings
- designs
- verbal directions
- customer orders
Communication in the workplace may include:

- listening and understanding
- speaking clearly and directly
- reading independently
- writing to audience needs
- group interaction
- the chain of command in which to report
- questioning to obtain information and/or clarify information and understanding
- routine oral reporting
- routine written reporting
- participation in routine meetings in the workplace
- basic recording of discussions

Effective numeracy skills are those which related to the job or specific task and may involve the operations of multiplication, division, addition, subtraction, percentages and/or fractions, and may include those related to:

- estimates of the quantities of materials and resources required to complete a work task
- money (cost, invoices, change, etc.)
- volume
- weight
- time
- length and distance
- speed
- area
- perimeter

A diversity of backgrounds may include, but is not limited to different:

- ages
- genders
- culture
- personal values or beliefs
- race
- religion
- political persuasion

Workplace technology may vary widely from industry to industry and may include:

- business equipment such as fax machines, telephones, photo copiers, cutting machines, cameras, voice recorders
- computer technology such as laptops, PCs, digital cameras, zip drives, modems, scanners, printers
- other technology such as machinery, hand tools, knives, ovens, stoves, lifts, security systems
Workplace technology precautions may include:
• routine checking of equipment
• regular backups of data
• keeping a log book of detected faults
• checking that repairs have been carried out
• using appropriate clothing

Appropriate action may include:
• contacting a supervisor, manager
• contacting the manufacturer
• contacting a service provider
• reporting and documenting the problem

Key personnel may include:
• supervisor
• manager
• fellow colleagues
• team members

Workplace procedures may include:
• organisational policies and guidelines
• common organisational practice
• performance plans
• OH&S policies, procedures and programs
• relevant legislative requirements in areas such as OH&S, privacy, anti-discrimination, environmental protection, trade practices, etc
• relevant licence requirements and related regulations

Information and documents may include:
• applicable national, state and territory regulations
• standard operating procedures applicable to work role
• quality standards applicable to work role

Applicable legislation, regulations and codes may include:
• applicable national, state and territory regulations
• relevant Australian Standards and related requirements
• relevant state/territory OH&S legislation
• relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIPC407A Complete courier delivery operations**

**Unit Descriptor**
This unit covers the fundamental knowledge and skills required to complete real or simulated courier delivery operations. It includes clarifying and organising the operations, planning the pick-up and delivery route(s), picking up item(s) from customers, delivering items to correct addresses, completing transactions with customers and maintaining records of courier delivery operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
This unit is designed for use in a Pathways qualification or skills set. It should not be used in a qualification that has a direct job outcome. The unit has applications within a Pathways Certificate I aimed at providing entry level skills and knowledge in the area of courier and delivery operations. It should be regarded as an integrating project unit. When delivered/assessed as part of a qualification, the unit will be customised to ensure its relevance to real or simulated work activities and related workplaces in the transport and logistics industry.

**Competency Field**
PC – Pathways Certificate

**ELEMENT PERFORMANCE CRITERIA**

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Clarify and organise pick-up and delivery operations**

1.1 Work requirements and specific customer needs are interpreted and, where necessary, clarified

1.2 Pick-up and delivery points are located

1.3 Size, weight and configuration of items to be delivered are identified and where necessary measured

1.4 Resources required to facilitate pick-up and delivery are identified and prepared for use

2 **Plan pick-up and delivery route**

2.1 Pick-up and delivery route is planned based on an analysis of distance, travel times, customer requirements, resource implications and known priorities

2.2 Items to be delivered are sorted accurately into route order

2.3 Items to be delivered are handled in a manner that minimises the risk of damage

2.4 Special items are identified accurately

2.5 Items to be delivered are organised into bundles and kept in sequence for delivery

2.6 Items to be delivered are handled securely
3 Pick-up items to be delivered

3.1 Items are picked up within specified times
3.2 Items are kept secure to minimise the risk of damage, theft, misdelivery and loss
3.3 Contact with customers is conducted courteously and in a manner that encourages customers to continue to use the pick-up and delivery services

4 Deliver items to correct addresses

4.1 Deliveries are completed within specified times
4.2 Items are kept secure to minimise the risk of damage, theft, misdelivery and loss
4.3 Items requiring special treatment are delivered as specified and relevant documentation is completed accurately
4.4 Contact with customers is conducted courteously and in a manner that encourages customers to continue to use the pick-up and delivery services

5 Complete transactions with customers

5.1 Amount owing is noted from the delivery advice or invoice and customer is advised
5.2 Transactions (where applicable) are completed in accordance with workplace policy and procedures
5.3 In the case of cash transactions, amount tendered is checked and the correct change is calculated and given

6 Maintain records of courier delivery operations

6.1 Incidents involving customers that occur, or hazards identified during the delivery, are reported accurately to the relevant person
6.2 Undelivered and undeliverable items are processed in accordance with workplace policies and procedures
6.3 Documentation and records are completed, checked for accuracy and given promptly to the appropriate persons

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Pick-up and delivery procedures, policies and instructions
• Relevant workplace standards and duty of care requirements
• Safe lifting and carrying policies and procedures
• Basic mathematical operations and techniques needed to plan pick-up and delivery routes and schedules and to complete any financial transactions involved
• Procedures for identifying and using relevant workplace technology when carrying out workplace calculations
• Typical mathematical problems involved in courier delivery operations and appropriate action and solutions
• Systems and equipment used during pick-up and delivery processes and the instructions, processes and precautions for their use

**Required skills:**
• Use literacy skills for written and verbal communication as may be required in courier pick-up and delivery operations
• Use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
• Interpret and follow a set of instructions for a pick-up and delivery operation
• Plan a route and schedule to complete required workplace tasks
• Follow relevant OH&S and environmental protection procedures and responsibilities including safe lifting and carrying procedures
• Work cooperatively and collaboratively with others to complete pick-up and delivery tasks
• Adapt and modify pick-up and delivery activities depending on differing workplace contexts, resources and environment
• Use appropriate techniques solve or report problems identified when completing pick-up and delivery operations
• Complete calculations required for transactions when completing pick-up and delivery operations
• Take appropriate initiatives to deal with problems and to complete tasks
• Identify and correctly use mobile phones and any other equipment and technology required to complete pick-up and delivery tasks
• Keep required records of pick-up and delivery operations
• Recognise and adapt appropriately to cultural differences experience when completing pick-up and delivery operations, including modes of behaviour and interactions among staff and customers
• Recognise limitations, ask for help or information about work requirements and procedures

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Dependent on the type of pick-up and delivery service being provided, pick-up and delivery points may be to:

- personal work areas within an organisation or on a worksite
- residential or business addresses in an area
Dependent on the type of pick-up and delivery service being provided, resources may include:

- communications technology such a mobile
- sorting and processing equipment (where applicable)
- street maps or layouts of buildings or sites
- directories of addresses within an organisation
- telephone directories
- delivery technology such as a delivery satchel, trolley, bicycle or motorcycle (where applicable)

Items to be picked up or delivered may include:

- letters
- parcels
- boxes
- files
- bulky items

Special items may include:

- fragile items
- bulky items
- heavy items
- registered items

Ways in which items may be kept secure include:

- packing them in the bags/satchels provided
- storing them in a locked storage area or bag
- ensuring that items are not dropped or damaged
- ensuring that items are kept under close observation during delivery and pick-up operations

Dependent on the type of pick-up and delivery service being provided, transactions may include:

- cash
- cheques
- credit arrangements
- other non-cash forms of transaction

Information and documents may include:

- applicable regulations
- standard operating procedures applicable to work role
- quality standards applicable to work role
- records of deliveries and pick-ups
- receipts for items picked up
- receipts for transactions completed
- records of financial transactions
- records and customer advice in situations where delivery or pick-up could not be completed

Applicable legislation, regulations and codes may include:

- applicable regulations
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIPC507A

Complete small store operations

Unit Descriptor
This unit covers the fundamental skills and knowledge required to complete real or simulated small store operations. It includes planning and organising for the operations, completing small store operations such as stocktaking, ordering, receiving and despatching goods, and maintaining records of small store operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit is designed for use in a Pathways qualification or skills set. It should not be used in a qualification that has a direct job outcome. The unit has applications across industries. When delivered/assessed as part of a qualification, the unit will be customised to ensure its relevance to the real or simulated work activities. The workplace environment may include a school classroom or workshop equipped with the appropriate workplace equipment, RTO premises, or an enterprise environment where a high level of supervision exists.

Competency Field
PC – Pathways Certificate

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Organise small store operations
1.1 Small store work requirements and specific internal or external customer requirements are interpreted and the small store operations are organised accordingly
1.2 An inventory or stocktake of goods or items held in the small store is conducted in accordance with workplace requirements
1.3 Levels of goods and items in stock are monitored and maintained at levels prescribed by store procedures
1.4 Orders for the replenishment of goods or items in the small store are made in accordance with store procedures

2 Complete small store operations
2.1 Incoming goods and items are received and checked against orders and relevant specifications
2.2 Received goods and items are stored in accordance with the small store procedures
2.3 Goods and items for issue are picked and despatched in accordance with the small store procedures

3 Maintain records of small store
3.1 Inventory or records of stocks held in the small store are kept in accordance with workplace procedures
3.2 Dockets and receipts for received goods are correctly completed
3.3 Any discrepancies or identified damage in received goods are recorded and reported in accordance with workplace procedures
3.4 Records of goods or items issued from the small store are completed in accordance with workplace procedures
3.5 Any discrepancies in the inventory or record of stocks held are identified and reported in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Procedures, policies and instructions for small store operations
• Relevant workplace standards and duty of care requirements
• Safe lifting and carrying policies and procedures
• Basic mathematical operations and techniques needed to place orders, complete simple stocktakes, receive and check goods and stock, and pick and despatch goods and stock
• Procedures for identifying and using relevant workplace technology when completing small store operations such as lifting equipment, calculators and computers
• Typical problems involved in small store operations and appropriate action and solutions
• Basic knowledge of the stock and goods held in the small store sufficient to allow identification in the course of small store activities

Required skills:
• Use literacy skills for written and verbal communication required in small store operations
• Use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
• Interpret and follow a set of instructions for a small store operation
• Plan a schedule to complete required workplace tasks
• Follow relevant OH&S and environmental protection procedures and responsibilities including safe lifting and carrying procedures
• Work cooperatively and collaboratively with others to complete small store tasks
• Adapt and modify small store activities depending on differing workplace contexts, resources and environment
• Use appropriate techniques solve or report problems identified during small store operations
• Take appropriate initiatives to deal with problems and to complete tasks
• Identify and correctly use communications and any other equipment and technology required to complete small store activities
• Keep required records of small store operations
• Recognise and adapt appropriately to cultural differences experience when completing small store operations, including modes of behaviour and interactions among staff and customers
• Recognise limitations, ask for help and seek clarification or information about work requirements and procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Dependent on the type of small store service being provided, inventory or stocktake types may include:
• simple stock identification, counting and recording for checks against existing stock records
• use of simple bar code equipment for stock identification, counting and recording and checks against existing stock records

Dependent on the type of small store service being provided, goods or items may include:
• food items
• gardening supplies
• small workshop tools and/or materials
• stationery/office supplies
• craft supplies
• books/magazines

Dependent on the type of small store service being provided and the types of goods involved, checking may include:
• check of quantities received against order, invoice or other delivery documentation
• visual inspection and identification
• checks for damage
• checks against specifications as per organisational instructions
• weighing

Dependent on the type of small store service being provided, ways in which items may be picked (accessed from storage) and despatched include:
• interpretation of a personal request and simple identification and selection of items from storage area and issuing by hand
• interpretation of an internal written request, simple identification and selection of items from storage area and delivering to internal customer concerned
• interpretation of an external request (possibly on a standard form, simple identification and selection of items from storage area and packing items and despatching them by courier or post)

Dependent on the type of small store service being provided, types of inventory or records of stocks may include:
• hand written inventory or stock record book
• simple computerised record system
Dependent on the type of small store service being provided, documentation and records may include:

- hand written record book
- simple computerised record system
- carbon copy receipt book

Information and documents may include:

- applicable regulations from each state and territory
- standard operating procedures applicable to work role
- quality standards applicable to work role

Applicable legislation, regulations and codes may include:

- applicable regulations from each state and territory
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
o through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
TLIQ1007B  Maintain customer credit accounts and services

Unit Descriptor
This unit involves the skills and knowledge required to maintain customer credit accounts and services in accordance with workplace requirements, including establishing and maintaining customer credit accounts and services, and maintaining a customer information system. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the maintenance of customer credit accounts and services.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the maintenance of customer credit accounts and services as part of work activities in the transport, distribution and/or allied industries.

Competency Field
Q – Financial Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Establish and maintain customer credit accounts and services
1.1 Lines of credit and other credit facilities are established and communicated to customers
1.2 Payment schedules by customers are monitored
1.3 Debtors are regularly identified and listed to initiate follow-up action
1.4 Debt recovery procedures are initiated and if unsuccessful approval is sought to write off bad debts

2 Maintain customer information system
2.1 Status of credit accounts is conveyed to customers on a regular basis.
2.2 Statistical returns displaying actual against anticipated performance are prepared
2.3 Database information regarding products and services sales on credit is maintained
2.4 Customer queries are dealt with promptly and courteously
2.5 Security of database and data integrity is maintained
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian and international codes and regulations relevant to freight services, including the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the maintenance of customer credit accounts and services
• Focus of operation of work systems, equipment, management and site operating systems for the maintenance of customer credit accounts and services
• Problems that may occur when maintaining customer credit accounts and services and appropriate action that can be taken to resolve the problems
• Information on relevant aspects of credit services, including: credit services offered by the workplace, credit account systems, credit ratings and limits and credit approval policies and procedures
• Documentation requirements for the maintenance of customer credit accounts and services
• Instruments of payment including letters of credit, cheques, promissory notes, bank drafts, etc.

Required skills:
• Communicate, negotiate and liaise effectively with others when maintaining customer credit accounts and services
• Read and interpret instructions, procedures and information relevant to the maintenance of customer credit accounts and services
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the maintenance of customer credit accounts and services
• Work collaboratively with others when maintaining customer credit accounts and services
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when maintaining customer credit accounts and services in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant computer and communication/office equipment
• Adapt to differences in equipment in accordance with standard operating procedures
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  
- in a range of work environments  
- by day or night

Customers may be:  
- internal or external

Workplaces may comprise:  
- large, medium or small worksites

Customers include:  
- all other rail and freight authorities  
- private businesses  
- government bodies  
- members of the public as well as internal customers

Equipment used may include:  
- computer  
- intercom system  
- facsimile machine  
- calculator  
- telephone  
- answering machine  
- photocopier

Consultative processes may involve:  
- other employees and supervisors  
- current and potential customers  
- suppliers, customers and clients  
- relevant authorities and institutions  
- management and union representatives  
- industrial relations and OH&S specialists

Communication in the work area may include:  
- phone  
- electronic data interchange (EDI)  
- fax  
- email  
- internet  
- RF systems  
- oral, aural or signed communications

Personal protective equipment may include:  
- gloves  
- safety headwear and footwear  
- safety glasses  
- two-way radios  
- high visibility clothing
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- codes of practice and regulations concerning the operation of credit accounts and services
- customer requests and works orders
- workplace procedures and policies including accounting procedures, credit approval procedures, office organisation procedures, record keeping, credit limits, and levels of credit authority
- operations manuals, job specifications and induction documentation
- manufacturers specifications for office equipment
- documentation and forms used for credit services
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for the provision of credit services
- privacy legislation
- conditions of credit extension policies and related government legislation
- audit and financial legislation
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIQ107D  Conduct financial transactions

Unit Descriptor
This unit involves the skills and knowledge required to conduct direct financial transactions as part of courier operations, including operating point of sale equipment, transacting sales, clearing register, and maintaining sales documents. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with relevant codes and regulations concerned with the conduct of direct financial transactions during the collection and delivery of valuables, secured products, documents and materials.

Work is performed under general supervision. It involves the application of the basic financial transaction principles, routine procedures and regulatory requirements to conduct direct financial transactions as part of courier operations.

Competency Field
Q – Financial Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Operate point of sale equipment
1.1 Point of sale equipment is operated and maintained in line with manufacturers specifications and workplace procedures
1.2 Procedure for opening the sales equipment or register is followed
1.3 Adequate change is maintained for use in transactions
1.4 Sales equipment/register is closed off in accordance with workplace cash security procedures

2 Transact sale
2.1 Amount owing is calculated and customer advised
2.2 In the case of cash transactions, amount tendered is checked and the correct change is calculated and given

3 Clear register
3.1 Sales equipment/register is cleared and cash is transferred at required times in accordance with workplace policy
3.2 Cheques, credit and other non-cash transactions are handled in accordance with workplace policy and procedures
3.3 Due security is maintained when handling cash in accordance with workplace security procedures

4 Maintain sales documents
4.1 Records are completed for all transactions including 'refunds' and 'no sales'

© Commonwealth of Australia 2009
TLI07 Transport and Logistics Training Package (Version 3)
To be reviewed by 2010
4.2 Adequate supplies of docket, vouchers and point of sale documents are maintained
4.3 Debtor transactions are processed in line with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant state and territory regulations and requirements related to the conduct of transactions within courier operations
• Relevant OH&S procedures and guidelines
• Risks and hazards when carrying out transactions and related precautions to control security threats
• Operational procedures for the conduct of direct financial transactions with customers in the courier industry
• Contingency planning relating to managing and controlling security threats
• Implications of credit and financial institution codes of practice
• Requirements of courier work systems, operations and relevant equipment
• Typical problems that can occur when conducting financial transactions and appropriate action that can be taken to prevent or solve them

Required skills:
• Communicate effectively with others when conducting financial transactions
• Read and interpret instructions, procedures and information relevant to the conduct of financial transactions
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the conduct of financial transactions
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when conducting financial transactions
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when conducting financial transactions in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of financial transactions
• Plan own work including predicting consequences and identifying improvements
• Apply relevant agreements, codes of practice or other legislative requirements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing workplace contexts, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use transaction equipment, processes and procedures
• Adapt to differences in equipment in accordance with standard operating procedures
• Safely use correct manual handling techniques

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• in a range of work environments and weather conditions
• by day or night

Customers may be:
• internal or external

Hazards may include:
• vehicular and pedestrian traffic
• uneven ground, steps, road surfaces
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature and radiant heat
• light including UV
• noise

Consultative processes may involve:
• clients
• other employees and supervisors
• union representatives
• industrial relations and OH&S specialists
• management
• other professional or technical staff
• local government authorities

Finance processing equipment may include:
• manual and electronic cash registers
• EFTPOS and credit card facilities
• smart card
• manual ticketing resources

Financial transactions are undertaken:
• within workplace policy and procedures

Communication may include:
• mobile and fixed phones
• radio
• oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- firearms
- two-way radios

Information/documents may include:

- workplace procedures and policies
- job specifications
- relevant manufacturers specifications and instructions for the use of transaction equipment
- operations manuals
- induction documentation
- competency standards and training materials
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- regulatory requirements for conducting financial transactions
- relevant Australian Standards and certification requirements
- relevant state/territory privacy legislation
- relevant state/territory OH&S regulations and legislation
- licensing requirements for driving and carrying particular classes of goods
- relevant state/territory road rules and traffic acts

**EVIDENCE GUIDE**

TLIQ1107B  Maintain petty cash account

Unit Descriptor
This unit involves the skills and knowledge required to maintain petty cash account customers in accordance with workplace requirements, including preparing petty cash documentation and conducting cash transactions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the maintenance of petty cash accounts.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the maintenance of petty cash accounts as part of work activities in the transport, distribution and/or allied industries.

Competency Field
Q – Financial Management

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare petty cash documentation

1.1 Requests for petty cash advances are validated and required vouchers are prepared
1.2 Petty cash claims are validated and attached receipts are checked
1.3 Claim documentation is prepared and checked for accuracy before processing
1.4 Claims and vouchers are presented to nominated person/section for checking and approval appropriate to workplace limits
1.5 Irregularities are noted and referred to nominated person/section for resolution
1.6 Details of claims and vouchers are recorded to enable tracing and balancing of cash holding

2 Conduct cash transactions

2.1 Petty cash is provided against claims and vouchers from cash holding
2.2 Petty cash returns are secured and return receipts are provided
2.3 Petty cash returns are documented to enable tracing and balancing of cash holding
2.4 Documented transactions are reconciled against cash held
2.5 Cash is drawn using workplace procedures to maintain a balance appropriate to normal transaction levels
2.6 Cash is secured in accordance with workplace security requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Codes of practice and regulations relevant to the maintenance of petty cash accounts
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the maintenance of petty cash accounts
- Focus of operation of work systems, equipment, management and site operating systems for the maintenance of petty cash accounts
- Problems that may occur when maintaining petty cash accounts and appropriate action that can be taken to resolve the problems
- Documentation requirements for the maintenance of petty cash accounts
- Instruments of payment including letters of credit, cheques, promissory notes, bank drafts etc.

Required skills:
- Communicate and negotiate effectively with others when maintaining petty cash accounts
- Read and interpret instructions and procedures relevant to petty cash accounts
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to petty cash accounts
- Work collaboratively with others when maintaining petty cash accounts
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when maintaining petty cash accounts in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Work systematically with required attention to detail
- Select and use relevant computer, communication and office equipment
- Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites
Equipment may include:

• filing and record keeping system
• cash holding box/system
• cash transaction record book
• relevant computer software

Recording mechanisms/systems may be:

• paper-based or electronic

Business source documents may include, but are not exclusive to:

• purchase requisitions
• invoices
• delivery dockets
• bank statements
• cash register rolls
• purchase orders
• receipts
• credit notes
• remittance advice
• deposit books

Hazards in the work area may include exposure to:

• chemicals
• dangerous or hazardous substances
• movements of equipment, goods, materials and vehicular traffic

Consultative processes may involve:

• other employees and supervisors
• current and potential customers
• suppliers, customers and clients
• relevant authorities and institutions
• management and union representatives
• industrial relations and OH&S specialists

Communication in the work area may include:

• phone
• electronic data interchange (EDI)
• fax
• email
• internet
• RF systems
• oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- high visibility clothing

Information/documents may include:

- workplace procedures and policies concerning petty cash transactions including security procedures
- codes of practice and regulations relevant to petty cash accounts
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for the provision of credit services
- privacy legislation
- conditions of credit extension policies and related government legislation
- audit and financial legislation
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIQ1207B Sell products and services

Unit Descriptor
This unit involves the skills and knowledge required to sell products and services in accordance with regulatory and workplace requirements, including preparing for financial transactions, promoting products and services, selling products and/or services, processing refunds, and reconciling financial transactions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace requirements and relevant trade practices regulations.

Work is performed under some supervision, generally within a team environment. It involves the application of regulatory requirements and workplace procedures when selling products and services in the transport and allied industries.

Competency Field
Q – Financial Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for financial transactions
1.1 Float, goods and services are prepared in accordance with workplace policies and procedures
1.2 Point of sale is established to meet workplace requirements and standards

2 Promote products and services
2.1 Strategies to promote products and services are developed in accordance with workplace policies and procedures
2.2 Strategies to promote products and services are implemented in accordance with workplace procedures

3 Sell products or services
3.1 Product knowledge is applied when answering customer inquiries
3.2 Sales transactions are conducted in a courteous manner to the customer's satisfaction
3.3 The price is correctly calculated and charged and the correct change and receipt is issued

4 Process refunds
4.1 Claim for refund is substantiated in accordance with company procedures
4.2 Refund claim application processes are completed to ensure transaction details are recorded
4.3 The customer refund is correctly calculated and issued in a courteous manner

5 Reconcile financial transactions

5.1 The value of money and vouchers issued and refunded are calculated to enable reconciliation against total sales to validate cash on hand

5.2 Money, goods, service entitlements and reconciliation documents are secured in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations and codes of practice relevant when selling products and services
- Relevant OH&S procedures and guidelines
- Workplace procedures and policies for selling products and services
- Overview of the tourism industry and franchising arrangements
- Australian and international transport industry guidelines
- Workplace products and services
- Applicable insurance and public liability
- Relevant consumer laws and trade practice requirements
- Transport system fare structure and schedules
- Advertising policies
- Equipment and materials used when selling products and services, and procedures and precautions that should be followed in their use
- Problems that may occur when selling products and services and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication and negotiation requirements when selling products and services

Required skills:
- Communicate and negotiate effectively with others when selling products and services
- Network with others in travel agencies and sales outlets
- Read and interpret instructions, procedures and product information relevant to the sale of products and services
- Interpret and follow operational instructions and prioritise work
- Complete documentation and entry of data related to the sale of products and services
- Work collaboratively with others when selling products and services
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems or objections that may arise when selling products and services in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies and environments
• Work systematically with required attention to detail
• Carry out research activities required when selling products and services
• Market and promote products and services
• Create promotional layouts
• Select and use relevant office and communications equipment and materials when selling products and services
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
Goods and services may include:
• tickets
• vouchers
• items sold on an occasional basis such as surplus equipment or stock
• marketing or promotional items
Equipment may include:
• point of sale equipment
• ticket machines
• pricing equipment
• electronic calculators
Customers may include:
• employees or external customers
Service entitlements may include:
• tickets for travel or admission
• vouchers to be exchanges for services
Consultative processes may involve:
• customers and potential customers
• other workplace personnel
• supervisors and managers
• representatives of travel agencies and sales outlets
• official representatives
Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- face-to-face communication and memos
- signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and policies for selling products and services
- work instructions, job description and induction materials
- pricing information including catalogues and computerised information
- published or computerised information on available products and services
- manufacturers specifications for office and communications equipment and materials
- relevant OH&S requirements and policies
- relevant codes of practice and regulations, including trade practice and consumer protection regulations
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures

Applicable regulations and legislation may include:
- relevant codes and regulations pertaining to sales of products and services, including trade practice and consumer protection requirements
- relevant state/territory OH&S legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**
The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria.

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations and codes of practice relevant to advising on and constructing fares for customers including trade practice and consumer protection requirements
- Relevant OH&S procedures and guidelines
- Workplace procedures and policies for advising on and constructing fares for customers
- International and Australian tourism and transport industry policies and regulations
- Workplace travel products and services
- Applicable insurance and public liability
- Relevant consumer law and trade practice requirements
- International regulations affecting Australian tourism operations
- Air, coach, ferry, tram and rail fare structures and schedules
- Procedures for quotation development
- Applicable health regulations
- Information on agents commissions
- Equipment, and materials used when advising on and constructing fares for customers, and precautions and procedures that should be followed in their use
- Problems that may occur when advising on and constructing fares for customers, and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication and negotiation requirements when advising on and constructing fares for customers

Required skills:
- Communicate and negotiate effectively with others when advising on and constructing fares for customers
- Read and interpret instructions, procedures and information relevant to advising on and constructing fares for customers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to advising on and constructing fares for customers including the preparation of travel documentation
- Work collaboratively with others when advising on and constructing fares for customers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when advising on and constructing fares for customers in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail
• Carry out sales and refund procedures
• Design and construct itineraries
• Construct fares
• Process coupons
• Carry out research and analysis relevant to advising on and constructing fares for customers
• Select and use relevant office and communications equipment and materials when advising on and constructing fares for customers
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments

Fares/itineraries to be constructed may include:
• air
• bus
• coach
• ferry
• rail
• tram
• combinations

In providing advice to suit the needs of the customer the following types of fares must be considered:
• published fares
• constructed fares
• net fares
• promotional fares

Information used when advising on and constructing fares for customers may include:
• market trend information
• customer requirements regarding tour packages
• agency and outlet agreements
• workplace budget and business objectives information

Travel documentation may include:
• tickets
• pre-paid ticket advice
• miscellaneous charge orders
• credit card charge forms

All documentation issued must be in accordance with:
• International Air Transport Association/Domestic Agency Program Australia and Australian transport regulations
Transport provider information includes:
- air, coach, rail, ferry guides
- fare manuals
- computerised data
- general travel information

Document details include:
- tickets
- miscellaneous charge orders
- pre-paid ticket advice
- credit card charge forms

Consultative processes may involve:
- customers and potential customers
- other workplace personnel
- supervisors and managers
- representatives of other transport agencies and organisations
- official representatives

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- face-to-face communication and memos
- signed communications and forms

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- workplace procedures and policies for advising on and constructing fares for customers
- work instructions, job description and induction materials
- air, coach, rail, ferry guides, fare manuals, computerised data and general travel information
- travel documentation
- information related to advertising and promotional activities within the industry
- tickets, miscellaneous charge orders, pre-paid ticket advice and credit card charge forms
- manufacturers specifications for office and communications equipment and materials
- relevant OH&S requirements and policies
- relevant codes of practice and regulations including trade practice and consumer protection regulations
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to advising on and constructing fares for customers, including trade practice and consumer protection requirements
- relevant state/territory OH&S legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
o a range of relevant exercises, case studies
   and other simulated practical and knowledge
   assessment, and/or
o access to an appropriate range of relevant
   operational situations in the workplace

- In both real and simulated environments, access is
  required to:
o relevant and appropriate materials and/or
  equipment, and/or
o applicable documentation including
  workplace procedures, regulations, codes of
  practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a
  registered training organisation
- As a minimum, assessment of knowledge must be
  conducted through appropriate written/oral tests
- Practical assessment must occur:
o through appropriately simulated activities at
  the registered training organisation, and/or
o in an appropriate range of situations in the
  workplace
TLIQ1407A Manage budgets and financial plans

Unit Descriptor
This unit involves the skills and knowledge required to manage budgets and financial plans. It covers all of the significant aspects of financial management for operational managers who are not financial specialists. It emphasises the preparation of users of budgets/financial plans through communication and training and consistent surveillance over budget performance, with early intervention where required. This unit derives from BSBMGT504A Manage budgets and financial plans. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Competency Field
Q – Financial Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Communicate budget and financial plans
1.1 Budget/financial plan communication package is reviewed by finance specialists
1.2 Package is amended/revised where appropriate
1.3 Training activities are undertaken with users of the budget and plans across the organisation
1.4 All data and terms are defined and understood by the users of the plans
1.5 Communication outcomes are tested to ensure clear understanding of objectives, processes and accountabilities

2 Monitor and control activities against plans
2.1 Delegations and budget accountabilities are confirmed in writing prior to budget period
2.2 Funds are allocated in accordance with budget objectives and parameters
2.3 Recording systems and documentation meet all audit requirements and legal obligations
2.4 Risk management plans are implemented and contingency plans are in place for all financial plans
2.5 Performance is monitored and variances identified on a real
time basis

2.6 Variances are analysed in conjunction with relevant experts to determine cause and effect

3 Report outcomes of financial plans

3.1 Records of financial performance are properly maintained within organisational systems
3.2 Financial performance is analysed and reported in a form and language appropriate to the audience
3.3 Non financial objectives are reported in the context of overall organisational performance
3.4 Strategies and plans are reviewed and updated to optimise organisational performance

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Budgetary procedures and policies
- Workplace processes for setting and achieving budgets
- Accountancy practices relevant to budgetary control
- Problems that may occur when setting and achieving budgets and action that can be taken to report or resolve the problems
- Risks that may exist when setting and achieving budgets and ways of controlling the risks involved
- Focus of operation of budgetary systems, resources, management and workplace operating systems
- Limits of authorised expenditure and who has budget authorities
- Quality and customer service standards, policies and procedures

Required skills:
- Communicate effectively with others when completing work activities
- Work collaboratively with others
- Access, read and interpret budgetary documents, financial statements and reports and workplace policies and procedures
- Apply basic accounting principles to budgetary processes
- Apply calculation skills sufficient for setting and achieving budgets
- Prioritise work and coordinate self and others in relation to workplace activities
- Identify and solve problems that may arise when setting and achieving budgets
- Select and apply appropriate technology, information systems and procedures
- Modify budgets and plans as required to cater for changes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
Monitor work activities in terms of planned schedule

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Delegations and budget accountabilities may include:
- monitoring expenditure
- authorising expenditure within limits
- reporting on variances to budget/plan
- taking remedial action within budget authority

Depending on the organisation concerned, workplace procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation and records may include:
- quality assurance procedures
- relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:
- relevant legislation from all levels of government that affects business operation, especially in regard to the maintenance of up-to-date, accurate financial information
- relevant industry codes of practice

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIQ1507A Manage assets

Unit Descriptor
This unit involves the skills and knowledge required to manage assets. It includes determining asset classification and identification; recording and valuing assets; and maintaining an asset management system. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Competency Field
Q – Financial Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine asset classification and identification
1.1 Determine asset register format on basis of current needs and business plan in accordance with company requirements
1.2 Select a compatible classification system that meets asset accounting and asset management needs in accordance with company requirements
1.3 Determine value thresholds for assets to be recorded in the asset register in accordance with company requirements

2 Record and value assets
2.1 Identify and record specified details of all material assets in accordance with the asset management policies and procedures
2.2 Record all assets in compliance with legislative and company requirements
2.3 Determine condition of each asset in accordance with manufacturers specifications and legislative and company requirements
2.4 Determine useful/residual life of each asset in accordance with manufacturers specifications and company requirements
2.5 Calculate current value of each asset based on valid and reliable information in accordance with legislative and company requirements

3 Maintain asset management system
3.1 Update records continuously to record asset purchases, loss, damage or disposal in accordance with company requirements
3.2 Conduct periodic audits to ensure accuracy of asset register in accordance with company requirements
3.3 Review asset management system periodically to ensure it is supporting business needs in accordance with company requirements
3.4 Provide training to support effective management and maintenance of the asset register in accordance with company requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Different types of asset management systems and their strengths and weaknesses
- Types of valuation methodologies and their usefulness in different contexts
- Requirements for completing relevant documentation such as asset registers
- Code of practice for working collaboratively with others

Required skills:
- Communicate effectively with others when managing assets
- Read and interpret instructions, procedures, information and signs relevant to the management of assets
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the management of assets
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unplanned events
- Modify activities depending on differing operational contingencies, risk situations and environments
- Use financial management skills sufficient to enable accurate recording of asset data
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Assets may include:

- buildings
- business and marketing contracts
- assets in the process of being transferred
- land
- office equipment and furniture
- plant and equipment
- vehicles
- facilities

Asset register may be a computer or manual file and include:

- damage/loss/theft
- date of purchase
- identifying number
- insurance policies and claims
- invoices and receipts
- location
- major repairs
- obsolescence
- value

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Consultative processes may involve:

- other employees and supervisors
- suppliers
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:

- lists of assets and or asset registers
- regulations and codes of practice relevant to ADG code, including safeworking and local authority regulations and procedures
- workplace policies and procedures related to ADG code
- relevant Australian Standards and certification requirements
Applicable legislation and regulations may include:

- relevant regulations, codes and safeworking systems for the use and checking of assets
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIQ1609A**  
*Carry out financial transactions and maintain records*

**Unit Descriptor**  
This unit involves the skills and knowledge required to carry out financial transactions and maintain records when providing taxicab services. It includes operating a taxicab meter in accordance with different tariff structures and taxi hire arrangements, calculating fares and handling payment transactions, and maintaining records for accounting purposes. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
This unit applies to the role of taxi driving. The work involves using basic financial transaction principles, routine procedures and regulatory requirements to handle payment transactions and maintain financial records as part of taxi driving operations.

**Competency Field**  
Q – Financial Management

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Operate a taxi meter in accordance with tariff structures and hiring arrangements**
   1.1 Tariff structures and the various forms of taxi hire are identified and applied
   1.2 Meter functions are identified and applied
   1.3 Meter is operated at beginning, throughout and at the end of hiring, in line with regulations and workplace procedures
   1.4 Meter is used to access information to complete driver running sheet, end-of-shift reports and reconciliation taking/fares

2. **Calculate fares and handle payment transactions**
   2.1 Amount owing is calculated and customer is advised
   2.2 In the case of cash transactions, amount tendered is checked and the correct change is calculated and given
   2.3 Adequate change is maintained for use in transactions
   2.4 Adequate supplies of dockets, vouchers and point of sale documents are maintained
   2.5 Cash, credit and other non-cash payment transactions are handled in accordance with workplace policy and procedures
   2.6 Due security is maintained when handling payments in accordance with workplace security procedures
   2.7 Process taxi subsidy scheme transaction according to state requirements

3. **Maintain daily records**
   3.1 Records are completed for all cash, credit and other non-
credit transactions in accordance with workplace policy and procedures
3.2 Calculations to complete the driver running sheet are carried out
3.3 End-of-shift reconciliation is completed
3.4 Appropriate records are maintained for taxation purposes

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state and territory regulations and codes of practice related to the conduct of transactions and maintenance of records within taxi operations
- Relevant OH&S procedures and guidelines
- Operational procedures for the conduct of direct financial transactions with customers in the taxi industry and the maintenance of records
- Sources of information and documentation needed when conducting financial transactions and maintaining records within the taxi industry
- Typical problems that can occur when carrying out financial transactions and maintaining records, and appropriate action that can be taken to prevent or solve them
- Risks and hazards when carrying out financial transactions and maintaining records, and related precautions to control security threats
- Contingency planning relating to managing and controlling security threats
- Implications of credit and financial institution codes of practice
- Requirements of taxi work systems, operations and relevant equipment
- Tariff structures
- Hiring arrangements
- Taxi meter functions

Required skills:

- Communicate effectively with others when conducting financial transactions and maintaining records
- Read and interpret instructions, procedures and information relevant to the conduct of financial transactions and maintenance of records
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the conduct of financial transactions and maintenance of records
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting financial transactions and maintaining records
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when conducting financial transactions and maintaining records, in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of financial transactions and maintenance of records
• Plan own work including predicting consequences and identifying improvements
• Apply relevant agreements, codes of practice or other legislative requirements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing workplace contexts, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use transaction equipment, processes and procedures
• Adapt to differences in equipment in accordance with standard operating procedures
• Use basic mathematical calculations
• Use EFTPOS equipment
• Complete documentation and maintain records for taxation purposes
• Complete a business activity statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Tariff structures and hiring arrangements may include:
• various forms of hiring
• relevant tariffs, tolls and fees

Amount owing is determined:
• in accordance with workplace policy and procedures
• in conformance with legal and regulatory requirements

Transactions are conducted using:
• EFTPOS machine
• calculators
• various forms of cards
• manual card imprinting resources

Finance processing equipment may include:
• manual and electronic cash registers
• EFTPOS and credit card facilities
• smart card
• manual ticketing resources

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Information/documents may include:

- workplace procedures and policies
- job specifications
- relevant manufacturers specifications and instructions for the use of transaction equipment
- operations manuals
- induction documentation
- competency standards and training materials
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- regulatory requirements for conducting financial transactions
- relevant Australian Standards and certification requirements
- relevant state/territory privacy legislation
- relevant state/territory OH&S regulations and legislation
- licensing requirements for driving and carrying particular classes of goods
- relevant state/territory road rules and traffic acts

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  1. applying the underpinning knowledge and skills
  2. applying relevant legislation and workplace procedures
  3. applying tariff structures and taxi hire arrangements
  4. operating a taxi meter
  5. operating EFTPOS and other manual card equipment in a taxicab
o selecting and using appropriate mathematical processes when conducting transactions
o selecting and using appropriate aids for carrying out calculations
o conducting cash, credit and other non-cash payment transactions
o filling out documents, vouchers, point of sale documents and other relevant taxi documentation legibly
o responding appropriately to telephone inquiries
o identifying required credit card clearances and transaction limits
o using appropriate communication methods and strategies
o locating, interpreting and applying relevant information
o maintaining transaction records and documentation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
  o on actual financial equipment used in the taxi industry
TLIQ1609A  Carry out financial transactions and maintain records
Unit Descriptor

This unit involves the skills and knowledge required to set and achieve a workplace budget in accordance with relevant regulatory requirements and workplace procedures. This includes planning the budget requirements, monitoring the budget and taking appropriate corrective action, monitoring expenditure, and reviewing and appropriately modifying the budget if necessary. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

Work must be carried out in compliance with the relevant regulations, standards and financial codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

Competency Field

Q – Financial Management

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan budget requirements

1.1 Financial flows for budgetary periods are planned and scheduled in accordance with workplace requirements

1.2 Information on costs and resource utilisation is fully assessed and correctly interpreted

1.3 Effective action is taken to reduce costs and enhance value to customer and/or workplace

2 Monitor budget and take corrective action

2.1 Corrective action is taken in response to actual or potential significant deviations from financial plans

2.2 Where a budget under- or overspend is likely to occur, the appropriate people are informed with minimum delay
2.3 Prompt, corrective action is taken where necessary in response to actual or potential significant deviations from budget

3 Monitor expenditure

3.1 Expenditure made is within agreed limits, does not compromise future spending requirements and conforms to the workplaces policy and procedures

3.2 Requests for expenditure outside limits of responsibility are referred to appropriate persons

3.3 Where necessary, expenditure is phased in accordance with a planned time scale

4 Review and modify budget

4.1 Actual income and expenditure is checked against agreed budgets at regular, appropriate intervals

4.2 Any necessary authority for changes in allocation between budget heads is obtained in advance of requirement

4.3 Modifications made to agreed budgets during the accounting period are consistent with agreed guidelines and are correctly authorised

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulations, codes of practice and legislative requirements
- Relevant OH&S and environmental procedures and regulations
- Workplace processes for setting and achieving budgets
- Problems that may occur when setting and achieving budgets and action that can be taken to report or resolve the problems
- Risks that may exist when setting and achieving budgets and ways of controlling the risks involved
- Focus of operation of budgetary systems, resources, management and workplace operating systems
- Accountancy practices relevant to budgetary control
- Budgetary procedures and policies
- Budgetary control systems
- Limits of authorised expenditure
- Quality and customer service standards, policies and procedures
- Resource availability including the competencies of individuals in the team/group

Required skills:

- Communicate effectively with others when setting and achieving budgets
- Read and interpret budgetary documents, financial statements and reports and workplace policies and procedures relevant to the setting and achievement of a budget
• Prioritise work and coordinate self and others in relation to workplace activities
• Complete documentation and enter data related to the setting and achievement of a budget
• Maintain budgetary records and documentation
• Operate electronic communication equipment to required protocol
• Apply calculation skills when setting and achieving budgets
• Provide leadership and work collaboratively with others when setting and achieving budgets
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when setting and achieving budgets in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Modify activities to cater for variations in workplace contexts and environment
• Work systematically with required attention to detail
• Select and apply appropriate technology, information systems and procedures
• Apply basic accounting principles to budgetary processes
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken in various work environments and involves a leadership role in the warehousing, storage, transport and distribution industries, for example:

• in the warehouse and/or depot
• in the vehicle on the road
• at the client's workplace
• in team and autonomous working situations

Customers may be:

• internal or external

Operations may be conducted:

• by day or night

The workplace environment may involve:

• twenty-four hour operation
• single and multi-site location
• large, medium and small workplaces

Services, products, risks, work systems and requirements potentially vary:

• in different sections of the workplace

Budgets may be:

• developed for component parts of operations or for specialised service provision

Budgets are developed:

• within the context of workplace policies and procedures
Consultative processes may involve:

- employees, supervisors and managers
- contractors
- suppliers and current or potential clients
- financial managers and accountants
- relevant authorities, government departments and institutions
- representatives of other enterprises and organisations related to the international transfer of freight
- industrial relations and OH&S specialists
- other professional, maintenance and technical staff

Communications systems may involve:

- fixed and mobile telephone
- radio
- fax
- email
- electronic data transfer of information
- mail, forms and internal memos

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- codes of practice and regulations relevant to the budgetary control
- budgetary documentation
- workplace operating procedures and policies
- operations manuals, job specifications and procedures and induction documentation
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- regulations and codes of practice relevant to budgetary control
- relevant Australian standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
o through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
TLIQ307C Maintain financial records in a small business

Unit Descriptor
This unit involves the skills and knowledge required to maintain financial records in a small business in the transport, warehousing, distribution and/or storage industries, including establishing system requirements, establishing the financial management system, and maintaining the financial reporting systems. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant codes of practice and regulations for the maintenance of financial records.

Work is performed in either a team or autonomous working situation. It involves the application of routine accounting principles and procedures to maintain basic financial records in a small business.

Competency Field
Q – Financial Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Establish system requirements
1.1 The output requirements of the financial system are established in accordance with business plans and statutory and regulatory obligations
1.2 The system needs and statutory reporting requirements are identified

2 Establish financial management system
2.1 The financial administrative systems established match the identified requirements of the business
2.2 Mechanisms for the review of terms of trade and fee structures are suited to the business's needs and meet industry standards
2.3 Equipment and software needed for the operation of the financial administrative system is identified, acquired and installed in association with relevant accounting and technical staff
2.4 Financial administration, reporting and the performance indicators to be provided by the system are in accordance with business's statutory obligations
2.5 Financial administrative systems are implemented in accordance with planned processes and policies

3 Maintain financial
3.1 Financial reports required to monitor business performance, to
reporting systems ensure accurate and timely information on working capital and cash flow, and to meet statutory obligations are accurately prepared to the prescribed format and at the required times

3.2 Financial reports are distributed to the relevant personnel and organisations by the due dates

3.3 Financial administration and reporting systems are evaluated against established performance indicators

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant agreements, codes of practice and legislative requirements pertaining to the maintenance of financial records in a small business or cost centre
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the maintenance of financial records in a small business or cost centre, including: compilation and use of cash receipts and cash payments journals, basic preparation, interpretation and analysis of financial reports, recording and balancing of petty cash transactions for financial records, completion of tax reconciliations and documentation, development and use of debtors and creditors records systems, completion of tax documentation and requirements, and reconciliation of bank statements with cash records
- Contacts and sources of information/documentation needed when maintaining financial records in a small business or cost centre
- Customer service policies and procedures
- Documentation requirements of banking institutions, governments and clients
- Accounting and auditing processes
- Financial control procedures
- Debt control processes
- Typical problems that can occur when maintaining financial records in a small business and appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate effectively with others when maintaining financial records in a small business
- Read and interpret instructions, procedures, information and financial documentation relevant to the maintenance of financial records in a small business
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the maintenance of financial records in a small business
- Use relevant communications systems and equipment when maintaining financial records
- Work collaboratively with others when maintaining financial records in a small business
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when maintaining financial records in a small business in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when maintaining financial records in a small business
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail
- Use relevant computerised systems for communication and document generation
- Adapt to differences in equipment in accordance with standard operating procedures

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Organisation may include:**
- small businesses or semi-autonomous cost centres in the transport, warehousing, transport and/or storage industries

**Customers may be:**
- internal or external

**Requirements for work may include:**
- relevant financial and taxation regulations
- communications and computing equipment
- hours of operation
- basic accounting software and documentation

**Financial records may include:**
- invoices
- computer spreadsheets
- ledgers
- wage sheets
- tax information

**Financial operations may include:**
- compilation and use of cash receipts and cash payments journals
- basic preparation, interpretation and analysis of financial reports
- recording and balancing of petty cash transactions for financial records
- completion of tax reconciliations and documentation
- development and use of debtors and creditors records systems
- completion of tax documentation and requirements
- reconciliation of bank statements with cash records
Consultative processes may involve:
- other employees and supervisors
- banking institutions
- Australian Taxation Office representatives
- suppliers and clients
- relevant authorities
- other agencies
- management
- other office or technical staff

Communications systems may involve:
- telephone
- fax
- email
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- workplace procedures
- organisational procedures
- established procedures

Documentation/records may include:
- workplace financial operating procedures and policies
- financial and taxation regulations and requirements
- invoices, receipts and other financial documentation
- journals and ledgers
- operations manuals, job specifications and procedures and induction documentation
- manufacturers instructions for the use of calculators, computers and other equipment used in financial operations
- relevant Australian and international standards, criteria and certification requirements
- competency standards and training materials
- supplier and/or client instructions
- relevant OH&S procedures
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- Australian and state/territory financial regulations, codes and procedures
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- Australian taxation regulations and requirements relevant to small businesses

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIQ407C Organise freight invoicing and payment

Unit Descriptor
This unit involves the skills and knowledge required to organise freight invoicing and payment, including preparing invoices, coordinating documentation, and processing payments. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work involves discretion and judgement for self and others in organising freight invoicing and payment. It is performed under limited or minimum supervision with general guidance on progress and outcomes of work.

A range of opportunities may be used to develop the workplace and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives.

Work involves responsibility for the organising of freight invoicing and payment and the provision of leadership of others either individually or in teams.

Competency Field
Q – Financial Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare invoices
1.1 Purchase order or documentation regarding request for invoice is registered, validated and filed appropriately
1.2 Payment method, timing and ,where required, currency and exchange rates are noted on the documentation
1.3 Invoice documents which commit the business to providing goods and services are registered and sourced
1.4 An invoice is raised listing items in a full, clear, legible and unambiguous description
1.5 Invoice original is checked and authorised by a signatory at an appropriate level
1.6 Required documentation is forwarded to business or organisation requesting invoice
1.7 Invoice details are recorded and filed in accordance with workplace policy

2 Coordinate documentation
2.1 Chart of accounts is checked at the end of the agreed period to verify payment or outstanding debt(s) against invoice(s) raised
2.2 Debtor's ledger is produced from balance sheet
2.3 Follow-up contacts of any outstanding account(s) are made according to workplace policy
2.4 Monthly statements are cross-checked at required intervals
2.5 Reminder notices are forwarded to customers in accordance with workplace policy

3 Process payments
3.1 Workplace policy and any particular contractual requirements are followed when making payments
3.2 Records of payments and any required government returns are completed and filed
3.3 Payments received are registered
3.4 Receipts are attached to payments with any corresponding documents and filed appropriately
3.5 Receipts are forwarded to customers
3.6 Files are retained according to archival regulations for audit purposes

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant regulatory and code requirements
• Relevant OH&S and environmental protection policies and procedures
• Workplace protocols and procedures for the organisation of freight invoicing and payment
• Relevant workplace business management policies and practices, including requirements for accounts, payments and record keeping
• Legal and commercial requirements for the work
• Focus of operation of financial systems, resources, management and workplace operating systems
• Resource availability including the processing capacity of equipment and software systems for planning activities
• Typical problems that can occur when organising freight invoicing and payment and related appropriate action that can be taken

Required skills:
• Communicate and negotiate effectively with others when organising freight invoicing and payment
• Read and interpret instructions, procedures and information relevant to the organisation of freight invoicing and payment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the organisation of freight invoicing and payment
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when organising freight invoicing and payment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems errors that may occur when organising freight invoicing and payment in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when organising freight invoicing and payment
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail
• Process invoices and payments
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
- single and multi-site locations
- large, medium or small companies
- vary across different sections of the workplace

Services, products, risks, work systems and requirements may potentially:

Operations involve:
- internal and external customer contact and coordination

Invoices may be:
- raised manually (typed/written) or computer-generated by authorised personnel

Transactions may be:
- in Australian or foreign currency

Consultative processes may involve:
- other employees and supervisors
- customers and suppliers
- management and union representatives
- industrial relations and OH&S specialists
- other professional or technical staff, contractors and maintenance personnel
### Communications systems may involve:
- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

### Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:
- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures

### Information/documentation may include:
- procedures for the organisation of freight invoicing and payment
- workplace records of invoices and payments
- customer/client instructions and assessed requirements
- legislation, regulations and related documentation relevant to business operations
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- invoices and receipts
- relevant agreements, codes of practice including the National Standards for Services and Operations
- manufacturers/suppliers specifications, advice, recommended procedures, policies and instructions
- workplace financial procedures and processes
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- quality assurance procedures

### Applicable regulations and legislation may include:
- relevant regulations, standards and codes of practice
- taxation and trading regulations relevant to business operations
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLIQ607C  Administer international trading accounts

#### Unit Descriptor
This unit involves the skills and knowledge required to administer international trading accounts, including calculating ratings on international movement of goods, negotiating and confirming financial terms of trade with customer, monitoring and addressing market changes in international freight forwarding, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
Work must be carried out in compliance with the relevant codes of practice and regulations for the export of freight.

Work is performed under general supervision. It involves the application of established workplace procedures to administer international trading accounts.

#### Competency Field
Q – Financial Management

#### ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

<table>
<thead>
<tr>

</tbody>
</table>
3 Monitor and address market changes in international freight forwarding

3.1 Changes in international markets are constantly monitored in accordance with workplace procedures
3.2 Alternative strategies and processes for forwarding goods are generated and confirmed with customers and agents where required
3.3 Analyses of future freight forward projections and market trends are undertaken for customers as requested

4 Complete documentation

4.1 Accounts with banks, customers, suppliers, agents and the like are maintained in accordance with workplace procedures and current legislation
4.2 Trading accounts in relation to the identified performance measures are regularly monitored and reviewed
4.3 Documentation is completed and secured in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant agreements, codes of practice and legislative requirements including international trade and freight regulations
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the administration of international trading accounts
- Contacts and sources of information and documentation needed when carrying out the administration of international trading accounts
- Customer service policies and procedures
- Documentation requirements of international and domestic banks, governments, clients, suppliers and agents
- Aspects of contract law relevant to the administration of international trading accounts
- Payment terms and procedures for method of international payments
- Operational procedures for document control
- International legislation regarding carriage of goods
- Banking procedures and exchange rates
- Typical problems that can occur when administering international trading accounts and appropriate action that can be taken to prevent or solve them

Required skills:

- Communicate effectively with others when administering international trading accounts
- Negotiate contract requirements and issues related to international trading accounts
- Read and interpret instructions, procedures, information and labels relevant to the administration of international trading accounts
- Prioritise work and coordinate self in relation to others
- Complete documentation related to the administration of international trading accounts
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when administering international trading accounts
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when administering international trading accounts in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when administering international trading accounts
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail
- Select and use relevant computerised systems and equipment for calculations and document generation
- Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work activities may cover:
- trading accounts related to the international movement of freight and may be conducted by day or night

Customers may be:
- internal or external

Requirements for work may include:
- site restrictions and procedures
- communications equipment
- international markets
- authorities and permits
- international codes of practice
- international financial control and exchange regulations

Methods of payment may include:
- open accounts
- cash against documents
- factoring
- consignments
- bills of exchange
- letters of credit
Currency arrangements may include:
- foreign bank accounts
- forward rates
- spot rates
- dollar rates

Changes in international markets may include:
- foreign bank accounts
- fluctuations in exchange rates
- changes to government regulations
- pricing variations by customers and shipping lines
- transit delays and strikes

Forms of freight transport may include:
- road
- rail
- sea
- air
- multi-modal

Communications systems may involve:
- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

Consultative processes may involve:
- other employees and supervisors
- suppliers, potential customers and existing clients
- relevant authorities
- shipping lines
- banking institutions
- other agencies
- management and union representatives
- OH&S specialists
- maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- workplace procedures
- organisational procedures
- established procedures
Documentation/records may include:

- operations manuals, job specifications and procedures and induction documentation
- trading documentation, including trading accounts, consignment notes, bills of exchange, letters of credit
- financial and trading records
- workplace operating procedures and policies
- manufacturers/client specifications, instructions and labelling advice including material safety data sheets
- competency standards and training materials
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- OH&S procedures
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- international transport regulations, codes and procedures
- relevant regulations for the import and export of cargo
- regulations and codes of practice for international trading accounts and the import and export of cargo
- Australian and international standards and certification requirements
- dangerous goods and hazardous substances codes and regulations
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- other regulations and legislative requirements pertaining to embargos, tariffs, quotas and prohibited goods

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts.
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace.
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation.
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace.
**TLIQ707C Prepare and process financial documents**

**Unit Descriptor**
This unit involves the skills and knowledge required to prepare and process financial documents, including recording and balancing petty cash transactions, balancing all other transactions, rectifying discrepancies as directed, preparing invoices for debtors, and preparing and process banking documents. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant financial codes of practice and regulations.

Work is performed under general supervision. It involves the application of routine principles and procedures to prepare and process financial documents.

