The material contained within this volume is part of the endorsed components of the Training Package (Version 4). This volume must be read in conjunction with information contained within the first volume of the Training Package. This Training Package is to be reviewed by October 2010.

*Volume I* A Guide for Users, which includes preliminary information, policy, assessment guidelines and all TLI07 (Version 4) qualifications.

*Volume II* Units of Competency, in the following field order:

| A | B | C | D | E | F | G | H | I | J | K | L | LIC | M | N | O | P | PC | Q | R | S | T | U | V | W | X | Y | Z |

This work is the result of wide consultations with Australian industry participants. It is a collaborative view and does not necessarily represent the view of DEEWR or any specific body. For the sake of brevity it may omit factors which could be pertinent in particular cases.

While care has been taken in the preparation of this Training Package, DEEWR and the original developer do not warrant that any licensing or registration requirements specified here are either complete or up-to-date for your state or territory. DEEWR and the original developer do not accept any liability for any damage or loss (including indirect and consequential loss) incurred by any person as a result of relying on the information contained in this Training Package.

This Training Package should not be regarded as professional advice and it should not be relied upon in any important matter without obtaining appropriate advice relevant to your circumstances.

The Transport and Logistics Skills Council wishes to acknowledge the financial and advisory support provided by the following organisations during the development of this Training Package:

- Australasian Railway Association
- Connex – Melbourne
- Department of Education, Employment Workplace Relations
- Maritime Union of Australia
- National Union of Workers
- Rail, Tram and Bus Union
- Queensland Rail
- TNT Australia
- TOLL Holdings
- Transport Workers Union of Australia
## TLIA1007C Coordinate goods to bond premises

### Unit Descriptor
This unit involves the skills and knowledge required to coordinate goods to bond premises in accordance with regulatory and workplace requirements including identifying and listing goods for bonding, arranging transfer of goods to bond store, and preparing and issuing bond lists. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

### Employability Skills
This unit contains employability skills.

### Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning coordination of goods to bond premises.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the coordination of goods to bond premises as part of work activities in the warehousing, distribution and/or storage industries.

### Competency Field
A – Handling Cargo/Stock

### ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify and list goods for bonding | 1.1 Goods are listed for bonding when not delivered or collected on completion of agreed storage period  
1.2 Prior to listing for bonding, inspection is arranged with the Australian Customs Service for goods identified as surplus  
1.3 Goods left after time advertised for collection are listed for bonding in accordance with workplace policy and Australian Customs Service requirements |
| 2 Arrange transfer of goods to bond store | 2.1 Arrangements for the transfer of goods to bond store are made in accordance with regulatory requirements and workplace procedures  
2.2 Carrier is notified of storage or yard location, marks and quantity |
| 3 Prepare and issue bond list | 3.1 Bond list is prepared in accordance with workplace requirements and Australian Customs Service regulations  
3.2 Bond list, endorsed with the relevant information, is issued to carrier |
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian and international codes and regulations relevant to the coordination of goods to bond premises
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the coordination of goods to bond premises
• Focus of operation of work systems, equipment, management and site operating systems for coordination of goods to bond premises
• Problems that may occur when coordinating goods to bond premises and appropriate action that can be taken to resolve the problems

Required skills:
• Communicate effectively with others when coordinating the delivery of goods to bond premises
• Read and comprehend simple statements in English
• Read and interpret instructions, procedures and labels relevant to the coordination of goods to bond premises
• Complete documentation when coordinating the delivery of goods to bond premises
• Work collaboratively with others when coordinating the delivery of goods to bond premises
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems when coordinating the delivery of goods to bond premises in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events when coordinating the delivery of goods to bond premises
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant communications, computing and office equipment when coordinating goods to bond premises
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments • by day or night
Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
• exposed conditions
• controlled or open environments

Hazards in the work area may include exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, goods and materials

Consultative processes may involve:
• other employees and supervisors
• suppliers, customers and clients
• bond store representatives
• relevant authorities and institutions
• management and union representatives
• industrial relations and OH&S specialists
• other maintenance, professional or technical staff

Communication in the work area may include:
• phone
• electronic data interchange (EDI)
• fax
• email
• internet
• radio
• oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Personal protective equipment may include:
• gloves
• safety headwear and footwear
• safety glasses
• two-way radios
• high visibility clothing
Information/documents may include:

- workplace procedures and policies for the coordination of goods to bond store premises
- supplier and/or client instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification/serial number
- agents delivery order and agents program
- customers clearance
- quarantine clearance
- point of MT return/hand-over agreement
- continuing permission
- single transaction permissions
- chief clerks MT delivery program
- gate pass/VMO clearance stamped
- bulk run numbers
- manufacturers specifications for equipment
- dangerous goods declarations and material safety data sheets (where applicable)
- relevant legislation, regulations and related documentation including ADG / IMDG Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the coordination of goods to bond premises
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLIA107C Secure cargo

#### Unit Descriptor
This unit involves the skills and knowledge required to secure cargo including preparing to secure cargo/containers, lashing and unlashing cargo, protecting cargo from weather, and packing and unpacking cargo. It may apply in cargo securing contexts in the stevedoring, transport, distribution and allied industries. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the securing of cargo.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the securing of cargo as part of work activities in the stevedoring, transport, distribution and allied industries.

#### Competency Field
A – Handling Cargo/Stock

### ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

#### 1 Prepare to secure cargo/containers

1.1 Work area is prepared and maintained in accordance with the national standards, safety codes and site operating procedures
1.2 Unsafe work practices and/or equipment are reported to appropriate personnel
1.3 Appropriate protective clothing, equipment and fittings are selected
1.4 Formwork is erected where no lashing points exist
1.5 Lashing plan is read and interpreted

#### 2 Lash and unlash cargo

2.1 Work is conducted in accordance with industry standards, statutory requirements, safety codes, site operating requirements and any special requirements of the cargo
2.2 Lashing points are identified and appropriate fittings and lashing equipment are used for each lashing point
2.3 Cargo is lashed and secured to lashing points ensuring the correct spread of lashings and that lashings are secured, attached and tensioned
2.4 Tensioners are securely fastened
2.5 When unlashaging, fittings are released, disconnected and removed from the cargo
2.6 Lashing equipment is placed in designated storage areas or cleared from work area
2.7 Lashing/unlashing operations ensure no injury to personnel or damage to machinery or cargo
2.8 Lashing is completed in accordance with lashing plan

3 Protect cargo from weather
3.1 Cargo is covered/uncovered safely ensuring appropriate covering and lashing, no injury to personnel or damage to cargo or equipment
3.2 Work is conducted in accordance with the requirements of national standards, safety codes and site operating procedures

4 Pack and unpack cargo
4.1 Damaged cargo is identified and reported following enterprise procedures
4.2 Cargo is sorted and stacked prior to packing or after unpacking, ensuring the stack is in the correct location, in accordance with national standards, safety codes, and site operating procedures
4.3 Cargo is identified through the interpretation of marks or numbers
4.4 Tight stow of cargo is maintained
4.5 Cargo is handled ensuring no injury to personnel or damage to cargo or equipment

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Procedures for managing and controlling hazardous situations when carrying out work activities
- The marking and numbering systems for cargo
- Problems that may occur when securing cargo or freight and appropriate action that can be taken to resolve the problems
- Focus of operation of work systems, equipment, management and site operating systems for the securing of cargo or freight
- Workplace procedures and policies for the securing of cargo or freight
- Australian and international standards, codes and regulations relevant to the securing of cargo or freight including the Australian and International Dangerous Goods Codes
- Relevant bond, quarantine or other legislative requirements
- Relevant handling and safety codes
- Relevant OH&S and environmental procedures and regulations

Required skills:
- Communicate effectively with others when securing cargo or freight
- Read and interpret instructions, procedures, information and labels relevant to securing cargo or freight
- Identify cargo, container and goods, coding, ADG and IMDG markings and where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
- Receive, acknowledge and send messages with available communications equipment
- Complete documentation related to the securing of cargo or freight
- Work collaboratively with others when securing cargo or freight
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use relevant equipment, processes and procedures when securing cargo or freight
- Operate and adapt to differences in cargo handling equipment in accordance with standard operating procedures
- Use the lashing and protection equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Work may be conducted:**  
- in a range of work environments  
- by day or night

**Customers may be:**  
- internal or external

**Workplaces may comprise:**  
- large, medium or small worksites
Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments
- at height
- in a workbox or workcage

Cargo may include:
- goods with specialist requirements, including temperature controlled goods and dangerous goods

Lashing equipment for containers may include:
- twistlocks
- pelican hooks
- lashing rods (bars)
- turn handles (keys)
- bottle screws
- bridging clamps
- cones

Securing equipment may include:
- chocks
- racks
- lashings
- ropes
- chains

Covers may include:
- rain and dust covers

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Personnel in work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing
- full arrest safety harness
Communication in the work area may include:

- phone
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the securing of cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the securing of cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant Australian standards and certification requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
**TLIA1107C Package goods**

**Unit Descriptor**
This unit involves the skills and knowledge required to package goods in accordance with regulatory and workplace requirements including selecting materials, packing and unwrapping products, and labelling packaged products/loads to the required labelling standards. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the packaging of goods.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the packaging of goods as part of work activities in the warehousing, distribution and/or storage industries.

**Competency Field**
A – Handling Cargo/Stock

---

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

**1 Select materials and pack and unwrap products**

1.1 Packaging specifications and order packaging documentation are correctly interpreted

1.2 Appropriate packaging technology suitable for the goods to be packed is selected

1.3 Packaging materials are identified and matched to specifications

1.4 Work plan ensures materials are used economically and that appropriate packaging is used that minimises loss and damage in transit or storage

1.5 Work is planned in accordance with OH&S requirements

1.6 Completed packed goods are stacked to minimise damage from within and outside

**2 Label packaged products/loads**

2.1 Workplace labelling standards are identified

2.2 Appropriate goods handling, labelling and other identification symbols are utilised

2.3 Invoices and picking slips are attached (where required)

2.4 Workplace documentation is completed
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian and international codes and regulations relevant to the packaging of goods including the Australian Dangerous Goods Code (ADG Code)
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the packaging of goods
• Focus of operation of work systems, equipment, management and site operating systems for the packaging of goods
• Problems that may occur when packaging goods and appropriate action that can be taken to resolve the problems
• Documentation requirements for the packaging of goods
• Housekeeping standards procedures required in the workplace
• Site layout and obstacles

Required skills:
• Communicate effectively with others when packaging goods
• Read and interpret instructions, procedures and labels relevant to the packaging of goods
• Complete documentation related to work activities when packaging goods
• Work collaboratively with others when packaging goods
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when packaging goods in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may occur when packaging goods
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of equipment when packaging goods
• Check operation of packaging equipment in terms of service schedule and standard operating procedures
• Select and use relevant communications, computing equipment and materials when packaging goods
• Estimate the size, shape and special requirements of goods and loads

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
  • by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • restricted spaces
  • exposed conditions
  • controlled or open environments

Goods may involve: • special handling, storage and/or packaging requirements, including temperature controlled goods and dangerous goods

Hazards in the work area may include exposure to: • chemicals
  • dangerous or hazardous substances
  • movements of equipment, goods and materials
  • oil or water on floor
  • a fire or explosion
  • damaged packaging or pallets
  • debris on floor
  • faulty racking
  • poorly stacked pallets
  • faulty equipment

Consultative processes may involve: • other employees and supervisors
  • suppliers, customers and clients
  • relevant authorities and institutions
  • management and union representatives
  • industrial relations and OH&S specialists
  • other maintenance, professional or technical staff
Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

TLIA1207C  Pick and process orders

Unit Descriptor
This unit involves the skills and knowledge required to pick and process orders in accordance with workplace requirements including identifying workplace order picking processes, policies and procedures; picking and despatching orders, and recording stock levels. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with relevant codes/regulations and workplace requirements for the picking and processing of orders.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures to the picking and processing of orders in the warehousing, distribution and/or storage industries.

Competency Field

3.2 Workplace records are completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Regulations relevant to the picking and processing of orders, including relevant bond, quarantine or other legislative requirements
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the picking and processing of orders
• Focus of operation of work systems, equipment, management and site operating systems for the picking and processing of orders
• Problems that may occur when picking and processing an order and appropriate action that can be taken to resolve the problems
• Documentation and record requirements when picking and processing an order
• Equipment used during picking and processing operations and the precautions and procedures that should be followed in its use
• Housekeeping standards procedures required in the workplace
• Site layout and obstacles

Required skills:
• Communicate effectively with others when picking and processing orders
• Read and comprehend simple statements in English
• Read and interpret instructions, procedures, signs and labels relevant to the picking and processing of orders
• Complete documentation related to picking and processing orders
• Identify relevant stock and goods coding and labelling, including ADG and IMDG markings
• Work collaboratively with others when picking and processing orders
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when picking and processing orders in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events when picking and processing orders
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when picking and processing orders
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use relevant equipment and communications technology when picking and processing orders
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Estimate the size, shape and special requirements of goods/loads

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:    • by day or night
                          • in a range of work environments
Customers may be:          • internal or external
Workplaces may comprise:   • large, medium or small worksites
Work may be conducted in:  • limited or restricted spaces
                          • exposed conditions
                          • controlled or open environments

Problems that may occur when picking and processing an order include:
• wrong stock is picked
• wrong carton for order
• incorrect location
• damaged stock
• no stock at location
• incorrect quantity
• failing to meet a special order requirement

Special order requirements may include:
• pricing
• special packing
• specific size of carton
• special categories of stock
Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- oil or water on floor
- a fire or explosion
- damaged packaging or pallets
- debris on floor
- faulty racking
- poorly stacked pallets
- faulty equipment

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- contractors
- official representatives

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- manufacturers specifications for equipment/tools
- workplace procedures and policies
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the picking and processing of orders
- Australian Dangerous Goods Code
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations
- workers compensation regulations

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIA1307C

Receive goods

Unit Descriptor
This unit involves the skills and knowledge required to receive goods in accordance with regulatory and workplace requirements, including identifying workplace procedures and documentation requirements for the receipt of goods; checking and inspecting goods on arrival and completing workplace documentation; and unloading, packing and storing stock. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the receiving of goods.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the receiving of goods as part of work activities in the warehousing, distribution and/or storage industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify workplace procedures and documentation requirements for the receipt of goods
1.1 Workplace procedures for receipt of goods are identified
1.2 Purpose of documents associated with the receipt of goods is interpreted
1.3 Workplace documentation requirements for the receipt of goods and reporting of damage are identified

2 Check and inspect goods on arrival and complete workplace documentation
2.1 Procedures for checking of goods in comparison with orders or manifests are identified and followed
2.2 Discrepancies and/or damaged goods are reported
2.3 Non-conforming goods are appropriately documented and despatched or stored in accordance with company procedures

3 Unload, unpack and store stock
3.1 Appropriate manual handling techniques and equipment are identified
3.2 Safe work procedures are used when unloading, unpacking and storing stock
3.3 Advice on appropriate storage locations and requirements for particular products is sought
3.4 Goods are unloaded and unpacked in accordance with workplace procedures
3.5 Assistance from others is sought when required to maintain safe and effective work
3.6 Directions are followed to store stock in appropriate areas

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian and international codes and regulations relevant to the receiving of goods including the ADG Code and relevant bond, quarantine or other legislative requirements
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the receiving of goods
• Focus of operation of work systems, equipment, management and site operating systems for the receiving of goods
• Problems that may occur when receiving goods and appropriate action that can be taken to resolve the problems
• Specifications and standards for the checking and inspection of received goods
• Documentation requirements for the receiving of goods
• Housekeeping standards procedures required in the workplace
• Site layout and obstacles

Required skills:
• Communicate effectively with others when receiving goods
• Read and comprehend simple statements in English
• Read and interpret instructions, procedures, information, labels and signs relevant to receiving goods
• Complete documentation related to the receival of goods
• Identify containers and goods coding, ADG and IMDG markings and where applicable emergency information panels
• Work collaboratively with others when receiving goods
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems when receiving goods in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events when receiving goods
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when receiving goods
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use relevant load handling equipment when receiving goods
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Estimate the size, shape and special requirements of goods and loads

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• limited or restricted spaces
• exposed conditions
• controlled or open environments

Received goods may involve:
• special handling and storage requirements, including temperature controlled goods and dangerous goods

Problems that may occur when receiving goods may include:
• damaged stock
• damaged pallets or packaging
• wrong stock
• error in paperwork
• poorly stacked stock
• incorrect quantity

Aspects of goods to be checked when receiving goods may include:
• correct type
• number
• condition
• quality
• packaging
• labelling
• dangerous goods declarations and markings (where applicable)
Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- oil or water on floor
- fire or explosion
- damaged packaging or pallets
- debris on floor
- poorly stacked pallets
- faulty equipment

Consultative processes may involve:

- other employees and supervisors
- suppliers, customers and clients
- drivers and agents
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- codes of practice and regulations relevant to the receiving of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for the receiving of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air Regulations
  - Australian and international explosives codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA1407C Use product knowledge to complete work operations

Unit Descriptor
This unit involves the skills and knowledge required to use product knowledge to complete work operations in accordance with workplace requirements including identifying products in a subsection of a warehouse or other storage area, examining quality and reporting on products, and using inventory and labelling systems to identify and locate products. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the identification, handling and storage of various categories of products/stock.

Work is performed under some supervision generally within a team environment. It involves the application of product knowledge and an understanding of relevant regulatory requirements to the handling and storage of various types of products/stock as part of work activities in the warehousing, distribution and/or storage industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify products in a subsection of a warehouse or other storage area
1.1 Products are identified against specified criteria in accordance with workplace procedures
1.2 Storage and handling characteristics are identified and applied consistently
1.3 Products are described to internal customers identifying features which may affect location, safety or storage requirements

2 Examine quality and report on products
2.1 Products are inspected in accordance with workplace quality assurance procedures
2.2 Workplace procedures are followed to replace, return or dispose of stock/products which are not useable
2.3 Non-conforming products are recorded/reported in accordance with workplace procedures

3 Use inventory and labelling systems to
3.1 Inventory and labelling systems are used to locate products within the workplace
identify and locate products

3.2 Goods are physically located and identified

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian codes and regulations relevant to the products being identified, handled, transported, stacked and/or stored as part of work operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the identification, handling, stacking and storage of particular categories of products
- Focus of operation of work systems, equipment, management and site operating systems for the packaging of goods
- Categories or groups of products and the special handling, stacking and storage requirements for each
- Purpose and use of cataloguing and labelling systems
- Strategies to seek out sources of knowledge of products and use this information to inform work
- Types of equipment and storage areas appropriate for different types of goods including perishable, fragile, dangerous, composition/state goods
- Documentation requirements including reports and records concerning damaged or contaminated goods
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when handling, transporting and storing products and providing information on products and services
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures, information and signs relevant to the handling, transporting and storing of products and the provision of information on products and services
- Identify containers and goods coding, ADG and IMDG markings and where applicable emergency information panels
- Complete documentation related to work activities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Adapt to differences in products and services in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select and use relevant communications, computing and load handling equipment
- Estimate the size, shape and special requirements of goods and loads
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Goods may involve:
- special handling, location, storage and/or packaging requirements, including temperature controlled goods and dangerous goods

Inventory systems may be:
- automated
- manual
- paper-based
- computerised
- microfiche

Categories or groups of products/stock may include:
- small parts
- perishable goods
- overseas export
- dangerous goods
- refrigerated products
- temperature controlled stock
- fragile goods

Distinguishing identification criteria for products may include:
- shape
- size
- colour
- distinguishing features
- codes and product identification/serial numbers
- labels
- signs or other documentation
- locations

- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the packaging of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLIA1507C**  
**Complete receival/despatch documentation**

**Unit Descriptor**  
This unit involves the skills and knowledge required to complete receival/despatch documentation in accordance with regulatory and workplace requirements including analysing orders to identify work requirements to fill order, following workplace order documentation processes, and finalising documentation in accordance with workplace procedures and any relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the completion of receival/despatch documentation.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the completion of receival/despatch documentation as part of work activities in the warehousing, distribution and/or storage industries.

**Competency Field**  
A – Handling Cargo/Stock

---

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

**1 Analyse order to identify work requirements to fill order**

1.1 Order request documentation is interpreted
1.2 Product(s) in order are noted and workplace location(s) are identified
1.3 Workplace and product knowledge is used to organise documentation
1.4 Required schedules for order movement are identified and noted where required
1.5 Special aspects of the order such as dangerous/hazardous goods or temperature controlled goods are identified and information on required documentation procedures and relevant regulatory requirements is identified, accessed and interpreted

**2 Follow workplace order documentation processes**

2.1 Workplace procedures for documentation of an order are identified
2.2 Workplace documentation is completed in accordance with workplace procedures and any relevant regulatory requirements
3 Finalise documentation

3.1 Order is checked against schedule and order form
3.2 Workplace records are completed, and labels and appropriate documentation are attached in accordance with workplace procedures and any relevant regulatory requirements
3.3 Special transportation requirements are identified and conveyed to appropriate personnel
3.4 Where applicable, all required documentation requirements for dangerous goods and hazardous materials are completed in accordance with the relevant regulations and codes

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to the completion of receival/despatch documentation, including the ADG Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the completion of receival/despatch documentation
- Focus of operation of work systems, equipment, management and site operating systems for the receiving and despatch of goods
- Problems that may occur when completing receival and despatch documentation and appropriate action that can be taken to resolve the problems
- Specifications and standards for the checking and inspection of received and despatched goods
- Documentation requirements for the receipt and despatch of goods
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when completing receival and despatch documentation
- Read and interpret instructions, procedures and labels relevant to the completion of receival and despatch documentation
- Complete receival and despatch documentation
- Identify containers and goods coding, ADG and IMDG markings and where applicable emergency information panels
- Work collaboratively with others when completing receival and despatch documentation
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems when completing receival and despatch documentation in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant computer, communication and office equipment when completing receival and despatch documentation
• Estimate the size, shape and special requirements of goods and loads

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments • by day or night
Customers may be: • internal or external
Workplaces may comprise: • large, medium or small worksites
Work may be conducted in: • limited or restricted spaces • exposed conditions • controlled or open environments
Received/despached goods may involve: • special handling and storage requirements, including temperature controlled goods, dangerous goods, explosives and hazardous substances
Problems that may occur when receiving/despatching goods include: • damaged stock • damaged pallets or packaging • wrong stock • error in paperwork • poorly stacked stock • incorrect quantity
Aspects of goods to be checked when receiving/despatching goods may include: • correct type • number • condition • quality • packaging • labelling • dangerous goods declarations and marking (where applicable)
Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

TLIA1607C  Use inventory systems to organise stock control

Unit Descriptor
This unit involves the skills and knowledge required to use inventory systems to organise stock control in accordance with workplace requirements including identifying inventory and stock control systems in use in the workplace, using re-order procedures to maintain stock levels, organising cyclical stock counts, and reporting discrepancies or variances. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the use of inventory systems to organise stock control.

Work is performed under some supervision generally within a team environment. It involves the application of product knowledge and an understanding of relevant workplace procedures and regulatory requirements when using inventory systems to organise stock control as part of work activities in the warehousing, distribution and/or storage industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify inventory and stock control systems in use in the workplace
1.1 Workplace inventory and stock control equipment, software and systems are identified
1.2 Reasons for common database approach to inventory records and documentation in the warehouse are explained
1.3 Procedures for identification and reporting of discrepancies or variances are identified

2 Use re-order procedures to maintain stock levels
2.1 Stock level maintenance checking is conducted
2.2 Stock is re-ordered to meet stock level maintenance requirements in accordance with workplace policies and procedures
2.3 Data is accurately entered and extracted from the inventory/records system using appropriate workplace procedures

3 Organise cyclical stock counts and report discrepancies or
3.1 Process for cyclical stock count is planned and work allocated to team members
3.2 Clear directions on tasks to be performed are given
variances

3.3 Stocktake activities are conducted in accordance with workplace procedures
3.4 Types and causes of records discrepancies are identified
3.5 Procedures for noting and correcting minor discrepancies are used
3.6 Major discrepancies are reported in accordance with workplace procedures
3.7 Workplace documentation is completed

4 Produce reports on record keeping and inventory functions

4.1 Types of reports to be produced from inventory records systems are identified
4.2 Reports are produced in accordance with workplace procedures and relevant regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Australian codes and regulations relevant to the organisation of stock control
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the use of inventory systems to organise stock control
• Focus of operation of inventory systems, equipment, management and site operating systems for the control of stock
• Principles of operation and functions of inventory systems
• Applications of different types of inventory systems and stock management approaches
• Workplace processes for records management and the production of inventory reports
• Principles of operation and functions of inventory systems
• Computer records and documentation requirements for stock control, including forms, checklists and inventory reports
• Housekeeping standards procedures required in the workplace
• Site layout and obstacles

Required skills:

• Communicate effectively with others when using inventory systems to organise stock control
• Read and comprehend simple statements in English
• Read and interpret instructions, procedures and labels relevant to the use of inventory systems for the organisation of stock control
• Complete documentation related to the use of inventory systems to organise stock control
• Work collaboratively with others when using inventory systems to organise stock control
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems when using inventory systems to organise stock control in accordance with regulatory requirements and workplace procedures

• Implement contingency plans for unplanned events

• Modify activities depending on differing operational contingencies, risk situations and environments

• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

• Operate and adapt to differences in equipment in accordance with standard operating procedures

• Select and use required personal protective equipment conforming to industry and OH&S standards

• Select and use relevant communications, computing and office equipment when using inventory systems to organise stock control

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments

• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces

• exposed conditions

• controlled or open environments

Goods may involve: • special handling, location, storage and/or packaging requirements, including temperature controlled goods and dangerous goods

Inventory systems may be: • automated

• manual

• paper-based

• computerised

• two-way radios  
• high visibility clothing |
| Consultative processes may involve: | • other employees and supervisors  
• suppliers, customers and clients  
• relevant authorities and institutions  
• management and union representatives  
• industrial relations and OH&S specialists  
• other maintenance, professional or technical staff |
| Information/documents may include: | • goods identification numbers and codes  
• manifests, picking slips, merchandise transfers, stock requisitions and bar codes  
• codes of practice and regulations relevant to the identification, handling and stacking of goods  
• Australian and international regulations and codes of practice for the handling, stacking and transport of dangerous goods and hazardous substances  
• operations manuals, job specifications and induction documentation  
• manufacturers specifications for equipment  
• workplace procedures and policies  
• supplier and/or client instructions  
• dangerous goods declarations and material safety data sheets (where applicable)  
• award, enterprise bargaining agreement, other industrial arrangements  
• relevant Australian standards and certification requirements  
• quality assurance procedures  
• emergency procedures |
Applicable regulations and legislation may include:

- relevant codes and regulations for the packaging of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and international dangerous goods codes
  - Australian and international explosives codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
### TLIA1707C

**Apply product knowledge to organise work operations**

**Unit Descriptor**
This unit involves the skills and knowledge required to apply product knowledge to the organisation of work operations including identifying and categorising products, matching products to locations based on specified criteria, and assisting individuals to solve stock identification and location problems. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the identification, handling and storage of various categories of products/stock.

Work is performed under some supervision generally within a team environment. It involves the application of product knowledge and an understanding of relevant regulatory requirements to the organisation of work operations in the warehousing, distribution and/or storage industries.

**Competency Field**
A – Handling Cargo/Stock

</tr>
</tbody>
</table>
4 Identify appropriate transfer and handling requirements

4.1 Resources used to transfer different products through the storage zones are identified and evaluated
4.2 Work in receival and despatch areas is supported by identification and reporting of variances
4.3 Stock re-ordering is informed by knowledge of product source, frequency of pick destination (or seasonality) of products and potential for supply problems
4.4 Relevant documentation is completed in accordance with workplace procedures

5 Contribute to continuous improvement

5.1 Knowledge of customer requirements is used to determine work design
5.2 Potential problems are predicted and notified to appropriate personnel
5.3 Opportunities for improvements to own work organisation are identified

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian codes and regulations relevant to the workplace activities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies relevant to the application of product knowledge to the organisation of workplace operations
- Focus of operation of work systems, equipment, management and site operating systems
- Information on various categories or groups of products including their key characteristics and hazards and the special handling, stacking and storage requirements for each
- Product sources, destinations and potential problems
- Re-ordering procedures and just-in-time planning principles
- Requirements for workplace documentation, inventory systems and records
- Sources of product information
- Strategies to seek out sources of knowledge of products and use this information to inform work
- Types of equipment and storage areas appropriate for different types of goods including perishable, fragile, dangerous, composition/state goods
- Documentation requirements including reports and records concerning damaged or contaminated goods
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles
Required skills:

- Communicate effectively with others when organising workplace activities
- Access, read and interpret product information, policies and regulatory requirements relevant to workplace operations
- Complete documentation related to the organisation of work activities
- Work collaboratively with others when organising workplace activities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when organising workplace activities in accordance with regulatory requirements and workplace procedures
- Use information on products/stock to determine, plan and organise processes used for receival, storage, goods movement, despatch, stock levels, re-ordering processes
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in products and services in accordance with standard operating procedures
- Organise and monitor the use of personal protective equipment conforming to industry and OH&S standards
- Select and use relevant communication, computing and office equipment when organising workplace activities

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

- in a range of work environments
- by day or night

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites

Workplace activities being organised may include but are not limited to:

- receival
- storage
- goods/stock movement
- despatch
- stock levels
- re-ordering processes

Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments
Goods may involve:
- special handling, location, storage and/or packaging requirements, including temperature controlled goods and dangerous goods

Modes of transfer may be:
- manual or motorised

Storage types may include but are not limited to:
- bin/binning systems
- rack refrigeration/freezers/cold rooms
- marked floor space
- containers
- racks and racking systems
- block/stacks
- pallets

Inventory systems may be:
- automated
- manual
- paper-based
- computerised
- microfiche

Categories or groups of products/stock may include:
- small parts
- perishable goods
- overseas export
- dangerous goods
- refrigerated products
- temperature controlled stock
- fragile goods

The characteristics of products/stock may include:
- small parts
- toxicity
- flammability
- form
- weight
- size
- state
- perishability
- fragility
- security risk
Labelling systems may include but are not limited to:

- batch code
- bar code
- identification numbering systems
- serial numbers
- symbols for safe handling
- ADG and HAZCHEM Codes

Hazards in the work area may include:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- oil or water on floor
- a fire or explosion
- damaged packaging or pallets
- debris on floor
- faulty racking
- poorly stacked pallets
- faulty equipment

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Consultative processes may involve:

- other employees and supervisors
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes, and container identification/serial number
- codes of practice and regulations relevant to workplace operations
- Australian and international regulations and codes of practice for the handling, stacking and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the packaging of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a
registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIA1807C  Organise despatch operations

Unit Descriptor
This unit involves the skills and knowledge required to organise despatch operations in accordance with workplace requirements including planning and organising despatch operations, organising the storage and despatch of stock, and completing all required documentation and records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the organisation of despatch operations.

Work is performed under some supervision generally within a team environment. It involves the application of regulatory requirements and workplace procedures to the organisation of despatch operations in the warehousing, distribution and/or storage industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan and organise despatch operations
1.1 Knowledge of product characteristics and workplace procedures are applied to the analysis of the stock
1.2 Resources including manual handling equipment, employee competencies, storage areas and goods management equipment are identified to match stock characteristics
1.3 Deadlines are scheduled to meet order requirements
1.4 Work processes are planned to meet deadlines

2 Organise the storage and despatch of stock
2.1 Employees, equipment and storage areas are allocated and supervised
2.2 Individuals are informed of work requirements and deadlines
2.3 Work processes are monitored to ensure that resources, both human and equipment, are maintained at productive levels and in accordance with workplace procedures and OH&S requirements
2.4 Discrepancies in stocks are noted and reported in accordance with company procedures

3 Complete documentation
3.1 Required despatch documentation and records are completed in accordance with workplace procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the organising of despatch operations, including the ADG Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the organising of despatch operations
- Focus of operation of work systems, equipment, management and site operating systems for the organising of despatch operations
- Problems that may occur when organising despatch operations and appropriate action that can be taken to resolve the problems
- Documentation and record requirements for despatch operations
- Equipment used during the organisation of despatch operations and the precautions and procedures that should be followed in its use
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when organising despatch operations
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures and labels relevant to the organising of despatch operations
- Complete documentation related to the organising of despatch operations
- Identify relevant stock and goods coding and labelling, including ADG and IMDG markings
- Work collaboratively with others when organising despatch operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when organising despatch operations in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select and use relevant equipment and communications technology when organising despatch operations
- Estimate the size, shape and special requirements of goods and loads
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
  • by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
  • exposed conditions
  • controlled or open environments

Goods to be despatched may involve: • special handling, location, storage and/or packaging requirements, including temperature controlled goods, dangerous goods or hazardous substances

Problems that may occur when despatching an order include: • wrong stock is despatched
  • wrong carton for order
  • incorrect location
  • damaged stock
  • no stock at location
  • incorrect quantity
  • failing to meet a special order requirement
  • failing to meet customers delivery requirements

Special order requirements may include: • pricing
  • special packing
  • specific size of carton
  • special categories of stock

Hazards in the work area may include exposure to: • chemicals
  • dangerous or hazardous substances
  • movements of equipment, goods and materials
  • oil or water on floor
  • a fire or explosion
  • damaged packaging or pallets
  • debris on floor
  • faulty racking
  • poorly stacked pallets
  • faulty equipment
Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- drivers and agents
- contractors
- official representatives
Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- manufacturers specifications for equipment/tools
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the organising of despatch operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air Regulations
  - Australian and international explosives codes
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment
- The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

3 Complete documentation

3.1 Documentation and records regarding receival operations are completed and filed/despatched in accordance with workplace procedures and relevant regulatory requirements.

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the organising of receival operations, including the ADG Code and relevant bond, quarantine or other legislative requirements.
- Relevant OH&S and environmental protection procedures and guidelines.
- Workplace procedures and policies for the organising of receival operations.
- Focus of operation of work systems, equipment, management and site operating systems for the organising of receival operations.
- Problems that may occur when organising receival operations and appropriate action that can be taken to resolve the problems.
- Documentation and record requirements for receival operations.
- Equipment used during the organisation of receival operations and the precautions and procedures that should be followed in its use.
- Housekeeping standards procedures required in the workplace.
- Site layout and obstacles.

Required skills:
- Communicate effectively with others when organising receival operations.
- Read and comprehend simple statements in English.
- Read and interpret instructions, procedures and labels relevant to the organising of receival operations.
- Complete documentation related to the organising of receival operations.
- Identify relevant stock and goods coding and labelling, including ADG and IMDG markings.
- Work collaboratively with others when organising receival operations.
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others.
- Promptly report and/or rectify any identified problems that may arise when organising receival operations in accordance with regulatory requirements and workplace procedures.
- Monitor work activities in terms of planned schedule.
- Modify activities depending on differing operational contingencies, risk situations and environments.
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment.
- Operate and adapt to differences in equipment in accordance with standard operating procedures.
- Select and use required personal protective equipment conforming to industry and OH&S standards.
• Select and use relevant equipment and communication technology when organising receiveal operations
• Estimate the size, shape and special requirements of goods and loads

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Goods to be received may involve:
• special handling, location, storage and/or packaging requirements, including temperature controlled goods, dangerous goods or hazardous substances

Problems that may occur when receiving an order include:
• wrong stock is received
• damaged stock
• damaged packaging or pallets
• incorrect quantity
• error in paperwork
• paperwork doesn't match goods
• delivered late
• poorly stacked stock
• incorrect quantity

Aspects of goods to be checked when goods are received may include:
• correct type
• number
• condition
• quality
• packaging
• labelling
• dangerous goods declarations and marking (where applicable)

Hazards in the work area may include exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, goods and materials
• oil or water on floor
• a fire or explosion
• damaged packaging or pallets
• debris on floor
• faulty racking
• poorly stacked pallets
• faulty equipment

Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- manufacturers specifications for equipment/tools
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the organising of receival operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment

- The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA2007C  Replenish stock

Unit Descriptor
This unit involves the skills and knowledge required to replenish stock in accordance with workplace requirements including participating in stock rotation activities, interpreting and filling replenishment requests, and completing all required stock replenishment tasks. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the replenishment of stock.

Work is performed under some supervision generally within a team environment. It involves the application of product knowledge and an understanding of relevant workplace procedures and regulatory requirements to replenish stock as part of work activities in the warehousing, distribution and/or storage industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Participate in stock rotation activities
1.1 Stock levels are counted against appropriate documentation
1.2 Stock levels are recorded and reported
1.3 Stocks are replenished, adjusted or rotated following workplace procedures
1.4 Stock re-ordering processes are activated when appropriate
1.5 Routine and non-routine problems with products or storage systems are reported following workplace procedures

2 Interpret and fill replenishment request
2.1 Order request documentation is interpreted
2.2 Product(s) in order noted and workplace location(s) are identified
2.3 Workplace and product knowledge is used to plan sequence of work
2.4 Appropriate materials handling equipment is selected in accordance with workplace procedures and timeframes and OH&S regulations
2.5 Required schedules for order movement and despatch or storage are identified
3 Complete stock replenishment

3.1 Products are sorted, assembled and consolidated in the appropriate storage areas
3.2 Work is checked in accordance with company procedures
3.3 Documentation and records are completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian codes and regulations relevant to the replenishment of stock
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the replenishment of stock
- Focus of operation of work systems, equipment, management and site operating systems for the replenishment of stock
- Principles of operation and functions of stock control systems
- Computer records and documentation requirements for the replenishment of stock
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when replenishing stock
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures and labels relevant to the replenishment of stock
- Complete documentation related to the replenishment of stock
- Work collaboratively with others when replenishing stock
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when replenishing stock in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in stock and equipment in accordance with standard operating procedures
- Select and use relevant communications, computing and office equipment when replenishing stock
- Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces

- temperature controlled stock
- fragile goods

The characteristics of products/stock may include:
- small parts
- toxicity
- flammability
- form
- weight
- size
- state
- perishability
- fragility
- security risk
Labelling systems may include:

- batch code
- bar code
- identification numbering systems
- serial numbers
- symbols for safe handling
- ADG and HAZCHEM Codes

Hazards in the work area may include:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- oil or water on floor
- a fire or explosion
- damaged packaging or pallets
- debris on floor
- faulty racking
- poorly stacked pallets
- faulty equipment

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Consultative processes may involve:

- other employees and supervisors
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- codes of practice and regulations relevant to the identification, handling and stacking of goods
- Australian and international regulations and codes of practice for the handling, stacking and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for the packaging of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA207C       Maintain container/cargo records

Unit Descriptor
This unit involves the skills and knowledge required to maintain container/cargo records in accordance with workplace requirements, including processing container and/or cargo documentation; maintaining records of container/cargo movements; monitoring container/cargo, including reefer units, and maintaining records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the maintenance of container/cargo records.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the maintenance of container/cargo records as part of work activities in the stevedoring, transport, distribution and allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT                  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Process container/cargo documentation
1.1 Container/cargo documentation is processed in accordance with workplace procedures and statutory authority requirements
1.2 Movements of containers/cargo are recorded in accordance with workplace procedures and statutory authority requirements

2 Maintain records of container/cargo movements
2.1 Container/cargo records are updated each time containers/cargo are moved within the yard
2.2 Containers/cargo are checked using markings to ensure correct identification when updating records

3 Monitor container/cargo and maintain records
3.1 Containers/cargo are monitored on a daily basis and the specified information recorded
3.2 Problems with controlled systems on containers/cargo are reported on the appropriate forms and forwarded to the maintenance area
3.3 Log cards on containers/cargo with controlled systems are checked on completion of monitoring and all unit or system breakdowns and/or faults are logged in the breakdown log
diary in accordance with workplace procedures
3.4 Movement of containers/cargo is monitored on a daily basis and the information recorded

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international standards, codes of practice and regulations relevant to the maintenance of container and cargo records including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the maintenance of container and cargo records
- Focus of operation of work systems, equipment, management and site operating systems for the maintenance of container and cargo records
- Problems that may occur when maintaining container and cargo records and appropriate action that can be taken to resolve the problems
- Relevant handling and safety codes
- Site layout and location of reefer units
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

Required skills:
- Communicate effectively with others when maintaining container and cargo records
- Receive, acknowledge and send messages with available communications equipment
- Read and interpret instructions, procedures, information and labels relevant to the maintenance of container and cargo records
- Interpret and follow operational instructions and prioritise work when maintaining container and cargo records
- Identify cargo, container and goods, coding, ADG / IMDG markings and where applicable emergency information panels
- Work collaboratively with others when maintaining container and cargo records
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems when maintaining container and cargo records in accordance with regulatory requirements and workplace procedures
- Estimate size, shape and special requirements of loads
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Containers/cargo may include:
- goods with specialist requirements, including reefer units and containers/cargo containing temperature controlled goods and/or dangerous goods

Information recorded during daily monitoring of reefers may include:
- temperatures
- water meter readings
- any faults in the operation of the reefer

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Personnel in work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Communication in the work area may include:
- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications
Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the maintenance of container/cargo records
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the maintenance of container/cargo records
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant Australian standards and certification requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
TLIA2107C Despatch stock

Unit Descriptor
This unit involves the skills and knowledge required to despatch stock in accordance with workplace requirements including analysing orders to identify work requirements, following workplace order picking processes to prepare goods for despatch, and completing despatch tasks in accordance with workplace procedures and schedules. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the despatch of goods.

Work is performed under some supervision generally within a team environment. It involves the application of regulatory requirements and workplace procedures to despatch operations in the warehousing, distribution and/or storage industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Analyse order to identify work requirements
1.1 Order request and consignment note documentation is interpreted
1.2 Required schedules for despatch are identified
1.3 Product(s) in order are identified
1.4 Workplace and product knowledge is used to plan sequence of work
1.5 Appropriate materials handling equipment is selected within required OH&S regulations and timeframe for the despatch

2 Follow workplace order picking processes to prepare goods for despatch
2.1 Goods for despatch are selected, checking against product knowledge, labels and other identification systems
2.2 Products are sorted, assembled and consolidated
2.3 Orders are secured and placed in storage/despatch zones, in accordance with schedule
2.4 Order is checked against despatch schedule and order form

3 Complete despatch following workplace procedures and schedules
3.1 Workplace records are completed, and labels and appropriate documentation attached
3.2 Load labels and documentation are checked and loading is organised in accordance with workplace procedures and ADG Code (where applicable)
3.3 Final check of load labels and documentation is completed in accordance with requirements
3.4 Transportation requirements are described to driver where appropriate

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to despatch operations, including the ADG Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the organising of despatch operations
- Focus of operation of work systems, equipment, management and site operating systems for despatching goods
- Problems that may occur when despatching goods and appropriate action that can be taken to resolve the problems
- Documentation and record requirements for despatch operations
- Equipment used during despatch operations and the precautions and procedures that should be followed in its use
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when organising despatch operations
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures and labels relevant to the organising of despatch operations
- Complete documentation related to the organising of despatch operations
- Work collaboratively with others when organising despatch operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when organising despatch operations in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in goods and equipment in accordance with standard operating procedures
- Select and use relevant equipment and communications technology when organising despatch operations
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Estimate the size, shape and special requirements of goods and loads

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Work may be conducted:**
- in a range of work environments
- by day or night

**Customers may be:**
- internal or external

**Workplaces may comprise:**
- large, medium or small worksites

**Work may be conducted in:**
- limited or restricted spaces
- exposed conditions
- controlled or open environments

**Goods to be despatched may involve:**
- special handling, location, storage and/or packaging requirements, including temperature controlled goods, dangerous goods or hazardous substances

**Problems that may occur when despatching an order include:**
- wrong stock is despatched
- wrong carton for order
- incorrect location
- damaged stock
- no stock at location
- incorrect quantity
- failing to meet a special order requirement
- failing to meet customers delivery requirements

**Special order requirements may include:**
- pricing
- special packing
- specific size of carton
- special categories of stock
Hazards in the work area may include:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- oil or water on floor
- a fire or explosion
- damaged packaging or pallets
- debris on floor
- faulty racking
- poorly stacked pallets
- faulty equipment

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- drivers and agents
- contractors
- official representatives
Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- manufacturers specifications for equipment/tools
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the organising of despatch operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment**

- The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

- This unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

TLIA2207C  Participate in stocktakes

Unit Descriptor
This unit involves the skills and knowledge required to participate in stocktakes in accordance with workplace requirements including preparing for stocktakes, conducting stocktakes, counting stock, identifying stock discrepancies, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the conduct of a stocktake.

Work is performed under some supervision generally within a team environment. It involves the application of product knowledge and an understanding of relevant workplace procedures and regulatory requirements when participating in stocktakes as part of work activities in the warehousing, distribution and/or storage industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for stocktake
1.1 Goods to be counted and appropriate inventory systems are identified
1.2 Required resources including equipment and record keeping systems are identified
1.3 Allocated tasks, zones and work requirements are identified
1.4 Sequence work role is planned in a time effective manner

2 Stocktake and count stock
2.1 Stocktaking and cyclical counts are undertaken in accordance with enterprise policies and procedures
2.2 Inventory data is interpreted
2.3 Inventory data is confirmed to match stock
2.4 Stock levels are accurately counted and documented

3 Identify stock discrepancies
3.1 Discrepancies in type, number and quality of stock are accurately recorded and documented
3.2 Products stored in inappropriate storage locations are relocated and stock records adjusted

4 Complete
4.1 Inventory data is reconciled to match warehouse stock in
documentation accordance with company procedures
4.2 Workplace documentation is completed

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian codes and regulations relevant to the conduct of stocktakes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the conduct of stocktakes
- Focus of operation of work systems, equipment, management and site operating systems for the conduct of stocktakes
- Workplace processes for records management and the production of stocktake reports
- Principles of operation and functions of stocktake systems
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when conducting stocktakes
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures and labels relevant to the conduct of stocktakes
- Complete documentation related to the conduct of stocktakes
- Work collaboratively with others when conducting stocktakes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when conducting stocktakes in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use relevant communication, computing and office equipment when conducting stocktakes
- Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Goods may involve:
- special handling, location, storage and/or packaging requirements, including temperature controlled goods and dangerous goods

Inventory systems may be:
- automated
- manual
- paper based
- computerised
- microfiche

Categories or groups of products/stock may include:
- small parts
- perishable goods
- overseas export
- dangerous goods
- refrigerated products
- temperature controlled stock
- fragile goods

The characteristics of products/stock may include:
- small parts
- toxicity
- flammability
- form
- weight
- size
- state
- perishability
- fragility
- security risk
Labelling systems may include:
- batch code
- bar code
- identification numbering systems
- serial numbers
- symbols for safe handling
- ADG and HAZCHEM Codes

Hazards in the work area may include:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- oil or water on floor
- a fire or explosion
- damaged packaging or pallets
- debris on floor
- faulty racking
- poorly stacked pallets
- faulty equipment

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Consultative processes may involve:

- other employees and supervisors
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- codes of practice and regulations relevant to the identification, handling and stacking of goods
- Australian and international regulations and codes of practice for the handling, stacking and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for the packaging of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIA2307C Coordinate stocktakes

Unit Descriptor
This unit involves the skills and knowledge required to coordinate stocktakes in accordance with workplace requirements including planning stocktakes, coordinating stocktake activities, identifying stock discrepancies, and adjusting documentation in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements when coordinating stocktakes.

Work is performed under some supervision generally within a team environment. It involves the application of product knowledge and an understanding of relevant workplace procedures and regulatory requirements when coordinating stocktakes as part of work activities in the warehousing, distribution and/or storage industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan stocktake
1.1 Goods to be counted and appropriate inventory systems are identified
1.2 Required resources including equipment, record keeping systems and personnel are identified
1.3 Members of the team are instructed and assisted
1.4 Team members are allocated to particular tasks and zones and given clear directions for work requirements
1.5 Sequence and operations of the stocktake are planned in a time effective manner

2 Coordinate stocktake
2.1 Stocktaking and cyclical counts are coordinated in accordance with workplace policies and procedures
2.2 Inventory data is interpreted
2.3 Inventory data is confirmed to match stock
2.4 Stock levels are accurately counted and documented

3 Identify stock discrepancies
3.1 Discrepancies in type, number and quality of stock are accurately recorded and documented
3.2 Possible reasons for discrepancies are identified
3.3 Products stored in inappropriate storage locations are relocated and stock records are adjusted in accordance with workplace procedures

4 Adjust documentation
4.1 Inventory data is reconciled to match warehouse stock in accordance with regulations, workplace practices, policies and procedures
4.2 Information is reconciled with audit requirements
4.3 Workplace documentation is completed

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian codes and regulations relevant to the coordination of stocktakes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the coordination of stocktakes
- Focus of operation of work systems, equipment, management and site operating systems for the conduct of stocktakes
- Workplace processes for records management and the production of stocktake reports
- Principles and functions of stocktakes
- Problems that may occur when coordinating a stocktake and appropriate action that can be taken
- Computer records and documentation requirements for the coordination of stocktakes
- Housekeeping standards procedures required in the workplace
- Site layout

Required skills:
- Communicate effectively with others when coordinating stocktakes
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures and labels relevant to the coordination of stocktakes
- Complete documentation related to the coordination of stocktakes
- Work collaboratively with others when coordinating stocktakes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when coordinating stocktakes in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in stock and equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Select and use relevant communications, computing and office equipment when coordinating stocktakes

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: ● in a range of work environments
                                ● by day or night
Customers may be:              ● internal or external
Workplaces may comprise:       ● large, medium or small worksites
Work may be conducted in:      ● restricted spaces
                                ● exposed conditions
                                ● controlled or open environments
Equipment used in stocktaking may include: ● calculators
                                               ● scanners
                                               ● hand-held computers
Inventory systems may be:      ● automated
                                               ● manual
                                               ● paper-based
                                               ● computerised
                                               ● microfiche
Categories or groups of products/stock may include:
                                               ● small parts
                                               ● perishable goods
                                               ● overseas export
                                               ● dangerous goods
                                               ● refrigerated products
                                               ● temperature controlled stock
                                               ● fragile goods
The characteristics of products/stock may include:

- small parts
- toxicity
- flammability
- form
- weight
- size
- state
- perishability
- fragility
- security risk

Labelling systems may include:

- batch code
- bar code
- identification numbering systems
- serial numbers
- symbols for safe handling
- ADG and HAZCHEM Codes

Hazards in the work area may include:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- oil or water on floor
- a fire or explosion
- damaged packaging or pallets
- debris on floor
- faulty racking
- poorly stacked pallets
- faulty equipment

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:

- other employees and supervisors
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- codes of practice and regulations relevant to the identification, handling and stacking of goods
- Australian and international regulations and codes of practice for the handling, stacking and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the packaging of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLIA2407C**  Organise warehouse records operations

**Unit Descriptor**
This unit involves the skills and knowledge required to organise warehouse records operations in accordance with workplace requirements including identifying record management databases, storage types and technologies; storing warehouse records; and using record management systems to retrieve information. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant regulations and workplace requirements when organising warehouse records operations.