**Competency Field**
Q – Financial Management

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

### 1 Record and balance petty cash transactions
1.1 Petty cash vouchers are prepared in accordance with workplace procedures
1.2 Petty cash claims and vouchers are checked for accuracy and authenticity before processing
1.3 Petty cash transactions are recorded
1.4 Irregularities are noted and referred to nominated person/section in accordance with workplace procedures

### 2 Balance all transactions
2.1 Transactions are presented to nominated person/section for checking in accordance with workplace procedures
2.2 Invoices for payment to creditors are reconciled in accordance with workplace procedures
2.3 Discrepancies between invoices and delivery notes/service agreements are identified and reported for resolution in accordance with workplace procedures
2.4 Errors in invoice charges are identified and corrective action is undertaken within scope of authority in accordance with workplace procedures

### 3 Rectify discrepancies as directed
3.1 Correct and authorised invoices are processed for payment and, where required, entered into financial records
3.2 Creditor enquiries are resolved within scope of authority or referred to other personnel in accordance with workplace procedures
4 Prepare invoices for debtors

4.1 Preparatory calculations are performed to produce accurate invoices
4.2 Relevant documentation is completed to ensure accuracy of contents
4.3 Invoices are distributed to nominated personnel for verification prior to despatch
4.4 Verified invoices are despatched within designated timelines
4.5 Verified figures are entered into financial journals
4.6 Documents are filed for auditing purposes and, if required, follow-up action

5 Prepare and process banking documents

5.1 Financial transactions are listed on deposit forms in accordance with financial institution's requirements
5.2 Pay-in documentation is balanced with all financial calculations
5.3 Financial institution deposit totals are balanced with internal records
5.4 Deposits are lodged with the financial institution

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant financial regulations, codes and procedures including pertinent taxation documentation requirements
• Relevant OH&S and environmental procedures and regulations
• Workplace procedures for the preparing and processing of financial documents
• Contacts and sources of information/documentation needed for the preparation and processing of financial documents
• Customer service policies and procedures
• Documentation requirements of banking institutions, governments and other relevant agencies
• Typical problems that can occur when preparing and processing financial documents and appropriate action that can be taken to prevent or solve them

Required skills:
• Communicate effectively with others when preparing and processing financial documents
• Read and interpret instructions, procedure and information relevant to the preparation and processing of financial documents
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the preparation and processing of financial documents
• Operate electronic communication equipment to required protocol
• Perform required calculations both manually and with the aid of relevant equipment and calculators
• Work collaboratively with others when preparing and processing financial documents
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when preparing and processing financial documents in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when preparing and processing financial documents
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail
• Select and use relevant equipment when preparing and processing financial documents, including the use of an appropriate range of office equipment, computer systems and financial software packages
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in: • a range of organisations in the transport, warehousing, distribution and/or storage industries and may be conducted by day or night

Customers may be: • internal or external

Requirements for work may include: • site restrictions and procedures • use of safety and personal protective equipment • specified loading operations • communications equipment • hours of operation • authorities and permits • financial regulations and processes • privacy and security procedures

Processing of financial documents may include: • recording and balancing petty cash transactions • balancing all transactions • rectifying discrepancies as directed • preparing invoices for debtors • preparing and processing banking documents
Lodgement of transactions with financial institutions may include:

- electronic banking
- manual processes including the use of third parties

Preparation of documentation is undertaken:

- within scope of authority

Business source documents may include:

- electronic banking
- requisitions
- orders
- service statements
- invoices and receipts
- despatch and receival notes
- credit notes
- statements
- sales tax statements
- consignment notes

Communications systems may involve:

- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- relevant authorities
- banking institutions
- other agencies
- management and union representatives
- OH&S specialists
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- workplace procedures
- organisational procedures
- established procedures
Documentation/records may include:

- operations manuals, job specifications and procedures and induction documentation
- guidelines concerning relevant financial regulations, codes and procedures including relevant taxation requirements
- competency standards and training materials
- manufacturers/client specifications, instructions and labelling advice including material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- OH&S procedures
- quality assurance procedures
- security procedures

Applicable regulations and legislation may include:

- relevant financial regulations, codes and procedures including relevant taxation requirements
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- international transport regulations, codes and procedures

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies
  - and other simulated practical and knowledge
assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLIQ907C**  
**Conduct courier/delivery cash transactions**

**Unit Descriptor**
This unit involves the skills and knowledge required to conduct courier/delivery cash transactions, including establishing price with customers, conducting transactions safely and securely, and recording transaction details. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant codes and regulations concerned with the conduct of cash transactions during the collection and delivery of valuables, secured products, documents and materials.

Work is performed under general supervision. It involves the application of the basic cash transaction principles, routine procedures and regulatory requirements to conduct cash transactions as part of courier/delivery operations.

**Competency Field**
Q – Financial Management

| **1 Establish price with customers** | 1.1 Cost of delivery/operation is confirmed with customer  
1.2 Customer queries are answered courteously and accurately  
1.3 Pricing structure is explained within workplace guidelines as required  
1.4 Bill/invoice is presented to customer |
| **2 Conduct cash transaction** | 2.1 Cash handed to courier/deliverer is checked and securely stored  
2.2 Change is given in appropriate denomination coins/notes  
2.3 Rounding of price is undertaken within workplace policy  
2.4 Appropriate security measures are taken when carrying out the cash transaction in accordance with workplace procedures |
| **3 Record cash transaction details** | 3.1 Invoice/bill is receipted or receipt provided to customer in accordance with workplace policy  
3.2 Record of transaction is made and kept  
3.3 Records at base are updated upon return to reflect transactions |
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory regulations and requirements related to the conduct of transactions within courier operations
- Relevant OH&S procedures and guidelines
- Risks and hazards when carrying out cash transactions and related precautions to control security threats
- Operational procedures for the conduct of cash transactions with customers in the courier industry
- Contingency planning relating to managing and controlling security threats
- Implications of financial regulations and codes of practice
- Requirements of courier work systems/operations and relevant equipment
- Typical problems that can occur when conducting courier and delivery cash transactions and appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate effectively with others when conducting courier and delivery cash transactions
- Read and interpret instructions, procedures and information relevant to the conduct of courier and delivery cash transactions
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the conduct of courier and delivery cash transactions
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting courier and delivery cash transactions
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when conducting courier and delivery cash transactions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when conducting courier and delivery cash transactions
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of courier and delivery cash transactions
- Apply relevant agreements, codes of practice or other legislative requirements
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and correctly use equipment, processes and procedures
- Adapt to differences in equipment in accordance with standard operating procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- firearms
- two-way radios

Information/documents may include:
- workplace procedures and policies
- job specifications
- relevant manufacturers specifications and instructions for the use of transaction equipment
- operations manuals
- induction documentation
- competency standards and training materials
- supplier and/or client instructions
- material safety data sheets
- codes of practice and regulations concerning cash transaction
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- regulatory requirements for conducting cash transactions
- relevant Australian Standards and certification requirements
- relevant state/territory privacy legislation
- relevant state/territory OH&S regulations and legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIR1007A  Plan purchasing**

**Unit Descriptor**
This unit involves the skills and knowledge required to plan purchasing, including preparing invitations to offer, identifying suppliers, issuing invitations to offer, and preparing purchase recommendations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

**Competency Field**
R – Contract Procurement

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

4.9 Approval is obtained for recommended offers

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant legislation, codes of practice and national standards related to procurement, for example Trade Practices Act, contract law, sale of goods legislation, consumer protection legislation and legislation related to the import of goods and services, where relevant
- Relevant OH&S and environmental procedures and regulations
- All details of the organisation's purchasing strategies
- Product knowledge about the goods and services being supplied
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Code of practice for working collaboratively with others
- Steps involved in planning the work activities

Required skills:

- Communicate effectively with others, including verbal skills to negotiate and liaise with potential suppliers and relevant personnel, and written skills including report writing
- Read and interpret instructions, procedures, information and signs relevant to the planning of purchasing
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Work systematically with required attention to detail
- Promptly report and/or rectify any identified problems in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist
• Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor work activities in terms of planned schedule
• Apply and use software appropriately
• Behave ethically and with probity in all aspects or work activities and adhere to industry and organisational codes of conduct

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Relevant personnel may include:
• internal users of purchased goods and services
• owner and Board
• CEO, managers, leaders, coordinators, supervisors and other persons authorised to commit the organisation to purchases
• specialist personnel involved in purchasing, asset maintenance and finance

Purchasing methods may include:
• written quotations
• invitation of open or select tenders
• direct purchases using supply agreements
• electronic trading
• direct negotiations

Invitations to offer may include:
• specifications of goods and/or services required
• criteria for selection of suppliers from offers received
• draft contracts and agreements
• delivery schedules
• requirements for off-site storage and warehousing
• required supplier capacity
• quality requirements
Purchasing strategies include:

- the organisation's documented strategies for purchasing, covering policies, procedures, guidelines and documentation formats for purchasing from suppliers including entities owned by the organisation, partners, alliance members and local and distant suppliers
- criteria for evaluating purchasing performance
- methodology for evaluating purchasing performance
- different policies, procedures and strategies for different dollar values of purchases
- limits of authority to approve purchases
- requirements for fairness and transparency in purchasing
- organisational and industry codes of conduct and ethics

Clarification of issues may include:

- requests for further information about specifications not responded to, misinterpretations of specifications and supplementary/add on products or services

Further information may include:

- requests about specifications not responded to, misinterpretations of specifications and supplementary/add on products or services
- supplier briefings and presentations

Consultative processes may involve:

- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Documentation and records may include:
- organisation's policies, procedures, strategies, methods and instructions relevant to procurement
- lists of relevant personnel to consult
- proformas and instructions used when preparing invitations to offer
- quality assurance procedures
- technical instructions

Applicable legislation and regulations may include:
- relevant legislation, codes of practice and national standards related to procurement, for example Trade Practices Act, contract law, sale of goods legislation, consumer protection legislation and legislation related to the import of goods and services, where relevant
- relevant industry codes of practice
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- award and enterprise agreements and relevant industrial instruments
- workplace relations regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
TLIR107C  Monitor supplier performance

Unit Descriptor
This unit involves the skills and knowledge required to monitor the performance of contracted suppliers of goods/materials/services including administering the supplier contract, assessing for conformity to contracted requirements, and completing all required documentation concerning the contract. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work is performed under general guidance on progress and outcomes of work. It involves discretion and judgement for self and others in monitoring supplier performance. This includes the application of workplace procedures to specified workplace operations to monitor and report on the performance of supply contractors.

A range of opportunities may be used to develop the work area and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisations' goals and key performance objectives by the work area and the individuals and teams within it.

Work involves responsibility for resource coordination and allocation and the provision of leadership of others either individually or in teams.

Competency Field
R – Contract Procurement

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Administer supplier contract

1.1 Procedures for the receival of supplied goods/materials/services are documented and implemented within the workplace

1.2 Supplied goods/material/services are assessed for conformity to contracted requirements including price, quantity, quality and delivery schedules

1.3 Non-conformance of supplier with contracted requirements is accurately detailed

1.4 Actions to rectify non-conformance are undertaken in accordance with enterprise procedures and within scope of authority

1.5 Issues of non-conformance beyond scope of authority are referred to designated personnel in accordance with enterprise
operating procedures

2 Complete documentation

2.1 Annotations and performance assessment/evaluations are completed and appended to supplier file
2.2 Action taken in regard to non-conformance of contracted requirements is documented and appended to supplier file
2.3 System records are maintained and updated in accordance with enterprise information management system and, where applicable, regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulatory and code requirements
- Relevant OH&S responsibilities and procedures
- Workplace protocols and procedures for monitoring the performance of supply contractors
- Workplace contract performance and disputation policies and procedures
- Workplace business policies and plans as they relate to supply contracts, including procedures for maintenance of confidentiality
- Focus of operation of recording, reporting and statistical analysis systems and resources
- Resource availability including the processing capacity of equipment and software systems for statistical analysis of data
- Typical problems that can occur with supply contracts and related appropriate action that can be taken

Required skills:
- Communicate effectively with others when monitoring supplier performance
- Read and interpret instructions, procedures and information relevant to the monitoring of supplier performance
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the monitoring of supplier performance
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when monitoring supplier performance
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when monitoring supplier performance in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail
• Select and appropriately apply technology, information systems and procedures when monitoring supplier performance
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
• single and multi-site location
• large, medium or small companies

Services, products, risks, work systems and requirements may:
• potentially vary across different sections of the workplace

Operations involve:
• customer and supplier contact and coordination

The key requirement of this unit is to:
• interpret the data and provide appropriate, timely information on the outcomes of data analysis to appropriate personnel

Contracts may be:
• for singular or continuous supply

Document/data interchange may be:
• electronic
• paper-based

Suppliers may include:
• domestic and international contractors
• corporations
• government agencies

Contract non-conformance must be:
• demonstrable

Relevant regulations/legislation may be related to:
• contract disputation
• confidentiality
• goods regulatory requirements
• probity

Consultative processes may involve:
• other employees and supervisors
• customers and suppliers
• management and union representatives
• industrial relations, occupational health and safety specialists
• other professional or technical staff, contractors and maintenance personnel
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- relevant supply contracts and agreements
- quality or enterprise work specifications and procedures
- manufacturers specifications and/or suppliers handling and storage advice, workplace procedures, policies and instructions
- guidelines relating to minimising risks to the environment and occupational health and safety requirements
- supplier and/or client instructions
- material safety data sheets
- relevant agreements, codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation, including regulations related to hazardous substances, dangerous goods and environment protection
- reports of accidents and incidents within regulatory requirements and enterprise procedures
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- quality assurance procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
unit

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIR1207A Conduct international purchasing

Unit Descriptor
This unit involves the skills and knowledge required to conduct international purchasing and includes sourcing potential suppliers, inviting offers, evaluating the offers received, preparing recommendations and contracting the successful supplier. It also covers arranging importation of the goods, including satisfying regulatory requirements, arranging required payments, and ensuring all contractual obligations are met. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Competency Field
R – Contract Procurement

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Source international suppliers
1.1 Goods to be purchased internationally are identified
1.2 Potential sources of supply are researched from relevant information sources
1.3 Market structures for proposed purchases are examined
1.4 Regulations governing international purchasing are determined
1.5 Potential sources of supply are identified from research
1.6 Assistance and clarification is sought, as required, to determine and apply workplace policies and procedures and regulations governing international purchasing of specified goods

2 Prepare invitations to offer for imported goods
2.1 Specifications of requirements for international purchasing of specified goods are obtained from relevant personnel and clarified, as required
2.2 Purchasing strategy most appropriate to the proposed purchase is selected
2.3 Invitations to offer are developed and documented
2.4 Invitations to offer are checked for compliance with regulations, organisation's policies and procedures and description of required goods
2.5 Criteria for evaluating offers are developed and documented and approval is sought and obtained for the documented criteria
2.6 Approval is sought for issuance of invitations to offer prior to issuance to prospective suppliers

3 Prepare recommendations in response to offers
3.1 Offer documents are received from suppliers
3.2 Offer documents are assessed against documented criteria and requirements of purchasing strategies
3.3 Further information is sought from suppliers, as required, to clarify offers
3.4 Offers are evaluated against purchasing criteria
3.5 Preferred offer is selected and recommendation made for approval by relevant personnel
3.6 Approval is obtained for recommended offers

4 Action successful offers
4.1 Contract with successful supplier is drafted
4.2 Legal expertise is accessed to ensure legality of contract agreements
4.3 Contract is issued in accordance with approval received
4.4 Unsuccessful offers are informed of outcome of evaluation process

5 Arrange importation of goods
5.1 Risks in ownership and transport of goods from point of delivery to final destination are assessed
5.2 Relevant insurance cover is arranged
5.3 Agents are sourced as required to arrange inspection, packing, transport, importation, customs clearance and delivery of goods into store
5.4 Statutory and regulatory requirements including fumigation and export/import controls are satisfied
5.5 Supply and logistics channels are managed to ensure delivery of goods is achieved satisfactorily and within designated timelines

6 Arrange provision of foreign currency payments and ensure all contractual obligations are satisfied
6.1 Advice is obtained on payment strategy to be followed
6.2 Arrangements are made to initiate currency hedging, letter of credit or payment by direct cheque in accordance with advice received
6.3 Payments are authorised at appropriate times
6.4 Actions are taken to ensure that any non-compliance with contractual conditions and specifications is rectified
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Legislation, codes of practice and national standards, for example Australian Customs Act, Trade Practices Act, law of contracts, quarantine legislation, relevant other government and international legislation relating to restrictions and prohibitions on imports
- Relevant OH&S and environmental procedures and regulations
- Organisation's policies and procedures for international purchasing
- Sources of information and assistance external to organisation, for example regulatory authorities such as Australian Custom Service (ACS) and Australian Quarantine Inspection Service (AQIS), customs brokers, Austrade, state/territory government departments or agencies, chambers of commerce
- Methods of payment applicable to international purchasing
- Relevant insurance brokers and available types of policies to cover identified risks
- Agencies involved in importation arrangements such as customs brokers, freight forwarders, logistics and transport companies and consultants
- Requirements for completing relevant documentation
- Code of practice for working collaboratively with others
- Steps involved in planning the work activities
- Procedures for managing and controlling hazardous situations when carrying out work activities
- Sources of information on differences in equipment and related standard operating and servicing procedures

Required skills:
- Communicate effectively with others when completing work activities, including written and verbal communication skills for developing and documenting invitations to offer
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Manage tasks across cultural and geographic barriers
- Assess and manage risks as appropriate to work tasks
- Promptly report and/or rectify any identified problems in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor work activities in terms of planned schedule
• Work systematically to timelines and with required attention to detail and accuracy
• Behave ethically and with probity in all aspects or work activities and adhere to industry and organisational codes of conduct

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information sources may include:
• trade or industry publications
• Austrade and state/territory government departments or agencies and chambers of commerce
• existing databases of suppliers
• international branches and affiliates of organisation
• catalogues and directories
• internet

Assistance and clarification may be sought from:
• manager or other personnel within the organisation
• external parties, for example, regulatory authorities such as Australian Customs Service (ACS), Australian Quarantine Inspection Service (AQIS), customs brokers and Austrade

Specifications may include:
• technical descriptions of goods to be purchased
• relevant quality parameters for goods
• size, capacity and volume of individual items
• quantities required
• indications of price range to be paid
• designated timelines
• packaging requirements

Criteria for evaluating offers may include:
• any preferences for country of origin
• cost structure
• quality parameters
• value adding offered by suppliers including technical support and guarantees
• availability and ability to meet designated timelines
• clarity of offer

Approval may be sought and obtained from:
• own manager
• purchasing manager
Specialist expertise may include:
- expertise within organisation
- regulatory bodies such as AQIS and ACS
- customs brokers, freight forwarders, logistics and transport companies and consultants

Agents include:
- customs brokers
- freight forwarders
- logistics and transport companies
- consultants

Actions may include:
- referral to more senior personnel within organisation, regulatory bodies and agents involved in arranging importation of goods
- imposition of fines or penalties
- interventions by self

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the organisation concerned, workplace procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation and records may include:
- organisation's policies, procedures, strategies, methods and instructions relevant to purchasing in an international context
- lists of relevant personnel to consult
- proformas and instructions used when preparing invitations to offer
- quality assurance procedures
- technical instructions

Applicable legislation and regulations may include:
- legislation, codes of practice and national standards, for example:
  - Australian Customs Act
  - quarantine legislation
  - other Australian legislation relating to restrictions and prohibitions on imports
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIR1407A  Manage suppliers

Unit Descriptor
This unit involves the skills and knowledge required to manage suppliers. It includes assessing suppliers and building a productive relationship with them; evaluating delivery of goods/services; negotiating arrangements and resolving disagreements with suppliers; and reviewing supplier performance. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Competency Field
R – Contract Procurement

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Assume suppliers and build productive relationship

1.1 Criteria to enable an effective evaluation of supplier services are developed and documented
1.2 Existing suppliers are assessed against criteria
1.3 Availability and suitability of alternate suppliers who can meet the service support requirements within legislative requirements are identified
1.4 Terms and conditions of suppliers to achieve service requirements are established and communicated
1.5 Cooperative relationships are developed with supplier according to organisational policies and procedures

2 Evaluate delivery of goods and/or services against agreements

2.1 The quality of goods and services supplied is assessed against criteria
2.2 Non-compliance is identified, documented and corrective action is implemented within the terms of contractual arrangements
2.3 Contingency plans are developed in the event of supplier failure to deliver
2.4 Relationships with suppliers are managed to support effective delivery

3 Negotiate

3.1 Arrangements with suppliers are negotiated and implemented
**arrangements with suppliers**

3.2 Market factors that may affect the supply of goods and services are identified and communicated to relevant personnel

3.3 Immediate corrective action is taken in consultation with the supplier where potential or actual problems are indicated

<table>
<thead>
<tr>
<th>4 Resolve disagreements with suppliers</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.1 Disagreements with suppliers are investigated to identify validity and causes</td>
</tr>
<tr>
<td>4.2 Disagreements are negotiated and resolved</td>
</tr>
<tr>
<td>4.3 Amendments to agreements as a consequence of the resolution of disagreements are documented</td>
</tr>
<tr>
<td>4.4 Approval is sought and obtained for amendments</td>
</tr>
<tr>
<td>4.5 Approved amendments are communicated to suppliers and relevant personnel</td>
</tr>
</tbody>
</table>

<table>
<thead>

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant sections of national and state or territory regulatory requirements and codes of practice related to procurement
- Relevant OH&S and environmental procedures and regulations
- Organisational policies, procedures, plans, guidelines and code of conduct relevant to procurement and supply contracts
- Procurement approval procedures
- Procedures for receipt and payment of goods and services
- Organisational procedures for monitoring the performance of suppliers
- Contract performance and dispute policies and procedures
- Procedures for operating electronic communications equipment
- Suppliers in the marketplace
- Common use arrangements
• Financial accountability requirements
• Operation of recording, reporting and statistical analysis systems and resources
• Requirements for completing relevant documentation
• Steps involved in planning the work activities
• Code of practice for working collaboratively with others
• Probity requirements and ethical issues

**Required skills:**
• Communicate effectively with others when managing suppliers
• Read and interpret instructions, procedures, information and signs relevant to the management of suppliers
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor work activities in terms of planned schedule

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Recommendations may include:**
- renew agreement for further purchasing
- seek new sources of supply
- file relevant supplier details for future reference

**Disagreements can be about:**
- delivery schedules
- costs, fees and prices
- quality of goods or services, including OH&S performance standards
- interpretations of specifications detailed in documents on which agreements are based
- interpretations of terms and conditions detailed in agreement
Consultative processes may involve:

- other employees and supervisors
- suppliers of equipment
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation and records may include:

- organisation's policies, procedures, strategies, methods and instructions relevant to procurement and supplier management
- relevant OH&S and environmental protection regulations
- lists of approved suppliers and relevant personnel to consult
- proformas and instructions used when evaluating suppliers and their performance
- quality assurance procedures
- technical instructions
- relevant Australian Standards

Applicable legislation and regulations may include:

- relevant sections of national and state or territory regulatory requirements and codes of practice related to procurement
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment**

- The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIR207C Source goods/services and evaluate contractors

Unit Descriptor

This unit involves the skills and knowledge required to source goods/materials/services and evaluate contractors including analysing supply requirements, and evaluating and selecting appropriate potential contractor(s). Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

Work is performed under general guidance on progress and outcomes of work. It involves discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within organisational policy and procedures. This includes the application of established workplace procedures to source goods and to evaluate potential contractors.

A range of opportunities may be used to develop the work area and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisations' goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

Competency Field

R – Contract Procurement

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Analyse supply requirements

1.1 Purpose and specifications of required goods/services are identified
1.2 Criteria to evaluate potential or existing contractor performance is established
1.3 Quantities of required goods/services are determined
1.4 Frequency of ordering/requesting of goods/services is identified

2 Evaluate potential contractors

2.1 Contractors of requested goods/materials/services are identified
2.2 Comparative costings for goods/materials/services are obtained
2.3 Contractors' ability to provide a consistent level of performance on repeat jobs is assessed
2.4 Contractors are evaluated in relation to established criteria and
2.5 A prioritised contractor shortlist is established based on the
capacity of contractors to provide a cost competitive quality
service
2.6 The outcomes of the contractor selection process are
documented including recommendations for actioning
agreements/contracts with selected contractors
2.7 Information and data generated during the selection process is
filed and maintained in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant regulatory and code requirements
• Relevant OH&S responsibilities and procedures
• Workplace policies, procedures and protocols for the sourcing and supply of goods/services, and the evaluation of potential supply contractors
• Workplace grievance and disputation handling policies and procedures
• Workplace business policies and plans as they relate to supply contracts, including procedures for maintenance of confidentiality
• Focus of operation of recording, reporting and statistical analysis systems and resources
• Resource availability including the processing capacity of equipment and software systems for statistical analysis of data
• Typical problems that can occur when sourcing goods and services and evaluating contractors, and related appropriate action that can be taken

Required skills:
• Communicate and negotiate effectively with others when sourcing goods and services and evaluating contractors
• Read and interpret instructions, procedures and information and signs relevant to the sourcing of goods and services and the evaluation of contractors
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the sourcing of goods and services and the evaluation of contractors
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when sourcing goods and services and evaluating contractors
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when sourcing goods and services and evaluating contractors in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and procedures to workplace tasks
- Adapt to differences in equipment in accordance with standard operating procedures

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
- single and multi-site location
- large, medium or small companies

Services, products, risks, work systems and requirements may:
- potentially vary across different sections of the workplace

Operations require:
- customer and supplier contact and coordination

Contractors may be:
- for one-off or repeat supplies/contract services

Document/data interchange may be:
- electronic
- paper-based

Selection processes include:
- procedures for maintenance of confidentiality and integrity

Personnel in work area may include:
- other employees and supervisors
- customers and suppliers
- external authorities and agencies
- management and union representatives
- industrial relations, occupational health and safety specialists
- other professional or technical staff, contractors and maintenance personnel

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documentation may include:

- quality and work specifications and procedures
- specifications for required products or services
- manufacturers specifications and/or suppliers handling and storage advice
- workplace procedures, policies and instructions
- OH&S regulations and procedures
- supplier and/or client instructions
- materials safety data sheets
- relevant agreements, codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation, including regulations related to hazardous substances, dangerous goods and environment protection
- reports of accidents and incidents within regulatory requirements and enterprise procedures
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- quality assurance procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific

- Performance is demonstrated consistently over a period
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIR307C Negotiate a contract

Unit Descriptor
This unit involves the skills and knowledge required to contract transport and distribution services in accordance with relevant regulatory requirements and workplace procedures. This includes negotiating the contract with a contractor, finalising the contract negotiations, and completing all enterprise contract requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations, standards, legal requirements and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and who provide leadership of others individually or in teams.

Competency Field
R – Contract Procurement

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Negotiate contract with contractor
1.1 Requirements of the contract are clearly documented and understood by the relevant parties
1.2 Areas of ambiguity or concern are clarified and resolved
1.3 Negotiations are undertaken with selected contractor for the contracting of required goods/services on a 'without prejudice' basis
1.4 Conditions for service and/or supply of goods/services are agreed between the enterprise and the contractor including the determination of key performance indicators
1.5 Alternative contractors are negotiated with if agreement is unable to be reached with preferred contractor
1.6 Contract negotiations conform to established workplace requirements and relevant legislation
2 **Complete contract negotiations**

2.1 Contract documentation is drafted in accordance with relevant legislation, workplace procedures and negotiated conditions of service and supply

2.2 Technical support in the drafting of contracts is accessed where required

2.3 Contract documentation is signed and exchanged between the relevant parties

3 **Complete enterprise contract requirements**

3.1 Documentation systems are established to ensure traceability of orders and financial transactions

3.2 Workplace systems that require interaction with contractors are identified and actioned

3.3 Quality assurance procedures for supplied goods/services are initiated

3.4 Contract and ancillary documentation is completed and stored in accordance with workplace procedures and, where applicable, regulatory requirements

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Regulations, codes of practice and legal requirements relevant to contractual arrangements
- Relevant OH&S and environmental protection procedures and regulations
- Workplace procedures for the negotiation of a contract
- Problems that may occur during the negotiation of a contract and action that can be taken to report or resolve the problems
- Risks that may exist when negotiating a contract and ways of controlling the risks involved
- Focus of operation supply arrangements, resources, management and workplace operating systems
- Applicable aspects of contract law
- Processes for contract formulation and negotiation
- Workplace business policies and plans including procedures for maintenance of confidentiality
- Equipment applications, capacities, and configurations
- Resource availability including the competencies of individuals in the team/group
- Relevant contract documentation requirements

**Required skills:**

- Communicate effectively with others when negotiating a contract
- Read and interpret instructions, procedures, information and regulatory requirements relevant to the negotiation of a contract
• Prioritise work and coordinate self and others in relation to workplace activities
• Complete documentation related to the negotiation of a contract
• Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when negotiating a contract
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when negotiating a contract in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate risks that may exist when negotiating a contract
• Plan and organise work activities
• Monitor work activities in terms of planned schedule
• Modify activities to cater for variations in workplace contexts and environment
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and apply appropriate technology and information systems
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: • in various work environments in warehousing, storage, transport and distribution industries

Customers may be: • internal or external

Operations may be conducted: • by day or night

The workplace environment may involve: • twenty-four hour operation
• single and multi-site location
• large, medium and small workplaces

Services, products, risks, work systems and requirements: • potentially vary in different sections of the enterprise

Contracts may be for: • singular or continuous supply of goods and/or services

Document/data interchange may be: • electronic
• paper-based

Clients/customers/suppliers may include: • domestic and international contractors
• corporations
• individuals
• government agencies
Contract must conform to:

- relevant legislation in regard to issues of probity and fair dealings

Consultative processes may involve:

- employees, supervisors and managers
- contractors
- suppliers and current or potential clients
- legal representatives, financial managers, accountants
- relevant authorities, government departments and institutions
- representatives of other enterprises and organisations related to the international transfer of freight
- industrial relations and OH&S specialists
- other professional, maintenance and technical staff

Communications systems may involve:

- fixed and mobile telephone
- radio
- fax
- email
- electronic data transfer of information
- mail, forms and internal memos

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Documentation/records may include:

- codes of practice and regulations relevant to the transport and distribution contractual arrangements
- legal and contract documentation
- workplace operating procedures and policies
- operations manuals, job specifications and procedures and induction documentation
- supplier and/or client instructions
- Australian and International standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- regulations and codes of practice relevant to contractual arrangements
- Australian and international regulations and codes of practice for the handling and transfer of dangerous goods and hazardous substances
- relevant financial regulations
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant licence or permit requirements and associated regulations
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
the underpinning knowledge and skills
relevant legislation and workplace procedures
other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIR507A Manage a contract

Unit Descriptor
This unit involves the skills and knowledge required to manage a contract. It includes confirming contract requirements; establishing a contract management system; and monitoring and evaluating the contract. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Competency Field
R – Contract Procurement

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Confirm contract requirements
1.1 Consult relevant parties to identify their requirements of the contract
1.2 Identify special provisions needed
1.3 Identify whether the contract is straightforward or whether specialist legal advice is needed and obtain advice where required
1.4 Contract specifications clearly identify the outcomes and measures required in the key performance areas
1.5 Relationship with contractor is managed in accordance with organisational policy and procedures

2 Establish contract management system
2.1 Effective communication/information strategies are established
2.2 Dispute and complaint system is established according to organisational policy and procedures
2.3 Consistent and accurate records of contract progress are maintained
2.4 Management strategy is documented, monitored for effectiveness and adapted as necessary during the life of the contract

3 Monitor contract
3.1 Regular inspections of contract services are undertaken to ensure compliance with specifications
3.2 Regular planned progress meetings are conducted and
documented between all contract personnel to ensure problems are identified and resolved early and documented

3.3 Variations between the specified scope of services and the contract are identified and documented and relevant personnel are notified without delay

3.4 Contract costs are monitored on a regular basis to ensure that the service is carried out within financial and contractual requirements

3.5 Payments for contract services are authorised in accordance with the conditions of contract and organisation's contract administrative system

4 Evaluate the contract

4.1 Evaluation of contract performance is undertaken relative to planned performance measures and in consultation with stakeholders and suppliers

4.2 Conclusions are detailed against agreed criteria and a complete picture of performance of the supplier, the organisation's procurement processes and value for money is provided

4.3 Evaluation is documented in accordance with organisational requirements to assist improvement in future procurement activities

4.4 Relevant parties are advised of evaluation outcomes in a timely manner in accordance with organisational guidelines

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice related to procurement, including law of contract, trade practices law and commercial law to a level sufficient to be able to manage the performance of a contractor
- Purchasing policies and practices of the organisation
- Whole-of-life considerations
- Disposals considerations
- Procedures for acceptance of goods or services
- Procurement approval processes
- Sufficient knowledge of finance to be able to manage a contract including negotiating price variations during the contract
- Performance management to be able to identify and manage compliance with the contract
- Confidentiality issues in relation to contracted services such as intellectual property
- Negotiation practice in procurement, including legal aspects
- Ethical issues
- Equal employment opportunity and anti-discrimination law
Financial and accounting issues relevant to the contract.
Procedures for operating electronic communications equipment
Requirements for completing relevant documentation
Code of practice for working collaboratively with others

**Required skills:**
- Communicate effectively with others when managing a contract
- Read and interpret instructions, procedures, information and the contract itself
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to contract management, including reports relevant to deliverables of stages and completion
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Negotiate solutions to problems as they arise during the management timeframe of the contract
- Modify activities depending on differing operational contingencies, risk situations and environments and negotiate those modifications where necessary with the contractor or agent
- Monitor work activities in terms of planned schedule

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Disputes and complaints may include disputes over:
- requirements
- delivery schedules
- price changes
- extensions to scope
- additional tasking
- payment schedules

Depending on the organisation concerned, workplace procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- other employees and supervisors
- relevant authorities
- legal or other expert advisers

Documentation and records may include:
- relevant legislation, regulations and codes of practice related to procurement and contracted services
- relevant OH&S and environmental protection regulations, if applicable
- organisation's policies and procedures on procurement and contracted services
- contract schedules, specifications and related documentation
- quality assurance procedures
- relevant Australian Standards and certification requirements where these apply to the contracted services

Applicable legislation and regulations may include:
- relevant sections of national and state or territory regulatory requirements and codes of practice related to procurement, including trade practices law, law of contract, commercial law and fair trading legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or

- access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIR607A  Develop, implement and review purchasing strategies

Unit Descriptor
This unit involves the skills and knowledge required to develop, implement and review an organisation's purchasing strategies. It includes determining, developing and implementing purchasing strategies, evaluating these and implementing improvements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Competency Field
R – Contract Procurement

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine purchasing objectives

1.1 Industry benchmarks for purchasing are researched and analysed for suitability to organisation
1.2 Organisation's purchasing data and information are analysed
1.3 Consultations are undertaken with relevant stakeholders and personnel to inform development of purchasing objectives
1.4 Purchasing objectives in line with organisation's goals are drafted
1.5 Approval is gained from relevant personnel for purchasing objectives

2 Develop purchasing strategies

2.1 Purchasing strategies are developed, taking into account legal requirements and purchasing objectives
2.2 Purchasing criteria include the five rights
2.3 Human resource, financial and other plans are developed to implement purchasing strategies
2.4 Approval is gained for plans to implement purchasing strategies
2.5 Changes resulting from approval process are made to plans and strategies, as required

3 Implement purchasing

3.1 Purchasing strategies are communicated to relevant personnel
strategies and stakeholders

3.2 Resources needed to implement purchasing strategies are accessed
3.3 Support is provided to implement purchasing strategies
3.4 Implementation of purchasing strategies by the organisation is monitored
3.5 Problems and issues arising during implementation are identified and addressed
3.6 Reports are provided to relevant personnel and stakeholders on implementation of purchasing strategies

4 Evaluate purchasing strategies and implement improvements

4.1 Implementation of purchasing strategies is reviewed
4.2 Improvements to purchasing strategies are identified from review process
4.3 Approval is gained to implement improvements to purchasing strategies
4.4 Improvements are communicated to relevant stakeholders and support is provided to implement improvements
4.5 Implementation of improvements is monitored and reviewed to determine effectiveness of improvements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislation, codes of practice, national and international standards, for example Trade Practices Act, contract law, sale of goods legislation, and legislation related to the import of goods and services, if relevant
- Occupational health and safety (OH&S) issues relevant to goods and services purchased by the organisation
- Organisation policies and procedures related to purchasing; contracting and tendering; business terms and conditions for purchasing, tendering and contracting; and ethical behaviour
- Product knowledge related to goods and services required by the organisation
- Information about industry benchmarks for purchasing, including information from peak bodies and industry associations and Australian Standards

Required skills:

- Communicate effectively with others when developing, implementing and reviewing purchasing strategies, including consulting and negotiating with stakeholders, using writing skills to document policies and procedures, and supporting staff to implement strategies
- Read and interpret instructions, procedures and information relevant to work activities
- Prepare reports appropriate to the development, implementation and review of purchasing strategies
• Plan and prioritise work activities and research and analyse data
• Develop human resource, financial and other plans when developing, implementing and reviewing purchasing strategies
• Use monitoring, review and evaluation skills when developing, implementing and reviewing purchasing strategies
• Identify and address any problems relating to the development, implementation and review of purchasing strategies
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interaction with others

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Relevant stakeholders may include:
• clients and customers
• tenderers, suppliers and contractors

Relevant personnel may include:
• internal users of purchased goods and services
• owner and Board
• CEO, managers, leaders, coordinators, supervisors and other persons authorised to commit the organisation to purchases
• specialist personnel involved in purchasing, asset maintenance and finance

Purchasing strategies include:
• policies, procedures, guidelines and documentation formats for purchasing from suppliers including entities owned by the organisation, partners, alliance members and local and distant suppliers
• criteria for evaluating purchasing performance
• methodology for evaluating purchasing performance
• key performance indicators for purchasing
• different policies, procedures and strategies for different dollar values of purchases
• limits of authority to approve purchases
• requirements for fairness and transparency in purchasing
• organisational and industry codes of conduct and ethics
Legal requirements may include issues in relation to:

- access and equity
- codes of practice
- data collection, storage and retrieval
- ethical conduct and governance
- industrial relations
- insurance
- accreditation, licence, patent and copyright
- operation, maintenance and service of tools, equipment, plant and machinery
- occupational health and safety
- planning
- privacy and confidentiality
- professional development
- standards (Australian and international)
- warranties

The five rights are:

- right supplier
  - due diligence requirements
  - demonstrable expertise and experience
  - evidence of past legal compliance
  - ethical conduct requirements
  - requirements to use organisations linked by ownership, partnership, alliance or other arrangements
- right price
  - value-for-money
  - cost/price analysis
- right quantity:
  - supply guarantees
- right quality
  - confidentiality and probity requirements
  - measures to manage risk
  - key performance indicators
  - quality accreditation
- right time
  - supply guarantees

Resources include:

- human, physical and other resources such as:
  - software systems
  - staff to undertake or assist with purchasing
  - documentation required for purchasing, such as proformas, order forms, standard tender documentation and basic standard contracts
Further information may include:
- training programs
- written information including procedures and internet or intranet-based information
- information sessions and briefings

Consultative processes may involve:
- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the organisation concerned, workplace procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation and records may include:
- relevant workplace policies, procedures and codes of conduct relating to purchasing and business management
- relevant OH&S and environmental protection regulations
- quality assurance procedures
- operations manuals, job specifications and induction documentation
- relevant Australian Standards

Applicable legislation and regulations may include:
- relevant legislation from all levels of government that affects business operation
- relevant industry codes of practice
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- award and enterprise agreements and relevant industrial instruments
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment
• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
## TLIR707A Manage international purchasing

### Unit Descriptor
This unit involves the skills and knowledge required to manage international purchasing of specific goods within workplace policies and procedures and regulatory frameworks. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

### Employability Skills
This unit contains employability skills.

### Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry. The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

### Competency Field
R – Contract Procurement

2.2 Support is provided to stakeholders to implement international purchasing strategies  
2.3 Implementation of international purchasing strategies is monitored within the organisation  
2.4 Problems and issues arising from implementation of international purchasing strategies are identified and addressed |
| 3 **Undertake more complex international purchasing** | 3.1 Export markets and cultural considerations having a potential impact on international purchasing are researched and appropriate markets are chosen  
3.2 International legal requirements on sale of goods and Australian regulatory controls applicable to imports into Australia are researched and applied as appropriate  
3.3 Relevant INCO terms and trade terms are applied  
3.4 Exception clauses to business conditions are drafted |
3.5 Any discrepancies are clarified and resolved to the satisfaction of all parties

4 Determine payment strategies

4.1 Financial risk management is analysed and available controls are implemented
4.2 Source and availability of funds for payment are identified
4.3 Currency payment methods - hedging, letters of credit, and payment by cheque upon/after shipment are researched and analysed
4.4 Currency payment methods are selected
4.5 Expenditure phasing is planned and implemented

5 Arrange barter or countertrade

5.1 Strategic implications of arranging specific barter or countertrade are researched and analysed
5.2 Suppliers willing to engage in international barter or countertrade are determined
5.3 Commercial conditions for proposed barter or countertrade are negotiated and agreement is reached with partners
5.4 Draft contract is prepared and legal expertise accessed to check legality of contract agreement
5.5 Contracts are approved and issued

6 Determine logistics strategies

6.1 Requirements for pre-shipment inspection are ascertained and arrangements are made
6.2 Shipping and other transport risks and facilities are researched and analysed
6.3 Regulatory compliance requirements for importation into Australia are researched and analysed
6.4 Logistics strategies for the organisation are developed to take account of appropriate transport, insurance and regulatory compliance requirements
6.5 Approval is gained from relevant personnel for implementation of logistics strategies

7 Evaluate international purchasing strategies and implement identified improvements

7.1 Implementation of international purchasing strategies is reviewed
7.2 Improvements to international purchasing strategies are identified from the review process
7.3 Approval is gained to implement improvements to international purchasing strategies
7.4 Changes are communicated to relevant stakeholders and support is provided to implement improvements
7.5 Implementation of changes is monitored and reviewed to determine effectiveness of improvements
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice relating to restrictions and prohibitions on imports
- Commonwealth/state/territory government procurement guidelines
- Organisational procurement policies and practices for international purchasing
- Contracting requirements
- Whole-of-life considerations
- Disposals considerations
- Procedures for acceptance of goods or services
- Procurement approval processes
- International markets and cultural considerations relevant to purchasing in supplier countries
- Legal considerations
- Negotiation practice in procurement
- Ethical issues
- Equal employment opportunity, equity and diversity principles and legislation
- Legal aspects of negotiation
- Legislation, codes of practice and national standards including the law of contract, Trade Practices Act, commercial law, quarantine legislation
- Financial and accounting issues relevant to the contract
- Source of information and assistance external to the organisation such as regulatory authorities, customs brokers, Austrade, state/territory government departments or agencies, chambers of commerce
- Methods of payment applicable to international purchasing including barter and countertrade
- INCOTERMS
- Relevant insurance brokers and types of policies to cover risks
- Agencies involved in arranging importation such as customs brokers, freight forwarders, logistics and transport companies and consultants
- Requirements for completing relevant documentation

Required skills:

- Communicate effectively with others when managing international purchasing
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

| Strategic implications may include: | • economic and financial implications  
|  | • business risks  
|  | • compliance requirements  
|  | • establishment of overseas branches and agencies or representatives  
|  | • knowledge and information requirements  
| Export requirements refers to: | • compliance with legislation  
|  | • tariffs, quotas, trading agreements and international treaties  
|  | • business processes and practices of supplier country  
| Cultural considerations may include: | • values, beliefs and attitudes  
|  | • perception of Australia  
|  | • business processes and practices within supplier country  
|  | • culturally appropriate communication styles  
| Legal requirements may include: | • international trade agreements and treaties  
|  | • international law  
|  | • legislation applicable to supplier country  
| Australian regulatory controls may include those applicable to: | • Australian Customs Service (ACS) requirements  
|  | • Australian Quarantine Inspection Service (AQIS) requirements  
|  | • Australian Taxation Office requirements  
|  | • requirements of other government departments and agencies  
|  | • Trade Practices Act  

4 © Commonwealth of Australia 2009  
TL107 Transport and Logistics Training Package (Version 3)  
To be reviewed by 2010
INCOTERMS refer to:  
- the set of international rules for the interpretation of trade terms published by ICC (International Chamber of Commerce) and applied to imports and exports to specify transportation and payment conditions

Controls may include:  
- insurance  
- guarantees  
- specifying a particular currency for payment  
- selection or rejection of particular payment methods  
- other strategies to minimise or transfer risk

Barter refers to:  
- the simultaneous exchange of goods between the importer and exporter

Countertrade refers to:  
- a trading transaction where export sales to a particular market are made on the condition that imports from that particular market are accepted in return

Requirements for pre-shipment inspection may include:  
- checks of condition of goods prior to shipment  
- checks made of quality, packaging (including condition of containers), quantities, labelling of goods and containers and separation of goods to comply with Australian regulations such as Dangerous Goods Act

Regulatory compliance requirements may include  
- fumigation and quarantine regulations  
- labelling requirements  
- separation of goods to comply with Australian regulations such as Dangerous Goods Act  
- legislation and regulations related to prohibited imports

Depending on the organisation concerned, workplace procedures may be called:  
- standard operating procedures (SOPs)  
- company procedures  
- enterprise procedures  
- organisational procedures  
- established procedures

Communication in the work area may include:  
- phone  
- electronic data interchange (EDI)  
- fax  
- email  
- internet  
- RF systems  
- oral, aural or signed communications
Consultative processes may involve:

- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:

- regulations and codes of practice relevant to Australian Dangerous Goods (ADG) code, including safeworking and local authority regulations and procedures
- relevant OH&S and environmental protection regulations
- workplace policies and procedures related to ADG code
- specialist permit applications
- phystosanitary certificates
- quality assurance procedures
- operations manuals, job specifications and induction documentation
- relevant Australian Standards and certification requirements

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of

TLIR707A Manage international purchasing

TL017 Transport and Logistics Training Package (Version 3)

To be reviewed by 2010
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace

practice and operation manuals
TLIR807A Implement and supervise stocktaking procedures

Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor stocktaking procedures. It includes maintaining stock records; implementing stocktaking and stock rotation; and identifying stock losses. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and logistics industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Competency Field
R – Contract Procurement

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Maintain stock records
1.1 Stock levels and records are monitored and maintained at required levels
1.2 Stock reorder cycles are monitored, maintained and adjusted as required
1.3 Stock storage and movement records are maintained in line with organisation's policy

2 Implement stocktaking and stock rotation processes
2.1 Policies and procedures in regard to stocktaking and cyclical counts are interpreted and explained to team members
2.2 Stocktaking tasks are allocated to individual team members
2.3 Team members are provided with clear directions for the performance of each task and supervised
2.4 Stocktaking and stock rotation procedures are implemented

3 Identify stock losses
3.1 Losses are accurately identified, recorded and assessed against potential loss forecast on a regular basis
3.2 Avoidable losses are identified and reasons established
3.3 Possible solutions to avoidable losses are recommended and implemented
3.4 Accurate reports on stocktake data, including discrepancies are produced for management
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Safe handling of specific dangerous goods (as relevant for enterprise)
- Stock control
- Stock replenishment/reorder procedures
- Procedures for identifying and recording discrepancies/damage
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation

**Required skills:**
- Communicate effectively with others when supervising a team of people involved in stocktaking
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Complete documentation related to work activities including stocktake documentation
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Monitor work activities in terms of planned schedule
- Operate equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Categories or groups of products or stock may include:
- small parts
- perishable goods
- goods for overseas export
- dangerous goods
- temperature controlled stock
- fragile goods
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Documentation and records may include:
- policy and procedures for receipt and despatch of goods
- procedures for stocktake
- manufacturers specifications and/or supplier handling and storage advice
- material safety data sheets
- industry codes of practice
- legislation and statutory requirements
- regulations and codes of practice relevant to ADG code, including safeworking and local authority regulations and procedures
- relevant OH&S and environmental protection regulations
- quality assurance procedures
- dangerous goods declarations and material safety data sheets, where applicable

Applicable legislation and regulations may include:
- relevant regulations, codes and safeworking systems for the use and checking of stock
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- safe disposal of out-of-date stocks

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIR907A Implement purchasing systems

Unit Descriptor
This unit involves the skills and knowledge required to implement purchasing systems. It includes identifying purchasing requirements; sourcing purchases; checking costings, and arranging purchasing. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Competency Field
R – Contract Procurement

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify purchasing requirements
1.1 Purchasing requirements are identified from orders and instructions in accordance with workplace procedures
1.2 Quantities, quality of goods, price limitations and delivery requirements are determined or confirmed in consultation with appropriate personnel

2 Source purchase
2.1 Source/s of materials are identified from workplace preferred supplier lists or through networks and knowledge of local and/or overseas suppliers
2.2 The supplier/vendor is advised of the requirements and specifications in accordance with site requirements
2.3 Availability of supply is confirmed
2.4 Difficulties in supply are reported in accordance with workplace procedures

3 Check costings
3.1 Alternative suppliers are contacted to check different costings
3.2 Actual costs are compared to predicted costs
3.3 Any recommendations regarding alternative suppliers are communicated to appropriate personnel following workplace procedures
3.4 All records/reports are maintained in accordance with site requirements
4 **Purchase materials**

4.1 Capacity of supplier to meet price, quality and delivery expectations is checked

4.2 Order is placed with supplier and delivery schedules are confirmed

4.3 Appropriate orders and invoices are exchanged according to workplace procedures

4.4 Materials are checked/inspected on receipt in accordance with site requirements

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant sections of national and state or territory regulatory requirements and codes of practice, particularly those relating to trade practices and privacy of information
- Relevant OH&S and environmental procedures and regulations
- Enterprise purchase/sales records system
- Knowledge of different types of purchasing systems, their use and applications
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation, particularly in relation to systems implementation
- Code of practice for working collaboratively with others
- Typical problems encountered in implementing purchasing systems and possible solutions
- Steps involved in planning the work activities

**Required skills:**

- Communicate effectively with others when completing work activities
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to purchasing systems, including reports, and documenting of discrepancies
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, errors in data input, collection or measurement, particularly in relation to cost, order quantity or quality
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule and ensure purchasing system is operating within identified time constraints
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Depending on the organisation concerned, workplace procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- other employees and supervisors
- suppliers of equipment
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:
- workplace policies and procedures related to purchasing, record keeping and costing
- purchasing records such as order forms, instructions or invoices
- workplace preferred supplier lists
- quality assurance procedures
- relevant OH&S and environmental protection regulations
- emergency procedures
- dangerous goods declarations and material safety data sheets, where applicable
- relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:
- trade practices legislation
- privacy legislation
- workplace relations regulations
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIS1009A Test rail using ultrasonic equipment

Unit Descriptor
This unit involves the skills and knowledge required to test plain rail and field welds using ultrasonic equipment in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes determining test requirements, conducting testing using hand directed equipment, conducting visual examination and measurement of welds, identifying and classifying defects, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the testing of rail using ultrasonic equipment as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
S – Installation and Commissioning

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine test requirements
1.1 Test site is identified and prepared using appropriate procedures and materials
1.2 Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements

2 Conduct testing using hand directed equipment
2.1 The most appropriate ultrasonic test for the application is selected
2.2 Testing equipment is selected and prepared in accordance with standards and/or procedures
2.3 Ultrasonic test is carried out in accordance with relevant standards, specifications and OH&S requirements
2.4 Ultrasonic testing equipment is checked for proper function, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions

3 Conduct visual examination and
3.1 Rail or weld is visually assessed for obvious defects
3.2 New welds are assessed for alignment and adjustment
measurement of rail and welds  
tolerance in accordance with standards and/or procedures  
3.3 Weld repairs are assessed for alignment tolerance in accordance with standards and/or procedures

4 Identify and classify defects
4.1 Indications are assessed and defects detected in accordance with standards and/or procedures  
4.2 Defects are classified in accordance with standards and/or procedures  
4.3 Defective welds and weld repairs are marked in accordance with standards and/or procedures

5 Complete documentation
5.1 Test results are reported in accordance with standards and/or procedures  
5.2 Required documentation is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations  
- Principles of ultrasonic testing  
- Ultrasonic probes, beam, their characteristics and screen display  
- Beam angles and probes required to locate various defect types  
- Fundamentals of rail and rail defects  
- Rail defects and rail defect classification  
- Workplace procedures for the ultrasonic testing of rail and welds  
- Problems that may occur during the ultrasonic testing of rail and welds, and action that can be taken to report or resolve the problems  
- Hazards that may exist during the ultrasonic testing of rail and welds, and ways of controlling the risks involved  
- Basic mechanical knowledge relevant to the ultrasonic testing of rail and welds  
- Relevant communication systems and procedures  
- Workplace protection  
- Hazardous situations and related personal protection measures  
- Relevant recording and documentation procedures

Required skills:
- Read and interpret instructions, procedures, information, technical data, standards and drawings relevant to the ultrasonic testing of rail and welds  
- Interpret and follow operational instructions and prioritise work  
- Complete documentation related to the ultrasonic testing of rail and welds
• Operate communication equipment to required protocol
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when testing rail and welds using ultrasonic equipment in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when testing rail and welds using ultrasonic equipment
• Identify hazards associated with ultrasonic testing
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant hand tools, power tools and equipment
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify, clean and prepare inspection areas for testing using appropriate procedures and materials
• Visually assess inspection areas and identify and classify obvious discontinuities
• Identify types of rail defects
• Select probes to use to locate each type of defect
• Check and maintain ultrasonic testing equipment
• Set up probes for each type of test
• Test with appropriate probes for each type of defect
• Interpret screen indications
• Locate, measure and assess defect size for all defect types
• Use sizing definitions
• Carry out additional visual and geometry assessments for field welds
• Report test results

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• weather conditions specified in relevant standards

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments
Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

Types of ultrasonic test and/or visual examination and measurement may vary according to:
- location
- rail mass or type
- weld type
- test requirement

Weld type may include:
- new aluminothermic welds
- flashbutt welds
- head repair welds using wirefeed or 'stick' welding process

Test requirements may include:
- acceptance testing (ultrasonic, geometric alignment and visual) of new aluminothermic welds
- acceptance testing (ultrasonic, geometric alignment and visual) of new flashbutt welds
- acceptance testing (ultrasonic, geometric alignment and visual) of new head repair welds
- ultrasonic testing of plain rail and welds

Equipment may include:
- ultrasonic testing units
- ultrasonic probes
- alignment gauges
- tape measures

Materials may include:
- coupling medium
- marking pens/paint

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Communications equipment may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- information provided by other workplace personnel
- rail inspections and reports
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - determining test requirements
  - conducting testing using hand directed equipment
  - conducting visual examination and measurement of rail and welds
  - classifying defects
  - completing documentation

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and...
equipment, and
  o applicable documentation including
    workplace procedures, regulations, codes of
    practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
  registered training organisation
- As a minimum, assessment of knowledge must be
  conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through activities in an appropriately
    simulated environment, and/or
  o in an appropriate range of situations in the
    workplace
TLIS1109A Test rail using nondestructive testing equipment

Unit Descriptor
This unit involves the skills and knowledge required to test switches, crossings and other special components in turnouts using ultrasonic and other nondestructive testing equipment in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes determining test requirements, conducting ultrasonic testing using hand directed equipment, conducting nondestructive testing, classifying defects, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to testing turnouts using nondestructive testing equipment as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
S – Installation and Commissioning

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine test requirements
1.1 Location and type of test is identified
1.2 Test site is prepared using appropriate procedures and materials
1.3 Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements

2 Conduct ultrasonic testing using hand directed equipment
2.1 The most appropriate ultrasonic test for the application is selected
2.2 Testing equipment is selected and prepared in accordance with standards and/or procedures
2.3 Ultrasonic testing equipment is checked for proper function, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions
2.4 Ultrasonic test is carried out in accordance with relevant standards, specifications and OH&S requirements
3 Conduct nondestructive testing

3.1 Select the most appropriate test for the application
3.2 Testing equipment is selected and prepared in accordance with standards and/or procedures
3.3 Nondestructive test is carried out in accordance with relevant standards, specifications and OH&S requirements
3.4 Nondestructive testing equipment is cleaned and stored in accordance with procedures, OH&S requirements and manufacturer instructions

4 Conduct visual examination

4.1 Crossings and switches are visually assessed for defects in accordance with standards and/or procedures

5 Identify and classify defects

5.1 Indications are assessed and defects detected in accordance with standards and/or procedures
5.2 Defects are classified in accordance with standards and/or procedures
5.3 Defective components are marked in accordance with standards and/or procedures

6 Complete documentation

6.1 Test results are reported in accordance with standards and/or procedures
6.2 Documentation on work undertaken is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Ultrasonic testing requirements for turnouts and special trackwork
- Special inspection requirements for alloy hardened crossings
- Application of dye penetrant testing and magnetic particle testing to rail
- Types of rail defects found in turnouts and rail defect classification
- Workplace procedures for the testing of turnouts and rail using nondestructive testing equipment
- Problems that may occur during the testing of turnouts and rail using nondestructive testing equipment, and action that can be taken to report or resolve the problems
- Hazards that may exist during the testing of turnouts and rail using nondestructive testing equipment, and ways of controlling the risks involved
- Relevant workplace technical manuals and instructions
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
• Relevant recording and documentation procedures

**Required skills:**

• Communicate effectively with others when testing turnouts and rail using nondestructive testing equipment
• Read and interpret technical data, drawings, instructions and manuals relevant to the testing of turnouts and rail using nondestructive testing equipment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the testing of turnouts and rail using nondestructive testing equipment
• Operate communication equipment to required protocol
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when testing turnouts and rail using nondestructive testing equipment in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when testing turnouts and rail using nondestructive testing equipment
• Identify hazards associated with ultrasonic, dye penetrant and magnetic particle testing
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use hand tools, power tools and equipment
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment
• Check turnouts for observable faults
• Apply special inspection requirements for alloy hardened crossings
• Carry out dye penetrant testing of switch blades
• Apply special testing requirements for wire feed repair welds in crossings
• Identify types of rail defects in switches and crossings
• Select probes to use to locate each type of defect and calibrate screen to find each defect type
• Check and maintain nondestructive testing equipment
• Set up probes for each type of test
• Test with appropriate probes for each type of defect
• Locate, measure and assess defect size for all defect types
• Use sizing definitions
• Report test results
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night  
- in weather conditions specified in relevant standards

Work may be conducted in:  
- restricted spaces  
- exposed conditions  
- controlled or open environments

Work may involve exposure to:  
- chemicals  
- dangerous or hazardous substances  
- movements of equipment, goods and vehicles

Types of ultrasonic test and/or visual examination and/or nondestructive test may vary according to:  
- location  
- rail mass or type  
- crossing type and material  
- switch type and material  
- test requirement

Test requirements may include:  
- acceptance testing (ultrasonic, geometric alignment and visual) of new crossing repair welds  
- ultrasonic testing of crossings and switches  
- dye penetrant testing of plain rail and switches  
- magnetic particle testing on plain rail and crossings  
- visual assessment of manganese and CV crossings

Equipment may include:  
- ultrasonic testing units  
- ultrasonic probes  
- alignment gauges  
- magnetic particle testing units

Material may include:  
- coupling medium  
- dye penetrant  
- marking pens/paint

Liaison may include:  
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Communications equipment may include:  
- two-way radios  
- telephones/mobile phones  
- agreed audible or hand signal
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying the location and appropriate type of test to be conducted
  - conducting tests using hand directed equipment and/or nondestructive testing applications
  - checking and maintaining testing equipment appropriately
  - completing testing reports

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, having access to track and/or
o in an appropriate range of situations in the workplace
Install and service rail lubrication equipment

Unit Descriptor
This unit involves the skills and knowledge required to install and service rail lubrication equipment in accordance with safeworking and regulatory requirements and workplace procedures. It includes installing the lubrication equipment, servicing and monitoring the lubrication equipment, removing lubrication equipment, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install and service rail lubrication equipment as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
S – Installation and Commissioning

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Install lubricator

1.1 Identify work location
1.2 Rail is correctly prepared at lubrication site to enable correct fitting of lubricator
1.3 Lubricator is installed and tested to ensure correct functionality in accordance with workplace procedures

2 Service and monitor lubricator

2.2 Lubricator is cleaned and correctly adjusted to ensure correct functionality
2.3 Parts are replaced as required to ensure correct functionality
2.4 Lubricator is filled with appropriate lubricant
2.5 Lubricator is checked and adjusted to maintain correct functionality

3 Remove lubricator

3.2 Preparations for the removal of the lubricator are made in accordance with workplace procedures
3.3 Lubricator is correctly removed and stowed in accordance with workplace procedures
4 Complete documentation

4.2 Required documentation is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant safety, OH&S and environmental procedures and regulations
• Workplace procedures for the installation and service of rail lubrication equipment
• Problems that may occur during the installation and service of rail lubrication equipment, and action that can be taken to report or resolve the problems
• Hazards that may exist during the installation and service of rail lubrication equipment, and ways of controlling the risks involved
• Basic mechanical knowledge relevant to the installation and service of rail lubrication equipment
• Principles of rail lubrication and lubrication equipment
• Relevant workplace technical manuals and instructions
• Characteristics of relevant equipment, materials, structures, hardware and components used in work activities
• Hazardous situations and related personal protection measures
• Relevant recording and documentation procedures

Required skills:

• Communicate effectively with others when installing or servicing rail lubrication equipment
• Read and interpret technical data, drawings, instructions and manuals relevant to the installation and service of rail lubrication equipment
• Interpret and follow operational instructions and perform work in correct sequence
• Complete documentation related to the installation and service of rail lubrication equipment
• Operate electronic communication equipment to required protocol
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when installing or servicing rail lubrication equipment in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Check compliance between work and job specifications
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant equipment and tools
• Adapt to differences in equipment in accordance with standard operating procedures
Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

Rail lubrication equipment to be installed and/or serviced may include:
- any used within the Australian rail systems

Resources may include:
- hand tools and small plant
- rail lubrication components
- rail borer

Materials may include:
- rail fastenings
- rail grease

Communications systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications

Information/documents may include:

- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- maintenance notices, records and requests
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - installing a rail lubricator
  - adjusting the pump to supply optimum grease delivery or replacing a gasket set

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
conducted through appropriate written/oral tests

- Practical assessment must occur:
  o through activities in an appropriately simulated environment, and/or
  o in an appropriate range of situations in the workplace
TLIS1309A Install minor structures

Unit Descriptor
This unit involves the skills and knowledge required to install minor non-track bearing structures and assemblies in rail industry contexts in accordance with safeworking and regulatory requirements and workplace procedures. This includes planning and preparing for the installation, installing the structure in accordance with workplace requirements, and cleaning up the site after installation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install minor structures as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
S – Installation and Commissioning

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan and prepare

1.1 Type of structure to be installed is identified and appropriate methods are planned in accordance with workplace procedures and specifications

1.2 Structure and/or materials for installation are identified, obtained and prepared in accordance with plans and specification

2 Install structure

2.1 Where required, excavation is conducted to standards in accordance with workplace procedures and regulatory requirements

2.2 Where required, foundations are installed in accordance with workplace procedures and specifications

2.3 Components are assembled and installed in accordance with specifications and/or plans using appropriate methods
2.4 Level/position of structure is adjusted to required standard to maintain correct track geometry/clearances
2.5 Fasteners are installed and tightened in position using correct fastening method to ensure structural integrity
2.6 Installed structure is checked against specified requirements/plans and all required adjustments are made

3 Maintain structures
3.1 Components requiring replacement are checked against standards and are measured for preparation of replacement component
3.2 Materials required for job are identified and organised as required to enable appropriate replacement of components
3.3 Replacement components are cut and shaped to the required standard in accordance with workplace procedures
3.4 Surfaces of components are treated using appropriate methods and materials as required

4 Clean up site
4.1 Site is cleaned up to remove unnecessary materials and restore site to environmentally sound and safe condition

5 Complete documentation
5.1 Work as executed documentation is completed as required in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation of minor structures
- Problems that may occur during the installation of minor structures, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation of minor structures, and ways of controlling the risks involved
- Functions of different types of minor structures
- Basic structures construction methods and techniques
- Information on the use of epoxy and grouts for mortar pads
- Relevant recording and documentation procedures

Required skills:
- Communicate effectively with others when installing minor structures
- Read and interpret plans, specifications, instructions and manuals relevant to the installation of minor structures
- Follow operational instructions and work sequences when installing minor structures
• Check compliance between work and job specifications
• Complete documentation related to the installation of minor structures
• Operate communication equipment to required protocol
• Work collaboratively with others when installing minor structures
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing minor structures in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Select and use relevant equipment and tools
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all weather conditions

Minor structures to be installed include:
• pipes and culverts
• OHWS (single mast)
• retaining walls
• level crossings
• buffer stops
• ballast retention walls
• ballast logs
• intermediate rail support on ballast walls
• earthworks protection structures

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, goods and vehicles
Equipment may include:
- cranes
- hand tools
- small power tools
- crane and lifting gear
- rollers and wacker packer for compaction
- welding, oxy and cutting equipment
- scaffolding
- ladders
- elevated work platform (EWP)

Materials may include:
- steel
- concrete
- timber
- concrete products
- rubber products
- bolts and fasteners
- epoxy grouts
- cement grouts
- paint (protective treatment)

Liaison may include:
- internal/external personnel from other work areas (e.g. train controller)
- road authorities
- local councils
- landowners

Communications equipment/systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - planning work requirements
  - installing a range of minor structures
  - maintaining a range of minor structures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
TLIS407B  Install and maintain rail bonding systems

Unit Descriptor
This unit involves the skills and knowledge required to install and maintain all types of temporary and permanent bonds and bonding cables in use in the Australian rail system in accordance with safeworking and regulatory requirements and workplace procedures. This includes planning the installation and maintenance, preparing the worksite, installing and maintaining the bonds and bonding cables, and conducting all required post-installation activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to install and maintain rail bonding systems as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
S – Installation and Commissioning

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Plan the installation and maintenance of the relevant bonding systems

1.1 Works order including drawings, plans and material lists is received/accessed, analysed and confirmed, if necessary by site inspection

1.2 Work is prioritised/scheduled including site and relevant electrical permits

1.3 Resources including personnel, plant, equipment and tools are identified and scheduled

1.4 Liaison and communication issues with other personnel, authorities, clients and landowners are resolved

2  Prepare the worksite

2.1 Personnel participating in the task, including plant operators and contractors, are fully briefed
2.2 Site preparation is completed in accordance with works order
2.3 Where required, specialist testing and earth equipment is inspected and replaced if defective
2.4 Where required, road signs, barriers and warning devices are positioned
2.5 Safeworking practices are observed on or about the running track/line

3 Install and maintain bonding system cables
3.1 Systems and circuits are isolated as required, proved safe to work on in accordance with work plan and, where required, electrical permits are issued/accepted/relinquished
3.2 Cable and surrounds, including rail and other surfaces, are prepared to appropriate specifications
3.3 Bonds are attached in accordance with specifications
3.4 Joint and termination procedures are carried out in accordance with authorised work procedures
3.5 Continuity testing procedures are carried out as required
3.6 The system is commissioned following the conduct of a visual inspection, and the completion of other testing

4 Conduct post-operational activities
4.1 Worksite is rehabilitated in accordance with workplace procedures
4.2 Work is completed in an agreed time and with a minimum waste
4.3 Notification, records and documentation for updating system data is completed

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
• Relevant OH&S and environmental procedures and regulations
• Workplace procedures for the installation and maintenance of rail bonding systems
• Problems that may occur during the installation and maintenance of rail bonding systems and action that can be taken to report or resolve the problems
• Hazards that may exist during the installation and maintenance of rail bonding systems and ways of controlling the risks involved
• Characteristics, capabilities and uses of various types of cables
• Cable testing and fault identification/location procedures
• Testing and commissioning procedures, including testing and earth/rail connecting conductors
• Traction earthing systems and bonding systems
• Basic circuits for signalling and communications systems
• Switching operation, isolation and access permit procedures
• Electrical principles including OHMs law, voltage and current transformation, voltage drop, cable
• Current capacities, inductance and capacitance, protection systems and devices
• The responsibilities and rights of other authorities, clients and landowners
• Regulatory and workplace traffic control requirements and guidance signals
• Relevant workplace documentation and records systems

Required skills:
• Communicate effectively with others when installing and maintaining rail bonding systems
• Read and interpret technical data, drawings, instructions and manuals relevant to the installation and maintenance of rail bonding systems
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the installation and maintenance of rail bonding systems
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when installing and maintaining rail bonding systems
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and maintaining rail bonding systems in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may arise when installing and maintaining rail bonding systems
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Organise activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant equipment and tools
• Joint and terminate earthing and bonding cables
• Guide, using signals, operators of plant and equipment during the installation and maintenance of cables
• Work at heights and in confined spaces
• Perform basic and exothermic welding
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to: • chemicals
• dangerous or hazardous substances
• movements of equipment, goods and vehicles

Rail bonding systems to be installed and maintained may include all those in service in the Australian rail system, including:
• traction bonding (as required in all electrified rail systems)
• track circuit continuity bonds
• cross bonding

Maintenance may include: • the diagnosis of faults and recommissioning
• the repair and replacement of cables and associated hardware

Earthing and bonding systems may include:
• permanent systems
• temporary systems
• grading rings
• earth grids

Types of conductors may include:
• steel
• steel rail
• copper
• aluminium and steel
• bare and sheathed cables
• single core
• stranded
• flexible

Cables may include:
• surface mounted
• aerial
• buried
• enclosed
Permanent jointing and terminating materials may include:

- polymeric tape materials
- polymeric heat shrink and covering materials
- exothermic welds
- crimped connections
- bolted connections

Temporary terminating components may include:

- screwed earth/rail/conductor clamps
- clipped earth/rail/conductor clamps
- sticks
- testers

Communications equipment may include:

- two-way radios, and/or
- telephones

Depending on work context, safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders and specifications
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge
assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and/or equipment, and/or
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through appropriately simulated activities at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace
TLIS507B  Install mechanical infrastructure for signalling

Unit Descriptor
This unit involves the skills and knowledge required to install mechanical infrastructure for signalling in accordance with safeworking and regulatory requirements and workplace procedures, including assembling components, installing the equipment and components to specifications, and testing and adjusting the equipment to workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the installation of mechanical infrastructure for signalling as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
S – Installation and Commissioning

ELEMENT
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Assemble components
1.1 Correct components are identified and selected to comply with specifications
1.2 Components are pre-assembled and positioned for installation and to identify any manufacturing fitting requirements
1.3 Components/linkages are modified to allow for complete installation as per job specifications

2 Install equipment and components
2.1 Equipment/component layouts are checked to ensure positioning matches job specifications
2.2 All hole/fastening positions are marked and drilled to allow for installation
2.3 Equipment/components are assembled and secured in the correct sequence
2.4 All interlinking components are attached and secured
2.5 Components are fabricated to ensure compliance with job specifications
2.6 Power source is connected by appropriate personnel if required to allow for operational testing

3 Test and adjust equipment

3.1 Required authorisation for testing is confirmed to ensure safe train operations may continue
3.2 Correct test equipment/procedures are identified
3.3 Appropriate tests are correctly carried out in conjunction with other personnel to ensure operational compliance
3.4 All required adjustments are carried out in conjunction with other personnel when required to ensure correct operational compliance
3.5 Operational readiness is confirmed and required documentation/certification is correctly completed to allow for commissioning
3.6 Equipment is locked and secured to ensure against unauthorised interference

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the installation of mechanical infrastructure for signalling
- Problems that may occur during the installation of mechanical infrastructure for signalling, and action that can be taken to report or resolve the problems
- Hazards that may exist when installing mechanical infrastructure for signalling, and ways of controlling the risks involved
- Principles of signalling
- Mechanical infrastructure limitations and characteristics
- Fault diagnosis, fault rectification and problem solving
- Material safety data sheets
- Materials procurement procedures
- Features, characteristics and applications of chemicals, paints and lubricants used on mechanical infrastructure
- Mechanical signal adjusting techniques
- Fault finding and testing procedures
- Track layout
- Relevant recording and documentation procedures
- Relevant sections of Australian Standards AS 4292 and AS 3000

Required skills:
• Communicate effectively with others when installing mechanical infrastructure for signalling
• Read and interpret instructions, procedures, information, technical data and drawings relevant to the installation of mechanical infrastructure for signalling
• Interpret and follow operational instructions and prioritise work
• Complete documentation and records related to the installation of mechanical infrastructure for signalling
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when installing mechanical infrastructure for signalling
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing mechanical infrastructure for signalling in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Use hand and power tools
• Use appropriate fabrication techniques
• Measure, align and assemble pre-made components
• Assemble inter-linking components
• Test and adjust mechanical equipment
• Check and confirm compliance to operational specifications
• Use portable electric generators and air compressors
• Use and dispose of a range of chemical cleaning agents, protective paints and lubricants
• Use appropriate painting techniques
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night • in all relevant weather conditions
Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Site preparation may include:
- levelling
- cleaning
- preparing trenches
- control cable and linkage routes

Equipment may include:
- mechanical
- pneumatic/hydraulic
- electric

Liaison may be required with:
- internal and external personnel

Manufacturing may include:
- cutting
- bending
- shaping
- welding
- drilling
- bolting
- clamping with ferrous and non-ferrous bar, rod, tube, chain and wire rope
Resources may include:

- signs
- lamps
- brackets
- level crossing assembly
- backboards
- clamp locks
- hoods
- switch locks
- warning lights
- bells
- masts
- mechanical points and point machines
- train stop
- non-interlocked levers
- chain locks
- facing point locks
- rod lines
- 'A' frames

Installation and assembly may include the application of:

- chemical cleaning agents
- protective paints
- lubricants

Fixing and fastening may include:

- chemical bonding and bolting

Compensation requirements may:

- have to be determined

Tools may include:

- hand tools
- power tools
- air tools
- specialist tools as required by the organisation

Communication equipment may include:

- two way radios
- computers and/or telephones
Safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses and safety glasses
- insect repellent
- safety headwear and footwear
- portable radios
- hand lamps and flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- job specifications
- technical manuals
- equipment/operational management information
- technical and engineering instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292 and AS 3000
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIS707B  Decommission mechanical signalling infrastructure equipment and interlocking equipment from service

Unit Descriptor
This unit involves the skills and knowledge required to decommission mechanical signalling infrastructure equipment and interlocking equipment from service in accordance with safeworking and regulatory requirements and workplace procedures. It includes disconnecting the mechanical/electromechanical equipment and components; modifying, testing and adjusting the remaining equipment; and certifying and securing the operational mechanical equipment in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the decommissioning of mechanical signalling infrastructure equipment and interlocking equipment from service as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
S – Installation and Commissioning

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Disconnect mechanical equipment and components
1.1 Required authorisation is confirmed to ensure safe train operations may continue after mechanical equipment/components are disconnected
1.2 Mechanical equipment and components are prepared to enable ready removal
1.3 Mechanical equipment/components are removed from operational area, and the area is made safe

2 Modify, test and adjust remaining equipment
2.1 Remaining equipment is modified as necessary to ensure compliance with job specification
2.2 Correct test equipment and procedures are identified
2.3 Appropriate tests are correctly carried out in conjunction with other personnel to ensure operational compliance

3 Certify and secure the operational equipment

3.1 Operational readiness is confirmed and required documentation/certification is correctly completed to allow for commissioning

3.2 Equipment is locked and secured to ensure against unauthorised interference

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines

• Relevant OH&S and environmental procedures and regulations

• Workplace procedures for the decommissioning of mechanical signalling infrastructure equipment and interlocking equipment from service

• Problems that may occur during the decommissioning of mechanical signalling infrastructure equipment and interlocking equipment from service, and action that can be taken to report or resolve the problems

• Hazards that may exist when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service, and ways of controlling the risks involved

• Principles of signalling

• Limitations and characteristics of mechanically operated signalling equipment

• Fault diagnosis, fault rectification and problem solving

• Repair techniques

• Testing and measuring procedures

• Manufacturers technical data

• Maintenance handbook

• Organisational requirements

• Relevant mechanical theory and principles

• Relevant recording and documentation procedures

• Relevant sections of Australian Standards AS 4292 and AS 3000

Required skills:

• Communicate effectively with others when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service

• Read and interpret instructions, procedures, information, technical data and drawings relevant to the decommissioning of mechanical signalling infrastructure equipment and interlocking equipment from service

• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the decommissioning of mechanical signalling infrastructure equipment and interlocking equipment from service
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may arise when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Use hand and power tools
• Use test equipment and testing techniques
• Apply repair and testing practices and procedures
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all relevant weather conditions

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, materials and vehicles
Preparation may include:

- loosening connections
- clearing around work area
- identifying replacement components/linkages

Work may include:

- cutting
- bending
- shaping
- welding
- drilling
- bolting
- clamping with ferrous and non-ferrous bar
- rod
- tube
- chain
- wire rope

Liaison may be required with:

- internal and external personnel
Equipment may be:

- mechanical
- pneumatic
- hydraulic
- electrical
- may include signage
- lamps
- brackets
- clamps
- hoods
- switchlocks
- warning lights
- points and points machines
- masts
- derailers
- trainstop
- facing point locks
- chainlocks
- non-interlocked levers
- rod leads
- bells
- 'A' frames
- ground frames
- Annett locks
- key locks
- staff locks
- circuit controllers
- point indicators

Components may include:

- bolts
- shims
- pins
- rods
- bars
- joints
- floor plates
- brackets
- levers
Tools may include:

- hand tools
- power tools
- air tools
- specialist tools as required by the organisation

Communication equipment may include:

- two-way radios
- computers and/or telephones

Safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses and safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps and flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- relevant technical manuals
- drawings/ sketches
- site plans/ layouts
- equipment/ operational management information
- technical and engineering instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292 and AS 3000
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or
• access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and/or equipment, and/or
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through appropriately simulated activities at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace
TLIS907B  Install mechanical signalling locking and interlocking devices

Unit Descriptor
This unit involves the skills and knowledge required to install mechanical signalling locking and interlocking devices in accordance with safeworking and regulatory requirements and workplace procedures, including assembling components, installing equipment and components to specifications, and testing and adjusting the equipment in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the installation of mechanical signalling locking and interlocking devices as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
S – Installation and Commissioning

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Assemble components
1.1 Correct components are identified and selected to comply with job specifications
1.2 Equipment and components are pre-assembled and positioned for installation in compliance with work orders and job specifications

2 Install equipment and components
2.1 Equipment/component layout is prepared and checked to ensure position matches the job specifications
2.2 All fastening positions are marked and drilled for installation
2.3 Equipment and components are secured in the correct sequence and position, and are in compliance with the job specifications
2.4 Additional requirements or alterations to existing components are identified and appropriate follow-up action is taken
2.5 Manufacturing of additional components is carried out to
allow for complete installation

2.6 Alterations to existing components are carried out to provide for the installation of new equipment

2.7 All interlinking components are correctly attached and secured ready for testing in compliance with work specifications

3 Test and adjust equipment

3.1 Required authorisation for tests is confirmed to ensure safe train operations may continue

3.2 Test procedures are coordinated and liaison with appropriate personnel is maintained to ensure overall safety

3.3 Appropriate tests are carried out to ensure all operations are within specifications and appropriate adjustments are made to ensure smooth operation

3.4 Testing is carried out to ensure functionality of all operations to the locking table

3.5 Operational readiness is confirmed and required documentation/certification is correctly completed to allow for commissioning

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines

• Relevant OH&S and environmental procedures and regulations

• Workplace procedures for the installation of mechanical signalling locking and interlocking devices

• Problems that may occur during the installation of mechanical signalling locking and interlocking devices, and action that can be taken to report or resolve the problems

• Hazards that may exist when the installing mechanical signalling locking and interlocking devices, and ways of controlling the risks involved

• Principles of signalling

• Material safety data sheets

• Mechanical fitting techniques

• Fault finding techniques

• Characteristics and applications of chemicals, paints and lubricants

• Pneumatic and hydraulic techniques

• Machining techniques

• Track layout

• Relevant mechanical theory and principles

• Relevant recording and documentation procedures

• Relevant sections of Australian Standards AS 4292 and AS 3000
Required skills:

- Communicate effectively with others when installing mechanical signalling locking and interlocking devices
- Read and interpret instructions, procedures, information, technical data and drawings relevant to the installation of mechanical signalling locking and interlocking devices
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the installation of mechanical signalling locking and interlocking devices
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing mechanical signalling locking and interlocking devices
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing mechanical signalling locking and interlocking devices in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when installing mechanical signalling locking and interlocking devices
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Use and dispose of a range of chemical cleaning agents, protective paints and lubricants
- Use high level fitting skills to fit and finely adjust inter-linking mechanical components
- Use hand, portable, power and air tools
- Assemble inter-linking components
- Test and adjust close tolerance mechanically operating equipment
- Use portable electric generators and air compressors
- Check and confirm compliance with operational specifications
- Work in confined spaces
- Use appropriate painting techniques
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

locking and interlocking devices to be installed and maintained may include:
- all those in service in the Australian rail system

Job specifications are:
- as defined in relevant technical manuals/documents

Equipment may include:
- ground frames
- locking/interlocking machines (cabins)
- Annett locks
- key locks
- staff locks
- circuit controller
- rod leads
- point indicators
- CCT controllers

Equipment technology may include:
- mechanical
- pneumatic
- hydraulic
- electric
Tools may include:
- jigs
- vices
- cutting equipment
- drills
- spanners
- files
- bending devices
- verniers
- gauges
- clamps

Installation and assembly may include:
- application of chemical cleaning agents
- protective paints and lubricants

Liaison may be required with:
- internal personnel
- external personnel

Layout includes:
- the physical placement and planning of all equipment, components and connections

Fixing and fastening may include:
- chemical bonding
- bolting

Manufacturing and installing may include:
- cutting
- bending
- shaping
- welding
- drilling
- bolting
- clamping with ferrous and non-ferrous bar
- rod
- tube
- chain
- wire rope
Components may include:

- bolts
- shims
- pins
- rods
- bars
- points
- floor plates
- brackets
- levers

Communication equipment may include:

- two-way radios
- computers and/or telephones

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- site and route plans
- schematic/wiring diagrams and sketches
- traction bonding plans
- equipment/operational management information
- technical and engineering instructions and specifications
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292 and AS 3000
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIT1007C Destroy records

Unit Descriptor
This unit involves the skills and knowledge required to destroy records in accordance with workplace requirements including collecting records to be destroyed, selecting destruction mode, destroying records, and documenting procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to the destruction of records within a record management process.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to destroy records as part of record management processes in the transport, warehousing, distribution and/or storage industries.

Competency Field
T – Records

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Collect records to be destroyed
1.1 Records for destruction are verified and assembled
1.2 Confirmation of destruction requirement is sought and obtained
1.3 Records are bundled, marked or labelled for destruction in line with organisational procedures
1.4 Destruction mode is confirmed from workplace documents

2 Select destruction mode
2.1 Records are assembled and made ready for destruction
2.2 Arrangements for records to be destroyed off site (where required) are undertaken in accordance with workplace procedures
2.3 Suitable controlled or secure environment is selected for handling/storage of documents to be destroyed

3 Destroy records
3.1 Confirmation of actions is obtained
3.2 Bundles of documents are checked for identification
3.3 Selected destruction method is used maintaining security, personal safety and environmental protection
3.4 Shredded and pulped records are collected for recycling
3.5 Electronic recording systems are checked to confirm erasure
of required documents

4 Document procedures

4.1 Documentation of completed operations is completed
4.2 Clients are notified of actions taken
4.3 Workplace records are updated to reflect activities undertaken
4.4 Off site destruction is confirmed with appropriate personnel

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Regulations relevant to the destruction of records as part of a records management process
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the destruction of records including policies on confidentiality and security of information and records
• Focus of operation of work systems, equipment, management and site operating systems for the destruction of records as part of a records management process
• Problems that may occur when destroying records and appropriate action that can be taken to resolve the problems
• Operational workflow within a records management system
• Types of equipment used in the destruction of records and the precautions and procedures that should be followed in their use
• Housekeeping standards and procedures required in the workplace
• Site layout and obstacles

Required skills:

• Communicate effectively with others when destroying records
• Read and interpret instructions, procedures and information relevant to the destruction of records
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the destruction of records
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when destroying records
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when destroying records in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail
• Identify, select and efficiently and effectively use equipment for the destruction of records
• Maintain security and confidentiality of material
• Use a range of information technology devices including computers, radio frequency devices, electronic data exchange systems, etc.
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Workplace environment may include movement of: • equipment
• goods
• products
• materials
• vehicular traffic

Records may be: • paper- or electronically-based

Storage requirements may include records in various modes such as:
• paper-based
• computer disks and reels
• CD-ROM
• microfiche
• film
• audio

The record destruction process is: • conducted as part of records management activities with the operator using discretion and judgement within established procedures. Paper based records may need to be separated from packaging before shredding, pulping or recycling

Methods of destruction may include:
• pulping
• shredding
• incineration
• recycling
• electronic data erasure
Hazards in the work area may include:
- height and reach implications of storage facilities
- dust and vapours
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked records or boxes
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

OH&S requirements include:
- manual handling
- protective clothing
- elimination/control of hazards
- machine isolation
- machine guarding

Communication in the work area may include:
- phone
- fax
- email/internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Consultative processes may involve:
- workplace personnel including supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards pertaining to records management
- storage specifications and requirements
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- quality assurance standards for records management

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to records management
- relevant Australian Standards relating to records management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- privacy and confidentiality legislation and regulations
- freedom of Information regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIT107C  Capture records into a records keeping system

Unit Descriptor
This unit involves the skills and knowledge required to capture records into a records keeping system in accordance with workplace requirements including identifying records to be captured and registering the identified records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to a record management process.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to capture records into a records management system in the transport, warehousing, distribution and/or storage industries.

Competency Field
T – Records

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify records to be captured

1.1 Material identified and classified for registration is sorted in accordance with records keeping system procedures

1.2 Activity documented by the record is identified from the elements of the record in accordance with organisational procedures

1.3 Area or action officer to which the record needs to go is identified from elements of the record and staff list in accordance with organisational procedures

1.4 Any material which cannot be readily identified is referred to the appropriate authority in accordance with organisational procedures

2 Register the record

2.1 Unique identifier is selected for record in accordance with organisational procedures and records keeping system rules

2.2 Record is registered into records keeping system with title, description, details of record creator, immediate location and any other control information to fulfil the system requirements in accordance with organisational procedures

2.3 Access and security status are recorded in accordance with organisational procedures and records keeping system rules

2.4 Disposal status of the record is recorded in accordance with records keeping system rules and organisational procedures
2.5 Record is forwarded to its appropriate location, which is recorded, in accordance with the system rules and organisational procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the capturing of records as part of a records management process
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the capturing of records into a records management system including policies on confidentiality and security of information and records
- Focus of operation of work systems, equipment, management and site operating systems for the capturing of records into a records management system
- Problems that may occur when capturing records and appropriate action that can be taken to resolve the problems
- Operational workflow within a records management system
- Types of equipment used in the capturing of records into a records management system and the precautions and procedures that should be followed in their use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when capturing records
- Read and interpret instructions, procedures and information relevant to the capturing of records
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the capturing of records
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when capturing records
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when capturing records in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Use a range of information technology devices including computers, radio frequency devices, electronic data exchange systems, etc.
• Maintain security and confidentiality of material
• Identify, select and efficiently and effectively use equipment for the capturing of records into a records management system
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  • in a range of work environments
  • by day or night

Customers may be:  • internal or external

Workplaces may comprise:  • large, medium or small worksites

Workplace environment may include movement of:

  • equipment
  • goods
  • products
  • materials
  • vehicular traffic

Records may include:

  • a simple records series (single disposal class in disposal authority)
  • a number of simple series; form-based records (e.g. financial or personnel transactions with limited range of activities in the records)
  • action that is either complete or includes sentencing that may be part of the capture process
  • media that is paper-based, electronic or other format

The record capturing process is:

  • conducted as part of records management activities with the operator using discretion and judgement within established procedures

Operating environment may include:

  • operating under supervision
  • working as a team effort
  • working solo
  • a sentencing process encompassing review with team procedures ensuring consistency
Hazards in the work area may include:
- height and reach implications of storage facilities
- dust, chemicals and vapours
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- pests
- debris on floor
- faulty racking
- poorly stacked records or boxes
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing

OH&S requirements include:
- manual handling
- protective clothing
- elimination/control of hazards
- machine isolation
- machine guarding

Communication in the work area may include:
- phone
- fax
- email/internet
- RF systems
- electronic data interchange (EDI)
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures
Consultative processes may involve:

- workplace personnel including supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Information/documents may include:

- job specifications and workplace operating procedures
- Australian or international standards pertaining to records management
- storage specifications and requirements
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the requirements for confidentiality and security of information
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- emergency procedures
- quality assurance standards for records management
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to records management
- relevant Australian Standards relating to records management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- privacy and confidentiality legislation and regulations
- freedom of Information regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
demonstrate competency in this unit

- requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIT207C Document a records system

Unit Descriptor
This unit involves the skills and knowledge required to document a records system in accordance with workplace requirements. It includes identifying records creators and their accountability requirements; locating records creators in their organisational structure; identifying the activities/function documented by the records; analysing and describing the record keeping system to identify the series; describing the links between record keeping series; describing the anomalies to the normal order of the series; and documenting the records series and its relationships over time. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to a records management process.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to document a records system in the transport, warehousing, distribution and/or storage industries.

Competency Field
T – Records

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify the records creators and their accountability requirements

1.1 The creating organisation is identified as a public or private entity and likely sources of information about the creator are identified and assessed as relevant

1.2 The record creator is identified by establishing who or what part of an organisation created the records

1.3 Where there is more than one creator over time, all the creators are located in their organisational and chronological context

1.4 The accountability requirements and functional responsibilities of the records creators are identified from available information sources

1.5 Sources of information used in the research are identified as authentic and copies kept in accordance with organisational record keeping practice

2 Locate the records creators in their

2.1 The nature of the jurisdiction governing the organisation is identified and described

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the documentation of a records system as part of a records management process
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the documentation of a records system including policies on confidentiality and security of information and records
- Focus of operation of work systems, equipment, management and site operating systems for the documentation of a records system
- Problems that may occur when documenting a records system and appropriate action that can be taken to resolve the problems
- Operational workflow within a records management system
- Types of equipment used in the documentation of a records system and the precautions and procedures that should be followed in their use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when documenting a records system
- Read and interpret instructions, procedures, information and signs relevant to documenting a records system
- Interpret and follow operational instructions and prioritise work
- Work collaboratively with others when documenting a records system
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when documenting a records system in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Use a range of information technology devices including computers, radio frequency devices, electronic data exchange systems, etc.
- Maintain security and confidentiality of material
- Identify, select and efficiently and effectively use equipment for the documentation of a records system
- Operate and adapt to differences in equipment in accordance with standard operating procedures
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Workplace environment may include movement of:
- equipment
- goods
- products
- materials
- vehicular traffic

Records may be:
- paper- or electronically-based

Storage requirements may include records in various modes such as:
- paper-based
- computer disks and reels
- CD-ROM
- microfiche
- film
- audio

Record system documentation may include but is not limited to:
- the administrative and functional context over time
- the identity of the creators
- the links to other related series
- the record keeping system

Records may range from:
- single series to multiple series in a system
- complexity of records creating context (multiple changes over time)
- complexity of system including anomalies and exception to system rules
- multiplicity of activities
- date-range and size of records series
- in various formats including paper, electronic storage media, structured; free text, graphic
Hazards in the work area may include exposure to:
- height and reach implications of storage facilities
- dust and vapours
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked records or boxes
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing

OH&S requirements include:
- manual handling
- protective clothing
- elimination/control of hazards
- machine isolation
- machine guarding

Communication in the work area may include:
- phone
- fax
- email/internet
- barcode readers
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Consultative processes may involve:
- workplace personnel including supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards pertaining to records management
- storage specifications and requirements
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the security and confidentiality requirements
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- quality assurance standards for records management

Applicable regulations and legislation may include:
- relevant codes and regulations pertaining to records management
- relevant Australian Standards relating to records management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- privacy and confidentiality legislation and regulations
- freedom of information regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific
- Performance is demonstrated consistently over a period
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Identify and classify records to be captured

Unit Descriptor
This unit involves the skills and knowledge required to identify and classify records to be captured in accordance with workplace requirements including identifying records to be captured, classifying records, and registering records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to a records management process.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to identify and classify records to be captured as part of record management processes in the transport, warehousing, distribution and/or storage industries.

Competency Field
T – Records

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify records to be captured

1.1 Incoming material is categorised in accordance with organisational procedures for records which are to be captured

1.2 Storage for records including specific environmental conditions and accessibility requirements are noted and actioned as required

1.3 Activity documented by the record is identified from the elements of the record in accordance with organisational procedures

1.4 Area or action officer to which the record needs to go is identified from elements of the record or its content and staff list, in accordance with organisational procedures

1.5 Incoming material is assessed against organisational checklist to identify what material needs to be captured

1.6 Material which does not need to be registered is dealt with in accordance with organisational procedures

1.7 Where required by organisational procedures, the format/media of the record is modified in accordance with organisational requirements and procedures

2 Classify the record

2.1 The identified transaction/action/activity documented by the record is matched to the organisation's classification scheme

2.2 The full classification of the record is selected in accordance
2.3 The classified record is linked to other records in the system in accordance with the system rules and organisational procedures

2.4 Indexing points (cross-reference terms) are selected for the record in accordance with the system rules and organisational procedures

3 Register the record

3.1 Unique identifier is selected for record in accordance with organisational procedures and record keeping system rules

3.2 Record is registered into record keeping system with title, description, details of record creator, immediate location and any other control information to fulfil the system requirements in accordance with organisational procedures

3.3 Access and security status are determined in accordance with organisational procedures and documented in accordance with record keeping system rules

3.4 Disposal status of the record is determined and recorded in accordance with the record keeping system rules and organisational procedures

3.5 Record is forwarded to its appropriate location, which is recorded in accordance with the system rules and organisational procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the identification and classification of records to be captured as part of a records management process
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the identification and classification of records to be captured including policies on privacy, confidentiality and security of information and records
- Focus of operation of work systems, equipment, management and site operating systems for the identification and classification of records to be captured as part of a records management process
- Problems that may occur with the identification and classification of records to be captured and appropriate action that can be taken to resolve the problems
- Operational workflow within a records management system
- Types of equipment used in the identification and classification of records to be captured and the precautions and procedures that should be followed in their use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
• Communicate effectively with others when identifying and classifying records to be captured
• Read and interpret instructions, procedures and information relevant to the identification and classification of records to be captured
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the identification and classification of records to be captured
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when identifying and classifying records to be captured
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when identifying and classifying records to be captured in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail
• Use a range of information technology devices including computers, radio frequency devices, electronic data exchange systems, etc.
• Maintain security and confidentiality of material
• Identify, select and efficiently and effectively use equipment and consumables for the identification and classification of records to be captured
• Adapt to differences in equipment in accordance with standard operating procedures
• Use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Workplace environment may include movement of:
• equipment
• goods
• products
• materials
• vehicular traffic
Records may be:  
- electronic  
- paper-based  
- microform  
- graphic  
- mainframe or PC-based applications

Storage requirements may include records in various modes such as:  
- paper-based  
- computer disks and reels  
- CD-ROM  
- microfiche  
- film  
- audio

The record identification and classification process is:  
- conducted as part of records management activities with the operator using discretion and judgement within established procedures

Access status of records may be:  
- confidential  
- high security (restricted)  
- open

Records may be registered (captured) into:  
- current records systems  
- archival control systems  
- business systems  
- storage facilities systems

Storage may be:  
- centralised or decentralised  
- off-line or off-site  
- in-house or out-sourced  
- commercial storage service or government repository  
- CD storage  
- imaging systems  
- microform  
- audio-visual/multimedia formats with special storage requirements (temperature controlled, dust-free, strict air-conditioning specifications)
Hazards in the work area may include:

- height and reach implications of storage facilities
- dust and vapours
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked records or boxes
- faulty equipment

OH&S requirements include:

- manual handling
- protective clothing
- elimination/control of hazards
- machine isolation
- machine guarding

Communication in the work area may include:

- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Consultative processes may involve:

- workplace personnel including supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing
Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards pertaining to records management
- storage specifications and requirements
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the privacy and confidentiality requirements
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- quality assurance standards for records management

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to records management
- relevant Australian Standards relating to records management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- privacy and confidentiality legislation and regulations
- freedom of information regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific**

- Performance is demonstrated consistently over a period
resources for assessment of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIT407C Maintain control of records

Unit Descriptor
This unit involves the skills and knowledge required to maintain control of records in accordance with workplace requirements including tracking records, conducting file audits, preparing reports from a records system, preparing staff lists, and implementing disaster recovery procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to a record management process.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to maintain control of records as part of record management processes in the transport, warehousing, distribution and/or storage industries.

Competency Field
T – Records

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Track record

1.1 Unique identifier of record to be located is determined from request or instructions

1.2 Location of record is obtained from records system in accordance with records system rules and organisational procedures

1.3 History of record location is obtained from records system in accordance with records system rules and organisational procedures

1.4 Information about record is obtained from records system in accordance with records system rules and organisational procedures

1.5 Information about the record is updated and amended in accordance with organisational procedures

1.6 All transactions on the records system are completed within the designated timeframe

2 Conduct a file audit

2.1 Files are physically located with action officer and in storage areas in accordance with supervisor's instructions

2.2 Discrepancies between nominal and actual record locations are identified

2.3 Supervisor is clearly/specifically informed/ notified of any discrepancies and/or issue
2.4 Unacceptable record keeping practices are observed and noted during the audit activities in accordance with organisational procedures
2.5 Information about any anomalous record is updated and amended in accordance with organisational procedures
2.6 Reconciliation statement is prepared and forwarded to supervisor in accordance with organisational procedures and records system procedures

3 Prepare reports from records system
3.1 Reports are prepared from system in accordance with supervisor's instructions or requests
3.2 Reports are prepared in accordance with workplace procedures and records system procedures
3.3 All reports from the records system are prepared within the designated timeframe

4 Prepare staff lists
4.1 Staff and user lists are checked and updated to accord with the current locations and designations of organisational staff members in accordance with supervisor's instructions
4.2 Staff and user lists are duplicated and circulated to all those requiring copies in accordance with supervisor's instructions

5 Implement disaster recovery procedures
5.1 Policies and procedures are identified for disaster recovery
5.2 Recovery actions are undertaken in accordance with workplace procedures and scope of authority
5.3 Appropriate personnel are informed of actions taken in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Regulations relevant to the maintenance of control of records as part of a records management process
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the maintenance of control of records including policies on confidentiality and security of information and records
• Focus of operation of work systems, equipment, management and site operating systems for the maintenance of control of records as part of a records management process
• Problems that may occur with the maintenance of control of records and appropriate action that can be taken to resolve the problems
• Operational workflow within a records management system
• Types of equipment used in the maintenance of control of records and the precautions and procedures that should be followed in their use
• Housekeeping standards and procedures required in the workplace
• Site layout and obstacles

**Required skills:**
• Communicate effectively with others when maintaining control of records
• Read and interpret instructions, procedures and information relevant to the maintenance of control of records
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the maintenance of control of records
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when maintaining control of records
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when maintaining control of records in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail
• Use a range of information technology devices including computers, radio frequency devices, electronic data exchange systems, etc.
• Maintain security and confidentiality of material
• Identify, select and efficiently and effectively use equipment for the maintenance of control of records
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites
Workplace environment may include movement of:
- equipment
- goods
- products
- materials
- vehicular traffic

Records may be:
- paper- or electronically-based

Storage requirements may include records in various modes such as:
- paper-based
- computer disks and reels
- CD-ROM
- microfiche
- film
- audio

The record control process is:
- conducted as part of records management activities with the operator using discretion and judgement within established procedures

Record information to be updated may come from:
- supervisor
- user
- file transfer slips
- action officers
- results of file audit
- requests

Standard reports prepared from the record keeping system may include:
- statistics
- resubmits for following day
- over due action reports
- daily correspondence

Those requiring copies of staff/user lists may include:
- managers of record keeping areas
- those undertaking classification and capture

OH&S requirements include:
- manual handling
- protective clothing
- elimination/control of hazards
Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Consultative processes may involve:
- workplace personnel including supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Hazards in the work area may include:
- height and reach implications of storage facilities
- dust and vapours
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked records or boxes
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing
Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards pertaining to records management
- storage specifications and requirements
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the privacy and confidentiality requirements
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- quality assurance standards for records management

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to records management
- relevant Australian Standards relating to records management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- privacy and confidentiality legislation and regulations
- freedom of information regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific**

- Performance is demonstrated consistently over a period
resources for assessment

of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLIT507C

**Provide information from and about records**

**Unit Descriptor**

This unit involves the skills and knowledge required to provide information from and about records in accordance with workplace procedures. It includes identifying the range of records required, gathering the required records, interpreting and administering access rules and procedures, and providing the information in response to users' requests. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Work must be carried out in accordance with regulations and workplace requirements relevant to a record management process. Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to provide information from or about records as part of record management processes in the transport, warehousing, distribution and/or storage industries.

**Competency Field**

T – Records

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Identify range of records required** | 1.1 The specific information required by the user is identified from interpretation of the user's request and clarified where initial request is unclear  
1.2 Range of records likely to contain the information required by the user is identified from analysis of the request  
1.3 The availability of the required records is accessed using appropriate finding aids and record keeping system  
1.4 Where the information required exceeds the staff member's ability to meet the request, the user is referred to an appropriate colleague or external organisation |

| 2 Gather required records | 2.1 Range of records likely to contain the information required by the user is obtained and analysed for the required information content  
2.2 Information is extracted, where required, and information is prepared in line with the request  
2.3 Specific records satisfying the requirements of the user are gathered together in accordance with organisational procedures  
2.4 Records are tracked to record change in location and use by the requesting user in accordance with the record keeping |
system rules and organisational procedures

2.5 Any obstacles to obtaining specific records within the specified time are explained to the user and a revised timeline agreed

3 Interpret and administer access rules and procedures

3.1 Person requesting the record is identified and access rules and procedures category are confirmed in accordance with organisational procedures

3.2 Access restriction rules and guidelines are applied to the records requested and to match the access category of the user

3.3 Where access restriction rules and guidelines prevent access to the user, the decision is recorded and the user is informed of their rights to a review of the decision

3.4 Where partial restriction to access is determined, the portions of the records or information which must be restricted are identified and documented, together with the basis of the restriction

4 Provide the information in response to users' requests

4.1 Where appropriate, specific records, or portions thereof, information and/or records are protected to prevent access, in accordance with access rules and organisational procedures

4.2 Requested information is prepared for the user in an appropriate format and in accordance with the initial request and organisational procedures

4.3 All access rules, record preservation requirements, specified timelines and occupational health and safety guidelines are adhered to

4.4 The records retrieved and used to provide information are documented according to the system rules and organisational procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the provision of information from or about records as part of a records management process
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the provision of information from or about records including policies on confidentiality and security of information and records
- Focus of operation of work systems, equipment, management and site operating systems for the provision of information from or about records as part of a records management process
- Problems that may occur when providing information from or about records and appropriate action that can be taken to resolve the problems
- Operational workflow within a records management system
• Types of equipment used in the provision of information from or about records and the precautions and procedures that should be followed in their use
• Housekeeping standards and procedures required in the workplace
• Site layout and obstacles

Required skills:
• Communicate effectively with others when providing information from or about records
• Read and interpret instructions and procedures relevant to the provision of information from or about records
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the provision of information from or about records
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when providing information from or about records
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when providing information from or about records in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify, select and efficiently and effectively use equipment for the provision of information from or about records
• Use a range of information technology devices including computers, radio frequency devices, electronic data exchange systems, etc.
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Maintain security and confidentiality of material

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external
Workplaces may comprise:

- large, medium or small worksites

Workplace environment may include movement of:

- equipment
- goods
- products
- materials
- vehicular traffic

Records may be:

- paper- or electronically-based

Storage requirements may include records in various modes such as:

- paper-based
- computer disks and reels
- CD-ROM
- microfiche
- film
- audio

The information service is conducted as part of:

- records management activities with the operator using discretion and judgement within established procedures. Boundaries of requests under freedom of information legislation and precedents may need to be considered. Interpretation of access clearances and privacy restrictions for records within particular levels of access and associated security releases may be required

Appropriate format for provision of information may include:

- original
- copy of original
- hard or soft copy of original
- digital
- permission to view information/record

Hazards in the work area may include:

- height and reach implications of storage facilities
- dust and vapours
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked records or boxes
- faulty equipment
Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing

OH&S requirements include:

- manual handling
- protective clothing
- elimination/control of hazards

Communication in the work area may include:

- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Consultative processes may involve:

- workplace personnel including supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards pertaining to records management
- storage specifications and requirements
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the privacy, confidentiality, access and security requirements
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- quality assurance standards for records management

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to records management
- relevant Australian Standards relating to records management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- privacy and confidentiality legislation and regulations
- freedom of information regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific

- Performance is demonstrated consistently over a period
resources for assessment

of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIT607C  Provide records retrieval service

Unit Descriptor
This unit involves the skills and knowledge required to provide a records retrieval service in accordance with workplace requirements including locating/retrieving records required, ensuring security of records, and delivering the record or record information. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to a record management process.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to provide a records retrieval service as part of record management processes in the transport, warehousing, distribution and/or storage industries.

Competency Field
T – Records

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Locate/retrieve records required
1.1 Search criteria are refined in consultation with user making request, and key words (or other indexing terms) are identified to retrieve records
1.2 Sources are searched to retrieve records according to agreed criteria
1.3 Records are retrieved or located to match request

2 Ensure security of records
2.1 Person requesting the record is identified and access category confirmed in accordance with organisational procedures
2.2 Access and security clearance documents are checked for match with category of identified person requesting the record
2.3 Where access is denied, the user is informed of the denial in accordance with organisational procedures

3 Deliver the record or record information
3.1 Where record is to be provided, it is retrieved from the storage location in accordance with record keeping system operation, organisational, and occupational health and safety procedures
3.2 Where information about the record is to be provided, it is given to the user
3.3 Where required by the record keeping system, records of the transaction are documented in accordance with record keeping system operation and organisational procedures
3.4 Where records are provided to the user, the new locations are recorded in accordance with the system rules and organisational procedures

3.5 Record, or record information is delivered to the authorised person within the specified timeframes

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Regulations relevant to the provision of a records retrieval service as part of a records management process
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the provision of a records retrieval service including policies on privacy, confidentiality and security of information and records
- Focus of operation of work systems, equipment, management and site operating systems for the provision of a records retrieval service as part of a records management process
- Problems that may occur when providing a records retrieval service and appropriate action that can be taken to resolve the problems
- Operational workflow within a records management system
- Types of equipment used in the provision of a records retrieval service and the precautions and procedures that should be followed in their use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

**Required skills:**

- Communicate effectively with others when providing a records retrieval service
- Read and interpret instructions, procedures and information relevant to the provision of a records retrieval service
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of a records retrieval service
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing a records retrieval service
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when providing a records retrieval service in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Use a range of information technology devices including computers, radio frequency devices, electronic data exchange systems, etc.
• Maintain security and confidentiality of material
• Identify, select and efficiently and effectively use equipment for the provision of a records retrieval service
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Workplace environment may include movement of:
• equipment
• goods
• products
• materials
• vehicular traffic

Records may be:
• paper- or electronically-based

Storage requirements may include records in various modes such as:
• paper-based
• computer disks and reels
• CD-ROM
• microfiche
• film
• audio

The record retrieval service is:
• conducted as part of records management activities with the operator using discretion and judgement within established procedures

Requests may be:
• written
• verbal
• computer-generated or system-generated
Information about the record may include:
- location or a unique identifier

Hazards in the work area may include:
- height and reach implications of storage facilities
- dust and vapours
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked records or boxes
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing

OH&S requirements include:
- manual handling
- protective clothing
- elimination/control of hazards

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures
Consultative processes may involve:
- workplace personnel including supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards pertaining to records management
- storage specifications and requirements
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including privacy and confidentiality requirements
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- quality assurance standards for records management

Applicable regulations and legislation may include:
- relevant codes and regulations pertaining to records management
- relevant Australian Standards relating to records management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- privacy and confidentiality legislation and regulations
- freedom of information regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

### TLIT707C Sentence records

#### Unit Descriptor
This unit involves the skills and knowledge required to sentence records within a workplace records system in accordance with workplace requirements including identifying records for sentencing, examining records for sentencing, selecting disposal status for records, and recording the disposal status. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to a records management process.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to sentence records as part of record management processes in the transport, warehousing, distribution and/or storage industries.

#### Competency Field
T – Records

#### PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify records for sentencing | 1.1 Records on which action is complete are located, removed, or copied from the active record keeping system, in accordance with organisational procedures  
1.2 Records are identified from request or supervisor's instructions |
| 2 Examine records for sentencing | 2.1 Any record on which action is not complete is returned to active record keeping system in accordance with organisational procedures  
2.2 Activity, group of related activities, or groups of transactions documented by the records are correctly identified at the appropriate level in accordance with organisational procedures  
2.3 Client is consulted concerning sentencing date and proposed actions for records is confirmed by client |
| 3 Select disposal status for records | 3.1 The disposal class is identified for the record in the records authorised schedule applicable to the activity or transactions  
3.2 Records are identified for further periods of retention, calculated in accordance with organisational procedures or for immediate destruction  
3.3 The items identified for immediate destruction are separated |
from the rest of the body of records

3.4 Items which cannot be sentenced are handled in accordance with organisational disposal procedures

4 Record the disposal status

4.1 The disposal status, disposal action and date of disposal action are recorded with the record keeping system in accordance with organisational disposal procedures and record keeping systems rules

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Regulations relevant to the sentencing of records as part of a records management process
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the sentencing of records including policies on confidentiality and security of information and records
• Focus of operation of work systems, equipment, management and site operating systems for the sentencing of records as part of a records management process
• Problems that may occur when sentencing records and appropriate action that can be taken to resolve the problems
• Operational work flow within a records management system
• Types of equipment used in the sentencing of records and the precautions and procedures that should be followed in their use
• Housekeeping standards and procedures required in the workplace
• Site layout and obstacles

Required skills:

• Communicate effectively with others when sentencing records
• Read and interpret instructions, procedures and information relevant to the sentencing of records
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the sentencing of records
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when sentencing records
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when sentencing records in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Use a range of information technology devices including computers, radio frequency devices, electronic data exchange systems, etc.
• Maintain security and confidentiality of material
• Identify, select and efficiently and effectively use equipment for the sentencing of records
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
   • by day or night
Customers may be: • internal or external
Workplaces may comprise: • large, medium or small worksites
Workplace environment may include movement of: • equipment
   • goods
   • products
   • materials
   • vehicular traffic
Records may include: • a simple records series (single disposal class in disposal authority)
   • a number of simple series; form-based records (e.g. financial or personnel transactions limited range of activities in the records)
   • action that is either complete or includes sentencing that may be part of the capture process
   • media that is paper-based, electronic or other format
The record sentencing process is conducted as part of: • records management activities with the operator using discretion and judgement within established procedures
Operating environment may include: • operating under supervision
   • working as a team effort
   • working solo
   • a sentencing process encompassing review with team procedures ensuring consistency
Hazards in the work area may include:
- height and reach implications of storage facilities
- dust and vapours
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- faulty racking
- poorly stacked records or boxes
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing

OH&S requirements include:
- manual handling
- protective clothing
- elimination/control of hazards

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Consultative processes may involve:
- workplace personnel including supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards pertaining to records management
- storage specifications and requirements
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including privacy and confidentiality requirements
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- quality assurance standards for records management

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to records management
- relevant Australian Standards relating to records management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- privacy and confidentiality legislation and regulations
- freedom of information regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
resources for assessment

- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIT807C Undertake disposal program

Unit Descriptor
This unit involves the skills and knowledge required to undertake a records disposal program in accordance with workplace requirements including preparing for disposal activities, undertaking disposal activities, supervising disposal actions, and seeking approval for disposal actions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to a records management process.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures when undertaking a disposal program as part of record management processes in the transport, warehousing, distribution and/or storage industries.