Work is performed under some supervision generally within a team environment. It involves the application of relevant workplace procedures and regulatory requirements to the organisation of warehouse records operations in the warehousing, distribution and/or storage industries.

**Competency Field**
A – Handling Cargo/Stock

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Identify record management databases, storage types and technologies</td>
<td>1.1 Requirements for records operations are identified and defined&lt;br&gt;1.2 Types of record systems which might meet workplace requirements are identified and reviewed&lt;br&gt;1.3 Advantages and disadvantages of identified systems are evaluated and noted&lt;br&gt;1.4 Record management systems are selected in accordance with workplace requirements&lt;br&gt;1.5 Appropriate action is taken to establish the selected record system in accordance with workplace procedures and operational requirements</td>
</tr>
<tr>
<td>2 Store warehouse records</td>
<td>2.1 Warehouse records are collected and consolidated in accordance with workplace procedures&lt;br&gt;2.2 Records are stored manually and/or electronically as required in accordance with system developers instructions and workplace procedures&lt;br&gt;2.3 Records are maintained in accordance with workplace procedures</td>
</tr>
<tr>
<td>3 Use record</td>
<td>3.1 Responses to requests for information are processed promptly</td>
</tr>
</tbody>
</table>
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian codes and regulations relevant to the organisation of warehouse records operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the organisation of warehouse records operations
- Focus of operation of record systems, equipment, management and site operating systems for the organisation of warehouse records
- Principles of operation and functions of warehouse records systems
- Principles of operation, functions and applications of different types of records systems
- Requirements for accessibility, security and confidentiality of records
- Computer records and documentation requirements for the organisation of warehouse records operations
- Problems that may occur when organising warehouse records operations and appropriate action that can be taken
- Housekeeping standards procedures required in the workplace
- Site layout

Required skills:

- Communicate effectively with others when organising warehouse records operations
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures and labels relevant to the organisation of warehouse records operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the organisation of warehouse records operations
- Work collaboratively with others when organising warehouse records operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when organising warehouse records operations in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Select and use relevant communications, computing and office equipment when organising warehouse records operations

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Record storage systems may be:
• micro-film
• computer images

Storage requirements may include:
• security
• clean environment
• computer disks
• type of document
• confidentiality
• accessibility
• microfilm
• hard copies

Hazards in the work area may include:
• chemicals
• dangerous or hazardous substances
• movements of equipment, goods and materials
• oil or water on floor
• a fire or explosion
• damaged packaging or pallets
• debris on floor
• faulty racking
• poorly stacked pallets
• faulty equipment
Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:

- other employees and supervisors
- record system developers and suppliers
- customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff
Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- codes of practice and regulations relevant to the identification, handling and stacking of goods
- Australian and international regulations and codes of practice for the handling, stacking and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include

- relevant codes and regulations for the packaging of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and international dangerous goods codes
  - Australian and international explosives codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment

- The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA2507D   Regulate temperature controlled stock

Unit Descriptor
This unit involves the skills and knowledge required to regulate temperature controlled stock in accordance with workplace requirements including identifying goods requiring temperature control, monitoring temperature of goods, and identifying and rectifying any identified problems in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the regulation of temperature controlled stock.

Work is performed under some supervision generally within a team environment. It involves the application of product knowledge and an understanding of relevant regulatory requirements to the regulation of temperature controlled stock in the warehousing, distribution and/or storage industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Identify goods requiring temperature control
   1.1 Goods requiring temperature control are identified
   1.2 Temperature for short- term and long-term storage is selected to match product type
   1.3 Upper and lower limits for temperature control are identified
   1.4 Storage separations and co-storage applications are identified for products

2  Monitor temperature
   2.1 Appropriate methods for determining temperature of goods are identified
   2.2 Storage areas are monitored for temperatures within range for products
   2.3 Products are monitored to ensure compliance with temperature storage requirements
   2.4 Short-term storage times are identified for transit goods

3  Identify and rectify problems
   3.1 Implications of incorrect temperature are identified
   3.2 Damaged goods are identified and appropriate action is undertaken in accordance with enterprise procedures
   3.3 Causes of out-of-temperature range are identified
3.4 Appropriate personnel are notified for problem rectification
3.5 Goods handling procedures for maintenance of temperature control are identified and implemented

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian codes and regulations relevant to the regulation of temperature controlled stock
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the regulation of temperature controlled stock
- Focus of operation of work systems, equipment, management and site operating systems for the regulation of temperature controlled stock
- Special handling, stacking and storage requirements for temperature controlled stock
- Procedures for pre-cooling and snap freezing
- Problems that can occur when regulating temperature controlled stock and appropriate action that can be taken
- Hazards when regulating and working with temperature controlled stock and appropriate action to control the risks involved
- Documentation requirements including reports and records concerning damaged or contaminated goods
- Housekeeping standards procedures required in the workplace
- Site layout

Required skills:
- Communicate effectively with others when regulating temperature controlled stock
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures and labels relevant to the regulation of temperature controlled stock
- Complete documentation related to the regulation of temperature controlled stock
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when regulating temperature controlled stock
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when regulating temperature controlled stock in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events when regulating temperature controlled stock
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in stock and equipment in accordance with standard operating procedures
• Select and use relevant equipment, processes and procedures
• Check refrigeration equipment operation in terms of maintenance schedule and standard operating procedures
• Select and implement corrective actions to maintain temperature levels
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites
• short-term and/or long-term temperature controlled areas

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Procedures for pre-cooling and snap freezing may include: • automated
• spraying with liquid nitrogen
• immersion in a very cold refrigerant
• freezing in moving air at less than -30oC
• plate freezer with very low refrigerant temperatures
Hazards in the work area may include:

- contamination of, or from, materials being handled
- noise, light, energy sources
- service lines
- spills, leakages, ruptures
- cold pipes and chilling equipment
- dangerous or hazardous substances
- movements of equipment, goods and materials
- dust/vapours
- oil, water or ice on floor
- a fire or explosion
- damaged packaging or pallets
- debris on floor
- faulty racking
- poorly stacked pallets
- faulty equipment

Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident/accident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operations
- authorities and permits

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- RF systems
- oral, aural or signed communications
Consultative processes may involve:

- other employees and supervisors
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves and protective clothing
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- codes of practice and regulations relevant to the identification, handling and stacking of goods
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for the regulation of temperature controlled goods
- relevant state/territory OH&S and environmental protection legislation
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations
- workers compensation regulations
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIA2607C \hspace{2cm} \textbf{Monitor storage facilities}

\textbf{Unit Descriptor} 
This unit involves the skills and knowledge required to monitor storage facilities in accordance with workplace requirements including determining site functions and operations; monitoring storage operations in accordance with workplace procedures; and taking appropriate action in response to identified discrepancies, changes to storage requirements, or breaches in operational procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

\textbf{Employability Skills} 
This unit contains employability skills.

\textbf{Application of the Unit} 
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the monitoring of storage facilities.

Work is performed under general supervision. It involves the application of product knowledge and an understanding of relevant regulatory requirements to the monitoring of storage facilities in the warehousing, distribution and/or storage industries.

\textbf{Competency Field} 
A – Handling Cargo/Stock

\textbf{ELEMENT} \hspace{2cm} \textbf{PERFORMANCE CRITERIA} 
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine site functions and operations 
1.1 Layout of storage facilities, work flow and activities undertaken in each zone are identified
1.2 Type of storage facilities, their purpose and (any) associated risk factors are identified
1.3 Inventory lists are accessed through record management system
1.4 Storage separations and co-storage applications are identified

2 Monitor storage operations 
2.1 Inventory data is confirmed to match goods/freight and applicable storage requirements
2.2 Storage areas are supervised to ensure movement of personnel and goods/freight are in accordance with workplace procedures
2.3 Storage facilities are checked to ensure appropriate operational capacity
2.4 Integrity of goods/materials are monitored to ensure appropriate quality is maintained
2.5 Discrepancies/changes to storage requirements and/or inventory lists are noted and action undertaken in accordance with workplace procedures
2.6 Appropriate action(s) are initiated in response to breaches of operational procedures or to an emergency/incident
2.7 Operational actions and investigative outcomes are documented in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian codes and regulations, permit and licence requirements relevant to the workplace activities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies relevant to the monitoring of storage facilities
- Focus of operation of work systems, equipment, management and site operating systems
- Information on various categories or groups of products including their key characteristics and hazards and the special handling, stacking and storage requirements for each
- Types of storage areas and related equipment appropriate for different types of goods including perishable, fragile, dangerous, composition/state goods
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Requirements for workplace documentation reports and records
- Problems that may occur when monitoring storage facilities and appropriate action that can be taken
- Site layout
- Housekeeping standards and procedures required in the workplace

Required skills:
- Communicate effectively with others when monitoring storage facilities
- Read and interpret instructions, procedures, information and signs relevant to the monitoring of storage facilities
- Complete documentation related to the monitoring of storage facilities
- Work collaboratively with others when monitoring storage facilities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when monitoring storage facilities in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events related to the monitoring of storage facilities
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Use information on products and stock to determine, plan and organise processes used for the monitoring of storage facilities
• Select and use relevant communications, computing and office equipment when monitoring storage facilities
• Monitor performance of equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Requirements for work may include:
• restricted spaces
• site restrictions and procedures
• use of safety and personal protective equipment
• communications equipment
• specialised lifting and/or handling equipment
• incident/accident breakdown procedures
• additional gear and equipment
• noise restrictions
• hours of operations
• authorities and permits

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments
• environments involving the movement of equipment, goods, materials and/or vehicular traffic

Goods may involve:
• special handling, location, storage and/or packaging requirements, including temperature controlled goods and dangerous goods

Modes of transfer may be:
• manual or motorised
Storage types may include but are not limited to:
- bin/binning systems
- rack refrigeration/freezers/cold rooms
- marked floor space
- containers
- racks and racking systems
- block/stacks
- pallets

Inventory systems may be:
- automated
- manual
- paper-based
- computerised
- microfiche

Categories or groups of products/stock may include:
- small parts
- perishable goods
- overseas export
- dangerous goods
- refrigerated products
- temperature controlled stock
- fragile goods

The characteristics of products/stock may include:
- small parts
- toxicity
- flammability
- form
- weight
- size
- state
- perishability
- fragility
- security risk

Labelling systems may include but are not limited to:
- batch code
- bar code
- identification numbering systems
- serial numbers
- symbols for safe handling
- ADG and HAZCHEM Codes
Hazards in the work area may include:

- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- skills, leakages, ruptures
- dust/vapours
- oil or water on floor
- a fire or explosion
- damaged packaging or pallets
- debris on floor
- faulty racking
- poorly stacked pallets
- faulty equipment

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:

- other employees and supervisors
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff
Information/documents may include:
- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- codes of practice and regulations relevant to workplace operations
- Australian and international regulations and codes of practice for the handling, stacking and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- codes and regulations relevant to the monitoring of storage facilities
- Australian and international regulations and codes of practice for the storage of dangerous goods and hazardous substances, including:
  - Australian Dangerous Goods Code
  - Australian Explosives Code
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment**
- The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA2807C Assess and monitor optimum stock levels

Unit Descriptor
This unit involves the skills and knowledge required to assess and monitor optimum stock levels in accordance with workplace requirements including assessing projected demand, assessing variables that impact upon optimum stock levels, determining optimum inventory levels, and monitoring optimum inventory levels. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning stock control operations.

Work is performed under general guidance on progress and outcomes of work. It requires the exercise of discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within organisational policy and procedures. A range of opportunities may be used to develop the work area and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives.

Work involves the application of product knowledge and an understanding of relevant workplace procedures and regulatory requirements when assessing and monitoring optimum stock levels as part of work activities in the warehousing, distribution and/or storage industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Assess projected demand
1.1 Information/data from sales plan or stock movement is analysed
1.2 Projected high and low volume periods are determined from the analysis of sales plan and/or stock movement data
1.3 Seasonal nature of stock demand is determined from the analysis of sales plan and/or stock movement data
1.4 Required inventory levels at different production and sales cycle stages are determined from the analysis of sales plan and/or stock movement data

2 Assess variables that
2.1 Stock manufacturing/supply and consignment delivery lead
impact upon optimum stock levels

2.1 Times are determined

2.2 Internal processing and distribution times are determined

2.3 Spoilage and obsolescence times are calculated (where applicable)

2.4 Maximum stock carrying capacity is assessed

2.5 Physical and human resources are assessed in relation to projected required stock levels

2.6 Contingencies are developed for abnormal distribution stoppages/slow-downs to supply chain

3 Determine optimum inventory levels

3.1 Production and sales cycle stages are correlated to stock manufacturing supply and distribution lead times

3.2 Safety stock levels are calculated

3.3 Optimum inventory levels are identified

4 Monitor optimum inventory levels

4.1 Inventory benchmarks are continually compared to current and known future sales turnover/production requirements

4.2 Adjustments to inventory levels are undertaken in accordance with reassessed sales turnover/production requirements, workplace procurement processes and within scope of authority

4.3 Changes and/or requests for adjustments to inventory levels are documented in accordance with workplace policies

4.4 Resources are assembled in accordance with identified optimum inventory levels

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Australian codes and regulations relevant to the optimisation of stock levels

• Relevant OH&S and environmental protection procedures and guidelines

• Workplace procedures and policies for the assessment and monitoring of optimum stock levels

• Focus of operation of supply arrangements, resources, management and workplace operating systems

• Purpose and use of key information required when optimising stock levels, including supply requirements, supplier information, enterprise contract procedures, sales plan, and distribution times

• Workplace business policies and plans including procedures for maintenance of confidentiality

• Computer records/documentation requirements when assessing and monitoring optimum stock levels
• Problems that may occur when assessing and monitoring optimum stock levels and appropriate action that can be taken to resolve the problems
• Worksite layout and organisational structure

**Required skills:**
• Communicate effectively with others when assessing and monitoring optimum stock levels
• Read and interpret instructions, procedures, policies, procedures and instructions relevant to the assessment and monitoring of optimum stock levels
• Complete documentation related to the assessment and monitoring of optimum stock levels
• Work collaboratively with others when assessing and monitoring optimum stock levels
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when assessing and monitoring optimum stock levels in accordance with regulatory requirements and workplace procedures
• Plan and organise resource availability including the competencies of individuals in a team or group
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and apply relevant technology, information systems and procedures when assessing and monitoring optimum stock levels

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may involve:
• twenty-four hour operation
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• limited or restricted spaces
• exposed conditions
• controlled or open environments

Work:
• applies to predominantly manual operations
• does not include a total computer generated purchasing system operation

Inventory benchmarks may be:
• periodic, monthly or annual
Lead times may vary in accordance with:

- type of transport mode(s)
- processing time
- regulatory requirements
- freight disputations
- customs regulations
- scarcity of resource

Information used when assessing and monitoring optimum stock levels may include:

- supply requirements
- supplier information
- workplace contract procedures
- sales plan
- distribution times

Consultative processes may involve:

- other employees and supervisors
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Inventory systems may be:

- automated
- manual
- paper-based
- computerised
- microfiche

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- relevant workplace quality specifications, policies and procedures
- Australian regulations and codes of practice relevant to stock management
- manufacturers specifications and/or suppliers handling and storage advice
- supplier and/or client instructions
- workplace business policies and plans including procedures for maintenance of confidentiality
- operations manuals, job specifications and induction documentation
- ADG Code and associated regulations
- material safety data sheets
- relevant Australian standards and certification requirements
- conditions of service, legislation and industrial agreements including award details, enterprise bargaining agreement, other industrial arrangements
- emergency procedures

Applicable regulations and legislation may include:

- codes and regulations relevant to the optimisation of stock levels including the ADG Code
- relevant state/territory OH&S and environmental protection legislation
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

  Assessment of this unit must be undertaken by a registered training organisation

  As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

  Practical assessment must occur:
    o through appropriately simulated activities at the registered training organisation, and/or
    o in an appropriate range of situations in the workplace
TLIA2907D Plan and manage storage of dangerous goods and hazardous substances

Unit Descriptor
This unit involves the skills and knowledge required to plan and manage the storage of dangerous goods and hazardous substances in accordance with all relevant regulatory requirements and workplace procedures including the current ADG Code. This includes defining the objectives of the required handling and storage operations; specifying equipment and system performance requirements; evaluating and selecting bulk handling and storage resources; and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with all the relevant regulations, standards and codes of practice, including the current ADG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Define objectives of required handling and storage operation

1.1 Requirements for bulk handling and storage activities are identified in accordance with workplace requirements

1.2 Current best practice and future trends for handling and storage equipment are assessed and compared to present operations

1.3 Consideration of workplace goals and present capabilities and constraints is undertaken in selecting bulk handling and storage resources
2 Specify equipment and system performance requirements

2.1 Bulk handling and storage equipment and system requirements are documented
2.2 Performance measures for equipment and system operations are developed and documented
2.3 Consultations are conducted with relevant employees and management to verify documented requirements

3 Evaluate and select bulk handling and storage resources

3.1 The range of bulk handling and storage equipment and facilities which meet specifications are researched for costs and benefits including potential adaptability for new business opportunities
3.2 A rating system is instigated to facilitate comparisons of cost/benefit and other qualitative properties of bulk handling and storage equipment and systems
3.3 An analysis of current employee competency to required competency is undertaken and documented
3.4 Equipment is selected based on comparisons of performance specifications including cost, output, set-up requirements, maintenance and retraining

4 Complete documentation

4.1 Workplace documentation is completed as appropriate
4.2 Handling and storage requirements are documented and communicated to relevant personnel
4.3 Reports are compiled and forwarded to appropriate personnel

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulations, codes of practice and legislative requirements including local and international regulations relevant to handling and storage
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- Relevant OH&S and environmental protection procedures and regulations
- Workplace procedures for the planning and management of the storage of dangerous goods and hazardous substances
- Problems that may occur during the planning and management of the storage of dangerous goods and hazardous substances and action that can be taken to resolve or report the problems
- Hierarchy of risks and hazards related to the storage of dangerous goods and hazardous substances and ways of controlling the risks involved
- Focus of operation of work systems, resources, management and workplace operating systems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Relevant permit and licence requirements
• Application of all relevant Australian and International Standards
• Operational procedures for safe transfer and storage of dangerous goods and hazardous materials
• Resource availability including the competencies of individuals in the team and group
• Understanding and knowledge of the application of current competencies within functional activity
• Coaching and mentoring approaches to support team members to share knowledge and skills
• Relevant workplace documentation procedures

**Required skills:**
• Communicate effectively with others when planning and managing the storage of dangerous goods and hazardous substances
• Read and interpret instructions, procedures, technical data, drawings, instructions and manuals relevant to the planning and management of storage of dangerous goods and hazardous substances
• Complete documentation related to the planning and management of the storage of dangerous goods and hazardous substances
• Provide leadership to others when planning and managing the storage of dangerous goods and hazardous substances
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise during the planning and management of the storage of dangerous goods and hazardous substances in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events when planning and managing the storage of dangerous goods and hazardous substances
• Prioritise work and coordinate self and others in relation to activities
• Recognise hazards and apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Select and apply appropriate technology, information systems and procedures when planning and managing the storage of dangerous goods and hazardous substances

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken in:
• various work environments in the bulk handling, dangerous goods and freight forwarding sections of the warehousing, storage, transport and distribution industries

Customers may be:
• internal or external
Operations may be conducted:  • by day or night

The workplace environment may involve:
• twenty-four hour operation
• single and multi site location
• large, medium and small workplaces

Work may involve:
• exposure to corrosive chemicals, solvents and adhesives, carcinogenic and other harmful substances
• movement of equipment, goods, and vehicular traffic

Regulatory controls and workplace procedures:
• govern requirements for co-storage, volume, mass and required controls

Requirements for bulk handling and storage activities may include:
• types of bulk materials
• quantities
• handling requirements including any special equipment or operating procedures required
• storage requirements
• stock control methods
• negating contaminant sources
• controlling pest infestation

Requirements for work may include:
• site restrictions and procedures
• use of safety and personal protective equipment
• communications equipment
• specialised lifting and/or handling equipment
• incident/accident breakdown procedures
• additional gear and equipment
• noise restrictions
• hours of operations
• authorities and permits

Hazards may include:
• hazardous or dangerous materials
• contamination of, or from, materials being handled
• fire/explosions
• noise, light, energy sources
• stationary and moving machinery, parts or components
• radioactive goods
• dust/vapours
• service lines
• spills, leakages, ruptures
Hazard management is consistent with:
- the principle of hierarchy or control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- Personal protective equipment may include: gloves, safety headwear and footwear, safety glasses, mask and respirator, protective clothing, breathing apparatus

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- mask and respirator
- protective clothing
- breathing apparatus

Consultative processes may involve:
- other employees and supervisors
- relevant authorities and institutions
- suppliers, potential customers and existing clients
- government instrumentalities
- emergency services
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documentation may include:

- Australian and international codes of practice and regulations relevant to bulk handling and storage
- Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including the current ADG Code
- workplace operating procedures and policies
- supplier and/or client instructions
- operations manuals, job specifications and procedures and induction documentation
- manufacturers specifications and/or suppliers handling and storage advice
- material safety data sheets
- Safe Working Limits (SWL) and Working Load Limits (WLL) of load shifting equipment and storage facilities
- Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- relevant codes and regulations for bulk handling and storage
- Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- all relevant Australian and international standards and certification requirements,
- relevant state/territory OH&S and environmental protection legislation in terms of duties of employers, employees, suppliers and contractors
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workplace relations regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - planning and assessing options for the safe and efficient storage of dangerous goods and hazardous substances to regulatory requirements as a minimum
  - identifying container markings and HAZCHEM codes
  - completing documentation as required for the storage of dangerous goods and hazardous goods
  - identifying potential hazards and planning work to minimise risks when storing dangerous goods and hazardous goods
  - determining (any) required permits/licensing
  - estimating weight and volume of goods to be stored and any special requirements
  - undertaking a hazard analysis
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA3007C Organise cargo for export

Unit Descriptor
This unit involves the skills and knowledge required to organise the export of cargo including confirming correct preparation of the consignment, organising the loading of the cargo and processing the documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant codes of practice and regulations for the export of cargo.

It is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

Work involves the application of routine freight forwarding principles and procedures to organise cargo for export.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Confirm correct preparation of consignment

1.1 Consignment is checked to ensure that cargo is consistent with packing specification and is suitable for the type and method of transport

1.2 Consignment is checked to ensure that labelling and marking of cargo conforms with domestic and international regulations and workplace requirements and that the packaging of cargo conforms to regulatory requirements and is appropriate for the method of transport

1.3 Cargo is checked for dangerous goods or explosives and it is confirmed that, where applicable, packaging and labelling conform with the Australian and International Dangerous Goods or Explosives Codes

1.4 Discrepancies in the composition or preparation of the cargo are noted and action is undertaken in accordance with workplace procedures

2 Organise the loading of cargo

2.1 Handling methods and equipment are selected which are suitable for the goods and transport method

2.2 Goods transfer methods between modes of transport are selected where appropriate

2.3 Procedures for the loading of cargo are organised in accordance with good practice requirements

2.4 Established industry practice is followed in the organisation of
the loading of cargo

2.5 Employees, equipment and temporary storage areas (if required) are allocated and supervised

2.6 Individuals are informed of work requirements, timelines and relevant personal protective equipment

2.7 Work processes are monitored to ensure that resources, both human and equipment, are maintained at productive levels and within OH&S requirements

3 Process documentation

3.1 All relevant documentation is consolidated and checked for completion

3.2 Dangerous goods declaration is obtained from consignor (if necessary)

3.3 Discrepancies in documentation are identified and action is undertaken in accordance with workplace procedures

3.4 Documents are filed/stored/forwarded in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Codes of practice and legislative requirements including local and international regulations relevant to the export of cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- Relevant OH&S and environmental procedures and regulations
- Interpretation of client requirements
- Procedures for the identification and evaluation of information needed to organise the export of cargo
- Procedures for the calculation of weights, volumes and dimensions
- Procedures for the reviewing of transport options and availability of carriers
- Procedures for liaising with Australian and international contacts
- Procedures for batching, dating and numbering
- Procedures for the completion of consignment documentation
- Problems that may occur when when organising the export of cargo and appropriate action that can be taken
- Contacts and sources of information/documentation needed when organising the export of cargo
- Customer service policies and procedures

Required skills:

- Communicate effectively with others when organising the export of cargo
• Read and interpret instructions, procedures, information, labels and other documents relevant to the organisation of the export of cargo
• Complete documentation related to the organisation of the export of cargo
• Work collaboratively with others when organising the export of cargo
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when organising the export of cargo in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may arise when organising the export of cargo
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in cargo and systems in accordance with standard operating procedures
• Select and use relevant communications equipment when organising the export of cargo

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation of the cargo for export may include:
• movement of equipment, goods, materials and vehicular traffic

Customers may be:
• internal or external

Operations may be conducted:
• by day or night

Cargo to be exported may include:
• dangerous, hazardous, perishable, fragile, packaged goods or in liquid or solid form

Forms of documentation for the export of cargo may include:
• packing specifications and lists
• manifests
• invoices

Transport modes may include:
• air, sea or combinations
Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident/accident breakdown procedures
- authorities and permits
- hours of operations
- noise restrictions
- additional gear and equipment

Hazards may include:

- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- dust/vapours
- spills, leakages, ruptures
- service lines

Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Established industry practice when planning procedures for the loading of cargo includes:

- available space is used efficiently
- goods are packed for ease of inspection and to meet delivery and customer requirements
- goods are secured ensuring no damage to contents
- weight and volume of consolidated cargo conforms to specifications
- dangerous goods are labelled in accordance with Australian and International Dangerous Goods Codes
- dangerous goods are packaged and labelled in accordance with their class and subsidiary risk

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- Australian and international codes of practice and regulations relevant to export of cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and procedures and induction documentation
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures
- relevant competency standards and training materials

Applicable procedures and codes may include:

- relevant codes and regulations for the export of cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant international and Australian state/territory road rules and transport regulations
- relevant Australian and international standards and certification requirements
- international transport regulations, codes and procedures
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA307C Connect and disconnect reefer units

Unit Descriptor
This unit involves the skills and knowledge required to connect and disconnect reefer units in accordance with workplace requirements including plugging and unplugging reefer units to/from power sources, attaching and detaching clip-on units, and identifying and reporting any problems with reefer unit operation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the connection and disconnection of reefer units.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the connection and disconnection of reefer units as part of work activities in the stevedoring, transport, distribution and allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plug/unplug reefer units to power sources
1.1 Reefer units are plugged/unplugged safely in accordance with workplace procedures
1.2 Reefer units are checked to be running correctly after being plugged in
1.3 Problems with the operation of reefer units are identified and reported to appropriate personnel in accordance with workplace procedures
1.4 Faults in reefer units are investigated and reported in accordance with workplace procedures
1.5 Reefer units are unplugged as required and cables are cleared from units

2 Attach/detach clip-on units
2.1 Clip-on units are attached/detached safely in accordance with the regulatory and code of practice requirements and workplace procedures
2.2 Problems with the operations of clip-on units are identified and reported to appropriate personnel
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international standards, codes and regulations relevant to the connection and disconnection of reefer units
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the connection and disconnection of reefer units
- Focus of operation of work systems, equipment, management and site operating systems for the connection and disconnection of reefer units
- Problems that may occur when connecting and disconnecting reefer units and appropriate action that can be taken to resolve the problems
- Site layout and location of reefer units
- The marking and numbering systems for cargo

Required skills:
- Communicate effectively with others when connecting and disconnecting reefer units
- Read and interpret instructions, procedures, information and labels relevant to connecting and disconnecting reefer units
- Interpret and follow operational instructions and prioritise work when connecting and disconnecting reefer units
- Identify cargo, container and goods, coding, ADG and IMDG markings and where applicable emergency information panels
- Receive, acknowledge and send messages with available communication equipment
- Work collaboratively with others when connecting and disconnecting reefer units
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in the operation of reefer units in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events when connecting and disconnecting reefer units
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when connecting and disconnecting reefer units
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify reefer units requiring clip-on units
- Identify, select and use relevant equipment, processes and procedures when connecting and disconnecting reefer units
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments • by day or night
Customers may be: • internal or external
Workplaces may comprise: • large, medium or small worksites
Work may be conducted in: • limited or restricted spaces • exposed conditions • controlled or open environments • at heights
Reefer units may: • require the attachment of clip-on units
Critical requirements when attaching clip-on units include: • appropriate clip-on tool used • protective equipment is worn • connection to container or crib is ensured
Hazards in the work area may include exposure to: • chemicals • dangerous or hazardous substances • movements of equipment, goods and materials
Personnel in work area may include: • workplace personnel • site visitors • contractors • official representatives
Personal protective equipment may include: • gloves • safety headwear and footwear • safety glasses • two-way radios • protective clothing • high visibility clothing
Communication in the work area may include: • phone • radio • oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the transport of cargo
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant standards and codes applying to the connection and disconnection of reefer units
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - A range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - Relevant and appropriate materials and/or equipment, and/or
  - Applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - Through appropriately simulated activities at the registered training organisation, and/or
  - In an appropriate range of situations in the workplace
**TLIA3107C Consolidate freight**

**Unit Descriptor**
This unit involves the skills and knowledge required to consolidate freight including assessing the scope to consolidate freight, combining or consolidating multiple shipments of products into higher volume shipments, and the related preparation of consignment documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant codes of practice and regulations for the carriage of freight.

It is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

Work involves the application of routine principles and procedures to efficiently and effectively combine and consolidate freight prior to shipment.

**Competency Field**
A – Handling Cargo/Stock

**ELEMENT**

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Assess scope to consolidate freight**
   1.1 Capacity and capability of different transport modes available to the organisation are assessed against proposed task
   1.2 Individual consignment loads are evaluated to identify relevant information needed to combine or consolidate freight
   1.3 Information is analysed to determine where opportunities for freight consolidation exist
   1.4 Packaging requirements for consolidated cargo conform to regulatory requirements
   1.5 Procedures for the loading of cargo are planned in accordance with established industry practice and Australian Dangerous Goods (ADG) Code
   1.6 Volumes and dimensions of proposed consolidation are calculated
   1.7 Proposed consolidation is matched against operational capacity and capability of carrier

2 **Prepare consignment documentation**
   2.1 Consignment documentation is prepared for consolidated cargo
   2.2 Labelling and marking requirements of cargo are documented in accordance with domestic and international regulations,
ADG Code and workplace requirements

2.3 Consignment documentation is completed and filed/stored in accordance with workplace procedures including dangerous goods declaration, where applicable

2.4 Freight is consolidated taking into account segregation requirements for dangerous goods, if applicable

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant codes of practice and legislative requirements including local and international freight regulations
• Relevant OH&S and environmental procedures and regulations
• Procedures for the calculation of volumes and dimensions
• Procedures for the identification and evaluation of information needed to facilitate the consolidation of freight
• Procedures for planning the loading of freight
• Procedures for the completion of consignment documentation
• Problems that may occur when consolidating freight and appropriate action that can be taken
• Sources of information and documentation needed when consolidating freight
• Customer service policies and procedures

Required skills:

• Communicate effectively with others when consolidating freight
• Read and interpret instructions, procedures, information and labels relevant to the consolidation of freight
• Complete documentation related to the consolidation of freight
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when consolidating freight
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur during the consolidation of freight in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may occur during the consolidation of freight
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in freight and equipment in accordance with standard operating procedures
- Select and use required computer and communication equipment when consolidating freight
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Consolidation of freight may include:**

- mixed products from multiple areas for shipment to a single customer
- the consolidation of smaller shipments

**Requirements for work may include:**

- freight forwarding protocols and procedures
- communications equipment
- workplace operations
- authorities and permits
- hours of operation
- relevant regulations

**Information needed to facilitate the consolidation of freight may include:**

- type, capacity and compatibility of cargo
- agreed delivery times and routing schedules
- pick-up and drop-off points
- specified carrier/mode of transport
- agreed cost structure

**Established industry practice when planning procedures for the loading of cargo includes:**

- available space is used efficiently
- goods are packed for ease of inspection and to meet delivery and customer requirements
- goods are secured ensuring no damage to contents
- weight and volume of consolidated cargo conforms to specifications

**Consultative processes may involve:**

- other employees and supervisors
- international and domestic agents, suppliers, clients
- relevant authorities and institutions
- management
- OH&S specialists
- other professional or technical staff
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- Australian and international codes of practice and regulations relevant to consolidation of freight
- operations manuals, job specifications and procedures and induction documentation
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- competency standards and training materials
- manufacturers/client specifications, instructions
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- emergency procedures
- quality assurance procedures

Applicable procedures and codes may include:

- relevant regulations for the import and export of cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- Australian and international standards and certification requirements
- international transport regulations, codes and procedures
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIA3207C Organise transport of freight or goods

Unit Descriptor
This unit involves the skills and knowledge required to organise the transport of freight or goods, including planning the transport operations, organising the transport of the freight, completing the required documentation and finalising the organisational process. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant codes of practice and regulations for the transport of freight or goods.

It is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

Work involves the application of routine principles and procedures to organise the transport of freight or goods prior to shipment.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan transport operations
1.1 Knowledge of product to be freighted and workplace procedures are applied to the analysis of the transportation process
1.2 Domestic and international regulations, codes and procedures for the transport of freight are identified
1.3 Resources including manual handling equipment, employees competencies, storage areas, goods management equipment and transportation equipment are identified to match the task
1.4 Work processes are planned to meet agreed timelines
1.5 Types of transportation required for the freight or goods is identified to match customer requirements, freight type and delivery time
1.6 Multiple transport modes are identified where applicable
1.7 Goods transfer methods between modes of transport are selected where appropriate

2 Organise the transport of freight
2.1 Employees, equipment and temporary storage areas (if required) are allocated and supervised
2.2 Freight is secured ensuring no damage to contents
2.3 Handling methods suitable to the goods and transport method are selected
2.4 Individuals are informed of work requirements and timelines
2.5 Work processes are monitored to ensure that resources, both human and equipment, are maintained at productive levels and according to workplace and OH&S requirements
2.6 Discrepancies in freight are noted and action undertaken in accordance with workplace procedures

3 Complete organisational process

3.1 Monitoring processes to track the movement of freight are implemented
3.2 Reporting requirements are communicated to appropriate personnel
3.3 Workplace documents and records are checked for completion and are filed/stored in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Codes of practice and legislative requirements relevant to the organisation of the transport of freight and goods
- Relevant OH&S and environmental procedures and regulations
- Procedures for the calculation/estimation of weight, volumes and dimensions
- Procedures for the identification and evaluation of information needed to facilitate the transport of freight
- Procedures for assessing storage and transport requirements and options
- Procedures for electing transport/storage equipment and systems
- Procedures for organising any required permits
- Procedures for coordinating the transfer and storage of goods including multi-modal transport
- Procedures for the completion of transport documentation
- Problems that may occur when organising the transport of freight and goods and appropriate action that can be taken
- Sources of information and documentation needed when organising the transport of freight and goods
- Customer service policies and procedures

Required skills:
- Communicate effectively with others when organising the transport of freight and goods
- Read and interpret instructions, procedures and labels relevant to the organisation of the transport of freight and goods
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the organisation of the transport of freight and goods
- Work collaboratively with others when organising the transport of freight and goods
- Establish effective working relationships with colleagues and clients
• Plan own work including prioritisation of work activities, predicting consequences and identifying improvements
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise during the organisation of the transport of freight and goods in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use communication, computers and systems required for the organisation of the transport of freight and goods
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation of the transport of freight/goods may include movement of:
• goods
• equipment
• materials
• vehicular traffic

Customers may be:
• internal or external

Operations may be conducted:
• by day or night

Freight/goods to be transported may include:
• dangerous, hazardous, perishable, fragile, packaged goods
• in liquid or solid form

Storage areas may be:
• existing, temporary or permanent

Transport modes may include:
• road, air, rail, sea or combinations

Information needed to facilitate the organisation of the transport of freight/goods may include:
• type, capacity and compatibility of freight/goods
• agreed delivery times and routing schedules
• pick-up and drop-off points
• specified mode of transport
• agreed cost structure
Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident/accident breakdown procedures
- authorities and permits
- hours of operations
- noise restrictions
- additional gear and equipment
- Australian standards and guidelines for manual handling

Hazards may include:
- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- dust/vapours
- spills, leakages, ruptures
- service lines

Consultative processes may involve:
- other employees and supervisors
- suppliers, potential customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- Australian and international codes of practice and regulations relevant to the transport of freight
- operations manuals, job specifications and procedures and induction documentation
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- competency standards and training materials
- manufacturers/client specifications, instructions
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures

Applicable procedures and codes may include:

- relevant regulations for the import and export of cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- Australian and international standards and certification requirements
- international transport regulations, codes and procedures
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

  - the underpinning knowledge and skills
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - A range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - Relevant and appropriate materials and/or equipment, and/or
  - Applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - Through appropriately simulated activities at the registered training organisation, and/or
  - In an appropriate range of situations in the workplace
TLIA3307C  Organise international transport of freight

Unit Descriptor
This unit involves the skills and knowledge required to organise the international transport of freight, including confirming customer requirements, organising freight arrangements and communicating with shipping agents and authorities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant codes of practice and regulations for the international transport of freight.

It is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

Work involves the application of routine principles and procedures to organise the international transport of freight.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Confirm customer requirements
1.1 Customer requirements for the movement of cargo in terms of the nature of goods, the countries of origin and destination, the timescales for collection and delivery and the estimated budget for the transaction are confirmed
1.2 Customer priorities for the shipment are confirmed
1.3 Decisions on possible routes, taking into account known variables, are undertaken

2 Organise freight arrangements
2.1 International regulations, codes of practice for the transport of freight are confirmed
2.2 Work processes are planned to meet agreed timelines
2.3 Transport modes (including multi-modal options) are matched to customer requirements, freight type and delivery times
2.4 Availability of selected carrier(s) is checked including modes of transport, scheduled departure dates and times, transfer times and costs for each stage of shipment
2.5 Arrangements are made to consolidate freight, where appropriate
2.6 Freight carrier(s) booking(s) are confirmed
2.7 Transport of freight to selected international carrier is organised
Communicate with shipping agents and authorities

3.1 Freight documentation is checked for accuracy and forwarded as appropriate to shipping agents and authorities
3.2 Confirmation of despatch of freight from international carrier is obtained
3.3 Arrival of cargo at port of entry is confirmed
3.4 Acceptance of freight documentation is confirmed
3.5 Payments are authorised
3.6 Cargo is on-forwarded from point of entry, where required
3.7 Customer is advised that freight has been forwarded to point of destination

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant codes of practice and legislative requirements including local and international freight regulations
- Relevant OH&S and environmental procedures and regulations
- Procedures for the interpretation of client requirements
- Procedures for the identification and evaluation of information needed to organise the international transport of freight
- Procedures for calculating volumes and dimensions
- Procedures for reviewing transport options and availability of carriers
- Procedures for liaising with Australian and international contacts using appropriate technology
- Procedures for completing consignment documentation
- Problems that may occur when organising the international transport of freight and appropriate action that can be taken
- Contacts and sources of information/documentation needed when organising the international transport of freight
- Customer service policies and procedures

Required skills:
- Communicate effectively with others when organising the international transport of freight
- Read and interpret instructions, procedures and labels relevant to the international transport of freight
- Complete documentation related to the organisation of the international transport of freight
- Work collaboratively with others when organising the international transport of freight
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when organising the international transport of freight in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Use relevant communication and computer equipment and systems when organising the international transport of freight
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisational activities may cover movement of:
• equipment
• goods
• materials
• various forms of freight transport

Requirements for work may include:
• freight forwarding protocols and procedures
• communications equipment
• workplace operations
• authorities and permits
• hours of operation
• relevant regulations

Information needed to organise the international transport of freight may include:
• type, capacity and compatibility of cargo
• agreed delivery times and routing schedules
• pick-up and drop-off points
• specified carrier/mode of transport
• agreed cost structure

Forms of transport may include:
• road
• rail
• sea
• air
• local courier
Consultative processes may involve:

- international and domestic agents, suppliers and clients
- relevant authorities and institutions
- other employees and supervisors
- management
- OH&S specialists
- other professional or technical staff

Communications systems may involve:

- telephone
- fax
- email
- electronic data transfer of information
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- Australian and international codes of practice and regulations relevant to the international transport of freight
- operations manuals, job specifications and procedures and induction documentation
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures
- relevant competency standards and training materials
Applicable procedures and codes may include:

- regulations and codes of practice for the international transport of freight
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and international dangerous goods codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA3507B Manage international freight transfer

Unit Descriptor
This unit involves the skills and knowledge required to plan and manage international freight transfer in accordance with relevant regulatory requirements and workplace procedures, including the ADG and IDG codes. This includes analysing freight transfer requirements, planning and establishing processes for international freight transfer, monitoring and coordinating systems and processes for international freight transfer, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant Australian and international regulations, standards and codes of practice, including the ADG and IDG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Analyse freight transfer requirements

1.1 Australian and international codes and regulations and workplace policies for international freight transfer are identified

1.2 Information on current and potential customers and their international freight requirements are obtained and analysed in accordance with workplace procedures

1.3 Special characteristics and customer requirements for the types of freight to be transferred are identified, interpreted and considered in accordance with workplace procedures

1.4 Appropriate options for international freight transfer are
1.5 Selected options for freight transfer arrangements are documented in accordance with workplace policy and related regulations.

2 Plan systems and processes for international freight transfer

2.1 Workplace policies and mission statement are interpreted to define the process requirements for international freight transfer.

2.2 Appropriate systems are evaluated and established/coordinated to facilitate the organisation of international freight transfer including suitable risk analysis.

2.3 Human resources needed to organise international freight transfer are identified and documented.

2.4 Action is initiated to ensure staff are assigned, recruited and/or trained in accordance with identified human resource requirements.

2.5 Office, computer and communications equipment is identified and action initiated for appropriate assignment or procurements.

2.6 Quality standards and procedures for proposed international freight transfer processes are documented/updated in accordance with workplace procedures.

3 Monitor and coordinate systems and processes for international freight transfer

3.1 International freight forwarding operations are monitored against identified quality standards and compliance with Australian and international regulatory requirements.

3.2 Non-compliance with quality standards or regulatory requirements is identified and appropriate action is initiated to report and rectify any identified problems.

3.3 Customer satisfaction with international freight transfer services is monitored using appropriate methods.

3.4 Customer concerns and suggestions for service improvements are acted upon in accordance with workplace procedures.

3.5 Reports and other required documentation related to international freight transfer operations are completed and referred to relevant personnel in accordance with workplace procedures.

3.6 Any changes in Australian and international regulations and codes of practice relevant to international freight transfer are monitored, identified and appropriate action is initiated to ensure ongoing compliance of workplace processes and systems.
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant Australian and international regulations, codes of practice and legislative requirements including local and international freight regulations
- Relevant OH&S and environmental procedures and regulations
- Procedures for the identification and interpretation of requirements of current and potential clients
- Procedures for the identification and evaluation of information needed to manage the international transfer of freight
- Procedures for reviewing options for international freight transfer systems
- Procedures for liaising with relevant Australian and international contacts using appropriate technology
- Procedures for establishing and monitoring suitable international freight transfer operations
- Focus of operation of work systems, resources, management and workplace operating systems
- Contacts and sources of information/documentation needed when managing systems for the international transfer of freight
- Quality and customer service policies and procedures
- Relevant permit and licence requirements
- Application of relevant Australian standards and associated certification requirements
- Operational requirements for the safe transfer and storage of dangerous goods and hazardous materials
- Relevant workplace documentation procedures applicable to the international transfer of freight

Required skills:
- Communicate effectively with others when managing international freight transfer operations
- Read and interpret instructions, procedures, information and labels relevant to the management of international freight transfer operations
- Complete documentation related to the management of international freight transfer operations
- Maintain workplace records and documentation when managing international freight transfer operations
- Provide leadership to others when managing international freight transfer operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Plan and organise systems and activities when managing international freight transfer operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in freight and systems in accordance with standard operating procedures
• Select and apply appropriate technology, information systems and procedures when managing international freight transfer operations

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: • in various work environments in the bulk handling, dangerous goods and freight forwarding sections of the warehousing, storage, transport and distribution industries

Customers may be: • internal or external

Operations may be conducted: • by day or night

The workplace environment may involve: • twenty-four hour operation
• single and multi-site location
• large, medium and small workplaces

Work systems may include: • freight forwarding protocols and procedures
• communications equipment
• workplace operations
• authorities and permits
• hours of operation
• relevant regulations

Information needed to organise the international transport of freight may include: • type, capacity and compatibility of cargo
• agreed delivery times and routing schedules
• pick-up and drop-off points
• specified carrier/mode of transport
• agreed cost structure

Forms of transport may include: • road
• rail
• sea
• air
• local courier
Consultative processes may involve:
- employees, supervisors and managers
- international and domestic agents, suppliers and current or potential clients
- relevant authorities, government departments and institutions
- representatives of other enterprises and organisations related to the international transfer of freight
- industrial relations and OH&S specialists
- other professional or technical staff

Communications systems may involve:
- telephone
- fax
- email
- electronic data transfer of information
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:
- Australian and international codes of practice and regulations relevant to the international transfer of freight
- Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including the ADG and IDG Code
- workplace operating procedures and policies
- operations manuals, job specifications and procedures and induction documentation
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
- supplier and/or client instructions
- Australian and International standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- regulations and codes of practice for the international transfer of freight
- Australian and international regulations and codes of practice for the handling and transfer of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA3807B  Control and order stock

Unit Descriptor

This unit involves the skills and knowledge required to control and order stock for a workplace store in an enterprise/organisation in a transport, distribution, production, hospitality, retail or other relevant industry sector. It specifically covers maintaining stock levels and records, organising and administering stocktakes, identifying stock losses, processing stock orders, and following up orders. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

Work must be carried out in compliance with the relevant codes of practice, regulations and workplace procedures for the control and ordering of stock in a workplace store.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to efficiently control and order stock in a workplace store.