Competency Field
T – Records

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for disposal activities
1.1 Records or areas where records are due for disposal action are identified from request or schedule
1.2 Resources needed to undertake the program are assembled in the location and at the time required

2 Undertake disposal activities
2.1 Records are assessed to determine what disposal action can be undertaken immediately, whether records need to be sentenced or reviewed, and whether any records need to be appraised
2.2 Disposal actions are distributed and delegated to be conducted in accordance with organisational rules, guidelines and procedures
2.3 Quality control measures are undertaken in accordance with organisational procedures to ensure consistency in determining disposal status and retention periods
2.4 Certificate of destruction documentation is completed and information provided to client as required

3 Supervise disposal actions
3.1 Disposal sentences referred by delegates are reviewed and disposal actions determined from existing schedules or from appraisal results
3.2 Checks are made to ensure that disposal decisions are recorded
in the record keeping system and that disposal actions taken are in accord with the decisions recorded

4 Seek approval for disposal actions

4.1 Approval is sought from the appropriate individual/body for disposal actions
4.2 Records which are no longer required for any purpose are destroyed in accordance with approval and organisational procedures
4.3 Records which need to be kept for a further period are stored in accordance with organisational records storage requirements
4.4 All disposal actions are recorded and authorised in accordance with organisational procedures and record keeping system requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to disposal of records within a records management process
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the disposal of records including policies on confidentiality and security of information and records
- Focus of operation of work systems, equipment, management and site operating systems for the disposal of records as part of a records management process
- Problems that may occur when undertaking the disposal of records and appropriate action that can be taken to resolve the problems
- Operational workflow within a records management system
- Types of equipment used in a records disposal program and the precautions and procedures that should be followed in their use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when undertaking the disposal of records
- Read and interpret instructions, procedures and information relevant to the disposal of records
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the disposal of records
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when undertaking the disposal of records
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when undertaking the disposal of records in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Use a range of information technology devices including computers, radio frequency devices, electronic data exchange systems, etc.
• Maintain security and confidentiality of material
• Identify, select and efficiently and effectively use equipment for the disposal of records
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
  • by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Workplace environment may include movement of: • equipment
  • goods
  • products
  • materials
  • vehicular traffic

Records may be: • paper- or electronically-based

Storage requirements may include records in various modes such as • paper-based
  • computer disks and reels
  • CD-ROM
  • microfiche
  • film
  • audio
The records disposal program is conducted as part of:

- records management activities with the operator using discretion and judgement within established procedures

Range of records may include:

- single series
- multiple series
- multiple systems
- in various formats including paper; electronic storage media; structured; free text; graphic

Hazards in the work area may include:

- height and reach implications of storage facilities
- dust and vapours
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked records or boxes
- faulty equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- protective clothing

OH&S requirements include:

- manual handling
- protective clothing
- elimination/control of hazards
- machine isolation and machine guarding

Communication in the work area may include:

- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures
Consultative processes may involve:

- workplace personnel including supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards pertaining to records management
- storage specifications and requirements
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including confidentiality and security requirements
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- quality assurance standards for records management

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to records management
- relevant Australian Standards relating to records management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- privacy and confidentiality legislation and regulations
- freedom of information regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
demonstrate competency in this unit

- requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Regulations relevant to the movement of records as part of a records management system
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the movement of records including policies on
  confidentiality and security of information and records
• Focus of operation of work systems, equipment, management and site operating systems for
  the movement of records as part of a records management system
• Problems that may occur when moving records and appropriate action that can be taken to
  resolve the problems
• Operational workflow within a records management system
• Types of equipment used in the movement of records and the precautions and procedures that
  should be followed in their use
• Housekeeping standards and procedures required in the workplace
• Site layout and obstacles

Required skills:
• Communicate effectively with others when moving records
• Read and interpret instructions, procedures, information and signs relevant to the movement
  of records
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the movement of records
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when moving records
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour
  and interactions with others
• Promptly report and/or rectify any identified problems that may occur when moving records
  in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may
  exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Use a range of information technology devices including computers, radio frequency devices, electronic data exchange systems, etc.
• Maintain security and confidentiality of material
• Identify, select and efficiently and effectively use equipment for the movement of records
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Workplace environment may include movement of:
• equipment
• goods
• products
• materials
• vehicular traffic

Record storage may be:
• centralised or decentralised
• off-line or off-site
• in-house or out-sourced
• commercial storage service or government repository
• CD storage
• imaging systems
• microform
• audio-visual multimedia formats with special storage requirements (e.g. temperature controlled, dust-free, strict air-conditioning specifications)

The record movement process is conducted as part of: • records management activities with the operator using discretion and judgement within established procedures
**Key aspects of the process may include:**

- request for movement may be written, verbal, computer-generated or system-generated
- paper, microform or audio-visual/multimedia records may be boxed for movement
- electronic records may be flagged and copied to new database for storage off-line or in new medium

**Information relating to the transfer may include:**

- locations
- dates
- titles
- destination
- originating organisation
- approving officer
- who undertook the transfer
- method to be used
- range of record unique identifiers

**Hazards in the work area may include:**

- height and reach implications of storage facilities
- dust and vapours
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked records or boxes
- faulty equipment

**Personal protective equipment may include:**

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

**OH&S requirements include:**

- manual handling
- protective clothing
- elimination/control of hazards
- machine isolation and machine guarding
Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Consultative processes may involve:
- workplace personnel including supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards pertaining to records management
- storage specifications and requirements
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- quality assurance standards for records management
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to records management
- relevant Australian Standards relating to records management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- privacy and confidentiality legislation and regulations
- freedom of information regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIU107B  Implement and monitor environmental protection policies and procedures

Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor environmental protection policies and procedures including accessing relevant information concerning environmental protection regulations and procedures, and implementing and monitoring procedures concerning environmental hazards, related control procedures, environmental training arrangements, and required records and documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision generally within a team environment. It involves the application of the environmental protection principles and regulations to implement and monitor environmental protection policies and procedures during the course of workplace operations.

Competency Field
U – Environment

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Access information concerning environmental protection regulations and procedures

1.1 Relevant provisions of environmental legislation and codes of practice are accurately followed
1.2 Information on workplace environmental policies, procedures and programs is stored in a readily accessible location and manner
1.3 Information is accurately and clearly explained to the work team and updated according to change in workplace policy
1.4 Information about the outcomes of environmental risk identification and control procedures is provided to the appropriate personnel

2 Implement and monitor procedures concerning environmental hazards

2.1 Existing and potential environmental hazards in the workplace are identified and reported
2.2 Identified hazards are assessed in relation to relevant environmental protection policies
2.3 Workplace procedures for dealing with hazardous events are
3 Implement and monitor environmental control procedures

3.1 Existing environmental protection measures are implemented, monitored and reviewed
3.2 Work procedures to protect environment are implemented and adherence to them by the work group is monitored
3.3 Required improvements to existing control measures are identified, including required resources for implementation, and reported to appropriate personnel

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Workplace procedures and guidelines for implementing and monitoring environmental protection
- Environmental risks associated with workplace operations and related precautions to control the risk
- Environmental protection standards required in the workplace
- Workplace environmental hazards and related hazard control measures
- Workplace reporting and recording processes and procedures
- Hierarchy of control principles for environmental risks (including preferred models for risk elimination, engineering controls, administrative controls and specific environmental protection techniques)
- Equipment and resources required when implementing and monitoring environmental protection and instructions for their use
- Problems that can occur when implementing and monitoring environmental protection procedures
- Significance of EEO principles and practice for environmental management
- Literacy levels and communication skills of those supervised
- Relevant management systems and procedures for environmental management
- Organisational structure and site layout

Required skills:

- Communicate effectively with others both orally and in writing when implementing and monitoring environmental protection procedures
- Counsel, advise and inform others on environmental protection matters
• Read and interpret instructions, procedures, information and signs relevant to the implementation and monitoring of environmental protection procedures
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the implementation and monitoring of environmental protection procedures
• Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when implementing and monitoring environmental protection procedures
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Recognise potential environmental risks and ways of minimising them
• Promptly report and/or rectify any identified problems that may occur when implementing and monitoring environmental protection procedures in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Carry out training needs analysis relevant to workplace requirements
• Identify and correctly use equipment and vehicles in accordance with environmental protection regulations and guidelines
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Implementation and monitoring of environmental protection policies and procedures may occur:

Customers may be:

• internal or external

Workplaces may comprise:

• in a range of work environments by day or night
• large, medium or small worksites in the transport, warehousing, distribution and/or storage industries
Workplace procedures for dealing with hazardous events may include:

- inspection and housekeeping
- training and assessment
- maintenance including plant and equipment
- purchasing
- evacuation
- hazardous substance containment
- operational instruction
- environmental information including incident and management practices
- consultation
- specific hazardous materials policies and procedures
- counselling and disciplinary processes
- risk assessment and control
- first aid
- internal and external auditing

Environment may include:

- indoor
- outdoor
- marine
- atmospheric

Environmental protection requirements may be obtained from:

- environmental hazard reports
- risk control procedures
- workplace personnel and management
- relevant legislation

Environmental hazards may include:

- exhaust fumes
- oils and lubricants
- gas
- smoke
- chemicals and detergents
- rubbish
- noise
- wastes

Servicing requirements may be obtained from:

- customer requests
- works orders
- freight requirements
- workplace personnel
Depending on workplace context, personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Personnel in the work area may include:

- workplace personnel including supervisors and management
- site visitors
- contractors
- official representatives

Support services can include:

- loading/unloading requirements
- load security/protection
- receipt personnel
- special vehicle access/parking

Promotional activities may include:

- public relations activities
- press releases
- open days
- in-house newsletters
- publications
- advertising programs
- seminars
- promotional briefings

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- OH&S and environmental protection regulations
- workplace housekeeping procedures and policies
- codes of practice for environmental protection
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, waste disposal/reprocessing, handling of dangerous goods/hazardous substances and other environmental protection issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- ADG Code
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to:

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
**demonstrate competency in this unit**

requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIU607B Conduct environmental audits

Unit Descriptor
This unit involves the skills and knowledge required to conduct an environmental audit in accordance with relevant environmental protection regulatory requirements and workplace procedures. This includes preparing for an environmental audit, scheduling an internal audit, conducting an environmental audit, documenting the findings, and reporting on the environmental audit results. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant Australian regulations, standards and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field
U – Environment

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for environmental audit

1.1 Relevant legislation, authority and enterprise requirements pertinent to the operations of the workplace are identified and followed

1.2 Practices and facilities required to be audited are identified and implications of non-conformance established

1.3 Technical and/or calibration requirements for audits are noted and, where necessary, appropriate support personnel are identified

1.4 Work schedules are investigated to identify appropriate schedule for audit
2 Schedule internal audit

2.1 Audit timings are planned to ensure that relevant procedures are conducted within workplace agreed time intervals and timeframes
2.2 Audit frequency is adjusted to ensure minimal disruption to the workplace
2.3 Contact is made with appropriate personnel and appointments for the audit are made

3 Conduct environmental audit and document findings

3.1 Operational procedures and assessment methods for the environmental audit are confirmed with affected personnel
3.2 Observations and interviews are conducted with (any) required approved third party
3.3 Documentation of observations and interview responses is completed

4 Report environmental audit results

4.1 Outcomes of the audit process are compared to workplace procedures
4.2 Audit results are discussed with relevant personnel
4.3 Reports of non-compliance are documented including options for environmental system improvements
4.4 Reports are forwarded to appropriate personnel for action

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S and environmental protection procedures and regulations, including the ADG Code where applicable
- Workplace processes for the conduct of an environmental audit
- Problems that may occur during the conduct of an environmental audit and action that can be taken to report or resolve the problems
- Hazards that may exist in the conduct of an environmental audit and ways of controlling the risks involved
- Focus of operation of workplace in relation to potential environmental risks and control/prevention measures
- Environmental risk management and control procedures
- Audit procedures and compliance implementation strategies
- Regulatory and guidance material on environmental safety
- Workplace business policies and plans including procedures for identification of non-compliance and best practice
- Equipment applications, capacities, configurations, safety hazards and control
- Application of relevant Australian Standards and associated certification requirements
- Resource availability including the competencies of individuals in the team or group
• Relevant workplace documentation procedures

**Required skills:**
• Communicate effectively with others when conducting an environmental audit
• Read and interpret instructions, technical data, regulatory requirements and workplace policies and procedures relevant to the conduct of an environmental audit
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the conduct of an environmental audit
• Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when conducting an environmental audit
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems identified when conducting an environmental audit in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan and organise environmental audit activities
• Monitor work activities in terms of planned schedule
• Modify activities to cater for variations in workplace contexts and environment
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and apply appropriate technology, information systems and procedures
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: • in various work environments in the warehousing, storage, transport and distribution industries

Customers may be: • internal or external

Operations may be conducted: • by day or night in all weather conditions

The workplace environment may involve: • twenty-four hour operation
• single and multi-site location
• large, medium and small workplaces

Services, products, risks, work systems and requirements potentially vary: • in different sectors of the warehousing, storage, transport and distribution industries
Environmental audits may be conducted:
- as part of enterprise or site specific procedures

Audits may be conducted:
- alone or in conjunction with other staff from the enterprise or external contractors

Audits may involve:
- movement of processed materials, dangerous goods, hazardous substances, waste disposal, run-offs, etc.

Consultative processes may involve:
- employees, supervisors and managers
- customers and suppliers
- relevant environmental authorities and local government departments
- representatives of other enterprises and organisations related to the international transfer of freight
- industrial relations and OH&S specialists
- other professional, maintenance or technical staff

Communications systems may involve:
- fixed or mobile telephone
- radio
- fax
- email
- electronic data transfer of information
- mail, forms and internal memos

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Documentation/records may include:

- environmental codes of practice and regulations relevant to workplace activities
- regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including the ADG Code where applicable
- workplace operating procedures, instructions and policies relevant to environmental protection
- operations manuals, job specifications and procedures and induction documentation
- local government environmental protection policies and guidelines
- supplier and/or client instructions
- relevant Australian Standards, criteria and certification requirements
- manufacturers specifications and/or suppliers handling and storage advice
- material safety data sheets
- communications technology equipment and oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory and local government environmental protection legislation and regulations
- Australian and international regulations and codes of practice for the handling and transfer of dangerous goods and hazardous substances
- relevant Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant licence or permit requirements and associated regulations
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIU707B Care for the environment

Unit Descriptor

This unit involves the skills and knowledge required to care for the environment when operating and maintaining equipment and/or vehicles including minimising the effects of pollution during operations, minimising the effects of pollution during maintenance, and transporting and handling environmentally hazardous materials safely and in accordance with environmental protection regulations and guidelines. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

Work must be carried out in accordance with relevant state/territory environmental protection regulations and workplace procedures.

Work is performed under some supervision generally within a team environment. It involves the application of the basic environmental protection principles and regulations to the operation and maintenance of equipment and vehicles during the course of workplace operations.

Competency Field

U – Environment

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Minimise the effects of pollution during operations

1.1 Precautions are taken to ensure spilt fuel, lubricants and chemicals do not pollute the environment

1.2 Equipment and vehicles are operated efficiently to minimise pollution of the air environment through excessive exhaust emissions

1.3 Unnecessary running of engines/equipment is avoided to minimise pollution of the air environment

1.4 Worksites are kept clean and tidy during work operations and the disposal of waste is in accordance with environmental regulations and workplace procedures

2 Minimise the effects of pollution during maintenance

2.1 Routine checks are conducted or organised to ensure emission control equipment on equipment/vehicle is operating correctly

2.2 Suitable precautions are taken during the cleaning of equipment/vehicles not to pollute the environment

2.3 Care is taken during services and maintenance operations to implement housekeeping procedures and environmental protection precautions and procedures

2.4 Rubbish is deposited in designated rubbish disposal bins
3 Transport/handle environmentally hazardous materials safely

3.1 Material safety data sheets are completed in accordance with government regulations and workplace requirements
3.2 Waste and effluent is disposed of in accordance with government regulations and government policy
3.3 Environmentally hazardous materials are handled and moved in accordance with relevant regulations, workplace procedures and guidelines aimed at minimising the risk of environmental pollution
3.4 Routes for vehicles carrying hazardous and noxious loads are planned to minimise the risk to the environment in the event of accident or spillage

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant environmental protection regulations
• Workplace procedures and guidelines for the care of the environment during workplace operations
• Environmental risks when carrying out workplace operations and related precautions to control the risk
• Environmental protection standards or licence required in the workplace
• Site layout including location of rubbish disposal bins and contaminated waste
• Application of relevant environmental protection regulations and requirements including site specific licence and trade waste requirements
• Service and maintenance procedures and checklists for equipment and vehicles
• Procedures and processes for waste and effluent regulation where applicable
• Environmental hazards and toxicity of materials typically carried in loads
• Emission control checking requirements for vehicles and relevant equipment
• Typical problems that can occur when caring for the environment and appropriate action that can be taken to prevent or solve them

Required skills:
• Communicate effectively with others when caring for the environment
• Read and interpret instructions, procedures and information relevant to the care of the environment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the care of the environment
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when caring for the environment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when caring for the environment in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when caring for the environment
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Recognise potential pollution risks and ways of minimising them
• Identify and correctly use equipment and vehicles in accordance with environmental protection regulations and guidelines
• Follow routine service and maintenance procedures for equipment and vehicles
• Adapt to differences in equipment and operating environment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Care for the environment may be conducted: • in a range of work environments by day or night:
  • within tunnel ventilation systems
  • ground water recharge system
  • ground water treatment plant

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites in the transport, warehousing, distribution and/or storage industries, other small medium sites related to road transport

Environment may include: • indoor
  • outdoor
  • marine
  • atmospheric
  • rivers
  • water table
  • road tunnel environment
Pollutants may include:

- exhaust fumes
- oils and lubricants
- gas
- smoke
- chemicals and detergents
- rubbish
- noise
- wastes
- road water run off
- ground water
- in tunnel air quality
  - CO
  - NO
  - NO2
  - PM2.5
  - PM10

Equipment/vehicles may include:

- motor vehicles, trucks and motorcycles
- fixed equipment emitting exhaust fumes/gases
- marine vessels
- forklifts, cranes and load shifting equipment
- tunnel ventilation equipment
- water treatment plants
- ground water systems
- pumps and drainage systems
- drainage
- ventilation tunnel
- detention basin

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Depending on workplace context, personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- OH&S and environmental protection regulations
- workplace housekeeping procedures and policies
- codes of practice for environmental protection
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, waste disposal/reprocessing, handling of dangerous goods/hazardous substances and other environmental protection issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures

Applicable regulations and legislation may include:

- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation
- workplace relations regulations
- ADG Code

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
For the environment

- relevant legislation and workplace procedures
- demonstrate an understanding of the precautions to be undertaken to prevent pollution to the environment within workplace and job role
- demonstrate an understanding of the requirements with in workplace procedures and regulatory requirements for the handling and moving of pollutants
- demonstrate the requirements for the disposal of waste and effluent in accordance with regulations and workplace procedures
- identify the pollution likely to effect the workplace and the effect on the job role

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIU809A  Apply environmental procedures to rail infrastructure

Unit Descriptor
This unit involves the skills and knowledge required to care for the environment during rail infrastructure maintenance and construction activities in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes minimising the effects of pollution during work and transporting and handling environmentally hazardous materials safely and in accordance with environmental protection regulations and guidelines. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with relevant state/territory environmental protection regulations and workplace procedures.

Work is performed under some supervision generally within a team environment. It involves the application of basic environmental protection principles and regulations to work undertaken during rail infrastructure maintenance and construction activities.

Competency Field
U – Environment

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Minimise the effects of pollution during work
1.1 Precautions are taken to ensure spilt fuel, lubricants, chemicals and noxious plants do not pollute the environment
1.2 Equipment and vehicles are operated efficiently to minimise pollution of the air environment through excessive exhaust emissions
1.3 Unnecessary running of engines/equipment is avoided to minimise pollution of the air environment
1.4 Worksites are kept clean and tidy during work operations and the disposal of waste is in accordance with environmental regulations and workplace procedures
1.5 Contaminant from worksites is contained by use of appropriate traps and barriers
1.6 Noise pollution from work is minimised

2 Minimise the effects of pollution during maintenance
2.1 Suitable precautions are taken during maintenance and construction activities not to pollute the environment by implementing housekeeping and environmental protection
3 Avoid environmental damage

3.1 Sensitive sites in the vicinity of work are identified
3.2 Suitable precautions are taken to avoid damage to sensitive sites

4 Transport/handle environmentally hazardous materials safely

4.1 The instructions contained in material safety data sheets in regard to safe transportation requirements are followed in accordance with government regulations and workplace requirements
4.2 Contaminant is disposed of in accordance with relevant regulations, workplace procedures and guidelines
4.3 Environmentally hazardous materials are handled and moved in accordance with relevant regulations, workplace procedures and guidelines aimed at minimising the risk of environmental pollution

5 Complete reports and documentation

5.1 Environmental breaches are reported
5.2 Documentation is completed in accordance with relevant regulations and workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OHS and environmental protection regulations
- Workplace procedures and guidelines for the care of the environment during rail infrastructure maintenance and construction
- Environmental risks when undertaking rail infrastructure maintenance and construction and related precautions to control the risk
- Environmental protection standards required during rail infrastructure maintenance and construction activities
- Site layout including location of rubbish disposal bins and run-off protection measures
- Application of relevant environmental protection regulations and requirements including site specific licence and trade waste requirements
- Service and maintenance procedures
- Procedures and processes for waste and effluent regulation where applicable
- Environmental hazards and toxicity of materials typically carried in loads
- Emission control checking requirements for vehicles and relevant equipment where fitted
- Typical problems that can occur when caring for the environment, and appropriate action that can be taken to prevent or solve them

Required skills:
• Read and interpret instructions, procedures and information relevant to the care of the environment during rail infrastructure maintenance and construction activities
• Interpret and follow operational instructions and perform work tasks in required sequence
• Complete documentation related to the care of the environment during rail infrastructure maintenance and construction activities
• Promptly report and/or rectify any identified problems that may arise when caring for the environment during rail infrastructure maintenance and construction activities in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when caring for the environment during rail infrastructure maintenance and construction activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Recognise potential pollution risks and ways of minimising them
• Identify and correctly use equipment and vehicles in accordance with environmental protection regulations and guidelines
• Follow routine service and maintenance procedures for equipment and vehicles
• Adapt to differences in equipment and operating environment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all weather conditions

Workplaces may comprise: • large, medium or small worksites in the maintenance and construction of rail infrastructure

Environment may include: • indoor
• outdoor
• marine or other waterways
• atmospheric

Sensitive sites may include: • culturally sensitive sites
• bio sites
• environmentally sensitive sites
Pollutants may include: 
- exhaust fumes
- oils and lubricants
- gas
- smoke
- chemicals and detergents
- noxious weeds
- contaminated soils
- rubbish
- noise
- wastes

Equipment/vehicles may include: 
- motor vehicles or trucks
- fixed equipment emitting exhaust fumes/gases
- on-track vehicles
- off-track plant
- small machinery

Cleanup equipment may include: 
- spill kits
- bio-degradable detergents
- hay bales
- silt traps

Personnel in the work area may include: 
- workplace personnel
- site visitors
- contractors
- official representatives

Work may involve: 
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Liaison may include: 
- internal or external personnel from other work areas (e.g. train controllers)
- local authorities

Communication systems may include: 
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: 
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Depending on workplace context, personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices

Information/documents may include:

- OH&S and environmental protection regulations
- regulations and policies concerning noise, waste disposal/reprocessing, handling of dangerous goods/hazardous substances and other environmental protection issues
- local authority regulations and procedures
- workplace housekeeping procedures and policies
- codes of practice for environmental protection
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures manuals
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- licence conditions
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation
- workplace relations regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying the following:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o an understanding of the precautions to be undertaken to prevent pollution to the environment within workplace and job role
  o an understanding of the requirements within the workplace procedures and regulatory requirements for the handling and moving of pollutants
  o an understanding of the requirements for the disposal of waste and effluent in accordance with regulations and workplace procedures
  o identification of the pollution likely to affect the workplace and the effect on the job role

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  o minimising the effects of a number of different pollutants during work in a variety of situations
  o identifying sensitive sites
  o disposing of contaminants in accordance with relevant regulations, workplace procedures and guidelines
  o completing documentation in accordance with workplace procedures
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
**TLIV107C  Cut and join materials**

**Unit Descriptor**
This unit involves the skills and knowledge required to cut and join materials for pallet manufacture in accordance with workplace requirements including planning, undertaking and completing the cutting/joining process. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the cutting and joining of materials as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

**Competency Field**
V – Pallet Operations

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Plan the cutting/joining process**

1.1 The process and materials to be used are identified

1.2 Manufacturers instructions and workplace procedures for the cutting/joining task are read and followed in the planning process

1.3 Safety precautions for self, equipment and work areas appropriate for the tasks are identified

1.4 Work sequence is planned, noting appropriate curing/cooling times, efficient work sequence and quality specification requirements

1.5 Allowances for wastage and/or joining overlaps are checked in workplace documentation and manufacturers instructions

2 **Undertake the cutting/joining process**

2.1 Equipment and consumables are assembled

2.2 Equipment and site are checked for safety

2.3 Adjustments and settings are made to suit materials, manufacturers instructions and workplace procedures

2.4 Materials to be cut or joined are positioned and secured

2.5 Cutting/joining process is undertaken in accordance with selected method of operation

2.6 Finished materials are checked for conformity to quality/workplace standards
2.7 Faults/problems with materials or componentry are identified and action is undertaken in accordance with workplace procedures

3 Complete the cutting/joining process

3.1 Finished materials are directed to storage area or next production stage
3.2 Waste materials are directed for disposal or recovery
3.3 Equipment is maintained and stored in designated area
3.4 Workplace documentation and records are completed as required

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the cutting and joining of materials as part of pallet production including requirements of Australian Standards AS 2858 and AS 2082
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the cutting and joining of materials as part of pallet production
- Focus of operation of work systems, equipment, management and site operating systems for the cutting and joining of materials as part of pallet production
- Problems that may occur when cutting and joining materials as part of pallet production and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the cutting and joining of materials as part of pallet production and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when cutting and joining materials as part of pallet production
- Read and interpret instructions, procedures, information and labels relevant to the cutting and joining of materials as part of pallet production
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the cutting and joining of materials as part of pallet production
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when cutting and joining materials as part of pallet production
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when cutting and joining materials as part of pallet production in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify, select and efficiently and effectively use relevant materials and equipment when cutting and joining materials as part of pallet production
• Adapt to differences in materials and equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments by day or night
Customers may be: • internal or external
Workplaces may comprise: • large, medium or small worksites
Workplace environment may include: • movement of equipment, goods, products, materials and vehicular traffic
The cutting/joining process is conducted: • as part of manufacture/repair activities with the operator using discretion and judgement within established specifications
Timber may be: • hardwood or softwood
Cutting/joining equipment covers: • a range of docking and trimming saws to which boards are mechanically fed
Equipment may include: • single or multiple saw positions
Visual assessment may cover the requirements of Australian Standards AS 2858 or AS 2082 and specifically includes:
• timber types and species
• timber characteristics
• end condition of the timber
OH&S requirements include: • manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:
- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures
Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures

Applicable regulations and legislation may include:
- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
Operate hand held air/power equipment for production processes

Unit Descriptor
This unit involves the skills and knowledge required to operate hand held air/power equipment for pallet production processes in accordance with workplace requirements. It includes identifying equipment and power requirements, setting up equipment and completing pre-use checks, operating hand held air and/or power equipment, and storing equipment appropriately after use. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the operation of hand held air and power equipment as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

Competency Field
V – Pallet Operations

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Identify equipment and power requirements

1.1 Equipment for drilling, cutting and grinding is identified and matched to work applications

1.2 Power and air supplies are identified for voltage, amperage, air pressure, lubrication and water separation

1.3 Emergency shut-down procedures are identified and followed when necessary

1.4 Appropriate workplace procedures and personal protective equipment are identified and used

2 Set up equipment and complete pre-use checks

2.1 Equipment settings, accessories and consumables are checked for appropriate condition

2.2 Manufacturers or workplace instructions for equipment are read and used to inform work practices

2.3 Equipment is set up for the required production process

2.4 Equipment is checked through the full operating range required for the task
3 Operate hand held air/power equipment

3.1 Equipment is operated in accordance with manufacturers and/or workplace instructions
3.2 Appropriate consumables including cooling and lubricating fluids are used where required
3.3 Provision is made to deal with waste, off-cuts and other by-products
3.4 Production techniques appropriate to the task are followed to meet required outcome
3.5 Finished materials are checked for conformity to quality/workplace standards
3.6 Faults/problems with materials or equipment are identified and action is undertaken in accordance with workplace procedures

4 Store equipment appropriately

4.1 Finished materials are directed to storage area or next production stage
4.2 Equipment is cleaned prior to storage
4.3 Equipment which is damaged, unserviceable or requiring service is tagged and appropriate steps are taken to arrange repair
4.4 Storage areas are maintained appropriately
4.5 Workplace documentation and records are completed as required

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the operation of hand held air and power equipment as part of pallet manufacturing processes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the operation of hand held air and power equipment as part of pallet manufacturing processes
- Focus of operation of work systems, equipment, management and site operating systems for the operation of hand held air and power equipment as part of pallet manufacturing processes
- Problems that may occur when operating hand held air and power equipment as part of pallet manufacturing processes and appropriate action that can be taken to resolve the problems
- Production workflow during pallet production
- Types of hand held air and power equipment used in pallet manufacturing processes and the precautions and procedures that should be followed in their use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
• Communicate effectively with others when operating hand held air and power equipment as part of pallet manufacturing processes
• Read and interpret instructions, procedures and information relevant to the operation of hand held air and power equipment as part of pallet manufacturing processes
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the operation of hand held air and power equipment as part of pallet manufacturing processes
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when operating hand held air and power equipment as part of pallet manufacturing processes
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating hand held air and power equipment as part of pallet manufacturing processes in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Maintain air and power equipment
• Carry out visual inspection of board quality to Australian Standards AS 2858 and AS 2082
• Identify, select and efficiently and effectively use air and power equipment within pallet manufacturing processes
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: in a range of work environments by day or night
Customers may be: internal or external
Workplaces may: large, medium or small worksites
Workplace environment may include: movement of equipment, goods, products, materials and vehicular traffic
The docking process is conducted:

- as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Timber may be:

- hardwood or softwood

Air/power equipment may include:

- chisels
- nail guns
- saws
- grinders/sanders
- drills
- spray guns
- socket drivers
- compressors
- glue guns
- hot air guns
- planes

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

OH&S requirements include:

- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Communication in the work area may include:

- phone
- fax
- email/internet
- barcode readers
- oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIV307C  Apply surface coatings using a spray gun

Unit Descriptor
This unit involves the skills and knowledge required to use a spray gun to apply surface coatings in accordance with workplace requirements, including planning surface coating process, undertaking surface preparation, applying surface coating, and completing workplace operations in accordance with requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Application of the Unit
Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the application of surface coatings using a spray gun as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

Competency Field
V – Pallet Operations

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan surface coating process
1.1 Equipment, accessories and consumables are assembled and checked for applicability to the surface coating task(s)
1.2 Material safety data sheets and/or product application and safety information are read and used to inform work practices
1.3 Particular process techniques, time and safety requirements are noted and used to inform work planning
1.4 Personal protective equipment is used/worn as required.

2 Undertake surface preparation
2.1 Characteristics of uncoated/raw material and the required surface coating materials are identified and appropriate action is taken to rectify the problem
2.2 Workplace instructions on surface preparation of materials are followed
2.3 Surface preparation is checked for conformity with required workplace standards

3 Apply surface coating
3.1 Sequence of work is identified maximising potential of the applied finish for the production operation
3.2 Equipment and accessories are used within manufacturers and
workplace instructions

3.3 Trial applications of surface materials are made to check spray patterns, equipment operations, materials consistency and specified surface finish

3.4 Surface coating depth and coverage is checked for conformity with specifications

3.5 Surfaces are kept free of contamination

3.6 Faults/problems are identified and action is undertaken in accordance with workplace procedures

4 Complete workplace operations

4.1 Products are located to storage area or next production stage as required

4.2 Equipment is cleaned prior to storage

4.3 Equipment which is damaged, unserviceable or requiring service is tagged and appropriate steps are taken to arrange repair

4.4 Workplace documentation and records are completed as required

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the application of surface coatings using spray gun equipment
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the application of surface coatings using spray gun equipment as part of pallet production
- Focus of operation of work systems, equipment, management and site operating systems for the application of surface coatings using a spray gun as part of pallet production
- Effects of the fumes, heat and other radiations
- Characteristics of the materials in terms of toxicity, reactivity, flammability, required viscosity and re-coatability
- Methods for preventing contamination of surfaces during and after surface coating
- Application of relevant hydraulic, mechanical and pneumatic principles to the spray process
- Problems that may occur when applying surface coatings using a spray gun and appropriate action that can be taken to resolve the problems
- Features and hazards of spray gun equipment used during pallet production and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when applying surface coatings using a spray gun
• Read and interpret instructions, procedures, information and labels relevant to the application of surface coatings using a spray gun
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the application of surface coatings using a spray gun
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when applying surface coatings using a spray gun
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when applying surface coatings using a spray gun in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Maintain spray gun equipment to manufacturers specifications
• Identify, select and efficiently and effectively use relevant materials and equipment when applying surface coatings using a spray gun
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: ● in a range of work environments by day or night
Customers may be: ● internal or external
Workplaces may comprise: ● large, medium or small worksites
Workplace environment may include: ● movement of equipment, goods, products, materials and vehicular traffic
The surface coating process is conducted: ● as part of manufacture/repair activities with the operator using discretion and judgement within established specifications
Spray guns may be: ● air or electrically powered
Coatings may be: ● water or chemically soluble
Spray guns may be:

- hand held or automated

OH&S requirements include:

- manual handling, personal protective equipment, elimination/control of hazards, machine isolation and machine guarding

Hazards in the work area may include exposure to:

- chemicals and fumes
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- respirators
- protective clothing

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

<table>
<thead>
<tr>
<th>Information/documents may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• company procedures</td>
</tr>
<tr>
<td>• enterprise procedures</td>
</tr>
<tr>
<td>• organisational procedures</td>
</tr>
<tr>
<td>• established or standard procedures</td>
</tr>
</tbody>
</table>

Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIV407C Undertake pallet repairs**

**Unit Descriptor**
This unit involves the skills and knowledge required to undertake pallet repairs in accordance with workplace procedures including inspecting and assessing pallet condition, repairing non-conforming pallets, and completing operations in accordance with requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures when repairing pallets in the transport, warehousing, distribution and/or storage industries.

**Competency Field**
V – Pallet Operations

**ELEMENT PERFORMANCE CRITERIA**

Elements describe the essential outcomes of a unit of competency.

1. **Inspect and assess pallet condition**

1.1 Pallet inspection method(s) is determined in compliance with occupational health and safety requirements and workplace procedures

1.2 Appropriate equipment is selected and used to inspect pallet

1.3 Visual and manual check of pallet condition is carried out in accordance with workplace standard operating procedure

1.4 Level of pallet damage is identified and repair method is determined and recorded in accordance with workplace procedures

2. **Repair non-conforming pallets**

2.1 Lifting devices and equipment are selected and checked for safe working operation

2.2 Pallet is positioned and secured

2.3 Repair to decks and bearers is undertaken in accordance with selected repair method and occupational health and safety and workplace safe operating requirements

2.4 Pallet is inspected for conformity to workplace specifications

3. **Complete operations**

3.1 Pallet is relocated to holding area without damage to pallet, personnel or equipment

3.2 Lifting devices and equipment are checked and returned to storage area
3.3 Documentation is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the repair of pallets including requirements of Australian Standards AS 2858 and AS 2082
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the repair of pallets
- Focus of operation of work systems, equipment, management and site operating systems for the repair of pallets
- Problems that may occur when repairing pallets and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the repair of pallets and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when repairing pallets
- Read and interpret instructions, procedures, information and labels relevant to the repair of pallets
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the repair of pallets
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when repairing pallets
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when repairing pallets in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain tools and machinery required in pallet repair
• Carry out inspection of the serviceability and condition of pallets
• Identify, select and efficiently and effectively use relevant materials and equipment when repairing pallets
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments by day or night
Customers may be: • internal or external
Workplaces may comprise: • large, medium or small worksites
Workplace environment may include: • movement of equipment, goods, products, materials and vehicular traffic
The repair processes are conducted: • as part of manufacture/repair activities with the operator using discretion and judgement within established specifications
Pallets may be: • of timber, metal or plastic construction
Pallets may be determined: • as non-repairable depending on cost, level of damage, time etc.
Hazards in the work area may include exposure to: • chemicals
• dangerous or hazardous substances
• stationary and moving equipment, parts and materials
• noise, light, energy sources
• electrical equipment
• humidity, air temperature, radiant heat
• debris on floor
• faulty racking
• poorly stacked materials or finished pallets
• faulty equipment
OH&S requirements include: • manual landing, protective clothing, elimination/control of hazards, machine isolation and machine guarding
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- respirators

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:
- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLIV507C  Clean and inspect pallets**

**Unit Descriptor**
This unit involves the skills and knowledge required to clean and inspect pallets in accordance with workplace requirements including identifying workplace procedures, resources and job specifications for cleaning pallets; inspecting and cleaning pallets; and monitoring and maintaining cleanliness and tidiness of pallet cleaning and storage areas. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the cleaning and inspection of pallets as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

**Competency Field**
V – Pallet Operations

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Identify workplace procedures, resources and requirements for cleaning pallets**
1.1 Workplace operating procedures, including occupational health and safety requirements for pallet cleaning, are identified and read
1.2 Equipment (including appropriate engineering controls and personal protective equipment) and consumables are selected in accordance with work area requirements
1.3 Specific requirements for pallet inspection and cleaning are identified and used in the planning of work activities
1.4 Requirements for the organisation of pallet storage before and after cleaning are identified to meet workplace requirements

2 **Inspect and clean pallets**
2.1 Information on serviceability requirements of pallets for required purposes is accessed and read
2.2 Pallet design features are noted and pallet types are identified for particular purposes
2.3 Pallets are inspected prior to, and during, cleaning to ensure that condition is appropriate for required use
2.4 Damaged pallets are tagged for repair or recycling
2.5 Pallets are cleaned following workplace procedures
2.6 Pallets are sorted and stacked in appropriate storage areas
2.7 Work is carried out following workplace practices and safe work procedures

3 Monitor and maintain cleanliness and tidiness of pallet cleaning and storage areas

3.1 Initiative is used to continuously monitor the cleanliness, safety and tidiness of the pallet cleaning and storage area

3.2 Housekeeping issues are raised with designated personnel in accordance with workplace procedures

3.3 Cleaning equipment and supplies are maintained and stored

4 Complete assigned pallet cleaning and inspection duties

4.1 Assigned pallet cleaning and inspection duties are conducted in accordance with workplace requirements

4.2 Documentation concerning cleaning operations is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the cleaning and inspection of pallets
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the cleaning and inspection of pallets including test methods for pallet strength and integrity
- Focus of operation of work systems, equipment, management and site operating systems for the cleaning and inspection of pallets
- Problems that may occur when cleaning and inspecting pallets and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the cleaning and inspection of pallets and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when cleaning and inspecting pallets
- Read and interpret instructions, procedures, information and labels relevant to the cleaning and inspection of pallets
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the cleaning and inspection of pallets
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when cleaning and inspecting pallets
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when cleaning and inspecting pallets in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Identify, select and efficiently and effectively use relevant materials and equipment when cleaning and inspecting pallets
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Maintain cleaning tools and equipment
• Carry out inspection of pallets to workplace standards
• Identify, select and efficiently and effectively use relevant materials and equipment when cleaning and inspecting pallets
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in a range of work environments by day or night

Customers may be:

• internal or external

Workplaces may comprise:

• large, medium or small worksites

Workplace environment may include:

• movement of equipment, goods, products, materials and vehicular traffic

The docking process is conducted:

• as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Cleaning operations may be conducted:

• by hand or machine involving detergents or solvents

Inspection may be:

• by eye or using testing equipment
Workplace requirements for completing cleaning activities may include:

- containing used cleaning agents and waste water in an appropriate manner
- sorting and appropriately storing recyclable materials for collection
- identifying maintenance requirements of any damaged equipment
- tagging faulty equipment and notifying appropriate personnel of maintenance requirements of damaged or non-functioning equipment
- checking work areas to ensure they meet required workplace standards
- completing and maintaining schedules and records

OH&S requirements include:

- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
Communication in the work area may include:

- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
# TLIV607C

## Manufacture pallets using automated methods

### Unit Descriptor

This unit involves the skills and knowledge required to manufacture pallets using automated methods including planning the production of pallets, setting up pallet production equipment, operating the automated pallet manufacturing plant, and completing operations in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

### Employability Skills

This unit contains employability skills.

### Application of the Unit

Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures when manufacturing pallets using automated methods as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

### Competency Field

V – Pallet Operations

### ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

#### 1 Plan production of pallets

1.1 Job requirements are identified from order form, workplace instructions and/or job specifications
1.2 Appropriate safety and shut-down procedures are followed
1.3 Automated equipment is organised to produce the required pallets as per job specifications
1.4 Communication with supervisor and other workers is maintained to ensure efficient work flow

#### 2 Set up pallet production

2.1 Start-up checks are completed according to workplace and manufacturers guidelines
2.2 Appropriate workplace occupational health and safety and other regulatory procedures are followed
2.3 Bearers and boards are inspected for compliance with workplace quality standards

#### 3 Operate automated pallet manufacturing equipment

3.1 Bearers and boards are loaded into stack trays according to correct quantity/sequence
3.2 Feed systems are maintained and monitored for correct work flow
3.3 Machine componentry is monitored to ensure appropriate speed and operation
3.4 Faults/problems with materials or componentry are identified and appropriate action is undertaken in accordance with workplace procedures
3.5 Pallet quality is checked prior to removal from stacker

4 Complete operations
4.1 Machine shut-down is conducted according to workplace and manufacturers guidelines
4.2 Waste materials are directed for disposal or recovery
4.3 Production records are completed in accordance with workplace procedures
4.4 Maintenance program (where applicable) is completed and recorded

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the manufacture of pallets using automated methods
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the manufacture of pallets using automated methods
- Focus of operation of work systems, equipment, management and site operating systems for the manufacture of pallets using automated methods
- Problems that may occur when manufacturing pallets using automated methods and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the manufacture of pallets using automated methods and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when manufacturing pallets using automated methods
- Read and interpret instructions, procedures, information and labels relevant to the manufacture of pallets using automated methods
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the manufacture of pallets using automated methods
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when manufacturing pallets using automated methods
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when manufacturing pallets using automated methods in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Maintain automated pallet manufacturing machinery
• Carry out visual inspection of board quality to Australian Standards AS 2858 and AS 2082
• Identify, select and efficiently and effectively use relevant materials and equipment when manufacturing pallets using automated methods
• Adapt to differences in materials and equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Workplace environment may include: • movement of equipment, goods, products, materials and vehicular traffic

The automated production process is conducted: • as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Timber may be: • hardwood or softwood
Major components of pallet machine may include:

- control panel
- boards
- stackers
- hoppers
- conveyors
- nail bowls
- nail chucks
- cams
- control switches

Visual assessment may cover the requirements of Australian Standards AS 2858 or AS 2082 and specifically includes:

- timber types and species
- timber characteristics
- end condition of the timber

OH&S requirements include:

- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Resources for assessment include:

- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:

- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLIV707C**

**Manufacture pallets using manual methods**

**Unit Descriptor**
This unit involves the skills and knowledge required to manufacture pallets using manual methods including planning the production of pallets, setting up manual pallet production processes, undertaking manual production of pallets, and completing operations in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the manufacture of pallets using manual methods as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

**Competency Field**
V – Pallet Operations

### PERFORMANCE CRITERIA

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Plan production of pallets**
   1.1 Pallet design is identified from order in accordance with workplace procedures
   1.2 Components are identified from drawings or instructions
   1.3 Number of components and quantity of timber necessary to complete order are calculated
   1.4 Arrangements are made for supply and cutting of boards and components
   1.5 Pallet assembly jig is selected to suit pallet design
   1.6 Brand requirements are identified from drawings or instructions and suitable stencils are selected
   1.7 Communication with supervisor and other workers is maintained to ensure efficient work flow

2. **Set up pallet production**
   2.1 Appropriate workplace occupational health and safety and other regulatory procedures are followed
   2.2 Personal protective equipment is selected and worn
   2.3 Equipment and components are brought to assembly area
   2.4 Components are inspected for compliance with workplace quality standards
2.5 Paint and painting equipment is prepared and tested

3 Undertake manual production of pallets

3.1 Components are checked for fit to assembly jig and a trial pallet is constructed to specifications in accordance with workplace procedures
3.2 Trial pallet is checked for conformity in accordance with workplace quality standards
3.3 Required number of pallets is constructed in accordance with workplace procedures
3.4 Faults/problems with equipment or components are identified and appropriate action is undertaken
3.5 Pallets are painted and stencilled to order in accordance with work specifications

4 Complete operations

4.1 Pallets are inspected and located to holding area without damage to pallet, personnel or equipment
4.2 Off-cuts, rejected boards and waste materials are directed for waste or recovery in accordance with workplace policy and procedures
4.3 Equipment is maintained and stored in designated areas
4.4 Documentation is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the manufacture of pallets using manual methods
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the manufacture of pallets using manual methods
- Focus of operation of work systems, equipment, management and site operating systems for the manufacture of pallets using manual methods
- Problems that may occur when manufacturing pallets using manual methods and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Tools and equipment used during the manufacture of pallets using manual methods and the precautions and procedures that should be followed in their use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when manufacturing pallets using manual methods
• Read and interpret instructions, procedures, information and labels relevant to the manufacture of pallets using manual methods
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when manufacturing pallets using manual methods
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when manufacturing pallets using manual methods in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Maintain tools and equipment used in the manufacture of pallets using manual methods
• Carry out visual inspection of board quality to Australian Standards AS 2858 and AS 2082
• Identify, select and efficiently and effectively use relevant materials and equipment when manufacturing pallets using manual methods
• Adapt to differences in materials and equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments by day or night and may cover the full range of standard wooden designs manufactured in the workplace concerned

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Workplace environment may include: • movement of equipment, goods, products, materials and vehicular traffic

The manual pallet production process is conducted: • as part of manufacture/repair activities with the operator using discretion and judgement within established specifications
Equipment used may include: • assembly jig
• nail gun
• compressor or compressed air supply
• paint spray gun

OH&S requirements include: • manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Hazards in the work area may include exposure to: • chemicals
• dangerous or hazardous substances
• stationary and moving equipment, parts and materials
• noise, light, energy sources
• electrical equipment
• humidity, air temperature, radiant heat
• debris on floor
• faulty racking
• poorly stacked materials or finished pallets
• faulty tools and equipment

Personal protective equipment may include: • gloves
• safety headwear and footwear
• safety glasses
• respirators
• protective clothing

Consultative processes may involve: • workplace personnel
• supervisors and managers
• customers/clients
• suppliers
• contractors
• union representatives
• industrial relations and OH&S specialists
• other professional or technical staff

Communication in the work area may include: • phone
• fax
• email
• internet
• barcode readers
• oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIV807C Dock boards using computer programmed machinery

Unit Descriptor
This unit involves the skills and knowledge required to dock boards using computer programmed machinery in accordance with workplace procedures and specifications including preparing computer-programmed machinery to dock boards, operating the programmed machinery to dock boards to specifications, monitoring and rectifying the processing operations where necessary, and completing operations in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the docking of boards using computer programmed machinery as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

Competency Field
V – Pallet Operations

ELEMENT
Elements describe the essential outcomes of a unit of competency.

1 Prepare computer programmed machinery to dock boards

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1.1 Appropriate workplace occupational health and safety and other regulatory procedures are followed

1.2 Job requirements regarding sizes and lengths are obtained from standards

1.3 Start-up checks are completed according to workplace standard procedures

1.4 General cross-section, length and condition of boards on conveyor are visually assessed in accordance with workplace quality standards

1.5 Program to cut requirements is selected from a range of available programs

1.6 Program is loaded and machine cycle checked

1.7 Need for new programs is identified and reported to supervisor

1.8 Communication with supervisor and other workers is maintained to ensure efficient work flow
2 Operate programmed machinery to dock boards

2.1 Trial boards are cut to check process and output
2.2 Machinery is operated to dock timber to specification
2.3 Reject boards are identified and directed for waste or recovery
2.4 Faults/problems with materials or componentry are identified and appropriate action is undertaken in accordance with workplace procedures

3 Monitor and rectify the processing operations where necessary

3.1 Dimensions and finish of cut boards are regularly checked in accordance with workplace standard procedures
3.2 Sawing process is adjusted to maintain accurate sizing
3.3 Feed systems are regularly monitored for material flow problems
3.4 Minor feed problems are cleared in accordance with equipment manufacturers instructions
3.5 Characteristics of blunt and damaged saws are recognised and appropriate action is taken to rectify the identified problem in accordance with workplace procedures
3.6 Saw blades are removed and replaced in accordance with workplace procedures
3.7 Work area is regularly cleaned in accordance with workplace procedures

4 Complete operations

4.1 Machine shut-down is conducted according to workplace and manufacturers guidelines
4.2 Boards are relocated to holding area without damage to boards, personnel or equipment
4.3 Waste materials are directed for disposal or recovery
4.4 Production records are completed in accordance with workplace procedures
4.5 Maintenance program (where applicable) is completed and recorded in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the docking of boards using computer programmed machinery including requirements of Australian Standards AS 2858 and AS 2082
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the docking of boards using computer programmed machinery
- Focus of operation of work systems, equipment, management and site operating systems for the docking of boards using computer programmed machinery
- Problems that may occur when docking boards using computer programmed machinery and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the docking of boards using computer programmed machinery and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

**Required skills:**

- Communicate effectively with others when docking boards using computer programmed machinery
- Read and interpret instructions, procedures, information and signs relevant to the docking of boards using computer programmed machinery
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the docking of boards using computer programmed machinery
- Work collaboratively with others when docking boards using computer programmed machinery
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when docking boards using computer programmed machinery in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: in a range of work environments by day or night

Customers may be: internal or external

Workplaces may comprise: large, medium or small worksites
Workplace environment may include:

- movement of equipment, goods, products, materials and vehicular traffic

The docking process is conducted:

- as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Timber may be:

- hardwood or softwood

Docking equipment covers:

- computer controlled docking and trimming saws to which boards are mechanically fed

Equipment may include:

- single or multiple saw positions

Visual assessment may cover the requirements of Australian Standards AS 2858 or AS 2082 and specifically includes:

- timber types and species
- timber characteristics
- end condition of the timber

OH&S requirements include:

- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment
Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIV907C Dock boards on mechanical feeds

Unit Descriptor
This unit involves the skills and knowledge required to dock boards using mechanical feed systems in accordance with workplace procedures including preparing for docking with mechanical feed, cutting boards on mechanical feed, monitoring and rectifying processing operations, and completing operations in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the docking of boards using mechanical feed processes as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

Competency Field
V – Pallet Operations

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for docking with mechanical feed
1.1 Appropriate workplace occupational health and safety and other regulatory procedures are followed
1.2 Job requirements regarding sizes and lengths acceptable for further processing are identified from order forms/workplace standards
1.3 Start-up checks are completed according to workplace procedures
1.4 General cross-section, length and condition of boards on conveyor is visually assessed in accordance with workplace quality standards
1.5 Typical docking/cutting patterns are identified
1.6 Communication with supervisor and other workers is maintained to ensure efficient work flow

2 Cut boards on mechanical feed
2.1 Individual boards are assessed and the optimal docking/cutting pattern is identified
2.2 Boards are positioned and saw(s) operated to produce selected cutting pattern
2.3 Swollen ends of boards are removed
2.4 Cuts are made to required lengths
2.5 Cuts are made to required grade
2.6 Faults/problems with materials or componentry are identified and appropriate action is undertaken in accordance with workplace procedures
2.7 Reject boards are identified and marked or removed

3 Monitor and correct processing
3.1 Feed systems are regularly monitored for material flow problems
3.2 Dimensions and finish of cut boards are regularly checked in accordance with workplace standards
3.3 Characteristics of blunt and damaged saws are recognised
3.4 Saw blades are removed and replaced in accordance with workplace standard procedures
3.5 Area around saw is regularly cleaned in accordance with workplace standard procedure

4 Complete operations
4.1 Machine shut-down is conducted according to workplace and manufacturers guidelines
4.2 Boards are relocated to holding area without damage to boards, personnel or equipment
4.3 Waste materials are directed for disposal or recovery
4.4 Production records are completed in accordance with workplace procedures
4.5 Maintenance program (where applicable) is completed and recorded

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the docking of boards using mechanical feed processes including requirements of Australian Standards AS 2858 and AS 2082
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the docking of boards using mechanical feed processes
- Focus of operation of work systems, equipment, management and site operating systems for the docking of boards using mechanical feed processes
- Problems that may occur when docking boards using mechanical feed processes and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the docking of boards using mechanical feed processes and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles
Required skills:

- Communicate effectively with others when docking boards using mechanical feed processes
- Read and interpret instructions, procedures, information and labels relevant to the docking of boards using mechanical feed processes
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the docking of boards using mechanical feed processes
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when docking boards using mechanical feed processes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when docking boards using mechanical feed processes in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain machinery including saw blade quality and sharpness
- Carry out visual inspection of board quality to Australian Standards AS 2858 and AS 2082
- Identify, select and efficiently and effectively use relevant materials and equipment when docking boards using mechanical feed processes
- Adapt to differences in materials and equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments by day or night
Customers may be: • internal or external
Workplaces may comprise: • large, medium or small worksites
Workplace environment may include: • movement of equipment, goods, products, materials and vehicular traffic
The docking process is conducted:

- as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Timber may be:

- hardwood or softwood

Docking equipment covers:

- manually controlled docking and trimming saws to which boards are mechanically fed

Equipment may include:

- single or multiple saw positions

Visual assessment may cover the requirements of Australian Standards AS 2858 or AS 2082 and specifically includes:

- timber types and species
- timber characteristics
- end condition of the timber

OH&S requirements include:

- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- respirators
- protective clothing

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
Communication in the work area may include:

- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIW107B  Operate under track protection rules

Unit Descriptor
This unit involves the skills and knowledge required to operate under local track protection rules in accordance with safeworking and regulatory requirements and workplace procedures, including accessing and interpreting information about track protection requirements, carrying out assigned protection and/or work activities, and responding appropriately to safety incidents and abnormal situations within the limits of personal responsibility. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of the relevant track protection rules and requirements to assigned track work activities across a variety of operational contexts within the Australian rail system.

Competency Field
W – Carrying Out Operations on Equipment and Systems

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Access and interpret information about track protection requirements
1.1 Information about track protection requirements relevant to work activities is sought and obtained/received in accordance with workplace procedures and the requirements of the relevant safeworking system
1.2 Information about relevant track protection requirements is interpreted and applied to work activities in accordance with workplace instructions

2  Carry out assigned protection and/or work activities
2.1 Assigned protection and/or work activities are carried out together with others in accordance with workplace instructions and safeworking procedures
2.2 Protection system and equipment is constantly reviewed in accordance with workplace procedures to ensure ongoing protection
2.3 Liaison is maintained with relevant authority/personnel to ensure maximum protection is maintained
2.4 Documentation and records required under safeworking rules
are completed in accordance with workplace procedures

3 **Respond appropriately to abnormal situations**

3.1 Abnormal situations, safety incidents and emergencies are identified in accordance with workplace procedures and safeworking regulations

3.2 Identified abnormal situations, safety incidents and emergencies are promptly reported to relevant personnel and action is taken within limits of responsibility in accordance with workplace procedures

3.3 Reports and records of identified abnormal situations, safety incidents and emergencies together with related action taken are completed in accordance with workplace procedures and safeworking rules

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- A general understanding of systems and track protection rules and requirements
- An overview of railway safeworking system requirements
- An understanding of railway safeworking system types
- An awareness of railway safeworking system limitations
- Communication protocols as they relate to the functions of the occupation concerned
- Safeworking rules and protocols as they relate to the work activities concerned
- Rail terminology as defined in the applicable state/territory safeworking system

**Required skills:**

- Communicate effectively with others when operating under track protection rules
- Read and interpret relevant rules, regulations and instructions when operating under track protection rules
- Interpret and follow operational instructions and prioritise work when operating under track protection rules
- Complete documentation applicable when operating under track protection rules
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating under track protection rules
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating under track protection rules in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Select and use required personal protective equipment
• Select and use relevant equipment and tools

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may include: • track work carried out in the state/territory concerned and covered by the safeworking system applicable in that state or territory. Work carried out on the Defined Interstate Rail Network is covered by separate competency units and relates to the Code of Practice for the Defined Interstate Rail Network

Operations may be conducted: • by day or night
• in both normal and emergency situations
• under all possible weather conditions

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve: • exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Terminology and related meanings will be: • as defined within the relevant state/territory safeworking system

Track protection rules will be: • as defined within relevant the state/territory safeworking system

Where applicable, work site safety plans will be: • as defined within the relevant state/territory safeworking system
Equipment may include:

- flags
- detonators
- stands
- stop signs
- speed boards
- whistles
- lamps

Communications equipment may include but is not limited to:

- hand-held or portable equipment
- fixed equipment
- portable equipment belt and harness
- specialised testing facilities

Radio, hand, light and flag commands will be:

- as defined within the relevant state/territory safeworking system

Safety clothing and equipment may include but is not limited to:

- high visibility clothing
- sunscreen and sunglasses
- insect repellent
- safety glasses, headwear, mask, footwear and gloves
- hearing protection
- safety devices
- lighting including strobe lighting
- hand tools

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Depending on the workplace context concerned, documentation/records may include but are not limited to:

- the relevant rules and regulations of the applicable state/territory safeworking system
- instructions of relevant rail authorities concerning rail safety and operations
- workplace procedures, policies and work instructions
- work orders
- technical instructions
- worksite safety plan (where applicable)
- Emergency Response Plan (ER Plan) and emergency procedure manuals
- train running information (TRI)
- local instructions
- safeworking forms
- manufacturers or workplace equipment instructions and operation manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS4292
- relevant state/territory OH&S regulations
- state, federal or territory environmental protection legislation
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- relevant national and state/territory dangerous goods legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIW1209A  Grind rails

Unit Descriptor
This unit involves the skills and knowledge required to grind rail and welds in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, grinding weld and/or weld repair, grinding rail to repair surface defects, and completing all required documentation. This competency relates to the grinding of new welds and weld repairs, wheel burns, rail batter and overflow in plain track. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the grinding of rail and welds as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
W – Carrying Out Operations on Equipment and Systems

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Determine job requirements
1.1 New welds and weld repairs are located
1.2 Defects relating to wheel burns, rail battering and rail overflow are identified
1.3 Appropriate equipment is selected
1.4 Appropriate repair method and/or profile is selected to ensure completed work will meet specifications
1.5 Site is cleared of obstructions and combustible material

2 Grind weld and/or weld repair
2.1 Rail is ground to profile using approved equipment in accordance with workplace procedures
2.2 Grinding equipment is operated safely in accordance with OH&S and environmental requirements
2.3 Rail gauge face is ground to match adjacent rail in curves, in accordance with standards and procedures
2.4 Rail profile and vertical and horizontal alignment are measured to ensure compliance with acceptance standards
2.5 Rail surface condition is assessed for compliance with
acceptance standards

3 Grind rail to repair surface defects

3.1 Rail is ground using approved equipment in accordance with workplace procedures
3.2 Grinding equipment is operated safely in accordance with OH&S and environmental requirements
3.3 Finished surface is checked to ensure compliance with specification

4 Complete documentation

4.1 Documentation on work undertaken is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the grinding of rail and welds
- Problems that may occur during the grinding of rail and welds, and action that can be taken to report or resolve the problems
- Hazards that may exist during the grinding of rail and welds, and ways of controlling the risks involved
- Acceptance standards for rail profile and surface condition
- Grinding methods and results
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record keeping requirements

Required skills:
- Communicate effectively with others when grinding rail and welds
- Read and interpret technical data, drawings, instructions and manuals relevant to the grinding of rail and welds
- Interpret and follow operational instructions and prioritise work when grinding rail and welds
- Complete documentation related to the grinding of rail and welds
- Operate communication equipment to required protocol
- Work collaboratively with others when grinding rail and welds
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when grinding rail and welds in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when grinding rail and welds
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment
- Select and use hand tools, power tools and equipment
- Apply grinding techniques to achieve rail profile and surface condition to meet requirements of standards and procedures

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**
- by day or night
- in all weather conditions

**Work may be conducted in:**
- restricted spaces
- exposed conditions
- controlled or open environments

**Work may involve exposure to:**
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

**Type and rate of grinding may vary according to:**
- location
- rail mass or type
- purpose of grinding

**Equipment may include:**
- hand held grinders
- rail profile grinders
- ride on rail profile grinders
- hand tools including gauges, track jacks, spiking hammers and bars

**Measuring equipment may include:**
- straight edge
- electronic straight edge
- profile gauge

**Materials may include:**
- grinding wheels

**Rail types may vary according to:**
- traffic task (head hardened)
Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Communication equipment systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- fire retardant clothing and overgear (aprons, spats etc.)
- face shields
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- track inspection reports
- rail inspections and reports
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying job requirements
  - operating the grinding equipment safely
  - grinding welds and weld repairs using appropriate grinding wheel speed and rate of
TLI07 Transport and Logistics Training Package (Version 3)

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
**TLI07 Transport and Logistics Training Package (Version 3)**

**TLIW1309A  Grind switches and crossings**

**Unit Descriptor**
This unit involves the skills and knowledge required to grind switches and crossings in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, grinding weld and/or weld repair, grinding switches and crossings to repair surface defects, and completing all required documentation. This competency relates to the grinding of weld repairs to switches and crossings, and repairing of surface profile of switches and crossings in service. Licensing or certification requirements are not applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the grinding of switches and crossings as part of workplace activities across a variety of operational contexts within the Australian rail system.

**Competency Field**
W – Carrying Out Operations on Equipment and Systems

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

3 Grind switch or crossing to repair surface defects

3.1 Switch or crossing is ground using approved equipment in accordance with workplace procedures
3.2 Grinding equipment is operated safely in accordance with OH&S and environmental requirements
3.3 Finished surface is checked to ensure compliance with acceptance standards

4 Complete documentation

4.1 Documentation on work undertaken is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the grinding of switches and crossings
- Problems that may occur during the grinding of switches and crossings, and action that can be taken to report or resolve the problems
- Hazards that may exist when grinding switches and crossings, and ways of controlling the risks involved
- Acceptance standards for switch and crossing profile and surface condition
- Grinding methods and results
- Relevant communication systems and procedures
- Authorisation/Approval processes and procedures
- Relevant recording and documentation procedures

Required skills:
- Communicate effectively with others when grinding switches and crossings
- Read and interpret technical data, drawings, instructions and manuals relevant to the grinding of switches and crossings
- Interpret and follow operational instructions and prioritise work when grinding switches and crossings
- Complete documentation related to the grinding of switches and crossings
- Operate communication equipment to required protocol
- Work collaboratively with others when grinding switches and crossings
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when grinding switches and crossings in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when grinding switches and crossings
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment
- Select and use hand tools, power tools and equipment
- Apply grinding techniques to achieve switch and crossing profile and surface condition to meet required standards and procedures

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**
- by day or night
- in all weather conditions

**Work may be conducted in:**
- restricted spaces
- exposed conditions
- controlled or open environments

**Work may involve exposure to:**
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

**Type and rate of grinding may vary according to:**
- location
- rail mass or type
- switch type
- crossing type
- crossing material
- purpose of grinding

**Equipment may include:**
- hand held grinders
- rail profile grinders
- hand tools including gauges, track jacks, spiking hammers and bars
- fume extraction equipment for grinding manganese crossings

**Measuring equipment may include:**
- straight edge
- electronic straight edge
- profile gauge
Materials may include:
- grinding wheels

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communications equipment may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on work context and crossing material, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- fire retardant clothing and overgear (aprons, spats etc)
- face shields
- portable radios/mobile phones
- hand lamps
- flags
- protective equipment for grinding manganese crossings
- fire fighting equipment
- safety devices
Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- rail inspections and reports
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - determining job requirements
  - safely operating grinding equipment
  - grinding weld repairs using appropriate grinding wheel speed and rate of metal removal
o grinding switches and crossings to repair surface defects
o completing documentation correctly

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIW1409A Weld rail using electric welding process

Unit Descriptor
This unit involves the skills and knowledge required to weld rails, crossings or switches using an electric welding process in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes preparing rails, crossings or switches for welding; setting up welding equipment; performing the welding operation; checking weld conformance; and completing required documentation. These processes are used to repair rail surface defects and restore rail profile to plain rail, crossings and switches. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the welding of rail using an electric welding process as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
W – Carrying Out Operations on Equipment and Systems

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare rails, crossings or switches for welding
1.1 Weld repair area is identified and assessed in accordance with standards and procedures
1.2 Welding equipment and consumables are prepared and checked for serviceability
1.3 Weld repair area is prepared for welding in accordance with workplace standards and procedures
1.4 Track components are assembled/aligned to specification where required

2 Assemble and set up welding equipment
2.1 Welding machine settings are adjusted to meet welding process requirements
2.2 Accessories and consumables are selected for use
2.3 Welding equipment is assembled and set up for welding

3 Perform welding operation

3.1 Weld metal is applied to repair area to meet specification in accordance with standards and procedures
3.2 Welded area is cleaned in preparation for grinding

4 Check weld conformance

4.1 Finish ground weld area is visually inspected for surface finish and defects
4.2 Finish ground weld area is checked for conformance to rail/crossing/switch profile acceptance standards

5 Complete post-operative checks and documentation

5.1 Welding equipment is checked for serviceability
5.2 Defective equipment is replaced
5.3 Documentation on work undertaken is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the welding of rail using an electric welding process
- Problems that may occur during the welding of rail using an electric welding process, and action that can be taken to report or resolve the problems
- Hazards that may exist during the welding of rail using an electric welding process, and ways of controlling the risks involved
- Fundamentals of track and components
- Track standards for rail, crossing and switch condition and surface profile
- Acceptance standards for weld repairs on rail
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record keeping requirements

Required skills:
- Communicate effectively with others when welding rail using an electric welding process
- Read and interpret technical data, drawings, instructions and manuals relevant to the welding of rail using an electric welding process
- Interpret and follow operational instructions and prioritise work when welding rail using an electric welding process
- Complete documentation related to the welding of rail using an electric welding process
- Operate communication equipment to required protocol
- Work collaboratively with others when welding rail using an electric welding process
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when welding rail using an electric welding process in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when welding rail using an electric welding process
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment
- Select and use hand tools, power tools and equipment

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

Types of weld repairs may vary according to:
- welding process location
- rail mass or type
- crossing and switch type
- rail, switch and crossing material

Welding process may include:
- flux core arc welding
- manual metal arc welding

Welding equipment may include:
- electric welders
- generators
- wirefeed welding unit
- electrode holder
- robotic welder
Equipment may include:

- mechanical handling/lifting equipment
- hand tools including impact wrenches, tie tampers, gauges, track jacks, spiking hammers and bars
- wire brushes
- rail thermometers and/or 'thermomelt' crayons
- cutting and boring equipment
- fastening equipment
- fume extraction equipment for use with welding manganese

Materials may include:

- flux core wire
- welding electrodes

Liaison may include:

- internal or external personnel from other work areas (e.g. train controllers, electricians)

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communications equipment may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on the work context, safety and personal protective equipment may include:

- high visibility clothing
- long pants and shirts
- hearing protection
- long gloves
- spats
- sunscreen
- sunglasses
- welding helmet
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
- special PPE when welding manganese
Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- rail inspections and reports
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - preparing items for welding according to workplace requirements
  - assembling and setting up welding equipment and preparing consumables
  - performing welding operation on rails,
crossings or switches
o ensuring weld conformance to workplace requirements
o completing documentation in accordance with workplace requirements

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through activities in an appropriately simulated environment, and/or
  o in an appropriate range of situations in the workplace
TLIW1509A  Weld rail using aluminothermic welding process

Unit Descriptor
This unit involves the skills and knowledge required to weld rail using the aluminothermic welding process in accordance with safeworking and regulatory requirements and workplace procedures. It includes preparing and planning the welding method, preparing the rail for aluminothermic welding, carrying out the welding process in accordance with workplace requirements, checking weld conformance, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to weld rail using the aluminothermic welding technique as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
W – Carrying Out Operations on Equipment and Systems

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Prepare and plan welding method

1.1 Work requirements are determined to identify scope of work and resources required
1.2 Welding equipment and consumables are prepared and checked for serviceability
1.3 Site is cleared of obstructions and combustible material to minimise risk of accidents and fire
1.4 Fire fighting and other safety equipment is organised, checked and located in accordance with required regulations
1.5 Personnel are briefed about safety precautions specific to aluminothermic welding as required to minimise risk of injury
2 Prepare rail for welding

2.1 Location of weld is identified and assessed in accordance with standards and procedures
2.2 Track is prepared for welding in accordance with workplace standards and procedures
2.3 Rail is prepared for welding in accordance with workplace standards and procedures

3 Carry out welding process

3.1 Moulds are fitted and luted to standard to prevent leakage of the molten reaction
3.2 Rails are pre-heated to standard to prevent heat loss
3.3 Rails are welded using aluminothermic method in accordance with approved procedures
3.4 Welding equipment is removed according to approved procedures
3.5 Excess material is removed from weld in accordance with workplace procedures
3.6 Rail profile is restored to standard using rail profile grinder in accordance with workplace procedures
3.7 Arrangements are made for track to be restored

4 Check weld conformance

4.1 Finish ground weld area is visually inspected for surface finish and defects
4.2 Finish ground weld area is checked for conformance to rail profile and geometry acceptance standards

5 Complete documentation

5.1 Required documentation and/or records are completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the welding of rail using the aluminothermic technique
- Problems that may occur during the welding of rail using the aluminothermic technique, and action that can be taken to report or resolve the problems
- Hazards that may exist during the welding of rail using the aluminothermic technique, and ways of controlling the risks involved
- Contents of relevant workplace technical manuals and instructions
- Characteristics of plant and equipment, hardware and components used in welding activities
- Impact on work activities of regulatory requirements
- Impact of other work activities on welding integrity
- Workplace documentation requirements
Site inspection techniques

**Required skills:**
- Communicate effectively with others when welding rail using the aluminothermic process
- Read and interpret technical data, drawings, instructions and manuals relevant to the welding of rail using the aluminothermic process
- Interpret and follow operational instructions and prioritise work when welding rail using the aluminothermic process
- Complete documentation related to the welding of rail using the aluminothermic process
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when welding rail using the aluminothermic process
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when welding rail using the aluminothermic process in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Carry out required welding operations
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Check compliance between work and job specifications
- Implement fire control procedures
- Select and use required personal protective equipment
- Identify, select and use hand and portable power tools

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**
- by day or night
- in all weather conditions

**Work may be conducted in:**
- restricted spaces
- exposed conditions
- controlled or open environments
Work may involve:
- hazards to eyes
- heat hazards
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Resources may include:
- rail tensor
- hand tools (hot axe, hammer)
- wedges
- straight edge
- rail shears
- rail friction saw
- rail profile grinder, angle grinder
- welding equipment
- electric generator
- gas heating/cutting equipment

Welding processes may include:
- Thermit Australia welding processes (i.e. SkV-Elite, SKVF, SMWF, SKVL)
- Railtech welding processes (i.e. PLK CJ, WG68 X CJ)
- other approved welding processes

Weld types may include:
- standard gap (short preheat)
- standard gap (long preheat)
- wide gap
- junction

Consumables may include:
- welding materials as required
- rail jewellery (plates, dogspikes, etc.)
- gases (oxy, acetylene, propane)
- closure rails

Safety hazards may include:
- fire risk
- poor weather
- eye damage
- burns
- rail tensor failure (broken pins etc.)
- welding rail in electrified territory
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Liaison may include:

- internal or external personnel from other work areas (e.g. train controllers, other track gangs)

Communications systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on the work context, safety and personal protective equipment may include:

- high visibility clothing
- fire retardant overalls or long sleeved shirts and long pants
- hearing protection
- gauntlet type gloves
- sunscreen
- sunglasses
- welding goggles
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Information may be provided:

- electronically
- in writing, via forms/documents
- orally, via face-to-face communications
Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- welding records
- track inspection reports
- timekeeping records
- incident reporting data
- maintenance specifications
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- electrified territory regulations
- relevant fire regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
- Planning and preparing for welding method
- Preparing rail for welding
- Using appropriate type or types of welding processes
- Checking weld for conformance
- Completing documentation correctly
- Successfully performing a minimum of 10 welds

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - A range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - Relevant and appropriate materials and equipment, and
  - Applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - Through appropriate activities in a simulated environment, and/or
  - In an appropriate range of situations in the workplace
TLIW1609A  Weld rail using flashbutt welding process

Unit Descriptor
This unit involves the skills and knowledge required to weld rail using the flashbutt welding process in accordance with safeworking and regulatory requirements and workplace procedures. It includes performing pre-operational and post-operational equipment checks, preparing rail for welding, carrying out the flashbutt welding in accordance with workplace requirements, checking weld conformance, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to weld rail using the flashbutt welding process as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
W – Carrying Out Operations on Equipment and Systems

ELEMENT
Elements describe the essential outcomes of a unit of competency.

1 Perform pre-operational equipment checks

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1.1 Detailed pre-operational equipment checks are conducted as per manufacturers specifications and/or local maintenance schedules

1.2 Deficiencies with equipment are identified and rectified in accordance with workplace procedures

1.3 Relevant persons are notified of problems and documentation is completed

2 Prepare rail for welding

2.1 Weld location is checked to confirm suitability for welding in accordance with workplace standards

2.2 Track preparation for welding is arranged (if required) in accordance with workplace procedures and standards

2.3 Rail ends are prepared for welding in accordance with
workplace procedures and standards

3 Carry out flashbutt welding

3.1 Flashbutt welding equipment is prepared for use
3.2 Flashbutt welding unit is clamped to rail ensuring accurate alignment
3.3 Equipment is operated in accordance with machine operation instructions and workplace procedures to achieve appropriate quality standard
3.4 Warning systems are monitored and responded to appropriately during operation to maintain correct functionality of equipment
3.5 Track restoration is arranged (where required) in accordance with workplace procedures and standards
3.6 Weld is profile-ground to ensure smooth running surface in accordance with workplace procedures and standards

4 Check weld conformance

4.1 Finished ground weld area is visually inspected for surface finish and defects
4.2 Finished ground weld area is checked for conformance to rail profile and geometry acceptance standards

5 Perform post-operational equipment checks

5.1 Post-operational equipment checks are conducted in accordance with manufacturers specifications or local maintenance schedules to identify defects and maintenance requirements
5.2 Deficiencies with equipment are identified and rectified in an appropriate manner to maintain correct functionality of equipment
5.3 Relevant persons are notified of problems and/or documentation is completed in accordance with instructions and the relevant codes of practice

6 Complete documentation

6.1 Required documentation and/or recording is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the operation of flashbutt welding equipment
- Workplace procedures for the welding of rail using the flashbutt welding process
- Problems that may occur during use of the flashbutt welding process and equipment, and action that can be taken to report or resolve the problems
• Hazards that may exist during welding of rail using the flashbutt welding process, and ways of controlling the risks involved
• Basic technical knowledge relevant to flashbutt welding
• Rail welding standards
• Emergency procedures
• Characteristics of relevant plant and equipment, transport, structures, hardware and components used in work activities
• Materials identification, handling and storage
• Hazardous situations and related personal protection measures
• Relevant recording and documentation procedures

Required skills:
• Communicate effectively with others when welding rail using the flashbutt welding process
• Read and interpret instructions, procedures, route information and signs relevant to welding of rail using the flashbutt welding process and equipment
• Interpret and follow operational instructions and follow scheduled work process when welding rail using the flashbutt welding process
• Complete documentation related to work activities
• Operate communication equipment to required protocol
• Work collaboratively with others when welding rail using the flashbutt welding process
• Promptly report and/or rectify any identified problems, faults or malfunctions when welding rail using the flashbutt welding process in accordance with regulatory requirements and workplace procedures
• Plan the scheduled work including predicting consequences and identifying improvements
• Implement contingency plans for unexpected events when using the flashbutt welding process and equipment
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Carry out required welding operations
• Select and use relevant hand and portable power tools
• Handle rail safely
• Check compliance between work and job specifications
• Implement required fire control procedures
• Select and use required personal protective equipment
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Operate flashbutt welding equipment (for which certificated and licensed)
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all possible weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Flashbutt welding equipment may include:
- rail mounted flashbutt welders
- stationary flashbutt welders used in field

Equipment may include:
- rail tensor
- welding records
- rail shears
- timekeeping records
- rail profile grinder, angle grinder
- incident reporting data
- electric generator
- track inspection reports
- gas heating/cutting equipment
- welding equipment
- rail friction saw
- hand tools

Safety hazards may include:
- fire risk
- poor weather
- rail tensor failure (broken pins etc.)
- flash damage to eyes
- burns

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Communications equipment may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on the work context, safety and personal protective equipment may include:

- high visibility clothing
- fire retardant overalls or long sleeved shirt and long pants
- hearing protection
- gauntlet type gloves
- sunscreen
- welding goggles
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements
- relevant fire regulations

Liaison may include:

- internal or external personnel from other work areas (e.g. train controllers)

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - ensuring equipment is operating correctly
  - preparing equipment for operation
  - operating equipment correctly
  - checking finished welds for conformance
  - completing documentation/records correctly
  - successfully performing a minimum of 25 welds

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies
and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLI207B Coordinate and manage track protection

Unit Descriptor
This unit involves the skills and knowledge required to coordinate and manage track protection in accordance with safeworking and regulatory requirements and workplace procedures, including planning and establishing track protection, monitoring and withdrawing track protection, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed with some supervisory or leadership responsibility, generally within a team environment.

It involves the application of the relevant safeworking rules and regulations requirements to the coordination and management of track protection as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
W – Carrying Out Operations on Equipment and Systems

ELEMENT PERFORMANCE CRITERIA

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan track protection
1.1 Job requirements are established to determine track protection needs
1.2 Relevant personnel are contacted and informed as required
1.3 Documentation is completed following workplace procedures to comply with relevant safeworking system

2 Establish track protection
2.1 Equipment is checked for availability and capability to perform job
2.2 Track protection system is established in accordance with relevant safeworking system

3 Monitor track protection
3.1 Protection system and equipment is constantly reviewed for compliance with standards/regulations to ensure ongoing protection
3.2 Relevant authority/personnel are liaised with as required to ensure maximum protection is maintained
4 Withdraw track protection

4.1 Relevant authority/personnel are informed of status of track protection to facilitate protection withdrawal
4.2 Relevant documentation is completed and track protection withdrawn
4.3 Equipment and personnel are removed in a safe manner
4.4 Equipment is secured and stored in an appropriate manner

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
• Relevant OH&S and environmental procedures and regulations
• A general understanding of railway safeworking systems and track protection rules and requirements
• An overview of railway safeworking system requirements
• An understanding of railway safeworking system types
• An awareness of railway safeworking system limitations
• Communication protocols as they relate to the functions of the occupation concerned
• Safeworking rules and protocols as they relate to the work activities concerned
• Rail terminology as defined in the applicable state/territory safeworking system
• Action to be taken in the event of safety incidents, identified unsafe situations and emergencies within the limits of responsibility of the occupation concerned

Required skills:
• Communicate effectively with others when coordinating and managing track protection
• Read and interpret relevant rules, regulations and work instructions relevant to coordinating and managing track protection
• Interpret and follow operational instructions and prioritise work when coordinating and managing track protection
• Complete documentation related to coordinating and managing track protection
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when coordinating and managing track protection
• Supervise and provide leadership to others
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when coordinating and managing track protection in accordance with regulatory requirements and workplace procedures
• Plan and organise work activities including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Coordinate and ensure compliance between work and track protection rules and relevant safeworking regulations
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may include:
- track work carried out in the state/territory concerned and covered by the safeworking system applicable in that state or territory. Work carried out on the Defined Interstate Rail Network is covered by separate competency units and relates to the Code of Practice for the Defined Interstate Rail Network

Operations may be conducted:
- by day or night
- in both normal and emergency situations
- under all possible weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Track protection rules will be:
- as defined within relevant state/territory safeworking system

Equipment may include:
- flags
- detonators
- stands
- stop signs
- speed boards
- whistles
- lamps
Locations may include:

- track on or near curves
- grades
- cuttings
- tunnels
- low visibility areas
- electrified areas

Scope of work will cover:

- the type, size and duration of work

Communications equipment may include but is not limited to:

- hand-held or portable equipment
- fixed equipment
- portable equipment belt and harness
- specialised testing facilities

Radio, hand, light and flag commands will be:

- as defined within the relevant state/territory safeworking system

Safety clothing and equipment may include but is not limited to:

- high visibility clothing
- sunscreen and sunglasses
- insect repellent
- safety glasses, headwear, mask, footwear and gloves
- hearing protection
- safety devices
- lighting including strobe lighting
- hand tools

Relevant personnel may include:

- team members
- supervisors/managers
- train controllers
- safeworking personnel
- hand signallers

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Depending on the workplace context concerned, documentation/records may include but are not limited to:

- the relevant rules and regulations of the applicable state/territory safeworking system
- instructions of relevant rail authorities concerning rail safety and operations
- workplace procedures, policies and work instructions
- work orders
- technical instructions
- worksite safety plan (where applicable)
- Emergency Response Plan (ER Plan) and emergency procedure manuals
- train running information (TRI)
- train notices
- local instructions
- safeworking forms
- manufacturers or workplace equipment instructions and operation manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS4292
- relevant state/territory OH&S regulations
- state, federal or territory environmental protection legislation
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- relevant national and state/territory dangerous goods legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
o relevant legislation and workplace procedures
o other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLIW507B**  
**Perform direct burial of cables**

**Unit Descriptor**

This unit involves the skills and knowledge required to perform the direct burial of cables in accordance with safeworking and regulatory requirements and workplace procedures including preparing the site, excavating the trench, preparing for directional boring, preparing the cable for installation, hauling and installing the cable, carrying out required tests, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of operational principles and procedures to perform the direct burial of cables as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

**Competency Field**

W – Carrying Out Operations on Equipment and Systems

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare site** | 1.1 Proposed cable route is planned and documented after identifying existing below-ground services in preparation for trench excavation  
1.2 Vegetation and other surface obstructions are removed and cable route is pegged out  
1.3 Resources, including tools, equipment and specialised cable-laying equipment are identified ready for use |
| **2 Excavate trench** | 2.1 Stable excavation is carried out using excavating equipment in accordance with planned cable route, and trench is shored up where necessary to prevent unwanted subsidence  
2.2 Excavation site is made safe through the erection of barriers and appropriate warning signs and bunting |
3 Prepare for directional boring

3.1 Site survey data is reviewed to determine suitable directional boring locations

3.2 Sites such as railway lines, drains, creeks and obstructions are assessed to provide detailed information for directional boring activities

3.3 Signs, barriers and bunting are erected to ensure site safety prior to directional boring activities

4 Prepare cable for installation

4.1 Cable to be installed is checked against specifications to ensure correct cable is installed

4.2 Operational readiness of all tools and lifting equipment is verified to ensure efficient installation of cable

4.3 Cable ends are prepared for hauling to ensure entire length of cable is efficiently installed without any cable damage

5 Haul cable

5.1 Cable-hauling equipment is checked and placed in correct hauling position, ensuring that winches, rollers and cable stockings are suitable for cable-hauling as per relevant specifications

5.2 Cable is hauled and placed into trench, ensuring that cable-hauling equipment operates within specifications and cable is installed without damage

6 Install cable

6.1 Earth conductors are fitted as per specifications and protective cable cover is fitted prior to compacting the backfill in the trench

6.2 Erosion prevention procedures are applied and trench and joint markers are installed

6.3 Signal and telecommunications are separated to ensure compliance with AUSTEL regulations

7 Test cables and document results

7.1 Cable ends are prepared for testing and testing procedures are applied using specified test equipment to confirm the cable circuit

7.2 Test results and as-laid cable plans are documented and distributed to appropriate personnel for recording or further action

7.3 Site works are completed and condition of site is reinstated to organisations requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the direct burial of cables
- Problems that may occur during the direct burial of cables and action that can be taken to report or resolve the problems
- Hazards that may exist during the direct burial of cables and ways of controlling the risks involved
- Basic electrical theory relevant to cable burial and installation
- Clearances and locations from other services
- Support methods
- Cabling hauling techniques
- Types of cables
- Relevant Australian Standards including AS 4292, 3000 and relevant Austel standards TS 008, TS 009, and associated regulations
- Relevant building standards and regulations
- Common cable installation practices
- Characteristics of equipment, materials and tools, and procedures and precautions for their use
- Trench shoring and excavation practices
- Hazardous situations and related personal protection measures
- Relevant recording and documentation procedures

**Required skills:**
- Communicate effectively with others when carrying out the direct burial of cables
- Read and interpret technical data, drawings, plans and instructions relevant to the direct burial of cables
- Interpret and follow operational instructions and prioritise work when carrying out the direct burial of cables
- Complete documentation related to the direct burial of cables
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out the direct burial of cables
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when carrying out the direct burial of cables in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Carry out relevant cable tests
- Check compliance between work and job specifications
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
  - by day or night
  - in all possible weather conditions

Work may be conducted in:  
  - restricted spaces
  - exposed conditions
  - controlled or open environments

Work may involve:  
  - exposure to chemicals, and dangerous or hazardous substances
  - movements of equipment, goods and vehicles

Type of cable may include:  
  - underground rated and approved copper
  - optical fibre
  - co-axial

Cable installation equipment may include:  
  - spools
  - drums
  - feeders
  - slippers
  - hauling eyes
  - jinker
  - forklift
  - crane
  - cable cover strips or protection straps as per relevant specifications
Site safety hazards may include:
- dangerous gases
- water
- soil
- guards
- barricades
- lanterns
- removal and placement of enclosure covers
- handling of jelly-filled cables

Safety equipment may include:
- witches hats
- flashing lights
- trench guards
- warning signs and tapes
- gas detector

Preparation may include:
- trenching by:
  - hand
  - plant
  - excavator
  - backhoe
- boring, including:
  - directional compaction
  - wet boring
  - sleeve boring

Hauling feeders may include:
- rod
- rope
- air pressure
- attachments such as stockings (mesh), splicing and hauling eye

Earth conductors may include:
- stainless steel or copper as per relevant specifications

Hauling methods may include:
- hand winch (hand and mechanical) using safety devices such as guards, slippers and two-way radios

Methods of sealing ends may include:
- shrink-end caps
- self-amalgamating tape

Installation requirements and constraints may include:
- site conditions
- condition of enclosures and pipe
- availability of cable size and type

Communications equipment may include:
- two-way radios, and/or
- telephones
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the work context, safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- gumboots
- portable radios

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- AUSTEL Technical Standards TS 008, TS 009
- AUSTEL Customer Premises Cabling Manual
- appropriate licences or certificates of competency (winch and/or crane, forklift)
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292, AS 2865 and AS 3000
- relevant Austel standards and regulations
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the
workplace
TLIW607B Operate computerised mail and parcels sorting equipment

Unit Descriptor
This unit involves the skills and knowledge to operate computerised mail and parcels sorting equipment in accordance with workplace requirements including setting up mail and parcels sorting equipment for operation, operating the equipment in accordance with workplace procedures, and completing the sorting process for mail and parcels as required. The process includes containerising processed mail and parcels for transfer to the next processing or distribution point. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is normally performed under general supervision, usually in a team or out-station environment.

Work involves the application of workplace procedures and regulatory requirements to the operation of computerised mail and parcels sorting equipment as part of work activities in the postal and allied industries.

Competency Field
W – Carrying Out Operations on Equipment and Systems

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Set up mail and parcels sorting equipment for operation

1.1 Individual and work team priorities and responsibilities are identified and confirmed

1.2 All OH&S and environment protection procedures and requirements for the relevant mail and parcels sorting equipment are identified, accessed and applied

1.3 The availability of mail and parcels to be sorted is identified and confirmed

1.4 The appropriate equipment configuration and sort plan is identified, accessed and applied

1.5 Mail and parcels to be sorted are transferred to sorting point

1.6 Labels for identifying the destination of mail are created and affixed to trays

2 Operate mail and parcels sorting

2.1 Internal operating procedures and equipment operating procedures are applied
2.2 Mail and parcels are sorted accurately and correctly in compliance with priority for sorting
2.3 Mail and parcels are handled safely to minimise risk of injury to people and damage to mail and parcels and processing equipment
2.4 Mail and parcels that are incorrectly classified and non-conforming items are identified, separated and re-processed
2.5 Mail and parcels that have been sorted to their correct destination are placed in appropriate mail container for distribution

3.1 Mail and parcels stackers/containers/bags are cleared down, sealed and labelled in accordance with workplace procedures
3.2 Mail and parcels are transferred to next sorting point using appropriate shifting equipment, and labels are scanned as required
3.3 Information required to complete records of mail and parcels processed is provided and recorded
3.4 Excess equipment is removed and work area is prepared for next activity/shift

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the operation of computerised mail and parcels sorting equipment
- Focus of operation of work systems, equipment, management and site operating systems for the operation of computerised mail and parcels sorting equipment
- Problems that may occur when operating computerised mail and parcels sorting equipment and appropriate action that can be taken to resolve/avoid the problems
- Requirements of automated mail processing systems, operations and relevant equipment
- Hazards that may occur during the operation of computerised mail and parcels sorting equipment and ways of controlling the risks involved
- Site layout
- Relevant personal protective equipment and procedures for its use

Required skills:
- Communicate effectively with others when operating computerised mail and parcels sorting equipment
- Read and interpret instructions, procedures, information and labels relevant to the operation of computerised mail and parcels sorting equipment
• Interpret and follow operational instructions and prioritise work when operating computerised mail and parcels sorting equipment
• Interpret and apply relevant agreements, codes of practice or other legislative requirements
• Complete documentation related to the operation of computerised mail and parcels sorting equipment
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when operating computerised mail and parcels sorting equipment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur operating computerised mail and parcels sorting equipment in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Select and use required personal protective equipment
• Identify, select and use relevant equipment, processes and procedures when operating computerised mail and parcels sorting equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Workplaces may comprise:
• large, medium or small worksites

Operations may include:
• shiftwork

Customers may be:
• internal or external

Hazards may include:
• vehicular traffic and pedestrians
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature
• lighting conditions
• machinery/equipment moving parts
• noise
Weighing devices may be:
• mechanical
• automated
• weighbridge

Work priorities may be communicated through:
• briefings
• noticeboards
• announcements

Equipment may include:
• mail trays, tubs and bags
• multi-line OCR
• AEG OCR
• bar code sorter
• flat sorting machine
• large parcels sorting machine
• small parcels sorting machine
• large letters sorting machine
• flat mail OCR
• scanners
• tipping belt
• pallet jack/maverick
• powered lifters
• kingfishers
• scales
• Unit Load Devices (ULDs) and Wheeled Unit Load Devices (WULDs)
• Vertical Sorting Frame (VSF) and Vertical Sorting Divisions (VSDs)
• ULD tipper
• conveyor belts
• strapping machine

Personal protective equipment may include:
• gloves
• safety headwear and footwear
• safety glasses
• two-way radios
• protective clothing
• high visibility clothing
Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace policies, operating procedures and practices
- Management Operating System (MOS)
- Management Information System (MIS)
- sorting system information including:
  - postcode book, national sort plan and state sort plan
  - postal guide
  - international postcode directory
  - label charts
- mail identification numbers, codes and labels
- manifests, consignment notes, bar codes, mail and container identification
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and or/client instructions
- HAZCHEM chart/MSDS
- safety observation feedback program
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances,
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
o through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
TLI707B | Code and coordinate video-coding operations

Unit Descriptor
This unit involves the skills and knowledge required to code and coordinate video-coding operations in accordance with workplace requirements including preparing to video-code mail, video-coding the mail, resolving any problems that may arise with the video-coding process, and completing the video-coding process as required. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is normally performed under general supervision, usually in a team or outstation environment. It involves the application of workplace procedures and regulatory requirements to video-coding and the coordination of video-coding operations as part of work activities in the postal and allied industries.

Competency Field
W – Carrying Out Operations on Equipment and Systems

ELEMENT | PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to video-code mail
1.1 Individual work priorities and responsibilities are identified and confirmed
1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied
1.3 Work station equipment is located, accessed and adjusted to meet ergonomic requirements
1.4 Access to video-coding system is obtained and 'online' status is achieved

2 Video-code mail
2.1 Access and ensure mail images are being received from MLOCR
2.2 Liaise with MLOCR operators to ensure the correct mail mix is being provided by MLOCR
2.3 Using keyboard, process or direct the processing of mail images from MLOCR using data provided in specific coding modes
2.4 Performance is monitored and issues or requirements are addressed
3 **Resolve problems with video-coding process**

3.1 Problems with MLOCR inputs and/or software are identified, assessed and resolved

3.2 Advice is provided to appropriate personnel regarding MLOCR malfunctions

4 **Complete video-coding process**

4.1 Access to the video-coding system is terminated and log-off procedures completed

4.2 Extended term shut-down procedures are applied

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the conduct of video-coding and the coordination of video-coding operations
- Focus of operation of work systems, equipment, management and site operating systems for video-coding and the coordination of video-coding operations
- Problems that may occur during video-coding operations and appropriate action that can be taken to resolve/avoid the problems
- Requirements of automated mail processing systems, operations and relevant equipment
- Hazards that may occur during video-coding operations and ways of controlling the risks involved
- Site layout
- Relevant personal protective equipment and procedures for its use

**Required skills:**

- Communicate effectively with others when conducting video-coding and coordinating video-coding operations
- Read and interpret instructions, procedures, information and labels relevant to video-coding operations
- Interpret and apply relevant agreements, codes of practice or other legislative requirements
- Interpret and follow operational instructions and prioritise work when conducting video-coding and coordinating video-coding operations
- Complete documentation related to the conduct of video-coding and the coordination of video-coding operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting video-coding and coordinating video-coding operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when conducting video-coding and coordinating video-coding operations in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Select and use required personal protective equipment
• Identify, select and use relevant equipment, processes and procedures for video-coding operations

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  
• in a range of work environments
• by day or night

Workplaces may comprise:  
• large, medium or small worksites

Operations may include:  
• shiftwork

Customers may be:  
• internal or external

Hazards may include:  
• vehicular traffic and pedestrians
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature
• lighting conditions
• machinery/equipment moving parts
• noise

Weighing devices may be:  
• mechanical
• automated
• weighbridge

Work priorities may be communicated through:  
• briefings
• noticeboards
• announcements
Equipment may include:

- supervisor's console
- video-coding desk
- Operator Support Devices (OSDs)
- computer hardware
- keyboard/mouse

Personal protective equipment may include:

- gloves
- safety footwear
- high visibility clothing

Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace polices, operating procedures and practices
- Management Operating System (MOS)
- Management Information System (MIS)
- performance assessment and analysis information
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and or/client instructions
- HAZCHEM chart/MSDS
- safety observation feedback program
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at
the registered training organisation, and/or

- in an appropriate range of situations in the workplace
UnitDescriptor
This unit involves the skills and knowledge required to carry out culler facer canceller (CFC) operations in accordance with workplace requirements including preparations to use the CFC machine and completing all CFC operations to attain and maintain optimum performance of the culling, facing and cancelling processes. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

EmployabilitySkills
This unit contains employability skills.

ApplicationoftheUnit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is normally performed under general supervision, usually in a team or outstation environment. It involves the application of workplace procedures and regulatory requirements to the conduct of culler facer canceller (CFC) operations as part of work activities in the postal and allied industries.

CompetencyField
W – Carrying Out Operations on Equipment and Systems

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCECRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to use CFC machine
1.1 Individual and work team priorities and responsibilities are identified and confirmed
1.2 All OH&S and environment protection procedures and requirements for the workplace, including housekeeping, are identified, accessed and applied
1.3 Mail to be processed is transferred to processing point and culled as necessary
1.4 Mail is handled and machinery/equipment operated safely to minimise risk of injury to people and damage to mail or machinery

2 Complete CFC operations
2.1 Culled mail is loaded into CFC according to workplace procedures
2.2 Reject mail from CFC process is processed manually by sorting or hand stamping
2.3 Cancelled mail is transferred to next process point
2.4 Information required to complete records of mail processed is provided and recorded at times specified in workplace procedures
2.5 Machine is checked and loose letters are removed at conclusion of process
2.6 Excess equipment is removed and work area is prepared for next activity/shift

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the conduct of culler facer canceller (CFC) operations
- Focus of operation of work systems, equipment, management and site operating systems for the conduct of culler facer canceller (CFC) operations
- Problems that may occur when carrying out culler facer canceller (CFC) operations and appropriate action that can be taken to resolve/avoid the problems
- Requirements of automated mail processing systems, operations and relevant equipment
- Hazards that may occur when carrying out culler facer canceller (CFC) operations and ways of controlling the risks involved
- Site layout
- Relevant personal protective equipment and procedures for its use

Required skills:
- Communicate effectively with others when conducting culler facer canceller (CFC) operations
- Read and interpret instructions, procedures, information and labels relevant to the conduct of culler facer canceller (CFC) operations
- Interpret and apply relevant agreements, codes of practice or other legislative requirements
- Interpret and follow operational instructions and prioritise work when conducting culler facer canceller (CFC) operations
- Complete documentation related to the conduct of culler facer canceller (CFC) operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting culler facer canceller (CFC) operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when conducting culler facer canceller (CFC) operations in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Select and use required personal protective equipment
• Identify, select and use relevant equipment, processes and procedures when carrying out culler facer canceller (CFC) operations

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Workplaces may comprise: • large, medium or small worksites

Operations may include: • shiftwork

Customers may be: • internal or external

Hazards may include: • vehicular traffic and pedestrians
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature
• lighting conditions
• machinery/equipment moving parts
• noise

Weighing devices may be: • mechanical
• automated
• weighbridge

Work priorities may be communicated through: • briefings
• noticeboards
• announcements
Equipment may include:

- CFC / Letter Preparation Lines (LPLs)
- BT lifters
- chairs
- kingfishers
- bags
- bag frames
- bag hoist
- bins
- tub/tray holder
- trolleys
- plastic and cardboard trays
- face up area frame
- knife
- gloves
- rakes
- needle stick holder (biological hazard container)
- hand stamps and table
- reject baskets
- out of course (OOC) stickers
- labels (TMS)
- Unit Load Devices (ULDs) and Wheeled Unit Load Devices (WULDs)
- ULD tippers

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace policies, operating procedures and practices
- Management Operating System (MOS)
- Management Information System (MIS)
- CFC process information including:
  - machine specifications
  - machine specifications
  - machine operating manuals
  - size gauges
  - label charts
- mail identification numbers, codes and labels
- mail and container identification
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and or/client instructions
- HAZCHEM chart/MSDS
- safety observation feedback program
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances,
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIX1107B**  
**Install overhead wiring structure**

**Unit Descriptor**
This unit involves the skills and knowledge required to install overhead wiring structures in accordance with safeworking and regulatory requirements and workplace procedures including planning and preparing for the installation, installing the required components to specification, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install overhead wiring structure as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

**Competency Field**
X – Construction

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Plan installation**

1.1 Work requirements are determined to identify scope of work and resources required

1.2 Type of overhead wiring structure required for job is identified and organised

2 **Prepare for installation**

2.1 Footings are prepared and excavated in compliance with standard, following workplace procedures

2.2 Formwork is installed in compliance with standard, following workplace procedures

2.3 Concrete reinforcing is installed in compliance with standard, following workplace procedures

2.4 Concrete is mixed and placed in compliance with standard, following workplace procedures

2.5 Hold down plates/bolts are placed into concrete to correct dimensions to enable fitting of overhead wiring structure
3 Install components

3.1 Components are assembled onto bridge section as required in preparation for installation
3.2 Masts and other components are positioned and installed as required, following accepted workplace procedures
3.3 Fastening systems are installed in compliance with standard to ensure the integrity of the overhead wiring structure

4 Complete documentation

4.1 Documentation is completed in line with company requirements and workplace practice

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the installation of overhead wiring structures
- Problems that may occur during the installation of overhead wiring structures and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation of overhead wiring structures and ways of controlling the risks involved
- Relevant earthmoving equipment and methods
- Characteristics and relevant information on overhead wiring structures
- Information in relevant workplace technical manuals and instructions
- Characteristics of plant and equipment, materials, transport, structures, hardware and components used in work activities
- Rail operations and train movement
- Hazardous situations and related personal protection measures
- Emergency procedures manuals
- Local authority procedures
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when installing overhead wiring structures
- Read and interpret technical data, drawings, instructions and manuals relevant to the installation of overhead wiring structures
- Interpret and follow operational instructions and prioritise work when installing overhead wiring structures
- Complete documentation related to the installation of overhead wiring structures
- Operate electronic communication equipment to required protocol
• Work collaboratively with others when installing overhead wiring structures
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing overhead wiring structures in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Apply required surveying and measuring techniques
• Conduct compaction testing
• Use levelling equipment
• Check compliance between work and job specifications
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Select and use required personal protective equipment
• Select and use relevant equipment and tools

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all possible weather conditions

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve:
• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Equipment may include:
• graders, front end loaders, back hoes, cranes
• manual tools
• small power tools
• angler borer and reinforcement cage and base bolts

Communications equipment may include:
• two-way radios, and/or
• telephones
Depending on work context, safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworkeing system requirements
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIX1607B Erect and mount structures and housings for signalling equipment

Unit Descriptor
This unit involves the skills and knowledge required to erect and mount structures and housings for signalling equipment in accordance with safeworking and regulatory requirements and workplace procedures including installing the foundations, assembling the components, and installing and mounting the structures and housings in accordance with specifications. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed with under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to general site maintenance carried out as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
X – Construction

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Install foundations
1.1 The worksite is inspected and appropriate arrangements made for safe access for heavy plant and equipment
1.2 Foundations are poured/laid in the correct location, size and quality requirements as per the work orders and job specifications
1.3 Required authorisation is confirmed to ensure safe train operations may continue

2 Assemble components
2.1 Components are correctly identified, prepared and laid out for assembly as per work orders/assembly specifications
2.2 Components are pre-assembled in the correct sequence and checked to ensure safe and efficient installation can commence

3 Install and mount structures and housings
3.1 Structures are positioned on foundations and checked for compliance to job specifications in preparation for securing
3.2 Structures are secured and checked for compliance with safety
requirements and job specifications

3.3 Housings and other equipment/components are correctly positioned, installed and secured to comply with work orders and job specification requirements

3.4 Housings and other equipment/components are secured to ensure correct orientation to track and to prevent unauthorised access

3.5 Structures and housings are positioned to ensure they are clear of all other structures, obstructions and interference, including minimum structure gauge

3.6 All equipment is locked and secured to maintain site safety and security

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the erection and mounting of structures and housings for signalling equipment
- Problems that may occur during the erection and mounting of structures and housings for signalling equipment and action that can be taken to report or resolve the problems
- Hazards that may exist during the erection and mounting of structures and housings for signalling equipment and ways of controlling the risks involved
- Information in workplace technical manuals and instructions
- Characteristics of plant and equipment, transport, structures, hardware and components used in work activities
- Impact on work activities of regulatory requirements
- Workplace documentation and records system management related to the work concerned
- Material safety data sheets
- Chemicals, paints and lubricants
- Rail operations and train movement
- Materials procurement procedures
- Track layout
- Principles of signalling
- Hazardous materials and situations and related personal protection measures
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when erecting and mounting structures and housings for signalling equipment
• Read and interpret technical data, instructions and manuals relevant to the erection and mounting of structures and housings for signalling equipment
• Interpret and follow operational instructions and prioritise work when erecting and mounting structures and housings for signalling equipment
• Complete documentation related to the erection and mounting of structures and housings for signalling equipment
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when erecting and mounting structures and housings for signalling equipment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when erecting and mounting structures and housings for signalling equipment in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Measure and lay out plans
• Assemble and pre-assemble pre-made components
• Check compliance between work and job specifications
• Use and dispose of a range of chemicals, paints and lubricants
• Position, secure and check structures, housings and components
• Work at heights and in confined spaces
• Select and use required personal protective equipment
• Select and use relevant equipment and tools

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all possible weather conditions

Site preparation may include:
• site clearance
• positioning
• levelling
• sub-foundation and ground preparation
• drainage and concrete form work (prefabricated or prepared on site using steel or timber)
Foundations may be:
- poured concrete (pre-mixed or mixed on site) or pre-cast concrete slabs
- flooring
- sub-stands
- blocks

Structures may include:
- signal posts
- level crossing protection
- gantries
- ground frames/bases
- A frames
- cranks
- prefabricated structures, but do not include major structures covered by the Building Code

Housings:
- may include prefabricated structures, cupboards and location cases
- may be mounted on the ground, on structures, inside control cases or on external surfaces. Housings covered by the building code are not included

Preparation may include:
- ensuring compliance with drawings/specifications, functionality, minor adjustments
- locating/securing and painting or other protective measures

Job specifications may be defined in:
- relevant technical manuals

Installation and assembly may include the application of:
- protective coatings, paints or lubricants

Gauge structure is:
- as required by each organisation for clearance

Communications equipment may include:
- two-way radios, and/or
- telephones
Depending on work context, safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIX1809A Implement ballast unloading

Unit Descriptor
This unit involves the skills and knowledge required to implement ballast unloading in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining the job requirements, carrying out the unloading activity in accordance with work orders, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under limited supervision, generally within a team environment. It involves the application of routine operational principles and procedures to implement ballast unloading as part of workplace activities across a variety of operational context within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
X – Construction

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine job requirements

1.1 Work requirements are determined for new ballast work and/or repair of existing ballast

1.2 Obstacles in work area are identified and removal or protection are organised as necessary to ensure smooth workflow following workplace procedures

1.3 Resources are organised to meet the scope of the job and work methods selected

1.4 Ballast quantities are determined

2 Undertake ballast unloading

2.1 Appropriate site communications are established and agreed to ensure safe and efficient working conditions

2.2 Ballast unloading operation is implemented to ensure appropriate flow rates and extent

2.3 Ballast is distribution by manual and/or mechanical methods to allow safe operation of trains
2.4 Ballast is removed from sensitive infrastructure to ensure safe operation of trains and safety of public

3 Complete documentation

3.1 Documentation is completed in line with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the implementation of ballast unloading activities
- Problems that may occur when implementing track ballast activities, and action that can be taken to report or resolve the problems
- Hazards that may exist when implementing track ballast activities, and ways of controlling the risks involved
- Functions of ballast
- Required standard of materials and methods involved in implementing ballast unloading activities
- Ballast flow rates
- Ballast hopper operation
- Contents of workplace technical manuals relating to ballast unloading and profile
- Relevant recording and documentation procedures

Required skills:
- Agree on communication methods and communicate effectively with others including train drivers and equipment operators when implementing ballast unloading activities
- Read and interpret technical plans, specifications, instructions and manuals relevant to implementing ballast unloading activities
- Interpret and follow operational instructions and prioritise work when implementing ballast unloading activities
- Complete documentation related to implementing ballast unloading activities
- Operate communication equipment to required protocol
- Work collaboratively with others when implementing ballast unloading activities
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when implementing ballast unloading activities in accordance with regulatory requirements and workplace procedures
- Plan own and team work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Select and use required personal protective equipment
• Select and use relevant equipment and tools

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all weather conditions

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve:
• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Equipment may include:
• front end loaders
• ballast hoppers
• road trucks
• hand tools and small plant
• ballast forks
• other mechanical means

Materials may include:
• gravel ballast
• crushed rock ballast
• metal fines/road base

Obstructions may include:
• underbridges
• turnouts
• signalling equipment
• train detection equipment
• level crossings
• lubrication equipment
Methods may include:

- placing ballast with:
  - ballast hoppers
  - off-track plant
  - ballast regulators
  - ballast cleaning equipment
- distributing ballast with:
  - ballast ploughs
  - ballast cleaning equipment
  - off-track plant
  - ballast regulators
  - manual methods

Communications equipment may include:

- two-way radios
- telephones/mobile phones

Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- dust mask
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/radio headsets or mobile phone
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - determining job requirements and ensuring unloading operation is carried out correctly
  - ensuring ballast is distributed so as to meet requirements for safe operation
  - completing documentation according to workplace requirements

Context of and specific
- Performance is demonstrated consistently over a period
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIX1909A  Implement track maintenance and construction

Unit Descriptor
This unit involves the skills and knowledge required to implement track maintenance and construction in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes planning work, implementing maintenance activities, dealing with maintenance and construction problems, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the implementation of track maintenance and construction as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
X – Construction

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan work
1.1 Scope of work is confirmed including identification of any deficiencies, and preparatory or ancillary work required
1.2 Operational constraints are identified
1.3 Information requirements are identified and accessed
1.4 Method of work is selected and general operating sequence is determined
1.5 Resources required for the work are arranged as required

2 Implement maintenance activities
2.1 Competent personnel are allocated tasks in accordance with the work sequence
2.2 Tasks are assessed as being in accordance with the pre-determined sequence and appropriate for the work
2.3 Work procedures are monitored and evaluated as being appropriate and in accordance with standards and procedures
2.4 Human and other resources are assessed as being adequate for the work
3 Deal with maintenance and construction problems

3.1 Causes and effects of system faults and failures within the worksite are diagnosed
3.2 Impact of work on track system integrity is assessed
3.3 Appropriate action is taken to ensure track system integrity
3.4 Scope of work is modified to include related tasks/interfaces
3.5 Related faults/failures beyond the authorised scope of work are reported

4 Complete documentation

4.1 Documentation on work undertaken is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Fundamentals of all rail infrastructure
- Track infrastructure and the interaction of all interfaces
- Track defects
- The range of track maintenance and/or construction techniques and work processes
- The range of competencies required to carry out track maintenance and/or construction
- Relevant engineering standards, specifications and codes of practice
- Problems that may occur during track maintenance and/or construction, and action that can be taken to report or resolve the problems
- Hazards that may exist when undertaking track maintenance and construction, and ways of controlling the risks involved
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record keeping requirements

Required skills:

- Communicate effectively with others when implementing track maintenance and construction
- Read and interpret technical data, drawings, instructions and manuals relevant to the maintenance and construction of track
- Interpret and follow operational instructions and prioritise work
- Select appropriate equipment
- Select appropriate work techniques
- Monitor, sequence and implement work
- Monitor work activities in terms of planned schedule, appropriateness and in conformance with standards and procedures
- Complete documentation
• Operate communication equipment to required protocol
• Work collaboratively with others when implementing track maintenance and construction
• Diagnose causes and effects of system faults and failures resulting from the work activities
• Assess impact of work on track system integrity
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when implementing track maintenance and construction in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when implementing track maintenance and construction
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

• by day or night
• in all weather conditions

Work may be conducted in:

• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve:

• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Track maintenance and construction activities may include:

• removing track components
• installing track components
• correcting track geometry
• adjusting track components
• repairing track components
Track components may include:

- rail, rail joints, welds
- points and crossings
- sleepers, sleeper plates and sleeper fastenings
- bearers, turnout plates and fastenings
- lubricators
- signs
- ballast
- track formation

Work methods may vary according to:

- location (geography and geometry)
- rail type and length
- sleeper and fastening type
- ballast type and condition
- climatic conditions
- track availability

Extent of activity may vary according to:

- complexity of task
- track availability
- scope of work including length of track being worked on, type of maintenance and construction activities being undertaken, and types of track components

Track availability may include working:

- during breaks in traffic
- on limited track possession
- during extended track possession
- on non-operational track or track under construction

Equipment may include:

- mechanical handling/lifting equipment
- track machines
- hand tools including impact wrenches, grinders, tension wrenches, friction rail saws, rail borer, tie tamper, gauges, track jacks, spiking hammers and bars
- rail tensors
- cutting and boring equipment
- fastening equipment
- on-track equipment including sleeper spacers
- rail heaters
- welding equipment