Competency Field

A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Maintain stock levels and records

1.1 Stock levels are monitored and maintained at levels prescribed by workplace specifications

1.2 Stock security systems are monitored and adjusted as required

1.3 Stock re-order cycles are maintained, monitored and adjusted as required

1.4 Colleagues are informed of their individual responsibilities in regard to recording of stock

1.5 Stock storage and movement records are maintained in accordance with workplace procedures

1.6 Stock performance is monitored and fast/slow moving items are identified and reported in accordance with workplace procedures

2 Organise and administer stocktakes

2.1 Stocktakes are organised at the appropriate time and responsibilities allocated to staff

2.2 Accurate reports on stocktake data are produced within designated timelines

3 Identify stock losses

3.1 Losses are accurately identified, recorded and assessed against
potential loss as forecast on a regular basis

3.2 Identified losses are reported in accordance with workplace procedures

3.3 Avoidable losses are identified and reasons are established, and appropriate solutions are recommended and implemented to prevent future avoidable losses

4 Process stock orders

4.1 Orders for stock are accurately processed in accordance with workplace procedures

4.2 Stock ordering and recording systems are accurately maintained

4.3 Purchase and supply agreements are correctly used and appropriate details recorded

4.4 Negotiated purchase and supply agreements are recorded accurately and filed for retrieval

5 Follow up orders

5.1 Delivery process is monitored to meet agreed deadlines

5.2 Appropriate liaison is undertaken with colleagues and suppliers to ensure continuity of supply

5.3 Routine supply problems are followed up or referred to the appropriate person in accordance with workplace policy

5.4 Stock is distributed in accordance with agreed allocations

6 Complete documentation

6.1 All required records and documentation are completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant codes of practice and legislative requirements (for example dangerous goods regulations, health and hygiene regulations, etc.)
- Relevant OH&S and environmental procedures and regulations
- Principles of stock control
- Procedures for the ordering of stock
- Stock control documentation and systems used in workplace stores
- Interpretation of workplace specifications and orders for supplies
- Stock security systems
- Protocols and procedures for liaising with supplier representatives, drivers and colleagues using appropriate technology
- Systems for the completion of relevant records and documentation
- Problems that may occur when controlling and ordering stock and appropriate action that can be taken to resolve the problems
• Contacts and sources of information and documentation needed when controlling and ordering stock
• Site layout
• The purpose and procedures for the use of relevant personal protective equipment
• Customer service policies and procedures

Required skills:
• Communicate effectively with others when controlling and ordering stock
• Read and interpret instructions, procedures and labels relevant to the controlling and ordering of stock
• Complete documentation related to the controlling and ordering of stock
• Work collaboratively with others when controlling and ordering stock
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when controlling and ordering stock in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Adapt to differences in stock and systems in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Select and use relevant communication and computing equipment when controlling and ordering stock

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

This unit may apply to:
• any workplace store in an enterprise/organisation in a transport, distribution, production, hospitality, retail or other relevant industry sector (excluding work areas and organisations involving major and/or dedicated warehousing)

Suppliers may be:
• internal or external
Requirements for work may include:

- workplace protocols and procedures
- communications equipment
- workplace operations manuals
- relevant regulations, authorities and permits
- hours of operation
- relevant record keeping requirements
- workplace quality and customer service standards

Stock control and record systems may be:

- manual
- computerised

Stock may include but is not limited to:

- production materials
- packaging materials
- equipment and tools
- office and stationery supplies
- forms, brochures and documents
- vouchers and tickets
- merchandise for sale
- linen
- food and beverage supplies

Consultative processes may involve:

- suppliers, representatives and drivers
- relevant authorities
- other employees and supervisors
- management
- other professional or technical staff

Communications systems may involve:

- telephone
- fax
- email
- electronic data transfer of information
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Personal protective equipment may include but is not limited to:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Documentation/records may include:

- workplace protocols and procedures
- workplace specifications for the stock concerned
- relevant regulations
- supplier instructions
- operations manuals
- documentation including order forms, standard letters, etc.
- induction documentation
- delivery options
- relevant Australian and international standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures
- relevant competency standards and training materials

Applicable procedures and codes may include:

- relevant regulations and codes of practice for receipt and storage of stock concerned
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria
of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA3907B  Receive and store stock

Unit Descriptor
This unit involves the skills and knowledge required to receive and store stock for a workplace store in an enterprise/organisation in a transport, distribution, production, hospitality, retail or other relevant industry sector. It specifically covers taking delivery of stock, storing the received stock, and rotating and maintaining stock in accordance with relevant regulatory and workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant codes of practice, regulations and workplace procedures for the receipt and storage of stock in a workplace store.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to safely and efficiently receive and store stock in a workplace store.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Take delivery of stock
1.1 Incoming stock is accurately checked against orders and delivery documentation in accordance with workplace procedures
1.2 Variations are accurately identified, recorded and communicated to the appropriate person
1.3 Items are inspected for damage, quality, use-by dates, breakages or discrepancies, and records are made in accordance with workplace policy

2 Store stock
2.1 All stock is promptly and safely transported to an appropriate storage area without damage
2.2 Stock is stored in the appropriate location within the area and in accordance with workplace security procedures
2.3 Appropriate personal protective equipment is correctly used during receipt and storage operations
2.4 Stock levels are accurately recorded in accordance with workplace procedures
2.5 Stock is labelled in accordance with workplace procedures
3 Rotate and maintain stock

3.1 Stock is rotated, where required, in accordance with workplace policy
3.2 Stock is moved using appropriate equipment, if necessary, in accordance with OH&S requirements, relevant regulations and workplace procedures
3.3 Quality of stock is checked and reported
3.4 Appropriate action is taken where the quality of the stock is found to be outside specified standards
3.5 Stock is placed in storage or disposed of in accordance with workplace policy

4 Complete documentation

4.1 All required records and documentation are completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant codes of practice and legislative requirements (for example dangerous goods regulations, health and hygiene regulations, etc.)
- Relevant OH&S and environmental procedures and regulations
- Principles of stock control
- Stock control documentation and systems used in workplace stores
- Interpretation of workplace specifications and orders for supplies
- Stock security systems
- Safe lifting and handling procedures
- Protocols and procedures for liaising with supplier representatives, drivers and colleagues using appropriate technology
- Code of practice for working collaboratively with others
- Systems for the completion of relevant records and documentation
- Problems that may occur when receiving and storing stock and appropriate action that can be taken to resolve the problems
- Contacts and sources of information and documentation needed when receiving and storing stock
- Site layout
- The purpose and procedures for the use of relevant personal protective equipment
- Customer service policies and procedures
- Procedures for operating electronic communications equipment

Required skills:

- Communicate effectively with others when receiving and storing stock
- Read and interpret instructions, procedures and labels relevant to receiving and storing stock
• Complete documentation related to receiving and storing stock
• Work collaboratively with others when receiving and storing stock
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when receiving and storing stock in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Select and use relevant communication and computing equipment when receiving and storing stock

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

This unit may apply to: • any workplace store in an enterprise/organisation in a transport, distribution, production, hospitality, retail or other relevant industry sector (excluding work areas and organisations involving major and/or dedicated warehousing)

Suppliers may be: • internal or external

Requirements for work may include:
• workplace protocols and procedures
• communications equipment

  o in an appropriate range of situations in the workplace
TLIA4007B Implement and monitor stevedoring regulations

Unit Descriptor This unit involves the skills and knowledge required to implement and monitor stevedoring regulations in accordance with relevant Australian and international regulations and codes of practice. This includes accessing appropriate information on relevant regulations and codes, interpreting regulations and codes relevant to workplace activities, implementing and monitoring compliance with the identified regulations and codes, and completing all required documentation in accordance with regulatory and workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills This unit contains employability skills.

Application of the Unit Work must be carried out in compliance with the relevant stevedoring regulations, codes of practice and workplace requirements.

Work is performed under limited supervision generally within a team environment. It involves the application of workplace procedures and information on regulations to the implementation and monitoring of compliance with stevedoring regulatory requirements as part of work activities in the stevedoring and/or allied industries.

Competency Field A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Access information on relevant regulations and codes

1.1 Australian and international regulations and codes of practice relevant to workplace stevedoring operations are identified in accordance with workplace procedures and in consultation with relevant personnel

1.2 Information on the identified regulatory and/or code requirements relevant to workplace functions and limits of responsibility are accessed in accordance with workplace procedures

2 Interpret relevant regulations and codes

2.1 Information on the identified regulatory and/or code requirements relevant to workplace functions and limits of responsibility is examined and interpreted in terms of its impact and implications for workplace activities

2.2 Compliance requirements are clarified and obligations under the regulations falling within the limits of responsibility and duty of care of various staff/team members are confirmed in
accordance with workplace procedures

2.3 Staff/team members/team leaders/supervisors are made aware of the identified regulatory/code requirements as they relate to workplace roles and responsibilities

3 Implement and monitor compliance with regulations and codes

3.1 Regulatory requirements relevant to workplace activities are implemented in accordance with the relevant regulations/ codes and workplace procedures

3.2 Appropriate information, training and/or instruction is organised to ensure that personnel are aware of compliance requirements

3.3 Procedures for monitoring compliance with operations in terms of regulatory requirements and workplace policies and procedures are followed

3.4 Problems that may lead to non-compliance are promptly and fully identified

3.5 Remedial action is timely and ensures continuity in workplace compliance with relevant regulations

3.6 Failure to comply with regulatory requirements and workplace policy is identified and action taken in accordance with workplace policies and procedures

4 Complete required documentation

4.1 Advice/reports to others on compliance issues are provided to relevant personnel and authorities in accordance with workplace procedures and relevant regulatory requirements

4.2 Documentation, records, reports and other information required within regulatory requirements is completed in accordance with the regulations and workplace procedures

4.3 Documentation is kept secure in accordance with workplace procedures and policy

4.4 Computer backup procedures are followed in the case of electronic records as per workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international regulations and codes of practice relevant to stevedoring operations
- Relevant OH&S and environmental protection procedures and guidelines
- Relevant customs, bond, quarantine and other legislative requirements including IMDG Code and Marine Orders
- Workplace/standard operating procedures and policies for the implementation and monitoring of compliance with stevedoring regulatory requirements
Focus of operation of work systems, equipment, management and site operating systems for stevedoring operations

Roles and responsibilities of various workplace personnel in terms of workplace activities and regulatory requirements

Problems that may occur when implementing and monitoring compliance with stevedoring regulatory requirements, and appropriate action that can be taken to resolve the problems

Site layout

**Required skills:**

- Communicate and negotiate effectively with others when implementing and monitoring stevedoring regulations
- Identify and access information on relevant regulations
- Read and interpret regulatory requirements, instructions, procedures and labels relevant to stevedoring operations
- Complete documentation related to stevedoring regulations
- Report on compliance related issues
- Work collaboratively with others when implementing and monitoring stevedoring regulations
- Resolve conflict situations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified breaches of stevedoring regulations in accordance with regulatory requirements and workplace procedures
- Coordinate compliance activities in the workplace
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Follow processes for monitoring compliance with regulatory requirements

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

- in limited or restricted spaces
- in exposed conditions
- in controlled or open environments
- in a range of work environments
- by day or night
Customers may be:  
• internal or external
• Workplaces may comprise:  
• large, medium or small worksites

Hazards in the work area may include:  
• exposure to chemicals
• exposure to dangerous or hazardous substances
• movements of equipment, goods and materials

Relevant personnel may include:  
• the master and officers of a vessel
• the crew of a vessel
• workplace team leaders/supervisors
• other workplace personnel
• customs officers and representatives
• officers of the Australian Quarantine and Inspection Service
• official representatives of other relevant regulatory authorities
• site visitors
• contractors
• other technical, maintenance and professional staff

Personal protective equipment may include:  
• gloves
• safety headwear and footwear
• safety glasses
• two-way radios
• protective clothing
• high visibility clothing

Communication in the work area may include:  
• phone
• fax
• email
• electronic data transfer (EDI)
• RF systems
• radio
• oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:  
• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Information/documents may include:

- Australian and international regulations and codes of practice relevant to stevedoring operations
- operations manuals, job specifications and induction documentation
- workplace standard operating procedures (SOPs) and policies
- guidelines and information on regulatory requirements issued by the relevant regulatory authorities
- documentation required to be completed under the relevant regulatory requirements
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for stevedoring operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- other sections of the Marine Orders and other regulations administered by the Australian Maritime Safety Authority (AMSA)
- quarantine regulations administered by the Australian Quarantine and Inspection Service (AQIS)
- customs regulations (export/import/bond requirements)
- relevant state/territory marine authority/port authority regulations
- relevant state/territory OH&S and environmental protection legislation
- water/sewerage regulations
- relevant state/territory road traffic regulations
- licence, patent or copyright arrangements
- workplace relations regulations
- workers compensation regulations
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA407C Process receipt and delivery of containers and cargo

Unit Descriptor
This unit involves the skills and knowledge required to process the receipt and delivery of containers and cargo in accordance with workplace requirements including checking the stacking/discharge list at commencement of a shift, assessing and planning container/cargo consolidation, allocating stack positions, identifying and checking containers/cargo, and checking and completing required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the receipt and delivery of containers and cargo.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the processing of the receipt and delivery of containers and cargo as part of work activities in the stevedoring, transport, distribution and allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
1 Check stacking/discharge list at commencement of shift
   1.1 Yard or terminal stacking/discharge lists are checked against container/cargo documentation and operational order of work, taking into account both ship and shore operations
   1.2 Stacking discharge lists are continually updated to reflect the correct location of containers and cargo

2 Assess and plan container/cargo consolidation
   2.1 Yard or terminal plans are assessed and where appropriate consolidation of container/cargo within the yard or terminal is planned
   2.2 Consolidation plans are prepared to ensure efficiency of operations and efficient use of available yard/terminal space
   2.3 Final yard/terminal positions are obtained from consolidation plans and recorded

3 Allocate stack positions
   3.1 Stack positions are allocated based on the nature of the container/cargo concerned and the requirements of yard/terminal operations
3.2 Stacking plan is communicated to the relevant personnel in accordance with workplace procedures

4 Identify and check containers/cargo

4.1 Containers/cargo are identified and checked at the point of entry to the yard and prior to stacking
4.2 Agreement between numbers and marks on container/cargo and shipping documentation is confirmed
4.3 Cargo/containers are inspected and appropriate action is taken to report identified damage or defects in accordance with workplace procedures
4.4 Stacking follows stacking plans and facilitates efficient movement within the yard

5 Check and complete documentation

5.1 Documentation is checked prior to performing completion procedures ensuring compliance with workplace procedures and regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international standards, codes and regulations relevant to the processing of the receipt and delivery of containers and cargo including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the processing of the receipt and delivery of containers and cargo
- Focus of operation of work systems, equipment, management and site operating systems for the receipt and delivery of containers and cargo
- Problems that may occur when processing the receipt and delivery of containers and cargo, and appropriate action that can be taken to resolve the problems
- Relevant handling and safety codes
- Site layout, stacking plans and available stacking space
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

Required skills:

- Communicate effectively with others when processing the receipt and delivery of containers and cargo
- Read and interpret instructions, procedures and labels relevant to the processing of the receipt and delivery of containers and cargo
- Identify cargo, container and goods, coding, ADG / IMDG markings and where applicable emergency information panels
- Receive, acknowledge and send messages with appropriate communications equipment
• Work collaboratively with others
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems when processing the receipt and delivery of containers and cargo in accordance with regulatory requirements and workplace procedures
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify, select and use relevant equipment, processes and procedures when processing the receipt and delivery of containers and cargo
• Use the lashing and protection equipment
• Estimate the size, shape and special requirements of loads
• Apply effective eye-hand coordination

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
• exposed conditions
• controlled or open environments

Cargo may include: • goods with specialist requirements, including temperature controlled goods and dangerous goods

Hazards in the work area may include exposure to: • chemicals
• dangerous or hazardous substances
• movements of equipment, goods, materials and vehicular traffic

Personnel in work area may include: • workplace personnel
• site visitors
• contractors
• official representatives
Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the processing of the receipt and delivery of containers and cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the receipt and delivery of containers and cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA4107B  Manually sort mail and parcels

Unit Descriptor
This unit involves the skills and knowledge required to manually sort mail and parcels in accordance with workplace requirements, including carrying out required preparations of the work area, manually sorting mail and parcels, and finalising the required sorting processes. The sorting processes include accurately and efficiently organising mail and parcels into groups for further processing or distribution and containerising processed mail and parcels ready for transfer to the next processing or distribution point. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is normally performed under general supervision, usually in a team or outstation environment. It involves the application of workplace procedures and regulatory requirements to the manual sorting of mail and parcels as part of work activities in the postal and allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to sort mail and parcels manually
1.1 Individual and work team priorities and responsibilities are identified and confirmed
1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied
1.3 The availability of mail and parcels to be processed is identified and confirmed
1.4 Mail and parcels to be processed are transferred to processing point
1.5 Labels for identifying the destination of mail are created and affixed to trays

2 Sort mail and parcels manually
2.1 Internal operating procedures and standards are applied to the manual processing of parcels and mail
2.2 Mail and parcels are inspected to ensure that all criteria have been met
2.3 Mail and parcels are sorted accurately and correctly in
compliance with priority for processing and manual sorting procedures

2.4 Mail and parcels are handled safely to minimise risk of injury to people and damage to mail and parcels

2.5 Mail and parcels that are damaged, underpaid, incorrectly classified, or are non-conforming items are identified, separated and re-processed in accordance with workplace procedures

2.6 Legal requirements and workplace policies and procedures in relation to the security of mail and parcels are followed

3 Complete process for manually sorting mail and parcels

3.1 Mail and parcel sorting frames/bag racks are cleared down, and mail and parcel containers/bags are sealed and labelled in accordance with workplace procedures

3.2 Mail and parcels are transferred to next processing or distribution point using appropriate shifting equipment and labels scanned as required

3.3 Information required to complete records of mail and parcels processed is provided and recorded

3.4 Excess equipment is removed and work area is prepared for next activity/shift

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the manual sorting of mail and parcels
- Focus of operation of work systems, equipment, management and site operating systems for the manual sorting of mail and parcels
- Problems that may occur when manually sorting mail and parcels and appropriate action that can be taken to resolve/avoid the problems
- Requirements of mail sorting systems, operations and relevant equipment
- Hazards that may occur during the manual sorting of mail and parcels and ways of controlling the risks involved
- Site layout
- Relevant personal protective equipment and procedures for its use

Required skills:

- Communicate effectively with others when manually sorting mail and parcels
- Read and interpret instructions, procedures and labels relevant to the manual sorting of mail and parcels
- Interpret and follow operational instructions and prioritise work
• Complete documentation related to the manual sorting of mail and parcels
• Work collaboratively with others when manually sorting mail and parcels
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise during the manual sorting of mail and parcels in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may arise during the manual sorting of mail and parcels
• Plan own work including predicting consequences and identifying improvements
• Apply security and safety precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment and systems in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify, select and use relevant equipment, processes and procedures when manually sorting mail and parcels

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  • in a range of work environments
                       • by day or night
Workplaces may comprise:  • large, medium or small worksites
Operations may include:  • shiftwork
Customers may be:  • internal or external
Hazards may include:  • vehicular traffic and pedestrians
                       • dust and vapours
                       • hazardous or dangerous materials
                       • humidity, air temperature
                       • lighting conditions
                       • machinery/equipment moving parts
                       • noise
Weighing devices may be:
- mechanical
- automated
- weighbridge

Work priorities may be communicated through:
- briefings
- noticeboards
- announcements

Equipment may include:
- mail trays, tubs and bags
- sorting frame/bag rack
- scanners
- tipping belt
- knife
- pallet jack/maverick
- powered lifters
- king fishers
- scales
- carousel
- Unit Load Device (ULD) and Wheeled Unit Load Device (WULD)
- Vertical Sorting Frame (VSF) and Vertical Sorting Division (VSD)
- ULD tipper
- conveyor belts
- strapping machine

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:
- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace policies, operating procedures and practices
- Management Operating System (MOS)
- Management Information System (MIS)
- sorting system information which may include:
  - postcode book, national sort plan and state sort plan
  - post guide
  - international postcode directory
  - labels chart
  - mail identification numbers, codes and labels
- manifests, consignment notes, bar codes, mail and container identification
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and or/client instructions
- HAZCHEM chart/material safety data sheets
- safety observation feedback program
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA4207B  Despatch mail

Unit Descriptor
This unit involves the skills and knowledge required to despatch mail in accordance with regulatory and workplace requirements, including carrying out required preparations, despatching mail in accordance with workplace procedures, and completing the despatch operations. The process includes all actions from the receipt of mail for consolidation to the despatch and maintenance of records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the despatch of mail and parcels.

Work normally performed under general supervision, usually within a team environment. It involves the application of workplace procedures and regulatory requirements to the despatch of mail as part of work activities in the postal and allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to despatch mail
1.1 Individual and work team priorities and responsibilities are identified and confirmed
1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied
1.3 Mail to be despatched is identified and accessed

2 Despatch mail
2.1 Internal operating procedures and standards are applied to the processing of mail
2.2 Mail is processed accurately and correctly in compliance with priority for despatching
2.3 Mail is handled and equipment operated safely to minimise risk of injury to people and damage to mail
2.4 Mail to be despatched is weighed and/or scanned to ensure compliance with workplace standards
2.5 Mail is placed in the appropriate mail transport devices for despatch
2.6 Mail transport devices are moved to the holding/loading areas in accordance with site procedures
3 Complete despatch of mail

3.1 Information required to complete records of mails despatched is provided and recorded
3.2 Excess equipment is removed and work area is prepared for next activity/shift

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian and international codes and regulations relevant to mail operations
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the despatch of mail
• Focus of operation of work systems, equipment, management and site operating systems for the despatch of mail
• Problems that may occur when despatching mail and appropriate action that can be taken to resolve or avoid the problems
• Requirements of mail despatch systems, operations and relevant equipment
• Safety and security hazards that may occur during the despatch of mail and ways of controlling the risks involved
• Relevant personal protective equipment and procedures for its use
• Site layout

Required skills:
• Communicate effectively with others when despatching mail
• Read and interpret instructions, procedures and labels relevant to the despatch of mail
• Complete documentation related to the despatch of mail
• Work collaboratively with others when despatching mail
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise the despatch of mail in accordance with regulatory requirements and workplace procedures
• Interpret and apply relevant agreements, codes of practice or other legislative requirements
• Apply safety and security precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify, select and use relevant equipment, processes and procedures when despatching mail

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Work may be conducted:**
- in a range of work environments
- by day or night

**Workplaces may comprise:**
- large, medium or small worksites

**Operations may include:**
- shiftwork

**Customers may be:**
- external or internal

**Hazards may include:**
- vehicular traffic and pedestrians
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature
- lighting conditions
- machinery/equipment moving parts
- noise
- insects

**Weighing devices may be:**
- mechanical
- automated
- weighbridge

**Work priorities may be communicated through:**
- briefings
- noticeboards
- announcements
Equipment may include:

- forklift
- BT lifting equipment
- kingfishers
- plastic and cardboard trays
- dock leveller
- conveyors
- trolley/carriers
- bags
- flute trays
- bins
- stillages
- unit load device (ULD)
- wheeled unit load device (WULD)

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- workplace policies, operating procedures and practices
- Management Operating System (MOS)
- Management Information System (MIS)
- sorting system information including:
  - postcode book, national sort plan and state sort plan
  - postal guide
  - international postcode directory
  - label charts
- manifests, consignment notes, bar codes, mail and container identification
- mail identification numbers, codes and labels
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and or/client instructions
- HAZCHEM chart/material safety data sheets
- safety observation feedback program
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment

- The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

- this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA4307B  Consolidate mail

Unit Descriptor
This unit involves the skills and knowledge required to consolidate mail in accordance with workplace requirements, including carrying out required preparations, consolidating mail, and completing the consolidation operations. The process includes the initial identification and separation of mail prior to movement to the despatch dock. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to consolidation of mail as part of work activities in the postal and allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for consolidation of mail

1.1 Individual and work team priorities and responsibilities are identified and confirmed
1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied
1.3 Mail to be consolidated is identified and accessed

2 Consolidate mail

2.1 Internal operating procedures and standards are applied to the consolidation of mail
2.2 Mail is consolidated accurately and correctly in compliance with workplace requirements
2.3 Mail is handled safely to minimise risk of injury to people and damage to mail
2.4 Mail to be consolidated is placed into mail containers for movement to next process point

3 Complete consolidation of mail

3.1 Mail containers are sealed and labelled accurately and correctly in accordance with workplace procedures
3.2 Information required to complete records of mail processed is provided and recorded
3.3 Mail containers are transferred to designated storage area to
await movement to next processing point using appropriate shifting equipment

3.4 Excess equipment is removed from work area and stored appropriately

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the consolidation of mail
- Focus of operation of work systems, equipment, management and site operating systems for the consolidation of mail
- Problems that may occur when consolidating mail and appropriate action that can be taken to resolve or avoid the problems
- Requirements of mail consolidation systems, operations and relevant equipment
- Safety and security hazards that may occur during the consolidation of mail and ways of controlling the risks involved
- Relevant personal protective equipment and procedures for its use
- Site layout

Required skills:
- Communicate effectively with others when consolidating mail
- Read and interpret instructions, procedures and labels relevant to the consolidation of mail
- Complete documentation related to the consolidation of mail
- Work collaboratively with others when consolidating mail
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when consolidating mail in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unplanned events that may occur when consolidating mail
- Interpret and apply relevant agreements, codes of practice or other legislative requirements
- Apply safety and security precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to mail or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify, select and use relevant equipment, processes and procedures when consolidating mail

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Workplaces may comprise: • large, medium or small worksites

Facilities may be: • within an airport environment

Customers may be: • external (including international) or internal

Hazards may include: • vehicular traffic and pedestrians
• dust and vapours

### TLIA4407B Carry out delivery operations

#### Unit Descriptor
This unit involves the skills and knowledge required to deliver mail/consignments to residential and business customers in accordance with workplace requirements, including carrying out required preparations, delivering mail/consignment to special route in accordance with workplace procedures, and reporting on the delivery activity. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the conduct of delivery operations as part of work activities in the postal and allied industries.

#### Competency Field
A – Handling Cargo/Stock

#### ELEMENT
Element performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

#### PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td><strong>Prepare to deliver mail/consignment</strong></td>
</tr>
<tr>
<td></td>
<td>1.1 Mail/consignment or delivery and associated items are identified and collected promptly from specific locations</td>
</tr>
<tr>
<td></td>
<td>1.2 Mail/consignment is sorted accurately into the route order</td>
</tr>
<tr>
<td></td>
<td>1.3 Mail/consignment is handled in a manner that minimises the risk of damage</td>
</tr>
<tr>
<td></td>
<td>1.4 Special items are identified accurately</td>
</tr>
<tr>
<td></td>
<td>1.5 Mail/consignment is organised into bundles and kept in sequence for delivery</td>
</tr>
<tr>
<td></td>
<td>1.6 Mail/consignment is handled securely</td>
</tr>
<tr>
<td>2</td>
<td><strong>Deliver mail/consignment to specific route</strong></td>
</tr>
<tr>
<td></td>
<td>2.1 Established laws, by-laws and procedural guidelines are followed and applied whilst undertaking deliveries</td>
</tr>
<tr>
<td></td>
<td>2.2 Mail/consignment is delivered in good condition and in the specified sequence</td>
</tr>
<tr>
<td></td>
<td>2.3 Deliveries are completed within specified times</td>
</tr>
<tr>
<td></td>
<td>2.4 Mail/consignment is kept secure to minimise the risk of damage, theft, misdelivery and loss</td>
</tr>
<tr>
<td></td>
<td>2.5 Items requiring special treatment are delivered as specified and relevant documentation is completed accurately</td>
</tr>
</tbody>
</table>
2.6 Contact with customers is conducted courteously and in a manner that encourages customers to continue to use and recommended mail services
2.7 Hazards associated with delivery round are identified and acted on

3 Report on delivery activity

3.1 Incidents involving customers that occur, or hazards identified during the delivery, are reported accurately to the relevant person
3.2 Opportunities for developing workplace business, together with competitor activity, that are identified during delivery operations are recorded and reported to the appropriate person
3.3 Undelivered and undeliverable mail/consignment is processed in accordance with workplace policies and procedures
3.4 Documents are completed, checked for accuracy and returned promptly to the appropriate persons

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to the mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the conduct of delivery operations
- Focus of operation of work systems, equipment, management and site operating systems for delivery operations
- Problems that may occur when conducting delivery operations and appropriate action that can be taken to resolve/avoid the problems
- Requirements of delivery systems, operations and relevant equipment
- Hazards that may occur during delivery operations and ways of controlling the risks involved
- Relevant personal protective equipment and procedures for its use
- Site layout

Required skills:
- Communicate effectively with others when conducting delivery operations
- Read and interpret instructions, procedures and labels relevant to delivery operations
- Complete documentation related to delivery operations
- Work collaboratively with others when conducting delivery operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when conducting delivery operations in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may occur when conducting delivery operations
• Apply safety and security precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Interpret and apply relevant agreements, codes of practice or other legislative requirements
• Plan own work including predicting consequences and identifying improvements
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify, select and use relevant equipment, processes and procedures when conducting delivery operations

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  • in a range of work environments
• by day or night

Workplaces may comprise:  • large, medium or small worksites

Facilities may be:  • within an airport environment

Customers may be:  • external (including international) or internal

Hazards may include:  • vehicular traffic and pedestrians
• uneven ground, steps, road surfaces
• light including UV
• animals, birds and insects
• noise
• varying traffic conditions
• hazardous or dangerous materials
• positions/status of letterbox or delivery point

Weighing devices may be:  • mechanical
• automated
• weighbridge
Work priorities may be communicated through:
- briefings
- noticeboards
- announcements

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:
- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- workplace policies, operating procedures and practices
- Management Operating System (MOS)
- Management Information System (MIS)
- sorting system information including:
  - postcode book, national sort plan and state sort plan
  - postal guide
  - international postcode directory
  - label charts
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and/or/client instructions
- HAZCHEM chart/material safety data sheets
- safety observation feedback program
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
relevant legislation and workplace procedures
other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA4507B  Process international parcels and letters

Unit Descriptor
This unit involves the skills and knowledge required to prepare and process international parcels and letters for both air and surface movement in accordance with workplace requirements. The process includes all actions after receipt of parcels from the dock to delivery to the consolidation/despatch area. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the processing of international parcels and letters as part of work activities in the postal and allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to process international parcels and mail
1.1 Individual and work team priorities and responsibilities are identified and confirmed
1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied
1.3 The availability of parcels and mail for processing is identified and confirmed
1.4 Parcels and mail received from streaming are segregated into airmail, economy air and surface categories
1.5 Mail and parcels are weighed prior to processing

2 Process air mail parcels and letters
2.1 Internal operating procedures and standards are applied to the sorting of parcels and mail
2.2 Parcels are handled safely to minimise risk of injury to people and damage to parcels and mail
2.3 Airmail parcels are quarantined for the stipulated period
2.4 Parcels and mail are sorted accurately and correctly by nation, in compliance with established priorities
2.5 Parcels and mail are documented and placed in appropriate containers
2.6 Completed bags are weighed and labels are generated and scanned
2.7 Containers of parcels are moved to the consolidation/despatch area
2.8 Excess equipment is removed and work area is prepared for next activity/shift
2.9 International parcels and mail processes and surveys are conducted as required
2.10 Mail and parcels incorrectly classified and non-conforming items are identified, separated and re-sorted

3 Process economy air surface parcels

3.1 Internal operating procedures and standards are applied to the sorting of parcels and mail
3.2 Economy air and surface parcels and mail are held in temporary storage for the service standard time
3.3 Parcels and mail are scanned and sorted accurately and correctly by nation in compliance with established practices
3.4 Parcels and mail are documented and placed in containers
3.5 Containers of parcels and mail are moved to the consolidation/despatch area using correct shifting equipment and labels
3.6 Excess equipment is removed and work area is prepared for next activity/shift
3.7 Information required to complete record of mail and parcels is provided and recorded

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the processing of international parcels and letters
- Focus of operation of work systems, equipment, management and site operating systems for the processing of international parcels and letters
- Problems that may occur when processing international parcels and letters and appropriate action that can be taken to resolve/avoid the problems
- Requirements of international parcels processing systems, operations and relevant equipment
- Safety and security hazards that may occur during the processing of international parcels and letters and ways of controlling the risks involved
- Relevant personal protective equipment and procedures for its use
- Site layout

Required skills:
• Communicate effectively with others when processing international parcels and letters
• Read and interpret instructions, procedures and labels relevant to the processing of international parcels and letters
• Complete documentation related to the processing of international parcels and letters
• Work collaboratively with others when processing international parcels and letters
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when processing international parcels and letters in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may occur when processing international parcels and letters
• Interpret and apply relevant agreements, codes of practice or other legislative requirements
• Plan own work including predicting consequences and identifying improvements
• Apply safety and security precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to mail or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify, select and use relevant equipment, processes and procedures when processing international parcels and letters

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Workplaces may comprise:
• large, medium or small worksites

Facilities may be:
• within an airport environment

Customers may be:
• external (including international) or internal
Hazards may include:

- vehicular traffic and pedestrians
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature
- lighting conditions
- machinery/equipment moving parts
- noise
- insects

Weighing devices may be:

- mechanical
- automated
- weighbridge

Work priorities may be communicated through:

- briefings
- noticeboards
- announcements

Equipment may include:

- aircraft load containers (e.g. igloos, bags, cans)
- strapping machine
- sorting frames/shelves
- bins
- unit load device (ULD)
- wheeled unit load device (WULD)
- hoists
- tubs
- stillages
- flat trolleys
- bag racks
- mechanical handling equipment
- mechanical moving equipment
- ergonomic chairs
- computer equipment
- king fishers
- plastic and cardboard mail trays

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing
Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace policies, operating procedures and practices
- Management Operating System (MOS)
- Management Information System (MIS)
- manifests, consignment notes, bar codes, mail and container identification
- mail identification numbers, codes and labels
- machine/equipment operations manuals
- air and surface movement schedules
- international aviation codes (IATA)
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and/or/client instructions
- HAZCHEM chart/material safety data sheets
- safety observation feedback program
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
o through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
### TLIA4607B Process parcels and letters

**Unit Descriptor**
This unit involves the skills and knowledge required to manually process parcels and letters in accordance with workplace requirements, including carrying out all required preparations, processing parcels and mail manually, and completing the processing operations. The process includes all actions after receipt from streaming up to immediately prior to despatch. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the processing of parcels and letters as part of work activities in the postal and allied industries.

**Competency Field**
A – Handling Cargo/Stock

### ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare to process parcels and mail manually** | 1.1 Individual and work team priorities and responsibilities are identified and confirmed  
1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied  
1.3 The availability of parcels and mail to be processed is identified and confirmed  
1.4 The appropriate sort plan is identified, accessed and applied  
1.5 Parcels and mail to be processed are transferred to processing point  
1.6 Labels for identifying the destination of mail are created and affixed to trays |
| **2 Process parcels and mail manually** | 2.1 Internal operating procedures and standards are applied to the manual processing of parcels and mail  
2.2 Parcels and mail are processed accurately and correctly in compliance with priority for processing  
2.3 Parcels and mail are handled safely to minimise risk of injury to people and damage to parcels |
2.4 Parcels and mail that are incorrectly classified and non-conforming items are identified, separated and re-processed
2.5 Parcels and mail are sorted to their correct destination and placed in appropriate mail container for distribution

3 Complete process for parcels and mail

3.1 Parcel and mail containers/bag racks are cleared down, sealed and labelled
3.2 Parcel and mail containers are weighed and labelled to ensure compliance with workplace procedures
3.3 Information required to complete records of parcels and mail processed is provided and recorded
3.4 Parcels and mail are transferred to next processing point using appropriate shifting equipment, and labels are scanned as required
3.5 Excess equipment is removed and work area prepared for next activity/shift

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the processing of parcels and letters
- Focus of operation of work systems, equipment, management and site operating systems for the processing of parcels and letters
- Problems that may occur when processing parcels and letters and appropriate action that can be taken to resolve/avoid the problems
- Requirements of parcels processing systems, operations and relevant equipment
- Safety and security hazards that may occur during the processing of parcels and letters and ways of controlling the risks involved
- Relevant personal protective equipment and procedures for its use
- Site layout

Required skills:
- Communicate effectively with others when processing parcels and letters
- Read and interpret instructions, procedures and labels relevant to the processing of parcels and letters
- Complete documentation related to the processing of parcels and letters
- Work collaboratively with others when processing parcels and letters
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when processing parcels and letters in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may occur when processing parcels and letters
• Plan own work including predicting consequences and identifying improvements
• Interpret and apply relevant agreements, codes of practice or other legislative requirements
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify, select and use relevant equipment, processes and procedures when processing parcels and letters

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Workplaces may comprise:
• large, medium or small worksites

Facilities may be:
• within an airport environment

Customers may be:
• external (including international) or internal

Hazards may include:
• vehicular traffic and pedestrians
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature
• lighting conditions
• machinery/equipment moving parts
• noise

Weighing devices may be:
• mechanical
• automated
• weighbridge
Work priorities may be communicated through:

- briefings
- noticeboards
- announcements
Equipment may include:

- pipe wheelers
- bag rack
- scanners
- tipping belt
- knife
- pallet jack/maverick
- powered lifters
- bags
- scales
- labels
- forklift
- sorting frames
- carousel
- bins
- strings
- stillages
- unit load devices (ULDs) and wheeled unit load devices (WULDs)
- ULD stands and lifters (dollies)
- vertical sorting frames (VSFs) and vertical sorting divisions (VSDs)
- flute tubs
- ergonomic chairs
- bags
- spectrum
- ULD tipper
- conveyor belts
- strapping machine
- plastic and cardboard trays
- barcode sorter (BCS)
- parcel machines
- TMS
- label printer
- optical character reader (OCR)
- letter mail labelling machine (LMLM)
- letter indexing desks (LIDS)
- flat multi-line optical character reader (FSM)
- scissor jacks
- kingfishers
- tray tippers
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:
- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- workplace policies, operating procedures and practices
- Management Operating System (MOS)
- Management Information System (MIS)
- sorting system information including:
  - postcode book, national sort plan and state sort plan
  - postal guide
  - international postcode directory
  - label charts
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and/or/client instructions
- HAZCHEM chart/material safety data sheets
- safety observation feedback program
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

- relevant legislation and workplace procedures
- other relevant aspects of the range statement
TLIA4707B  Stream mail

Unit Descriptor
This unit involves the skills and knowledge required to stream mail in readiness for the next stage of processing in accordance with workplace requirements, including preparing to stream mail, streaming mail in accordance with workplace procedures, and finalising all required streaming operations. The process may include opening, facing up and traying mail. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the streaming of mail and parcels.

Work is normally performed under general supervision, usually within a team environment. It involves the application of workplace procedures and regulatory requirements to the streaming of mail as part of work activities in the postal and allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to stream mail
1.1 Individual and work team priorities and responsibilities are identified and confirmed
1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied
1.3 Mail to be streamed is identified, accessed and prepared

2 Stream mail
2.1 Internal operating procedures and standards are applied to the streaming of mail
2.2 Mail is categorised and streamed accurately and correctly in compliance with priority for streaming
2.3 Mail is handled safely to minimise risk of injury to people and damage to mail

3 Complete streaming of mail
3.1 Mail containers are loaded onto appropriate mail movement device and labelled
3.2 Information required to complete records of mail processed is provided and recorded
3.3 Mail containers are transferred to next processing point using appropriate shifting equipment
3.4 Excess equipment is removed and work area is prepared for next activity shift

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the streaming of mail
- Focus of operation of work systems, equipment, management and site operating systems for the streaming of mail
- Problems that may occur when streaming mail and appropriate action that can be taken to resolve avoid the problems
- Requirements of mail streaming systems, operations and relevant equipment
- Hazards that may occur during the streaming of mail and ways of controlling the risks involved
- Relevant personal protective equipment and procedures for its use
- Site layout

Required skills:
- Communicate effectively with others when streaming mail
- Read and interpret instructions, procedures and labels relevant to the streaming of mail
- Complete documentation related to the streaming of mail
- Work collaboratively with others when streaming mail
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when streaming mail in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events when streaming mail
- Plan own work including predicting consequences and identifying improvements
- Interpret and apply relevant agreements, codes of practice or other legislative requirements
- Apply safety and security precautions and required action to minimise, control or eliminate hazards that may exist when streaming mail
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify, select and use relevant equipment, processes and procedures when streaming mail
• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: ● in a range of work environments
● by day or night

Workplaces may comprise: ● large, medium or small worksites

Facilities may be: ● within an airport environment

Customers may be: ● internal or external

Hazards may include: ● vehicular traffic and pedestrians
● dust and vapours

  - international postcode directory
  - label charts
- manifests, consignment notes, bar codes, mail and container identification
- mail identification numbers, codes and labels
- machine equipment operations manuals
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and or/client instructions
- HAZCHEM chart/material safety data sheets
- safety observation feedback program
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA4807C Carry out border clearance functions

Unit Descriptor
This unit involves the skills and knowledge required to carry out basic border clearance functions in accordance with Customs and related legislation and workplace requirements. It includes creating import declarations for import clearance; resolving problems arising from lodgement of entries or import declarations; and undertaking post-entry amendments, where applicable. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning the conduct of border clearance functions. Work is undertaken in a range of environments including small to large worksites in the customs broking and international freight forwarding industries. Work at this level is performed under supervision, generally within a collaborative team environment.

This unit is normally packaged at AQF II or above.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Create Integrated Cargo System (ICS) import declarations for import clearance
1.1 Information required for ICS import declarations is determined
1.2 Required information for ICS import declarations is prepared
1.3 Staff delegated to prepare required information are supported to complete tasks accurately and in a timely manner
1.4 Information is checked for accuracy
1.5 Required information for ICS import declarations is collated and entered
1.6 Questions relating to lodgement of the import declaration are reviewed

2 Resolve problems arising from lodgement of entries or import declarations
2.1 Progress of preparing import declarations for lodgement is monitored
2.2 Problems arising before or after lodgement of the import declarations are identified and action is taken to address problems

3 Undertake post-entry
3.1 Needs for amendments are confirmed as required
amendments (where applicable) 3.2 Import declarations are amended in accordance with Customs and related legislation as well as workplace procedures and other regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Customs legislation, other legislation and regulations relevant to border clearance functions
- Relevant OH&S and environmental procedures and regulations
- Requirements for completing relevant documentation
- Steps involved in planning work activities
- Functions and responsibilities of customs broker acting as a nominee, or sole trader
- Purpose and features of customs programs
- Role and authority of Customs and how it fits into the structure of government
- Range of customs duties and tariffs and how they are applied
- Problems that may occur when carrying out border clearance functions and appropriate action that can be taken to resolve problems
- Purpose of warehousing goods and obligations of warehouse proprietors to Customs
- Factors comprising landed cost from commercial and customs documentation
- Procedures to be followed in the event of an emergency
- Cultural differences amongst customers, internal and external freight contacts and within customer service teams and their implications when carrying out border clearance functions
- Sources of information on new developments in border clearance operations

Required skills:
- Negotiate, communicate and liaise effectively with clients and others when carrying out border clearance functions
- Read and interpret instructions, procedures, information and signs relevant to the conduct of border clearance functions
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate work systems, equipment, management and site operating procedures for border clearance functions
- Work collaboratively with others
- Plan, organise and monitor own work activities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Solve problems that arise during border clearances functions
- Adapt to new skill and knowledge requirements required due to the development of new border clearance operations
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant computer/communication/office equipment
• Identify import restrictions and prohibitions from relevant sources

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

New developments in border clearance operations may include:
- regulations
- processes
- systems
- technology
- types and packaging of goods

Information on new developments in border clearance operations may be obtained from:
- internal networks such as: own team, staff in other departments, support staff, managers, training staff, etc.
- external networks
- bulletins, journals, magazines, books, etc.
- internet websites
- internal and external training programs

Adaptability to new skill and knowledge requirements required due to the development of new border clearance operations may include:
- external training programs
- internal training programs
- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts

Depending on the organisation concerned, workplace procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- clients
- agents
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
**Documentation and records may include:**

- Customs and related legislation
- other legislation related to border clearance functions
- shipping documentation
- quarantine documentation
- permits to import and/or export
- Customs Notices
- commercial invoices and packing lists
- manifests, delivery notes, special clearances, consignment notes and authorised weighbridge certificates
- internal documentation used for border clearance functions
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- client instructions
- industrial relations agreements or contracts
- regulations and codes of practice relevant to border clearance procedures including safeworking and local authority regulations and procedures
- relevant OH&S and environmental protection regulations
- workplace policies and procedures related to border clearance
- quality assurance procedures
- emergency procedures
- dangerous goods declarations and material safety data sheets, where applicable

**Applicable legislation and regulations may include:**

- Customs and related legislation
- privacy legislation
- export/import/quarantine/bond requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment**

- The evidence required to demonstrate competency in
this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
- identifying required information after completion of import declarations
- resolving problems arising from lodgement of entries
- undertaking post-entry amendments
- selecting and using the technology required for basic border clearance functions

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA4907C  Apply specialist permit requirements as part of customs broking activities

Unit Descriptor
This unit involves the skills and knowledge required to apply specialist permit requirements as part of customs broking activities in accordance with Customs and related legislation and workplace requirements. It includes identifying required permits; assessing permit applications; and facilitating the gaining of permits. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning specialist permit requirements. Work is undertaken in a range of environments including small to large worksites in the custom broking and international freight forwarding industries. Work at this level is performed under supervision, generally within a collaborative team environment.

This unit is normally packaged at AQF II or above.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify required permits
1.1 Goods requiring permits are identified
1.2 Correct permits are identified for import/export of goods
1.3 Goods and commodities restricted/prohibited for import/export under the laws of Australia and other countries are identified

2 Assess permit applications
2.1 Permit application process is understood and followed by the applicant
2.2 Specialist expertise is engaged to clarify permit application process as required
2.3 Information required for permit application is gathered and documented
2.4 Other required documentation is identified and gathered
2.5 Liaison is undertaken with client as required to facilitate completion of permit application
2.6 Permit application is checked
2.7 Permit application and other required documentation is lodged
2.8 Client is kept informed about the application process and progress

3 Facilitate gaining of permits

3.1 Problems arising with application are identified and addressed
3.2 Negotiations and discussions are entered into with clients, relevant personnel and permit issuing authorities to facilitate issuing of permits
3.3 Approved applications are reviewed to ensure compliance with client requirements
3.4 Permit requirements are communicated to clients
3.5 Application and permit documentation is stored in accordance with workplace and relevant regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Customs, quarantine and other legislation relevant to the application of specialist permit requirements, including the Prohibited Import Regulations, Prohibited Export Regulations, Australian Dangerous Goods (ADG) Code and relevant wildlife conservation quarantine or other legislative requirements
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures and policies for the application of specialist permit requirements
- Relevant specialist permit procedures and guidelines
- Requirements for completing relevant documentation
- Focus of operation of work systems, equipment, management and site operating systems for the application of specialist permit requirements
- Problems that may occur when applying specialist permit requirements and appropriate action that can be taken to resolve the problems
- Code of practice for working collaboratively with others
- Steps involved in planning work activities
- Procedures to be followed in the event of an emergency
- Procedures for managing and controlling hazardous situations when carrying out work activities

Required skills:
- Negotiate, communicate and liaise effectively with customers and others when completing work activities
- Read and interpret instructions, procedures and information relevant to the specialist permit requirements
- Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Select and use relevant computer/communication/office equipment when applying specialist permit requirements
• Work collaboratively as part of a customs broking/freight forwarding team
• Plan and organise work activities when applying specialist permit requirements
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
• Solve problems that may arise when applying specialist permit requirements
• Present information using appropriate media and technology
• Identify, interpret and learn skills and knowledge required for new developments in relevant permit requirements
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Restricted/prohibited goods/commodities subject to quarantine and wildlife conservation regulations or other regulatory and/or permit requirements may include:

- livestock
- flora and fauna
- wines and spirits
- specified horticultural products
- plant and animal products from countries with known diseases, viruses and other contagious pathogens
- commodities containing ozone-depleting substances
- therapeutic goods and complementary medicines
- hazardous waste
- heritage and cultural items
- dangerous goods, explosives, firearms and ammunition
- imported foods
- industrial chemicals
- goods and materials that may be used to construct explosives or weapons of mass destruction (WMD) as determined by the Department of Foreign Affairs and Trade (DFAT)
- other commodities subject to Australian and overseas government regulations and requiring specialist permits
Information on relevant aspects of specialist permit requirements may include:

- wildlife conservation requirements, such as:
  - wildlife conservation in Australia
  - international treaties for wildlife conservation
  - export/import regulations for wildlife
  - permit validation for exports to the USA
  - acquittals and specimen export records (SER)

- quarantine permit requirements, such as:
  - quarantine treatment
  - AQIS approved premises
  - cargo clearance
  - pests and diseases
  - plant quarantine
  - animal quarantine
  - plant and animal exports

- other specialist permit requirements, such as:
  - wines and spirits
  - prescribed amounts of cash
  - commodities containing ozone-depleting substances
  - requirements for Therapeutic Goods Administration Permits (TGP)
  - hazardous waste
  - heritage and cultural items
  - dangerous goods, explosives, firearms, ammunition, and chemical, biological and radioactive weapons materials and components and other prohibited imports and exports
  - imported food program and permit regulations
  - requirements of the National Industrial Chemicals Notification and Assessment Scheme (NICNAS)
  - regulations and permits pertaining to goods and materials that may be used to construct explosives or weapons of mass destruction (WMD) as determined by the Department of Foreign Affairs and Trade
  - dual use goods covered by the WMD Act
Agencies from which permits may be obtained may include:

- Australian Quarantine and Inspection Service
- Australian Custom Service
- Department of the Environment Water, Heritage and the Arts (DEWHA)
- Department of Agriculture, Fisheries and Forestry
- Department of Innovation, Industry, Science and Research
- Department of Health and Ageing
- Department of Defence
- Department of Foreign Affairs and Trade
- Australian Federal Police
- Australian Wine and Brandy Corporation
- Health Insurance Commission
- Wheat Export Authority
- Attorney Generals Department
- Department of Prime Minister and Cabinet
- Department of Infrastructure, Transport and Regional Development and Local Government

Checks made during permit application may include:

- accuracy checks
- checks for missing information
- checks for unfulfilled requirements
- whether supplementary documents are required

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications
Consultative processes may involve:

- other employees and supervisors
- suppliers of specialist permits
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:

- regulations and codes of practice relevant to import and export procedures
- relevant OH&S and environmental protection regulations
- workplace policies and procedures related to specialist permit requirements
- quality assurance procedures
- emergency procedures
- operations manuals, job specifications and induction documentation
- dangerous goods declarations and material safety data sheets, where applicable
- goods manifest
- relevant Australian Standards and certification requirements
- other government documentation covering regulated trade (including online)
Applicable regulations and legislation may include:

- relevant codes and regulations for the issuing of specialist permits
- Customs and related legislation
- export/import/quarantine/bond requirements
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- other Australian legislation relating to restrictions and prohibitions on imports and exports and related permit requirements
- relevant state/territory OH&S and environmental protection legislation
- Customs Act 1901
- Environmental Protection and Biodiversity Conservation Act 1999
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying required permits
  - facilitating the gaining of permits
  - communicating and negotiating with customers and agencies responsible for the issuing of permits

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA5007C Apply GST legislation as part of customs broking activities

Unit Descriptor
This unit involves the skills and knowledge required to apply GST (Goods and Services Tax) legislation as part of customs broking activities. It includes assessing the applicability of GST and other relevant taxes; determining tax exemptions and taxes to be paid; and documenting the results of all tax determinations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs and Australian Taxation Office related legislation and workplace requirements concerning the GST. Work is undertaken in a range of environments including small to large worksites in the customs broking and international freight forwarding industries. Work at this level is performed under some supervision, generally within a collaborative team environment.

This unit is normally packaged at AQF level III or above.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Assess applicability of GST and other relevant taxes
1.1 Applicability of GST and related taxes including Wine Equalisation Tax (WET) and Luxury Car Tax (LCT) to goods and services is assessed
1.2 Allowable exemptions and specialised schemes relating to GST and related taxes are researched for applicability to that commodity and/or transaction
1.3 Allowable exemptions are applied to goods and commodities
1.4 Accuracy of assessments is checked

2 Determine taxes
2.1 The rate of GST and related taxes on goods and services are determined
2.2 Other required information such as overseas freight and insurances are obtained
2.3 Data is input for GST calculation

3 Document tax assessments in accordance with
3.1 Results are recorded on appropriate documentation
3.2 Rates and amounts of GST and other taxes payable are
3.3 Completed documentation is stored and retained, and passed on to client and other relevant personnel as required and in accordance with the requirements of Customs and related legislation and workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Customs and other related legislation as they apply to the implementation of GST legislation, including A New Tax System (Goods and Services Tax) Act 1999 and associated regulations
• Relevant sections of national and state or territory regulatory requirements and codes of practice
• Relevant OH&S and environmental procedures and regulations
• Information on relevant aspects of GST legislation as they relate to customs broking and freight forwarding activities
• Sources of information on new developments in GST legislation as they relate to customs broking activities
• Focus of operation of work systems, equipment, management and site operating systems for the implementation of GST legislation as they relate to customs broking activities
• Problems that may occur when applying GST legislation and appropriate action that can be taken to resolve the problems
• Techniques to learn skills and knowledge required for new developments in GST legislation as they relate to customs broking activities
• Documentation requirements for the application of GST legislation as they relate to customs broking activities
• Steps involved in planning the work activities
• Procedures to be followed in the event of an emergency
• Procedures for managing and controlling hazardous situations when carrying out work activities

Required skills:
• Negotiate, communicate and liaise effectively with others when applying GST legislation as part of customs broking activities
• Read and interpret instructions, procedures and information relevant to the application of GST legislation as they relate to customs broking activities
• Plan and organise work activities
• Complete documentation related to work activities
• Work collaboratively with others as part of an operational team
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Operate relevant computer/communication/office equipment when applying GST legislation
• Enter information using appropriate media and technology
• Identify, interpret and learn new skills and knowledge required for new developments in GST legislation and related systems and technology
• Resolve problems which may arise when applying GST legislation
• Monitor work activities in terms of planned schedule
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects of GST legislation as they relate to customs broking and freight forwarding activities may include:

• key features of the GST legislation
• GST system overview
• basic operation of the GST system
• roles and responsibilities of Australian Customs Service (Customs) and the Australian Taxation Office (ATO) as they relate to GST
• registration process
• GST accounting requirements
• GST-free goods and supplies
• GST input-taxed supplies
• GST collection and remittance
• special rules pertaining to GST requirements
• impact of GST on Customs functions
• calculations of GST on taxable importations
• transport and insurance costs attracting GST
• impact of GST on importers and exporters
• non-taxable importation

GST and related taxes refers to:

• Goods and Services Tax
• Wine Equalisation Tax (WET)
• Luxury Car Tax (LCT)
• other taxes on imported/exported goods and commodities

Allowable exemptions and specialised schemes refers to:

• government initiatives and schemes to promote exports of goods and services

Verification may be undertaken by:

• customs broker
• other experienced colleagues within the organisation

Documentation may be passed on to:

• colleagues for further processing
• manager for checking and verification
• customs broker
New developments in the application of GST legislation may include changes in:

- rates
- GST and customs legislation
- processes
- systems

Information on new developments in the application of GST legislation may be obtained from:

- internal networks such as: own operational team, staff in other departments, support staff, managers, training staff, etc.
- external networks such as: staff in Customs, ATO and various regulatory authorities, staff in other customs broking enterprises, etc.
- bulletins, journals, magazines, books, etc.
- internet websites
- internal and external training programs

Techniques to learn skills and knowledge required for new developments in the application of GST legislation may include:

- external training programs
- internal training programs
- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
Documentation and records may include:

- relevant documentation and guidance materials on A New Tax System (Goods and Services Tax) Act 1999 and Customs and other legislation as they relate to the implementation of GST legislation
- ATO rulings on GST
- Insurance documents
- Shipping documents
- Commercial invoices
- Customs and related legislation and procedures as they relate to calculation of GST as part of customs broking activities
- internal documentation used for the application of GST legislation as part of customs broking activities
- codes of practice and regulations relevant to the application of GST legislation as part of customs broking activities
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- client instructions
- quality assurance procedures
- relevant OH&S and environmental protection regulations

Applicable legislation and regulations may include:

- Customs and related legislation
- A New Tax System (Goods and Services Tax) Act 1999 and Customs and other legislation as they relate to the implementation of tax legislation as part of customs broking activities
- trade modernisation legislation
- other taxation legislation
- export/import/quarantine/bond requirements
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria.
unit

of this unit and include demonstration of:
• determining applicability of GST and other relevant taxes
• determining taxes
• documenting tax assessments

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  • a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and/or equipment, and/or
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through appropriately simulated activities at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace
Plan and organise the international forwarding of freight by sea and multimodal transport

Unit Descriptor
This unit involves the skills and knowledge required to plan and organise international forwarding of freight by sea and multimodal transport (covering the importing, exporting and transiting of freight). This includes confirming customers' freight transport requirements; selecting routing for sea and multimodal transport; advising on and organising the packaging, packing, loading, stowage and storage of the freight; and completing freight forwarding calculations required for sea and multimodal transport. It also includes assisting in the organisation of insurance for sea and multimodal freight transport; organising permits, authorisations etc.; liaising with the freight forwarding global network; tracking and tracing international cargo being forwarded by sea and multimodal transport; and completing documentation and records required for sea and multimodal transport. There are no specific licensing or certification requirements applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for persons involved in planning and organising the international forwarding of freight by sea and multimodal transport as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Select routing for sea and multimodal freight transport

1.1 Requirements for international sea and multimodal freight transport services are confirmed and clarified with the customer

1.2 Critical logistics aspects of the freight transport are determined, analysed and taken into account in planning the freight forwarding solution(s)

1.3 Checks are made that all conventions for international sea and
multimodal freight transport are fulfilled

1.4 Where the freight forwarding involves special transport services, advice is sought as required from experts or specialists in the area of the special cargo or dangerous goods concerned

1.5 Suitable routing for sea or multimodal transport is selected after consideration of the options available and analysis of the risks involved

1.6 Alternative routing options are identified for possible use in the event of contingencies

2 Advise on and organise the packaging, packing, stowage and storage of freight for sea and multimodal freight transport

2.1 Suitable options are determined for the packaging, packing, stowage and storage of freight given the type of cargo, the mode of transport, the destination and the selected route(s)

2.2 Where applicable, container types suitable for sea and multimodal transport and appropriate for the freight are reviewed and appropriate options selected

2.3 The pricing of containers and other forms of freight packaging suitable for sea and multimodal transport is determined and advice provided to the customer

2.4 Advice is provided to the customer on the selection, loading and packing of suitable container types and other forms of freight packaging as applicable

2.5 Shipping documents required for the selected containers or other forms of packaging suitable for sea and multimodal freight transport are prepared as per standard procedures and regulatory requirements

2.6 Appropriate action is taken to organise and provide advice to the customer on the packaging, packing, stowage and storage of the freight for the planned forwarding project including the planning of the loading of the selected containers where applicable

3 Complete freight forwarding calculations for sea and multimodal freight transport

3.1 Calculations required in the course of planning and organising the international forwarding of freight by sea or multimodal transport are completed accurately and with the available computational aids

4 Assist in organising insurance for sea and multimodal freight transport

4.1 Risks involved in the planned sea or multimodal freight forwarding solution are identified and analysed

4.2 Transport and liability insurance requirements for the proposed forwarding solution are evaluated and considered

4.3 Assistance in selecting and organising appropriate insurance options is provided as per standard procedures and applicable regulatory requirements
5 Organise permits, authorisations etc. needed for sea and multimodal freight transport

5.1 Documentation requirements are determined for the cargo, mode(s) of transport and selected routing concerned, including permits, authorisations etc.

5.2 Documentation requirements are organised and processed as per standard procedures and applicable regulatory requirements

6 Liaise with freight forwarding global network

6.1 Appropriate liaison with agents, carriers and others in the global network and supply chain is undertaken to plan and organise the freight forwarding project

6.2 Appropriate information and communications technology systems and equipment are used when liaising with the freight forwarding global network as per standard operating procedures and regulatory requirements

7 Track and trace international cargo being forwarded by sea or multimodal freight transport

7.1 International cargo being transported by sea or multimodal freight transport is tracked and traced during a freight forwarding project using the available systems and technology

7.2 Problems with the transit of freight identified during tracking activities are evaluated and appropriate action is initiated to address the problems as per standard procedures

7.3 Advice is provided to the customer on the progress of the shipment and any action taken to address unexpected contingencies

8 Complete required documentation and records

8.1 All forms and documentation required for the planned freight forwarding project are completed as per standard operating procedures and applicable regulatory requirements

8.2 Data is retrieved from and entered into computer systems as per standard operating procedures and applicable regulatory requirements

8.3 Records of arrangements made and critical transactions are kept as per standard operating procedures and applicable regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international regulations and conventions applicable to the planning and organising of international freight forwarding by sea or multimodal transport (including the importing, exporting and transiting of goods)

- Standard procedures, codes of practice and protocols for planning and organising international freight forwarding by sea or multimodal transport (including the importing, exporting and transiting of goods)

- Relevant OH&S and environmental procedures and regulations
• Principles of international trade and commerce
• Principles and forms of maritime and multimodal freight transport
• Definitions, purpose and uses of Incoterms and CombiTerms
• Types of cargo vessels - their applications, capacity and routes
• Major trade routes, services, conferences, ports and freight terminals as they apply to maritime and multimodal freight transport
• Maritime terminals, cargo handling and terminal equipment at major worldwide ports and freight terminals
• Cargo types, consignments and consolidations
• Containers and containerisation, including types, purposes, dimensions and specifications; loading principles and processes; load planning for containers
• Processes for the chartering of vessels - types of charter, terms and contracts
• Sources of information and documentation needed when planning and organising international freight forwarding by sea or multimodal transport, including permits and authorisations
• Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
• Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
• Typical problems that can occur when planning and organising international freight forwarding by sea or multimodal transport and related appropriate action that can be taken to prevent or solve them

**Required skills:**

• Communicate effectively with others when planning and organising international freight forwarding by sea or multimodal transport, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
• Read and interpret instructions, procedures, information and signs relevant to the planning and organising of international freight forwarding by sea or multimodal transport
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the planning and organising international freight forwarding by sea or multimodal transport including the use of calculators and data entry to a computer
• Operate information and communication technology to required protocol
• Perform required estimates and calculations of variables such as size, weight, distance, risk and costs when planning and organising international freight forwarding involving sea or multimodal transport
• Work collaboratively with others when planning and organising international freight forwarding by sea or multimodal transport
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when planning and organising international freight forwarding by sea or multimodal transport in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when planning and organising international freight forwarding by sea or multimodal transport
• Monitor work activities in terms of planned schedule and deadlines
• Apply relevant codes of practice and applicable legislative requirements
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Modes of international freight transport may include:
• sea transport
• transport by inland waterway
• multimodal transport

International freight forwarding includes services related to:
• the importing of goods
• the exporting of goods
• the transiting of goods

Marine vessel types may include:
• container ships
• roll-on/roll-off carriers (RO-RO)
• bulk carriers (dry cargo vessels)
• conventional ships
• tankers (crude oil, chemicals, liquefied gas, liquid foodstuffs)
• heavy lift ships (equipped with cranes and derricks)
Types of multimodal transport include:

- sea/air
- air/road (truck)
- rail/road/inland waterways-sea-rail/road inland waterways
- mini-bridge
- land bridge
- piggyback
- sea train
- rail-sea-land
- inland waterway-sea-inland waterway

Type of barges used in inland waterway carriage may include:

- motor barges
- tugged barges
- tug
- sailing barges

Pre-transport issues in the forwarding of freight by sea and multimodal transport may include:

- adequacy of insurance
- adequacy of packaging
- planning of the packing and loading of cargo into containers
- planning for security, proper stacking and stowage and handling in transit
- planning for the loading of non-containerised cargo onto a vessel (including sea, air, rail, road or other transport)

Requirements for work may include:

- international freight forwarding codes of practice, protocols and procedures
- regulations relevant to international freight forwarding
- authorities and permits relevant to international freight forwarding
- workplace standard operating procedures
- information and communications technology and related systems
- global time zones and hours of operation
Parameters of freight transport services relevant to customer requirements may include:

- standard operating procedures for forwarding of various types of international freight
- type of transport modes
- transport routing
- various consignment methods
- packaging, packing, stowage and storage options including containerisation
- relevant legislative requirements
- required import/export documentation, labelling and requirements
- transport security checks
- insurance requirements
- service costs
- contract arrangements
- payment requirements and procedures
- fiduciary and legal responsibilities of either party

Advantages of multimodal transport include:

- minimises time loss at transhipment points
- may provide faster transit of goods
- reduces burden of documentation and formalities
- saves costs
- establishes only one agency to deal with
- reduces costs of exports

Scope of services performed by multimodal transport operators include:

- FCL (full container load))
- LCL (less than full container load)
- weighing and measurement of cargo
- CFS (container-freight station)
- consolidation
- booking of space
- CY (container yard)
- liaison with Customs and other relevant regulatory authorities
- assisting in organising required insurance coverage
- return of leased containers
- communication with customer and global contacts
- use of appropriate information and communication technology
Container types may include:
- general cargo containers
- thermal containers
- tank containers
- (dry) bulk containers
- flat racks/open tops (special equipment)

Types of packages used for storing and protecting cargo during transit may include:
- bags
- cartons
- thermal cartons with gel-ice
- cases
- drums
- pallets
- pallecons and other devices for carrying bulk liquids, pastes and powders

Communications systems may involve:
- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail

Sources of information required to perform international freight forwarding functions may include:
- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

Consultative processes may involve:
- customers
- international and domestic agents and suppliers
- relevant authorities, government departments and institutions
- representatives of transport companies
- relevant regulatory authorities and institutions
- other professional or technical staff
- management
- freight forwarding specialists
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include but are not limited to:

- Australian and international regulations, conventions and codes of practice applicable to the international forwarding of freight
- summaries and definitions of Incoterms and Combiterms
- customers' instructions and transport requirements
- workplace standard operating procedures and policies
- operations manuals, job specifications and procedures and induction documentation
- standard FIATA forms and documentation such as
  - a Negotiable Multimodal Transport Bill of Lading (FB/L)
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
  - a Forwarders Warehouse Receipt (FWR)
  - a Forwarders Forwarding Instructions (FFI)
  - a Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - a Shippers Intermodal Weight Certification (SIWC)
  - an Original Bill of Lading (OB/L)
  - a Master Air Waybill (MAWB)
  - a House Bill of Lading (HBL)
  - a House Air Waybill (HAWB)
  - Multimodal Transport Bill of Lading (MTB/L)
- cargo manifests
- pre-advice and pre-alert documents
- operations manuals, job specifications and procedures and induction documentation
- freight forwarding competency standards and training materials
- workplace operating procedures and policies
- Australian and International standards, criteria and certification requirements
- data obtained through communications technology equipment and oral, aural or signed communications
- freight forwarder company’s quality assurance standards and procedures
- emergency procedures
Applicable regulations and legislation may include:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  
  - selecting routing for sea and multimodal freight transport
  - advising on and organising the packaging, packing, stowage and storage of freight for sea and multimodal transport
  - completing freight forwarding calculations for sea and multimodal freight transport
  - assisting in the organisation of insurance for sea and multimodal freight transport
  - organising permits, authorisations etc. needed for sea and multimodal freight transport
  - liaising with the freight forwarding global network when organising sea and multimodal freight transport
  - tracking and tracing international cargo being forwarded by sea and multimodal freight transport
  - completing documentation and records required for sea and multimodal freight transport

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  
  - a range of relevant exercises, case studies
and/or other simulated practical and knowledge assessment, and/or

- access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA5060A  Plan and organise the international forwarding of freight by air transport

Unit Descriptor
This unit involves the skills and knowledge required to plan and organise international forwarding of freight by air transport (covering the importing, exporting and transiting of freight). This includes confirming customers' freight transport requirements; selecting routing for air freight transport; advising on and organising the packaging, packing, loading, stowage and storage of air freight; and completing freight forwarding calculations for air transport. It also includes assisting in the organisation of insurance for air freight transport; organising permits, authorisations etc.; liaising with the freight forwarding global network; tracking and tracing international cargo being forwarded by air transport; and completing documentation and records required for air freight transport. There are no specific licensing or certification requirements applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for persons involved in planning and organising the international forwarding of freight by air transport as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Select routing for air freight transport

1.1 Requirements for international air freight transport services are confirmed and clarified with the customer

1.2 Critical logistics aspects of the freight transport are determined, analysed and are taken into account in planning the freight forwarding solution(s)

1.3 Checks are made that all conventions for international air freight transport are fulfilled

1.4 Where the freight forwarding involves special transport services, advice is sought as required from experts or
specialists in the area of the special cargo or dangerous goods concerned

1.5 Suitable routing for air freight transport is selected after consideration of the options available and analysis of the risks involved

1.6 Alternative routing options are identified for possible use in the event of contingencies

2 Advise on and organise the packaging, packing, stowage and storage of freight for air transport

2.1 Suitable options are determined for the packaging, packing, stowage and storage of freight given the type of cargo, the mode of transport, the destination and the selected route(s)

2.2 Where applicable, container types suitable for air freight transport and appropriate for the freight are reviewed and appropriate options selected

2.3 The pricing of containers and other forms of freight packaging suitable for air freight transport is determined and advice provided to the customer

2.4 Advice is provided to the customer on the selection, loading and packing of suitable container types and other forms of freight packaging as applicable

2.5 Documentation required for the selected containers or other forms of packaging suitable for air freight transport is prepared as per standard procedures and regulatory requirements

2.6 Appropriate action is taken to organise and provide advice to the customer on the packaging, packing, stowage and storage of the freight for the planned forwarding project including the planning of the loading of the selected containers where applicable

3 Complete freight forwarding calculations for air freight transport

3.1 Calculations required in the course of planning and organising the international forwarding of freight by air freight transport are completed accurately and with the available computational aids

4 Assist in organising insurance for air freight transport

4.1 Risks involved in the planned air freight forwarding solution are identified and analysed

4.2 Transport and liability insurance requirements for the proposed forwarding solution are evaluated and considered

4.3 Assistance in selecting and organising appropriate insurance options is provided as per standard procedures and applicable regulatory requirements

5 Organise permits, authorisations etc. needed for air freight

5.1 Documentation requirements are determined for the cargo, air transport and selected routing concerned, including permits, authorisations etc.
5.2 Documentation requirements are organised and processed as per standard procedures and applicable regulatory requirements.

6.1 Appropriate liaison with agents, carriers and others in the global network and supply chain is undertaken to plan and organise the freight forwarding project.

6.2 Appropriate information and communications systems and equipment are used when liaising with the freight forwarding global network as per standard operating procedures and regulatory requirements.

7.1 International cargo being transported by air freight transport is tracked and traced during a freight forwarding project using the available systems and technology.

7.2 Problems with the transit of freight identified during tracking activities are evaluated and appropriate action is initiated to address the problems as per standard procedures.

7.3 Advice is provided to the customer on the progress of the international air freight transport project and any action taken to address unexpected contingencies.

8.1 Forms and documentation required for the planned freight forwarding project are completed as per standard operating procedures and applicable regulatory requirements.

8.2 Data is retrieved from and entered into computer systems as per standard operating procedures and applicable regulatory requirements.

8.3 Records of arrangements made and critical transactions are kept as per standard operating procedures and applicable regulatory requirements.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international regulations and conventions applicable to the planning and organising of international freight forwarding by air transport (including the importing, exporting and transiting of goods)
- Standard procedures, codes of practice and protocols for planning and organising international freight forwarding by air transport (including the importing, exporting and transiting of goods)
- Relevant OH&S and environmental procedures and regulations
- Principles of international trade and commerce
- Principles and forms of air freight transport
- Definitions, purpose and use of Incoterms and Combiters.
• Types of aircraft - their applications, capacity and routes
• Major air routes, services, conferences, airports and freight terminals as they apply to air freight transport
• Airports, cargo handling and terminal equipment at major worldwide airports and freight terminals
• Cargo types, consignments and consolidations
• Aircraft containers and containerisation, including types, purposes, dimensions and specifications; loading principles and processes; load planning for containers
• Processes for the chartering of aircraft - types of charter, terms and contracts
• Sources of information and documentation needed when planning and organising international freight forwarding by air transport, including permits and authorisations
• Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
• Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
• Typical problems that can occur when planning and organising international freight forwarding by air transport and related appropriate action that can be taken to prevent or solve them

Required skills:
• Communicate effectively with others when planning and organising international freight forwarding by air transport, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
• Read and interpret instructions, procedures, information and signs relevant to the planning and organising of international freight forwarding by air transport
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the planning and organising international freight forwarding by air transport including the use of calculators and data entry to a computer
• Operate information and communication technology systems to required protocol
• Perform required estimates and calculations of variables such as size, weight, distance, risk and costs when planning and organising international freight forwarding involving air transport
• Work collaboratively with others when planning and organising international freight forwarding by air transport
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when planning and organising international freight forwarding by air transport in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when planning and organising international freight forwarding by air transport
- Monitor work activities in terms of planned schedule and deadlines
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Mode of international freight transport is:**
- air transport

**International freight forwarding includes services related to:**
- the importing of goods
- the exporting of goods
- the transiting of goods

**Major aircraft types used for international freight transport may include but are not limited to:**
- Airbus A320
- Airbus A321
- Airbus A330
- Airbus A340
- Boeing B747
- Boeing B757-200F
- Boeing B767
- Boeing B767-200
- Boeing B767-300
- Boeing B777
- Boeing B777-200
- Boeing B777-300

**Pre-transport issues in the forwarding of freight by air transport may include:**
- confirmation that the cargo fulfils air cargo security requirements
- adequacy of insurance
- adequacy of packaging
- planning of the packing and loading of cargo into aircraft containers
- planning for security, proper stacking and stowage and handling in transit
- planning for clearance, delivery and receival during transit and at destination
Requirements for work may include:

- international freight forwarding codes of practice, protocols and procedures
- regulations relevant to the international forwarding of freight by air transport
- authorities and permits relevant to the international forwarding of freight by air transport
- workplace standard operating procedures
- information and communications technology and related systems
- global time zones and hours of operation

Parameters of air freight transport services relevant to customer requirements may include:

- standard operating procedures for forwarding of various types of international freight by air
- type of air transport modes
- air transport routing
- various consignment methods for air transport
- packaging, packing, stowage and storage options for air transport, including air freight containerisation or use of unit load devices
- relevant legislative requirements
- required import/export documentation, labelling and requirements
- transport security checks
- insurance requirements
- service costs
- contract arrangements
- payment requirements and procedures
- fiduciary and legal responsibilities of either party
Types of aircraft containers or unit load devices (ULDs) may include but are not limited to:

- LD1 Half Size Lower Deck (Accepted by B767, B747)
- LD2 Half Size Lower Deck (Accepted by B767-200, B767-300)
- LD3 Half Size Lower Deck (Accepted by A330, A340, B757-200F, B767, B777, B747)
- LD3-45 Lower Deck (Accepted by A320, A321)
- LD3-45 Wing Pallet With Net (Accepted by A320, A321)
- LD7 Lower Pallet With Net (Accepted by A330, A340, B767-200, B767-300, B777-200, B777-300, B747)
- LD8 Full Width Lower Deck (Accepted by B767-200, B767-300)
- LD9 Full Size Lower Deck (Accepted by A330, A340, B767-200, B767-300, B777-200, B777-300, B747)
- LD29 Full Width Lower Deck (Accepted by B767-200, B767-300, B747)
- M1 Main Deck Pallet With Net (Accepted by B747)
- 96" Lower Deck Pallet With Net (Accepted by A330, A340, B767-200, B767-300, B777-200, B777-300, B747)

Types of packages used for storing and protecting cargo during transit may include:

- bags and cartons
- thermal cartons with gel-ice
- cases
- drums
- pallets
- pallecons and other devices for carrying bulk liquids, pastes and powders

Communications systems may involve:

- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail

Consultative processes may involve:

- customers
- international and domestic agents and suppliers
- airline representatives
- other employees and supervisors
- relevant regulatory authorities and institutions
- management
- freight forwarding specialists
- other professional or technical staff
Sources of information required to perform international freight forwarding functions may include:

- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include but are not limited to:

- Australian and international conventions, codes of practice and regulations relevant to the international transfer of freight
- summaries and definitions of Incoterms and Combiterms
- customers' instructions and transport requirements
- workplace standard operating procedures and policies
- operations manuals, job specifications and procedures and induction documentation
- standard FIATA forms and documentation such as:
  - a Negotiable Multimodal Transport Bill of Lading (FB/L)
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
  - a Forwarders Warehouse Receipt (FWR)
  - a Forwarders Forwarding Instructions (FFI)
  - a Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - a Shippers Intermodal Weight Certification (SIWC)
  - an Original Bill of Lading (OB/L)
  - a Master Air Waybill (MAWB)
  - a House Bill of Lading (HBL)
  - a House Air Waybill (HAWB)
  - a Multimodal Transport Bill of Lading (MTB/L)
- cargo manifests
- pre-advice and pre-alert documents
- operations manuals, job specifications and procedures and induction documentation
- Australian and international standards, criteria and certification requirements
- data obtained through communications technology equipment and oral, aural or signed communications
- freight forwarder company’s quality assurance standards and procedures
- emergency procedures
Applicable regulations and legislation may include:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - selecting routing for air freight transport
  - advising on and organising the packaging, packing, stowage and storage of freight for air transport
  - completing freight forwarding calculations for air freight transport
  - assisting in the organisation of insurance for air freight transport
  - organising permits, authorisations etc. needed for air freight transport
  - liaising with the freight forwarding global network when organising air freight transport
  - tracking and tracing international cargo being forwarded by air transport
  - completing documentation and records required for air freight transport

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through activities in an appropriately simulated environment at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIA5061A  Plan and organise the international forwarding of freight by road and rail transport

Unit Descriptor
This unit involves the skills and knowledge required to plan and organise international forwarding of freight involving road and rail transport (covering the importing, exporting and transiting of freight). This includes confirming customers' freight transport requirements; selecting routing for road and rail freight transport; advising on and organising the packaging, packing, loading, stowage and storage of road and rail freight; and completing freight forwarding calculations for road and rail transport. It also includes assisting in the organisation of insurance for road and rail freight transport; organising permits, authorisations etc.; liaising with the freight forwarding global network; tracking and tracing international cargo being forwarded by road and rail transport; and completing documentation and records required for road and rail freight transport. There are no specific licensing or certification requirements applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for persons involved in planning and organising the international forwarding of freight by road and rail transport as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Select routing for road and rail freight transport
1.1 Requirements for international road and rail freight transport services are confirmed and clarified with the customer
1.2 Critical logistics aspects of the freight transport are determined, analysed and taken into account in planning the freight forwarding solution(s)
1.3 Checks are made that all conventions for international road and rail freight transport are fulfilled
1.4 Where the freight forwarding involves special transport services, advice is sought as required from experts or specialists in the area of the special cargo or dangerous goods concerned

1.5 Suitable routing for road and rail freight transport is selected after consideration of the options available and analysis of the risks involved

1.6 Alternative routing options are identified for possible use in the event of contingencies

2 Advise on and organise the packaging, packing, stowage and storage of freight for road and rail transport

2.1 Suitable options are determined for the packaging, packing, stowage and storage of freight given the type of cargo, the mode of transport, the destination and the selected route(s)

2.2 Where applicable, container types suitable for road and rail freight transport and appropriate for the freight are reviewed and appropriate options selected

2.3 Restrictions on the dimensions of containers for transport by road and/or rail are taken into account when selecting container types

2.4 The pricing of containers and other forms of freight packaging suitable for road and rail freight transport is determined and advice provided to the customer

2.5 Advice is provided to the customer on the selection, loading and packing of suitable container types and other forms of freight packaging as applicable

2.6 Documentation required for the selected containers or other forms of packaging suitable for road and rail freight transport is prepared as per standard procedures and regulatory requirements

2.7 Appropriate action is taken to organise and provide advice to the customer on the packaging, packing, stowage and storage of the freight for the planned forwarding project including the planning of the loading of the selected containers where applicable

3 Complete freight forwarding calculations for road and rail freight transport

3.1 Calculations required in the course of planning and organising the international forwarding of freight involving road and rail freight transport are completed accurately and with the available computational aids

4 Assist in organising insurance for road and rail freight transport

4.1 Risks involved in the planned road and rail freight forwarding solution are identified and analysed

4.2 Transport and liability insurance requirements for the proposed forwarding solution are evaluated and considered

4.3 Assistance in selecting and organising appropriate insurance options is provided as per standard procedures and applicable
5 Organise permits, authorisations etc. needed for road and rail freight transport

| 5.1 Documentation requirements are determined for the cargo, mode(s) of transport and selected routing concerned, including permits, authorisations etc. |
| 5.2 Documentation requirements are organised and processed as per standard procedures and applicable regulatory requirements |

6 Liaise with the freight forwarding global network

| 6.1 Appropriate liaison with agents, carriers and others in the global network and supply chain is conducted to plan and organise the freight forwarding project |
| 6.2 Appropriate information and communications technology systems and equipment are used when liaising with the freight forwarding global network as per standard operating procedures and regulatory requirements |

7 Track and trace international cargo being forwarded by road and rail transport

| 7.1 International cargo being transported by road or rail freight transport is tracked and traced during a freight forwarding project using the available systems and technology |
| 7.2 Problems with the transit of freight identified during tracking activities are evaluated and appropriate action is initiated to address the problems as per standard procedures |
| 7.3 Advice is provided to the customer on the progress of the international road and rail freight transport project and any action taken to address unexpected contingencies |

8 Complete required documentation and records

| 8.1 Forms and documentation required for the planned freight forwarding project are completed as per standard operating procedures and applicable regulatory requirements |
| 8.2 Data is retrieved from and entered into computer systems as per standard operating procedures and applicable regulatory requirements |
| 8.3 Records of arrangements made and critical transactions are kept as per standard operating procedures and applicable regulatory requirements |

**REQUIRED KNOWLEDGE AND SKILLS**
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Australian and international regulations and conventions applicable to the planning and organising of international freight forwarding involving road and rail transport (including the importing, exporting and transiting of goods)
• Standard procedures, codes of practice, conventions and protocols for planning and organising international freight forwarding involving road and rail transport (including the importing, exporting and transiting of goods)

• Relevant OH&S and environmental procedures and regulations

• Principles of international trade and commerce

• Principles and forms of road and rail freight transport

• Types of road vehicles, trains and rollingstock - their applications, capacity and routes

• Major road and rail routes, services, conferences, road and rail freight terminals as they apply to road and rail freight transport

• Freight handling and terminal equipment at major worldwide road and rail freight terminals

• Definitions, purpose and use of Incoterms and Combiterms

• Freight types, consignments and consolidations

• Road and rail containers and containerisation, including types, purposes, dimensions and specifications; loading principles and processes; load planning for containers

• Sources of information and documentation needed when planning and organising international freight forwarding by road and rail transport, including permits and authorisations

• Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood

• Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry

• Typical problems that can occur when planning and organising international freight forwarding by road and rail transport and related appropriate action that can be taken to prevent or solve them

**Required skills:**

• Communicate effectively with others when planning and organising international freight forwarding involving road and rail transport, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)

• Read and interpret instructions, procedures, information and signs relevant to the planning and organising of international freight forwarding involving road and rail transport

• Interpret and follow operational instructions and prioritise work

• Complete documentation related to the planning and organising international freight forwarding by road and rail transport, including the use of calculators and data entry to a computer

• Operate information and communication technology to required protocol

• Perform required estimates and calculations of variables such as size, weight, distance, risk and costs when planning and organising international freight forwarding involving road and rail transport
• Work collaboratively with others when planning and organising international freight forwarding involving road and rail transport
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when planning and organising international freight forwarding involving road and rail transport in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when planning and organising international freight forwarding involving road and rail transport
• Monitor work activities in terms of planned schedule and deadlines
• Apply relevant codes of practice and applicable legislative requirements
• Modify activities depending on differing operational contingencies, risk situations and environments
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Mode of international freight transport may include:
• road transport
• rail transport
• piggyback (combined transport road-rail transport)

International freight forwarding includes services related to:
• the importing of goods
• the exporting of goods
• the transiting of goods
Trains used for international rail freight transport may include but are not limited to:

- Conventional transport by railwagons or rollingstock, involving complete wagon loads (as part loads have now nearly disappeared), including:
  - various different types of railwagons or rollingstock (railway-owned or privately-owned)
  - special railwagons or rollingstock (e.g. with changeable axles, container-carrying railwagons or rollingstock etc.)

- Combined transport by rail (road-rail transport), including:
  - piggyback (transport by rail of road semi-trailers)
  - container traffic by rail (unaccompanied combined transport)
  - swap-bodies (similar to containers)
  - Euro (pallet wide) containers

Road vehicles used for international freight transport may include but are not limited to:

- vans and light rigid vehicles of varying length, width, height, loading and total weight
- rigid trucks of varying length, width, height, loading and total weight
- semitrailers and multi-combination vehicles of varying length, width, height, loading and total weight
- vehicles capable of participating in combined freight movements such as road/rail, road/ferryboat, roll-on/roll-off vessels
- vehicles capable of carrying special loads such as perishable goods, liquids, gases and heavy-lift cargo
- vehicles with swap-bodies (similar to containers)

Pre-transport issues in the forwarding of freight by road and rail transport may include:

- adequacy of insurance
- adequacy of packaging
- planning of the packing and loading of cargo into containers
- planning for security, proper stacking and stowage and handling in transit
- planning for clearance, delivery and receival during transit and at destination
Requirements for work may include:

- international freight forwarding codes of practice, protocols and procedures
- regulations relevant to the international forwarding of freight by road and rail transport
- authorities and permits relevant to the international forwarding of freight by road and rail transport
- workplace standard operating procedures
- information and communications technology and related systems
- global time zones and hours of operation

Parameters of road and rail freight transport services relevant to customer requirements may include:

- standard operating procedures for forwarding of various types of international freight by road and rail
- type of transport modes
- road and rail transport routing
- various consignment methods for road and rail transport
- packaging, packing, stowage and storage options for road and rail transport, including road and rail freight containerisation or use of unit load devices
- relevant legislative requirements
- required import/export documentation, labelling and requirements
- transport security checks
- insurance requirements
- service costs
- contract arrangements
- payment requirements and procedures
- fiduciary and legal responsibilities of either party

Types of containers used in road and rail transport may include but are not limited to:

- box (dry van)
- open top
- open side
- bulk
- tanks
- reefer
- platform
- flat
### Types of packages used for storing and protecting cargo during transit may include:

- bags
- cartons
- thermal cartons with gel-ice
- cases
- drums
- pallets
- pallecons and other devices for carrying bulk liquids, pastes and powders

### Consultative processes may involve:

- customers
- international and domestic agents and suppliers
- railway or road transport company representatives
- relevant regulatory authorities and institutions
- other employees and supervisors
- management
- freight forwarding specialists
- other professional or technical staff

### Sources of information required to perform international freight forwarding functions may include:

- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

### Communications systems may involve:

- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail

### Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include but are not limited to:

- Australian and international regulations and codes of practice for the international forwarding of freight by road and rail
- summaries and definitions of Incoterms and Combiterms
- customers' instructions and transport requirements
- workplace standard operating procedures and policies
- operations manuals, job specifications and procedures and induction documentation
- standard FIATA forms and documentation such as:
  - Waybill for inland transportation
  - Waybill for cross border traffics
  - International Customs Transit Document (e.g. carnet TIR)
  - a Truck Bill of Lading
  - a Rail Bill of Lading
  - a Negotiable Multimodal Transport Bill of Lading (FB/L)
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
  - a Forwarders Warehouse Receipt (FWR)
  - a Forwarders Forwarding Instructions (FFI)
  - a Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - a Shippers Intermodal Weight Certification (SIWC)
  - an Original Bill of Lading (OB/L)
  - a House Bill of Lading (HBL)
  - Multimodal Transport Bill of Lading (MTB/L)
- cargo manifests
- pre-advice and pre-alert documents
- Australian and international standards, criteria and certification requirements
- data obtained through communications technology equipment and oral, aural or signed communications
- freight forwarder company’s quality assurance standards and procedures
- emergency procedures
Applicable regulations and legislation may include:

- Australian and international regulations
- Conventions and codes of practice for the international forwarding of freight
- Relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- Relevant regulations pertaining to international trading and financial transactions
- Relevant Australian and international transport security and safety legislation
- Relevant Australian and international environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - Selecting routing for road and rail freight transport
  - Advising on and organising the packaging, packing, stowage and storage of freight for road and rail transport
  - Completing freight forwarding calculations for road and rail freight transport
  - Assisting in the organisation of insurance for road and rail freight transport
  - Organising permits, authorisations etc. needed for road and rail freight transport
  - Liaising with the freight forwarding global network when organising road and rail freight transport
  - Tracking and tracing international cargo being forwarded by road and rail transport
  - Completing documentation and records required for road and rail freight transport

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - A range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant
operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**
• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through activities in an appropriately simulated environment at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIA507C  Check and evaluate records and documentation

Unit Descriptor
This unit involves the skills and knowledge required to check and evaluate records and documentation in accordance with regulatory and workplace requirements including checking documentation and analysing and evaluating records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant standards, regulations and workplace requirements concerning the documentation requirements for the local and international transport of cargo and containers.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the checking and evaluation of documentation for the local and international transport of cargo and containers as part of work activities in the stevedoring, transport, distribution and allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Check documentation

1.1 Documentation is checked to ensure its compliance with regulatory and workplace requirements

1.2 Documentation is checked on a regular basis, and the personnel responsible for documentation are advised of deadlines

1.3 Use of systems for the maintenance of records complies with regulatory and workplace requirements

2 Analyse and evaluate records

2.1 Records are analysed to identify unexpected deviations from plans or possible future problems with plant and equipment

2.2 Advice is provided to appropriate personnel when problems are identified

2.3 Security of records and documentation is maintained at all times with access being granted to authorised personnel in accordance with workplace procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international standards, codes and regulations relevant to the documentation requirements for the local and international transport of cargo and containers including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for checking and evaluating documentation for the local and/or international transport of cargo and containers
- Focus of operation of work systems, equipment, management and site operating systems for checking and evaluating cargo/container transport documentation
- Problems that may occur when checking and evaluating documentation and appropriate action that can be taken to resolve the problems
- Types of cargo, containers and transport modes and the documentation requirements for each
- Site layout, loading/unloading plans and sequence sheets
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

Required skills:
- Communicate effectively with others when checking and evaluating transport documentation
- Read and interpret instructions, procedures and labels relevant to checking and evaluating transport documentation
- Receive, acknowledge and send messages with available communications equipment
- Identify cargo, container and goods, coding, ADG and IMDG markings and where applicable emergency information panels
- Work collaboratively with others when checking and evaluating transport documentation
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when checking and evaluating transport documentation in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Identify, select and use relevant equipment, processes and procedures when checking and evaluating documentation for the local and/or international transport of cargo and containers
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:
- a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments
- office environments

Cargo/freight may include:
- goods with specialist requirements, including temperature controlled goods and dangerous goods

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Personnel in work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:
- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the documentation requirements for the local and/or international transport of cargo and containers
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant standards, codes and regulations relevant to the documentation requirements for the local and international transport of cargo and containers
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant Australian standards and certification requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLIA5107C  Carry out quarantine procedures

**Unit Descriptor**

This unit involves the skills and knowledge required by an Accredited Person to carry out the requirements of the quarantine Co-Regulation Schemes in accordance with Australian Quarantine Inspection Service (AQIS) regulatory and workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

This unit applies to individuals working as an Accredited Person in accordance with the relevant AQIS accreditation and business Compliance Agreement for commodity and non-commodity Co-Regulation Schemes. Work is undertaken in a range of environments including small to large worksites in the customs broking and international freight forwarding industries. Work at this level is performed by those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

**Competency Field**

A – Handling Cargo/Stock

</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
<tr>
<td><strong>1 Confirm AQIS accreditation status for clearance</strong></td>
<td></td>
</tr>
<tr>
<td>1.1 Appropriate checks are made to assess if the business has a valid Compliance Agreement with AQIS for the relevant Co-Regulation Scheme</td>
<td></td>
</tr>
<tr>
<td>1.2 Ensure information is conveyed to AQIS by answering a question on this matter as appropriate at the time of lodgement of the import declaration</td>
<td></td>
</tr>
<tr>
<td><strong>2 Assess a packing declaration</strong></td>
<td></td>
</tr>
<tr>
<td>2.1 Packing declaration is checked to confirm whether or not it contains acceptable straw, timber and bark declarations in accordance with the relevant Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document</td>
<td></td>
</tr>
<tr>
<td>2.2 Packing declaration is checked to confirm that all other critical information is present as detailed in the relevant Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document</td>
<td></td>
</tr>
<tr>
<td>2.3 If the packing declaration is unacceptable or if required information is missing, it is declared to AQIS at the time of lodgement of the import declaration</td>
<td></td>
</tr>
</tbody>
</table>
| 3 Assess a treatment certificate | 3.1 Treatment certificate is checked to confirm whether or not the treatment provider is acceptable to AQIS  
3.2 Treatment certificate is checked to confirm that all critical fields are present, correct and legible as detailed in the Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document  
3.3 Treatment certificate is checked to confirm that this treatment, dosage and duration is acceptable and in accordance with the requirements of the Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document |
|--------------------------------|-------------------------------------------------------------------------------------------------------------|
| 4 Convert quantities detailed in treatment certificates | 4.1 Quantities of fumigants stated in a treatment certificate as being used to treat a given volume of material are checked against AQIS requirements  
4.2 Where necessary, required conversions are carried out to ensure that the quantity of fumigant and volume of material are at the correct dosage |
| 5 Check and confirm unpack destination for FCL/X consignments | 5.1 The unpack postcode for FCL consignments is determined as metropolitan, rural or semi-rural in accordance with the Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document  
5.2 If a FCL or FCX consignment is to be unpacked at a rural or semi-rural address as identified by the postcode and the AQIS Containerised Cargo Clearance Resources Document, it is declared to AQIS at the time of lodgement of the import declaration |
| 6 Confirm that all non-commodity documentation is valid linked and meets AQIS requirements | 6.1 Information contained in packing declarations and treatment certificate is verified as containing a linking consignment identifier or numerical link to the shipment in accordance with the Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document |
| 7 Confirm that all commodity documentation is valid and meets AQIS requirements | 7.1 Determine information and documentation required for assessment in accordance with the Scheme's Processes and Outcomes Document  
7.2 Assess documentation to determine if the commodity is in scope as required by the Scheme's Processes and Outcomes Document  
7.3 Ensure documentation contains linkage to the consignment as required by the Scheme's Processes and Outcomes Document  
7.4 Assess documentation in accordance with the requirements of the Scheme's Processes and Outcomes Document |
8 Enter required Processing Types and Automatic Entry Processing (AEP) codes

8.1 Determine the AQIS Processing Type and enter it into the AQIS Processing Type field in the Joint Entry Management Computer System (JEMS) in accordance with the Processes and Outcomes Document for each of the relevant Co-Regulation Schemes.

8.2 Determine the Quarantine Approved Premise where the activity is to take place in accordance with the Processes and Outcomes Document for EACH of the relevant Co-Regulation Schemes. The QAP Code is entered into the QAP Field on the Joint Entry Management Computer System (JEMS) in accordance with the Processes and Outcomes Document for each of the relevant Co-Regulation Schemes.

9 Ensure that all documentation and records are completed and correctly retained

9.1 All principal documentation and records of cleared imports including all relevant shipping documents, packing declarations, bills of lading, etc. are maintained in accordance with AQIS Co-Regulation Scheme requirements.