Communications systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signal
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- track inspections and reports
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - planning work
  - supervising maintenance activities
  - dealing with maintenance and construction problems
  - completing documentation

- Assessment must also include exercises which demonstrate competent performance in implementing a combination of at least three of the following activities:
  - installing and maintaining rail joints
  - installing and maintaining guard and check rails
  - maintaining track geometry
  - adjusting rail
  - maintaining points and crossings
  - operating on-track machine
  - installing and maintaining rail lubrication equipment
  - welding rail using flashbutt technique
  - welding rail using aluminothermic welding technique
  - welding rail using electric welding process
  - grinding rails
o grinding switches and crossings
o carrying out ballast activity
o carrying out sleeper installation or replacement
o carrying out rail replacement
o installing and maintaining rail fastening and anchoring systems
o undertaking rail earthworks
o installing and maintaining track drainage
o installing and constructing points and crossings

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through activities in an appropriately simulated environment, and/or
  o in an appropriate range of situations in the workplace
TLIX2009A Install and maintain surface track drainage

Unit Descriptor
This unit involves the skills and knowledge required to install and maintain surface track drainage both manually and mechanically in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining the job requirements, carrying out the maintenance of track drainage in accordance with work orders, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install and maintain surface track drainage maintenance as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
X – Construction

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine job requirements
1.1 Worksite is identified
1.2 Underground services are identified where required and marked to protect services from excavation
1.3 Work method and resources are selected to meet job requirements

2 Undertake track drainage work
2.1 Environmental protection requirements are implemented where applicable
2.2 Drainage is cleaned, repaired or installed to relevant standard by manual and/or mechanical methods in accordance with workplace standards
2.3 Work is completed to meet drainage requirements
3 Complete documentation

3.1 Documentation is completed in line with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and maintenance of surface track drainage
- Problems that may occur during the installation and maintenance of surface track drainage, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and maintenance of surface track drainage, and ways of controlling the risks involved
- Drainage requirements of various types of earthworks
- Causes of defects such as erosion and water scouring
- Functions and design principles of drainage
- Understanding the required standards of materials and the methods involved in the installation and maintenance of surface track drainage
- Characteristics of relevant plant and equipment, hardware and components used in work activities
- Impact on work activities of regulatory requirements
- Hazardous situations and related personal protection measures
- Required personal protective equipment
- Relevant recording and documentation procedures
- Environmental protection requirements

Required skills:
- Communicate effectively with others when undertaking the installation and maintenance of surface track drainage
- Read and interpret plans relevant to the installation and maintenance of surface track drainage
- Follow operational instructions and work sequences when installing and maintaining surface track drainage
- Complete documentation related to the installation and maintenance of surface track drainage
- Operate communication systems to required protocol
- Work collaboratively with others during the installation and maintenance of surface track drainage
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and maintaining surface track drainage in accordance with regulatory requirements and workplace procedures
- Establish environment protection requirements as required
- Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Select and use required personal protective equipment
• Select and use relevant equipment and tools

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  • by day or night
• in all weather conditions

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve:
• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Surface drainage may include:
• open cess drains
• top drains
• side drains

Equipment may include:
• front end loaders
• back hoes
• ditch digger
• hand tools and small plant
• other mechanical means

Materials may include:
• granular soil
• gravel
• ballast
• earthwork protection materials including fascines, gabion baskets, reno mattresses, revetment mattresses
• geotextiles
• baffle materials

Drainage may differ for:
• batters
• points and crossings
• location of track (steep grades)
• multiple tracks
Drainage cleaning, repair and construction methods may include:

- manual methods
- off-track plant
- revegetation
- lining

Communications systems may include:

- two way-radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Information may be provided:
- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals

Applicable procedures and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - correctly determining job requirements
  - cleaning, repairing or installing drainage to relevant standard by manual and/or mechanical methods
  - completing all relevant documentation to workplace standards

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through activities in an appropriately simulated environment, and/or
  o in an appropriate range of situations in the workplace
TLIX2109A  Install and replace transoms

Unit Descriptor
This unit involves the skills and knowledge required to install and replace transoms on underbridges in accordance with safeworking and regulatory requirements and workplace procedures. It includes preparing for work, installing/replacing transoms, and completing documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the installation or replacement of transoms as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
X – Construction

ELEMENT          PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for work
1.1 Worksite is identified
1.2 Installation, replacement or repair method is selected to meet work requirements in accordance with workplace procedures
1.3 Plant, equipment and other materials are prepared for work
1.4 Transoms are prepared to requirements of job using correct methods, including dressing and protective coatings

2 Install/replace transoms
2.1 Where necessary unserviceable transoms are extracted using manual or mechanical methods in accordance with workplace procedures
2.2 New transom is installed using manual or mechanical methods in accordance with workplace standards and procedures
2.3 Transom is suitably supported by appropriate methods in accordance with workplace standards and procedures
2.4 Transom bolts are replaced or tightened as required
2.5 Work is completed to meet track geometry requirements in accordance with workplace standards and procedures
2.6 Work is checked for compliance to acceptance standards for spacing, skew and geometry
3 Complete documentation

3.1 Required documentation is completed in accordance with workplace policies and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and replacement of transoms
- Problems that may occur during the installation and replacement of transoms, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and replacement of transoms, and ways of controlling the risks involved
- Types of tools and equipment that may be used in installing and replacing railway transoms, and their applications
- Contents of relevant workplace technical manuals and instructions
- Timber protective treatments
- Basic track structure and geometry requirements
- Transom condition and placement acceptance standards
- Emergency procedures
- Local authority procedures, if applicable

Required skills:
- Communicate effectively with others when installing and replacing transoms
- Follow operational instructions and work sequences when installing and replacing transoms
- Read and interpret instructions, procedures, route information and signs relevant to the installation and replacement of transoms
- Interpret and follow operational instructions and follow scheduled work processes when installing and replacing transoms
- Complete documentation related to the installation and replacement of transoms
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing and replacing transoms
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using tools and equipment while installing and replacing transoms in accordance with regulatory requirements and workplace procedures
- Implement prepared contingency plans for unexpected events when installing and replacing transoms
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment
• Identify, select and use relevant tools and equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all weather conditions

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve:
• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, materials and vehicles

Installation and replacement methods may include:
• constructing new bridges
• partial replacement in existing track
• full replacement in existing track

Repair methods may include:
• boring new holes in timber transoms
• replacing broken or damaged transoms

Transom types may include:
• timber
• synthetic
• composite

Tools and equipment may include:
• mechanical handling/lifting equipment
• bars, sleeper tongs
• adze
• planer
• square and string line
• jacks
• manual tools
• small power tools
• oxy cutting equipment
• scaffolding
Materials may include:
- bolts and fasteners
- zinc/polyester strip
- resilient pads
- paint/timber preservatives

Transom spacing and dimensions may vary according to:
- bridge configuration
- traffic task

Removal and insertion may be:
- mechanical
- manual

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communication systems may include:
- two-way radios
- radio headsets
- telephones/mobile phones
- agreed audible or hand signals

Safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- works orders
- technical instructions, plans and specifications
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- trackside signals

Applicable regulations and legislation may include:

- legislated rail safety requirements including applicable acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
o preparing for work by selecting appropriate methods, materials and equipment for a variety of situations
o installing or replacing a number of transoms
o completing documentation to required workplace standards

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through activities in an appropriately simulated environment, and/or
  o in an appropriate range of situations in the workplace
TLIX2209A Implement structures maintenance and installation of minor structures

Unit Descriptor
This unit involves the skills and knowledge required to implement structures maintenance and installation of minor structures in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes planning work, implementing maintenance activities, dealing with maintenance and construction problems, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the implementation of structures maintenance and installation of minor structures as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
X – Construction

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan work
1.1 Scope of work is confirmed including identification of any deficiencies, and preparatory or ancillary work required
1.2 Operational constraints are identified
1.3 Information requirements are identified and accessed
1.4 Method of work is selected and general operating sequence is determined
1.5 Resources required for the work are arranged as required

2 Implement maintenance activities
2.1 Competent personnel are allocated tasks in accordance with the work sequence
2.2 Tasks are assessed as being in accordance with the pre-determined sequence and appropriate for the work
2.3 Work procedures are monitored and evaluated as being appropriate and in accordance with standards and procedures
2.4 Human and other resources are assessed as being adequate for the work
3 Deal with maintenance and construction problems

3.1 Causes and effects of system faults and failures within the worksite are diagnosed
3.2 Impact of work on structure integrity is assessed
3.3 Impact of work on track system integrity is assessed
3.4 Appropriate action is taken to ensure structure and track system integrity
3.5 Scope of work is modified to include related tasks/interfaces
3.6 Related faults/failures beyond the authorised scope of work are reported

4 Complete documentation

4.1 Documentation on work undertaken is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Fundamentals of all rail infrastructure
- Structures infrastructure and the interaction of all interfaces
- Structures defects
- The range of structures maintenance and/or construction techniques and work processes
- The range of competencies required to carry out structures maintenance and/or construction
- Relevant engineering standards, specifications and codes of practice
- Problems that may occur during structures maintenance and minor construction, and action that can be taken to report or resolve the problems
- Hazards that may exist when undertaking structures maintenance and minor construction, and ways of controlling the risks involved
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record keeping requirements

Required skills:
- Communicate effectively with others when implementing structures maintenance and the installation of minor structures
- Read and interpret instructions, procedures, information, technical data, standards and drawings relevant to implementing structures maintenance and the installation of minor structures
- Interpret and follow operational instructions and prioritise work
- Select appropriate equipment
- Select appropriate work techniques
Monitor, sequence and implement work

Monitor work activities in terms of planned schedule, appropriateness and in conformance with standards and procedures

Complete documentation

Operate electronic communication equipment to required protocols

Work collaboratively with others when implementing structures maintenance and the installation of minor structures

Diagnose causes and effects of system faults and failures resulting from the work activities

Assess impact of work on structure integrity

Assess impact of work on track system integrity

Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when implementing structures maintenance and the installation of minor structures, in accordance with regulatory requirements and workplace procedures

Implement contingency plans for unexpected events when implementing structures maintenance and the installation of minor structures

Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities

Modify activities depending on differing operational contingencies, risk situations and environments

Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Operate and adapt to differences in equipment in accordance with standard operating procedures

Select and use required personal protective equipment

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**
- by day or night
- in all weather conditions

**Work may be conducted in:**
- restricted spaces
- exposed conditions
- controlled or open environments

**Work may involve:**
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles
Structures maintenance and construction activities may include:

- maintaining structures
- repairing structures
- removing structure components
- installing structure components
- installing transoms

Structures may include:

- bridges
- pipes and culverts
- tunnels
- platforms
- retaining walls
- overhead wiring structures
- level crossings
- buffer stops

Work methods may vary according to:

- location
- type of structure
- structure material type
- climatic conditions
- track availability

Extent of activity may vary according to:

- complexity of task
- track availability
- scope of work including type of structure being worked on, type of maintenance and construction activities being undertaken

Track availability may include working:

- during breaks in traffic
- on limited track possession
- during extended track possession
- on non-operational track or track under construction

Equipment may include:

- mechanical handling/lifting equipment
- hand tools
- small power tools
- oxy cutting equipment
- scaffolding
- ladders
- elevated work platform (EWP)
- cranes

Liaison may include:

- internal or external personnel from other work areas (e.g. train controllers, electricians)
Communications systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- track inspections and reports
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - planning work including selecting appropriate methods, sequencing work and arranging resources
  - implementing, monitoring and evaluating maintenance activities
  - dealing appropriately with a number of maintenance and/or construction problems
  - completing documentation according to workplace requirements
- Assessment must include exercises which demonstrate competent performance in implementing a combination of at least two of the following activities:
  - repairing concrete/masonry structures
  - repairing timber structures
  - repairing steel structures
  - maintaining bridge bearings
  - carrying out routine maintenance of structures
  - installing transoms
  - installing temporary track support
  - mixing and placing chemical repair products
**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - A range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - Relevant and appropriate materials and equipment, and
  - Applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - Through activities in an appropriately simulated environment, and/or
  - In an appropriate range of situations in the workplace

- Installing minor structures
TLIX2309A  Carry out track ballasting

Unit Descriptor
This unit involves the skills and knowledge required to carry out track ballasting both manually and mechanically in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining the job requirements, carrying out the ballast activity in accordance with work orders, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to carrying out track ballasting as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
X – Construction

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine job requirements
1.1 Worksite is identified
1.2 Work method is selected to meet job requirements
1.3 Resources are identified to meet the scope of the job and work methods selected

2 Undertake ballast activity
2.1 Ballast is removed from track using appropriate methods and equipment in accordance with workplace procedures
2.2 Ballast profile is established through repair of existing ballast and/or distribution of new ballast using appropriate methods and equipment in accordance with workplace procedures
2.3 Work is completed to meet ballast profile requirements to ensure safe operation of trains in accordance with workplace procedures

3 Complete
3.1 Documentation is completed in line with workplace
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the carrying out of track ballasting
- Problems that may occur when carrying out of track ballasting, and action that can be taken to report or resolve the problems
- Hazards that may exist when carrying out of track ballasting, and ways of controlling the risks involved
- Ballast profile standards
- Functions of ballast
- Basic understanding of materials and methods involved in the restoration of ballast profiles
- Ballast flow rates
- Ballast hopper operation
- Relevant recording and documentation procedures

**Required skills:**
- Communicate effectively with others when carrying out track ballast activities
- Read and interpret instructions and manuals relevant to the carrying out of track ballasting
- Interpret and follow operational instructions including the correct work sequences when carrying out track ballasting
- Complete documentation related to the carrying out of track ballasting
- Use agreed communication methods
- Work collaboratively with others when carrying out track ballasting
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when carrying out track ballasting in accordance with regulatory requirements and workplace procedures
- Perform work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Select and use relevant equipment and tools
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night
- in all weather conditions

Work may be conducted in:  
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:  
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Equipment may include:  
- off-track plant (front end loaders, back hoes etc.)
- ballast hoppers
- hand tools and small plant
- ballast sled
- ballast undercutters
- ballast cleaners
- ballast forks
- ballast regulators
- other mechanical means

Materials may include:  
- gravel ballast
- crushed rock ballast
- metal fines/road base

Ballast profile may differ for:  
- different rail mass
- rail types (non-welded, welded and curve)
- traffic task
- sleeper type

Methods may include:  
- unloading ballast hoppers
- spreading ballast dumped by truck or front end loader or similar equipment
- profiling using shovels, ballast forks or using a ballast regulator
- removing ballast using manual methods
- removing ballast using:
  - off-track plant
  - ballast cleaners
  - undercutters
  - ballast sled
Liaison may include:  
- internal or external personnel from other work areas (e.g. train controllers)

Communications systems may include:  
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:  
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:  
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:  
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  o removing and distributing existing ballast by manual and/or mechanical methods
  o distributing new ballast by manual and/or mechanical methods
  o ensuring completed work meets ballast profile requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
TLIX2409A Install railway sleepers

Unit Descriptor
This unit involves the skills and knowledge required to install railway sleepers manually or mechanically in accordance with safeworking and regulatory requirements and workplace procedures. It includes preparing for work, restoring track gauge, installing or replacing sleepers, and completing documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install railway sleepers as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
X – Construction

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for work
1.1 Worksite is identified
1.2 Installation, replacement or repair method is selected to meet work requirements in accordance with worksite standards and procedures
1.3 Plant, equipment and materials are prepared for work

2 Restore track gauge
2.1 Where necessary track gauge is restored using appropriate methods in accordance with worksite standards and procedures

3 Install or replace sleeper
3.1 Where necessary, unserviceable sleepers are extracted using manual or mechanical methods in accordance with worksite procedures
3.2 New sleeper is installed using manual or mechanical methods in accordance with worksite procedures
3.3 Sleeper plates are installed on relevant sleeper types in accordance with worksite procedures
3.4 Sleeper is suitably packed or supported by appropriate methods in accordance with worksite procedures
3.5 Work is completed to meet track geometry requirements in accordance with worksite procedures
3.6 Work is checked for compliance to acceptance standards for spacing, skew and geometry

4 Complete documentation
4.1 All documentation is completed in line with workplace policies and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant safety, OH&S and environmental procedures and regulations
• Workplace procedures for the installation of railway sleepers
• Problems that may occur during the installation of railway sleepers, and action that can be taken to report or resolve the problems
• Hazards that may exist when installing railway sleepers, and ways of controlling the risks involved
• Types of tools and equipment that may be used when installing railway sleepers, and their applications
• Contents of relevant workplace technical manuals and instructions
• Sleeper condition and placement acceptance standards
• Defects that can occur in sleepering tools and equipment, and related action that should be taken
• Relevant recording and documentation procedures

Required skills:
• Communicate effectively with others when installing railway sleepers
• Interpret and follow operational instructions and follow scheduled work processes when installing railway sleepers
• Complete documentation related to the installation of railway sleepers
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when installing railway sleepers
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing railway sleepers in accordance with regulatory requirements and workplace procedures
• Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Install railway sleepers in accordance with workplace requirements
- Restore track gauge in accordance with workplace requirements
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations are conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Installation and replacement methods may include:
- laying new track
- partial replacement in existing track
- full replacement in existing track
- changeover from one sleeper type to another in existing track
- partial changeover from one sleeper type to another in existing track

Repair methods may include:
- boring new holes in timber sleepers
- replacing sleeper plates
- replacing insulating material
- replacing broken or damaged sleepers

Sleeper includes:
- sleepers
- turnout bearers

Sleeper types may include:
- timber
- steel
- concrete
- any other approved types
Equipment may include:

- mechanical handling/lifting equipment
- bars, sleeper tongs, shovels, picks
- jacks
- sleeper borers
- multi spindle borers
- dog screw setters
- tie crane
- sleeper removers/inserters
- scarifiers
- sleeper spacing machines

Sleeper spacings may vary according to:

- track configuration
- joint type
- sleeper types
- traffic tasks

Insulation pads may:

- be required

Removal and insertion may be:

- mechanical
- manual

Liaison may include:

- internal or external personnel from other work areas (e.g. train controllers, other work teams)

Communications systems may include:

- two-way radios
- radio headsets
- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - completing appropriate preparations for work
  - restoring track gauge correctly
  - inserting or replacing a number of sleepers including all types occurring in candidate’s workplace
  - completing documentation correctly

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the
workplace
**TLIX2509A Install rail**

**Unit Descriptor**
This unit involves the skills and knowledge required to install rail in accordance with safeworking and regulatory requirements and workplace procedures. It includes identifying job requirements, preparing rail for installation, installing rail, joining rail ends, restoring track, and completing documentation. Licensing or certification requirements are not applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install rail as part of workplace activities across a variety of operational contexts within the Australian rail system.

**Competency Field**
X – Construction

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| Identify job requirements | 1.1 Scope of work is determined and resources are arranged  
| | 1.2 Replacement rail is checked for compliance with acceptance standards in accordance with workplace procedures |
| Prepare rail for installation | 2.1 Rails are loaded and unloaded using approved methods to minimise risk to health and safety  
| | 2.2 Rails are cut to required length using an appropriate method to minimise delays and wastage  
| | 2.3 If required, rails are bent to the correct curvature to ensure correct track geometry is maintained to standard |
| Install rail | 3.1 Where required, existing rail is unfastened and removed using appropriate equipment or manual method  
| | 3.2 New rail is lifted into place using appropriate equipment or manual method maximising efficiency and minimising risk of injuries |
| Join rail ends | 4.1 Rail joints are prepared for welding or are assembled and installed to specifications in accordance with workplace procedures |
4.2 Rail bonds or other track circuit connections are installed/restored as required in accordance with workplace procedures

5 Restore track
5.1 Track fastenings are restored in accordance with workplace procedures
5.2 Arrangements are made for rail to be adjusted in accordance with workplace procedures

6 Complete documentation
6.1 Completed work is checked for compliance to standards to ensure safe operations of trains
6.2 Required documentation is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and replacement of rail
- Problems that may occur during the loading and unloading of rail, and action that can be taken to report or resolve the problems
- Hazards that may exist during the loading and unloading of rail, and ways of controlling the risks involved
- Problems that may occur during the installation and replacement of rail, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and replacement of rail, and ways of controlling the risks involved
- Rail pressing (crowing) procedures
- Acceptance standards for re-use of rails
- Rail installation acceptance standard
- Characteristics of plant and equipment, transport, structures, hardware and components used in work activities
- Relevant recording and documentation procedures

Required skills:
- Communicate effectively with others when installing and replacing rail
- Interpret and follow operational instructions and prioritise work when installing and replacing rail
- Complete documentation related to the installation and replacement of rail
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing and replacing rail
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and replacing rail in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Measure rail weight/dimensions
• Load and unload rails
• Cut rails to required length using an appropriate methods
• Drill rail ends or prepare for welding
• Install rail joints
• Crow rails to the correct curvature
• Unfasten and remove rail using appropriate equipment or manual methods including mechanical handling/lifting equipment, track machines
• Lay new rail using appropriate equipment or manual methods including mechanical handling/lifting equipment, track machines
• Install rail fastenings
• Install/restore temporary rail bonds or other track circuit connections
• Check compliance between work and job specifications
• Effectively apply re-railing techniques
• Select and use required personal protective equipment
• Select and use relevant equipment and tools

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  • by day or night
• in all weather conditions

Work may be conducted in:  • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve:  • exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Rail loading/unloading equipment may include:  • off-track or on-track plant
• manual methods
• rail trains
• mechanical handling/lifting equipment
Rail loading/unloading methods may vary according to:

- rail length
- on-site storage
- rail re-use intentions

Rail installation/replacement may include:

- laying new rail
- replacing worn or defective rail with new or second hand rail
- replacing rail defects with new or second hand closure rails
- installing bonded insulated joints
- transposing rails

Equipment may include:

- mechanical handling/lifting equipment
- hand tools, including impact wrench, grinder, tension wrench, friction rail saw, and velocity rail punch
- rail threaders
- fastening equipment
- cutting and boring equipment

Materials may include:

- rail (new or second hand)
- fastenings
- plates
- anchors
- bolts
- nuts
- washer clips
- rail jewellery

Rail joint parts and surroundings to be checked may include:

- joint insulation
- fishbolts
- rail bonds
- rail geometry

Fastening may include:

- bolts
- rail fasteners
- coach screws

Communications equipment/systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- dust masks
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Liaison may include:

- internal or external personnel from other work areas

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - loading or unloading rails correctly
  - removing existing rail and/or lifting new rail into place using appropriate equipment and methods
  - preparing rail joints and installing them correctly
  - restoring track fastenings according to workplace procedures
  - checking replacement rails meet requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
through activities in an appropriately simulated environment, and/or
in an appropriate range of situations in the workplace
**TLIX2609A Install and repair temporary track supports**

**Unit Descriptor**
This unit involves the skills and knowledge required to install and repair temporary track supports in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, preparing and installing the temporary support, and completing documentation. Licensing or certification requirements may be applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install and repair temporary track supports as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

**Competency Field**
X – Construction

---

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

3 Complete documentation

3.1 Documentation is completed as required in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and repair of temporary track supports
- Problems that may occur during the installation and repair of temporary track supports, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and repair of temporary track supports, and ways of controlling the risks involved
- Emergency procedures
- Local authority procedures
- Relevant recording and documentation procedures

Required skills:
- Communicate effectively with others when installing or repairing temporary track supports
- Read and interpret plans, specifications, instructions and manuals relevant to the installation or repair of temporary track supports
- Follow operational instructions and work sequences when installing or repairing temporary track supports
- Check compliance between work and job specifications
- Complete documentation related to the installation or repair of temporary track supports
- Operate communication equipment to required protocol
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing or repairing temporary track supports in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions
Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Equipment may include:
- front end loaders, back hoes, cranes
- manual tools including bars, hammers and spanners
- small power tools
- chainsaw
- compression borer
- compaction equipment such as rollers and wacker packer
- oxy and cutting equipment
- scaffolding
- ladders
- elevated work platform (EWP)

Support structures may include:
- overpinning/track baulks
- underpinning
- pig sties
- temporary bridge support

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communications systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety headwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- legislated rail safety requirements including applicable acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - planning work requirements
  - organising plant, materials and equipment for a range of jobs
  - installing and/or repairing a range of temporary supports

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and

  o in an appropriate range of situations in the workplace
TLIX2709A Install and repair rail fastening systems

Unit Descriptor
This unit involves the skills and knowledge required to install and repair rail fastening systems in accordance with safeworking and regulatory requirements and workplace procedures. It includes identifying the work requirements, installing the fastening system, repairing the fastening system, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install and repair rail fastening systems as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
X – Construction

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify requirements
1.1 Worksite is identified to confirm work requirements
1.2 Appropriate fastening system is chosen to suit job requirements
1.3 Appropriate tools and equipment are selected for job to facilitate the effective replacement/repair of components

2 Install fastening system
2.1 Selected fastening systems are installed using appropriate equipment to required standards

3 Repair fastening system
3.1 Fastening systems are repaired using appropriate methods to the required standard, to maintain integrity of rail fastening systems

4 Complete
4.1 Documentation is completed in line with workplace requirements
documented

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant safety, OH&S and environmental procedures and regulations
• Workplace procedures for the installation and repair of rail fastening systems
• Problems that may occur during the installation and repair of rail fastening systems, and action that can be taken to report or resolve the problems
• Hazards that may exist during the installation and repair of rail fastening systems, and ways of controlling the risks involved
• Relevant rail fastening and anchoring equipment and methods
• Characteristics and relevant information on rail fastening systems
• Information in relevant workplace technical manuals and instructions
• Characteristics of plant and equipment, hardware and components used in work activities
• Hazardous situations and related personal protection measures
• Relevant recording and documentation procedures

Required skills:
• Communicate effectively with others when installing and repairing rail fastening systems
• Read and interpret technical plans, specifications, instructions and manuals relevant to the installation and repair of rail fastening systems
• Interpret and follow operational instructions when installing and repairing rail fastening systems
• Complete documentation related to the installation and repair of rail fastening systems
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when installing and repairing rail fastening systems
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and repairing rail fastening systems in accordance with regulatory requirements and workplace procedures
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Select and use required personal protective equipment
• Select and use relevant equipment and tools
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all weather conditions

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve: • exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Rail fastening and anchoring systems include: • sleeper fastenings
  o dogspikes, lockspikes, dogscrews, lockscrews, holding down bolts, screwspikes
  o resilient fastening
• special fastenings in points and crossings
• rail anchors

Equipment may include: • manual tools
• small power tools

Liaison may include: • internal or external personnel from other work areas (e.g. train controllers, other work groups)

Communications systems may include: • two-way radios
• radio headsets
• telephones/mobile phones
• agreed audible or hand signals

Information may be provided: • electronically
• in writing, via forms/documents/plans
• orally, via face-to-face communications
Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- operational instructions, policies and workplace procedures
- work orders
- technical instructions
- the appropriate track standards for the rail operating system
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - installing rail fastening systems on track using static and resilient fastenings used in the relevant rail corridors
  - repairing a section of anchored track
  - ensuring completed track complies with track standards for the relevant rail corridor

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- Access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIX2809A  Install and repair fences and gates

Unit Descriptor
This unit involves the skills and knowledge required to install and repair fences and gates in accordance with safeworking and regulatory requirements and workplace procedures. It includes selecting and preparing the materials, clearing and excavating the site, digging the required holes, installing the components, performing any required repairs and maintenance of the fences and/or gates, and completing required documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install and repair fences and gates as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
X – Construction

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Select and prepare materials
1.1 Work requirements are determined to identify scope of work and resources required
1.2 Obstacles are identified and underground services are marked where they are in the vicinity of the fence line
1.3 Materials required for job are selected in accordance with specification
1.4 Materials are prepared using appropriate methods and tools

2  Dig holes and excavate
2.1 Site is cleared and excavations are made as required to ensure access and safeworking conditions
2.2 Holes are dug to requirements using appropriate methods and equipment to enable safe construction of fence
3 Install components
   3.1 Poles/posts are concreted or compacted into position according to job requirements
   3.2 Wire is strung and tensioned to standard where required
   3.3 Fencing is constructed to appropriate standards

4 Perform repairs and maintenance
   4.1 Defective materials/components are removed and replaced as required to ensure correct operation and function of fence or gate
   4.2 Tools and equipment are stored securely, following safety guidelines

5 Complete documentation
   5.1 Documentation is completed in line with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and repair of fences and gates
- Problems that may occur during the installation and repair of fences and gates, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and repair of fences and gates, and ways of controlling the risks involved
- Contents of relevant workplace technical manuals and instructions
- Characteristics of plant and equipment, hardware and components used in work activities
- Workplace documentation requirements

Required skills:
- Communicate effectively with others when installing and repairing fences and gates
- Read and interpret instructions and manuals relevant to the installation and repair of fences and gates
- Interpret and follow operational instructions and prioritise work when installing and repairing fences and gates
- Complete documentation related to the installation and repair of fences and gates
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing and repairing fences and gates
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and repairing fences and gates in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Select and use required personal protective equipment
• Select and use relevant equipment and tools
• Install and repair fences and gates

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
                                 • in all weather conditions

Work may be conducted in:   • restricted spaces
                             • exposed conditions
                             • controlled or open environments

Work may involve:           • exposure to chemicals, and dangerous or hazardous substances
                             • movements of equipment, goods and vehicles

Tools and equipment may include:
                             • graders, front end loaders, back hoes, tractors, cranes
                             • holes diggers, augers
                             • manual tools
                             • small power tools
                             • concrete mixer

Fence types may include:
                             • post and wire
                             • stockproof post and wire
                             • manproof
                             • security fencing
                             • paling or metal panel fences

Fence types may vary according to:
                             • location
                             • security requirements
                             • public safety considerations
Materials may include:
- metal, concrete or timber posts and rails
- metal or timber gates
- fencing wire (plain and barbed)
- fencing panels
- palings
- nails, screws etc.
- hinges and locks
- concrete

Liaison may include:
- internal or external personnel from other work areas (e.g. other work teams, neighbours)

Communications systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - erecting new fences and gates using a variety of materials/techniques, and/or
  - repairing existing fences and gates
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

- ensuring completed work meets workplace standards
TLIX2909A Use chemical repair products

Unit Descriptor
This unit involves the skills and knowledge required to use chemical repair products in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining the work requirements, applying the chemical repair method in accordance with manufacturers instructions, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to use chemical repair products as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
X – Construction

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine work requirements
1.1 Site is inspected thoroughly to establish best means of repair/installation
1.2 Work requirements are determined to identify scope of work and resources required

2 Apply repair method
2.1 Components and surfaces are cleaned and prepared in accordance with manufacturers instructions or workplace procedures to ensure maximum bond strength
2.2 Chemical repair product is mixed and prepared in accordance with manufacturers instructions or workplace procedures to ensure maximum bond strength
2.3 Chemical repair product is applied in accordance with manufacturers instructions or workplace procedures to minimise waste and maximise effectiveness
2.4 Repair site is cleaned of excess repair product to ensure clean finish
2.5 Repair is stabilised and supported using appropriate method until product is sufficiently cured to enable maximum bond strength
2.6 Chemical repair product is used in a safe and environmentally sound manner to minimise health and safety risks to personnel

3 Complete documentation

3.1 Documentation is completed in line with company requirements and workplace practice

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the use of chemical repair products
- Problems that may occur during the use of chemical repair products, and action that can be taken to report or resolve the problems
- Hazards that may exist during the use of chemical repair products, and ways of controlling the risks involved
- Information in relevant workplace technical manuals and instructions
- Characteristics of relevant plant and equipment, structures and chemical products used in work activities
- Hazardous situations and related personal protection measures
- Required personal protective equipment
- Relevant recording and documentation procedures

Required skills:
- Communicate effectively with others when using chemical repair products
- Read and interpret instructions, procedures, information and labels relevant to the use of chemical repair products
- Interpret and follow operational instructions and prioritise work when using chemical repair products
- Complete documentation related to the use of chemical repair products
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when using chemical repair products
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using chemical repair products in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Check compliance between work and job specifications
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
• Select and use relevant equipment and tools

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**
• by day or night
• in all weather conditions

**Work may be conducted in:**
• restricted spaces
• exposed conditions
• controlled or open environments

**Work may involve:**
• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

**Equipment may include:**
• hand tools
• special safety equipment for handling chemicals
• mixer
• air compressor

**Materials may include:**
• epoxy resins
• dry clad and other similar products

**Communications systems may include:**
• two-way radios
• telephones/mobile phones
• agreed audible or hand signals
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- respirator
- safety mask
- gas detectors
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- work orders
- technical instructions
- material safety data sheets (MSDS)
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - inspecting repair site and determining scope of work
  - selecting and using the correct repair method
  - completing documentation according to workplace requirements

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIX3009A Install and repair rail earthworks

Unit Descriptor
This unit involves the skills and knowledge required to install and repair rail earthworks in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, undertaking trenching, establishing track formation and minor trackside earthworks, and completing documentation in accordance with specifications. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install and repair rail earthworks as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
X – Construction

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine job requirements

1.1 Worksite is identified

1.2 Underground services are identified where required and marked to protect services from excavation

1.3 Work method is selected to meet job requirements

1.4 Resources are organised to meet the scope of the job and work methods selected

2 Undertake trenching

2.1 Excavation is undertaken to establish base for formation in accordance with design

2.2 Excavated material is removed from worksite

2.3 Suitable materials and methods are used to construct new track formation in accordance with design and workplace procedures
3 Establish track formation

3.1 Excavation is undertaken to establish base for formation in accordance with design
3.2 Excavated material is removed from worksite
3.3 Suitable materials and methods are used to construct new track formation in accordance with design and workplace procedures

4 Establish and maintain minor trackside earthworks

4.1 Trackside earthworks are constructed or repaired using appropriate equipment and following workplace procedures
4.2 Grading and/or compaction is carried out using appropriate equipment, with care taken to maintain correct drainage and to protect the environment, trackside installations, fences and underground cabling

5 Complete documentation

5.1 Documentation is completed in line with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and repair of rail earthworks
- Problems that may occur during the installation and repair of rail earthworks, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and repair of rail earthworks, and ways of controlling the risks involved
- Causes of defects such as erosion and water scouring
- Information in relevant workplace technical manuals and instructions
- Functions and design principles of track formation and earthworks
- Required standards of materials and the methods involved in the installation and repair of rail earthworks
- Characteristics of relevant plant and equipment, hardware and components used in work activities
- Hazardous situations and related personal protection measures
- Required personal protective equipment
- Relevant recording and documentation procedures
- Environmental protection requirements

Required skills:

- Communicate effectively with others when installing and repairing rail earthworks
- Read and interpret plans relevant to the installation and repair of rail earthworks
• Interpret and follow operational instructions and prioritise work when installing and repairing rail earthworks
• Complete documentation related to the installation and repair of rail earthworks
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when installing and repairing rail earthworks
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and repairing rail earthworks in accordance with regulatory requirements and workplace procedures
• Establish environment protection requirements as required
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Select and use required personal protective equipment
• Select and use relevant equipment and tools

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all weather conditions

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve:
• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Rail earthworks may include:
• reconstructing track formation and capping
• shaping shoulders (cesses)
• access roads
• waterway rehabilitation including shaping channels and/or scour protection
• trackside or across track trenching (less than 1.5 m depth)
• sub surface drainage

Services may include:
• water sewage and drainage pipe
• electrical cables
• signalling cables
Equipment may include:
- measuring tapes
- levels

Plant may include:
- front end loaders, back hoes
- graders
- skidsteer loaders
- grab buckets
- trench diggers
- road trucks
- hand tools and small plant

Support plant and equipment may include:
- cranes and buckets
- compressors, fittings, hoses, pumps
- pneumatic picks and jack hammers
- winches

Materials may include:
- soils and gravel
- geo-textile materials
- earthwork protection materials including fascines, gabion baskets, reno mattresses, revetment mattresses
- concrete pipes, PVC pipes, FRC pipes

Liaison may include:
- internal or external personnel from other work areas (e.g. other work teams)

Communications systems may include:
- two way-radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  o selecting appropriate work methods
  o establishing track formations in accordance
with designs
  o repairing minor trackside earthworks
    including grading and compaction
  o completing documentation correctly

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts

• Resources for assessment include:
  o a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

• Practical assessment must occur:
  o through activities in an appropriately simulated environment, and/or
  o in an appropriate range of situations in the workplace
Install points and crossings

Unit Descriptor
This unit involves the skills and knowledge required to install points and crossings in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes carrying out relevant construction work on site, installing points and crossings, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the installation of points and crossings as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
X – Construction

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Construct points and crossings
1.1 Work requirements are determined to identify scope of work and resources required
1.2 Delivered materials are checked for compliance with design
1.3 Assembly area is prepared
1.4 Structure is fabricated according to design specification if required to minimise on-site disruptions to on-site workflow, if applicable
1.5 Track layout is assembled in accordance with the specified design, manufacturer instructions and workplace procedures
1.6 Track layout dimensions, geometry and condition are checked for compliance with design
1.7 Track layout is prepared for transport to site in accordance with manufacturer instructions and workplace procedures
1.8 Track layout is transported to installation site using appropriate methods and equipment in accordance with
workplace requirements and procedures

2 **Install points and crossing**

2.1 Existing trackwork is removed from worksite

2.2 Track bed is prepared for installation of track layout in accordance with workplace procedures

2.3 New points and crossings are installed in accordance with specified design, manufacturers instructions and workplace procedures

2.4 Track layout dimensions, geometry, condition and operation are checked for compliance to standards in accordance with design, manufacturers instructions and workplace procedures

3 **Complete documentation**

3.1 Required documentation is completed in accordance with workplace procedures

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation of points and crossings
- Problems that may occur during the installation of points and crossings, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation of points and crossings, and ways of controlling the risks involved
- Features and principles of operation of points and crossings
- Measurement techniques
- Clearances and tolerances
- Rail bending techniques applied to points and crossing components
- Points and crossings acceptance standards
- Techniques for the installation of points and crossings
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record keeping requirements

**Required skills:**

- Communicate effectively with others when installing points and crossings
- Read and interpret technical data, standards and drawings relevant to the installation of points and crossings
- Interpret and follow operational instructions and prioritise work when installing points and crossings
- Complete documentation related to the installation of points and crossings
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when installing points and crossings
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing points and crossings in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use hand tools, power tools and equipment
• Assemble track layouts to plans and specifications
• Use relevant plant and mechanised equipment
• Use appropriate equipment to make accurate measurements on points and crossings
• Select and use required personal protective equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night  
• in all weather conditions

Work may be conducted in: • restricted spaces  
• exposed conditions  
• controlled or open environments

Work may involve: • exposure to chemicals, and dangerous or hazardous substances  
• movements of equipment, materials and vehicles

Points and crossing may include: • turnouts  
• diamond crossings  
• slips  
• catchpoints  
• expansion switches
Equipment may include:

- off-track plant, cranes
- mechanical lifting and handling devices
- rail mounted transporter vehicles
- hand tools and small plant
- rail saws, rail drills

Measurement equipment may include:

- measuring tapes
- stringline
- rail gauges (switch, crossing)
- gauge boards

Materials may include:

- track layout components
- rail jewellery
- sleepers/ties
- bearers

Crossings may include:

- fabricated
- Rail bound manganese
- monoblock
- Davis
- compound crossings
- swing nose
- spring wing type crossings
- single or dual gauge

Bearers may include:

- timber
- concrete
- steel
Components may include:

- switches
- crossings
- stockrails
- closure rails
- rail braces
- bearer plates
- bolts, clips
- studs/switch stops
- heel blocks
- housings
- anti-creep devices
- chairs
- switch rollers
- checkrails
- chocks
- manual points equipment

Fastenings may include:

- slip/friction
- resilient

Switch blades may be:

- asymmetrical
- conventional
- undercut
- housed

Heels of switches may be:

- fixed or flexible

Operations of switches may be:

- manual
- interlocked

Liaison may include:

- internal or external personnel from other work areas (e.g. signalling staff)

Communication systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals
Safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- works orders
- technical instructions, plans and specifications
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - assembling track layout and checking dimensions, geometry and condition of assembled track
  - preparing track bed according to workplace procedures
  - installing points and/or crossings correctly
  - checking for correct operation of installed points and/or crossings

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including
workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIY1008A  Provide specialist integrated logistics support advice

Unit Descriptor
This unit covers the competency required to provide specialist advice related to integrated logistics support. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. The provision of advice may be verbal or in a written format and will relate specifically to issues that are encountered in integrated logistics support activity. It includes the requirement to identify the issues, provide advice, formulate options and select the preferred option to address identified issues. This unit of competency specifically addresses advice that is relevant to integrated logistics support activity; it is not intended to cover technical advice that is provided in a broader context of the organisational endeavour or a professional discipline. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for integrated logistics support specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and analyse issue/s
1.1 Circumstances that require the provision of advice relating to integrated logistics support are observed, received and clarified
1.2 Issue/s are identified and confirmed, if necessary, through consultation with relevant personnel
1.3 Circumstances are analysed and issue/s are interpreted and clearly defined
1.4 Research related to issue/s is conducted and advice of relevant personnel is sought to clarify findings that are unclear
2 Formulate options for integrated logistics support advice

2.1 Options related to the provision of advice are identified and evaluated
2.2 Options are prioritised and the preferred option/s is chosen

3 Provide specialist integrated logistics support advice

3.1 Advice is formulated and discussed with stakeholders
3.2 Stakeholder requirements are negotiated, documented and incorporated within proposed advice
3.3 Concluding advice is provided in accordance with ethical and practical guidelines and within specified resource constraints

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Analysis process
- Duty of care
- Information sources
- Materiel sustainment
- Organisational guidelines and standards
- Organisational policy and procedures
- Product knowledge related to systems and/or equipment in service in the organisation
- Professional codes of practice
- Research techniques
- Specialist knowledge in integrated logistics support
- Verbal communication techniques
- Written communication to a level required in the preparation of letters and reports

Required skills:
- Demonstrate a clear understanding of key issues and persuasively negotiate to ensure that integrated logistics support considerations are addressed
- Display insight into how industry operates and the drivers that influence their dealings
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of integrated logistics support information, present information confidently and select the appropriate medium for communication to influence a range of audiences
- Focus on gaining a clear understanding of others’ comments by listening and adapting to the audience to ensure that integrated logistics support considerations are addressed
- Identify, review and analyse information that may impact on the integrated logistics support program or may be impacted by the integrated logistics support program
- Liaise with stakeholders to harness information and opportunities that may impact on the integrated logistics support program
Prepare and present reports that may be complex and written, to inform and/or to succinctly present an argument to enable results to be achieved

Provide and receive feedback in a positive manner

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Advice may be:
- ad hoc
- by request
- formal or informal
- verbal or written
- and may include advice relating to:
  - acquisitions
  - disposal
  - inspections
  - in-service support
  - policy implementation
  - staff processes
  - technical manual development
  - trials and interoperability
  - transitional planning
  - transport

Ethical and practical guidelines must:
- comply with professional codes of practice (as applicable)

Resources may include:
- financial
- information technology applications and tools
- infrastructure
- personnel
- time

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - demonstrate clear communication of integrated logistics support information
  - demonstrate understanding of personal role in relation to wider organisational or project context
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts
Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY108A Formulate materiel logistics strategies

Unit Descriptor
This unit covers the competency required to formulate materiel logistics strategies across the life cycle. These strategies are formulated to ensure that the materiel and materiel systems are able to meet their stated capability requirement. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. Materiel logistics is the life cycle management of materiel to achieve the stated objectives of the capability managers. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for logistics specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

This unit cannot be used in a qualification in which TLIY208A Contribute to materiel logistics strategies has been used.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Analyse the materiel logistics environment

1.1 Operational concept of the materiel and materiel systems are analysed, and key factors and issues are identified for consideration and/or response

1.2 External and internal factors likely to impact on materiel logistics needs and capabilities are continually monitored and analysed

1.3 Key stakeholders are identified and consulted on materiel and materiel systems needs and capabilities in accordance with organisational policy and procedures

1.4 Legislation and organisational policy and procedures that may impact on materiel logistics activity are identified and analysed
2 **Develop materiel logistics strategies**

2.1 Consultation and negotiation with key stakeholders is conducted in accordance with organisational policy and procedures

2.2 Strategic objectives are defined and documented in materiel logistics strategies

2.3 Life cycle costing analysis of strategic options is undertaken and documented in accordance with organisational policy and procedures

3 **Establish priorities for materiel logistics strategies**

3.1 Strategic priorities are developed and documented that support the organisation’s materiel logistics objectives

3.2 Strategic priorities are analysed to ensure they reflect the capability requirements of key stakeholders, in accordance with organisational policy and procedures

3.3 Opportunities for strategic alliances and cooperative ventures are incorporated into the strategies

4 **Communicate materiel logistics strategies**

4.1 Strategies are explained to key stakeholders

4.2 Strategies are promoted across the organisation through a variety of communication channels, in accordance with organisational policy and procedures

5 **Evaluate materiel logistics strategies**

5.1 Materiel logistics strategies are regularly evaluated in accordance with organisational policy and procedures

5.2 Strategies are amended and documented in accordance with organisational policy and procedures

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Acquisition processes
- Business processes
- Capability performance measurement
- Codification and cataloguing processes
- External environment scanning relating to social, political economic and technological developments
- Industrial base capability
- Integrated logistics support
- International agreements and arrangements
- Interoperability
- Legislative and regulatory environment as it pertains to materiel logistics
• Life cycle costing
• Logistics support analysis principles and processes
• Logistics governance
• Materiel logistics
• Materiel system components
• Organisational policy and procedures
• Outsourcing/in-sourcing
• Performance based logistics
• Performance management techniques
• Project management
• Strategic planning methodologies
• Supply chain concepts
• Technical regulation
• Value chain concepts

Required skills:
• Align materiel logistics strategy to the strategic objectives of the organisation
• Analyse materiel logistics information to determine where internal and external factors impact on the materiel logistics environment, and adjust strategic planning activities accordingly
• Apply project management knowledge in formulating materiel logistics strategies
• Build and sustain positive relationships with team members, stakeholders and clients
• Commit to action, even in cases of limited information and conditions of uncertainty
• Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
• Display resilience by continuing to move forward despite criticism or setbacks
• Effectively manage materiel logistics contracts and their deliverables
• Exercise judgement by using intelligence and commonsense to shape strategic thinking
• Identify, assesses, and prioritises competing objectives
• Manage time, and prioritise work to ensure objectives are met in accordance with required schedule
• Prepare complex and sensitive material; present information confidently; and select the appropriate medium for maximum communication effect to influence a range of audiences
• Review and analyse performance measurement data to guide and direct the team to ensure objectives are measured against defined parameters
• Source information on best practice approaches adopted in both the public and private sectors, demonstrating an insight into how industry operates and the business drivers that influence industry with their dealings
• Undertake research and analysis about operational concepts and strategic objectives to determine the impacts on the materiel logistics environment
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Materiel may include: all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes.

Key stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers

Organisational policy and procedures may include:
- Australian Standards
- International Standards
- integrated logistics support
- logistics support analysis
- organisational instructions and standards

Legislation may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Life cycle costing is:
- the sum total of all costs, both direct and indirect, incurred over the total life cycle from concept through to disposal. Life cycle costing includes capability/concept development, development test and evaluation, acquisition, operation and support and disposal costs

Strategic alliances and cooperative ventures may include:
- relatively enduring inter-organisational cooperative arrangements, involving flows and linkages that utilise resources and/or governance structures from autonomous organisations, for the joint accomplishment of individual goals linked to the corporate mission of each sponsoring organisation
Communication channels may include:
- electronic
- media
- plans
- publications
- verbal
- written

Processes for the evaluation may include:
- balanced score card measures
- conformance reports
- customer feedback
- gap analysis
- key performance indicators
- variance analysis

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**
- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify and evaluate priorities, and adjust them as necessary to ensure they meet objectives
  - analyse and evaluate outcomes
  - initiate any remedial action required
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

**Context of and specific resources for assessment**
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
• Assessment of this unit of competency may include a combination of methods such as:
  o authenticated evidence from the workplace and/or training programs
  o case studies
  o demonstration
  o feedback from supervisors and peers regarding the candidate’s ability
  o observation
  o portfolios
  o projects
  o questioning
  o reviews or reports prepared by the candidate
  o scenarios
  o simulation or role plays
TLIY1108A  Conduct logistics support analysis activities

Unit Descriptor
This unit covers the competency required to conduct logistics support analysis activities. It includes the requirement to conduct a range of processes including the capture, recording, recovery and analysis of data; maintenance of associated workplace networks; and stakeholder requirements. Logistics support analysis describes the process for identifying and analysing the functional supportability requirements consistent with the Integrated Logistics Support Program. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self sufficient in its intended operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for logistics specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

1 Prepare to conduct logistics support analysis activities

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1.1 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities in accordance with organisational policy and procedures

1.2 Effective relationships are developed with stakeholders through consultation

1.3 Legislation and organisational policy and procedures that may impact on logistics support analysis activities are identified and analysed

1.4 Sources of information relevant to logistics support analysis are identified and obtained in accordance with organisational policy and procedures

1.5 All personnel involved in logistics support analysis are briefed in accordance with standard procedures
### 2 Conduct logistics support analysis activities

2.1 Logistics support analysis methods and techniques appropriate to the area are employed in accordance with plans, schedules and standard procedures

2.2 Logistics support analysis activities are conducted and concluded within resource constraints

2.3 Logistics support analysis activities are implemented, monitored and amended based on changing circumstances in accordance with methodologies and procedures

2.4 Resources are allocated to logistics support analysis activities in accordance with the logistics support analysis plan and resource availability

### 3 Report on logistics support analysis activities

3.1 Logistics support analysis performance is reported to all stakeholders in a transparent manner and meeting all compliance requirements

3.2 Logistics support analysis activities are regularly reviewed to ensure systems and/or equipment capability is maintained throughout its life cycle in accordance with organisational policy and procedure

### 4 Maintain logistics support analysis records

4.1 Logistics support analysis records are completed in accordance with relevant policy and procedures

4.2 Logistics support analysis records are amended and documented in accordance with organisational policy and procedure

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Logistics support analysis processes
- Integrated logistics support processes
- Organisational policy and procedures related to logistics support analysis
- Organisational role relevant to logistics support analysis
- Product knowledge related to systems and/or equipment in service in the organisation
- Reliability, availability and maintainability
- Safety, legislative and statutory requirements relevant to logistics support analysis
- Written and oral communication to a level required in the preparation of correspondence and reports

**Required skills:**

- Apply logistics support analysis, integrated logistics support and project management knowledge relevant to work being performed
• Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
• Demonstrate an understanding of the strategic objectives of the materiel logistics program to identify long-term factors and external considerations that need to be taken into consideration in conducting logistics support analysis activities
• Display resilience by continuing to move forward despite criticism or setbacks
• Identify, review and analyse information that may impact on the logistics support analysis activities or that may be impacted by the logistics support analysis activities
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Manage time and prioritise work to ensure objectives are met in accordance with required schedule
• Undertake performance measurement to enable objectives to be measured against defined parameters
• Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Stakeholders may include: • capability manager • contractors • customers • project managers • regulators • subordinates • supervisors • suppliers

Materiel may include: • all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Organisational policy and procedures may include: • Australian Standards • International Standards • organisational instructions and standards

Legislation may include: • relevant federal, state and local government legislation and regulations
Sources of information may include:

- contractors
- databases
- duty statements
- legislation
- managers
- peers
- plans
- policies
- procedures
- publications
- reference material
- standards
- supervisors
- suppliers

Personnel may include:

- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers
- team members

Logistics support analysis activities may include:

- data and information analysis
- data and information management
- data and information retrieval
- identification of data and information
- reporting
- research

Resources may include:

- financial
- information technology applications and tools
- infrastructure
- personnel
- time
Methodologies and procedures may include:

- configuration management
- life cycle costing
- logistics support analysis
- maintenance requirement determination
- procurement
- reliability centred maintenance
- systems engineering

Compliance requirements may include:

- authority
- delegations
- environmental
- legislative
- organisational policy
- regulatory

Life cycle may include:

- whole of a particular item/system/process, from identification of a capability need to capability disposal

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Assessment must confirm the ability to:
  - adhere to and apply relevant data and information management processes
  - analyse data and information
  - apply knowledge of integrated logistics support to assist in work and to guide problem solving
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels
of the candidate

- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups

- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY1208A  Develop and review materiel sustainment plans

Unit Descriptor
This unit covers the competency required to develop and review materiel sustainment plans and associated subordinate plans to ensure efficient and effective delivery of materiel sustainment across the materiel and materiel system life cycle. The materiel sustainment plans document how the materiel or materiel system will be supported to ensure they meet the stated capability requirement. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for materiel sustainment specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify materiel sustainment requirements

1.1 Materiel sustainment planning requirements are identified in accordance with organisational policy and procedures

1.2 Sources of information relevant to materiel sustainment are identified and accessed in accordance with organisational policy and procedures

1.3 Standards and legislation applicable to materiel sustainment are identified and accessed

1.4 Specific materiel sustainment requirements are assessed against available information

1.5 Life cycle costing analysis of requirements is conducted in accordance with organisational policy and procedures

2 Prepare materiel sustainment plans

2.1 Organisational policy and procedures relevant to materiel sustainment requirements are identified and interpreted

2.2 Stakeholder consultation is conducted in accordance with relevant organisational policy and procedures

2.3 Materiel sustainment plans are developed in accordance with legislative requirements and organisational policy and procedures
2.4 Materiel sustainment plans are promulgated in accordance with organisational policy and procedures

3 Review materiel sustainment plans

3.1 Materiel sustainment plans are reviewed in accordance with relevant organisational policy and procedures

3.2 Required changes to materiel sustainment plans are identified and prepared in accordance with relevant organisational policy and procedures

3.3 Amendments to materiel sustainment plans are prepared and promulgated to relevant stakeholders or personnel in accordance with relevant organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Codification and cataloguing processes
- Configuration management
- Contract management
- Industrial base capability
- Legislative and regulatory environment as it pertains to materiel logistics
- Life cycle costing
- Logistics governance
- Logistics support analysis principles and processes
- Materiel sustainment
- Organisational policy and procedures
- Organisational role relevant to materiel sustainment
- Performance based logistics
- Planning processes
- Procurement
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to materiel sustainment
- Supply chain
- Technical regulatory framework

Required skills:
- Apply materiel sustainment and project management knowledge in developing a plan
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of and determine, the strategic objectives of the organisation and identify long-term factors and external considerations that need to be taken into consideration when planning for materiel sustainment
• Display insight into how industry operates and the drivers that influence their dealings
• Display resilience by continuing to move forward despite criticism or setbacks
• Draw on information from a variety of sources using research, analysis and judgement to determine where internal and external factors impact on materiel sustainment requirements and adjust planning accordingly
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Undertake performance measurement to enable objectives to be measured against defined parameters
• Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Materiel sustainment may include:
• the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks

Organisational policy and procedures may include:
• Australian Standards
• International Standards
• logistics support analysis principles and processes
• organisational instructions and standards

Sources of information may include:
• conceptual documents
• contractors
• customers
• legislation
• managers
• peers
• plans
• policies
• publications
• reference material
• standards
• supervisors
• suppliers
Standards and legislation may include:
- Australian Standards
- International Standards
- organisational instructions and standards
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Life cycle costing is:
- the sum total of all costs, both direct and indirect, incurred over the total life cycle from concept through to disposal. Life cycle costing includes capability/concept development, development test and evaluation, acquisition, operation and support and disposal costs

Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel sustainment plans may include:
- disposal
- facilities
- technical data
- training
- transitional plans

Promulgated may include:
- authorised
- documented
- endorsed
- issued
- published

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this:
- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
UNIT

- Analyse materiel sustainment requirements
- Adjust plans as necessary to ensure effective and efficient performance
- Initiate and efficiently monitor processes
- Initiate any remedial action required

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

CONTEXT OF AND SPECIFIC RESOURCES FOR ASSESSMENT

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - Computer and relevant software
  - Legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - Plans
  - Workplace documentation

METHOD OF ASSESSMENT

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - Authenticated evidence from the workplace and/or training programs
  - Case studies
  - Demonstration
  - Feedback from supervisors and peers regarding the candidate’s ability
  - Observation
  - Portfolios
  - Projects
  - Questioning
  - Reviews or reports prepared by the candidate
  - Scenarios
  - Simulation or role plays
Develop materiel sustainment processes and procedures

Unit Descriptor
This unit covers the competency required to develop materiel sustainment processes and the attendant procedures, within the organisation. It includes anticipating and confirming the need for development, the development processes; gathering and analysing information; determining direction; and drafting, releasing and promoting the process. It includes the initial development of those procedures that are integral to the processes. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for materiel sustainment specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Analyse the materiel sustainment environment

1.1 Operation of the materiel sustainment environment is analysed and key factors and issues are identified

1.2 External and internal factors likely to impact on materiel sustainment needs and capabilities are continually monitored and analysed

1.3 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities, in accordance with organisational policy and procedures

1.4 Legislation and organisational policy and procedures that may impact on materiel sustainment activity are identified and analysed

2 Develop materiel

2.1 Consultation and negotiation with stakeholders is conducted in
Develop materiel sustainment processes and procedures

2 Materiel sustainment processes and procedures for materiel and materiel systems are developed and documented in accordance with organisational policy and procedures

2.3 Costing analysis of options is undertaken and documented in accordance with organisational policy and procedures

2.4 Procedures required to support the processes are identified, developed and documented

2.5 Processes and procedures are approved in accordance with organisational policy and procedures

3 Communicate materiel sustainment processes and procedures

3.1 Stakeholders are fully informed of the outcomes, in accordance with organisational policy and procedures

3.2 Materiel sustainment processes and procedures are promulgated in accordance with organisational policy and procedures

3.3 Policy and procedures are promoted in accordance with relevant organisational policy and procedures

4 Review materiel sustainment processes and procedures

4.1 Performance systems are monitored and analysed to assess the impact of processes and procedures in achieving plans and targets

4.2 Materiel sustainment processes and procedures are reviewed in accordance with organisational policy and procedures

4.3 Required changes to materiel sustainment processes and procedures are identified and prepared in accordance with relevant organisational policy and procedures

4.4 Amendments to materiel sustainment policy and procedures are documented and promulgated to relevant stakeholders, in accordance with relevant organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Codification and cataloguing processes

• Contract management

• Logistics support analysis principles and processes

• Management processes

• Materiel sustainment

• Organisational policy and procedures

• Organisational role relevant to materiel sustainment

• Performance based logistics

• Product knowledge related to systems and/or equipment in service in the organisation
• Safety, legislative and statutory requirements relevant to materiel sustainment

**Required skills:**

• Apply materiel sustainment and project management knowledge in developing processes and procedures

• Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved

• Demonstrate an understanding of the strategic objectives of the organisation, and identify long-term factors and external considerations that need to be taken into consideration when developing materiel processes and procedures

• Develop processes and procedures that can be readily understood by those responsible for action

• Display resilience by continuing to move forward despite criticism or setbacks; remain positive and respond to pressure in a controlled manner

• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals

• Undertake performance measurement to enable objectives to be measured against defined parameters

• Undertake research and analysis to determine internal and external factors that impact on the materiel sustainment program, and incorporate into processes and procedures accordingly

• Use appropriate information technology and software

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Materiel sustainment may include:

• the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks
Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Organisational policy and procedure may include:
- Australian Standards
- International Standards
- logistical support analysis
- organisational instructions and standards

Legislative requirements may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Costing may include the outlay or expenditure of:
- labour
- life cycle costs
- money
- resources
- time

Promulgated may include:
- authorised
- documented
- endorsed
- issued
- published
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - analyse materiel sustainment environment
  - identify requirements for processes and procedures and adjust them as necessary to ensure effective and efficient performance of the processes
  - initiate and efficiently monitor processes
  - initiate any remedial action required

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment

- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate

- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups

- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
- scenarios
- simulation or role plays
### TLIY1408A  Manage materiel sustainment operations

#### Unit Descriptor
This unit covers the competency required to prepare for materiel sustainment operations, to manage those operations throughout the materiel life cycle and to report on those operations in the organisational environment. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
This unit was developed for materiel sustainment specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

#### Competency Field
Y – Materiel Logistics

### ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

</table>
2.4 Life cycle costing analysis processes are developed and documented in accordance with organisational policy and procedures

3 Apply materiel sustainment management strategies

3.1 Materiel sustainment risks and impacts are identified, recorded and managed
3.2 Materiel sustainment procedures are applied in accordance with legislative requirements
3.3 Management activities are carried out in accordance with organisational policy and procedures
3.4 Failures and variances to plan are documented, reported and managed in accordance with organisational policy and procedures
3.5 Participation and contribution to materiel sustainment activities are established and maintained

4 Review materiel sustainment operations

4.1 Performance systems and processes are monitored and analysed to assess progress in achieving plans and targets
4.2 Systems, procedures and records associated with documenting performance are managed in accordance with the organisation’s requirements
4.3 Materiel sustainment operations are reviewed in accordance with organisational policy and procedures
4.4 Changes required are identified and prepared in accordance with organisational policy and procedures
4.5 Amendments to materiel sustainment operations are incorporated into plans and promulgated to relevant stakeholders, in accordance with organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Codification and cataloguing processes
- Industrial base capability
- Legislative and regulatory environment as it pertains to materiel logistics
- Logistics governance
- Logistics support analysis principles and processes
- Management processes
- Materiel sustainment
- Organisational policy and procedures
- Organisational role relevant to materiel sustainment
- Performance based logistics
• Product knowledge related to systems and/or equipment in service in the organisation
• Safety, legislative and statutory requirements relevant to materiel sustainment

**Required skills:**

• Apply integrated logistics support and project management knowledge to relevant materiel sustainment operations
• Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
• Demonstrate an understanding of the strategic objectives of the organisation, and identify long-term factors and external considerations that need to be taken into consideration when managing materiel sustainment operations
• Display resilience by continuing to move forward despite criticism or setbacks
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Manage obsolescence by ensuring implications of obsolescence are taken into consideration, and determining and implementing an obsolescence management strategy in accordance with policy and procedures
• Manage procurement activities occurring in the materiel sustainment environment
• Undertake performance measurement to enable objectives to be measured against defined parameters
• Undertake research and analysis to investigate internal and external factors that impact on the materiel sustainment program
• Use appropriate information technology and software

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:

• conceptual documents
• contractors
• legislation
• managers
• peers
• plans
• policies
• publications
• reference material
• standards
• supervisors
• suppliers
Materiel sustainment may include:

- the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks.