9.2 Clients are advised that AQIS may call up this documentation during any audit.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Proficiency in the requirements of the AQIS Co-Regulation Schemes
- Australian and international legislation, codes and regulations relevant to non-commodity quarantine freight clearance operations
- Relevant OH&S and environmental protection procedures and guidelines
- AQIS and workplace procedures and policies for non-commodity quarantine freight clearance operations
- Focus of operation of work systems, equipment, management and site operating systems for non-commodity quarantine freight clearance operations
- Typical problems that may occur during non-commodity quarantine freight clearance and appropriate action that can be taken to resolve the problems
- Information on relevant aspects of non-commodity quarantine freight clearance practices
- Sources of information on new developments in non-commodity quarantine freight clearance procedures
- Techniques to learn the skills and knowledge required for new developments in non-commodity quarantine freight clearance procedures
- Documentation and record requirements for non-commodity quarantine freight clearance operations

Required skills:

- Negotiate, communicate and liaise effectively with clients and others
• Read and interpret instructions, procedures and information relevant to non-commodity quarantine freight clearance procedures
• Select and use relevant computer/communication/office equipment when carrying out non-commodity quarantine freight clearance operations
• Complete documentation related to work activities
• Work collaboratively as part of a freight clearance team
• Plan and organise work activities when carrying out non-commodity quarantine freight clearance procedures
• Identify, interpret and learn skills and knowledge required for relevant new developments in non-commodity quarantine freight clearance services
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Solve problems that may arise when carrying out non-commodity quarantine freight clearance operations
• Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
• Monitor work activities in terms of planned schedule
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

An Accredited Person is a person who is:

- accredited under the relevant AQIS Co-Regulation Scheme: who has successfully completed the AQIS approved training course fulfilled accreditation requirements. In order to perform tasks under the Co-Regulations Scheme, an Accredited Person must also operate in a business that is a signatory to an existing Compliance Agreement with AQIS

The AQIS Co-Regulation Schemes are:

- a scheme developed to allow business entities to subscribe to a Compliance Agreement with AQIS, and for the business's Accredited Persons to assess commodity and non-commodity documentation on behalf of AQIS, in order to facilitate the quarantine clearance of freight
Information on relevant aspects of commodity and non-commodity freight clearance practices may include:

- AQIS Containerised Cargo Document for each Co-Regulation Scheme
- Processes and Outcomes Document for each Co-Regulation Scheme
- commodity requirements and treatment
- AQIS AEP system and related procedure statements and codes
- the legislation and procedures relating to the non-commodity quarantine clearance of freight
- ICON an AQIS online database

The term 'straw' may include:

- straw
- cereal
- rice hulls
- and other unprocessed plant materials

The term 'timber' may include:

- crates
- cases
- dunnage
- pallets
- skids
- any other timber used as a shipping aid

The term 'bark' is defined as:

- the external natural layer covering trees and branches. This material is distinct and separable from processed timber

Quarantine non-commodity clearance documentation may include:

- packing declarations
- treatment certificates
- shipping documents
- bills of lading
- commercial invoices
- physio sanitary certificates

Unpacking destinations may include:

- metropolitan destinations
- fringe rural destinations
- rural destinations

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Communication in the work area may include:

- phone
- ICS direct or via proprietary software to ICS
- AQIS Import Management System (AIMS)
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- clients
- AQIS officers
- management and union representatives

Documentation and records may include:

- the AQIS Containerised Cargo Clearance Document
- Enterprise Compliance Agreement with AQIS
- AQIS Operational Procedure Statements for the Automatic Entry Processing for FCL Scheme
- packing declarations
- treatment certificates
- shipping documents
- bills of lading
- commercial invoices
- physio sanitary certificates
- goods identification numbers and codes, manifests, delivery notes, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for non-commodity quarantine clearance activities
- Australian and international regulations and codes of practice for non-commodity quarantine freight clearance operation
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- AQIS and client instructions
- quality assurance procedures
- emergency procedures
Applicable legislation and regulations may include:

- Quarantine Act 1908 and Regulations
- codes of practice of the Customs Brokers and Forwarders Council of Australia
- export/import/quarantine/bond requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying and interpreting the quarantine Co-Regulation Schemes
  - confirming accreditation status for container clearance
  - assessing a packing declaration
  - assessing a treatment certificate
  - converting quantities detailed in treatment certificates
  - identifying that all relevant documentation is valid and meets all requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA5207C  Carry out customs clearance practices

Unit Descriptor
This unit involves the skills and knowledge required to carry out customs clearance practices in accordance with Customs and related legislation and workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs related legislation and workplace requirements concerning customs clearance practices. Work is undertaken in a range of environments, including small to large worksites in the custom broking and international freight forwarding industries. Work at this level is performed by those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine the appropriate terms of trade of a consignment
   1.1 Determination is made of the correct terms of trade

2 Interpret the rules of origin for preference claim goods within the Customs Act 1901 and Custom Tariff Act 1995
   2.1 Schedule 1 of the Customs Tariff Act 1995 is consulted
   2.2 Determination is made as to whether goods are the produce or manufacture of a preference country in accordance with the Customs Act 1901 and Customs Tariff Act 1995
   2.3 Determination is made as to whether the goods qualify for preferential treatment under free trade agreements or other preferential trade agreements
   2.4 Determination is made as to whether direct shipment requirements in the Customs Act 1901 have been met

3 Interpret concessional rates of duty in Schedule 4 to the Customs Tariff Act 1995
   3.1 The relevant tariff concession order is interpreted
   3.2 The relevant by-law is interpreted
   3.3 The correct treatment code or reference code for concessional entry of goods is applied

4 Interpret special provisions relating to anti-dumping
   4.1 Determination is made as to whether interim dumping duty applies to the goods
<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
</table>
| **measures within the Customs Act 1901 and the Customs Tariff (Anti-Dumping) Act 1995 and related legislation** | 4.2 Determination is made as to whether interim countervailing duty applies to the goods  
4.3 Determination is made as to whether dumping duty applies to the goods  
4.4 Determination is made as to whether countervailing duty applies to the goods  
4.5 Interim dumping duty security amount is calculated  
4.6 Interim or dumping duty payable is calculated  
4.7 Accuracy of the duty calculation is verified |
| **5 Interpret industry assistance provisions** | 5.1 Duty concession AusIndustry assistance schemes are applied to the goods  
5.2 Determination is made as to whether the goods comply with the requirements of the scheme(s) |
| **6 Apply the relevant rate of duty to the goods** | 6.1 The importer and seller are identified  
6.2 The relevant contract and commercial invoice are identified  
6.3 The terms of trade relevant to the contract are identified  
6.4 Situations where there is insufficient reliable information are identified |
| **7 Determine availability of customs duty refunds, rebates and remissions** | 7.1 The documents are examined for completeness  
7.2 The circumstance giving rise to the refund, rebate or remission opportunity is identified  
7.3 The relevant Customs Regulation and reason code is determined  
7.4 The time frames within which refunds are available is determined in accordance with the regulations  
7.5 The refund application or Version 2 of the import declaration is prepared |
| **8 Interpret and apply the Security and Temporary Import Provisions of Customs legislation** | 8.1 The transaction giving rise to the Temporary Import and/or Security undertaking is established as conforming to the requirements of the Customs Act 1901 and Regulations  
8.2 Application forms are completed and lodged in accordance with Customs Regulations |
| **9 Calculate and advise on drawback claims and advise on TRADEX procedures** | 9.1 Receive import and export documents sufficient to prepare claim  
9.2 Determine that the claim is made within prescribed time frames  
9.3 Drawback claim is prepared and calculated in accordance with a Customs approved method  
9.4 Situations suitable for TRADEX registration are identified |
10 Apply dispute resolution procedures

10.1 Customs internal appeal procedures are exhausted
10.2 The circumstance giving rise to the dispute is identified in accordance with the Customs Act 1901
10.3 Any Customs demands are identified within the legislation
10.4 Requirements for payment under protest are determined
10.5 Time frames within which action must commence are determined
10.6 Requirements for the referral to a court of Competent Jurisdiction are determined
10.7 Provisions relating to forfeiture, seizure and condemnation of goods are reviewed

11 Determine the situations under which Customs may impose penalties

11.1 Determine the offence that has been committed
11.2 Determine if it is a strict liability offence
11.3 Determine appropriate time frames within which penalties may apply and demand may be made

12 Calculate FOB value, applying currency conversion and factorisation principles

12.1 The components that constitute the price paid or payable are identified
12.2 Terms of trade relevant to the invoice are identified
12.3 Currency used is identified
12.4 Adjustments are identified
12.5 Additions and subtractions to price are made
12.6 Costs against goods are apportioned using factorisation
12.7 Applicable rate of exchange is applied
12.8 FOB value field on entry/declaration is completed
12.9 Calculations are checked for accuracy and verified as required
12.10 Completed documentation is retained by relevant personnel in the enterprise in accordance with the requirements of Customs and related legislation and workplace procedures
12.11 Relevant documentation is passed on to the client

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant sections of customs and related legislation, regulations and codes of practice relevant to customs clearance operations
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for customs clearance operations
• Focus of operation of work systems, equipment, management and site operating systems required for customs clearance operations
• Documentation requirements for customs clearance practices
• Requirements for completing relevant documentation
• Routine issues that may occur during customs clearance and appropriate action that can be taken to deal with the issues
• Sources of information on new developments in customs clearance practices
• Ways of learning the skills and knowledge required for new developments in customs clearance practices
• Steps involved in planning the work activities
• Procedures for managing and controlling hazardous situations when carrying out work activities

**Required skills:**

• Negotiate, communicate and liaise effectively with customers and others
• Read and interpret instructions, procedures and information relevant to customs clearance practices
• Interpret and follow operational instructions and prioritise work
• Plan and organise work activities when carrying out customs clearance practices
• Complete documentation related to work activities
• Select and use relevant computer/communication/office equipment when carrying out customs clearance practices
• Work collaboratively as part of a customs broking team
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
• Deal with routine issues that may arise when carrying out customs clearance practices
• Identify, interpret and learn skills and knowledge required for relevant new developments in customs clearance practices
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects of customs clearance practices may include:

- the structure and application of anti-dumping laws in Australia
- differences between the Tariff Concession and By-law and other industry assistance initiatives
- the use of the Penalties and Infringement Notice Scheme
- the various forms and functions of securities and temporary importations
- recovery of shortpaid duties
- the procedures for 'Payments Under Protest'
- Customs Act 1901 and regulations as they relate to refunds, remissions and drawbacks
- 'Seizure', 'Forfeiture and 'Condemnation' as it relates to customs clearance practices
- requirements for preferential treatment of goods under free trade agreements and other preferential trade agreements

Assistance schemes include:

- Tradex Scheme which provides for an upfront exemption from customs duty and taxes on imported goods intended for re-export or to be used as inputs to exports
- Enhanced Project By-law Scheme (EPBS) provides duty concessions on eligible goods used in major projects

Tariff concession order refers to:

- Part 1 of the Schedule of Concessional Instruments published by the Australian Customs which lists goods covered by item 50 of Schedule 4

By-law refers to:

- instruments issued to the 4th Schedule to the Customs Tariff Act 1995 items as published by the Australian Customs

Interim dumping, dumping and countervailing duty:

- have the meanings contained in Section 269T (Definitions) of the Customs Act 1901

Interim duty security amount may include:

- any duty collected under Section 42 of the Customs legislation on any duty payable under the Customs Tariff (Anti-Dumping) Act 1995

Other concessional schemes may include:

- Automotive Competitiveness and Investment Scheme (ACIS)
- Quota
New developments in border clearance operations may include:

- regulations
- processes
- systems
- technology
- types and packaging of goods

Information on new developments in border clearance operations may be obtained from:

- internal networks such as: own team, staff in other departments, support staff, managers, training staff, etc.
- external networks
- bulletins, journals, magazines, books, etc.
- internet websites
- internal and external training programs

Ways of learning skills and knowledge required for new developments in border clearance operations may include:

- external training programs
- internal training programs
- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- clients
- agents
- relevant authorities and institutions
- management representatives
Documentation and records may include:
- Customs and related legislation
- other regulatory requirements pertaining to customs clearance functions
- relevant sections of the Australian Customs Manual
- dumping commodities register
- manifests, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for customs clearance functions
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable legislation and regulations may include:
- Customs and related legislation pertaining to customs clearance functions
- privacy legislation
- export/import/quarantine/bond requirements
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- relevant state/territory OH&S and environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - selecting and using the technology required to carry out customs clearance practices
  - determining and identifying offences and applicable time frames
  - applying procedures for compliance with
Customs and related legislation
- Conducting calculations and appropriate adjustments undertaken as part of routine customs clearance operations
- Recognising and dealing with routine issues that may arise during customs clearance operations

**Context of and specific resources for assessment**
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - A range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - Relevant and appropriate materials and/or equipment, and/or
  - Applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - Through appropriately simulated activities at the registered training organisation, and/or
  - In an appropriate range of situations in the workplace
TLIA5307C  Carry out customs valuation

Unit Descriptor
This unit involves the skills and knowledge required to carry out customs valuation in accordance with Customs and related legislation and workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning customs valuation functions. Work is undertaken in a range of environments including small to large worksites in the customs broking and international trade industries. Work at this level requires some supervision, generally within a team environment.

This unit is normally packaged at AQF III or above.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Apply the relevant valuation method
1.1 Situations where the transaction value method applies are recognised
1.2 Situations where alternate methods of valuation apply are recognised
1.3 Situations where there is insufficient reliable information are identified
1.4 Alternate valuation methods are identified as required by the Customs Act and related legislation

2 Identify the import sales transaction contract for customs valuation purposes
2.1 Importer and seller are identified
2.2 Relevant contract or contracts are identified
2.3 Terms of trade relevant to the contract are identified

3 Determine the price and elements of adjusted price
3.1 Components that constitute the price paid or payable are identified
3.2 The correct adjusted price deductions to be made taking into account relevant legislation and the terms of the relevant import sales transaction are determined

4 Determine Price Related Costs
4.1 Determination to related costs additions to be made taking into account relevant legislation and the terms of the relevant import sales transaction are determined
5 Calculate customs value

5.1 The date and place of export are determined in accordance with the Customs Act 1901
5.2 Valuation elements against imported goods using factorisation are apportioned
5.3 Transaction value is calculated by applying applicable rate of exchange
5.4 The requirement for a valuation advice is identified

6 Record valuation information on customs entry/declaration in accordance with legislative requirements

6.1 Valuation related fields on a customs declaration are identified
6.2 Valuation information is entered correctly on customs declaration
6.3 Calculations are checked for accuracy and verified as required
6.4 Completed documentation is retained by relevant personnel in the enterprise in accordance with the requirements of Customs and related legislation and workplace procedures
6.5 Post entry advice to the client is initiated where required
6.6 Relevant documentation is passed on to the client

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Customs and related legislation relevant to the determination of a customs valuation
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the conduct of a customs valuation
- Focus of operation of work systems, equipment, management and site operating systems needed for customs valuation processes
- Problems that may occur when carrying out customs valuations and appropriate action that can be taken to resolve the problems
- Information on relevant aspects of basic customs valuations
- Types of goods and related handling and documentation requirements including dangerous goods and hazardous substances
- Sources of information on new developments in custom valuation practices
- Ways of learning the skills and knowledge required for new developments in customs valuation practices
- Cultural differences amongst customers, internal and external contacts and within the operational team and their implications when carrying out customs valuations
- Documentation requirements for customs valuations
- Penalties and the infringement notice scheme as it applies to goods incorrectly valued
- Steps involved in planning the work activities

Required skills:
• Negotiate, communicate and liaise effectively with clients and others
• Read and interpret instructions, procedures and information relevant to the determination of customs valuations
• Identify, interpret and learn skills and knowledge required for relevant new developments in customs valuation practices
• Plan and organise work activities
• Complete documentation related to work activities
• Select and use relevant computer/communication/office equipment when carrying out customs valuations
• Enter information using appropriate technology when carrying out customs valuations
• Work collaboratively as part of an operational team
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Solve problems that may arise when determining customs valuations
• Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on the determination of relevant aspects of customs valuations may include:

• the principles, theories and history of the Australian valuation system with regard to the WTO valuation agreement and Customs and related legislation
• Customs Act 1901 and the Customs Regulations
• Transaction Value including:
  o import sales transaction
  o price
  o adjusted price
  o price related costs
  o production assists
  o royalties and licence fees/commissions
  o value on related amounts
  o related parties
  o rebates
  o arms length transactions
  o contract of sale
Alternate valuation methods may include:
- identical goods valuation
- similar goods valuation
- deductive goods method
- computed value method
- fall back method

INCOTERMS 2000 are:
- the ICC Official Rules for the Interpretation of Trade
  Terms, International Chamber of Commerce, 1999

Adjusted price may include:
- deductible financing costs
- post importation costs
- Australian inland freight and insurance
- deductible administrative costs
- overseas freight and insurance

Price related costs may include:
- production assist costs
- packing costs
- foreign inland freight and foreign inland insurance
- commissions
- royalties and licence fees
- proceeds of resale

Factorisation means:
- the apportionment of costs over a line value (each line of
  the invoice for which there is a separate classification)

Valuation Advice means:
- the completion and lodgement of request for official
  Valuation Advice with the Australian Customs Service

Post entry Valuation Advice may include:
- advising the client what options are available if there is
  disagreement with the customs value

Verification may include:
- other colleagues within the enterprise
- customs brokers

New developments in customs valuation practices including changes in:
- technology
- products
- regulations
- legislation
- processes
- systems
Information on new developments in customs valuation practices may be obtained from:

- internal networks such as: own operational team, staff in other departments, support staff, managers, training staff, etc.
- external networks such as: airline, shipping, road transport and storage, personnel, staff in bond stores; staff in various regulatory authorities; and equipment and systems suppliers
- bulletins, journals, magazines, books, etc.
- internet websites
- internal and external training programs
- external training programs
- internal training programs

Ways of learning skills and knowledge required for new developments in customs valuation practices may include:

- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
Documentation and records may include:

- Customs Act 1901 and related legislation
- World Trade Organisation Valuation Agreement
- Australian Customs Manual on Valuation and Preference
- Integrated Cargo System (ICS) user manuals
- goods identification numbers and codes
- manifests, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for customs valuation
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable rules, legislation and regulations may include:

- Customs Act 1901 and related legislation
- World Trade Organisation Valuation Agreement
- privacy legislation
- export/import/quarantine/bond requirements
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- relevant state/territory OH&S and environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the relevant valuation method
  - identifying the contract for customs
valuation purposes
  ○ determining the price and elements of adjusted price
  ○ identifying elements of price related costs
  ○ calculating customs value
  ○ recording valuation information on customs entry/declaration
  ○ selecting and using the technology required to conduct customs valuations

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA5407C  Classify commodities for the import and export of goods through customs

Unit Descriptor
This unit involves the skills and knowledge required to classify commodities for the import and export of goods through customs in accordance with Customs and related legislation and workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the Customs Tariff Act 1995 and related legislation and workplace requirements concerning customs commodity classification functions. Work is undertaken in a range of environments including small to large worksites in the customs broking and international freight forwarding industries. Work at this level requires some supervision, generally within a team environment.

This unit is normally packaged at AQF III or above.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Locate resources necessary for classification of goods
1.1 Determine and obtain resources and documentation sufficient to classify goods

2 Apply identification principles to goods
2.1 Goods are identified in accordance with classification principles
2.2 Alternative classifications are checked as required
2.3 Assistance is sought as required
2.4 Section and Chapter Notes are consulted

3 Select and justify heading (4 figure)
3.1 The principles of statutory construction in the context of particular tariff headings and words are applied
3.2 Heading and Notes are interpreted in hierarchical order
3.3 Rejection of alternate headings are justified
3.4 Pre or post classification potential areas of dispute are identified

4 Locate and justify a sub-heading (6 or 8 figure)
4.1 The requirement for a tariff classification advice is identified
4.2 Sub-heading Notes are interpreted in hierarchical order
4.3 The dash system is applied to the classification
4.4 The correct statistical code is identified

5 Utilise classification tools as directed

5.1 Resources are utilised to assist in classification of goods
5.2 Client is consulted to obtain further details of characteristics of goods to be classified as required
5.3 Assistance is sought as required
5.4 A preliminary classification of goods is made
5.5 Preliminary classification is checked with manager, supervisor or more senior personnel prior to customs import being completed

6 Complete post classification requirements in accordance with legislative requirements

6.1 Tariff classification advice request is prepared in response to identified problems
6.2 Classification is entered correctly on the customs entry/declaration in accordance with the requirements of Customs and related legislation and workplace procedures
6.3 Completed documentation is retained by relevant personnel in accordance with the requirements of Customs and related legislation and workplace procedures
6.4 Relevant documentation and other sources of information (e.g. from internet, industry experts, etc.) is retained and passed on to the client in accordance with the requirements of Customs and related legislation and workplace procedures
6.5 Post entry classification advice to the client is initiated where required

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Customs and related legislation relevant to the classification of commodities for the import and export of goods through customs
- Relevant OH&S and environmental protection procedures and guidelines
- Customs and workplace procedures and policies for the classification of commodities for the import and export of goods through customs
- Focus of operation of work systems, equipment, management and site operating systems for the classification of commodities for the import and export of goods through customs
- Problems that may occur when classifying commodities for the import and export of goods through customs and appropriate action that can be taken to resolve the problems
- Information on relevant aspects of the classification of commodities for the import and export of goods through customs
- Types of goods and related classification and documentation requirements
- Sources of information on new developments in the classification of commodities for the import and export of goods through customs
• Ways of learning the skills and knowledge required for new developments in the classification of commodities for the import and export of goods through customs
• Cultural differences amongst customers, internal and external freight contacts and within the operational team and their implications when providing customs classification services
• Documentation and recording requirements for the classification of commodities for the import and export of goods through customs
• Steps involved in planning the work activities

**Required skills:**
• Communicate effectively with others when classifying commodities for the import and export of goods through customs
• Locate, read and interpret instructions, procedures and information relevant to the classification of commodities for the import and export of goods through customs
• Plan and organise work activities when classifying commodities for the import and export of goods through customs
• Select and use relevant computer/communication/office equipment when classifying commodities for the import and export of goods through customs
• Enter information using appropriate technology
• Work collaboratively as part of an operational team
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
• Solve problems that may arise when classifying commodities for the import and export of goods through customs
• Take responsibility for classifying commodities for the import and export of goods through customs
• Identify, interpret and learn skills and knowledge required for relevant new developments in the classification of commodities for the import and export of goods through customs
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Locate the resources necessary for the classification of goods
• Record work outcomes
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects of the classification of commodities for the import and export of goods through customs may include:

- the reasons for the Customs Tariff Act 1995 and for the imposition of duty on imported goods
- the content of the Customs Tariff Act 1995 and the various sections within the Act as they relate to the classification of commodities for the import and export of goods through customs
- the schedules of the tariff and comparisons between the sub-heading structures at various levels in order to arrive at correct classification and duty rates
- the Rules for the Interpretation of the Harmonized System and the Australian Customs Tariff Act 1995
- comparisons and differences between the various rules for tariff classification purposes
- the principles of classification in the identification of goods for tariff purposes and their application to the classification of commodities for the import and export of goods through customs
- the legal notes to the tariff and the context of each note and the application of this context to the classification of commodities for the import and export of goods through customs
- the applications of the various aids available to the classification process

Where goods for classification are not available, sample of goods may be in the form of:

- photographic (still, video or electronically transmitted image)
- a written description including technical drawings

Resources to classify goods includes:

- Australian Harmonized Export Classification Book (ISBN 0 642 4772 3)
- the combined Customs Tariff Act 1995
- precedents database
- dictionaries
- trade or technical publications
- Harmonized System Explanatory Notes (HSEN)

Examples of previous related classifications include:

- candidate's and colleagues' previous classifications
- examples from texts and reference materials

Client consultation may be required where:

- characteristics of goods cannot be determined from available information or require clarification in relation to use, function, context (as a component of another item)
Assistance may include:

- advice from supervisor or manager, more experienced colleagues, customs brokers, training staff, technical experts
- using reference material within organisation, training providers, professional libraries, trade journals
- consulting technical experts in the industry, professional association or a training provider

New developments in the classification of commodities may relate to changes in:

- technology
- regulations
- processes
- systems

Information on new developments in the classification of commodities for the import and export of goods may be obtained from:

- internal networks such as: own work team, staff in other departments, support staff, managers, training staff, etc.
- external networks such as: staff in various regulatory authorities
- bulletins, journals, magazines, books, etc.
- internet websites
- internal and external training programs

Ways of learning skills and knowledge required for new developments in the classification of commodities for the import and export of goods may include:

- external training programs
- internal training programs
- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications
Consultative processes may involve:

- other employees and supervisors
- personnel in relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:

- Customs and related legislation
- dictionaries
- trade or technical publications
- Harmonized System Explanatory Notes (HSEN)
- manifests, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation
- operations manuals, job specifications and induction documentation
- manufacturers specifications for relevant equipment
- workplace procedures and policies
- supplier and/or client instructions
- quality assurance procedures
- extrinsic material (as defined in the Acts Interpretation Act)

Applicable legislation and regulations may include:

- Customs and related legislation
- other legislation related to importing and exporting of goods
- export/import/quarantine/bond requirements
- relevant state/territory OH&S and environmental protection legislation
- Australian Harmonized Export Classification Book
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- Customs Tariff Act 1995

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
o locating resources necessary for the classification of commodities for the import and export of goods
o utilising classification tools as directed
o selecting and using the technology required to classify commodities for the import and export of goods
o completing classification in accordance with legislation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIA5507C  Classify complex commodities for the import and export of goods through customs

Unit Descriptor
This unit involves the skills and knowledge required to classify complex commodities for the import and export of goods in accordance with Customs and related legislation and workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs Tariff Act 1995 and related legislation and workplace requirements concerning customs commodity classification functions. Work is undertaken in a range of environments including small to large worksites in the custom broking and international freight forwarding industries. Work at this level is performed by those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Competency Field
A – Handling Cargo/Stock

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Apply identification principles to goods
1.1 Objective and analytical classification principles are applied
1.2 Research resources are accessed to classify goods
1.3 Precedents are considered
1.4 Assistance is sought as required
1.5 Administration Appeals Tribunal (AAT) decisions and court cases are considered
1.6 Product knowledge research is undertaken

2 Select tariff headings for consideration (4 figure)
2.1 The principles of statutory construction in the context of particular tariff headings and words are applied
2.2 Relevant precedents are applied when classifying commodities
2.3 Aids to interpretation of the tariff are used where applicable
2.4 Alternate headings are considered as appropriate
2.5 Pre or post classification potential areas of dispute are identified

3 Select tariff sub-heading (6 or 8 figure)
3.1 AAT decisions, court cases and other precedents on tariff classification are interpreted and applied
3.2 Sub-heading notes are reviewed in hierarchical order
3.3 The dash system is applied to the classification
3.4 The correct statistical code is identified

4 Interpret and apply Section and Chapter Notes
4.1 Tariff classification is determined
4.2 Rejection of alternate headings are justified by reference to the Section and Chapter Notes

5 Interpret and apply rules for interpretation to goods
5.1 Interpretative rules are applied to justify tariff classification of goods
5.2 Research resources are accessed when interpreting and applying rules for interpretation to goods
5.3 Requirements for tariff classification advice are identified

6 Complete post classification requirements in accordance with legislative requirements
6.1 Tariff Classification Advice Request is prepared in response to identified problems
6.2 Classification is entered correctly on the customs entry/declaration in accordance with the requirements of Customs and related legislation and workplace procedures
6.3 Completed documentation is retained by relevant personnel in the enterprise in accordance with the requirements of Customs and related legislation and workplace procedures
6.4 Relevant documentation and other sources of information (e.g. from internet, industry experts, etc.) is retained and passed on to the client in accordance with the requirements of Customs and related legislation and workplace procedures
6.5 Post entry classification advice to the client is initiated where required

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Customs and related legislation relevant to the classification of complex commodities for the import and export of goods through customs
- Relevant OH&S and environmental protection procedures and guidelines
- Customs and workplace procedures and policies for the classification of complex commodities for the import and export of goods through customs
- Focus of operation of work systems, equipment, management and site operating systems for the classification of complex commodities for the import and export of goods through customs
- Problems that may occur when classifying complex commodities for the import and export of goods through customs and appropriate action that can be taken to resolve the problems
• Information on relevant aspects of the classification of complex commodities for the import and export of goods through customs
• Types of complex commodities and related classification and documentation requirements
• Sources of information on new developments in the classification of complex commodities for the import and export of goods through customs
• Ways of learning the skills and knowledge required for new developments in the classification of complex commodities for the import and export of goods through customs
• Cultural differences amongst customers, internal and external freight contacts and within the operational team and their implications when providing customs classification services
• Documentation and recording requirements for the classification of commodities for the import and export of goods through customs
• Steps involved in planning the work activities

Required skills:
• Communicate effectively with others when classifying complex commodities for the import and export of goods through customs
• Locate, read and interpret instructions, procedures and information relevant to the classification of complex commodities for the import and export of goods through customs
• Plan and organise work activities when classifying complex commodities for the import and export of goods through customs
• Select and use relevant computer/communication/office equipment when classifying complex commodities for the import and export of goods through customs
• Enter information using appropriate technology
• Maintain workplace documentation and records
• Work collaboratively as part of an operational team
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
• Solve problems that may arise when classifying complex commodities for the import and export of goods through customs
• Identify, interpret and learn skills and knowledge required for relevant new developments in the classification of complex commodities for the import and export of goods through customs
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Learn skills and knowledge required for relevant new developments in the classification of complex commodities
• Select and use appropriate workplace colloquial and technical language and communication technologies in the workplace context
• Follow the designated plan for the work
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects for the classification of commodities for the import and export of goods may include:

- processes and practices for classifying various types of complex commodities
- the contents and purpose of Customs Tariff Act 1995, Schedule 2, 3 and 4

Objective classification may include:

- the classifier finding out as much as possible about the goods in the condition they are imported or exported

Analytical classification may include:

- technology
- the avoidance of generalised terms such as souvenirs, printed matter and clothing as these terms do not demonstrate analytical classification as required to correctly identify the goods

Harmonized system terminology may include:

- sufficient identification to be capable of being transferred into tariff terminology. For example, a tool holder could be included in the identification if the holder worked solely or principally with machines described specifically in the harmonized system

Assistance may include:

- advice from more experienced colleagues, customs brokers, experienced classifiers, technical experts
- seeking further details about the goods from the client
- consulting technical experts in the industry that the goods belong to
- classification software
- from customers
- commercially available
- additional resources

Tools may include:

- Harmonised System Explanatory Notes and Commodities
- dictionaries, trade journals, technical publications

Menu may include:

- the list of chapters at the start of the Customs Tariff Act 1995 for imports and the summary of classification in the front of the AHECC

Type may include:

- Type Chapters (refer to Chapters 64-66, 84-95 and 97 in the Harmonized System)

Materials may include:

- Material Chapters (refer to Chapters 1-63 and 67-83 in the Harmonized System)
Merchandise trade may include: goods that are covered by a reference number in Schedule 4 of the Customs Tariff Act 1995 or a export statistical item in Chapters 98 and 99 in AHECC.

Section and Chapters Notes may include: Legal Notes contained within Schedule 3 Customs Tariff Act 1995 and include directional notes (inclusion, restriction, extension) and definitional notes and notes having application across the complete Schedule. All relevant Legal Notes are expected to be considered and applied. Notes that have specific industry application such as paper, chemicals, base metals and some textile notes may require clarification/assistance from other parties.

Interpretation rules may include: General Rules for the Interpretation of the Harmonized System. They are the rules that are to be followed for every classification.

Clarification may include: seeking assistance from colleagues, customs broker, more experienced classifier, or technical expert.

obtaining additional information from client.

Sub-heading notes may include: Legal Notes contained within Schedule 3 Custom Tariff Act 1995 and include directional notes (inclusion, restriction, extension) and definitional Notes and Notes having application across the complete Schedule. All relevant Legal Notes are expected to be considered and applied. Notes that have specific industry application such as paper, chemicals, base metals and some textile Notes may require clarification/assistance from other parties.

Dash system is: a design feature of the Harmonized System which assists with the selection of the appropriate 8 figure classification.

New developments in the classification of complex commodities may relate to changes in:

- technology
- legislation
- regulations
- case law
- WCO Classification
- processes
- systems
Information on new developments in the classification of complex commodities may be obtained from:

- internal networks such as: own work team, staff in other departments, support staff, managers, training staff, etc.
- external networks such as: staff in various regulatory authorities
- bulletins, journals, magazines, books, etc.
- internet websites
- internal and external training programs

Ways of learning skills and knowledge required for new developments in customs classification may include:

- external training programs
- internal training programs
- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- clients
- agents
- personnel in relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
Documentation and records may include:

- Customs and related legislation
- Australian Harmonized Export Classification Book
- Customs Tariff Act 1995 and Schedules
- precedents database
- dictionaries
- trade or technical publications
- Harmonized System Explanatory Notes (HSEN)
- manifests, cartnotes, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation
- operations manuals, job specifications and induction documentation
- manufacturers specifications for relevant equipment
- workplace procedures and policies
- supplier and/or client instructions
- quality assurance procedures
- extrinsic material (as defined in the Acts Interpretation Act)

Applicable legislation and regulations may include:

- Customs and related legislation
- Australian Harmonized Export Classification Book
- Customs Tariff Act 1995 and Schedules
- other legislation related to importing and exporting of goods
- export/import/quarantine/bond requirements
- equal employment opportunity and affirmative action legislation
- equal opportunity legislation
- workplace relations regulations
- relevant state/territory OH&S and environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - interpreting and applying rules for interpretation to goods
selecting and justifying heading (4 figure)
locating and justifying a sub-heading (6 or 8 figure)
completing post classification requirements
interpreting and applying Section and Chapter Notes

**Context of and specific resources for assessment**
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIA5607C**  
**Carry out complex customs valuation**

**Unit Descriptor**  
This unit involves the skills and knowledge required to carry out complex customs valuation in accordance with Customs and related legislation and workplace requirements. It includes applying the relevant method for the complex customs valuation required; identifying the contract for customs valuation purposes; determining the price and elements of adjusted price; and identifying elements of price related costs. It also includes calculating customs value through the application of currency conversion and factorisation principles, and recording valuation information on customs entry/declaration. Note: A primary responsibility of a customs broker is to ensure compliance with Australian Customs and other related legislation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning customs valuation functions. Work is undertaken in a range of environments including small to large worksites in the customs broking and international trade industries. Work at this level is performed by those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

**Competency Field**  
A – Handling Cargo/Stock

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Apply the relevant valuation method**  
1.1 Situations where the transaction value method applies are recognised  
1.2 Situations where alternate methods of valuation apply are recognised  
1.3 Situations where there is insufficient reliable information are identified  
1.4 An appropriate valuation method is selected and applied for the complex customs valuation situation identified

2 **Identify the sales transaction**  
2.1 Importer and seller are identified  
2.2 Relevant contract or contracts are identified  
2.3 Invoice terms relevant to the contract are identified
### 3 Identify the import sales transaction
- 3.1 Import sales transaction is identified

### 4 Determine the price in the import sales transaction
- 4.1 The price in the relevant import sales transaction is identified

### 5 Determine the elements of adjusted price for a valuation
- 5.1 The correct adjusted price deductions are made, taking into account the relevant legislation and terms of trade

### 6 Identify elements of price related costs for a valuation
- 6.1 Correct price related costs are made, taking into account the relevant legislation and terms of trade

### 7 Calculate customs value for a valuation
- 7.1 The date and place of export are determined in accordance with the Customs Act 1901
- 7.2 Valuation elements against imported goods using factorisation are apportioned
- 7.3 Alternate valuation methods are applied where necessary
- 7.4 Transaction value is calculated by applying applicable rate of exchange
- 7.5 Valuation Advice Request is prepared in response to identified problems
- 7.6 The requirement for a Valuation Advice Request is identified

### 8 Record valuation information on customs declaration in accordance with legislative requirements
- 8.1 Valuation related fields on a customs declaration are identified
- 8.2 Valuation information is entered correctly on customs declaration
- 8.3 Calculations are checked for accuracy and verified as required
- 8.4 Completed documentation is retained by relevant personnel in the enterprise in accordance with the requirements of Customs and related legislation and workplace procedures
- 8.5 Post entry valuation advice to the client is initiated where required
- 8.6 Relevant documentation is passed on to the client

### REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

#### Required knowledge:
- Customs Act 1901 and related legislation relevant to the conduct of a custom valuation
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for carrying out customs valuation
- Focus of operation of work systems, equipment, management and site operating systems for carrying out customs valuation
• Problems that may occur when carrying out customs valuation and appropriate action that can be taken to resolve the problems
• Information on relevant aspects of customs valuation
• Types of goods and related handling and documentation requirements including dangerous goods and hazardous substances
• Sources of information on new developments in customs valuation practices
• Ways of learning the skills and knowledge required for new developments in customs valuation practices
• Cultural differences amongst customers, internal and external freight contacts and within the customer service team and their implications when providing customs valuation services
• Documentation requirements for customs valuations
• Penalties and the infringement notice scheme as it applies to goods incorrectly valued

**Required skills:**
• Negotiate, communicate and liaise effectively with clients and others when conducting customs valuations
• Read and interpret instructions, procedures and information relevant to the conduct of customs valuations
• Select and use appropriate workplace colloquial and technical language and communication technologies in the workplace context
• Identify, interpret and learn skills and knowledge required for relevant new developments in customs valuation practices
• Follow the designated plan for the customs valuation work
• Maintain work records
• Select and use relevant computer/communication/office equipment when carrying out customs valuations
• Enter information using appropriate technology when carrying out customs valuations
• Work collaboratively as part of an operational team
• Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
• Solve problems that may arise when carrying out customs valuations
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects of customs valuation may include:

- identification and calculation of various aspects kinds of valuation such as:
  - royalties and licence fees
  - commissions
  - rebates
  - packing costs
  - rejection of transaction value
  - related parties
  - transfer pricing
- alternate valuation methods
- case law as it applies to valuation
- Valuation Advice Request and rulings

Transaction value is:
- the main method for valuing goods for customs purposes

Alternate valuation methods may include:

- Identical Goods Valuation
- Similar Goods Valuation
- Deductive Goods Method
- Computed Value Method
- Fall Back Method

INCOTERMS 2000 are:
- the ICC Official Rules for the Interpretation of Trade Terms, International Chamber of Commerce, 1999

Adjusted price may include:

- deductible financing costs
- post importation costs
- Australian inland freight and insurance
- deductible administrative costs
- overseas freight and insurance

Price related costs may include:

- production assist costs
- packing costs
- foreign inland freight and insurance
- commissions
- royalties and licence fees
- proceeds of resale

Factorisation means:
- the apportionment of costs over a line value (each line of the import declaration for which there is a separate classification)
Valuation advice may include:

- the completion and lodgement of an official Valuation Advice Request with Australian Customs
- advice to the client to pay under protest

Post entry valuation advice may include:

- advising the client what options are available if there is disagreement with the customs value

Verification may include:

- other colleagues within the enterprise
- customs brokers

New developments in complex customs valuation practices including changes in:

- case law
- technology
- products
- regulations
- legislation
- processes
- systems

Information on new developments in customs valuation practices may be obtained from:

- internal networks such as: own operational team, staff in other departments, support staff, managers, training staff, etc.
- regulatory authority, WTO, WCO
- bulletins, journals, magazines, books, etc.
- internet websites
- internal and external training programs

Ways of learning skills and knowledge required for new developments in customs valuation practices may include:

- external training programs
- internal training programs
- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Documentation and records may include:

- Customs Act 1901 and related legislation
- World Trade Organisation Valuation Agreement
- Australian Customs Manual on Valuation
- manifests, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for customs valuation
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable legislation and regulations may include:

- Customs Act 1901 and related legislation
- privacy legislation
- export/import/quarantine/bond requirements
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- relevant state/territory OH&S and environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment

- The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:

- applying the relevant method for a customs valuation
- identifying the import sales transaction for customs valuation purposes
- recording valuation information on customs entry/declaration
- calculating customs value for a customs valuation
- identifying elements of price related costs for a customs valuation
- determining the price and elements of adjusted price for a complex customs valuation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA5707C  Analyse, advise on and carry out integrated border clearance transactions

Unit Descriptor

This unit involves the skills and knowledge required to analyse, advise on and carry out integrated border clearance transactions, usually involving analysis of complex interactions between component elements of the transactions and in accordance with Customs and related legislation and workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning customs valuation functions. Work is undertaken in a range of environments including small to large worksites in the customs broking and international freight forwarding industries. Work at this level is performed by those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Competency Field

A – Handling Cargo/Stock

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Read and interpret the facts of the transaction request

1.1 Documentation on the integrated border clearance transaction is reviewed and pertinent Customs and other related legislation and quality standards are identified

1.2 Customs and other related legislation and quality standards are accessed and their implications for the integrated border clearance transaction are clarified and confirmed

1.3 Missing or ambiguous documentation on the integrated border clearance transaction is identified and documentation is updated as required in consultation with the client

1.4 The integrated border transaction is interpreted to determine the potential interactive effects that may need to be considered between the different legislative requirements and quality standards

2  Identify and analyse any problems

2.1 The various aspects of the integrated border clearance transaction and the related documentation are analysed and any identified issues and problems are documented

2.2 The implications and risks associated with identified issues
and problems are assessed

2.3 Outcomes of the assessment of implications and risks are recorded in accordance with workplace procedures and relevant legislative requirements

3 Develop and review alternative solutions

3.1 Appropriate alternative solutions to the identified issues and problems are developed with due consideration to the management of the risks involved, all legislative requirements, enterprise quality standards and the needs of the client

3.2 The comparative benefits and risks of the alternative solutions are reviewed in accordance with workplace procedures

3.3 The various options and their outcomes of the review of their comparative benefits and risks are documented as required

4 Select and justify a solution

4.1 Based on the review of the alternative solutions developed, a selection is made of the preferred solution

4.2 The justification for the selection is documented as per workplace procedures and policies with due reference to its compliance with all legislative requirements, the benefits of the selected solution, the risks involved and how they will be managed

4.3 Any critical issues identified during the review and analysis process are discussed and cleared with relevant internal and external personnel if necessary

5 Provide advice to client on a border clearance transaction

5.1 The results of the review of the integrated border clearance transaction are discussed with the client and advice is provided on the recommended solution and the rationale for the recommendation

5.2 Agreement is gained from the client to proceed with the integrated border clearance transaction as planned

6 Complete the border clearance transaction

6.1 The integrated border clearance transaction is completed in accordance with the agreed approach and all pertinent legislative requirements and workplace procedures

7 Document and record the border clearance transaction

7.1 All required documentation for the integrated border clearance transaction is completed and verified in accordance with all legislative requirements and workplace procedures

7.2 Information is entered into appropriate systems as required

7.3 Records are made of the integrated border clearance transaction and information on any specific issues and problems and related solutions adopted and action taken

7.4 All relevant information concerning the integrated border clearance transaction is forwarded to the client and relevant internal and external personnel
7.5 Records for the integrated border transaction are retained according to Customs and related legislation requirements as well as workplace and organisational procedures.

8 Implement formal review mechanisms for dispute resolution

8.1 The need for a formal review of a dispute related to a border transaction is identified in accordance with the relevant requirements of Customs and other related legislation.

8.2 The appropriate review mechanism for a dispute related to a border transaction is identified in accordance with the relevant requirements of Customs and other related legislation.

8.3 The identified review mechanism is implemented for the resolution of a dispute related to a border transaction in accordance with the relevant requirements of Customs and other related legislation.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant Customs and related legislation and Australian and international codes and regulations relevant to the analysing, advising on and conducting integrated border clearance transactions.

• Relevant OH&S and environmental protection procedures and guidelines.

• Workplace procedures and policies for analysing, advising on and conducting integrated border clearance transactions.

• Focus of operation of work systems, equipment, management and site operating systems when analysing, advising on and conducting integrated border clearance transactions.

• Issues and problems that may be identified when analysing, advising on and conducting integrated border clearance transactions and appropriate action that can be taken to resolve the problems and issues concerned.

• Information on relevant aspects of integrated border clearance transactions.

• Types of goods and related documentation.

• Sources of information on new developments in border clearance operations, transactions and related legislative requirements.

• Ways of learning the skills and knowledge required for new developments in border clearance operations, transactions and related legislative requirements.

• Cultural differences amongst customers, internal and external contacts and within the operational team and their implications.

• Documentation requirements needed when analysing, advising on and conducting integrated border clearance transactions.

Required skills:

• Negotiate, communicate and liaise effectively with clients and others.

• Take responsibility for analysing, advising on and conducting integrated border clearance transactions and related solutions.
• Read and interpret instructions, procedures and information relevant to analysing, advising on and conducting integrated border clearance transactions
• Identify, interpret and learn skills and knowledge required for relevant new developments in border clearance transactions
• Plan and organise work activities
• Select and use relevant computer/communication/office equipment when analysing, advising on and conducting integrated border clearance transactions
• Present information using appropriate media and technology
• Work collaboratively as part of a customs broking team
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
• Solve problems that may arise when analysing, advising on and conducting integrated border clearance transactions

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects of integrated border clearance transactions may include:
• the functions and responsibilities of a customs broker nominee, sole trader and corporate brokerage
• the role and authority of the Customs, AQIS and other legislative authorities and how they fit into the structure of the government and customs broker practices
• internal and external review practices available to analyse and review issues and problems arising within integrated border clearance transactions
• processes and practices for advising clients on issues and related solutions arising during an assessment of integrated border clearance transactions

Analysis of an integrated border clearance transaction may involve:
• careful and detailed consideration of the client's instructions and needs, all compliance requirements and relevant workplace quality standards. It also includes consideration of all possible interactive effects and risks and a comparative review of appropriate solutions to any problems and issues identified in the course of the analysis
Aspects of integrated border clearance transactions that will need to be examined and analysed to establish any interactive effects and problems may include:

- permit requirements (including environmental/wildlife and quarantine)
- GST requirements
- tariff classification requirements
- valuation
- prohibitions and restrictions
- infringement notices and penalties
- dispute resolution

Aspects of transaction that may be considered in the consideration of interactive effects and issues can include:

- client requirements
- compliance with all legislation and permit requirements
- risk assessment (to broking organisation, regulatory authorities and client)
- cost effectiveness
- timeliness
- source(s) of information

New developments in border clearance requirements and operations may relate to:

- legislation
- processes
- systems
- technology
- goods

Information on new developments in border clearance requirements and operations may be obtained from:

- internal networks such as: own operations team, staff in other departments, support staff, managers, training staff, etc.
- external networks such as: staff in various regulatory authorities (Customs, AQIS, etc.), airline, shipping, road transport and storage, personnel, staff in bond stores and other customs broking firms, etc.
- official booklets, bulletins, journals, magazines, books, etc.
- internet websites (e.g. Customs, AQIS)
- internal and external training programs

Ways of learning skills and knowledge required for new developments in border clearance requirements and operations may include

- external training programs
- internal training programs
- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts
Depending on the organisation concerned, workplace procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- clients
- their agents
- other employees and supervisors
- relevant authorities and institutions
- management representatives
- other relevant government departments, authorities and institutions
- Customs
- AQIS
Documentation and records may include:

- relevant Customs and related legislation
- ATO legislative requirements
- AQIS and other legislative requirements and publications pertaining to border clearance functions
- relevant sections of Australian Customs Manual
- information from relevant websites on the internet such as Customs, DEWHA and AQIS websites
- manifests, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for integrated border clearance transactions
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment required when conducting analysis
- workplace procedures and policies
- client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable legislation and regulations may include:

- Customs Act 1901 and related legislation pertaining to integrated border clearance transactions
- taxation legislation
- AQIS and other government and legislative requirements pertaining to border clearance functions
- privacy legislation
- export/import/quarantine/bond requirements
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- relevant state/territory OH&S and environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
demonstrate competency in this unit

requirements of the elements and performance criteria of this unit and include demonstration of:

- reading and interpreting the facts of the transaction request
- identifying and analysing any problems that may arise in completing a border clearance transaction
- developing and reviewing alternative solutions
- selecting and justifying solutions to typical border clearance transaction problems
- completing the border clearance transaction
- documenting and recording the border clearance transaction

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA5807A Manage facility and inventory requirements

Unit Descriptor
This unit involves the skills and knowledge required to manage a facility and its inventory requirements. It includes identifying space, safety and security requirements; developing a documentation system; designing storage zones; and evaluating facility utilisation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and logistics industry.

This unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify space requirements
1.1 The medium-term and long-term storage needs of the organisation are assessed to facilitate planning in accordance with the business plan of the enterprise and legislative requirements
1.2 Product type, picking frequencies, value, fragility, weight, handling characteristics, quantity and holding periods are assessed to consider type and amount of storage
1.3 Facility is assessed to determine the stock holding and handling requirements for each inventory item
1.4 Volume requirements are calculated to ensure that ongoing stock holding needs are met
1.5 The total space requirement is calculated and used to formulate plan for space utilisation

2 Identify safety and security requirements
2.1 An assessment is made of risks to ensure maximum safety and security for personnel, stock and facilities
2.2 Storage handling security and incident/emergency procedures for each class or type of product are identified and documented
2.3 Fire prevention and firefighting systems are identified in accordance with building code regulations and storage material requirements
2.4 An evacuation plan is developed in accordance with the safety
program of the enterprise

3 Develop documentation system

3.1 A system for recording and tracing stock location, receival, throughput and despatch is developed and implemented to enable reporting, quality assurance and financial requirements to be met

3.2 A system for recording communication with carriers, customers and employees is developed and implemented to assess operational effectiveness and to provide data for system improvement

4 Design storage zones

4.1 Space requirements and equipment operation are accurately assessed to facilitate the planning of warehouse zones

4.2 An assessment is made of the facility to enable the most effective use of available space

4.3 Positioning of storage areas, bays, work stations and the like is undertaken in accordance with data obtained from the planning process

4.4 Provision for maintenance and cleaning is catered for

5 Evaluate facility utilisation

5.1 A continual system of review is used involving regular checks to ensure storage areas and systems are functioning at optimum levels

5.2 Receiving and despatch systems provide efficient operations

5.3 Storage and handling systems provide ease of access and comply with ergonomic principles

5.4 Product handling and storage minimises product damage, contamination and stock losses

5.5 Facility layout remains sufficiently flexible to meet changing storage and handling requirements

5.6 Appropriate reporting systems are established and used to maintain data for the design of improved facilities and systems

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of national and state or territory regulatory requirements and codes of practice, including knowledge of fire safety and building regulations applicable to the facility
- Relevant OH&S and environmental procedures and regulations
- Focus of operation of warehouse systems, resources, management and workplace operating systems
- Enterprise business policies and plans including procedures for operations of the facility
- Throughput and storage requirements for specific types of inventory
- Principles, purpose and location of controls, monitoring devices, and systems
• Selection and appropriate application of technology, information systems and procedures
• Procedures for operating electronic communications equipment
• Requirements for completing relevant documentation
• Procedures for managing and controlling hazardous situations when carrying out work activities, particularly those that relate to the storage of materials
• Procedures to be followed in the event of an emergency

**Required skills:**
• Communicate effectively with others when managing facility and inventory requirements
• Read and interpret plans, diagrams, regulations, codes of practice and other documentation relevant to the management of facilities and inventory requirements
• Provide leadership to others when managing facilities and inventory requirements
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and or rectify any identified problems that may arise during the planning and management of facilities and inventory requirements
• Develop and implement contingency plans for unplanned events which may arise during the management of facilities and inventory requirements
• Prioritise work and coordinate the work of others
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Select and apply appropriate technology, information systems and procedures when managing facility and inventory requirements

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve:
• twenty four hour operation
• single and multi site location
• large, medium and small companies

Depending on the organisation concerned, workplace procedures may be called:
• standard operating procedures (SOPs)
• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- customers and suppliers
- other professional or technical staff, contractors and maintenance personnel

Documentation and records may include:
- regulations and codes of practice relevant to the functions of a storage facility, including the ADG code, fire safety and firefighting regulations, building code regulations, storage and handling procedures, and security procedures relevant to the specific facility
- relevant OH&S and environmental protection regulations
- quality assurance procedures
- emergency procedures, particularly in relation to fire and evacuation
- operations manuals, job specifications and induction documentation
- relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- building codes, fire safety and firefighting codes and regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria.
unit of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIA607C Organise and monitor terminal/wharf operations**

**Unit Descriptor**
This unit involves the skills and knowledge required to organise and monitor terminal/wharf operations in accordance with workplace requirements including organising equipment, machinery and personnel; identifying, assessing and managing potential risks; monitoring work performance and progress; monitoring the status of pending work; solving problems and making decisions; completing all shift requirements; and preparing for the next shift. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant standards, regulations and workplace requirements concerning terminal/wharf operations.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the organisation and monitoring of terminal/wharf operations as part of work activities in the stevedoring, transport, distribution and/or allied industries.