Organisational policy and procedures may include:

- Australian Standards
- International Standards
- logistics support analysis
- organisational instructions and standards
- through life support

Stakeholders may include:

- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel may include:

- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes.

Logistics support analysis is:

- the process for identifying and analysing the functional supportability requirements consistent with the goals of the Integrated Logistic Support program. Logistics Support Analysis also describes the process for the coordinated development of logistics related task data, and the processing of that data to define logistics resource requirements. Logistics Support Analysis defines analytical process for the preparation for In-service support and disposal, and the interface with Supportability Assessments (Supportability Test and Evaluation)
Key performance indicators may include:
- costs
- milestones
- production
- resources
- scheduling
- timings

Life cycle costing is:
- the sum total of all costs, both direct and indirect, incurred over the total life cycle from concept through to disposal. Life cycle costing includes capability/concept development, development test and evaluation, acquisition, operation and support and disposal costs

Legislative requirements may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Promulgated may include:
- authorised
- documented
- endorsed
- issued
- published

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify and establish materiel sustainment operation processes
  - identify, acquire and adjust resources as necessary to ensure effective and efficient performance of the processes
  - initiate and efficiently monitor processes
  - initiate any remedial action required
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate.
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups.
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays

- legislation, guidelines, procedures and protocols relating to test and evaluation processes
- plans
- workplace documentation
TLIY1508A Establish supply chains

Unit Descriptor
This unit covers the competency required to establish and develop a strategy and model for supply chain management. The establishment and development of supply chains in the materiel system are an integral support to the stated capability requirement. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for materiel logisticians working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine the requirements of the supply chain
1.1 Components of the supply chain are identified and their links and inter-relationships are analysed in accordance with organisational policy and procedures
1.2 Communication, data access, information sharing and technology requirements for an integrated supply chain are determined
1.3 Requirements for collaborative planning, forecasting and tailored supply chains are identified
1.4 Supply chain requirements are documented in accordance with organisational policy and procedures

2 Determine a strategy for supply chain management
2.1 Strategies for the supply chain are determined that cover outsourcing, choice of suppliers and partners, re-shaping contractual relationships and the performance of the entire supply chain rather than individual supply chain segments
2.2 Strategy includes matching supplier capability to customer requirements including strategies to optimise electronic information sharing and inventory risk management
2.3 Strategies to build effective customer supplier relationships are identified
2.4 Performance management strategies include customer
satisfaction requirements across the supply chain continuum

2.5 Supply chain management strategy includes strategic alliances, electronic business and electronic data interchange

2.6 Strategy addresses legal, ethical and security issues relating to supply chain management

2.7 Strategy includes the integration of supply chain processes into existing business processes

3 Develop a model for supply chain management

3.1 Supply chain management options are researched, and strengths and weaknesses of each option are identified

3.2 Supply chain management models are investigated and their requirements are analysed and compared with the capability and culture of the supply chain

3.3 Model for supply chain management is developed that meets the needs of the organisation including information flow, collaborative planning and forecasting in accordance with the organisation’s supply chain management strategy

3.4 Supply chain management model is developed to support reduced inventory footprints, operating costs, faster cycle times and greater customer satisfaction rates

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Codification and cataloguing processes
- Industrial base capability
- Integrated logistics support
- International agreements
- Interoperability
- Legislative and regulatory environment as it pertains to supply chains
- Logistics governance
- Logistics support analysis principles and processes
- Materiel sustainment
- Performance based logistics
- Planning processes
- Product knowledge related to systems and/or equipment in service in the organisation
- Organisational policy and procedures
- Organisational role relevant to supply chains
- Safety, legislative and statutory requirements relevant to supply chains
- Supply chain concepts

Required skills:
• Analyse and evaluate information, and determine how it may be impacted by the supply chain or how the supply chain might be impacted by the information being considered
• Apply logistics and project management knowledge in establishing supply chains
• Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
• Demonstrate an understanding of and determine the strategic objectives of the organisation, and identify long-term factors and external considerations that need to be taken into consideration when establishing a supply chain
• Display resilience by continuing to move forward despite criticism or setbacks
• Identify relevant information from the integrated logistics support program and materiel sustainment program that is relevant to the establishment of supply chains
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Source information on best practice approaches adopted in both the public and private sectors, demonstrating an insight into how industry operates and the business drivers that influence industry with their dealings
• Undertake performance measurement to enable objectives to be measured against defined parameters

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Supply chain may include:
  • cash flow
  • entire cycle from raw materials to producers, component suppliers, manufacturers, wholesalers, third party service providers, retailers, customers and recyclers, freight, distribution
  • use of open and international supply chain management standards

Organisational policy and procedures may include:
  • Australian Standards
  • International Standards
  • logistics support analysis principles and processes
  • organisational instructions and standards

Data may include:
  • electronic catalogues
  • electronic data interchange (EDI)
  • inventory data
  • logistics databases
  • product shipment data
  • real-time warehouse inventory status
Technology requirements may include:

- information technology to smooth the flow of data
- radio frequency identification (RFID), barcoding and scanning technology
- wireless application protocol (WAP) to allow personnel to access logistics databases via handheld or palm-sized devices

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - analyse supply chain requirements
  - identify the requirements for plans and adjust them as necessary to ensure effective and efficient performance
  - initiate and efficiently monitor processes
  - initiate any remedial action required
  - communicate with stakeholders
  - prepare and provide relevant reports and documentation

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment

- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate

- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups

- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace
and/or training programs
  o case studies
  o demonstration
  o feedback from supervisors and peers regarding the candidate’s ability
  o observation
  o portfolios
  o projects
  o questioning
  o reviews or reports prepared by the candidate
  o scenarios
  o simulation or role plays
TLIY1608A  Implement and monitor materiel sustainment plans

Unit Descriptor
This unit covers the competency required to implement and monitor materiel sustainment plans and associated subordinate plans. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for materiel sustainment specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify requirements for the provision of materiel sustainment plans
1.1 Sources of information relevant to materiel sustainment plans are identified and obtained in accordance with organisational policy and procedures
1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures
1.3 Materiel sustainment plans are assessed against reviewed information

2 Implement materiel sustainment plans
2.1 Performance indicators and other criteria for measurement of achievement are developed
2.2 Materiel sustainment risks and impacts relevant to the plan are identified, reported and managed
2.3 Materiel sustainment plans are implemented in accordance with organisational policy and procedures
2.4 Participation and contribution to materiel sustainment activities is established and maintained in accordance with the schedule

3 Monitor and report on implementation of materiel sustainment
3.1 Materiel sustainment plans are monitored and regularly reviewed in accordance with organisational policy and procedures
plans

3.2 Plans are amended and documented in accordance with organisational policy and procedures
3.3 Performance measures are monitored to ensure they address all key aspects of organisational performance and meet the requirements of stakeholders
3.4 Performance data is analysed on a regular basis both in terms of the indicators and compliance with organisational policy and procedures
3.5 Strategic performance is reported to all stakeholders in a transparent manner and meeting all compliance requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Codification and cataloguing processes
- Configuration management
- Contract management
- Logistics support analysis principles and processes
- Materiel sustainment processes related to planning
- Organisational policy and procedures impacting on materiel sustainment
- Organisational role relevant to materiel sustainment
- Performance based logistics
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements
- Technical regulatory framework
- Written communication to a level required in the preparation of correspondence and reports

Required skills:
- Apply materiel sustainment and project management knowledge relevant to work being performed
- Develop and/or comply with procedures to implement and monitor materiel sustainment plans
- Display resilience by continuing to move forward despite criticism or setbacks, remain positive and respond to pressure in a controlled manner
- Ensure that there are mechanisms in place to monitor materiel sustainment plans
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Negotiate and communicate with key stakeholders (both internal and external), receive their input, and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Undertake performance measurement to enable objectives to be measured against defined parameters
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:
- contractors
- customers
- legislation
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
- suppliers

Materiel sustainment plans may include:
- disposal
- facilities
- finance
- obsolescence
- technical data
- training
- transitional plans

Organisational policy and procedures may include:
- Australian Standards
- International Standards
- organisational instructions and standards

Performance indicators may include:
- costs
- milestones
- production
- resources
- scheduling
- timing
Materiel sustainment may include:

- the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks.

Compliance requirements may include:

- authority
- delegations
- environmental
- legislative
- organisational policy
- regulatory

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Assessment must confirm the ability to:
  - apply relevant implementation processes
  - monitor and report on implementation processes
  - analyse data and information
  - apply knowledge of materiel sustainment plans to assist in work and to guide problem solving

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment

- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
• Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
• Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  o authenticated evidence from the workplace and/or training programs
  o case studies
  o demonstration
  o feedback from supervisors and peers regarding the candidate’s ability
  o observation
  o portfolios
  o projects
  o questioning
  o reviews or reports prepared by the candidate
  o scenarios
  o simulation or role plays
TLIY1708A Conduct materiel sustainment activities

Unit Descriptor

This unit covers the competency required to conduct materiel sustainment activities. It includes the requirement to conduct a range of processes including the capture, recording, recovery and analysis of data; and maintenance of associated workplace networks and stakeholder requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

This unit was developed for materiel sustainment specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field

Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

Perforamnce criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to conduct materiel sustainment activities

1.1 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities in accordance with organisational policy and procedures

1.2 Effective relationships are developed with stakeholders through consultation

1.3 Legislation and organisational policy and procedures that may impact on materiel sustainment activities are identified and analysed

1.4 Sources of information relevant to materiel sustainment activities are identified and obtained, in accordance with organisational policy and procedures

1.5 All personnel involved in materiel sustainment are briefed in accordance with standard procedures

2 Conduct materiel sustainment activities

2.1 Materiel sustainment methods and techniques appropriate to the area are employed, in accordance with plans, schedules and standard procedures

2.2 Materiel sustainment activities are conducted and concluded within resource constraints

2.3 Materiel sustainment activities are implemented, monitored and amended based on changing circumstances in accordance
with methodologies and procedures

2.4 Resources are allocated to materiel sustainment in accordance with materiel sustainment plan and resource availability

3 Report on materiel sustainment activities

3.1 Materiel sustainment performance is reported to all stakeholders in a transparent manner and meeting all compliance requirements

3.2 Materiel sustainment activities are regularly reviewed to ensure systems and/or equipment capability is maintained throughout its life cycle, in accordance with organisational policy and procedures

4 Maintain materiel sustainment records

4.1 Materiel sustainment records are completed in accordance with relevant policy and procedures

4.2 Materiel sustainment records are amended and documented in accordance with organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Materiel sustainment processes
- Organisational policy and procedures related to materiel sustainment
- Organisational role relevant to materiel sustainment
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to materiel sustainment
- Written and oral communication to a level required in the preparation of correspondence and reports

Required skills:
- Analyse and evaluate information, and determine how it may be impacted by the materiel sustainment activities or how materiel sustainment activities might be impacted by the information being considered
- Apply materiel sustainment and project management knowledge relevant to work being performed
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Manage time and prioritise work to ensure objectives are met in accordance with required schedule
- Negotiate and communicate with key stakeholders (both internal and external), receive their input, and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Undertake performance measurement to enable objectives to be measured against defined parameters
- Use appropriate information technology and software

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Stakeholders may include:**
- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers

**Organisational policy and procedures may include:**
- Australian Standards
- International Standards
- organisational instructions and standards

**Legislation may include:**
- relevant federal, state and local government legislation and regulations

**Materiel sustainment may include:**
- the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks
Sources of information may include:

- contractors
- databases
- duty statements
- legislation
- managers
- peers
- plans
- policies
- procedures
- publications
- reference material
- standards
- supervisors
- suppliers

Materiel sustainment activities may include:

- data and information analysis
- data and information management
- data and information retrieval
- identification of data and information
- reporting
- research

Personnel may include:

- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers
- team members

Resources may include:

- information technology applications and tools
- financial
- infrastructure
- personnel
- time

© Commonwealth of Australia 2009
TL107 Transport and Logistics Training Package (Version 3)
To be reviewed by 2010
Methodologies and procedures may include:
- configuration management
- life cycle costing
- logistics support analysis
- maintenance requirement determination
- procurement
- reliability centred maintenance
- systems engineering

Compliance requirements may include:
- authority
- delegations
- environmental
- legislative
- regulatory
- organisational policy

Life cycle may include:
- whole of a particular item/system/process, from identification of a capability need to capability disposal

Materiel sustainment records may include:
- databases
- files
- finance systems
- logistics information technology systems
- logistics systems
- registers
- spreadsheets
- technical data systems

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - adhere to and apply relevant data and information management processes
  - analyse data and information
  - apply knowledge of materiel sustainment to assist in work and to guide problem solving
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
o computer and relevant software
o legislation, guidelines, procedures and protocols relating to test and evaluation processes
o plans
o workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate.
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups.
- Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY1808A Apply materiel sustainment processes and procedures

Unit Descriptor
This unit covers the competency required to apply materiel sustainment processes and procedures. The application of processes and procedures is specific to a variety of component processes including: materiel sustainment administrative procedures, materiel sustainment data collection and storage, and materiel sustainment data retrieval. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for materiel sustainment specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to apply materiel sustainment processes and procedures

1.1 Requirement for application of processes and procedures is identified from work requests/instructions and is confirmed

1.2 Occupational health and safety requirements, including those contained in organisation procedures, are applied throughout the operation

1.3 Resources and equipment required for the work are identified, acquired and prepared in accordance with organisational procedures

1.4 Sources of information relevant to materiel sustainment requirements are identified and obtained in accordance with organisational policy and procedures

2 Apply materiel sustainment processes and procedures

2.1 Materiel sustainment activities are conducted and concluded within resource constraints

2.2 Materiel sustainment activities are implemented, monitored and amended based on changing circumstances in accordance with organisational policy and procedures

3 Monitor and report on materiel sustainment processes and procedures

3.1 Materiel sustainment outcomes are reported in accordance
materiel sustainment processes and procedures

3.2 Materiel sustainment activities are monitored and reviewed to ensure systems and/or equipment capability is maintained in accordance with organisational policy and procedures

4 Maintain records for materiel sustainment processes and procedures

4.1 Materiel sustainment records are completed in accordance with organisational policy and procedures

4.2 Materiel sustainment records are amended and documented in accordance with organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Materiel life cycle
- Materiel sustainment administrative procedures
- Materiel sustainment data collection and storage requirements
- Materiel sustainment data retrieval procedures
- Organisational role relevant to materiel sustainment
- Safety, legislative and statutory requirements relevant to materiel sustainment
- Written communication to a level required in the preparation of letters and reports

Required skills:
- Apply materiel sustainment knowledge relevant to work being performed
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Operate equipment and systems relevant to materiel sustainment activities
- Use appropriate information technology and software

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation may include:
- Defence
- enterprises that work in materiel sustainment
- other government departments or instrumentalities that work with materiel
Materiel sustainment may include:

- the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks.

Organisational policy and procedures may include:

- Australian Standards
- International Standards
- organisational instructions and standards

Materiel sustainment activities may include:

- administrative procedures
- data collection and storage
- data retrieval

Resources may include:

- financial
- information technology applications and tools
- infrastructure
- personnel
- time
- transport

Materiel sustainment records may include:

- databases
- files
- finance systems
- logistics information technology systems
- logistics systems
- registers
- spreadsheets
- technical data systems

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  o adhere to and apply relevant data collection, storage and retrieval requirements
  o apply knowledge of materiel sustainment to assist in work and to guide problem solving

- Competency should be demonstrated over time and should be observed in a range of actual or simulated
work contexts

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY1908A  Provide specialist materiel sustainment advice

Unit Descriptor
This unit covers the competency required to provide specialist advice related to materiel sustainment. The provision of advice may be verbal or in a written format and will relate specifically to issues that are encountered in materiel sustainment activity. It includes the requirement to identify the issues, provide advice, formulate options and select the preferred option to address identified issues. This unit of competency specifically addresses advice that is relevant to materiel sustainment activity; it is not intended to cover technical advice that is provided in a broader context of the organisational endeavour or a professional discipline. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for materiel sustainment specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and analyse issue/s
1.1 Circumstances that require the provision of advice relating to materiel sustainment are observed, received and clarified
1.2 Issue/s are identified and confirmed, if necessary, through consultation with relevant personnel
1.3 Circumstances are analysed and issue/s are interpreted and clearly defined
1.4 Research related to issue/s is conducted and advice of relevant personnel is sought to clarify findings that are unclear

2 Formulate options for materiel sustainment advice
2.1 Options related to the provision of advice are identified and evaluated
2.2 Options are prioritised and preferred option/s is chosen

3 Provide specialist materiel sustainment
3.1 Advice is formulated and discussed with stakeholders
3.2 Stakeholder requirements are negotiated, documented and
advice incorporated within proposed advice

3.3 Concluding advice is provided in accordance with ethical and practical guidelines and within specified resource constraints

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Analysis process
- Duty of care
- Information sources
- Organisational guidelines and standards
- Organisational policy and procedures
- Product knowledge related to systems and/or equipment in service in the organisation
- Professional codes of practice
- Research techniques
- Specialist knowledge in materiel sustainment
- Verbal communication techniques
- Written communication to a level required in the preparation of letters and reports

Required skills:
- Approach negotiations with a clear understanding of key issues and persuasively negotiate to ensure that materiel sustainment considerations are addressed
- Display insight into how industry operates and the drivers that influence their dealings
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of materiel sustainment advice, present information confidently and select the appropriate medium for communication to influence a range of audiences
- Focus on gaining a clear understanding of others’ comments by listening and adapting to the audience to ensure that materiel sustainment considerations are addressed
- Identify, review and analyse information that may impact on the materiel sustainment program or may be impacted by the materiel sustainment program
- Liaise with stakeholders to harness information and opportunities that may impact on the materiel sustainment program
- Prepare and present reports that may be complex, to inform and/or to succinctly present an argument to enable results to be achieved
- Provide and receive feedback in a constructive manner
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Advice may be:
- ad hoc
- by request
- formal or informal
- verbal or written
- and may include advice relating to:
  - acquisitions
  - disposal
  - in-service support
  - inspections
  - policy implementation
  - staff processes
  - technical manual development
  - trials and interoperability
  - transitional planning
  - transport

Materiel sustainment may include:
- the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks

Ethical and practical guidelines must:
- comply with professional codes of practice (as applicable)

Resources may include:
- financial
- information technology applications and tools
- infrastructure
- personnel
- time

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - demonstrate clear communication of materiel sustainment information
  - demonstrate understanding of personal role
in relation to wider organisational or project context

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY2008A  Develop and review configuration management plans

Unit Descriptor
This unit covers the competency required to develop and review configuration management plans and associated subordinate plans to ensure efficient and effective delivery of configuration management across the materiel and materiel system life cycle. Configuration management plans document how the materiel or materiel system will be supported to ensure they meet the stated capability requirement. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report change processing and implementation status. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for configuration management specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and analyse configuration management requirements

1.1 Configuration management planning requirements are identified in accordance with organisational policy and procedures

1.2 Sources of information relevant to configuration management are identified and accessed in accordance with organisational policy and procedures

1.3 Standards and legislation applicable to configuration management are identified and accessed

1.4 Specific configuration management requirements are assessed against available information

1.5 Analysis of resource requirements is conducted in accordance with organisational policy and procedures
2 Prepare configuration management plans

2.1 Stakeholder consultation is conducted in accordance with relevant organisational policy and procedures
2.2 Organisational policy and procedures relevant to configuration management requirements are identified and interpreted
2.3 Configuration management plans are developed in accordance with legislative requirements and organisational policy and procedures
2.4 Configuration management plans are promulgated in accordance with organisational policy and procedures

3 Review configuration management plans

3.1 Configuration management plans are evaluated in accordance with relevant organisational policy and procedures
3.2 Required changes to configuration management plans are identified and prepared in accordance with relevant organisational policy and procedures
3.3 Amendments to configuration management plans are prepared and promulgated to relevant stakeholders or personnel in accordance with relevant organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Codification and cataloguing processes
- Configuration management
- Legislative and regulatory environment as it pertains to materiel logistics
- Logistics governance
- Organisational policy and procedures
- Organisational role relevant to configuration management
- Planning processes
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to configuration management
- Sustainment

Required skills:

- Apply configuration management and project management knowledge relevant to planning
- Consult and negotiate effectively with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall configuration management planning objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation and identify and assess potential alliances and effective strategies
- Display resilience by continuing to move forward despite criticism or setbacks
- Draw on information from a variety of sources using research, analysis and judgement to identify and develop configuration management plans
- Identify, review and analyse information that may impact on configuration management planning, or may be impacted by configuration management planning
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake performance measurement relevant to configuration management planning to enable objectives to be measured against defined parameters
- Use appropriate information technology and software

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Organisational policy and procedures may include:**
- Australian Standards
- International Standards
- organisational instructions and standards

**Sources of information may include:**
- conceptual documents
- contractors
- customers
- legislation
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
- suppliers

**Standards and legislation may include:**
- Australian Standards
- International Standards
- organisational instructions and standards
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements
Resource requirements may include:

- financial
- information technology applications and tools
- infrastructure
- personnel
- time
- transport

Stakeholders may include:

- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Configuration management plans may include:

- delegations
- instructions
- manuals
- processes

Promulgated include:

- authorised
- documented
- endorsed
- issued
- published

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify the requirements for plans and adjust them as necessary to ensure effective and efficient performance
  - initiate and efficiently monitor processes
  - initiate any remedial action required

- Competency should be demonstrated over time and should be observed in a range of actual or simulated...
work contexts

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY208A Contribute to materiel logistics strategies

Unit Descriptor
This unit covers the competency required to provide input to the development of materiel logistics strategies by employees, or others, who are not directly responsible for the development process itself. It includes contributions to the consultative, validation and review phases and the provision of feedback on the process. Materiel system is a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. Materiel logistics is the life cycle management of materiel to achieve the stated objectives of the capability managers. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for logistics specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

This unit cannot be used in a qualification in which TLIY108A Formulate materiel logistics strategies has been used.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Analyse the materiel logistics environment
1.1 Stakeholders are identified and consulted on materiel needs and capabilities in accordance with organisational policy and procedures
1.2 Effective relationships are developed with stakeholders through consultation
1.3 Legislation and organisational policy and procedures that may impact on materiel logistics activity are identified and analysed
1.4 Key factors and issues that have been identified from the operational concept of the materiel and materiel system are reviewed
2 Establish priorities for materiel logistics strategies

2.1 Organisation’s objectives are stated clearly and in measurable terms
2.2 Strategies are developed in the context of meeting chosen product differentiation and cost structure objectives in accordance with logistics support analysis principles
2.3 Materiel logistics activities are introduced, consistent with the strategic direction and costing

3 Review strategic performance

3.1 Performance indicators and other criteria for measurement of achievement are developed and documented
3.2 All key aspects of organisational performance are addressed in performance measures, to meet the interests of stakeholders
3.3 Performance data is analysed on a regular and planned basis, in terms of the indicators, performance standards and in accordance with organisational policy and procedures
3.4 Strategic performance is reported in accordance with organisational policy and procedures
3.5 Objectives and strategies are reviewed, revised and documented where necessary

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Acquisition processes
- Business processes
- Capability performance measurement
- Codification and cataloguing processes
- External environment scanning relating to social, political, economic and technological developments
- Industrial base capability
- Integrated logistics support
- International agreements and arrangements
- Interoperability
- Legislative and regulatory environment as it pertains to materiel logistics
- Life cycle costing
- Logistics governance
- Logistics support analysis principles and processes
- Materiel logistics
- Materiel system components
- Organisational policy and procedures
- Outsourcing/in-sourcing
• Performance based logistics
• Project management
• Strategic planning methodology
• Supply chain concepts
• Technical regulation
• Value chain concepts

**Required skills:**
• Analyse materiel logistics information to determine where internal and external factors impact on the materiel logistics environment, and adjust strategic planning activities accordingly
• Apply project management knowledge in contributing to materiel logistics strategies
• Build and sustain positive relationships with team members, stakeholders and clients
• Commit to action even in cases of limited information and conditions of uncertainty
• Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
• Display resilience by continuing to move forward despite criticism or setbacks
• Exercise judgement by using intelligence and commonsense to shape strategic thinking
• Identify, assess, and prioritise competing objectives to facilitate development of the overall materiel logistics strategy
• Manage time and prioritise work to ensure objectives are met in accordance with required schedule
• Prepare complex and sensitive material, present information confidently and select the appropriate medium for maximum communication effect to influence a range of audiences
• Source information on best practice approaches adopted in both the public and private sectors, demonstrating an insight into how industry operates and the business drivers that influence industry with their dealings
• Undertake research and analysis to determine operational concepts and strategic objectives and to identify impacts on the materiel logistics environment
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Stakeholders may include:
- capability manager
- contractors
- customers
- employees
- government agencies
- owners
- project managers
- regulators
- subordinates
- supervisors
- suppliers

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Organisational policy and procedures may include:
- Australian Standards
- International Standards
- organisational instructions and standards

Legislation may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Strategies may include:
- long-term plans which will guide the organisation in achieving its mission

Product may include:
- materials, parts, components, subassemblies, assemblies and equipment. The term product can encompass a family of products. A family of products is defined as all products of the same classification, design, construction, material, type, produced with the same production facilities, processes and quality of material, under the same management and quality controls, but having the acceptable variety of physical and functional characteristics defined and specified in the applicable engineering documentation
Logistics support analysis is: the process for identifying and analysing the functional supportability requirements consistent with the goals of the integrated logistic support program. Logistic support analysis also describes the process for coordinated development of logistics related task data, and the processing of that data to define logistics resource requirements. Logistic support analysis defines analytical process for the preparation for in-service support and disposal, and the interface with Supportability Assessments (Supportability Test and Evaluation).

Performance indicators may include: series of measurements/targets for each of the key result areas of the strategies.

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify the requirements for contribution and adjust them as necessary to ensure they meet objectives
  - initiate and efficiently monitor processes
  - initiate any remedial action required
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts.

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a
combination of methods such as:
  o authenticated evidence from the workplace and/or training programs
  o case studies
  o demonstration
  o feedback from supervisors and peers regarding the candidate’s ability
  o observation
  o portfolios
  o projects
  o questioning
  o reviews or reports prepared by the candidate
  o scenarios
  o simulation or role plays
### TLIY2108A

**Manage configuration management processes**

**Unit Descriptor**
This unit covers the competency required to prepare for configuration management processes, to manage those processes throughout the materiel life cycle and to report on those processes in the organisational environment. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report change processing and implementation status. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
This unit was developed for configuration management specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

**Competency Field**
Y – Materiel Logistics

### ELEMENT

Elements describe the essential outcomes of a unit of competency.

#### PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Identify configuration management requirements**
   1.1 Sources of information relevant to configuration management are identified and obtained in accordance with organisational policy and procedures
   1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures
   1.3 Configuration management requirements are defined and documented in accordance with organisational policy and procedures

2. **Develop configuration management strategies**
   2.1 Consultation with stakeholders is conducted in accordance with organisational policy and procedures
   2.2 Configuration management strategies are developed and recorded in accordance with organisational policy and procedures
   2.3 Key performance indicators are developed and documented in accordance with organisational policy and procedures
   2.4 Analysis of resource processes is developed and documented
3 **Apply configuration management strategies**

- 3.1 Configuration management risks and impacts are identified, recorded and managed
- 3.2 Configuration management procedures are applied in accordance with legislative requirements
- 3.3 Configuration management activities are carried out in accordance with organisational policy and procedures
- 3.4 Failures and variances to plan are documented, reported and managed in accordance with organisational policy and procedures
- 3.5 Participation and contribution to configuration management activities is established and maintained

4 **Review configuration management processes**

- 4.1 Performance systems and processes are monitored and analysed to assess progress in achieving plans and targets
- 4.2 Systems, procedures and records associated with documenting performance are managed in accordance with organisation’s requirements
- 4.3 Configuration management processes are reviewed in accordance with organisational policy and procedures
- 4.4 Changes required are identified and prepared in accordance with organisational policy and procedures
- 4.5 Amendments to configuration management processes are incorporated into plans and promulgated to relevant stakeholders in accordance with organisational policy and procedures

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Codification and cataloguing processes
- Configuration management principles and processes
- Industrial base capability
- Legislative and regulatory environment as it pertains to materiel logistics
- Logistics governance
- Management processes
- Organisational policy and procedures
- Organisational role relevant to configuration management
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to configuration management

**Required skills:**
• Apply configuration management and project management knowledge relevant to configuration management processes
• Demonstrate an understanding of the strategic objectives of the organisation and identifies and assesses potential alliances and effective strategies
• Display resilience by continuing to move forward despite criticism or setbacks
• Focus on clear communication of configuration management processes, present information confidently and select appropriate medium for communication to a range of audiences
• Identify, review and analyse information that may impact on configuration management processes, or may be impacted by configuration management processes
• Negotiate and communicate effectively with key stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall configuration management objectives are achieved
• Undertake research and analysis to identify and develop configuration management processes
• Use appropriate information technology and software for configuration management processes

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:
• contractors
• conceptual documents
• legislation
• managers
• peers
• plans
• policies
• publications
• reference material
• standards
• supervisors
• suppliers

Organisational policy and procedures may include:
• Australian Standards
• International Standards
• logistical support analysis
• organisational instructions and standards
Stakeholders may include:

- capability managers
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Key performance indicators may include:

- costs
- milestones
- production
- resources
- timings
- scheduling

Resource processes may include:

- financial
- information technology applications and tools
- infrastructure
- personnel
- transport

Legislative requirements may include:

- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Promulgated may include:

- authorised
- documented
- endorsed
- issued
- published

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify and establish configuration
management operation processes

- identify, acquire and adjust resources as necessary to ensure effective/efficient performance of the processes
- initiate and efficiently monitor processes
- initiate any remedial action required
- effectively and efficiently manage configuration management operations

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY2208A Implement and monitor configuration management plans

Unit Descriptor
This unit covers the competency required to implement and monitor configuration management plans, including adjusting current and future activity, amending plans, acquiring resources, liaising with stakeholders and providing associated reports. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report change processing and implementation status. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for configuration management specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify requirements for the provision of configuration management

1.1 Sources of information relevant to configuration management plans are identified and obtained in accordance with organisational policy and procedures

1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures

1.3 Configuration management plans are assessed against reviewed information

2 Implement configuration management plans

2.1 Performance indicators and other criteria for measurement of achievement are implemented

2.2 Configuration management risks and impacts relevant to the plan are identified, reported and managed

2.3 Configuration management plans are implemented in accordance with organisational policy and procedures

2.4 Participation and contribution to configuration management
Implement and monitor configuration management plans activities is established and maintained in accordance with the plan

3 **Monitor and report on implementation of configuration management plans**

<p>| | |</p>

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing processes
- Configuration management
- Configuration management processes related to planning
- Organisational policy and procedures impacting on configuration management
- Organisational role relevant to configuration management
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements
- Technical regulatory framework
- Written communication to a level required in the preparation of correspondence and reports

**Required skills:**

- Apply configuration management and project management knowledge relevant to work being performed
- Demonstrate an understanding of the strategic objectives of the organisation, and identify and assess potential alliances and effective strategies
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Implement processes to enable configuration management requirements to be effectively transitioned across the life cycle, including integrated logistics support considerations, and validation and verification activities
- Manage time and prioritise work to ensure objectives are met in accordance with the schedule
• Monitor processes to ensure that configuration management systems continue to enable the 
  operational requirements to be attained – this may include performance metrics
• Negotiate and communicate effectively with key stakeholders (both internal and external) and 
  resolve any potential areas of conflict or concern to ensure that overall configuration 
  management objectives are achieved

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and 
 situations that may affect performance.

Sources of information may include:
  • contractors
  • customers
  • legislation
  • managers
  • peers
  • plans
  • policies
  • publications
  • reference material
  • standards
  • supervisors
  • suppliers

Configuration management plans may include:
  • disposal
  • facilities
  • technical data
  • training
  • transitional plans

Organisational policy and procedures may include:
  • Australian Standards
  • International Standards
  • organisational instructions and standards

Performance indicators may include:
  • costs
  • milestones
  • production
  • resources
  • scheduling
  • timing
Compliance requirements may include:

- authority
- delegations
- environmental
- legislative
- organisational policy
- regulatory

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - apply relevant implementation processes
  - monitor and report on these processes
  - analyse data and information
  - apply knowledge of configuration management plans to assist in work and to guide problem solving

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers
regarding the candidate’s ability
  o observation
  o portfolios
  o projects
  o questioning
  o reviews or reports prepared by the candidate
  o scenarios
  o simulation or role plays
### TLIY2308A  Conduct configuration management activities

#### Unit Descriptor
This unit covers the competency required to conduct configuration management activities. It includes the requirement to conduct a range of processes including the capture, recording, recovery and analysis of data; and maintenance of associated workplace networks and stakeholder requirements. Materiel systems may include a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self sufficient in its intended operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
This unit was developed for configuration management specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

#### Competency Field
Y – Materiel Logistics

#### ELEMENT
Elements describe the essential outcomes of a unit of competency.

#### PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare to conduct configuration management activities** | 1.1 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities in accordance with organisational policy and procedures  
1.2 Effective relationships are developed with stakeholders through consultation  
1.3 Legislation and organisational policy and procedures that may impact on configuration management activities are identified and analysed  
1.4 Sources of information relevant to configuration management activities are identified and obtained in accordance with organisational policy and procedures  
1.5 All personnel involved in configuration management activities are briefed in accordance with standard procedures |

| **2 Conduct configuration** | 2.1 Configuration management methods and techniques appropriate to the area are employed in accordance with plans, |
management activities

schedules and standard procedures

2.2 Configuration management activities are conducted and concluded within resource constraints

2.3 Configuration management activities are implemented, monitored and amended based on changing circumstances, in accordance with methodologies and procedures

2.4 Resources are allocated to configuration management activities in accordance with the configuration management plan and resource availability

3 Report on configuration management

3.1 Configuration management performance is reported to all stakeholders in a transparent manner and meeting all compliance requirements

3.2 Configuration management reports are regularly reviewed to ensure systems and/or equipment capability is maintained throughout its life cycle in accordance with organisational policy and procedures

4 Maintain configuration management records

4.1 Configuration management records are completed in accordance with relevant policy and procedures

4.2 Configuration management records are amended and documented in accordance with organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Configuration management processes
- Organisational policy and procedures related to configuration management
- Organisational role relevant to configuration management
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to configuration management
- Technical regulatory framework
- Written and oral communication to a level required in the preparation of correspondence and reports

Required skills:

- Apply configuration management and project management knowledge relevant to work being performed
- Demonstrate an understanding of the strategic objectives of the organisation, and identify and assess potential alliances and effective strategies
- Display resilience by continuing to move forward despite criticism or setbacks
• Identify, review and analyse information that may impact on the configuration management program, or may be impacted by the configuration management program
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Manage time and prioritise work to ensure objectives are met in accordance with the schedule
• Negotiate and communicate effectively with key stakeholders (both internal and external), and resolve any potential areas of conflict or concern to ensure that overall configuration management objectives are achieved
• Undertake performance measurement relevant to configuration management to enable objectives to be measured against defined parameters
• Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Stakeholders may include:
• capability manager
• contractors
• customers
• project managers
• regulators
• subordinates
• supervisors
• suppliers

Materiel may include:
• all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Organisational policy and procedures may include:
• Australian Standards
• International Standards
• organisational instructions and standards

Legislation may include:
• relevant federal, state and local government legislation and regulations

Configuration management activities may include:
• data and information analysis
• data and information management
• data and information retrieval
• identification of data and information
• reporting
• research
Sources of information may include:
- contractors
- databases
- duty statements
- legislation
- managers
- peers
- plans
- policies
- procedures
- publications
- reference material
- standards
- supervisors
- suppliers

Personnel may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers
- team members

Resources may include:
- contractual
- financial
- information technology applications and tools
- infrastructure
- personnel
- time

Methodologies and procedures may include:
- configuration management
- life cycle costing
- logistics support analysis
- maintenance requirement determination
- procurement
- reliability centred maintenance
- systems engineering
Compliance requirements may include:
- authority
- delegations
- environmental
- legislative
- organisational policy
- regulatory

Life cycle may include:
- whole of a particular item/system/process, from identification of a capability need to capability disposal

Configuration management records may include:
- databases
- files
- information technology systems
- registers
- spreadsheets

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - adhere to and apply relevant data and information management processes
  - analyse data and information
  - apply knowledge of materiel configuration management to assist in work and to guide problem solving
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

Method of assessment
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands
such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of:
  o authenticated evidence from the workplace and/or training programs
  o case studies
  o demonstration
  o feedback from supervisors and peers regarding the candidate’s ability
  o observation
  o portfolios
  o projects
  o questioning
  o reviews or reports prepared by the candidate
  o scenarios
  o simulation or role plays
TLIY2408A  Apply configuration management processes and procedures

Unit Descriptor
This unit covers the competency required to apply configuration management processes and procedures. The application of processes and procedures is specific to a variety of component processes including: configuration management administrative procedures, configuration management data collection and storage, and configuration management data retrieval. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report change processing and implementation status. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for configuration management specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

ELEMENT
PERFORMANCE CRITERIA
1 Prepare to apply configuration management processes and procedures
1.1 Requirements for application of processes and procedures are identified from work requests/instructions and are confirmed
1.2 Occupational health and safety requirements, including those contained in organisation’s procedures, are applied throughout the operation
1.3 Resources and equipment required for the work are identified, acquired and prepared in accordance with organisational procedures
1.4 Sources of information relevant to configuration management requirements are identified and obtained in accordance with organisational policy and procedures

2 Apply configuration management processes
2.1 Configuration management activities are conducted and concluded within resource constraints
2.2 Configuration management activities are implemented, monitored and amended based on changing circumstances in accordance with organisational policy and procedures

3 Monitor and report on configuration management processes and procedures

3.1 Configuration management outcomes are reported in accordance with organisational policy and procedures

3.2 Configuration management activities are monitored and reviewed to ensure systems and/or equipment capability is maintained, in accordance with organisational policy and procedures

4 Maintain records for configuration management processes and procedures

4.1 Configuration management records are maintained in accordance with organisational policy and procedures

4.2 Configuration management records are amended and documented in accordance with organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Cataloguing and codification
- Configuration management administrative procedures
- Configuration management data collection and storage requirements
- Configuration management data retrieval procedures
- Materiel life cycle
- Organisation role relevant to configuration management
- Safety, legislative and statutory requirements relevant to configuration management
- Technical regulatory framework
- Written communication to a level required in the preparation of letters and reports

Required skills:
- Apply configuration management knowledge relevant to work being performed
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Operate equipment and systems relevant to configuration management activities
- Use appropriate information technology and software
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation may include:
- Defence
- enterprises that work in configuration management
- other government departments or instrumentalities that work with materiel

Organisational policy and procedures may include:
- Australian Standards
- International Standards
- organisational instructions and standards

Configuration management activities may include:
- configuration management administrative procedures
- configuration management data collection and storage
- configuration management data retrieval

Resources may include:
- financial
- information technology applications and tools
- infrastructure
- personnel
- time

Configuration management records may include:
- databases
- files
- registers
- spreadsheets

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  o adhere to apply relevant data collection, storage and retrieval requirements
  o apply knowledge of configuration management to assist in work and to guide problem solving
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  o computer and relevant software
Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate.
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups.
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY2508A  Provide specialist configuration management advice

Unit Descriptor
This unit covers the competency required to provide specialist advice related to configuration management. The provision of advice may be verbal or in a written format and will relate specifically to issues that are encountered in configuration management activity. It includes the requirement to identify the issues, provide advice, formulate options and select the preferred option to address identified issues. This unit of competency specifically addresses advice that is relevant to configuration management activity; it is not intended to cover technical advice that is provided in a broader context of the organisational endeavour or a professional discipline. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report changes to processing and implementation status. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for configuration management specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

ELEMENT PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and analyse issue/s

1.1 Circumstances that require the provision of advice relating to configuration management are observed, received and clarified

1.2 Issue/s are identified and confirmed, if necessary, through consultation with relevant personnel

1.3 Circumstances are analysed and issue/s are interpreted and clearly defined

1.4 Research related to issue/s is conducted and advice of relevant personnel is sought to clarify findings that are unclear
2 Formulate options for configuration management advice

2.1 Options related to the provision of advice are identified and evaluated
2.2 Options are prioritised and the preferred option/s is chosen

3 Provide specialist configuration management advice

3.1 Advice is formulated and discussed with stakeholders
3.2 Stakeholder requirements are negotiated, documented and incorporated within proposed advice
3.3 Concluding advice is provided in accordance with ethical and practical guidelines and within specified resource constraints

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Analysis process
- Duty of care
- Information sources
- Organisational guidelines and standards
- Organisational policy and procedures
- Product knowledge related to systems and/or equipment in service in the organisation
- Professional codes of practice
- Research techniques
- Specialist knowledge in configuration management
- Technical regulatory framework
- Verbal communication techniques
- Written communication to a level required in the preparation of letters and reports

Required skills:
- Approach negotiations with a clear understanding of key issues and persuasively negotiate to ensure that configuration management considerations are addressed
- Display an insight into how industry operates and the drivers that influence their dealings
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of configuration management advice, present information confidently and select the appropriate medium for communication to a range of audiences
- Identify, review and analyse information that may impact on the configuration management program, or may be impacted by the configuration management program
- Liaise with stakeholders to harness information and opportunities that may impact on the configuration management program
- Prepare and present reports that may be complex, to inform and/or to succinctly present an argument to enable results to be achieved
- Use appropriate information technology and software
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Advice may be:
- ad hoc
- by request
- formal or informal
- verbal or written
- and may include advice relating to:
  - acquisitions
  - disposal
  - in-service support
  - inspections
  - policy implementation
  - staff processes
  - technical manual development
  - trials and interoperability
  - transitional planning
  - transport

Ethical and practical guidelines must:
- comply with professional codes of practice (as applicable)

Resources may include:
- financial
- information technology applications and tools
- infrastructure
- personnel
- time

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - demonstrate clear communication of configuration management information
  - demonstrate understanding of personal role in relation to wider organisational or project context
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY2608A  Apply codification and cataloguing processes and procedures

Unit Descriptor

This unit covers the competency required to collect, analyse and catalogue codification data and information including identifying required codification information, analysing and preparing information for use, providing explanatory information, and cataloguing the information. Codification is the act of establishing and maintaining an item of supply identification and related data under a recognised cataloguing system and/or the national system of another country participating in international codification systems. Cataloguing is the act of recording and promulgating selected management data relating to the items of supply in recognised catalogues. The application of codification and cataloguing is specific to a variety of component processes including: materiel logistics administrative procedures, materiel logistics data collection and storage, and materiel logistics data retrieval. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

This unit was developed for codification and cataloguing specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field

Y – Materiel Logistics

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to apply codification and cataloguing processes and procedures

1.1 Requirement for application of codification and cataloguing processes and procedures is identified from work requests/instructions and is confirmed

1.2 Occupational health and safety requirements, including those contained in organisation’s procedures, are applied throughout the operation

1.3 Resources and equipment required for the work are identified, acquired and prepared in accordance with organisational procedures

1.4 Sources of information relevant to codification and cataloguing requirements are identified and obtained in
2 Apply codification processes and procedures

2.1 Codification information and data is collated and analysed in accordance with organisational policy and procedures
2.2 Research and analysis is conducted in accordance with codification requirements
2.3 Codification is established and confirmed in accordance with organisational policy and procedures

3 Apply cataloguing processes and procedures

3.1 Codification outcomes are interpreted and catalogued in accordance with organisational policy and procedures
3.2 Cataloguing activities are monitored and reviewed to ensure system capability is maintained in accordance with organisational policy and procedures

4 Maintain records for codification and cataloguing processes and procedures

4.1 Codification and cataloguing records are documented in accordance with organisational policy and procedures
4.2 Codification and cataloguing records are reviewed and updated in accordance with organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Codification and cataloguing administrative procedures
- Codification and cataloguing data collection and storage requirements
- Codification and cataloguing data storage and retrieval procedures
- Configuration management
- Integrated logistics support
- Materiel life cycle
- Materiel sustainment
- Organisational role relevant to codification and cataloguing
- Safety, legislative and statutory requirements relevant to codification and cataloguing
- Technical regulatory framework
- Written communication to a level required in the preparation of letters and reports

**Required skills:**
- Analyse and interpret codification and cataloguing data to source information for external and internal sources
- Apply codification and cataloguing knowledge relevant to work being performed
- Display resilience by continuing to move forward despite criticism or setbacks
• Draw on information from a variety of sources using research, analysis and judgement to identify information that needs to be incorporated into codification and cataloguing data
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation may include:
• Defence
• enterprises that require codification and cataloguing
• other government departments or instrumentalities that work with materiel

Organisational policy and procedures may include:
• Australian Standards
• International Standards
• organisational instructions and standards

Codification information and data may include:
• liaison
• manufacturer’s information
• physical descriptions
• technical drawings
• technical specifications

Cataloguing activities may include:
• administrative procedures
• data management
• data collection and storage
• data retrieval
• liaison

Codification and cataloguing records may include:
• databases
• files
• registers
• spreadsheets

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
• Assessment must confirm the ability to:
  o adhere to and apply relevant data collection, storage and retrieval requirements
  o apply knowledge of codification and cataloguing to assist in work and to guide
problem solving
• Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
• Competency should be assessed in the workplace or in a simulated workplace environment
• Access is required to:
  o computer and relevant software
  o legislation, guidelines, procedures and protocols relating to test and evaluation processes
  o plans
  o workplace documentation

Method of assessment
• Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
• Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
• Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  o authenticated evidence from the workplace and/or training programs
  o case studies
  o demonstration
  o feedback from supervisors and peers regarding the candidate’s ability
  o observation

  o simulation or role plays
### TL0708A

**Assess maintenance spares and manage repairable items**

**Unit Descriptor**
This unit covers the competency required to assess spares and manage repairable items in maintenance activities while complying with relevant regulations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
This unit was developed for materiel sustainment specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

**Competency Field**
Y – Materiel Logistics

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Perform spares assessment activities** | 1.1 Organisation spares assessment and supply information systems are identified and applied  
1.2 Maintenance data, spares usage data and trends are monitored, and required holdings of spares are varied as required  
1.3 Spares availability problems are identified and strategies are determined to resolve problems  
1.4 Acceptable sources of suitable substitute parts are identified and requirements for documentation are specified in accordance with organisational policy and procedures  
1.5 Configuration management requirements are observed in spares assessing |
| **2 Manage repairable items** | 2.1 Maintenance and reliability data is monitored and changes to maintenance programs are proposed where necessary  
2.2 Documentation is raised to allocate repairable items to maintenance facilities in accordance with contractual requirements, and organisational policy and procedures  
2.3 Specific investigation or additional maintenance requirements are specified |
| **3 Maintain records** | 3.1 Data required for input to Integrated Logistics Support (ILS) |
records is provided where applicable

3.2 Systems, procedures and records associated with documenting performance are managed in accordance with the organisational requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Codification and cataloguing processes
- Configuration management
- Industrial base capability
- Integrated logistics support
- Legislative and regulatory environment as it pertains to materiel logistics
- Logistics governance
- Logistics support analysis principles and processes
- Management processes
- Materiel sustainment
- Organisational policy and procedures
- Organisational role relevant to materiel sustainment
- Performance based logistics
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to materiel sustainment

Required skills:
- Analyse and interpret assessment information to determine where internal and external factors impact on the assessment of spares and management of repairable items
- Demonstrate an understanding of the strategic objectives of the organisation to identify long-term factors and external considerations that need to be taken into consideration
- Draw on information from a variety of sources using research, analysis and judgement to develop assessment requirements
- Effectively administer spares and services contracts and their deliverables
- Effectively consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake procurement activities occurring in the spares and repairable item environment
- Use appropriate information technology and software to assess and manage repairable items
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Spares assessment and supply information systems may be:
- developed within the organisation
- manual or computer-based
- proprietary systems purchased by the organisation

Suitable substitute parts may be identified from:
- drawings, standards and specifications in the case of piece parts and materials
- manufacturers’ catalogues and specifications in the case of complete components (items of products)
- modification data

Organisational policy and procedures may include:
- Australian Standards
- International Standards
- logistics support analysis
- organisational instructions and standards

Repairable items may include:
- electrical system components
- electronic systems components
- engines and engine components
- hydraulic, pneumatic and fuel components
- instrument system components
- items of role equipment
- items of safety equipment
- mechanical components
- removable structural components

Investigation or additional maintenance requirements may include:
- compliance with directives or special technical instructions
- incident investigation
- modifications
- service bulletin compliance
- service difficulty (defect) report investigation
- warranty claims

ILS records may include:
- baselines for reliability, availability and maintainability
- failure modes, effects and criticality analysis
- life cycle costing data
- logistics support analysis plans
- logistics support analysis record data
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - initiate and efficiently monitor processes
  - initiate any remedial action required
  - communicate with stakeholders
  - prepare and provide relevant reports and documentation
  - effectively and efficiently manage materiel sustainment operations
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

Method of assessment
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
o scenarios
o simulation or role plays
TLIY2808A  Apply knowledge of logistics

Unit Descriptor
This unit covers the competency required to analyse and apply knowledge of logistics. The application of this knowledge is required by people who are not currently specialists in the field but need the knowledge to inform their decision making. The application of logistics knowledge is specific to a variety of component processes in logistical activities including the logistics support to operations, logistics support to capability and the application of logistics systems. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for emerging logistics specialists within Defence who need an understanding of the functions and activities of the wider organisation but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Access and interpret relevant logistics information
1.1 Relevant logistics requirements are identified and obtained
1.2 Logistics information obtained is analysed to determine the relevance and application to the organisation
1.3 Outcomes of the analysis are formulated and recommendations relevant to logistics are determined