**Competency Field**
A – Handling Cargo/Stock

**ELEMENT PERFORMANCE CRITERIA**

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Organise equipment, machinery and personnel**

1.1 Equipment, machinery and personnel are organised to facilitate the safe and efficient loading and unloading of the ship

1.2 Liaison is maintained with supervisors to ensure the availability of adequate resources

2 **Identify, assess and manage potential risks**

2.1 Potential risks are identified and assessed and appropriate solutions are implemented in accordance with workplace procedures

2.2 Potential risks to safe and efficient operations are removed from the work area or other arrangements are made to ensure conditions for safe work

2.3 Supervisors are advised of potential risks and liaison is maintained until the risk has been removed

3 **Monitor work performance and**

3.1 Work performance and progress is monitored to ensure work is performed in accordance with established guidelines and
progress procedures and that safe work practices are maintained
3.2 Methods and procedures of work are monitored and refined in consultation with supervisors and operational personnel
3.3 Work performance rates are monitored with delays minimised to ensure work program objectives are met
3.4 Work practices are monitored to ensure compliance with national standards and safety codes
3.5 Environmental conditions are monitored to ensure safe working conditions are maintained

4 Monitor status of pending work
4.1 The status of pending work is monitored, in order of priorities, taking into account the needs of the ship and the terminal/wharf

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian and international standards, codes and regulations relevant to the operation of terminals/wharves including the Australian and International Dangerous Goods Codes
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the organisation and monitoring of terminal/wharf operations
• Focus of operation of work systems, equipment, management and site operating systems for the organisation and monitoring of terminal/wharf operations
• Problems that may occur when organising and monitoring terminal/wharf operations and appropriate action that can be taken to resolve the problems
• Relevant handling and safety codes
• Site layout
• The marking and numbering systems for cargo
• Relevant bond, quarantine or other legislative requirements

Required skills:
• Communicate effectively with others when organising and monitoring terminal and wharf operations
• Read and interpret instructions, procedures, information and labels relevant to organising and monitoring terminal and wharf operations
• Complete documentation related to organising and monitoring terminal and wharf operations
• Receive, acknowledge and send messages with appropriate communications equipment
• Identify cargo, container and goods, coding, ADG / IMDG markings and where applicable emergency information panels
• Work collaboratively with others when organising and monitoring terminal and wharf operations
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify, select and use relevant equipment, processes and procedures when organising and monitoring terminal and wharf operations
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Estimate size, shape and special requirements of loads

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:
• a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• limited or restricted spaces
• exposed conditions
• controlled or open environments

Account may be taken of the following conditions in relation to operational safety (depending on the operational context of the terminal/wharf concerned):
• organisational and statutory operating requirements
• surface condition of the work area
• stacking area
• degree of visibility
• weather conditions
• other traffic
• obstacles
• site and nature of loads
• ship/vehicle/rail movements
• tidal movement
Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Personnel in work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the organisation and monitoring of terminal/wharf operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for terminal and wharf operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant Australian standards and certification requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIA707C Coordinate stevedoring clerical functions

Unit Descriptor
This unit involves the skills and knowledge required to coordinate stevedoring clerical functions in accordance with workplace requirements including monitoring clerical functions; solving operational problems; arranging the inspection/survey of containers and/or cargo, preparing for the next shift; and completing and handing over the shift. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant standards, regulations and workplace requirements concerning terminal/wharf operations.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the coordination of clerical functions at a container/cargo terminal/wharf as part of work activities in the stevedoring, transport, distribution and/or allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Monitor clerical functions
1.1 Duties and the relationship of the duties to enterprise procedures are outlined and explained in accordance with workplace procedures
1.2 Clerical work is monitored to ensure it meets workplace requirements

2 Solve operational problems
2.1 Potential and actual problem(s) are identified and/or anticipated
2.2 Information and evidence surrounding the problem is collected and analysed
2.3 Options are identified, evaluated and optimal solution selected
2.4 The chosen solution is implemented in accordance with workplace procedures
2.5 The effectiveness of the solution is evaluated against workplace requirements to resolve the problem

3 Arrange the inspection/survey of containers/cargo
3.1 Arrangements are made to allow access to identified containers/cargo by authorised personnel
3.2 Records of access allowed are completed in accordance with
workplace procedures

4 **Prepare for next shift**

4.1 Personnel requirements for next shift are determined to ensure safe and efficient operations

4.2 Container/cargo movements in the yard are checked and recorded to ensure the incoming shift has up-to-date information on the status of work and container/cargo location

**REQUIRED KNOWLEDGE AND SKILLS**
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Australian and international standards, codes and regulations relevant to the operation of terminals/wharves including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the coordination of clerical functions at a container or cargo terminal or wharf
- Focus of operation of work systems, equipment, management and site operating systems relevant to the coordination of clerical functions at a container or cargo terminal or wharf
- Problems that may occur when coordinating clerical functions at a container or cargo terminal or wharf and appropriate action that can be taken to resolve the problems
- Relevant handling and safety codes
- Site layout of container or cargo terminal or wharf
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

**Required skills:**
- Communicate effectively with others when coordinating clerical functions at a container or cargo terminal or wharf
- Read and interpret instructions, procedures and labels relevant to coordinating clerical functions at a container or cargo terminal or wharf
- Interpret and follow operational instructions and prioritise work when coordinating clerical functions at a container or cargo terminal or wharf
- Identify cargo, container and goods, coding, ADG and IMDG markings and where applicable emergency information panels
- Complete documentation related to work activities when coordinating clerical functions at a container or cargo terminal or wharf
- Operate electronic communication equipment to required protocol when coordinating clerical functions at a container or cargo terminal or wharf
- Work collaboratively with others when coordinating clerical functions at a container or cargo terminal or wharf
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify, select and use relevant equipment, processes and procedures when coordinating clerical functions at a container or cargo terminal or wharf

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:  a range of work environments
• by day or night
Customers may be:  • internal or external
Workplaces may comprise:  • large, medium or small worksites
Work may be conducted in:  • limited or restricted spaces
• exposed conditions
• controlled or open environments
Cargo may include:  • goods with specialist requirements, including temperature controlled goods and dangerous goods
Hazes in the work area may include exposure to:  • chemicals
• dangerous or hazardous substances
• movements of equipment, goods and materials
Personnel in work area may include:  • workplace personnel
• site visitors
• contractors
• official representatives

© Commonwealth of Australia 2009
TLI07 Transport and Logistics Training Package (Version 3)
To be reviewed by 2010
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data transfer (EDI)

TLIA807C  Transfer cargo

Unit Descriptor
This unit involves the skills and knowledge required to transfer cargo in accordance with workplace requirements including preparing for the transfer of the load, safely transferring the cargo using appropriate lifting equipment, finalising the transfer, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the transfer of cargo/freight.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements when transferring cargo as part of work activities in the stevedoring, transport, distribution and allied industries.

Competency Field
A – Handling Cargo/Stock

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Prepare for load transfer

1.1 Load characteristics are identified to determine any special handling or equipment requirements

1.2 Location of load in yard and following transfer method is determined

1.3 Pathway for load transfer is established consistent with workplace procedures noting obstacles and any particular safety precautions

1.4 Working area is prepared in accordance with the national standards, safety codes, and site operating procedures

1.5 Personal protective equipment and other safety equipment is assembled

1.6 The Safe Working Load (SWL) or Working Load Limit (WLL) is calculated using formulae for the particular type of lifting equipment

1.7 Lifting equipment is checked to determine safe working order for the transfer

1.8 Unsafe equipment is reported to appropriate personnel

2  Transfer cargo

2.1 Cargo is steadied and secured using appropriate devices

2.2 Load is lifted and shifted safely following national standards, safety codes and site operating procedures
2.3 Load is transferred and set down ensuring no injury to personnel or damage to machinery or cargo

3 **Complete transfer**

3.1 Securing arrangements are released from load ensuring no injury to personnel or damage to machinery or cargo

3.2 Relevant documentation is completed including reporting of damaged cargo in accordance with workplace reporting requirements

3.3 Equipment is returned to store and work area returned to normal working condition

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Australian and international codes and regulations relevant to the transfer of cargo/freight including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the transfer of cargo and freight
- Focus of operation of work systems, equipment, management and site operating systems for the transfer of cargo and freight
- Problems that may occur when transferring cargo/freight and appropriate action that can be taken to resolve the problems
- Relevant handling and safety codes
- Types of equipment used to transfer loads in terminals/wharves, their applications and procedures and precautions for their use
- Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of load shifting equipment
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

**Required skills:**

- Communicate effectively with others when transferring cargo and freight
- Read and interpret instructions, procedures, information and signs relevant to the transfer of cargo and freight
- Interpret and follow operational instructions and prioritise work when transferring cargo and freight
- Complete documentation related to work activities when transferring cargo and freight
- Receive, acknowledge and send messages with communications equipment whilst operating load transfer equipment
- Work collaboratively with others when transferring cargo and freight
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when transferring cargo and freight in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may occur when transferring cargo and freight
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of load transfer equipment
• Conduct checks on equipment used when transferring cargo and freight in terms of service schedule and standard operating procedures
• Identify, select and use relevant equipment, processes and procedures when transferring cargo and freight
• Estimate the size, shape and special requirements of loads

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Work may be conducted in:**
- a range of work environments
- by day or night

**Customers may be:**
- internal or external

**Workplaces may comprise:**
- large, medium or small worksites

**Work may be conducted in:**
- limited or restricted spaces
- exposed conditions
- controlled or open environments

**Cargo/freight may include:**
- goods with specialist requirements, including temperature controlled goods and dangerous goods
Equipment may include: • appropriate load shifting equipment normally in use at a terminal or wharf (but does not include gantry equipment, boom cranes, dozers or specialised load shifting equipment which are covered by separate competency units)

Hazards in the work area may include exposure to: • chemicals • dangerous or hazardous substances • movements of equipment, goods, materials and vehicular traffic

Personal protective equipment may include: • gloves • safety headwear and footwear • safety glasses • two-way radios • protective clothing • high visibility clothing

Communication in the work area may include: • phone • fax • email • electronic data transfer (EDI) • RF systems • radio • oral, aural or signed communications

Personnel in work area may include: • workplace personnel • site visitors • contractors • official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: • company procedures • enterprise procedures • organisational procedures • established procedures
Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the transfer of cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for the transfer of cargo/freight
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIA907E**  Complete and check import/export documentation

**Unit Descriptor**
This unit involves the skills and knowledge required to complete and or evaluate import and export documentation, and check documentation in accordance with the requirements of Customs and related legislation and workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning the completion and checking of import/export documentation.

Work is performed under some supervision generally within a team environment. Work is undertaken in a range of environments including small to large worksites in the customs broking and freight forwarding industries.

This unit is normally packaged at AQF II or above.

**Competency Field**
A – Handling Cargo/Stock

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

</tr>
<tr>
<td>1.9 Lodge all documentation if required by legislation (e.g. CITES)</td>
</tr>
</tbody>
</table>
2 Complete documentation to meet legislative and workplace requirements

2.1 Content requirements for each section of the documentation are identified and applied in accordance with the requirements of Customs and related legislation and workplace procedures.

2.2 Workplace procedures for authorisations are followed.

2.3 Data entry for documents are completed.

2.4 Problems arising in completing required documents are identified and assistance sought to resolve these in accordance with the requirements of Customs and related legislation and workplace procedures.

2.5 Actions are taken to meet deadlines.

2.6 Assistance is sought as required in completing required documents.

3 Check documentation to ensure it meets legislative requirements

3.1 Documents are collated and checked before forwarding to supervisor, manager or more senior personnel for checking within designated timelines in accordance with the requirements of Customs and related legislation and workplace procedures.

3.2 Declarations are checked to ensure they meet the requirements of Customs and related legislation and workplace procedures.

3.3 Letters of credit are checked to ensure they meet commercial, transport and overseas requirements.

3.4 Dangerous goods documentation is checked in accordance with the requirements of Customs and related legislation and workplace procedures.

3.5 Required documents are forwarded for checking by supervisor, manager or more senior personnel in accordance with the requirements of Customs and related legislation and workplace procedures.

3.6 Any revisions to documents are finalised and rechecked by self and supervisor, manager or more senior personnel prior to lodgement.

4 Lodge documentation for processing

4.1 Documents are forwarded to relevant personnel in accordance with the requirements of Customs and related legislation and workplace procedures.

4.2 Documents are filed, stored and retained in accordance with the requirements of Customs and related legislation and workplace procedures.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian and international standards, codes and regulations relevant to the import and export of cargo and freight
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the completion of import and export documentation
• Focus of operation of work systems, equipment, management and site operating systems for completing import/export cargo and freight documentation
• Problems that may occur when completing import and export documentation and appropriate action that can be taken to resolve the problems
• The Customs Act 1901 and related legislation
• Documentation requirements for the import and export of cargo and freight

**Required skills:**
• Communicate effectively with others when completing import and export documentation
• Read and comprehend simple statements in English
• Read and interpret instructions, procedures and labels relevant to the import and export of cargo and freight
• Complete and/or assess accuracy of import and export documentation
• Work collaboratively with others when completing import and export documentation
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems when completing and/or assessing import and export documentation in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use relevant communications, computing and office equipment when completing import and export documentation

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Work may be conducted in:**
• a range of work environments
• by day or night

**Customers may be:**
• internal or external

**Workplaces may comprise:**
• large, medium or small worksites
Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Cargo may include:
- goods with specialist requirements, including temperature controlled goods and dangerous goods
- personal effects
- consignments imported/exported by parcels post
- consignments imported/exported by air freight
- consignments imported/exported by sea freight
- wildlife or wildlife products (living or non-living)
- goods with specialist requirements, including temperature controlled goods and dangerous goods

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Consultative processes may involve:
- other employees and supervisors
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- goods identification numbers and codes
- manifests, barcodes, and container identification/serial number
- relevant Customs legislation, related legislation including quarantine legislation, environment and conservation legislation and Australian and international codes of practice and regulations relevant to import/export of cargo
- Australian and international standards, regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- dangerous goods declarations and material safety data sheets (MSDSs) (where applicable)
- packing declaration
- timber treatment certificates
- cleanliness certificate
- handling instructions for cargo (especially for dangerous goods or temperature controlled goods)
- commercial invoices
- packing lists
- air waybill (AWB)
- certificates of origin
- bills of lading (B/L) or sea waybills
- certificates of marine insurance, other insurance certificates
- quarantine treatment certificate
- transportation and warehousing instructions
- permits from regulatory bodies (Australian and international)
- financial documentation
- other documents specific to goods, country of origin/destination
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian Standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant Customs and related legislation, including taxation legislation
- relevant standards and codes for the import/export of cargo
- quarantine legislation
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying procedures required for documentation for import/export of goods
  - completing and checking documentation and records to meet relevant Customs legislation and related legislation and workplace requirements
  - providing customer/client service and work effectively with others
  - selecting and using appropriate workplace colloquial and technical language and communication technologies in the workplace context

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge
assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and/or equipment, and/or
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

• Practical assessment must occur:
  • through appropriately simulated activities at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace
**TLIB10009A** Visually inspect track infrastructure

**Unit Descriptor**
This unit involves the skills and knowledge required to visually inspect track infrastructure in accordance with safeworking and regulatory requirements and workplace procedure. It includes patrolling the track and right of way infrastructure, and recording and documenting identified defects in accordance with workplace requirements. Licensing or certification requirements are not applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the visual inspection of the railway track infrastructure as part of workplace activities across a variety of operational contexts within the Australian rail system.

**Competency Field**
B – Equipment Checking & Maintenance

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Patrol track infrastructure**
   1.1 Appropriate inspection method is employed to conduct visual examinations of track and right of way for the identification of defects
   1.2 Visual examinations are performed in accordance with workplace procedures and in line with inspection schedules
   1.3 Variations from allowable tolerances, defects and deficiencies likely to affect train safety are identified to enable appropriate action to be taken on the repairs required
   1.4 Unsatisfactory conditions are assessed in terms of seriousness and priority

2. **Record and document defects**
   2.1 Appropriate action is taken to safeguard operation of the rail system
   2.2 Inspection schedule or work report data is completed in accordance with workplace procedures
   2.3 Defects and deficiencies are reported to enable repairs to be effected in a timely manner
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the visual inspection of track and right of way
- Problems that may occur during the visual inspection of track and right of way, and action that can be taken to report or resolve the problems
- Hazards that may exist when visually inspecting track and right of way, and ways of controlling the risks involved
- Contents of relevant technical specifications and manuals
- Track and right of way standards
- Different types of track and right of way defects
- Defect deterioration under differing operating conditions
- Visible rail defect types
- Techniques for prioritising defect rectification
- Fault identification and analysis techniques
- Emergency procedures
- Details of local authority procedures

Required skills:
- Communicate effectively with others when visually inspecting track and right of way
- Read and interpret instructions, procedures, information and signs relevant to the visual inspection of track and right of way
- Identify different types of track and right of way defects
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the visual inspection of track and right of way
- Record and report results of visual inspection of track and right of way in required format
- Operate communication equipment to required protocol
- Promptly report and/or rectify any identified problems, faults or malfunctions when visually inspecting track and right of way in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events during the visual inspection of track and right of way
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment
• Identify, select and use tools and equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all weather conditions

Work may be conducted in:
• restricted spaces or exposed conditions
• controlled or open environments

Work may involve:
• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Track and right of way infrastructure may include:
• track geometry
• track components
• turnouts
• formation
• drainage
• earthworks
• clearances
• trackside signs
• fencing

Patrol methods may include:
• walking
• engine
• road/rail vehicle
• track vehicle

Patrol inspections may include:
• scheduled patrol
• patrol in abnormal weather (heat, cold, wet etc.)
• special patrols as directed
Faults may include:

- track geometry defects (top, twist, line, gauge)
- pumping or unstable track
- obstructions to train movements
- obstructions to the wheel path of the train
- defective or broken rails, joints, breakaways, and loose or foul joints, fishbolts and fishplates
- failures of sleepers, transoms and fastenings
- breaches of fencing and ineffective safety barriers
- missing or incorrect speed signs
- track formation, cutting or embankment failure
- failed or ineffective drainage
- ballast deficiencies and foul ballast
- crossing and switch failures

Tools may include:

- hand tools
- small plant

Depending on the type and seriousness of identified defects, appropriate action may include:

- stop trains
- speed restrictions
- immediate repair action
- report for programmed repair action
- monitor for further deterioration

Liaison may include:

- internal or external personnel from other work areas

Communication equipment may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:

- electronically
- in writing, via forms/documents
- orally, via face-to-face communications
Safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radio/mobile phone
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- maintenance notices, records and requests
- local authority regulations and procedures
- work orders
- technical instructions
- QA plans, data and document control
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - patrolling the track and right of way infrastructure
  - recording and documenting identified defects to workplace standards

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a
registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIB1007C**  
**Plan and implement maintenance schedules**

**Unit Descriptor**  
This unit involves the skills and knowledge required to plan and implement maintenance schedules in accordance with relevant regulatory requirements and workplace procedures. This includes establishing maintenance requirements, organising maintenance activities, organising resources, and completing all required procedures and documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Work must be carried out in compliance with the relevant Australian regulations, standards and codes of practice, including the ADG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource co-ordination and allocation and provides leadership of others individually or in teams.

**Competency Field**  
B – Equipment Checking & Maintenance

**ELEMENT PERFORMANCE CRITERIA**  
Elements describe the essential outcomes of a unit of competency.

**ELEMENT**  
**1 Establish maintenance requirements**

1.1 Equipment specifications, service requirements and workplace procedures are checked for recommended maintenance intervals and processes

1.2 Special requirements for maintenance of storage zones are identified

1.3 Comparisons with previous experience, future equipment use, work requirements and standard operating procedures are made to inform the planning process

1.4 Work plan and work schedule are developed

1.5 Contractors and/or maintenance providers (internal/external) are identified

1.6 Costings for process are identified based on work schedule
(equipment/staff off-line), equipment manufacturers recommendations, charges for materials, equipment and consumables and external/internal labour charges

1.7 Required interruptions, processes and procedures are documented and recorded

1.8 Clearances for any required costs for maintenance are obtained

2 Organise maintenance activities

2.1 Work schedules and staff rosters are checked to identify times when the maintenance process may be scheduled including optimum timing for any shut down

2.2 Permission from supervisory personnel is obtained for timing of maintenance to optimise the maintenance process and work

2.3 Detailed work plans are developed to accord with work schedules, availability of expertise and the resource availability

2.4 Employees with the required competencies are identified and where necessary appropriate training and assessment is facilitated

2.5 Approvals for work schedule, employee work pattern and maintenance schedule adjustments are obtained and work plan is refined to ensure the maintenance program will maintain workplace outputs in terms of workplace policy

3 Organise resources

3.1 Required equipment, personnel and consumables are allocated in accordance with workplace procedures

3.2 Consumables, equipment and expertise are located and coordinated to meet maintenance work schedule

3.3 Externally sourced equipment, consumables and expertise are identified and appropriate arrangements made for procurement

4 Complete maintenance procedures

4.1 Completed work is checked against the maintenance schedule and the work plan

4.2 Records of work are completed and forwarded to appropriate personnel noting areas where additional maintenance is required to maintain optimum work output and equipment life

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian and international regulations, codes of practice and legislative requirements including local and international freight regulations
- Relevant OH&S and environmental procedures and regulations
- Procedures for identification and interpretation of maintenance requirements
• Procedures for identification and evaluation of information needed to plan and implement maintenance schedules
• Procedures for reviewing system options for maintenance operations including appropriate risk analysis
• Procedures for liaising with manufacturers and suppliers
• Procedures establishing and/or monitoring suitable maintenance systems
• Focus of operation of maintenance systems, resources, management and workplace operating systems
• Characteristics and capabilities of equipment, materials and processes used
• Relative features and risks of various maintenance systems, their applications and processes, and issues involved in their use
• Quality and customer service standards, policies and procedures
• Application of relevant Australian and international standards and associated certification requirements
• Resource availability including the competencies of individuals in the team/group
• The application of current competencies within functional activity
• Coaching and mentoring approaches to support team members to share knowledge and skills
• Relevant workplace documentation procedures
• Contacts and sources of information/documentation needed when planning and implementing maintenance systems
• Procedures for operating electronic communications equipment

**Required skills:**
• Communicate effectively with others when planning and implementing maintenance schedules
• Read and interpret instructions, procedures, information and signs relevant to the planning and implementing of maintenance schedules
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the planning and implementing of maintenance schedules
• Work collaboratively with others in the planning and implementing of maintenance schedules
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Adapt to differences in equipment in accordance with standard operating procedures
• Ensure the servicing of equipment in terms of maintenance schedule and standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken in: • various work environments in the warehousing, storage, transport and distribution industries

Customers may be: • internal or external

Operations may be conducted: • by day or night

The workplace environment may involve:
• twenty-four hour operation
• single- and multi-site location
• large, medium and small workplaces

Work systems may include:
• preventative and remedial maintenance schedules, protocols and procedures
• faulty equipment tagging and repair/replacement systems
• equipment inventory and identification systems
• communications equipment
• workplace operations
• authorities and permits
• hours of operation
• relevant regulations

Consultative processes may involve:
• employees, supervisors and managers
• equipment manufacturers and suppliers
• contractors
• industrial relations and OH&S specialists
• other professional or technical staff

Communications systems may involve:
• telephone
• fax
• email
• electronic data transfer of information
• mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Documentation/records may include:

- Australian and international codes of practice and regulations relevant to equipment maintenance
- Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including the ADG Code
- workplace operating procedures, maintenance schedules and policies
- operations manuals, job specifications and procedures and induction documentation
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
- supplier and/or client instructions
- statistical information on equipment malfunctions, maintenance and repairs
- relevant Australian standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- quality assurance and customer service standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- regulations and codes of practice related to equipment maintenance
- Australian and international regulations and codes of practice for the handling, storage and transfer of dangerous goods and hazardous substances
- relevant Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB10109A Install and maintain rail joints

Unit Descriptor
This unit involves the skills and knowledge required to install and maintain rail joints in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes identifying and determining parameters or components that require repair, cutting and boring rail, maintaining rail joints, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to installing and maintaining rail joints as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and determine parameters or components that require adjustment
1.1 Rail joint condition, component, fastening and anchoring defects affecting rail joints are identified in accordance with workplace procedures
1.2 Appropriate repair method is selected to ensure rail joint meets specifications
1.3 Scope of work is determined and resources are arranged

2 Install rail joint
2.1 Location of rail joint is determined
2.2 Rail is cut and correct rail gap is established for joint type (mechanical or insulated)
2.3 Rail ends are bent (if required) in accordance with workplace procedures
2.4 Bolt holes are bored to meet joint specification
2.5 Joint is assembled to meet specification
3 Maintain rail joint

3.1 Surfaces and component parts are checked for insulation, lubrication, correct spacing and correct installation in accordance with specifications and work procedures

3.2 Rail joint is maintained to specifications following workplace procedures

4 Complete documentation

4.1 Required documentation is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for installing and maintaining rail joints
- Problems that may occur when installing and maintaining rail joints, and action that can be taken to report or resolve the problems
- Hazards that may exist when installing and maintaining rail joints, and ways of controlling the risks involved
- Fundamentals of track structures relating to rail joints
- Track standards relating to rail joints
- Rail joint components
- Rail joint defects
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation requirements

Required skills:
- Communicate effectively with others when installing and maintaining rail joints
- Read and interpret instructions, procedures, information, technical data, standards and drawings relevant to installing and maintaining rail joints
- Interpret and follow operational instructions
- Complete documentation related to installing and maintaining rail joints
- Operate electronic communication equipment to required protocols
- Work collaboratively with others when installing and maintaining rail joints
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when installing and maintaining rail joints in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Select and use hand tools, power tools and equipment
• Identify/locate parameters or components of rail joints requiring adjustment or replacement
• Adjust and repair rail joints
• Install rail joints
• Use relevant plant and mechanised equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  • by day or night
• in all weather conditions

Work may be conducted in:  • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to:  • chemicals
• dangerous or hazardous substances
• movements of equipment, materials and vehicles

Equipment may include:  • mechanical handling/lifting equipment
• track machines
• hand tools including impact or tension wrenches, grinders, friction rail saws, rail punches, rail borers, tie tampers, gauges, track jacks, spiking hammers and bars
• rail tensors
• fastening equipment
• oxy/acetylene equipment
Materials may include:
- resilient and/or static fastenings
- sleeper plates/pads
- anchors
- bolts
- nuts
- washer clips
- shims
- fish plates
- swage fastenings

Rail joint parts and surroundings to be checked may include:
- joint insulation
- expansion gap
- fishplates
- fishbolts
- sleeper
- sleeper fastening
- rail anchoring and rail bonds
- track geometry

Fastenings may include:
- pandrol clips, fist fastenings, Trak Lok, Rex lock
- dogspeaks/dog screws
- bolts, spring washers, nuts
- double shouldered sleeper plates
- insulated sleeper pads

Types of rail joint may include:
- mechanical joint
- mechanical junction joints
- insulated mechanical joint
- insulated plate joints
- bow plates
- bonded insulated joint

Rail ends on curves may require:
- bending (also known as pressing or crowing)

Special transitional rail joints may be:
- required between changes of mass/wear

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Communication systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- information provided by other workplace personnel
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - examining rail joints to determine defects and selecting appropriate repair methods
  - installing rail joints correctly
  - checking component parts and carrying out appropriate maintenance activities
  - completing documentation to organisational requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIB10209A

Adjust rail

Unit Descriptor
This unit involves the skills and knowledge required to adjust rail in accordance with safeworking and regulatory requirements and workplace procedures. It includes identifying and determining the requirements for rail adjustment, undertaking rail adjustment, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to adjust rail as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and determine the requirements for rail adjustment

1.1 Appropriate adjustment method is determined and resources are arranged

1.2 Adjustment length is established depending on track geometry and location in accordance with workplace procedures

2 Adjust rail

2.1 Anchor points are identified and created as necessary to enable rail adjustment to be undertaken in accordance with workplace procedures

2.2 Track is released and rail is vibrated to achieve stress free state in accordance with workplace procedures

2.3 Appropriate measurements are taken and used to calculate adjustment requirements in accordance with workplace procedures

2.4 Rail length is adjusted using appropriate method to achieve desired rail stress

2.5 Rail is joined using appropriate method in accordance with
workplace procedures
2.6 Track fastenings are restored in accordance with workplace procedures
2.7 Creep control marks are installed or reset in CWR track in accordance with workplace procedures (if applicable)

3 Complete documentation
3.1 Completed work is checked for compliance to standards to ensure safe operations of trains
3.2 Required documentation is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant safety, OH&S and environmental procedures and regulations
• Workplace procedures for rail adjustment
• Problems that may occur when adjusting rail, and action that can be taken to report or resolve the problems
• Hazards that may exist when adjusting rail, and ways of controlling the risks involved
• Basic rail adjustment theory and critical aspects of rail stress
• Rail adjustment procedures
• Temperature and alignment limitations on adjustment
• Documentation and record keeping requirements

Required skills:
• Communicate effectively with others when adjusting rail
• Read and interpret instructions, procedures, information and signs relevant to rail adjustment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to rail adjustment
• Operate communication equipment to required protocol
• Work collaboratively with others when adjusting rail
• Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when adjusting rail in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment
• Identify, select and use hand tools
• Establish appropriate adjustment length
• Measure and calculate adjustment condition
• Use rail adjustment procedures for adjustment in different track configurations
• Use 'rail out - rail in' method appropriately and correctly (if applicable)
• Install and reset creep control marks in CWR track (if applicable)
• Complete documentation and record keeping requirements

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all weather conditions

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, materials and vehicles

Adjustment methods may vary according to:
• rail length
• adjustment condition (initial or re-adjustment)
• proximity to fixed points (turnouts, bridges etc.)

Adjustment methods may include:
• conversion of jointed track to CWR
• adjustment of existing CWR
• adjustment of existing jointed track
• 'rail out - rail in' method

Adjustment length may vary according to:
• track curvature
• proximity to fixed points (turnouts, bridges etc.)
• adjustment temperature
• equipment limitations

Appropriate measurements may include:
• rail temperature
• rail gaps
• rail longitudinal movement
Rail joints may include:  
- aluminothermic welds  
- flashbutt welds  
- fishplated joints  

Track fastenings may include:  
- anchors  
- non-resilient fastenings  
- resilient fastenings  

Measuring equipment may include:  
- rail thermometers  
- gap gauges  
- tape measures  
- measuring wheels  
- stringline  

Tools and equipment may include:  
- mechanical handling/lifting equipment  
- hand tools including hammers, impact wrenches, grinders, tension wrenches, friction rail saws, and rail punches  
- rail tensors  
- rail heaters  
- rail threaders  
- fastening equipment  

Communication equipment/systems may include:  
- two-way radios  
- telephones/mobile phones  
- agreed audible or hand signals  

Liaison may include:  
- internal or external personnel from other work areas (e.g. train controllers)
Safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- works orders
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- trackside signals
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying and determining appropriate methods for rail adjustment
  - taking appropriate measurements and calculating adjustments
  - ensuring track is restored correctly

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - actual materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIB107C  Check and assess operational capabilities of equipment

Unit Descriptor
This unit involves the skills and knowledge required to check and assess the operational capabilities of equipment in accordance with workplace requirements, including inspecting equipment and work area, checking the operational capability of equipment and its safety devices, identifying and assessing the impact of faults on safety and work requirements, and recording and reporting the results of inspection and testing in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the checking and assessment of the operational capability of equipment.

Safety checks and equipment tests are performed under limited supervision.

Work involves the application of regulatory requirements and workplace procedures to the checking and assessment of the operational capability of equipment in the stevedoring, transport, warehousing, distribution and/or storage industries.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Inspect equipment and work area
1.1 Equipment is inspected prior to start-up in accordance with workplace pre-operational functional safety check procedures and manufacturers specifications
1.2 Aspects of equipment/work area found to be outside manufacturers and/or workplace specifications are reported to designated persons for appropriate action

2 Check equipment operational capability
2.1 Equipment and components are tested after start-up in accordance with manufacturers specifications and workplace procedures
2.2 Warning systems are all checked for operational effectiveness

3 Identify and assess impact of faults on
3.1 Faults are identified and assessment made of the potential effect on the operation of the equipment for the required work
work requirements

3.2 Faults that may affect the safe operation of the equipment are reported to the appropriate personnel for rectification

4 Record and report results of inspection and testing

4.1 The results of the inspection and testing are accurately reported in accordance with regulatory requirements, workplace policy and industry guidelines

4.2 Records are clear, unambiguous and concisely kept in accordance with workplace policy

4.3 Clear reference is made to any items which may affect the future safety of the equipment

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Workplace procedures and policies for the checking and assessing of the operational capability of equipment

• Focus of operation of work systems, equipment, management and site operating systems for the checking and assessing of the operational capability of equipment

• The characteristics, capabilities and limitations of the equipment

• Tools and equipment used during the checking and assessing of the operational capability of equipment and the precautions and procedures that should be followed in their use

• Problems that may occur when checking and assessing the operational capability of equipment and appropriate action that can be taken to resolve the problems

• Operational safety requirements for the equipment concerned

• Housekeeping standards procedures required in the workplace

• Site layout and obstacles

Required skills:

• Communicate effectively with others when checking and assessing the operational capability of equipment

• Read and interpret instructions, procedures, information, labels and signs relevant to the checking and assessing of the operational capability of equipment

• Interpret and follow operational instructions and prioritise work

• Complete documentation related to the checking and assessing of the operational capability of equipment

• Work collaboratively with others when checking and assessing the operational capability of equipment

• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures

• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Select and use relevant equipment and communications technology when checking and assessing the operational capability of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:
• a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• limited or restricted spaces
• exposed conditions
• controlled or open environments

Purpose of equipment checking and inspection is to:
• ensure it is free from damage, leaks and obstructions that may prejudice safety or limit operational capability

Safety and operational capability checks may be performed:
• on a range of equipment used in the stevedoring, transport, warehousing, distribution and/or storage industries

Visual checks may include but are not limited to:
• pressure over/under specification
• fluid leaks
• temperature over/under specifications
• cracks, surface or structural faults or other damage
• tightness of bolts, fixtures and fittings within specifications
Records/results of pre-operation tests may include:
- details of faulty equipment or specific components
- action taken
- results of testing
- details of repair and maintenance work to be undertaken

Operational checks may be performed by:
- operating/checking the functionality of various pieces of safety and component equipment (where applicable)

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- a fire or explosion
- faulty equipment/tools

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- equipment manufacturers
- site visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Communication in the work area may include:
- phone
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications
Information/documents may include:

- workplace procedures and policies for the checking and assessment of the equipment concerned
- manufacturers specifications for equipment/tools
- equipment identification labels, barcodes and serial numbers
- supplier and/or client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant standards, codes and regulations pertaining to the checking and operation of the equipment concerned
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- export/import/quarantine/bond requirements
- relevant Australian standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB1107C  Set up and rig crane for lift

Unit Descriptor
This unit involves the skills and knowledge required to set up and rig a mobile crane for a lift, including the systematic positioning and stabilisation of the crane and its assembly. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the setting up and rigging of a crane prior to lift in a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Position and stabilise crane
1.1 Crane is directed to position as per job plan to ensure safe operation in accordance with applicable Australian Standards, codes of practice and manufacturers specifications
1.2 Ground is checked to ensure it is firm enough to bear the load
1.3 Appropriate plates or packing are correctly used to adequately distribute the load
1.4 Any outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturers instructions and the appropriate Australian Standard and other relevant statutory regulations
1.5 Outrigger packing is checked for adequacy prior to and after lift is taken

2  Assemble crane
2.1 The block is reeved in accordance with manufacturers instructions
2.2 Any counterweights are installed to manufacturers specifications
2.3 Any attachments are set up in accordance with manufacturers instructions
2.4 Other personnel are assisted as necessary to ensure efficient and safe assembly and set up of crane
2.5 Any flies are assembled in accordance with manufacturers
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Procedures for prioritising and multi-tasking work
- Company work procedures concerning the setting up and rigging of a mobile crane at a worksite
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements
- Procedures for the identification and correct use of equipment, processes and procedures

Required skills:
- Communicate effectively with others when setting up and rigging a crane for a lift
- Read and interpret instructions, procedures, information and signs relevant to the setting up and rigging of a crane for a lift
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the setting up and rigging of a crane for a lift
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when setting up and rigging a crane for a lift
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when setting up and rigging a crane for a lift
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor condition of equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• day or night
• in a variety of weather conditions

Environment may include:
• movement of equipment, goods, materials and vehicular traffic

Customers may be:
• internal or external

Mobile crane may be involved in work in a range of industry sectors including:
• construction and demolition
• manufacturing
• waterfront
• mining
• primary industry
• utilities (electricity, gas, water)
• arboricultural
• swimming pool
• quarrying

Hazards may include:
• power lines
• noise, light, energy sources
• overhead service lines
• surrounding buildings, structures, facilities
• underground services
• obstructions
• uneven or unstable ground and recently filled trenches
• stationary and moving machinery and equipment
• hazardous or dangerous materials
• traffic hazards and congestion
• other vehicles and personnel

Hazard management is:
• consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
o relevant and appropriate materials and/or equipment, and/or
o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
o through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
UNIT DESCRIPTOR

This unit involves the skills and knowledge required to plan a lifting job and set up work areas prior to the positioning and setting up of a mobile crane, including obtaining and confirming job instructions and work specifications, coordinating the loading of gear and equipment, assessing job requirements work areas, designing the job plan and setting up the work area. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

EMPLOYABILITY SKILLS

This unit contains employability skills.

APPLICATION OF THE UNIT

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the planning of a mobile crane job and setting up of work areas prior to lift in a variety of operational contexts.

COMPETENCY FIELD

B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Obtain and confirm job instructions/work specifications

1.1 Job instructions are obtained and checked to ensure specifications include all necessary information

1.2 Lift plan and other work specifications are interpreted and clarification sought if necessary

2 Coordinate loading of gear and equipment

2.1 Specific gear necessary for job is identified and obtained

2.2 Equipment is properly packed and secured according to company procedures to ensure injury and damage are avoided during transportation

3 Assess job requirements and work area

3.1 Adequate site access and egress is identified

3.2 Potential hazards are identified and appropriate elimination or control measures selected

3.3 Weight and dimensions of load are estimated or confirmed in consultation with customer and relevant personnel to ensure job is within limits of crane capacity

3.4 Site information is interpreted and requirements confirmed with site supervisor
3.5 Area is assessed to ensure there is sufficient space to establish crane and conduct lift
3.6 Need to move mobile crane is assessed and, where applicable, route to be travelled is planned to ensure crane traverses firm surfaces and slopes are avoided where possible
3.7 Any concerns about the safety or feasibility of the lift are discussed with the customer and if not resolved, reported to supervisor
3.8 Payment arrangements are confirmed with customer where required
3.9 Customer requirements are anticipated and suggestions made which will maximise safety and efficiency and minimise inconvenience

4 Design job plan
4.1 The job plan is developed to include hazard prevention/control measures and safety procedures in line with applicable Australian Standards, codes of practice and equipment manufacturers specifications
4.2 Cranes load chart is consulted and information on permissible loads, radii, weights, boom and jib configurations taken into account in planning the job
4.3 The job plan takes into account job requirements and customer priorities, and workplace rules and procedures
4.4 Job plan is discussed and confirmed with relevant personnel
4.5 Job plan details are documented as required

5 Set up work area
5.1 Site personnel and public are advised of any danger and site/work area is isolated as necessary in line with legislative, regulatory and customer requirements
5.2 Site safety procedures are followed
5.3 Required protective equipment is identified and fitted in accordance with manufacturers guidelines and customer requirements
5.4 Ancillary equipment is assembled and erected where appropriate
5.5 Load destination and travel route where applicable are prepared to accept load

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
• Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
• Operational procedures for crane crews
• Prioritising and multi-tasking work
• Company work procedures for the planning of mobile crane jobs and the setting up of work areas
• Guidelines relating to the safe use of machinery and equipment
• Focus of operation of work systems and equipment
• Application of relevant agreements, codes of practice or other legislative requirements
• Identification and correct use of equipment, processes and procedures

**Required skills:**

• Communicate effectively with others when planning job and setting up work area
• Read and interpret instructions, procedures, information and signs relevant to the planning of a lifting job and the setting up of the work area
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the planning of a lifting job and the setting up of the work area
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when planning a lifting job and setting up the work area
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when planning a lifting job and setting up the work area in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor condition of equipment during setting up processes and take appropriate action
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Dependent of the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIB1307C Maintain mobile cranes

Unit Descriptor
This unit involves the skills and knowledge required to carry out routine maintenance of a mobile crane, including obtaining and confirming job instructions and work specifications, coordinating the loading of gear and equipment, assessing job requirements and work areas, designing the job plan and setting up the work area. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations and maintenance.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine maintenance principles and procedures to servicing and maintenance of mobile cranes in a variety of operational contexts.

This unit applies to maintenance activity on equipment used by the operator and is limited to lubrication, fluid, filter and accessory changing and checks for cracks, surface or structural faults or other damage.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

PERFORMANCE CRITERIA

1 Plan maintenance operations

1.1 Tags, service records, log books and crane manufacturers information are read prior to commencing maintenance, noting previously identified and manufacturers recommendations

1.2 Maintenance schedules are read and maintenance tasks noted to match the schedule

1.3 A step by step procedure is worked out to minimise time delays and to sequence maintenance processes consistent with manufacturers recommendations

2 Complete pre-maintenance checks

2.1 Appropriate safe work area is selected for conduct of maintenance

2.2 Required tools, consumables and equipment are identified and assembled

2.3 Equipment is inspected for visible faults and loose or damaged components
3 Identify and assess any faults found

3.1 Conditions found are compared with manufacturers information and intended use of crane
3.2 Conditions noticed which may cause difficulties in the future are identified and the potential effect on the safe and efficient operation of the mobile crane is documented
3.3 Potential fault conditions are reported to the appropriate personnel

4 Conduct maintenance operations and safety check

4.1 Fluid replacements and lubrication operations are completed
4.2 Fluid levels are checked and adjusted
4.3 Mechanical components are checked for secure attachments and tensions
4.4 Mechanical adjustments are made
4.5 The maintenance plan is followed and appropriate adjustments are made to the plan to deal with unexpected events
4.6 Own work and crane system operations are checked to ensure that the crane's operational condition is to the required specifications
4.7 Tools, equipment and unused consumables are returned to the appropriate locations and waste is disposed of within workplace policy and procedures

5 Complete maintenance records

5.1 Accurate reporting of the results of the safety check and the maintenance conducted is completed and filed in accordance with procedures, industry guidelines and any statutory requirements
5.2 Clear reference in reports is made to any items which may not yet require maintenance but may affect the future working condition or safety of the mobile crane

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulations, permit and licence requirements pertaining to mobile crane operational safety and maintenance
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational safety and maintenance procedures for crane crews
- Use, characteristics, capabilities and limitations of the lubrication and adjustment tools and equipment
- Workplace procedures for the planning of mobile crane jobs and the setting up of work areas
- Guidelines relating to the safe use of machinery and equipment
- Focus of operation of crane systems and equipment
• Application of relevant agreements, codes of practice or other legislative requirements

**Required skills:**
• Communicate effectively with others when maintaining a mobile crane
• Read and interpret instructions, procedures, information and signs relevant to the maintenance of a mobile crane
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the maintenance of a mobile crane
• Work collaboratively with others when maintaining a mobile crane
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Identify non-conformities which may compromise operational capability
• Implement contingency plans for unexpected maintenance issues
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Prioritise and multi-task work when maintaining a mobile crane
• Monitor work activities in terms of planned maintenance schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self, others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify and correctly use crane equipment and related maintenance processes and procedures
• Service equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes when maintaining a mobile crane

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• day or night
• in a variety of weather conditions

Environment may include:
• movement of equipment, goods, materials and vehicular traffic

Customers may be:
• internal or external
Mobile crane may be involved in work in a range of industry sectors including:

- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Maintenance may include:

- routine inspections of crane and its associated equipment
- checks prior to operations
- checks on completion of operations
- checks on completion of repairs

Routine checks/servicing may include:

- checking and topping up of water levels
- replacement of oils
- replacement of air in tyres
- checking pressure, fluid leaks, temperature
- checking tightness of bolts, fixtures, attachments and fittings to ensure they are within specifications
- checking for cracks, surface or structural faults or other damage

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety checks may include:

- warning devices
- operating lights or audible cues
- braking and transmissions
- lifting devices
- steering and suspension
- windscreen wipers
- isolation switches and shut down devices
- mechanical, electrical, electronic, hydraulic or pneumatic components
Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
Documentation/records may include:

- codes of practice and regulatory requirements concerning crane maintenance and safety
- operations manuals including load charts and crane and rigging manuals
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- material safety data sheets
- communications technology equipment, oral, aural or signed communications
- personal and work area procedures and practices
- induction documentation
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations pertaining to the maintenance and safety of mobile cranes
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or
  
  o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  
  o relevant and appropriate materials and/or equipment, and/or
  
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  
  o through appropriately simulated activities at the registered training organisation, and/or
  
  o in an appropriate range of situations in the workplace
TLIB1407C

Load and unload wheeled or tracked crane

Unit Descriptor
This unit involves the skills and knowledge required to unload and load a wheeled or tracked mobile crane from and onto a float, including inspecting the worksite, unloading and loading crane from and onto float and securing the crane prior to travel. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the loading and unloading of a tracked crane prior to lift in a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Inspect site
1.1 Site access and exit routes are identified
1.2 Site hazards are identified
1.3 Loading and unloading area is selected based on assessment of work site requirements, physical conditions, proximity to job and safety of operations

2 Unload/load crane from/onto float
2.1 Vehicle is inspected and checked prior to unloading
2.2 Pre-operational checks are conducted in accordance with manufacturers instructions and workplace requirements
2.3 Float is positioned on site in designated loading/unloading area noting ground conditions and potential site hazards
2.4 Lashings, chains, stabilisers and chocks are safely removed and correctly stowed and secured in designated areas
2.5 Loading ramps are secured
2.6 Crane is driven on/off float ensuring no injury to personnel or damage to equipment and site
2.7 Crane is stabilised, shut down and secured

3 Secure crane for travel
3.1 Weight and dimensions of crane are established and compared to carrying capacity of vehicle
3.2 Crane is correctly positioned on float
3.3 Crane is secured using appropriate securing equipment and shackled to anchorage points in accordance with workplace/float securing system and manufacturers specifications
3.4 Securing equipment is tightened to ensure security during travel
3.5 Ramps are loaded and secured

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Application of relevant agreements, codes of practice or other legislative requirements
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Identification and correct use of equipment, processes and procedures related to the loading and unloading of wheeled or tracked cranes
- Focus of operation of work systems and equipment
- Operational procedures for crane crews
- Procedures for prioritising and multi-tasking work
- Wheeled or tracked mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Workplace procedures for the planning of mobile crane jobs and the setting up of work areas
- Workplace procedures for the loading and unloading of wheeled or tracked cranes
- Guidelines relating to the safe use of machinery and equipment

Required skills:
- Communicate effectively with others when loading and unloading wheeled or tracked cranes
- Read and interpret instructions, procedures, information and signs relevant to the loading and unloading of wheeled or tracked cranes
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the loading and unloading of wheeled or tracked cranes
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when loading and unloading wheeled or tracked cranes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur during the loading and unloading of wheeled or tracked cranes in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that could occur during the loading and unloading of wheeled or tracked cranes
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • day or night
• in a variety of weather conditions

Environment may include: • movement of equipment, goods, materials and vehicular traffic

Customers may be: • internal or external

Mobile crane may include: • any wheeled or tracked unit

Mobile crane may be involved in work in a range of industry sectors including:
• construction and demolition
• manufacturing
• waterfront
• mining
• primary industry
• utilities (electricity, gas, water)
• arboricultural
• swimming pool
• quarrying
Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction processes
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB1507C  Undertake site inspection

Unit Descriptor
This unit involves the skills and knowledge required to undertake a site inspection in preparation for a lift requiring a mobile crane, including arranging the site inspection, clarifying customer requirements, defining job requirements and completing necessary records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations and safety.