2 Use knowledge of logistics
2.1 Logistics requirements and recommendations relevant to work being conducted are applied in accordance with organisational policy and procedures
2.2 Effectiveness of the recommendations is assessed, reviewed and recorded in accordance with organisational policy and procedures
2.3 Recommendations are adjusted if required and documented for future application in accordance with organisational policy and procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Logistics information or information systems
- Logistics knowledge relevant to the work performed
- Logistics relevant to logistics support to capability and logistics support to operations
- Safety, legislative and statutory requirements relevant to logistics

Required skills:
- Analyse and interpret logistics information to determine where internal and external factors impact on the logistics requirements, and adjust planning accordingly
- Consult and negotiate with key stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of key logistics information, present information confidently and select the appropriate medium for communication to a range of audiences
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake research and analysis to determine where internal and external factors impact on logistics requirements, and adjust planning accordingly
- Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Logistics may include:
- logistics support to capability
- logistics support to operations and logistics systems

Organisation may include:
- Defence
- enterprises that work in logistics
- other government departments or instrumentalities that require logistics support

Organisational policy and procedures may include:
- Australian Standards
- International Standards
- organisational instructions and standards

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to
- Assessment must confirm the ability to:
  - adhere to relevant logistics requirements
demonstrate competency in this unit

- apply knowledge of logistics to assist in work and to guide problem solving
- demonstrate understanding of personal role in relation to wider organisational or project context

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
**TLIY2908A**  
**Apply knowledge of integrated logistics support**

**Unit Descriptor**  
This unit covers the competency required to analyse and apply knowledge of integrated logistics support. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system with the aim of ensuring that operational and preparedness requirements are met, at a minimised life cycle cost, within regulatory, legislative and contractual constraints. The application of this knowledge is required by people who are not integrated logistics support specialists but who need the knowledge to inform their decision making. The application of integrated logistics support knowledge is specific to a variety of component processes in material logistics activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
This unit was developed for logistics specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion, and judgement and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

**Competency Field**  
Y – Materiel Logistics

---

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

| 1 Access and interpret relevant integrated logistics support information | 1.1 Relevant integrated logistics support requirements are identified and obtained  
1.2 Integrated logistics information obtained is analysed to determine the relevance and application to the organisation  
1.3 Outcomes of the analysis are formulated and recommendations relevant to integrated logistics support are determined |
| 2 Use knowledge of integrated logistics support | 2.1 Integrated logistics support requirements and recommendations relevant to materiel and materiel logistics are applied in accordance with organisational policy and procedures  
2.2 Effectiveness of the recommendations is assessed, reviewed |
and recorded in accordance with organisational policy and procedures

2.3 Recommendations are adjusted if required and documented for future application in accordance with organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Integrated logistics support
• Materiel life cycle
• Safety, legislative and statutory requirements relevant to materiel and materiel systems
• Sustainment knowledge relevant to the work performed
• Sustainment relevant to materiel and materiel systems

Required skills:
• Analyse and interpret integrated logistics support information to determine where internal and external factors impact on the integrated logistics requirements, and adjust planning accordingly
• Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
• Display resilience by continuing to move forward despite criticism or setbacks
• Focus on clear communication of key integrated logistics support information, present information confidently and select the appropriate medium for communication to a range of audiences
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Undertake research and analysis to determine where internal and external factors impact on integrated logistics support requirements, and adjust planning accordingly
• Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation may include: • Defence
• enterprises that work in materiel logistics
• other government departments or instrumentalities that work with materiel
Materiel may include: • all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Materiel logistics is: • the life cycle management of materiel to achieve the stated objectives of capability managers

Organisational policy and procedures may include: • Australian Standards • International Standards • organisational instructions and standards

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit • Assessment must confirm the ability to:
  o adhere to relevant integrated logistics support requirements
  o apply knowledge of integrated logistics support to assist in work and to guide problem solving
  o demonstrate understanding of personal role in relation to wider organisational or project context

• Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment • Competency should be assessed in the workplace or in a simulated workplace environment

• Access is required to:
  o computer and relevant software
  o legislation, guidelines, procedures and protocols relating to test and evaluation processes
  o plans
  o workplace documentation

Method of assessment • Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate

• Assessment methods should reflect workplace demands such as literacy and the needs of particular groups

• Assessment methods suitable for valid and reliable
assessment of this unit of competency may include a combination of methods such as:
- authenticated evidence from the workplace and/or training programs
- case studies
- demonstration
- feedback from supervisors and peers regarding the candidate’s ability
- observation
- portfolios
- projects
- questioning
- reviews or reports prepared by the candidate
- scenarios
- simulation or role plays
TLIY3008A  Apply knowledge of materiel sustainment

Unit Descriptor
This unit covers the competency required to analyse and apply knowledge of materiel sustainment. The application of this knowledge is required by people who are not materiel sustainment specialists but who need the knowledge to inform their decision making. The application of materiel sustainment knowledge is specific to a variety of component processes in material logistics activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for logistics specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Access and interpret relevant materiel sustainment information

1.1 Relevant materiel sustainment requirements are identified and obtained

1.2 Materiel sustainment information obtained is analysed to determine the relevance and application to the organisation

1.3 Outcomes of the analysis are formulated and recommendations relevant to materiel sustainment are determined

2 Use knowledge of materiel sustainment

2.1 Materiel sustainment requirements and recommendations relevant to materiel and materiel logistics are applied in accordance with organisational policy and procedures

2.2 Effectiveness of the recommendations is assessed, reviewed and recorded in accordance with organisational policy and procedures

2.3 Recommendations are adjusted if required and documented for future application in accordance with organisational policy and procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Contract management
- Materiel sustainment knowledge relevant to the work performed
- Materiel life cycle
- Materiel sustainment relevant to materiel and materiel systems
- Organisational policy and procedures
- Organisational role relevant to materiel sustainment
- Safety, legislative and statutory requirements relevant to materiel and materiel systems

Required skills:
- Analyse and interpret materiel sustainment information to determine where internal and external factors impact on the integrated logistics requirements, and adjust planning accordingly
- Consult and negotiate with key stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Display resilience by continuing to move forward despite criticism or setbacks
- Draw on information from a variety of sources using research, analysis and judgement to determine where internal and external factors impact on materiel sustainment requirements and adjust planning accordingly
- Focus on clear communication of materiel sustainment information, present information confidently and select the appropriate medium for communication to a range of audiences
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Materiel sustainment may include:
- the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks
Organisation may include:
- Defence
- enterprises that work in materiel logistics
- other government departments or instrumentalities that work with materiel

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Materiel logistics is:
- the life cycle management of materiel to achieve the stated objectives of the capability managers

Organisational policy and procedures may include:
- Australian Standards
- International Standards
- organisational instructions and standards

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - adhere to relevant materiel sustainment requirements
  - apply knowledge of materiel sustainment to assist in work and to guide problem solving
  - demonstrate understanding of personal role in relation to wider organisational or project context
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

Method of assessment
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels
of the candidate

- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY308A Develop and review integrated logistics support plans

Unit Descriptor
This unit covers the competency required to develop and review integrated logistics support plans and associated subordinate plans to ensure efficient and effective delivery of integrated logistics support across the materiel and materiel system life cycle. Integrated logistics support plans document how the materiel or materiel system will be supported to ensure they meet the stated capability requirement. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for integrated logistics support specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify integrated logistics support requirements

1.1 Integrated logistics support planning requirements are identified in accordance with organisational policy and procedures

1.2 Sources of information relevant to integrated logistics support are identified and accessed in accordance with organisational policy and procedures

1.3 Standards and legislation applicable to integrated logistics support are identified and accessed

1.4 Specific integrated logistics support requirements are assessed against available information

1.5 Life cycle costing analysis of requirements is conducted in accordance with organisational policy and procedures
2 Prepare integrated logistics support plans

2.1 Organisational policy and procedures relevant to integrated logistics support requirements are identified and interpreted
2.2 Stakeholder consultation is conducted in accordance with relevant organisational policy and procedures
2.3 Integrated logistics support plans are developed in accordance with legislative requirements and organisational policy and procedures
2.4 Integrated logistics support plans are promulgated in accordance with organisational policy and procedures

3 Review integrated logistics support plans

3.1 Integrated logistics support plans are reviewed in accordance with relevant organisational policy and procedures
3.2 Required changes to integrated logistics support plans are identified and prepared in accordance with relevant organisational policy and procedures
3.3 Amendments to integrated logistics support plans are prepared and promulgated to relevant stakeholders or personnel in accordance with relevant organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Codification and cataloguing processes
- Industrial base capability
- Integrated logistics support
- International agreements
- Interoperability
- Legislative and regulatory environment as it pertains to materiel logistics
- Logistics support analysis principles and processes
- Logistics governance
- Materiel sustainment
- Organisational policy and procedures
- Organisational role relevant to integrated logistics support
- Performance based logistics
- Planning processes
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to integrated logistics support
- Supply chain concepts

Required skills:
- Apply integrated logistics support and project management knowledge in planning
• Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
• Demonstrate an understanding of the strategic objectives of the organisation to identify long-term factors and external considerations that need to be taken into consideration when planning for integrated logistics support
• Display resilience by continuing to move forward despite criticism or setbacks
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Undertake performance measurement to enable objectives to be measured against defined parameters
• Undertake research and analysis to determine where internal and external factors impact on the integrated logistics support requirements, and adjust planning accordingly
• Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisational policy and procedures may include:
• Australian Standards
• International Standards
• logistics support analysis principles and processes
• organisational instructions and standards

Sources of information may include:
• conceptual documents
• contractors
• customers
• legislation
• managers
• peers
• plans
• policies
• publications
• reference material
• standards
• supervisors
• suppliers
Standards and legislation may include:

- Australian Standards
- International Standards
- organisational instructions and standards
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Life cycle costing is:

- the sum total of all costs, both direct and indirect, incurred over the total life cycle from concept through to disposal. Life cycle costing includes capability/concept development, development test and evaluation, acquisition, operation and support and disposal costs

Stakeholders may include:

- capability manager
- contractors
- customers
- project managers
- regulatory authorities
- subordinates
- supervisors
- regulators
- suppliers
- team members

Integrated logistics support plans may include:

- disposal
- facilities
- technical data
- training
- transitional plans

Promulgated may include:

- authorised
- documented
- endorsed
- issued
- published

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this:

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
unit

- identify the requirements for plans and adjust them as necessary to ensure effective and efficient performance
- initiate and efficiently monitor processes
- initiate any remedial action required

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY3108A  Apply knowledge of configuration management

Unit Descriptor
This unit covers the competency required to analyse and apply knowledge of configuration management. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report change processing and implementation status. The application of this knowledge is required by people who are not configuration management specialists but who need the knowledge to inform their decision making. The application of configuration management knowledge is specific to a variety of component processes in material logistics activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for logistics specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Access and interpret relevant configuration management information
1.1 Relevant configuration management requirements are identified and obtained
1.2 Configuration management information obtained is analysed to determine the relevance and application to the organisation
1.3 Outcomes of the analysis are formulated and recommendations relevant to configuration management requirements are determined

2 Use knowledge of configuration management
2.1 Configuration management requirements and recommendations relevant to materiel and materiel logistics are applied in accordance with organisational policy and procedures
2.2 Effectiveness of the recommendations is assessed, reviewed and recorded in accordance with organisational policy and
2.3 Recommendations are adjusted if required and documented for future application in accordance with organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Integrated logistics support
- Configuration management knowledge relevant to the work performed
- Configuration management relevant to materiel and materiel systems
- Materiel life cycle
- Materiel sustainment
- Safety, legislative and statutory requirements relevant to materiel and materiel systems
- Technical regulatory framework

Required skills:
- Analyse and interpret configuration management information to determine where internal and external factors impact on the configuration management requirements, and adjust planning accordingly
- Consult and negotiate with key stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of configuration management information, present information confidently and select the appropriate medium for communication to a range of audiences
- Identify, interpret and analyse configuration management requirements relevant to work being performed
- Undertake research and analysis to determine where internal and external factors impact on configuration management requirements, and adjust planning accordingly
- Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation may include:
- Defence
- Enterprises that work in materiel logistics
- Other government departments or instrumentalities that work
Materiel may include:

- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Materiel logistics is:

- the life cycle management of materiel to achieve the stated objectives of the capability managers

Organisational policy and procedures may include:

- Australian Standards
- International Standards
- organisational instructions and standards

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Assessment must confirm the ability to:
  - adhere to relevant control and recording requirements
  - apply knowledge of compliance management to assist in work and to guide problem solving
  - demonstrate understanding of personal role in relation to wider organisational or project context
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable
assessment of this unit of competency may include a combination of methods such as:
  o authenticated evidence from the workplace and/or training programs
  o case studies
  o demonstration
  o feedback from supervisors and peers regarding the candidate’s ability
  o observation
  o portfolios
  o projects
  o questioning
  o reviews or reports prepared by the candidate
  o scenarios
  o simulation or role plays
TLIY3208A  Apply knowledge of technical regulatory framework

Unit Descriptor
This unit covers the competency required to analyse and apply knowledge of the technical regulatory framework. The application of this knowledge is required by people who are not specialists of the technical regulatory framework but need the knowledge to inform their decision making. The application of technical regulatory framework knowledge is specific to a variety of component processes in material logistics activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for logistics specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Access and interpret relevant technical regulatory framework information
1.1 Relevant technical regulatory framework requirements are identified and obtained
1.2 Technical regulatory information obtained is analysed to determine the relevance and application to the organisation
1.3 Outcomes of the analysis are formulated and recommendations relevant to technical regulatory requirements are determined

2 Use knowledge of technical regulatory framework
2.1 Technical regulatory requirements and recommendations relevant to materiel and materiel logistics are applied in accordance with organisational policy and procedures
2.2 Effectiveness of the recommendations is assessed, reviewed and recorded in accordance with organisational policy and procedures
2.3 Recommendations are adjusted if required and documented for future application in accordance with organisational policy and procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Configuration management
- Materiel life cycle
- Safety, legislative and statutory requirements relevant to materiel and materiel systems
- Technical regulatory framework knowledge relevant to the work performed
- Technical regulatory framework relevant to materiel and materiel systems

Required skills:
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of technical regulatory information to a range of audiences
- Identify, interpret and analyse technical regulatory requirements relevant to work being performed
- Present technical regulatory information confidently and select the appropriate medium for communication
- Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Technical regulatory framework may include compliance in:
- environment
- safety
- suitability

Organisation may include:
- Defence
- enterprises that work in materiel logistics
- other government departments or instrumentalities that work with materiel

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Materiel logistics is:
- the life cycle management of materiel to achieve the stated objectives of the capability managers
Organisational policy and procedures may include:

- Australian Standards
- International Standards
- Organisational instructions and standards

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Assessment must confirm the ability to:
  - Adhere to relevant compliance requirements
  - Apply knowledge of the technical regulatory framework to assist in work and to guide problem solving
  - Demonstrate understanding of personal role in relation to wider organisational or project context
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - Computer and relevant software
  - Legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - Plans
  - Workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - Authenticated evidence from the workplace and/or training programs
  - Case studies
  - Demonstration
  - Feedback from supervisors and peers regarding the candidate’s ability
  - Observation
  - Portfolios
0 projects
0 questioning
0 reviews or reports prepared by the candidate
0 scenarios
0 simulation or role plays
TLIY3308A  Apply technical regulatory framework compliance management systems

Unit Descriptor
This unit covers the competency required to apply and validate technical regulatory framework compliance management systems, processes and procedures established by an organisation to fulfil its obligations and responsibilities under applicable compliance requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for technical regulatory framework specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Prepare for compliance roles and responsibilities

1.1 Structure of the organisation is examined to identify the roles, authorities, accountabilities and responsibilities of the various managers and operational staff in maintaining compliance within the technical regulatory framework.

1.2 Technical regulatory framework compliance requirements applicable to the work area/operational unit are identified, confirmed and interpreted.

1.3 Specific responsibilities of the individual or team are identified and clarified.

1.4 Feedback and performance indicators on the operation of the technical compliance management processes and procedures are reviewed and agreed with the manager/team leader.

1.5 Appropriate briefings and training are undertaken to ensure jobholder is aware of roles and responsibilities within the planned technical regulatory framework compliance management system.

2 Apply technical compliance management system

2.1 Technical regulatory framework components of technical compliance management system are confirmed, and authorised procedures for their implementation are clarified.
2.2 Resources for the application of technical regulatory framework compliance management system are accessed and utilised in accordance with organisational policy and procedures

2.3 Implementation plan and schedule are accessed and applied in collaboration with managers and operations staff and in accordance with relevant technical regulatory framework

2.4 Essential technical regulatory framework preconditions for any duty, function or activity are confirmed before proceeding with designated or assigned work

3 Validate individual application of technical compliance management processes

3.1 Specified information on individual’s role and responsibilities within technical compliance management system is gathered from appropriate sources

3.2 Feedback and performance indicator satisfaction data is prepared, reviewed and processed in accordance with agreed workplace practices

3.3 Problems in the application of technical compliance management system and in particular any breach of compliance requirements are identified and appropriate action is initiated to address the problems concerned

3.4 Reports on any identified breaches of compliance requirements and related action taken are prepared and processed to the responsible authority/stakeholder

3.5 Records of technical regulatory framework activities are maintained in accordance with approved systems requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Configuration management
- Elements of the technical regulatory framework compliance management systems including:
  - breach management policies and processes including the identification, classification, investigation, rectification and reporting of breaches in compliance requirements
  - compliance complaints handling systems
  - compliance related management information systems
  - compliance reporting procedures
  - continuous improvement processes for compliance including validation and review
  - corporate induction and training processes related to compliance
  - documentation of compliance requirements relevant to the specified work role/area
  - liaison procedures with relevant internal personnel on compliance related matters
  - processes for the internal promulgation of information on compliance requirements
o reporting processes on compliance including reports on breaches and rectification action
o specification of local work area compliance management functions, authorities, accountabilities and responsibilities under the technical regulatory framework
o techniques and performance indicators for validating the individual application of a compliance system

- Quantitative and qualitative data analysis techniques relevant to compliance applications
- Relevant Australian Standards and International Standards
- Sources of data relevant to compliance
- Techniques suitable for applying compliance related systems and activities

**Required skills:**
- Apply technical regulatory framework knowledge relevant to work being performed
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Operate equipment and systems relevant to technical regulatory framework activities
- Use appropriate information technology and software

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Technical regulatory framework compliance requirements:**
- may include those authorised by the relevant technical regulatory framework and contained in implementation directions from internal authorities
- will be based on:
  o codes of practice
  o internal policies
  o organisational policy and procedures
  o standard operating procedures
  o standards

**Technical regulatory framework components may include:**
- configuration management
- design and design approval
- engineering including engineering change
- integrated logistics support
- logistics
- materiel sustainment
- procurement
- quality
Resources may include:

- access to appropriate technical expertise
- communication systems
- facilities
- financial
- human resources
- information technology capabilities and systems
- infrastructure
- time
- transport

Specified information may include:

- plans
- project plans
- standing instructions
- standard operating procedures
- work flow charts
- work instructions
- work procedures

Breaches may include:

- Defence Force Discipline Act
- penalties, which may include sanctions, suspension, loss of formal recognition or accreditation, and court determination in relation to criminal or civil cases
- Public Service Act
- relevant civil legislation and regulations
- relevant commercial legislation and regulations

Responsible authority/stakeholder may include:

- compliance management team (where relevant)
- compliance specialists at the operational level
- legal and business advisors and consultants with expertise in compliance management
- project sponsors
- representatives of professional associations and institutes relevant to the Defence organisation’s operations and sphere of business
- senior management team
- technical regulatory authorities

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to**

- Assessment must confirm the ability to:
  - adhere to and apply relevant data collection,
demonstrate competency in this unit

- storage and retrieval requirements
  - apply knowledge of a technical regulatory framework compliance management system to assist in work and to guide problem solving
  - demonstrate understanding of personal role in relation to wider organisational or project context

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY3408A  Apply technical risk management systems and techniques

Unit Descriptor
This unit covers the competency required to assist with aspects of risk management in relation to the technical integrity of an organisation’s materiel. It specifically involves assisting in the planning, control and review of risks associated with the organisation’s materiel. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for technical regulatory framework specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Assist with risk analysis and planning

1.1 Contribution is made to identify and prioritise risks to the technical integrity of the organisation’s materiel

1.2 Within delegated technical/engineering authority, input is provided to develop risk management strategies and risk management plans within established guidelines

1.3 Established risk analysis methods, techniques and tools are used to assist in the analysis of risks in accordance with organisational plans

1.4 Reporting mechanisms for risks to technical integrity are incorporated, in accordance with organisational plans

2  Conduct risk control activities

2.1 Risk control activities are undertaken in accordance with organisational plans

2.2 Risks to technical integrity are acted on within technical/engineering authority or reported to others for response

2.3 Contribution is made to the implementation of agreed risk approaches and the amendment of plans to reflect the changing context

2.4 Opportunities are identified and reported for action in the
same way as risks

3 **Contribute to assessing risk management outcomes**

3.1 Contribution is made to the ongoing review of the technical integrity of organisational materiel to determine the effectiveness of risk management activities by accessing data and available information.

3.2 Risk management issues and responses are reported to others for lessons learned or application in future technical/engineering activities.

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Risk management as applied in a technical/engineering context, including principles, tools, techniques, standards and processes
- Technical regulatory framework, organisation’s engineering management plan and risk management plan

**Required skills:**

- Apply safety, legislative and statutory requirements relevant to technical risk management
- Apply technical risk management knowledge relevant to work being performed
- Interpret organisational role relevant to technical risk management
- Operate equipment and systems relevant to technical risk management activities
- Use appropriate information technology and software

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Risks may include:

- actual
- likely/probable
- perceived
- potential
- sources of technical risk and associated documents may include:
  - design change
  - Engineering Management Plan
  - Risk Management Plan
  - appropriate standards
Delegated technical/engineering authority may include authority:
- appointed in accordance with the relevant technical regulatory framework
- subject to frequent change in a multi-disciplinary environment
- under limited guidance and supervision
- within agreed authorisation and limits
- within established organisational framework, procedures and routines

Risk analysis methods, techniques and tools may include:
- assisting in qualitative and/or quantitative risk analysis, such as schedule simulation, decision analysis, contingency planning and alternative strategy development
- using personal experience and/or subject matter experts
- using specialist risk analysis tools to assist in the decision making process

Organisational plans may include:
- engineer management plans
- risk management plans

Others may include:
- executive authorities
- higher project authorities
- other stakeholders
- project specialists or personnel
- regulatory authorities
- team members

Opportunities may include:
- better means of achieving a result
- changes in the regulatory framework or broader environment that offer scope for rescheduling activities to better effect
- efficiencies or methods to work more effectively, such as ways of shortening an activity
- improvements to technical integrity
- risk mitigation

Review may include:
- changes to technical regulatory authority
- technical integrity of organisation’s materiel
Data and information may include:
- financial data
- list of potential risk events (risk register/log)
- logistics data
- organisational files and records
- risk analysis and reappraisal
- risk diaries, incident logs, occurrence reports and other such documentation
- risk management lessons learned
- risk management plan
- technical data

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  o adhere to and apply relevant data collection, storage and retrieval requirements
  o apply knowledge of technical risk management systems to assist in work and to guide problem solving
  o demonstrate understanding of personal role in relation to wider organisational or project context
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts
- Consistency in performance and evidence that candidates have contributed to the management of risk within projects includes applying, within authority, the requirements of the job or work role in relation to:
  o implementing, monitoring, and successfully completing risk management activities
  o contributing to reports of results
  o completing work area housekeeping requirements including the documentation of risk management activity and process outcomes
  o identifying risk
  o controlling risks
  o developing risk management strategies
  o modifying activities to cater for variations in workplace context and environment
  o monitoring risks (with emphasis on variation management)
TLIY3408A  Apply technical risk management systems and techniques

- reviewing risk management within the project
- working and communicating effectively and positively with others involved in the work

**Context of and specific resources for assessment**

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY3508A  Maintain technical data and information

Unit Descriptor
This unit covers the competency requires to maintain the technical data and information of the organisation in good order on a day-to-day basis. It includes gathering together technical data and information that is subject to organisational updates, performing the required updates, retrieving reports from the data management system in response to a request, and monitoring those aspects which are relevant to the immediate business unit requirements.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for technical regulatory framework specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Collate technical data and information
1.1 Technical data and information which should be incorporated into the organisation’s records system are identified in accordance with the data and technical information management system
1.2 Technical data and information which should be incorporated into the organisation’s information systems is recorded in accordance with the requirements of the data and technical information management system
1.3 Technical data and information is sorted and catalogued in accordance with workplace requirements
1.4 Security and access requirements for technical data and information are adhered to in accordance with the management system

2 Update technical data and information system
2.1 Technical data and information which is of direct interest to the business unit is routinely monitored
2.2 New or revised technical data and information is identified and incorporated in accordance with authorised systems
2.3 Movement and use of the technical data and information is updated in accordance with authorised systems
2.4 Technical data and information system is updated accurately and within the timeframes set by authorised systems
2.5 Technical data and information is archived or disposed of in accordance with authorised systems

3 Prepare reports from organisation’s technical data management system

3.1 Request for reports is interpreted and clarification of content and frequency is sought where necessary
3.2 Reports are prepared from the organisation’s technical data management system in accordance with instructions or request
3.3 Format and style of reports are in accordance with organisational procedures
3.4 All reports from the organisation’s technical data management system are prepared within workplace requirements and in accordance with security and access procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Applicable standards
• Data management principles and processes including functional requirements for data management
• Relevant details of the technical regulatory framework, organisation engineering management plans and technical data management plan

Required skills:
• Apply technical data and information and project management knowledge in technical data and information systems
• Consult and negotiate effectively with stakeholders (both internal and external), receive their input and resolve any potential areas of conflict or concern to ensure that overall technical data and information systems objectives are achieved
• Display resilience by continuing to move forward despite criticism or setbacks
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Implement processes to enable new technical data and information system requirements to be effectively transitioned across the life cycle – this includes integrated logistics support considerations, and validation and verification activities
• Monitor processes to ensure that the technical data and information systems continue to enable the operational requirements to be attained – this may include performance metrics
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Data and technical information management system may include:

- allocating access/security status
- capturing structural and contextual metadata
- classifying and indexing items
- computer-based, paper-based, microfiche and manual systems
- generating and allocating unique identifiers to data items
- identifying and recording disposal status items
- identifying technical data and information creators
- links between technical data and information items
- locating and tracking items
- naming/titling items
- negotiating transfer of custody or ownership
- recording the use history of items

Workplace requirements may include:

- arrangements for disposal and archiving of technical data and information
- identifying disposal and/or archiving criteria
- numbering system or naming conventions for technical data and information
- timeframe for processing

Security and access requirements may include:

- intellectual property restrictions
- protection of privacy
- security restrictions
- trade secrets or commercial in confidence information
Monitoring technical data and information which is of direct interest to the business unit may include:

- audit trail or log of users and activity in systems
- compliance with access rules
- compliance with disposal procedures
- correct use of spelling, spacing and numbering
- data integrity
- disparity, sentencing difficulties or gaps in retention and disposal coverage
- disputes arising from matters, particularly access questions
- failures in tracking or increases in lost items
- input of metadata requirements
- legal precedents requiring changes to system/s
- records of authorisation of destruction
- reliability of optical character recognition techniques
- retention of records
- scanned clarity of images
- security
- space shortages
- storage standards maintenance
- volumes of actions or accumulations of records above or below anticipated levels

Authorised systems may include:

- applicable industry and international standards
- authorised data technical information management frameworks and systems
- engineering management plans (including technical data management plans and configuration management plans)
- relevant organisational instructions
- relevant technical regulatory framework
Reports may include:

- ad hoc reports
- part of a management solution for another support/operational function
- regular records management reports
- specific reports such as:
  - defect trends
  - design support network reviews
  - engineering delegations
  - engineering design
  - engineering instructions and standards
  - maintenance data
  - maintenance instructions
- system management reports

Format and style of reports may be:

- computer-generated
- formal
- informal
- manual

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Assessment must confirm the ability to:
  - apply relevant implementation processes
  - monitor and report on implementation processes
  - analyse data and information
  - apply knowledge of technical data and information plans to assist in work and to guide problem solving
  - demonstrate understanding of personal role in relation to wider organisational or project context

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

- Consistency in performance and evidence that candidates have taken responsibility for maintaining technical data and information includes applying, within authority, the requirements of the job or work role in relation to:
  - contributing to reports of results
  - completing work area housekeeping requirements including documenting technical data and information management
activity and process outcomes
\(\circ\) successfully maintaining technical data and information management systems
\(\circ\) modifying activities to cater for variations in workplace context and environment
\(\circ\) working and communicating effectively and positively with others involved in the workplace

**Context of and specific resources for assessment**

- **Context of assessment**
- Competency should be assessed in the workplace or in a simulated workplace environment
- **Specific resources for assessment**
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY3608A Manage and monitor technical data and information systems

Unit Descriptor
This unit covers the competency required to manage and monitor all technical data and information creation, capture, use and monitoring activities within the data management system. This competency occurs with the system framework established by others. It may also be used to review these processes and activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for technical regulatory framework specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMAEncR EERIANA
Elements describe the essential outcomes of a unit of competency.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Designate detailed technical data and information use, and maintenance responsibilities</td>
<td>1.1 Responsibilities for technical data and information use and maintenance activities are designated to staff in accordance with approved system framework, organisational policy and the abilities of individual staff</td>
</tr>
<tr>
<td></td>
<td>1.2 Rules for the operation of the system are devised in compliance with approved systems framework</td>
</tr>
<tr>
<td></td>
<td>1.3 Resources for approved budget period are allocated in accordance with policy and the strategic plan</td>
</tr>
<tr>
<td>Develop key performance indicators for technical data management activities</td>
<td>2.1 Measurable performance indicators are developed for technical data management activities in accordance with the authorised systems</td>
</tr>
<tr>
<td></td>
<td>2.2 Data management responsibilities of individual personnel/organisational units are identified and documented</td>
</tr>
<tr>
<td></td>
<td>2.3 Acceptable range of variation for compliance is determined based upon data management responsibilities, applicable data management system and organisation’s risk management analysis</td>
</tr>
</tbody>
</table>
3 Develop monitoring methodology

3.1 Methodology for monitoring the technical data management system’s rules, standards and procedures is developed based upon authorised systems.

3.2 Methodology developed includes timeframes involved, means of surveillance and form of reporting.

3.3 Methodology, performance criteria and the ranges of variation from the standards and rules are submitted to appropriate authority for approval.

4 Monitor a technical data management system

4.1 Monitoring is undertaken in accordance with approved timeframes and frequency.

4.2 Staff being monitored are notified in accordance with organisational policy and guidelines, where applicable.

4.3 Any variation from data management system’s framework, rule, standards and procedures that exceed the agreed limit is noted and details of the situation are recorded.

4.4 Where required, reports are provided to appropriate authority relating to technical data and information use and maintenance, and are in the required format, at the required intervals.

5 Identify and respond to problems and changes

5.1 Problems and changes requiring a systematic response are identified from monitoring reports and external events.

5.2 Recommendations are made for revisions to systems, procedures, and future (strategic) plans in response to identified variations, changes and problems.

5.3 Amendments to systems are devised and implementation is planned, in response to problems and changes that require a systemic response.

5.4 Recommendations for system amendments and the planning and implementation required are prepared, and approval is sought from appropriate authority.

5.5 Procedures for using technical data and information systems, and subsequent alterations and amendments to the procedures are authorised, ensuring that performance indicator parameters and access rules are adhered to.

6 Designate technical data and information creation and capture responsibilities

6.1 Responsibilities for technical data and information creation and capture activities are designated to staff in accordance with organisational policy.

6.2 Technical data and information creation and capture performance targets are set within the parameters of the technical data management plan.

6.3 Resources for the budget period are allocated in accordance with organisational policy and strategic plan.
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Area of technical expertise
- Data management, standards, principles, process and functional requirements
- Details of the technical regulatory framework, organisation’s engineering management plans and the technical data management plan
- Established communication channels and protocols
- Organisational functions, structure and culture
- Organisational policy, strategies and procedures
- Organisation’s data management systems
- Organisation’s rules for the capture of, access to, and use and maintenance of, technical data and information
- Organisation’s technical classification scheme and language
- Problem identification and resolution
- Procedures for recording, reporting and maintaining workplace records and information
- Quality assurance principles and processes
- Work flow and business process re-engineering principles and practices

Required skills:
- Apply technical data and information and project management knowledge to technical data and information systems
- Consult and negotiate effectively with key stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall technical data and information systems objectives are achieved
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Implement processes to enable new technical data and information system requirements to be effectively transitioned across the life cycle – this includes integrated logistics support considerations, and validation and verification activities
- Monitor processes to ensure that the technical data and information systems continue to enable the operational requirements to be attained – this may include performance metrics

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Technical data and information may be:
- as specified and defined in the technical regulatory framework
- included either explicitly or implicitly in the established system framework
Approved system framework:

- is established by an approved authority and issued as the basis of all technical data and information management
- contains:
  - high level accountability and functional responsibilities
  - high level control/management requirements and protocols
  - key aspects of technical regulatory framework
  - outline of the structuring rules for repositories, cataloguing systems, security access systems, processes and software
  - protocols on functionality, maintainability and growth
  - technical context
  - technologies/standards

Rules may include:

- allocating access/security status
- capturing structural and contextual metadata
- classifying and indexing items
- generating and allocating unique identifiers to data items
- identifying and recording disposal status items
- identifying technical data and information creators
- links between technical data and information items
- locating and tracking items
- naming/titling items
- negotiating transfer of custody or ownership
- recording the use of history of items

Measurable performance indicators may include:

- those developed for specific tasks
- those incorporated in the data management system
- performance indicators that relate to:
  - disposal (percentage of data, unsentenced data, overdue for disposal action, functions/data not covered by disposal schedules)
  - parameters for tracking of technical data and information
  - retrieval and access (security and access rules, response to request time limits, service levels for requests)

Data management responsibilities may include:

- established systems framework
- organisation’s responsibility and accountability analysis
- system’s rules, standards and procedures
Identified and documented may include:
- established systems framework
- organisation’s responsibility and accountability analysis
- system’s rules, standards and procedures

Means of surveillance may include:
- examination of results (technical data and information)
- form/s of reporting
- real-time observation (security of process)
- statistical reports
- selected snapshots of the system

Appropriate authority may include:
- chief executive officer
- delegated individual
- external public authority
- nominated senior management representative
- senior management team
- technical/engineering authority

Monitoring may include:
- number of systems
- single data management system

Variation may include:
- increases or decreases in the use of particular technologies/standards
- variations from the data management system’s performance or capacity
- variations within the agreed limit but which are consistent

Reports may include:
- technical data and information capture
- technical data and information compliance
- technical data and information creation
- technical data and information maintenance
- technical data and information use

Problems and changes may include:
- changes in administrative changes to functions/activities
- changes to organisational structures
- legislative or technical regulatory changes
- technological change and implementation
Systemic may include:
- current technical data management systems
- technical systems (which generate technical data and information)
- storage facilities systems
- systemic changes which may include:
  - amendment to the classification system
  - bulk movement of technical data and information to control
  - migration of systems
  - new classification and control language
  - new disposal classes or retention periods
  - new organisational or business unit functions

Revisions may include:
- access rules and procedures
- classification and indexing schemes
- disposal schedules
- storage projections and requirements
- technical data and information specifications

Recommendations for system amendments may include:
- changes to/enforcement of procedures
- counselling of non-conforming individuals/business units
- disciplinary action

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - apply relevant implementation processes
  - monitor and report on implementation processes
  - analyse data and information
  - apply knowledge of technical data and information plans to assist in work and to guide problem solving
  - demonstrate understanding of personal role in relation to wider organisational or project context

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
Method of assessment

• Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate.

• Assessment methods should reflect workplace demands such as literacy and the needs of particular groups.

• Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of:
  o authenticated evidence from the workplace and/or training programs
  o case studies
  o demonstration
  o feedback from supervisors and peers regarding the candidate’s ability
  o observation
  o portfolios
  o projects
  o questioning
  o reviews or reports prepared by the candidate
  o scenarios
  o simulation or role plays
TLIY408A  Develop integrated logistics support processes and procedures

Unit Descriptor
This unit covers the competency required to develop integrated logistics support processes and the attendant procedures within the organisation. It includes anticipating and confirming the need for development, the development processes; gathering and analysing information; determining direction; and drafting, releasing and promoting the processes. It also includes the initial development of those procedures that are integral to the processes. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for integrated logistics support specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Analyse the integrated logistics support environment

1.1 Operation of the integrated logistics support environment is analysed and key factors and issues are identified

1.2 External and internal factors likely to impact on integrated logistics support needs and capabilities are continually monitored and analysed

1.3 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities, in accordance with
organisational policy and procedures
1.4 Legislation and organisational policy and procedures that may impact on integrated logistics support activity are identified and analysed

2 Develop integrated logistics support processes and procedures
2.1 Consultation and negotiation with stakeholders is conducted in accordance with organisational policy and procedures
2.2 Integrated logistics support processes for materiel and materiel systems are developed and documented in accordance with logistics support analysis principles
2.3 Costing analysis of options is undertaken and documented in accordance with organisational policy and procedures
2.4 Procedures required to support the processes are identified, developed and documented
2.5 Processes and procedures are approved in accordance with organisational policy and procedures

3 Communicate integrated logistics support processes and procedures
3.1 Stakeholders are fully informed of the outcomes, in accordance with organisational policy and procedures
3.2 Integrated logistics support processes and procedures are promulgated in accordance with organisational policy and procedures
3.3 Policy and procedures are promoted in accordance with relevant organisational policy and procedures

4 Review integrated logistics support processes and procedures
4.1 Performance systems are monitored and analysed to assess the impact of processes and procedures in achieving plans and targets
4.2 Integrated logistics support processes and procedures are reviewed in accordance with organisational policy and procedures
4.3 Required changes to integrated logistics support processes and procedures are identified and prepared in accordance with relevant organisational policy and procedures
4.4 Amendments to integrated logistics support policy and procedures are documented and promulgated to relevant stakeholders in accordance with relevant organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Codification and cataloguing processes
- Integrated logistics support
• International agreements
• Interoperability
• Logistics support analysis principles and processes
• Management processes
• Organisational policy and procedures
• Organisational role relevant to integrated logistics support
• Performance based logistics
• Product knowledge related to systems and/or equipment in service in the organisation
• Safety, legislative and statutory requirements relevant to integrated logistics support
• Supply chain concepts

**Required skills:**

• Apply integrated logistics support and project management knowledge in developing processes and procedures
• Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
• Demonstrate an understanding of the strategic objectives of the organisation to identify long-term factors and external considerations that need to be taken into consideration when developing integrated logistics support processes and procedures
• Develop processes and procedures that can be readily understood by users
• Display resilience by continuing to move forward despite criticism or setbacks
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Undertake performance measurement to enable objectives to be measured against defined parameters
• Undertake research and analysis to determine where internal and external factors impact on integrated logistics support processes and procedures, and adjust accordingly
• Use appropriate information technology and software
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Organisational policy and procedure may include:
- Australian Standards
- International Standards
- organisational instructions and standards

Legislative requirements may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Logistics support analysis is:
- the process for identifying and analysing the functional supportability requirements consistent with the goals of the integrated logistic support program. Logistic support analysis also describes the process for coordinated development of logistics related task data, and the processing of that data to define logistics resource requirements. Logistic support analysis defines analytical process for the preparation for in-service support and disposal, and the interface with Supportability Assessments (Supportability Test and Evaluation)
Costing may include the outlay or expenditure of:
- labour
- life cycle costs
- money
- resources
- time

Promulgated may include:
- authorised
- documented
- endorsed
- issued
- published

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify the requirements for processes and procedures and adjust them as necessary to ensure effective and efficient performance of the processes
  - initiate and efficiently monitor processes
  - initiate any remedial action required
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

Method of assessment
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable
assessment of this unit of competency may include a combination of methods such as:

- authenticated evidence from the workplace and/or training programs
- case studies
- demonstration
- feedback from supervisors and peers regarding the candidate’s ability
- observation
- portfolios
- projects
- questioning
- reviews or reports prepared by the candidate
- scenarios
- simulation or role plays
TLIY508A

Manage integrated logistics support operations

Unit Descriptor
This unit covers the competency required to prepare for integrated logistics support operations, to manage those operations throughout the materiel life cycle and to report on those operations in the organisational environment. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for integrated logistics support specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify integrated logistics support management requirements
1.1 Sources of information relevant to integrated logistics support are identified and obtained in accordance with organisational policy and procedures
1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures
1.3 Integrated logistics support management requirements are defined and documented in accordance with organisational policy and procedures

2 Develop integrated logistics support
2.1 Consultation with stakeholders is conducted in accordance with organisational policy and procedures
2.2 Integrated logistics support management strategies are developed and recorded taking into account materiel and/or materiel system, in accordance with organisational policy and procedures.

2.3 Key performance indicators are developed and documented in accordance with organisational policy and procedures.

2.4 Life cycle costing analysis processes are developed and documented in accordance with organisational policy and procedure.

3.1 Integrated logistics support risks and impacts are identified, recorded and managed.

3.2 Integrated logistics support procedures are applied in accordance with legislative requirements.

3.3 Management activities are carried out in accordance with organisational policy and procedures.

3.4 Failures and variances to plan are documented, reported and managed in accordance with organisational policy and procedure.

3.5 Participation and contribution to integrated logistics support activities is established and maintained.

4.1 Performance systems and processes are monitored and analysed to assess progress in achieving plans and targets.

4.2 Systems, procedures and records associated with documenting performance are managed in accordance with the organisation’s requirements.

4.3 Integrated logistics support operations are reviewed in accordance with organisational policy and procedures.

4.4 Changes required are identified and prepared in accordance with organisational policy and procedures.

4.5 Amendments to integrated logistics support operations are incorporated into plans and promulgated to relevant stakeholders, in accordance with organisational policy and procedures.

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing processes
- Industrial base capability
- Integrated logistics support
- International agreements
- Interoperability
- Legislative and regulatory environment as it pertains to materiel logistics
- Logistics support analysis principles and processes
- Logistics governance
- Management processes
- Organisational policy and procedures
- Organisational role relevant to integrated logistics support
- Performance based logistics
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to integrated logistics support
- Supply chain concepts

**Required skills:**

- Apply integrated logistics support and project management knowledge in developing processes and procedures
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation to identify long-term factors and external considerations that need to be taken into consideration when developing integrated logistics support processes and procedures
- Develop processes and procedures that can be readily understood by users
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake performance measurement to enable objectives to be measured against defined parameters
- Undertake research and analysis to determine where internal and external factors impact on integrated logistics support process and procedures, and adjust accordingly
- Use appropriate information technology and software
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:
- conceptual documents
- contractors
- legislation
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
- suppliers

Organisational policy and procedures may include:
- Australian Standards
- International Standards
- logistical support analysis
- organisational instructions and standards

Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes
Key performance indicators may include:

- costs
- milestones
- production
- resources
- scheduling
- timings

Life cycle costing is:

- the sum total of all costs, both direct and indirect, incurred over the total life cycle from concept through to disposal. Life cycle costing includes capability/concept development, development test and evaluation, acquisition, operation and support and disposal costs

Legislative requirements may include:

- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Promulgated may include:

- authorised
- documented
- endorsed
- issued
- published

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify integrated logistics support operation processes
  - identify, acquire and adjust resources as necessary to ensure effective and efficient performance of the processes
  - initiate and efficiently monitor processes
  - initiate any remedial action required

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment

- Access is required to:
  - computer and relevant software
Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate.
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups.
- Assessment methods suitable for valid and reliable assessment of this unit competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY608A  Manage verification and validation processes

Unit Descriptor
This unit covers the competency required to verify and validate integrated logistics support processes and to manage verification and validation processes within the organisation. Verification and validation is a generic term for the complete range of checks that are performed on a system in order to increase confidence that the system is suitable for its intended purpose. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for integrated logistics support specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify requirements for management strategies for verification and validation

1.1 Sources of information relevant to verification and validation are identified and obtained in accordance with organisational policy and procedures

1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures

1.3 Materiel verification and validation requirements are defined and documented

2 Develop management

2.1 Consultation with stakeholders is conducted in accordance
strategies for verification and validation

2.2 Verification and validation processes are developed and recorded taking into account materiel and/or materiel system, in accordance with organisational policy and procedures

3 Implement management strategies for verification and validation

3.1 Integrated logistics support risks and impacts relevant to verification and validation processes are identified, recorded and managed

3.2 Verification and validation processes are applied in accordance with legislative requirements

3.3 Activities are carried out in accordance with organisational policy and procedures

3.4 Participation and contribution to verification and validation process activities is established and maintained

4 Review management strategies for verification and validation

4.1 Integrated logistics support operations are reviewed in accordance with organisational policy and procedures

4.2 Changes required are identified and prepared in accordance with organisational policy and procedures

4.3 Amendments to integrated logistics support activities are incorporated and distributed to relevant personnel in accordance with organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Codification and cataloguing processes
- Industrial base capability
- Integrated logistics support processes relevant to verification and validation processes
- International agreements
- Interoperability
- Legislative and regulatory environment as it pertains to materiel logistics
- Logistics support analysis principles and processes
- Logistics governance
- Organisational policy, plans and procedures relevant to verification and validation processes
- Organisational role relevant to verification and validation processes
- Performance based logistics
- Safety, legislative and statutory requirements
- Supply chain concepts
- Written communication to a level required in the preparation of complex correspondence and reports
Required skills:

- Analyse information and identify areas that impact on verification and validation processes
- Apply verification and validation knowledge relevant to the work being performed
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the materiel logistics program to identify long-term factors and external considerations that need to be taken into consideration during validation and verification processes
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake performance measurement to enable objectives to be measured against defined parameters
- Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:
- contractors
- legislation
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
- suppliers

Verification and validation is:
- a generic term for the complete range of checks that are performed on a system in order to increase confidence that the system is suitable for its intended purpose, it includes:
  - performance tests
  - reliability tests
  - rigorous set of functional tests

Organisational policy and procedures may include:
- Australian Standards
- International Standards
- logistics support analysis
- organisational instructions and standards
Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Legislative requirements may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify, acquire and adjust resources as necessary to ensure effective and efficient performance of the processes
  - initiate and efficiently monitor processes
  - initiate any remedial action required
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

Implement and monitor integrated logistics support plans

Unit Descriptor
This unit covers the competency required to implement and monitor integrated logistics support plans and associated subordinate plans. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for integrated logistics support specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify requirements for the provision of integrated logistics support

1.1 Sources of information relevant to integrated logistics support plans are identified and obtained in accordance with organisational policy and procedures

1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures

1.3 Integrated logistics support plans are assessed against reviewed information

2 Implement integrated logistics support plans

2.1 Performance indicators and other criteria for measurement of achievement are developed

2.2 Integrated logistics support risks and impacts relevant to the plan are identified, reported and managed across the life cycle

2.3 Integrated logistics support activities are executed in accordance with organisational policy and procedures

2.4 Participation and contribution to integrated logistics support activities is established and maintained in accordance with the schedule
### Monitor and report on implementation of integrated logistics support

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing processes
- Configuration management
- Integrated logistics support processes related to planning
- International agreements
- Interoperability
- Logistics support analysis principles and processes
- Organisational policy and procedures impacting on integrated logistics support
- Organisational role relevant to integrated logistics support
- Performance based logistics
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements
- Supply chain concepts
- Technical regulatory framework
- Written communication to a level required in the preparation of correspondence and reports

**Required skills:**

- Apply integrated logistics support and project management knowledge relevant to work being performed
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the materiel logistics program to identify long-term factors and external considerations that need to be taken into consideration in integrated logistics support planning
• Develop and/or comply with procedures to implement and monitor integrated logistics support plans
• Display resilience by continuing to move forward despite criticism or setbacks
• Ensure that mechanisms are in place to monitor integrated logistics support plans
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Undertake performance measurement to enable objectives to be measured against defined parameters

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:
• contractors
• customers
• legislation
• managers
• peers
• plans
• policies
• publications
• reference material
• standards
• supervisors
• suppliers

Integrated logistics support plans may include:
• disposal
• facilities
• technical data
• training
• transitional plans

Organisational policy and procedures may include:
• Australian Standards
• International Standards
• organisational instructions and standards

Performance indicators may include:
• costs
• milestones
• production
• resources
• scheduling
• timing
Life cycle may include:
- whole of a particular item/system/process, from identification of a capability need to capability disposal

Compliance requirements may include:
- authority
- delegations
- environmental
- legislative
- organisational policy
- regulatory

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**
- Assessment must confirm the ability to:
  - apply relevant implementation processes
  - apply knowledge of integrated logistics support plans to assist in work and to guide problem solving
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

**Context of and specific resources for assessment**
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to test and evaluation processes
  - plans
  - workplace documentation

**Method of assessment**
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
- feedback from supervisors and peers regarding the candidate’s ability
- observation
- portfolios
- projects
- questioning
- reviews or reports prepared by the candidate
- scenarios
- simulation or role plays
Conduct integrated logistics support activities

Unit Descriptor
This unit covers the competency required to conduct integrated logistics support activities. It includes the requirement to conduct a range of processes including the capture, recording, recovery and analysis of data; maintenance of associated workplace networks; and stakeholder requirements. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self sufficient in its intended operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for integrated logistics support specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to conduct integrated logistics support activities

1.1 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities in accordance with organisational policy and procedures

1.2 Effective relationships are developed with stakeholders through consultation

1.3 Legislation and organisational policy and procedures that may impact on integrated logistics support activity are identified and analysed

1.4 Sources of information relevant to integrated logistics support activities are identified and obtained in accordance with
organisational policy and procedures
1.5 All personnel involved in integrated logistics support are briefed in accordance with standard procedures

2 Conduct integrated logistics support activities
2.1 Integrated logistics support methods and techniques appropriate to the area are employed in accordance with plans, schedules and standard procedures
2.2 Integrated logistics support activities are conducted and concluded within resource constraints
2.3 Integrated logistics support activities are implemented, monitored and amended based on changing circumstances in accordance with methodologies and procedures
2.4 Resources are allocated to integrated logistics support activities in accordance with the integrated logistics support plan and resource availability

3 Report on integrated logistics support activities
3.1 Integrated logistics support performance is reported to all stakeholders in a transparent manner and meeting all compliance requirements
3.2 Integrated logistics support activities are regularly reviewed to ensure systems and/or equipment capability is maintained throughout its life cycle in accordance with organisational policy and procedure

4 Maintain integrated logistics support records
4.1 Integrated logistics support records are completed in accordance with relevant policy and procedures
4.2 Integrated logistics support records are amended and documented in accordance with organisational policy and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Integrated logistics support processes
• Organisational policy and procedures related to integrated logistics support
• Organisational role relevant to integrated logistics support
• Product knowledge related to systems and/or equipment in service in the organisation
• Reliability, availability and maintainability
• Safety, legislative and statutory requirements relevant to integrated logistics support
• Written and oral communication to a level required in the preparation of correspondence and reports

Required skills:
• Apply integrated logistic support and project management knowledge relevant to work being performed
• Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
• Demonstrate an understanding of the strategic objectives of the materiel logistics program to identify long-term factors and external considerations that need to be taken into consideration in conducting integrated logistics support activities
• Display resilience by continuing to move forward despite criticism or setbacks
• Identify, review and analyse information that may impact on the integrated logistics support activities or that may be impacted by the integrated logistics support activities
• Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
• Manage time and prioritise work to ensure objectives are met in accordance with required schedule
• Undertake performance measurement to enable objectives to be measured against defined parameters
• Use appropriate information technology and software

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Stakeholders may include: • capability manager
• contractors
• customers
• project managers
• regulators
• subordinates
• supervisors
• suppliers

Materiel may include: • all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Organisational policy and procedures may include: • Australian Standards
• International Standards
• organisational instructions and standards

Legislation may include: • relevant federal, state and local government legislation and regulations
Sources of information may include:
- contractors
- databases
- duty statements
- legislation
- managers
- peers
- plans
- policies
- procedures
- publications
- reference material
- standards
- supervisors
- suppliers

Personnel may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers
- team members

Integrated logistics support activities may include:
- data and information analysis
- data and information management
- data and information retrieval
- identification of data and information
- reporting
- research

Resources may include:
- financial
- information technology applications and tools
- infrastructure
- personnel
- time
Methodologies and procedures may include:

- configuration management
- life cycle costing
- logistics support analysis
- maintenance requirement determination
- procurement
- reliability centred maintenance
- systems engineering

Compliance requirements may include:

- authority
- delegations
- environmental
- legislative
- organisational policy
- regulatory

Life cycle may include:

- whole of a particular item/system/process, from identification of a capability need to capability disposal

Records may include:

- databases
- files
- registers
- spreadsheets

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  o adhere to and apply relevant data and information management processes
  o analyse data and information
  o apply knowledge of integrated logistics support to assist in work and to guide problem solving

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  o computer and relevant software
  o legislation, guidelines, procedures and protocols relating to test and evaluation processes
plans
workplace documentation

Method of assessment

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate’s ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
TLIY908A Apply integrated logistics support processes and procedures

Unit Descriptor
This unit covers the competency required to apply integrated logistics support processes and procedures. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. The application of processes and procedures is specific to a variety of component processes including: integrated logistics support administrative procedures, integrated logistics support data collection and storage, and integrated logistics support data retrieval. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for integrated logistics support specialists working within the materiel logistics area of Defence but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Competency Field
Y – Materiel Logistics

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Prepare to apply integrated logistics support processes and procedures

   1.1 Requirement for application of integrated logistics support processes and procedures is identified from work requests/instructions and is confirmed

   1.2 Occupational health and safety requirements, including those contained in organisation’s procedures, are applied throughout the operation

   1.3 Resources and equipment required for the work are identified, acquired and prepared in accordance with organisational procedures

   1.4 Sources of information relevant to integrated logistics support requirements are identified and obtained in accordance with organisational policy and procedures

2 Apply integrated logistics support activities are conducted and
2.2 Integrated logistics support activities are implemented, monitored and amended based on changing circumstances in accordance with organisational policy and procedures

3.1 Integrated logistics support outcomes are reported in accordance with organisational policy and procedures

3.2 Integrated logistics support activities are monitored and reviewed to ensure systems and/or equipment capability is maintained, in accordance with organisational policy and procedures

4.1 Integrated logistics support records are maintained in accordance with organisational policy and procedures

4.2 Integrated logistics support records are amended and documented in accordance with organisational policy and procedures

REQUiRED KNOWLiEDGE AND SKiLLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Integrated logistics support administrative procedures
- Integrated logistics support data collection and storage requirements
- Integrated logistics support data retrieval procedures
- Materiel life cycle
- Organisational role relevant to integrated logistics support
- Safety, legislative and statutory requirements relevant to integrated logistics support
- Written communication to a level required in the preparation of letters and reports

**Required skills:**
- Apply integrated logistic support knowledge relevant to work being performed
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Operate equipment and systems required to apply integrated logistic support processes and procedures
- Use appropriate information technology and software
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation may include:
- Defence
- enterprises that work in integrated logistics support
- other government departments or instrumentalities that work with materiel

Resources may include:
- financial
- information technology applications and tools
- infrastructure
- personnel
- time
- databases

Organisational policy and procedures may include:
- Australian Standards
- International standards
- organisational instructions and standards

Integrated logistics support activities may include:
- integrated logistics support administrative procedures
- integrated logistics support data collection and storage
- integrated logistics support data retrieval

Records may include:
- databases
- files
- registers
- spreadsheets

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - adhere to and apply relevant data collection, storage and retrieval requirements
  - apply knowledge of integrated logistics support to assist in work and to guide problem solving
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
o computer and relevant software
o legislation, guidelines, procedures and protocols relating to test and evaluation processes
o plans
o workplace documentation

**Method of assessment**

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate.
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups.
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  o authenticated evidence from the workplace and/or training programs
  o case studies
  o demonstration
  o feedback from supervisors and peers regarding the candidate’s ability
  o observation
  o portfolios
  o projects
  o questioning
  o reviews or reports prepared by the candidate
  o scenarios
  o simulation or role plays