Work is performed with general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to conduct of site inspections prior to mobile crane lifts in a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Arrange site inspection
1.1 Available information about customer requirements is obtained from relevant personnel
1.2 Need for site inspection is confirmed through appropriate questioning and discussion
1.3 Mutually acceptable meeting time is arranged with customer
1.4 Full customer details are recorded according to workplace procedures

2 Clarify customer requirements
2.1 Customer needs and perception of job are clearly established through appropriate questioning and discussion
2.2 Alternative job methods are suggested where applicable and a safe and cost effective method negotiated with the customer
2.3 Clients ability to provide any necessary competent personnel is ascertained

3 Define job requirements
3.1 Information regarding load and movement requirements is accessed and any necessary measurements are taken to enable accurate estimation of job requirements
3.2 Specific scheduling needs are ascertained taking into account legislative and customer requirements
3.3 Information from site inspection and customer is used to
identify hazards and contingencies
3.4 Specific site and job requirements are identified
3.5 Lift study is arranged as required to provide additional information or meet customer expectations
3.6 Necessity to be on site during lift is assessed in line with workplace policy taking into consideration complexity of job, potential hazards and expertise of available personnel
3.7 Need for permits/authorisations is determined

4 Complete records
4.1 Required records are updated accurately, legibly and promptly according to workplace procedures
4.2 Records include all relevant information about the job

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation and safety
• Relevant OH&S and environmental procedures and regulations
• Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
• Site inspection procedures and protocols
• Operational procedures for crane crews for the conduct of a site inspection for a lift using a mobile crane
• Guidelines relating to the safe use of machinery and equipment
• Focus of operation of work systems and equipment
• Application of relevant agreements, codes of practice or other legislative requirements

Required skills:
• Communicate effectively with others when conducting a site inspection for a lift using a mobile crane
• Read and interpret instructions, procedures, information and signs relevant to a site inspection for a lift using a mobile crane
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to a site inspection for a lift using a mobile crane
• Work collaboratively with others when conducting a site inspection for a lift using a mobile crane
• Plan own work including predicting consequences and identifying improvements
• Prioritise and multi-task work
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may be identified when conducting a site inspection for a lift using a mobile crane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when conducting a site inspection for a lift using a mobile crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify and correctly use equipment, processes and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Sites may include:
- building and construction sites
- demolition sites
- wharves
- tree lopping/removal sites
- mining sites
Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction processes
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- site plan
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts.
- Resources for assessment include:
  - A range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant operational situations in the workplace.
- In both real and simulated environments, access is required to:
  - Relevant and appropriate materials and/or equipment, and/or
  - Applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation.
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.
- Practical assessment must occur:
  - Through appropriately simulated activities at the registered training organisation, and/or
  - In an appropriate range of situations in the workplace.
TLIB1607C De-rig, pack and store tools and equipment

Unit Descriptor
This unit involves the skills and knowledge required to de-rig a mobile crane and to pack and store tools and equipment, including inspecting tools and equipment, securing outriggers, packing and storing tools and equipment and completing necessary records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the de-rigging of a mobile crane and the packing and storage of tools and equipment in a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Inspect tools and equipment
1.1 Rigging gear is removed and inspected for damage and defects
1.2 Damaged and defective gear is tagged and segregated for testing/repair/disposal by a qualified person

2 Secure outriggers
2.1 Any outriggers, stabilisers, counterweights and attachments are secured and stowed in accordance with manufacturers instructions
2.2 Outrigger packing is dismantled and stowed securely

3 Pack and store tools and equipment
3.1 Gear is cleaned as required and stored appropriately
3.2 Additional gear is returned to depot, marked off and stored according to workplace procedures
3.3 Other personnel are assisted as necessary to ensure efficient pack up

4 Complete records
4.1 Required workplace records are updated and processed accurately and promptly
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews concerning the de-rigging of cranes and the packing and storing of tools and equipment
- Defects that may be identified when de-rigging a crane and appropriate action that should be taken
- Guidelines relating to the safe use of machinery and equipment
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements

Required skills:
- Communicate effectively with others when de-rigging a mobile crane
- Read and interpret instructions, procedures, information and signs relevant to the de-rigging of a mobile crane
- Interpret and follow operational instructions and prioritise work
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when de-rigging a mobile crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when de-rigging a mobile crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Prioritise and multi-task work
- Plan own work including predicting consequences and identifying improvements
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
• Check condition of equipment when de-rigging a mobile crane
• Identify and correctly use equipment, processes and procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• day or night
• in a variety of weather conditions

Environment may include:
• movement of equipment, goods, materials and vehicular traffic

Customers may be:
• internal or external

Mobile crane may be involved in work in a range of industry sectors including:
• construction and demolition
• manufacturing
• waterfront
• mining
• primary industry
• utilities (electricity, gas, water)
• arboricultural
• swimming pool
• quarrying

Hazards may include:
• power lines
• noise, light, energy sources
• overhead service lines
• surrounding buildings, structures, facilities
• underground services
• obstructions
• uneven or unstable ground and recently filled trenches
• stationary and moving machinery and equipment
• hazardous or dangerous materials
• traffic hazards and congestion
• other vehicles and personnel

Hazard management is:
• consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/information may include:

- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB1707C  Assemble and dismantle boom or jib

Unit Descriptor
This unit involves the skills and knowledge required to assemble and dismantle a boom and jib on a lattice boom mobile crane, including planning the assembly/dismantling and following correct procedures for the boom/jib assembly and disassembly. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to assembly and dismantling of booms and jibs on lattice boom mobile cranes in a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan assembly/dismantling
1.1 Site selected to assemble/dismantle the boom and/or jib is as level as possible and unobstructed
1.2 A plan for the assembly and dismantling of the crane is developed in accordance with the appropriate Australian Standard, other statutory regulations, licensing requirements and manufacturers specifications including any licensing requirements

2 Assemble/dismantle boom or jib
2.1 Equipment, including personal protective equipment, is assembled and used as appropriate for the requirements of the task
2.2 The plan for assembly or dismantling of the boom/jib is carried out in accordance with manufacturers specifications, appropriate Australian Standards and other relevant statutory regulations and guides
2.3 All connections on boom and jib pendants and rope anchorages are checked before boom is raised to ensure they are in good order, tight and secure
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane assembly and dismantling
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews concerning the assembling and dismantling of booms and jibs on lattice boom mobile cranes
- Defects that may be identified when assembling and dismantling a boom/jib and appropriate action that should be taken
- Guidelines relating to the safe use of machinery and equipment
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements

**Required skills:**
- Communicate effectively with others when assembling and dismantling mobile crane booms and jibs
- Read and interpret instructions, procedures, information and signs relevant to the assembling and dismantling of mobile crane booms and jibs
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others during the assembly and dismantling of mobile crane booms and jibs
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur during the assembly and dismantling of mobile crane booms and jibs in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur during the assembly and dismantling of mobile crane booms and jibs
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor condition of equipment during the assembly and dismantling of mobile crane booms and jibs and take appropriate action if required

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**
- day or night
- in a variety of weather conditions

**Environment may include:**
- movement of equipment, goods, materials and vehicular traffic

**Customers may be:**
- internal or external

**Mobile crane may be any lattice boom mobile crane involved in work in a range of industry sectors including:**
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

**Hazards may include:**
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

**Hazard management is:**
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for assembly may include:
- site restrictions and procedures
- authorities and permits
- hours of operation
- slings, chains, nets, brackets and other specialised lifting equipment
- personal protective equipment
- support trucks

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Documentation/information may include:

- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to the assembly of mobile cranes
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge
assessment, and/or
  o access to an appropriate range of relevant
    operational situations in the workplace

- In both real and simulated environments, access is
  required to:
  o relevant and appropriate materials and/or
    equipment, and/or
  o applicable documentation including
    workplace procedures, regulations, codes of
    practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
  registered training organisation
- As a minimum, assessment of knowledge must be
  conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at
    the registered training organisation, and/or
  o in an appropriate range of situations in the
    workplace
**TLIB1807B**  
**Conduct full train examination**

**Unit Descriptor**  
This unit involves the skills and knowledge required to conduct a full train examination in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes preparing for the examination of the train, preparing the train for examination, examining the rolling stock, examining the loads, and documenting and actioning the examination results. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the conduct of a full train examination as part of workplace activities across a variety of operational contexts within the Australian rail industry.

**Competency Field**  
B – Equipment Checking & Maintenance

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for examination

1.1 Train consist and information on load detail is established for examination purposes

1.2 Location for full train examination is confirmed and other relevant personnel notified of examination

1.3 Customer defect notices/carded wagon information is established for examination purposes

1.4 Materials and equipment required to conduct the full train examination are prepared

1.5 OH&S requirements applicable to the examination are confirmed

1.6 Other relevant train documentation is accessed and reviewed to establish key information on rolling stock required for examination

2 Prepare train for examination

2.1 Applicable safety device or system is used to ensure train is isolated or secured for examination

2.2 Road is locked out using appropriate techniques to ensure
safety during examination

2.3 Flags, banners, signs and other relevant safety equipment is positioned before and during examination to ensure safety is maintained

3 Examine rolling stock

3.1 Types of rolling stock and capacities are confirmed as appropriate for the safe transportation of passengers or freight

3.2 Brake systems are checked and all brake tests are conducted and certificates issued as appropriate

3.3 Structure of rolling stock and major components are checked and tested to ensure operational safety

3.4 Rolling stock is carded and information is recorded within enterprise system

3.5 Train irregularities are noted and corrective action initiated in accordance with operational requirements

3.6 End-of-train monitor is attached and correct operation is confirmed

3.7 OH&S legislation, codes of practice, policies and procedures are observed during the examination to prevent injury and damage

3.8 Communication is maintained with other personnel involved to ensure safe, efficient and complete examination

4 Examine loads

4.1 Load security is checked and confirmed to meet operational safety requirements

4.2 Load contamination is identified and rectified in accordance with OH&S and dangerous goods requirements

4.3 Load dimensions are confirmed appropriate to wagon type and checked against documentation for accuracy

5 Document and action examination results

5.1 Required documentation is completed and forwarded for recording examination results and initiating any required corrective actions

5.2 Other relevant personnel are informed of remedial or appropriate action required prior to resumption of train service

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines

- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling

- Workplace procedures for the conduct of a full train examination
• Train movement documentation procedures
• Communication protocols
• Procedures to be followed in the event of an emergency
• Standards and specifications for all items requiring examination during a train examination
• Signals and signalling systems
• Contingency management processes for unplanned events

Required skills:
• Communicate effectively with others when conducting a full train examination
• Read and interpret instructions, procedures, information and signs relevant to the conduct of a full train examination
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to a full train examination
• Operate electronic communication equipment to required protocol
• Work both individually and as part of a team when conducting a full train examination
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions identified during a full train examination in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may occur during a full train examination
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Assess rolling stock defects when conducting a full train examination
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted by day or night in:
• the full range of weather conditions
• the full range of light conditions
• typical running temperatures of trains
Locations for examinations may include:
- heavy traffic
- high volume city freight terminals
- remote regional yard and siding locations

Persons involved in examination may include:
- self only or self in conjunction with other personnel

Train under examination may be:
- loaded or unloaded

Items examined may include:
- brake equipment
- draw gear
- superstructures
- out-of-gauge conditions
- wheels and axles
- bearings
- locking and securing devices
- dangerous goods condition and separation
- air and electrical connections
- load condition (damage, leaks etc.)
- load securing devices (chains, ropes, pins etc.)
- steps, handrails and handbrakes
- rolling stock sequence
- trailing items (ropes, hoses etc.)
- bogies and brake rigging

Communication methods may include:
- written
- verbal
- line-of-sight signals
- radio

Relevant personnel can include:
- train controllers
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel
- those responsible for controlling signals
Safety and protective equipment may include:

- high visibility clothing
- end of train markers
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
- hearing protection

Corrective action may include:

- notification of others who will deal with problem
- detachment and replacement of defective rolling stock

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and instructions and job specification
- induction and training materials
- repair cards and books
- inspection reports
- consist forms
- wagon cards
- transport instructions
- incident reports
- safeworking forms
- out-of-gauge documents
- load and weight records
- dangerous goods manifest
- drivers advice (train load)
- mechanical condition advice forms
- brake test certification
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- ADG Code and regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
TLIB1807B Conduct full train examination

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIB1907B**  
**Test train braking system**

**Unit Descriptor**  
This unit involves the skills and knowledge required to test train braking systems in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes planning and preparing for train brake inspection and testing, inspecting and testing train brake operation, dealing with identified faults, and recording the results of a brake test in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the testing of a train braking system as part of workplace activities across a variety of operational contexts within the Australian rail industry.

**Competency Field**  
B – Equipment Checking & Maintenance

## ELEMENT

**PERFORMANCE CRITERIA**

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

### 1 Plan and prepare for train brake inspection and testing

1.1 Brake test documentation, rolling stock data and other relevant reports are read to confirm required action

1.2 Appropriate tools and equipment are obtained and checked prior to inspection

1.3 OH&S legislation, codes of practice, policies and procedures are identified and followed

1.4 Train is isolated or secured in accordance with workplace procedures to make the work area safe for the inspection

### 2 Inspect and test train brake operation

2.1 Brake leakage test is conducted to ensure compliance to required standards

2.2 Where required by workplace procedures, modified brake tests are conducted to workplace procedures to meet required standard

2.3 Air continuity test is conducted to conform with workplace procedures to ensure train braking system meets functional
2.4 Brakes are applied and released on train and their function confirmed
2.5 Defects and faults are identified and rolling stock is carded

3 Deal with identified faults
3.1 Procedures for replacement or repair of identified defective components are implemented in accordance with workplace procedures and manufacturers specifications
3.2 Confirmation/verification of minor repairs or replacements is obtained
3.3 Defective rolling stock not fit to run is identified and detachment arrangements made in compliance with operational requirements

4 Record brake test
4.1 Brake test records are prepared or endorsed to reflect inspection results
4.2 Records are circulated and filed in accordance with workplace policies and procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Brake systems, their components and their operation
- Types of brake tests and their purpose
- Tools and equipment applications
- Diagnostic techniques
- Communication protocols
- Documentation requirements relating to brake testing
- Procedures for completing relevant documentation
- Procedures to be followed in the event of an emergency

Required skills:
- Communicate effectively with others when testing train braking systems
- Read and interpret instructions, procedures, information and signs relevant to the testing of train braking systems
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the testing of train braking systems
- Operate electronic communication equipment to required protocol
• Work collaboratively with others when testing train braking systems
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when testing train braking systems in accordance with regulatory requirements and workplace procedures
• Apply rail safety practices and regulations
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Assess brake system defects
• Operate and adapt to differences in brakes and related equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted by day or night in:
• the full range of weather conditions
• the full range of light conditions
• typical running temperatures of trains

Locations for tests may include:
• heavy traffic
• high volume city freight terminals
• remote regional yard and siding locations

Movement status of rolling stock to be tested may include:
• arriving
• departing
• stationary

Load status of train during brake testing may be:
• loaded or unloaded

Tests may include:
• brake leakage test
• air continuity test
• modified brake test
• train brake test
• hose and pipe components repair or replacement
Safety and protective equipment may include:

- high visibility clothing
- end of train markers
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
- hearing protection

Relevant personnel can include:

- train controllers
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel
- those responsible for controlling signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and instructions and job specification
- induction and training materials
- brake instruction documentation
- safeworking documentation
- brake test certification
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

• applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
• relevant state/territory OH&S legislation
• relevant state/territory environmental protection legislation
• relevant Australian Standards

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLIB2007B Visually inspect stationary train**

**Unit Descriptor**

This unit involves the skills and knowledge required to visually inspect a stationary train in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes preparing for the visual inspection, inspecting the train, and documenting and actioning the inspection results. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the visual inspection of a stationary train as part of workplace activities across a variety of operational contexts within the Australian rail industry.

**Competency Field**

B – Equipment Checking & Maintenance

**ELEMENT**

Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Prepare for a visual inspection of a stationary train**

   1.1 Inspection location and requirements are obtained and inspection activities planned

   1.2 Materials, documents and equipment required for the inspection are identified, obtained, and prepared for use

   1.3 Visual inspection is started at planned time and location to minimise delays to train availability

   1.4 Train identification and status is confirmed and required actions taken to ensure train remains safe for duration of inspection

   1.5 Individual responsibilities required to complete inspection are agreed with relevant personnel

   1.6 Conditions are assessed and necessary actions taken to ensure inspection is effective

2 **Carry out a visual inspection of a stationary train**

   2.1 Visual inspection is undertaken in accordance with workplace procedures

   2.2 Communication is maintained with relevant personnel to
To ensure safe, efficient and complete inspection.

2.3 Condition of rolling stock, couplings and load are visually inspected and obvious faults, wagons and locations documented.

2.4 Wagons are carded, in accordance with workplace policies and procedures, where required by inspection result.

2.5 Apparent problems are investigated further and corrected, where possible.

2.6 Conditions requiring urgent action are noted and appropriate action taken to initiate immediate response.

3 Document and action inspection results

3.1 All required documentation is completed and forwarded to record inspection results and initiate corrective actions.

3.2 Appropriate personnel are informed of actions required prior to movement of train.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.
- Procedures for planning a visual inspection of a stationary train.
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.
- Procedures for carrying out a visual inspection of a stationary train.
- Security procedures.
- Issue resolution procedures.
- Standards and specifications for all items requiring examination.
- Contingency management processes for unexpected events that may arise when carrying out a visual inspection of a stationary train.
- Communication protocols related to the visual inspection of a stationary train.
- Documentation requirements relating to visual examination.
- Procedures for completing relevant documentation.
- Guidelines relating to equipment capability and limitations.

Required skills:

- Communicate effectively with others when carrying out a visual inspection of a stationary train.
- Read and interpret instructions, procedures, information and signs relevant to carrying out a visual inspection of a stationary train.
- Interpret and follow operational instructions and prioritise work.
- Complete documentation related to a visual inspection of a stationary train.
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when carrying out a visual inspection of a stationary train
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when carrying out a visual inspection of a stationary train in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected situations that may arise when carrying out a visual inspection of a stationary train
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in rolling stock and equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Assess rolling stock defects

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted by day or night in:
• the full range of weather conditions
• the full range of light conditions
• typical running temperatures of trains

Locations for examinations may include:
• heavy traffic
• high volume city freight terminals
• remote regional yard and siding locations

Persons involved in examination may include:
• self only or self in conjunction with other personnel

Train under examination may be:
• loaded or unloaded
Items examined may include:
- brake equipment
- draw gear
- superstructures
- out-of-gauge conditions
- wheels
- load and discharge doors
- locking and securing devices
- dangerous goods condition and separation
- air and electrical connections
- load condition (damage, leaks etc)
- load securing devices (chains, ropes, pins etc)
- trailing items (ropes, hoses etc)

Communication methods may include:
- written
- verbal
- line-of-sight signals
- radio

Relevant personnel may include:
- train controllers
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel
- those responsible for controlling signals

Safety and protective equipment may include:
- high visibility clothing
- end of train markers

- flags
- safety devices
- hearing protection
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and instructions and job specification
- induction and training materials
- repair cards and books
- inspection reports
- consist forms
- wagon cards
- transport instructions
- incident reports
- safeworking forms
- out-of-gauge documents
- load and weight records
- dangerous goods manifest and declarations
- drivers advice (train load)
- mechanical condition advice forms
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- ADG Code and regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment

- The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIB207C  Test equipment and isolate faults

Unit Descriptor
This unit involves the skills and knowledge required to test equipment and isolate faults in accordance with workplace requirements, including identifying scope of the operational test; planning operational tests; checking the equipment through full operating range; and isolating faults and/or formulating recommendations for adjustment, repair or replacement in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the testing of equipment and the isolation of faults.

Work is performed under some supervision, generally within a team environment. It involves the application of regulatory requirements and workplace procedures to the testing and the isolation of faults in equipment in the stevedoring, transport, warehousing, distribution and/or storage industries.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify scope of operational check
1.1 Physical condition of equipment is observed
1.2 Test procedures and parameters are identified in accordance with workplace procedures and manufacturers specifications
1.3 Preliminary observations are recorded
1.4 Test procedures are discussed with appropriate staff and necessary permission obtained

2 Plan operational checks
2.1 Specifications and notes from preliminary observations are checked and areas to be clarified are identified
2.2 Sequence of tests is planned noting areas where results and observations should be recorded
2.3 Safe area for testing is identified
2.4 Arrangements are made for any additional resources (including staff)

3 Check unit through full operating range
3.1 Test is undertaken observing relevant safety and operational requirements
3.2 Results are recorded and findings confirmed
4 Isolate fault and/or formulate recommendations

4.1 Proposals for equipment repair are recorded based on faults found, cost/time implications and workplace approval systems

4.2 Report is explained to relevant workplace personnel including any options and recommendations

4.3 Parts are procured and/or repairs undertaken in accordance with enterprise procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of regulatory requirements applicable to the testing of equipment and the isolation of faults
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures and policies for the testing of equipment and the isolation of faults, including the tagging and reporting of faulty equipment and components
- Focus of operation of work systems, equipment, management and site operating systems for the testing of equipment and the isolation of faults
- Fault-finding techniques including identification of cost/time effective rectification procedures
- Tools, meters, gauges and equipment used during the testing of equipment and the isolation of faults and the precautions and procedures that should be followed in their use
- Guidelines relating to the safe use of machinery and equipment including the tagging of unserviceable or damaged items
- Faults that may occur with equipment, and appropriate action that can be taken to report and/or rectify the identified faults in the equipment or its components
- The characteristics, capabilities and limitations of the equipment
- Operational safety requirements for the equipment concerned
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles
- Documentation and record requirements

Required skills:
- Communicate effectively with others when testing equipment and isolating faults
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures, information and signs relevant to the testing of equipment and the isolation of faults
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the testing of equipment and the isolation of faults
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when testing equipment and isolating faults
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when testing equipment and isolating faults in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use relevant meters, gauges, equipment and tools when testing equipment and isolating faults
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Apply basic mechanical, hydraulic, electrical and electronic principles to testing and fault identification activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
• exposed conditions
• controlled or open environments

Tests and the isolation of faults may be performed: • on a range of equipment used in the stevedoring, transport, warehousing, distribution and/or storage industries

Personal protective equipment may include:
• gloves
• safety headwear and footwear
• safety glasses
• two-way radios
• high visibility clothing
Tests may include but are not limited to:

- tests of operational performance
- tests as part of routine servicing
- identification of causes of poor or out-of-specification performance
- tests following servicing and/or adjustment of equipment

Records/results of tests may include:

- details of faulty equipment or specific components
- details of action taken
- results of testing and associated recommendations
- details of repair and maintenance work to be undertaken

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- a fire or explosion
- faulty equipment/tools

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- equipment manufacturers
- site visitors
- contractors
- official representatives

Communication in the work area may include:

- phone
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications
Information/documents may include:

- workplace procedures and policies for the checking and assessment of the equipment concerned
- manufacturers specifications for equipment/tools
- equipment identification labels, barcodes and serial numbers
- supplier and/or client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the checking and operation of the equipment concerned
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB2107B  Conduct train roll-by inspection

Unit Descriptor
This unit involves the skills and knowledge required to conduct a train roll-by inspection in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes preparing to carry out a roll-by inspection of a moving train, inspecting the moving train in accordance with workplace procedures, and reporting and actioning the inspection results. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the conduct of a roll-by inspection of a moving train as part of workplace activities across a variety of operational contexts within the Australian rail industry.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for a roll-by inspection
1.1 Position is taken for the roll-by inspection of a moving train at the planned time to ensure complete observation without personal risk
1.2 Individual responsibilities required to complete the roll-by inspection are agreed, where necessary, with relevant personnel
1.3 Conditions are assessed and necessary actions are taken to ensure roll-by inspection is effective

2 Conduct a roll-by inspection of a moving train
2.1 Train identification and status is confirmed to ensure a roll-by inspection is appropriate
2.2 Inspection is undertaken systematically to ensure maximum effectiveness
2.3 Communication is maintained with relevant personnel to ensure safe, efficient and complete roll-by inspection
2.4 Inspection is conducted in accordance with OH&S workplace
policies and procedures to prevent injury and damage

2.5 Condition of rolling stock and load are observed as the train passes and specific faults, wagons and locations are identified and noted

2.6 Conditions requiring urgent action are noted and appropriate action taken to initiate immediate response

3 Report and action roll-by inspection results

3.1 All required documentation is completed and forwarded to record inspection results and initiate corrective actions

3.2 Appropriate personnel are informed of actions required to minimise risk from continued movement of train

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Procedures for planning a roll-by inspection of a moving train
- Procedures for carrying out a roll-by inspection of a moving train
- Procedures for completing documentation relevant to a roll-by inspection of a moving train
- Security procedures
- Issue resolution procedures
- Standards and specifications for all items requiring examination
- Contingency management processes for unexpected situations that may arise when carrying out a roll-by inspection of a moving train
- Communication protocols
- Documentation requirements relating to a roll-by inspection
- Guidelines relating to equipment capability and limitations

Required skills:

- Communicate effectively with others when carrying out a roll-by inspection of a moving train
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to a roll-by inspection of a moving train
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out a roll-by inspection of a moving train
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when carrying out a roll-by inspection of a moving train in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected situations that may occur when carrying out a roll-by inspection of a moving train
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Assess any rolling stock defects and take appropriate action
• Select and use relevant equipment and materials
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted by day or night in:
• the full range of weather conditions
• the full range of light conditions
• typical running temperatures of trains

Locations for examinations may include:
• heavy traffic
• high volume city freight terminals
• remote regional yard and siding locations

Persons involved in examination may include:
• self only or self in conjunction with other personnel

Load status of train during examination may include:
• loaded or unloaded
Items examined may include:

- brake equipment
- draw gear
- superstructures
- out-of-gauge conditions
- wheels
- bearings
- locking and securing devices
- dangerous goods condition and separation
- air and electrical connections
- load condition (damage, leaks etc.)
- load securing devices (chains, ropes, pins etc.)
- trailing items (ropes, hoses etc.)

Communication methods may include:

- written
- verbal
- line-of-sight signals
- radio

Relevant personnel can include:

- train controllers
- other train examiners/inspectors
- maintenance personnel
- train crews
- yard and other operational personnel
- those responsible for controlling signals

Safety and protective equipment may include:

- high visibility clothing
- end of train markers
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
- hearing protection
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and instructions and job specification
- induction and training materials
- repair cards and books
- inspection reports
- consist forms
- wagon cards
- transport instructions
- incident reports
- safeworking forms
- out-of-gauge documents
- load and weight records
- dangerous goods manifest
- drivers advice (train load)
- mechanical condition advice forms
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where train operations are carried out on that network
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- ADG Code and regulations
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB2207B  Diagnose and rectify minor faults

Unit Descriptor
This unit involves the skills and knowledge required to diagnose and rectify minor faults in accordance with workplace requirements, including identifying maintenance and/or repair requirements, conducting minor maintenance and routine repairs, checking and reporting minor repairs and/or maintenance, and providing support in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with workplace procedures and the regulations and safeworking codes of practice relevant to fault diagnosis and rectification.

Work is performed under some supervision, generally within a team environment.

Work involves the application of routine minor fault diagnosis and rectification procedures to maintain the safety and operation of equipment across a variety of operational rail transport contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify maintenance/repair requirements
1.1 Condition of rolling stock and/or motive power unit ancillary equipment is assessed
1.2 Faulty or damaged components or equipment are identified and assessed for component exchange or minor repair
1.3 Equipment and tools required are identified and obtained
1.4 Work areas and equipment are prepared and made safe for repair/maintenance/component exchange activities

2 Conduct minor maintenance and routine repairs
2.1 Minor repair/maintenance/component exchange are carried out to comply with the manufacturers specifications and workplace procedures
2.2 Equipment, tools and materials required are operated, applied and handled to conform to OH&S requirements and manufacturers specifications to prevent injury and damage

3 Check and report minor repairs/maintenance
3.1 Minor repair/maintenance/component exchange activities are checked for compliance with safety requirements and workplace procedures
3.2 Equipment is checked to confirm that it has been restored to operational standards
3.3 Repair/maintenance/component exchange activities are documented in appropriate records or log books

4 Provide support

4.1 Repairs/maintenance/component exchange activities requiring support are identified and level of support established
4.2 Assistance to repair/maintenance/component exchange activities is provided where required
4.3 Repair/maintenance/component exchange work not able to be undertaken or completed is reported to appropriate personnel for follow-up action
4.4 Work site is checked for cleanliness and operational safety and appropriate action taken to restore site and equipment

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state/territory regulations, codes of practice and safeworking system requirements
- Relevant OH&S and environmental protection requirements
- Workplace procedures and policies for the diagnosis and repair of minor faults
- Typical minor repair problems that can occur and related action that should be taken
- Tools and equipment used when diagnosing and rectifying minor faults and the procedures and precautions for their care, use and storage
- Workplace documentation and records requirements
- Procedures to be followed in the event of an emergency
- Workplace component and material supply system

Required skills:
- Communicate effectively with others when diagnosing and rectifying minor faults
- Read and interpret instructions, procedures, information and signs relevant to the diagnosis and rectification of minor faults
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when diagnosing and rectifying minor faults
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when diagnosing and rectifying minor faults in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may occur when diagnosing and rectifying minor faults
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment, motive power units and rolling stock to be checked and maintained may include:

• all classes of locomotives, motive power units, rail cars and types of wagons in service within Australian rail systems

Operations may be carried out in typical rail transport situations, including:

• operations conducted at day or night
• typical weather conditions.
• in confined spaces, exposed conditions and controlled or open environment

Minor maintenance/repair component exchange may include:

• minor component change out
• diagnosing minor faults
• identifying correct lubricants
• identifying correct fuel and carrying out refuelling
• identifying correct solvents and cleaning fluids
• maintaining fluid and air pressures
• replacing faulty/damaged/worn equipment
• servicing and cleaning batteries
• inspecting wheels and ancillary equipment in cabin or on rolling stock
Safety equipment may include:  
- high visibility clothing  
- end of train markers  
- sunscreen and sun glasses  
- insect repellent  
- gloves, safety headwear, mask and footwear  
- portable radios  
- flags and hand lamps  
- safety glasses and hearing protection  
- safety devices

Environmental hazards may include:  
- leaking oil and fuel  
- defective or inappropriately adjusted exhaust systems  
- inappropriate disposal of fluids in drains or sewerage systems  
- inappropriate disposal of waste and rubbish

Consultative processes may involve:  
- workplace personnel including supervisors and managers  
- equipment manufacturers representatives and contractors  
- union representatives  
- industrial relations and OH&S specialists  
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:  
- company procedures  
- enterprise procedures  
- organisational procedures  
- established or standard procedures

Contingency processes may relate to:  
- personal injury  
- tool malfunctions

Operators of mechanised equipment must have:  
- undertaken training and, where appropriate, hold the relevant license, permit or certificate  
- be recognised as competent for the class of machinery being used
Information/records may include:
- workplace operational and technical instructions and procedures for the diagnosis and rectification of minor faults
- relevant regulations including state/territory safety codes of practice and safeworking regulations
- maintenance checklists and records for the diagnosis and rectification of minor faults
- tool/equipment manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when diagnosing and rectifying minor faults
- OH&S procedures
- QA plans and procedures
- data and document control procedures
- relevant Australian standards and certification requirements
- emergency procedures
- award, enterprise bargaining agreement, other industrial arrangements

Applicable regulations and legislation may include:
- relevant state/territory regulations, codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts

• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIB2307B  Provide sanitation and water services support to passenger transportation units

**Unit Descriptor**
This unit involves the skills and knowledge required to provide sanitation and water services support to passenger transportation units in accordance with workplace and regulatory requirements, including planning the decanting and watering of passenger vehicles, carriages or vessels; providing a decanting and water service; and completing all decanting and watering operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures to the provision of sanitation and water services support to passenger transportation units in the transport and allied industries.

**Competency Field**
B – Equipment Checking & Maintenance

---

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Plan decanting and watering of passenger vehicles/carriages/vessels**
   1.1 Transport systems vehicles, carriages or vessel type are identified to assess the nature and extent of the servicing required
   1.2 Sanitary waste removal and water system refill are planned to ensure minimal inconvenience and delay to customers and services

2 **Provide decanting service**
   2.1 Decanting unit is connected to transport units waste tanks in accordance operational requirements
   2.2 Transport units waste is removed to holding tanks in accordance with workplace procedures
   2.3 Decanting unit is disconnected from transport unit and unit is cleaned to meet workplace and health and hygiene regulations

3 **Provide water service**
   3.1 Water supply is connected to transport units water storage
tanks in accordance with operational requirements

3.2 Transport units water storage tanks are filled in accordance with occupational health and safety regulations

3.3 Water supply is disconnected from transport unit and unit cleaned to meet workplace and health and hygiene regulations

4 Complete decanting and watering

4.1 Documentation is completed concerning the removal of waste and the supply of water

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the provision of sanitation and water services support to passenger transportation units, including the discharging of waste and the charging of water containers
- Focus of operation of work systems, equipment, management and site operating systems for the provision of sanitation and water services support to passenger transportation units
- Equipment, chemicals and materials used during the provision of sanitation and water services support to passenger transportation units, and the precautions and procedures that should be followed in their use
- Problems that may occur when providing sanitation and water services support to passenger transportation units and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication requirements when providing sanitation and water services support to passenger transportation units, including radio operation
- Housekeeping standards procedures required in the workplace
- Site layout

Required skills:

- Communicate effectively with others when providing sanitation and water services support to passenger transportation units
- Read and interpret instructions, procedures, information, labels and signs relevant to the provision of sanitation and water services support to passenger transportation units
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of sanitation and water services support to passenger transportation units
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing sanitation and water services support to passenger transportation units
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when providing sanitation and water services support to passenger transportation units in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when providing sanitation and water services support to passenger transportation units
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Select and safely use relevant equipment and materials when providing sanitation and water services support to passenger transportation units
• Select, mix and apply appropriate cleaning materials
• Handle and store hazardous substances and materials
• Store cleaning materials and equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in: • a range of work environments  
  • by day or night
Transportation units may include: • rail carriages, buses, coaches, ferries and other transport units incorporating water and sanitation services
Cleaning and decanting equipment may include: • mops  
  • buckets  
  • hoses  
  • pumps  
  • waste tanks
Reporting may include: • verbal communication  
  • written communication
Hazards in the work area may include exposure to: • chemicals  
  • dangerous or hazardous substances
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- high visibility clothing

Consultative processes may involve:
- other workplace personnel
- supervisors and managers

Communication in the work area may include:
- phone
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- work instructions, job description and induction materials
- manufacturers specifications for equipment/materials
- relevant OH&S and environmental protection requirements and policies
- relevant codes of practice including the National Standards for Manual Handling, the Industry Safety Code and the ADG Code
- relevant health and hygiene legislation, regulations and related documentation
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at
the registered training organisation, and/or
0 in an appropriate range of situations in the workplace
TLIB2407B  Clean transportation units and facilities for passenger use

Unit Descriptor
This unit involves the skills and knowledge required to clean transportation units and facilities for passenger use in accordance with workplace and regulatory requirements, including identifying and preparing for cleaning; cleaning the facility or unit; identifying any minor maintenance requirements of transportation units and facilities; and completing all work requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the cleaning of transportation units and facilities for passenger use.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures to the cleaning of transportation units and facilities for passenger use as part of work activities in the transport and allied industries.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Identify and prepare for cleaning
1.1 Transportation units and facilities are inspected for hygiene and cleanliness on an on-going basis
1.2 Customer complaints regarding lack of hygiene and cleanliness within transport units and facilities are investigated
1.3 Transport units or areas requiring cleaning and the nature of the material to be cleaned is identified to determine appropriate response
1.4 Cleaning procedures are identified and cleaning materials and equipment are organised in accordance with workplace procedures
1.5 Areas that require cleaning that breach OH&S regulations or workplace standards are cordoned off to prevent access by staff and customers

2  Clean facility or unit
2.1 Transportation units and facilities are cleaned or detailed to workplace standards
2.2 Cleaning equipment is operated in accordance with OH&S regulations, codes of practice, and workplace procedures
2.3 Chemicals are used in accordance with OH&S legislation, codes of practice, policies and procedures
2.4 Hazardous and general waste is removed in accordance with OH&S regulations, codes of practice and workplace procedures

3 Identify minor maintenance requirements of transportation units and facilities

3.1 Transport units and facilities are inspected to identify maintenance requirements
3.2 Minor maintenance of the transport units and facilities is conducted in accordance with the workplace policies and procedures
3.3 Minor maintenance actions are reported in accordance with workplace procedures
3.4 Further maintenance requirements of transport units or facilities are reported in accordance with workplace procedures

4 Complete the work

4.1 Cordon off area is re-opened for use when safe for customer access
4.2 Transportation units/facilities cleanliness and appearance is verified prior to the unit being released for service
4.3 Stocks of cleaning equipment are monitored and replenished as required

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the cleaning of transportation units and facilities for passenger use, including, where relevant, the ADG Code and relevant health and hygiene requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the cleaning of transportation units and facilities for passenger use, including the discharging of waste and the charging of water containers
- Focus of operation of work systems, equipment, management and site operating systems for the cleaning of transportation units and facilities for passenger use
- Equipment, chemicals and materials used during the cleaning of transportation units and facilities for passenger use, and the precautions and procedures that should be followed in their use
- Problems that may occur when cleaning transportation units and facilities and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication requirements when cleaning transportation units and facilities, including radio operation
- Housekeeping standards procedures required in the workplace
- Site layout

**Required skills:**
- Communicate effectively with others when cleaning transportation units and facilities
- Read and interpret instructions, procedures, information and signs relevant to the cleaning of transportation units and facilities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when cleaning transportation units and facilities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when cleaning transportation units and facilities in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when cleaning transportation units and facilities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and safely use relevant equipment and materials when cleaning transportation units and facilities
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select, mix and apply appropriate cleaning materials
- Handle and store hazardous substances and materials

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:
- a range of work environments
- by day or night

Transportation units may include:
- rail carriages, buses, coaches, ferries and other transport units
Cleaning equipment may include:

- vacuum cleaner
- steam cleaners
- mop and bucket
- polisher
- broom
- hose
- shampoo unit
- hovel
- specialised cleaning unit
- remote controlled cleaning unit
- special containers for syringes

Reporting may include:

- verbal communication
- written communication

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances

Facilities could include:

- hard floor (internal)
- soft floor
- ceiling surfaces and fittings
- external surfaces
- hard floor (external)
- glass surfaces
- internal surfaces
- furniture and fittings
- seats
- hard surfaces (e.g. metal, tiled)

Transportation units may include:

- passenger vehicles/carriages/vessels owned leased or hired for which the organisation is responsible for cleaning

Facilities may include:

- any premises owned, leased or hired and used by the transport system's internal and external customers

Chemicals include:

- all types of active and passive materials/agents used for cleaning within the organisation's transportation units and facilities

Hazardous waste includes:

- all materials/agents/items/objects that are identified under the relevant acts, regulations or codes
Equipment used to cordon off areas may include:
- portable barriers
- gate closure
- witches hats
- designated tape

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- high visibility clothing

Consultative processes may involve:
- other workplace personnel, supervisors and managers

Communication in the work area may include:
- phone
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and policies for the cleaning of transportation units and facilities for passenger use
- work instructions, inspection reports, works orders, job description, and induction materials
- manufacturers specifications for equipment/materials
- relevant OH&S and environmental protection requirements and policies
- relevant codes of practice including the National Standards for Manual Handling, the Industry Safety Code and the ADG Code
- relevant health and hygiene legislation, regulations and related documentation
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the cleaning of transportation units and facilities for passenger use, including health and hygiene regulations and the ADG Code
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at
the registered training organisation, and/or
0 in an appropriate range of situations in the workplace
TLIB2607B  Prepare for train operation

Unit Descriptor
This unit involves the skills and knowledge required to prepare for train operation in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes implementing the prescribed pre-departure checks and confirming the required train documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to prepare for train operation as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Implement pre-departure checks
1.1 Motive power control systems are set-up and checked in accordance with workplace policies and procedures
1.2 Required checks and relevant procedures and standards are identified
1.3 Train, or relevant portion of the train, is checked to ensure that rolling stock is coupled and sequenced correctly
1.4 Train braking systems are applied and released to ensure they are operating effectively
1.5 Visual inspection is conducted to identify any obvious defects that would prevent safe transit
1.6 Faults are identified and appropriate corrective action is taken to ensure operational safety with minimum delay to planned running schedule
1.7 Relevant OH&S requirements are followed to prevent injury and damage

2 Confirm train documentation
2.1 Relevant personnel are promptly advised of the result of checks completed
2.2 Purpose of the journey and activities to be undertaken, are
identified

2.3 Constraints and special instructions that may apply for the journey are identified

2.4 Documentation is read to identify and confirm consist, attach / detach information, loading information and characteristics of the train including compliance with relevant regulatory and ADG Code requirements

2.5 Authority to proceed relevant to the operational situation is obtained and followed

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Procedures for preparing a train for operation
- Set-up procedures for equipment used in the control of trains
- Train testing procedures
- Train preparation documentation procedures
- Communication procedures and protocols
- Maintenance and servicing procedures
- Procedures to be followed in the event of an emergency
- Train coupling equipment and methods
- Safeworking systems and requirements
- Safeworking in electrified areas
- Train characteristics and specifications
- ADG Code and other dangerous goods regulations
- Contingency management processes for unexpected events

Required skills:
- Communicate effectively with others when preparing a train for operation
- Read and interpret instructions, procedures, information and signs relevant to preparing a train for operation
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the preparation of a train for operation
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when preparing a train for operation
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when preparing a train for operation in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when preparing a train for operation
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of train and equipment
• Set up and check train control systems
• Test air continuity and braking systems

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted:
• by day or night
• in all relevant weather conditions

Motive power units may include: all motive power units in service within Australian rail systems and may include:
• diesel locomotives
• electric locomotives
• railcars
• multiple units (including electric multiple units)

Rolling stock may include:
• all rolling stock in service within Australian rail systems including both passenger cars and freight rolling stock
• correct coupling and sequencing of train requires that couplings are locked in place and flexible connections between rolling stock are made
• positioning and set-up of remote control equipment is correct
• the separation of dangerous goods complies with ADG Code and regulatory requirements
Visual inspections may include checking:
- wheels and braking equipment for signs of wear or damage
- flexible connections and fittings for signs of wear or damage
- couplings for signs of wear or damage
- fuel, oil, water and coolant
- air system for leaks
- electrical equipment
- pantographs
- emergency and safety equipment such as vigilance control and deadman relays

Relevant personnel can include:
- maintenance personnel
- yard, station and other operational personnel
- train controllers and signalers
- train crews
- depot coordinators
- hand-over crew

Communication methods may include:
- written, including signed communications, lists and forms
- verbal
- line-of-sight signals
- radio

Safety and protective equipment may include:
- high visibility clothing
- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- portable radios
- hand lamps
- flags
- safety devices
- hearing protection

Dependent of the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network
- workplace procedures and instructions and job specification
- induction and training materials
- train consists
- train notices
- out-of-gauge notices
- dangerous goods manifests
- brake certification
- load/passenger manifests
- OH&S and environmental protection legislation, codes of practice, policies and procedures
- maintenance specifications
- local instructions
- two-way radio operation procedures
- emergency procedure manuals
- manufacturers specifications
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where train is to operate on that network
- relevant Australian standards
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB2707B Set up and shut down on-train remote control system

Unit Descriptor: This unit involves the skills and knowledge required to set up and shut down on-train remote control system in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes setting up the remote control system, setting up the lead control system, and shutting down the remote control equipment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills: This unit contains employability skills.

Application of the Unit: Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the setting up and shutting down of the on-train remote control system as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field: B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Set up remote control system

1.1 Remote control system components are set up in accordance with operational plans and manufacturers instructions

1.2 Remote motive power units are placed in required operating mode

1.3 Communication code is entered and air and electrical systems are activated

1.4 Brake and traction systems are tested using approved personnel to ensure correct operation

2 Set up lead control system

2.1 Cab console is checked, electrical systems are activated and the system self-test is confirmed

2.2 Communication code is entered and confirmation obtained that system has entered link mode

2.3 Full control is obtained and brake tests are conducted, using lead control equipment, to ensure correct braking is operational
2.4 Procedures to establish total control are repeated where necessary
2.5 Train is moved using the full range of tests to ensure operational safety and control

3 Shut down remote control equipment

3.1 Shut-down procedures of lead and remote control equipment are followed to ensure train security and de-activation of the system
3.2 Equipment indicators or functions are operated to ensure the shut-down process is correct and complete

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
• Relevant OH&S and environmental procedures and regulations
• Controls, instruments and indicators of an on-train remote control unit and their purpose, location and use
• Procedures for the operation of remote control units
• Set-up and shut-down procedures
• Braking and safety system procedures
• Procedures for the control of motive power units
• Procedures for managing hazardous situations involving on-train remote control systems
• Procedures for identifying equipment defects in remote control units and assessing any identified defective units for appropriate action
• Critical on-train remote control information including compatible coupling, braking and drive equipment, ancillary systems, and signalling systems

Required skills:
• Communicate effectively with others when setting up and shutting down on-train remote control systems
• Read and interpret instructions, procedures, information and signs relevant to the setting up and shutting down of on-train remote control systems
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the setting up and shutting down of on-train remote control systems
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when setting up and shutting down on-train remote control systems
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when setting up and shutting down on-train remote control systems in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment
- Judge speeds and movements when operating unit over short distances

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations conducted:**
- by day or night
- in all relevant weather conditions

**On-train remote control equipment may be:**
- any mechanism and operating system to allow the control of one motive power unit which is part of a train from another unit which is part of the same train

**Motive power units may include all motive power units in service within Australian rail systems and may include:**
- diesel locomotives
- electric locomotives
- railcars
- multiple units (including electric multiple units)
- non-operational units

**Remote control operation may be used:**
- within a yard for the purpose of marshalling or shunting or on running lines
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and instructions and job specifications
- induction and training materials
- relevant log or record books
- maintenance specifications, notices, records and requests
- local instructions
- equipment operation manuals
- operational instructions, policies and procedures
- emergency procedure manuals
- two-way radio operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIB2807B  Maintain and use hand tools

Unit Descriptor
This unit involves the skills and knowledge required to maintain and use hand tools in accordance with workplace requirements, including selecting and using hand tools to complete workplace tasks, maintaining basic hand tools in accordance with manufacturers instructions, and securing and storing hand tools in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace procedures and safeworking codes relevant to the maintenance and use of hand tools.

Work is performed under some supervision, generally within a team environment.

Work involves the application of routine procedures to maintain and use hand tools across a variety of operational workplace contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Select and use hand tools
1.1 Correct tools for work to be carried out are chosen to complete workplace tasks and to ensure efficient and safe working conditions
1.2 Appropriate personal safety protection is used to minimise the risk of personal injury

2 Maintain hand tools
2.1 Equipment is cleaned and maintained in accordance with manufacturers specifications and/or local instructions to ensure correct functionality of equipment
2.2 Any unserviceable tools are repaired, replaced or reported to relevant personnel to ensure correct functionality

3 Secure and store hand tools
3.1 Tools are transported in a safe, secure, efficient manner to minimise risk of injury to personnel and damage to equipment
3.2 Tools are stored and secured according to manufacturers or workplace procedures to prevent damage to, and losses of, equipment
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of state/territory regulations, codes of practice and safeworking system requirements
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures and policies for the use and maintenance of hand tools
- Problems that can occur when using and maintaining hand tools and related action that should be taken
- Materials used when using and maintaining hand tools and the procedures and precautions for their care, use and storage
- Workplace documentation and records requirements
- Procedures to be followed in the event of an emergency
- Workplace component and material supply system

Required skills:
- Communicate effectively with others when maintaining and using hand tools
- Read and interpret instructions, procedures, information and signs relevant to the maintenance and use of hand tools
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the use and maintenance of hand tools
- Operate electronic communication equipment to required protocols
- Work both individually and collaboratively with others when maintaining and using hand tools
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when maintaining and using hand tools in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Identify, select and efficiently and effectively use relevant hand tools and related materials
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Hand tools may include: • those required for operations and maintenance

Operations may be carried out in typical rail transport situations, including:
• operations conducted at day or night
• typical weather conditions
• in confined spaces, exposed conditions and controlled or open environment

Materials may include:
• servicing materials such as lubricants
• related materials and consumables needed when using tools, e.g. nails, screws, grease, etc.

Safety equipment may include:
• high visibility clothing
• sunscreen and sun glasses
• insect repellent
• gloves, safety headwear, mask and footwear
• portable radios
• flags and hand lamps
• safety glasses and hearing protection
• safety devices

Environmental hazards may include:
• leaking oil and fuel
• inappropriate disposal of fluids in drains or sewerage systems
• inappropriate disposal of waste and rubbish

Consultative processes may involve:
• workplace personnel
• supervisors and managers
• customers/clients
• equipment manufacturers representatives and contractors
• union representatives
• industrial relations and OH&S specialists
• other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established or standard procedures

Contingency processes may relate to:
• personal injury
• tool malfunctions
Operators of mechanised equipment must have:

- undertaken training
- where appropriate, hold the relevant licence, permit or certificate
- be recognised as competent for the class of machinery being used

Information/records may include:

- workplace operational and technical instructions and procedures for the use and care of hand tools
- relevant regulations including state/territory safety codes of practice and safeworking regulations
- maintenance checklists and records for the use and servicing of tools
- tool/equipment manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when using and maintaining hand tools
- OH&S procedures
- QA plans and procedures
- data and document control procedures
- relevant Australian standards and certification requirements
- emergency procedures
- award, enterprise bargaining agreement, other industrial arrangements

Applicable regulations and legislation may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
unit requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB2907B Use and maintain minor mechanical equipment

Unit Descriptor
This unit involves the skills and knowledge required to use and maintain minor mechanical equipment in accordance with workplace requirements, including carrying out pre-operation checks on equipment, operating mechanical equipment in accordance with workplace requirements, conducting routine maintenance, and securing and storing equipment in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with workplace procedures and the regulations and safeworking codes of practice relevant to the use and maintenance of minor mechanical equipment.

Work is performed under some supervision, generally within a team environment. It involves the application of routine procedures to use and maintain minor mechanical equipment across a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Carry out pre-operation checks
1.1 Pre-operational checks are conducted to manufacturers specifications to ensure optimum functionality of equipment
1.2 Necessary adjustments to equipment are made to ensure efficient operation, according to manufacturers instructions
1.3 Faulty equipment is reported to relevant person to ensure equipment is safe and effective to use

2 Operate mechanical equipment
2.1 Equipment is operated in accordance with manufacturers or workplace operating instructions to ensure safe and effective operation
2.2 Appropriate personal safety protection is used to minimise the risk of injury to operator
2.3 Work operational hazards are eliminated or controlled appropriately when using equipment to ensure safeworking conditions
2.4 Assisting personnel are given clear instructions about their duties if required to ensure safe and effective working conditions
3 Conduct routine maintenance

3.1 Equipment is cleaned and maintained in accordance with manufacturers specifications to ensure optimum functionality

3.2 Detailed and accurate records are maintained according to workplace procedures

4 Secure and store

4.1 Equipment is handled and transported in a safe, secure, efficient manner to minimise risk of injury to personnel and damage to equipment

4.2 Equipment is stored and secured according to manufacturers or workplace procedures to prevent damage and losses of equipment

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of state and territory codes of practice and safeworking system requirements including the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures and policies for the use and maintenance of minor mechanical equipment
- Problems that can occur when using and maintaining minor mechanical equipment and related action that should be taken
- Tools and equipment used when using and maintaining minor mechanical equipment and the procedures and precautions for their care, use and storage
- Workplace documentation and records requirements
- Procedures to be followed in the event of an emergency
- Workplace component and material supply system

Required skills:

- Communicate effectively with others when using and maintaining minor mechanical equipment
- Read and interpret instructions, procedures, information and signs relevant to using and maintaining minor mechanical equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to using and maintaining minor mechanical equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when using and maintaining minor mechanical equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when using and maintaining minor mechanical equipment in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify, select and efficiently and effectively use relevant tools and equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment may include:
• mechanical handling/lifting equipment
• basic hand tools
• small plant such as motorised borers and saws

Operations may be carried out in typical transport situations, including:
• operations conducted at day or night
• typical weather conditions
• in confined spaces, exposed conditions and controlled or open environment

Materials may include:
• servicing materials such as lubricants
• related materials and consumables needed when using tools, e.g. nails, screws, grease, etc.

Safety equipment may include:
• high visibility clothing
• sunscreen and sun glasses
• insect repellent
• gloves, safety headwear, mask and footwear
• portable radios
• flags and hand lamps
• safety glasses and hearing protection
• safety devices
Environmental hazards may include:
- leaking oil and fuel
- inappropriate disposal of fluids in drains or sewerage systems
- inappropriate disposal of waste and rubbish

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- equipment manufacturers representatives and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Contingency processes may relate to:
- personal injury
- tool malfunctions

Operators of mechanised equipment must have:
- undertaken training
- where appropriate, hold the relevant licence, permit or certificate
- be recognised as competent for the class of machinery being used
Information/records may include:

- workplace operational and technical instructions and procedures for the use and maintenance of minor mechanical equipment
- relevant regulations including state/territory safety codes of practice and safeworking regulations
- maintenance checklists and records for the use and maintenance of minor mechanical equipment
- tool/equipment manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when use and maintaining minor mechanical equipment
- OH&S procedures
- QA plans and procedures
- data and document control procedures
- relevant Australian standards and certification requirements
- emergency procedures
- award, enterprise bargaining agreement, other industrial arrangements

Applicable regulations and legislation may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB3007B   Undertake general site maintenance

Unit Descriptor
This unit involves the skills and knowledge required to undertake general site housekeeping and maintenance in depots, sub-depots, factories, compounds, campsites, etc. in accordance with safeworking and regulatory requirements and workplace procedures. It includes preparing for the work, conducting site housekeeping functions, applying pest and vegetation control measures, and completing all work requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant requirements of the codes of practice and safeworking requirements and regulations of the states/territories concerned, including the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to general site maintenance carried out as part of workplace activities across a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for work

1.1 Works order including drawings, sketches and material lists is received/accessed, analysed and confirmed if necessary by site inspection

1.2 Resources, including equipment and materials, are identified and obtained

1.3 Liaison and communication issues with other personnel at the site are resolved

1.4 Hazards are identified prior to commencement of work

1.5 Site safety requirements are observed

2 Conduct site housekeeping functions

2.1 Stores, materials and equipment are loaded/off-loaded safely and secured

2.2 Site, including stores and materials, is laid out to plan

2.3 Stores and materials are checked for serviceability, cleaned as necessary and prepared for use
2.4 Minor earthwork maintenance is conducted
2.5 Excess materials and refuse are disposed of/returned as required by workplace procedures

3 Apply pest and vegetation control measures
   3.1 Pest and vegetation control requirements are identified and appropriate control measure is selected and authorised by the appropriate person
   3.2 Chemical control agents are prepared in accordance with safety requirements and workplace procedures
   3.3 Pest control measures are applied, monitored and varied to maintain effectiveness
   3.4 Control measures are applied and pests and vegetation removed/neutralised

4 Complete the work
   4.1 Worksite is rehabilitated
   4.2 Work completion details are finalised and recorded/advised to appropriate personnel

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of applicable regulatory requirements
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for general site maintenance
- Problems that may occur during site maintenance activities and action that can be taken to report or resolve the problems
- Hazards that may exist during site maintenance activities and ways of controlling the risks involved
- Contents of workplace technical manuals and instructions relating to the work activities concerned
- Characteristics of plant and equipment, transport, structures, hardware and electrical components used in work activities
- Impact on work activities of regulatory requirements
- Workplace documentation and records system management related to the work concerned
- Hazardous chemicals used in general site maintenance and related precautions and personal protection measures
- Relevant recording and documentation procedures

Required skills:
- Communicate effectively with others when carrying out general site maintenance
- Read and interpret instructions, procedures, information, labels and signs relevant to general site maintenance
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to general site maintenance
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when carrying out general site maintenance in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when carrying out general site maintenance
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify and organise resources required for work activities
- Use hand tools and minor plant
- Work at heights and in confined spaces

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted by day or night in all relevant weather conditions and may involve working:

- from a vehicle/platform
- from a ladder
- from an elevating work platform
- from a tree
- on the ground

Stores, materials and equipment may include:

- those required for erection, maintenance and servicing functions

Minor earthworks may include:

- restoration of backfill to complete excavations
- pole and structure foundations
- basic drainage
| Vegetation control measures may include: | • hand clearing  
| | • growth retardants  
| | • machinery assisted cleaning  
| | • herbicidal cleaning  
| | • fire cleaning  
| Pest control measures may include: | • seals  
| | • chemicals  
| | • baits  
| | • traps  
| | • sprays  
| Communication equipment may include: | • two-way radios, and/or  
| | • telephones  
| Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: | • company procedures  
| | • enterprise procedures  
| | • organisational procedures  
| | • established procedures  
| Safety and protective equipment may include: | • high visibility clothing  
| | • hearing protection  
| | • gloves  
| | • sunscreen  
| | • sunglasses  
| | • safety glasses  
| | • insect repellent  
| | • safety headwear  
| | • safety footwear  
| | • portable radios  
| | • hand lamps  
| | • flags  
| | • safety devices |
Information/documents may include:

- relevant state/territory codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network
- operational instructions, policies and workplace procedures
- relevant logs or record books
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIB307C  Carry out vehicle servicing and maintenance

Unit Descriptor
This unit involves the skills and knowledge required to carry out basic servicing and maintenance of a commercial vehicle, including action to implement vehicle manufacturers specifications for routine checks and maintenance and to ensure that all specified safety requirements are met, and that the vehicle is operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations of the relevant roads and traffic authority.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine vehicle checking and maintenance principles and procedures to service and maintain a commercial vehicle across a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Maintain and service the vehicle systems

1.1 Fluid levels are checked and adjusted following manufacturers specifications and workplace procedures

1.2 Air levels are checked and adjusted following manufacturers specifications and workplace procedures

1.3 Routine checks are made of vehicle systems and appropriate action is initiated for maintenance where required in accordance with workplace procedures

1.4 Appropriate precautions and procedures are followed when servicing/maintaining a vehicle to ensure adequate protection of the environment

1.5 OH&S procedures are followed when carrying out routine servicing and maintenance of a vehicle

2 Carry out minor repairs to a vehicle

2.1 Vehicle components are removed, repaired or replaced and refitted to the vehicle using the correct tools and following manufacturers instructions and workplace procedures

2.2 Tyres on vehicle are repaired or replaced following workplace procedures and manufacturers instructions
2.3 Worn brakes are identified and action taken in accordance with workplace procedures and manufacturers specifications
2.4 The need for more complex maintenance procedures is identified and the problem correctly referred following workplace procedures

3 Diagnose minor vehicle faults and undertake repairs for the safe operation of a vehicle

3.1 Minor faults in the vehicle systems are identified, diagnosed and repaired following manufacturers specifications and workplace procedures
3.2 Identified faults which create a safety hazard are reported and appropriate action is taken to remove the vehicle from operation pending repair

4 Complete documentation

4.1 Records of routine servicing, maintenance and repairs are kept in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant 'duty of care' requirements for the routine servicing and maintenance of vehicles
- Relevant OH&S and pollution control procedures
- Procedures for the checking and routine service and maintenance of a commercial vehicle in accordance with workplace and the manufacturer's requirements and established safety rules and regulations
- Problems that may occur during the routine servicing and maintenance of a vehicle and appropriate action and solutions
- Recognition and diagnosis of faults and vehicle irregularities
- Basic principles of operation of systems on commercial vehicles, including: electrical systems, fuel systems, cooling systems, steering systems, exhaust systems, tyres and brakes
- Basic fault finding procedures required during routine servicing and maintenance of vehicles
- Procedures required to minimise waste during routine servicing and maintenance
- Housekeeping standards required for routine servicing and maintenance
- Procedures for the use and maintenance of the materials, tools and parts required for routine servicing and maintenance
- Reporting and documentation requirements

Required skills:
- Communicate effectively with others when carrying out vehicle servicing and maintenance
- Read and interpret instructions, procedures, information and signs relevant to vehicle servicing and maintenance
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to vehicle servicing and maintenance
• Operate electronic communication equipment to required protocol
• Work collaboratively with others
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions identified when carrying out vehicle servicing and maintenance in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during vehicle servicing and maintenance
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to vehicle or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of vehicle servicing and maintenance

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Maintenance may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- in tight or confined spaces, exposed conditions and controlled or open environments
- while in a depot, base or warehouse
- while in the vehicle on the road
- while at a client's workplace

Type of vehicle may include any commercial road transport vehicle including:

- light vehicle
- heavy vehicle
- combination vehicle
Maintenance checks may include:

- routine inspections of vehicle systems
- checks prior to operations
- checks on completion of operations
- checks on completion of maintenance activities

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Minor routine servicing may include:

- topping-up of water levels
- replacement of oils
- replacement of air in tyres

Environmental hazards may include:

- leaking oil and fuel
- defective or inappropriately adjusted exhaust systems
- inappropriate disposal of vehicle fluids in drains or sewerage systems

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/records may include:

- workplace routine servicing and maintenance procedures, checklists and instructions
- relevant state/territory roads and traffic authority vehicle maintenance regulations
- maintenance checklists and records
- vehicle manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when servicing and maintaining vehicles
- OH&S procedures to be followed when servicing and maintaining vehicles
Applicable regulations and legislation may include:

- relevant state/territory roads and traffic authority vehicle maintenance regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIB3107B**  
**Clean up plant, equipment and worksite**

**Unit Descriptor**  
This unit involves the skills and knowledge required to clean up plant, equipment and worksite in accordance with safeworking and regulatory requirements and workplace procedures, including planning and preparing work, arranging the clear up and disposal/reclamation of material, operating cleaning equipment and mobile plant, finalising the work and restoring the site. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the cleaning up of plant, equipment and worksites as part of workplace activities across a variety of operational contexts within the Australian rail system.

**Competency Field**  
B – Equipment Checking & Maintenance

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Plan and prepare work**

1.1 Details of cleaning requirements are identified by instructions, inspections, work orders and schedules

1.2 Materials and equipment are identified and obtained

1.3 Relevant legislative, statutory and workplace requirements and standards are identified, applied and monitored throughout the work procedure

1.4 Environmental regulatory requirements are identified to ensure site is left in an environmentally sound condition

1.5 Required materials to be removed and methods of removal are identified to facilitate clean up

2 **Arrange clear up and disposal/reclamation of material**

2.1 Storage/disposal areas and quarantine zones are identified and arranged to ensure environmentally sound disposal

2.2 Reclaimed material is removed to storage areas using appropriate methods

2.3 Non-required materials/services are removed and disposed of in appropriate manner to ensure clean and environmentally stable site
2.4 Site is inspected for overlooked materials to minimise wastage and losses

3 Operate cleaning equipment and mobile plant

3.1 Cleaning and mobile plant is operated to site/manufacturers requirements.
3.2 Operator maintenance is performed to manufacturers/site standards
3.3 Cleaning equipment is cleaned and stored

4 Finalise work and restore site

4.1 Drainage is established/restored as necessary to ensure well drained site
4.2 Re-vegetation/environmental repair is arranged if required to return site to environmentally sound condition
4.3 Barriers are removed or checked for integrity to ensure access to correct areas
4.4 Access roads are closed if required to prevent unauthorised access to closed site
4.5 Site is left in suitable level and surface condition to ensure environmentally sound, safe and clean site

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the cleaning up of plant, equipment and worksites
- Problems that may occur during the cleaning up of plant, equipment and worksites and action that can be taken to report or resolve the problems
- Hazards that may exist when cleaning up plant, equipment and worksites and ways of controlling the risks involved
- Permit to work system where applicable
- Applications and characteristics of plant and equipment
- Cleaning agents/sealants and their properties and precautions for their use
- Cleaning equipment and related materials and their applications
- Plant and equipment cleaning procedures and instructions
- Relevant recording and documentation requirements
- Manufacturers instructions for the servicing and cleaning of equipment

Required skills:
- Communicate effectively with others when cleaning up plant, equipment and worksites
• Read and interpret instructions, procedures, information and signs relevant to the cleaning up of plant, equipment and worksites
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the cleaning up of plant, equipment and worksites
• Operate electronic communication equipment to required protocol
• Work collaboratively with others
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may arise when cleaning up plant, equipment and worksites
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment and sites in accordance with standard operating procedures
• Use hand and power tools
• Apply cleaning agents, sealants and chemicals
• Handle hazardous materials
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Level and re-vegetate sites
• Identify and reclaim salvageable materials
• Identify and remove water/waste/surplus materials
• Operate and maintain relevant mobile plant and mobile plant equipment
• Apply cleaning agents, sealants and chemicals
• Use barriers correctly

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

• by day or night
• in all relevant weather conditions
Materials may include:

- all purpose garden sprays
- floor stripper
- floor polish
- floor cleaner
- disinfectant
- degreaser
- bleach
- petrochemicals

Tools may include:

- gardening implements
- cleaning tools
- hand tools

Cleaning equipment may include:

- hoses
- lances
- pneumatic tube hones
- high speed polishers
- vacuum cleaners
- steam cleaners
- brooms
- buckets
- mops
- shovels
- duster
- internal combustion driven vacuum cleaner

Cleaning operations may also include:

- water lancing
- internal boiler washing

Communication methods may include:

- written
- verbal
- radio

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Safety and protective equipment may include:

- high visibility clothing
- hearing protection and gloves
- sunscreen
- sunglasses and safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Disposal of material may involve:

- the use of a quarantine zone in accordance with environmental regulations and requirements

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- relevant logs or record books
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- environmental regulations and associated requirements
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB3407B Maintain poles and associated hardware

Unit Descriptor
This unit involves the skills and knowledge required to maintain poles and associated hardware in accordance with safeworking and regulatory requirements and workplace procedures, including planning for the maintenance of poles and associated hardware, preparing the worksite, conducting the maintenance of poles and associated hardware, and completing all of the work requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the maintenance of poles and associated hardware as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan for maintenance of poles and associated hardware
1.1 Works order is received/accessed, analysed and confirmed, if necessary by site inspection
1.2 Resources required for the job are identified and scheduled
1.3 Replacement or additional poles, associated hardware and plant/equipment are transported to the worksite
1.4 Liaison and communication issues are resolved

2 Prepare the worksite
2.1 Personnel participating in task, including plant operators and contractors, are fully briefed
2.2 Road signs, barriers and warning devices are positioned, and worksite protection is provided
2.3 Safeworking practices are observed on or about the running line/track
2.4 Replacement or additional poles and associated hardware are placed in planned assembly and/or pre-lift location
2.5 Excavation/foundation is inspected and confirmed as being in accordance with the works order or specification
3 Conduct maintenance of poles and associated hardware

3.1 Actual maintenance requirement is confirmed by site inspection
3.2 Pole and associated hardware to be maintained is stabilised if necessary
3.3 Maintenance of pole and associated hardware is carried out in accordance with the work order and workplace standing requirements

4 Complete the work

4.1 Worksite is rehabilitated, and work is completed in an agreed time and with minimum waste
4.2 System data and pole records are updated according to workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including OH&S instructions related to pole erection, site safety and rescue techniques
- Workplace procedures for the maintenance of poles and associated hardware
- Hazards that may exist when maintaining poles and associated hardware and ways of controlling the risks involved
- Mechanical principles related to structures
- Pole maintenance techniques and processes
- Characteristics, capabilities, uses, limitations and location standards of the types of poles
- Switching or de-energising procedures during maintenance operations
- Workplace technical manuals and instructions which relate to the assembly, erection and lift/transfer of poles and association hardware
- Pole treatment chemicals and HAZCHEM requirements
- Soil types and stabilisation processes
- Responsibilities in relation to other authorities, clients and land-owners
- Regulations for rigging, traffic control and guidance signals
- Documentation and records systems related to pole management
- Procedures for identifying and using support plant and equipment

Required skills:
- Communicate effectively with others when maintaining poles and associated hardware
- Read and interpret instructions, procedures, information and signs relevant to the maintenance of poles and associated hardware
- Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when maintaining poles and associated hardware
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when maintaining poles and associated hardware in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Adapt to differences in tools and equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Perform basic welding and oxy cutting
• Guide, by convention and signals, operators of plant/equipment during lift/transfer operations
• Operate minor plant and equipment
• Use hand tools
• Rig/sling loads for lifting

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all relevant weather conditions

Work may be conducted: • in restricted spaces or exposed conditions
• in controlled or open environments

Work may involve exposure to: • chemicals
• dangerous or hazardous substances
• movements of equipment, materials and vehicles

Pole types may include: • wood
• concrete
• steel
• composite
Associated hardware may include:
- insulators
- crossarms
- stays
- earth down leads and bond wires
- crossarm braces
- pole steps
- shackle straps
- associated bolts and clamps

Maintenance requirements may be obtained from:
- site inspection
- works orders
- workplace personnel
- client requests

Maintenance may include:
- removal, repair and replacement of poles
- welding
- chemical treatment
- pole staking and rebutting
- repair and cleaning of associated hardware
- servicing
- reinstatement

Pole stabilisation techniques may include:
- back-fill consolidation
- concreting
- baulking
- reinforcement nailing
- approved steel reinforcing
- temporary and permanent staywires

Methods of erection may include:
- crane
- auger/erector
- winch A frame

Works orders may include:
- drawings
- plans
- resource and materials lists

Resources may include:
- personnel
- plant
- equipment
- transport
Liaison may involve:

- clients
- authorities
- landowners
- personnel

Communication equipment may include:

- two-way radio, and/or
- telephones

Information may be provided:

- electronically
- in writing, via forms/documents
- orally, via face-to-face communications

Safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant log or record book
- maintenance notices, records and requests
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio operation procedures
- emergency procedures manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
• access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB4007B Inspect poles and associated hardware

Unit Descriptor
This unit involves the skills and knowledge required to inspect poles and associated hardware in accordance with safeworking and regulatory requirements and workplace procedures, including planning and preparing for the inspection, conducting the inspection of the poles and associated hardware, and completing the inspection in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the inspection of poles and associated hardware as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan and prepare for inspection
1.1 Inspection program or works order is received/accessed, analysed and confirmed, if necessary by site inspection
1.2 Resources required for the job are identified and scheduled
1.3 Liaison and communication issues are resolved
1.4 Personnel participating in task, including plant operators and contractors, are fully briefed

2 Conduct inspection of poles and associated hardware
2.1 Worksite requirements are confirmed and hazards identified by site inspection
2.2 Road signs, barriers and warning devices are positioned, and worksite protection is provided
2.3 Safeworking practices are observed on or about the running line/track
2.4 Pole structures, including foundations and hardware, are inspected by test or examination against approved specifications

3 Complete the
3.1 Worksite is rehabilitated, and work is completed in an agreed
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations, including OH&S instructions related to pole erection, site safety and rescue techniques
- Workplace procedures for the inspection of poles and associated hardware
- Problems that may occur during the inspection of poles and associated hardware, and action that can be taken to report or resolve the problems
- Hazards that may exist when inspecting poles and associated hardware and ways of controlling the risks involved
- Workplace and commercial technical manuals, publications and instructions which relate to pole quality and chemical treatment
- Characteristics, capabilities, uses, limitations and location standards of the types of poles
- Mechanical principles related to structures
- Pole maintenance techniques and processes
- Soil types and stabilisation processes
- Diagnostic and fault finding techniques relevant to the inspection of poles and associated hardware
- Regulatory and workplace requirements for rigging, traffic control and guidance signals for planned operations
- Workplace documentation and records systems related to pole management
- Procedures for the use of relevant support plant and equipment

Required skills:

- Communicate effectively with others when inspecting poles and associated hardware
- Communicate plans, intentions and safety criteria to others
- Read and interpret technical instructions and manuals, procedures, information and signs relevant to the inspection of poles and associated hardware
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the inspection of poles and associated hardware
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when inspecting poles and associated hardware
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when inspecting poles and associated hardware in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when inspecting poles and associated hardware
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use appropriate pole testing equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Use hand tools
• Operate relevant minor plant and equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all relevant weather conditions

Work may be conducted in: • restricted spaces or exposed conditions
• controlled or open environments

Work may involve exposure to: • chemicals, dangerous or hazardous substances
• movements of equipment, materials and vehicles

Pole types may include: • wood
• concrete
• steel
• composite
## Associated hardware may include:
- insulators
- crossarms
- stays
- earth down leads and bond wires
- crossarm braces
- pole steps
- shackle straps
- associated bolts and clamps

## Maintenance requirements may be obtained from:
- site inspection
- works orders
- workplace personnel
- client requests

## Inspection/testing devices may include:
- electronic data capture devices
- computers
- sonic testing devices
- shigometer
- X-ray
- CAT-scanner
- proof load tester
- drills

## Works orders may include:
- drawings
- plans
- resource and materials lists.
- materials lists

## Resources may include:
- personnel
- plant
- equipment
- transport

## Liaison may involve:
- clients
- authorities
- landowners
- personnel

## Communication equipment may include:
- two-way radios
- telephones
Information may be provided:
- electronically
- in writing, via forms/documents
- orally, via face-to-face communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant log or record book
- maintenance notices, records and requests
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIB407C**  
**Carry out vehicle inspection**

**Unit Descriptor**  
This unit involves the skills and knowledge required to carry out an inspection of a commercial vehicle, including action to implement vehicle manufacturers specifications for routine checks, to clean the vehicle, and to ensure that all specified safety requirements are met and that the vehicle is operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Work must be carried out in compliance with the regulations of the relevant roads and traffic authority concerned with the inspection of commercial vehicles.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine inspection principles and procedures to check the safety and operation of a commercial vehicle across a variety of operational contexts.

**Competency Field**  
B – Equipment Checking & Maintenance

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Check the vehicle**

   1.1 A visual check of the internal and external condition of the vehicle is carried out following workplace procedures

   1.2 Pre-operational inspections and checks of the vehicle's tyres, suspension, fluid levels and other critical features are carried out to ensure conformance with the requirements of the relevant roads and traffic authority

   1.3 Associated equipment is tested to ensure it functions correctly to manufacturers specifications

   1.4 Post start-up and shut-down checks are carried out after engine is started to identify possible engine or electrical problems

   1.5 Warning systems (instruments and gauges) are checked to ensure they are operational

   1.6 Where relevant, vehicle monitoring device is logged on/off in accordance with manufacturers instructions and workplace policy

2 **Clean vehicle**

   2.1 Vehicle and associated equipment is cleaned in accordance with workplace procedures and legislation
3 Complete documentation

3.1 Basic faults are identified and/or diagnosed and appropriate action is taken to report or remedy them as required by workplace procedures and legislation

3.2 Records of inspection are updated and recommended repairs are documented in accordance with workplace polices

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant duty of care requirements for the routine inspection of vehicles
- Relevant OH&S and pollution control procedures
- Procedures for the routine inspection of a commercial vehicle in accordance with workplace and manufacturers requirements and established safety rules and regulations, including pre-operational checking procedures, visual inspection procedures and warning systems checking procedures
- Problems that may occur during the routine inspection of a vehicle and appropriate actions and solutions
- Basic principles of operation of systems on commercial vehicles, including electrical systems, fuel systems, cooling systems, steering systems, exhaust systems, tyres, brakes
- Reporting and documentation requirements

Required skills:

- Communicate effectively with others during the routine inspection of a vehicle
- Read and interpret instructions, procedures, information and manuals relevant to the routine inspection of a vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the routine inspection of a vehicle
- Operate electronic communication equipment to required protocol
- Work collaboratively with others during the routine inspection of a vehicle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that are identified during the routine inspection of a vehicle in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur during the routine inspection of a vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Use cleaning equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Maintenance may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• in confined spaces, exposed conditions and controlled or open environment
• while in the a depot, base or warehouse
• while in the vehicle on the road
• while at a client's workplace

Type of vehicle may include any commercial road transport vehicles including:
• light vehicles
• heavy vehicles
• combination vehicles

Inspection may include:
• visual checks of vehicle
• routine checks of vehicle systems
• checks in accordance with a detailed inspection schedule

Routine checks may include:
• water levels
• oil levels
• air pressure in tyres
• brakes
• lights
• condition of tyres
• battery
• exhaust system
• suspension

Environmental hazards may include:
• leaking oil and fuel
• defective or inappropriately adjusted exhaust systems
• inappropriate disposal of vehicle fluids in drains or sewerage systems
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/records may include:

- workplace routine inspection procedures, checklists and instructions
- relevant state/territory roads and traffic authority vehicle maintenance regulations
- vehicle manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when inspecting, servicing and maintaining vehicles
- OH&S procedures to be followed when inspecting vehicles

Applicable regulations and legislation may include:

- relevant state/territory roads and traffic authority vehicle maintenance regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

o relevant and appropriate materials and/or equipment, and/or
o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
**TLIB4207B**  
**Conduct inspection of safeworking procedures and infrastructure**

**Unit Descriptor**  
This unit involves the skills and knowledge required to conduct inspection of safeworking procedures and infrastructure in accordance with safeworking and regulatory requirements and workplace procedures, including planning and preparing for the inspection, inspecting the safeworking infrastructure, inspecting for compliance with safeworking procedures, and completing required reports and taking remedial action in accordance with workplace and regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of regulatory requirements and operational principles and procedures to conduct an inspection of safeworking procedures and infrastructure as part of workplace activities across a variety of operational contexts within the Australian rail system. Safeworking procedures and infrastructure inspected may include any of those in use within Australian rail system.

**Competency Field**  
B – Equipment Checking & Maintenance

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Plan and prepare for inspection**
   1.1 Inspection is planned for in accordance with workplace requirements
   1.2 Relevant instructions and information are gathered in preparation for inspection

2 **Inspect safeworking infrastructure**
   2.1 Safeworking equipment is inspected to ensure that it is located and operating correctly
   2.2 Safeworking facilities are checked for correct operation and maintenance

3 **Inspect for compliance of safeworking procedures**
   3.1 Safeworking forms are checked for sufficient supply and correct completion
   3.2 Work practices of relevant workers are checked to ensure
4 Complete reports and take remedial action

4.1 Reports are completed in accordance with workplace requirements
4.2 Where necessary, follow-up action is taken to ensure safe passage of train and equipment

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the inspection of safeworking procedures and infrastructure
- Problems that may occur during the inspection of safeworking procedures and infrastructure and action that can be taken to report or resolve the problems
- Hazards that may be identified during an inspection of safeworking procedures and infrastructure and ways of controlling the risks involved
- Safeworking system requirements/regulations
- Relevant Australian Standards, technical specifications and manuals
- Documentation/authorisation processes and procedures
- Material safety data sheets
- Hazardous situations associated with workplace activities and ways of controlling the risks involved
- Relevant records procedures
- Emergency procedures manuals
- Operational equipment manuals and operating instructions

Required skills:
- Communicate effectively with others when inspecting safeworking procedures and infrastructure
- Read and interpret instructions, procedures, information and signs relevant to the inspection of safeworking procedures and infrastructure
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the inspection of safeworking procedures and infrastructure
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when inspecting safeworking procedures and infrastructure
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems when inspecting safeworking procedures and infrastructure in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when inspecting safeworking procedures and infrastructure
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in situations and equipment in accordance with standard operating procedures
- Identify, select and use relevant office equipment required when inspecting safeworking procedures and infrastructure
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night
- in all relevant weather conditions

Work may be conducted in:  
- restricted spaces or exposed conditions
- controlled or open environments

Work may involve exposure to:  
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Conditions under which examination is undertaken may include:  
- full range of weather conditions
- full range of light conditions
- typical running temperatures of trains
Infrastructure to be inspected may include:

- telephones
- catchpoints
- scotchblocks
- rigid levers
- Annett keys
- trackwork and perway signs
- signals and marker plates
- station limit and station indicator boards
- warning bells, boomgates, flashlights, level crossing signage
- safeworking instruments

Facilities to be inspected may include:

- train order and pilot key sheds
- signal cabins/boxes

Relevant workers may include:

- workplace personnel
- contractors

Communication equipment may include:

- two-way radios
- computers
- telephones

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- working timetables
- track layouts
- signalling diagrams
- written advice
- inspection schedules
- reports
- maintenance notices, records and requests
- relevant Australian Standards
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIB4607B**  
**Service and clean mechanical signalling equipment and infrastructure**

**Unit Descriptor**  
This unit involves the skills and knowledge required to service and clean mechanical signalling equipment and infrastructure in accordance with safeworking and regulatory requirements and workplace procedures, including cleaning and servicing the equipment/infrastructure, and checking the operation and functionality of the equipment/infrastructure after cleaning. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the servicing and cleaning of mechanical infrastructure signalling equipment as part of workplace activities across a variety of operational contexts within the Australian rail system.

**Competency Field**  
B – Equipment Checking & Maintenance

**ELEMENT PERFORMANCE CRITERIA**  
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Clean and service equipment**

1.1 All necessary cleaning and servicing equipment, resources and consumables are confirmed ready for use

1.2 All rubbish, weeds and obstructions are removed from equipment and housings

1.3 Initial visual check of operational equipment is performed to identify any equipment faults

1.4 External surfaces are prepared/painted to organisations standards to protect the equipment

1.5 All internal surfaces and operational components are cleaned and lubricated to ensure operational effectiveness

1.6 All chemicals, lubricants and consumables are used and disposed of in compliance with material safety data sheets and OH&S Codes and Practices

2 **Check equipment operation**

2.1 Approval to conduct a check of equipment operation is obtained in accordance with relevant operational rules and
procedures

2.2 Track clearance check is made before conducting equipment operation check to ensure safe train movement

2.3 Authorised equipment check is carried out in accordance with operating procedures to identify any equipment faults

2.4 Operational effectiveness of equipment is confirmed through observation during train movements if required

2.5 Equipment faults are correctly identified, recorded and appropriate corrective action is taken

2.6 Serviced equipment is locked and secured to prevent unauthorised access

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the servicing and cleaning of mechanical signalling equipment and infrastructure
- Problems that may occur during the servicing and cleaning of mechanical signalling equipment and infrastructure, and action that can be taken to report or resolve the problems
- Hazards that may exist when servicing and cleaning mechanical signalling equipment and infrastructure, and ways of controlling the risks involved
- Fundamentals of signalling and operations of mechanical signalling equipment
- Rail/train movement systems
- Fault detection techniques
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record keeping requirements
- Recording procedures
- Track/turnout layout

Required skills:

- Communicate effectively with others when servicing and cleaning mechanical signalling equipment and infrastructure
- Read and interpret instructions, procedures, information and signs relevant to the servicing and cleaning of mechanical signalling equipment and infrastructure
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the servicing and cleaning of mechanical signalling equipment and infrastructure
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when servicing and cleaning mechanical signalling equipment and infrastructure
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when servicing and cleaning mechanical signalling equipment and infrastructure in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when servicing and cleaning mechanical signalling equipment and infrastructure
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Use hand, portable, power and air tools
- Safely use chemical cleaning agents, solvents and lubricants
- Carry out visual inspection and checking
- Check/confirm compliance with operational specifications
- Use basic computer skills
- Use appropriate painting techniques

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Work may be conducted in:
- restricted spaces or exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles
Signal equipment may include:
- point machines
- hydraulic and pneumatic points
- signals
- points
- ground frames
- channel irons
- wire ropes
- point rodding
- level crossing signs
- signal locations/housings
- foundations/support/sleepers

Cleaning and servicing equipment may include:
- steam cleaners
- hand tools
- brushes/wire and paint
- hand held power/air tools
- brush/weed trimmers

Chemicals and consumables may include:
- paints and paint strippers
- cleaning and de-greasing agents
- solvents
- weed killers
- oils
- greases
- cleaning rags

Rubbish removal/disposal may be carried out using:
- internal and/or external operating rules and procedures

Visual checks may include:
- rust
- breakage
- graffiti
- rubbish build up
- environmental damage/degradation

Operational checks may include:
- mechanical movement
- linkages
- clearances
- interferences
- alignment
- wear
- loose fittings
Communication equipment may include:
- two-way radios
- computers
- telephones

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- authority to access the site or to operate equipment, including:
  - written authority
  - verbal authority
  - authority as detailed in organisation operating rules and procedures
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIB4707B**  
**Repair and adjust mechanical signalling equipment and infrastructure**

**Unit Descriptor**  
This unit involves the skills and knowledge required to repair and adjust mechanical signalling equipment and infrastructure (excluding interlocking equipment) in accordance with safeworking and regulatory requirements and workplace procedures, including diagnosing equipment faults, correcting equipment faults, and testing and adjusting the equipment after repair. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the repair and adjustment of mechanical signalling equipment and infrastructure (excluding interlocking equipment) as part of workplace activities across a variety of operational contexts within the Australian rail system.

**Competency Field**  
B – Equipment Checking & Maintenance

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Diagnose equipment faults**

1.1 Out-of-specification or non-operating equipment/components are correctly identified through operational testing

1.2 Viability of adjustments/replacements/repairs to equipment/components is correctly evaluated to ensure cost effective operations

1.3 Work is planned to ensure minimum disruption to train operations and safe repair activities

1.4 Support/assistance with diagnosis or repair operation is obtained through liaison with appropriate personnel

2 **Correct equipment faults**

2.1 Equipment and component cleaning/lubrication and adjustment is performed to specifications to ensure required level of operations

2.2 Equipment and components are replaced or repaired as per operational specifications to ensure required level of operations
2.3 Viability of repairs to replaced equipment/components is evaluated and equipment tagged for repair or disposed of as per organisational requirements
2.4 Liaison with or support to other personnel is maintained to ensure equipment is maintained within specification

3 Test and adjust equipment

3.1 All equipment functions are tested to ensure operational compliance with required standards
3.2 Final cleaning, lubricating and adjustments to equipment is carried out to ensure operational compliance
3.3 Equipment is locked/secured as specified to ensure safety and protection from elements or persons
3.4 Records of repair activities are correctly completed and forwarded to appropriate personnel for use in identifying future maintenance requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the repair and adjustment of mechanical signalling equipment and infrastructure (excluding interlocking equipment)
- Problems that may occur during the repair and adjustment of mechanical signalling equipment and infrastructure and action that can be taken to report or resolve the problems
- Hazards that may exist when repairing and adjusting mechanical signalling equipment and infrastructure and ways of controlling the risks involved
- Contents of technical specifications manuals
- Documentation/authorisation processes and procedures
- Track layout
- Material safety data sheets
- Mechanical fitting techniques
- Workshop facilities, personnel and manufacturing/repair capabilities
- Overview of other operations and personnel (i.e. non-mechanical)
- Material procurement procedures
- Principles of railway signalling
- Use of chemicals, solvents and lubricants
- Fault detection techniques
- Recording procedures

Required skills:
• Communicate effectively with others when repairing and adjusting mechanical signalling equipment and infrastructure
• Read and interpret instructions, procedures, information and signs relevant to the repair and adjustment of mechanical signalling equipment and infrastructure
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the repair and adjustment of mechanical signalling equipment and infrastructure
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when repairing and adjusting mechanical signalling equipment and infrastructure
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when repairing and adjusting mechanical signalling equipment and infrastructure in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when repairing and adjusting mechanical signalling equipment and infrastructure
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate signalling equipment
• Adapt to differences in equipment in accordance with standard operating procedures
• Correctly use protective paints and lubricants
• Select and use hand, portable, power and air tools
• Check compliance with operational specification
• Repair and replace equipment
• Apply relevant test procedures
• Operate mechanical signalling equipment
• Use appropriate painting techniques
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all relevant weather conditions
Equipment may include:
- signals
- points equipment,
- ground frames
- level crossing and tramway crossing mechanisms
- frames
- rods
- bars
- platforms
- structures
- housings
- boxes
- signage

Repairs may include:
- filing
- grinding
- replacement of components including bushes, pivot pins, gears, wear plates, welding and joining

Adjustments may include:
- adjustments using designed adjustment components
- shimming
- the checking of clearances and tolerances

Cleaning and lubrication includes:
- all cleaning operations by hand
- chemical or steam cleaning
- the application of protective paints or sealing agents
- the application of lubricating oils and greases

Operational compliance includes:
- manufacturers or workplace specifications for functional movements, operations and outcomes

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Tools and equipment may include:
- hand tools
- portable power generators
- air compressors
- measuring rules
- gauges

Communication equipment may include:
- two-way radios
- telephones
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant log or record book
- maintenance notices, records and requests
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIB4807B**  
**Carry out off-site repair, overhaul and assembly of mechanical signalling equipment**

**Unit Descriptor**
This unit involves the skills and knowledge required to carry out off-site repair, overhaul and assembly of mechanical signalling equipment in accordance with safeworking and regulatory requirements and workplace procedures, including assessing equipment condition, replacing out-of-specification components, producing components where required, assembling components, and testing and adjusting equipment to ensure overall system integrity. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the servicing and cleaning of mechanical infrastructure signalling equipment as part of workplace activities across a variety of operational contexts within the Australian rail system.

**Competency Field**
B – Equipment Checking & Maintenance

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1 Assess equipment condition</strong></td>
<td>1.1 Equipment condition is established through tagged repair sheets from the field and initial examination</td>
</tr>
<tr>
<td></td>
<td>1.2 Condition of all out-of-tolerance equipment and components is correctly identified and recorded through detailed inspection and testing</td>
</tr>
<tr>
<td></td>
<td>1.3 The type and extent of required repairs are evaluated to determine viability of repair operations and to estimate time requirements</td>
</tr>
<tr>
<td></td>
<td>1.4 Components requiring disposal are identified and replacement components are arranged to allow work to commence</td>
</tr>
<tr>
<td><strong>2 Replace components</strong></td>
<td>2.1 Equipment is dismantled to the extent required to carry out previously identified repairs</td>
</tr>
<tr>
<td></td>
<td>2.2 Components requiring replacement are stored for later repair/disposed of in line with organisational requirements</td>
</tr>
</tbody>
</table>
2.3 Components are replaced/repairs/returned to operational condition in line with technical specifications and standard workshop practices

3 Produce components

3.1 Components are produced to comply with the defined job requirements and technical specifications
3.2 Appropriate manufacturing/workshop techniques are applied to ensure required quality components are produced

4 Assemble components

4.1 Assembly methods and sequencing are planned to ensure efficient operations
4.2 Components are laid out for assembly in compliance with planned processes
4.3 Assembly of all components, sub assemblies and equipment is correctly carried out as per planned operations and in compliance with job and technical specifications
4.4 All securing methods and operations comply with the job and technical specifications

5 Test and adjust equipment

5.1 All equipment functions are tested to ensure conformance to drawings and specifications
5.2 All assembly and joining/securing processes and outcomes are checked and tested as required to match the job and technical specifications
5.3 Adjustments are made to ensure all equipment operations meet the technical specifications
5.4 Operational/functional compliance to the job and technical specifications is confirmed and certified
5.5 All required documentation is correctly completed and forwarded to appropriate personnel to confirm the equipment is certified for use

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the servicing and cleaning of mechanical infrastructure signalling equipment
- Problems that may occur during the servicing and cleaning of mechanical infrastructure signalling equipment, and action that can be taken to report or resolve the problems
- Hazards that may exist when servicing and cleaning mechanical infrastructure signalling equipment, and ways of controlling the risks involved
• Fundamentals of signalling and operations of mechanical signalling equipment
• Rail/train movement systems
• Fault detection techniques
• Authorisation/approval processes and procedures
• Documentation and record keeping requirements
• Track/turnout layout

**Required skills:**
• Communicate effectively with others when servicing and cleaning mechanical infrastructure signalling equipment
• Read and interpret instructions, procedures, information and signs relevant to the servicing and cleaning of mechanical infrastructure signalling equipment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the servicing and cleaning of mechanical infrastructure signalling equipment
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when servicing and cleaning mechanical infrastructure signalling equipment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when servicing and cleaning mechanical infrastructure signalling equipment in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when servicing and cleaning mechanical infrastructure signalling equipment
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use hand, portable, power and air tools
• Safely use chemical cleaning agents, solvents and lubricants
• Carry out visual inspection and checking
• Check/confirm compliance with operational specifications
• Use basic computer skills
• Use appropriate painting techniques
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Work may be conducted in:
- restricted spaces or exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Signal equipment may include:
- point machines
- hydraulic and pneumatic points
- signals
- points
- equipment
- ground frames
- channel irons
- wire ropes
- point rodding
- level crossing signs
- signal locations/housings
- foundations/supports/sleepers

Cleaning and servicing equipment may include:
- steam cleaners
- hand tools
- brushes/wire and paint
- hand-held power/air tools
- brush/weed trimmers

Chemicals and consumables may include:
- paints and paint strippers
- cleaning and de-greasing agents
- solvents
- weed killers
- oils
- greases
- cleaning rags

Rubbish removal/disposal may be carried out:
- using internal and/or external operating rules and procedures
Visual checks may include:
- rust
- breakage
- graffiti
- rubbish build up
- environmental damage/degradation

Operational checks may include:
- mechanical movement
- linkages
- clearances
- interferences
- alignment
- wear
- loose fittings

Communication equipment may include:
- two way radios
- computers
- telephones

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- authority to access the site or to operate equipment, including:
  - written authority
  - verbal authority
  - authority as detailed in organisation operating rules and procedures
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB507C  Carry out maintenance of vehicles designed to carry special loads

Unit Descriptor
This unit involves the skills and knowledge required to carry out basic servicing and routine maintenance of a commercial vehicle designed to carry a special load, including action to implement manufacturers specifications for routine checks and maintenance of the vehicle and its associated ancillary equipment, and to ensure that all specified safety requirements are met and that the vehicle and its ancillary equipment are operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations of the relevant roads and traffic authority and workplace procedures and policy concerning vehicle maintenance.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine vehicle checking and maintenance principles and procedures to maintain the safety and operation of a commercial vehicle designed to carry special loads across a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Diagnose vehicle faults and undertake repairs for the safe operation of a vehicle

1.1 Faults in the vehicle and/or ancillary equipment electrical system are identified, diagnosed and repaired following manufacturers specifications and workplace procedures

1.2 Faults in the fuel system are identified, diagnosed and repaired following manufacturers specifications and workplace procedures

2 Maintain the vehicle systems

2.1 Fluid levels in the vehicle and/or ancillary equipment are checked and adjusted following manufacturers specifications and workplace procedures

2.2 Air/hydraulic fluid levels in the vehicle and/or ancillary equipment are checked and adjusted following manufacturers specifications and workplace procedures

2.3 Safety equipment is inspected in accordance with regulatory requirements and workplace procedures
3 Carry out minor repairs to a vehicle

3.1 Vehicle components are removed, repaired or replaced and refitted to the vehicle using the correct tools and following manufacturers instructions and workplace procedures

3.2 Tyres are repaired or replaced on vehicle following workplace procedures and manufacturers instructions

3.3 The need for more complex maintenance procedures is identified and the problem correctly referred following workplace procedures

3.4 OH&S procedures are followed throughout maintenance activities

4 Complete documentation

4.1 Records of routine maintenance and repairs are kept in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant duty of care requirements for the routine servicing and maintenance of vehicles designed to carry special loads
- Relevant OH&S and pollution control procedures
- Procedures for the checking and routine servicing and maintenance of a commercial vehicle designed to carry special loads in accordance with workplace and manufacturers requirements and established safety rules and regulations
- Problems that may occur during the routine servicing and maintenance of a vehicle and its associated ancillary equipment, and appropriate action and solutions
- Recognition and diagnosis of faults and vehicle/ancillary system irregularities
- Basic principles of operation of systems on commercial vehicles, including electrical systems, fuel systems, cooling systems, steering systems, exhaust system, tyres, brakes, and relevant ancillary systems
- Basic fault finding procedures required during routine servicing and maintenance of vehicles designed to carry special loads
- Procedures required to minimise waste during routine servicing and maintenance
- Housekeeping standards required for routine servicing and maintenance
- Procedures for the use and maintenance of the materials, tools and parts required for routine servicing and maintenance
- Reporting and documentation requirements

Required skills:
- Communicate effectively with others when carrying out the routine servicing and maintenance of a commercial vehicle designed to carry special loads
- Read and interpret instructions, procedures, information and signs relevant to work activities
Interpret and follow operational instructions and prioritise work
Complete documentation related to work activities
Operate electronic communication equipment to required protocol
Work collaboratively with others when carrying out the routine servicing and maintenance of a commercial vehicle designed to carry special loads
Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
Promptly report and/or rectify any identified problems, faults or malfunctions when carrying out the routine servicing of a vehicle designed to carry special loads in accordance with regulatory requirements and workplace procedures
Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
Monitor work activities in terms of planned schedule
Modify activities depending on differing operational contingencies, risk situations and environments
Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Operate and adapt to differences in equipment in accordance with standard operating procedures
Select and use required personal protective equipment conforming to industry and OH&S standards
Service equipment in terms of maintenance schedule and standard operating procedures
Check and replenish fluids and carry out lubrication processes in the course of servicing activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle may include all vehicles designed to carry special loads, for example:

- concrete agitator
- livestock transporter
- armoured car
- tanker
- refrigerated vehicle
- waste vehicle
- fresh produce vehicle
- car carrier
- container carrier
- recovery vehicle
Maintenance may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- in confined spaces, exposed conditions and controlled or open environment
- while in a depot, base or warehouse
- while in the vehicle on the road
- while at a client's workplace

Ancillary equipment will be dependent on type of special load carried and may include:
- refrigeration systems
- concrete agitation systems
- car transporter systems
- livestock transporter systems
- waste loading/discharge systems
- recovery systems
- tanker pumping and related systems
- on-board cranes and hoists
- armoured car systems

Maintenance checks may include:
- routine inspections of vehicle systems
- routine inspections of ancillary systems
- checks prior to operations
- checks on completion of operations
- checks on completion of maintenance activities

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
- minor repairs to ancillary systems in accordance with instructions

Minor routine servicing may include:
- topping up of water levels
- replacement of oils
- replacement of air in tyres
- topping up of fluid levels in ancillary systems where relevant
Environmental hazards may include:

- leaking oil and fuel
- defective or inappropriately adjusted exhaust systems
- inappropriate disposal of vehicle fluids in drains or sewerage systems

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/records may include:

- workplace routine servicing and maintenance procedures, checklists and instructions for both the vehicle and associated ancillary equipment
- relevant state/territory roads and traffic authority vehicle maintenance regulations
- maintenance checklists and records
- vehicle manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when servicing and maintaining vehicles designed to carry special loads
- OH&S procedures to be followed when servicing and maintaining vehicles designed to carry special loads

Applicable regulations and legislation may include:

- relevant state/territory roads and traffic authority vehicle maintenance regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIB5307B** Maintain mechanical signalling locking and interlocking devices

**Unit Descriptor**
This unit involves the skills and knowledge required to maintain mechanical signalling locking and interlocking devices in accordance with safeworking and regulatory requirements and workplace procedures, including diagnosing and correcting faults in the devices, and testing and adjusting the repaired equipment to meet workplace and manufacturers standards. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the maintenance of mechanical signalling locking and interlocking devices as part of workplace activities across a variety of operational contexts within the Australian rail system.

3.1 All locking/interlocking equipment functions are tested to ensure operational compliance with required standards

3.2 Final cleaning, lubricating and adjustments to equipment are carried out to ensure operational compliance

3.3 Equipment is locked/secured as specified to ensure safety and protection from elements or persons

3.4 Records of repair activities are correctly completed and forwarded to appropriate personnel for use in identifying future maintenance requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the repair and adjustment of mechanical locking and interlocking signalling equipment
- Problems that may occur during the repair and adjustment of mechanical locking and interlocking signalling equipment and action that can be taken to report or resolve the problems
- Hazards that may exist when repairing and adjusting mechanical locking and interlocking signalling equipment and ways of controlling the risks involved
- Contents of technical specifications and manuals
- Documentation/authorisation processes and procedures
- Track layout
- Material safety data sheets
- Mechanical fitting techniques
- Workshop facilities, personnel and manufacturing/repair capabilities
- Overview of other operations and personnel (i.e. non-mechanical)
- Material procurement procedures
- Principles of railway signalling, particularly those dealing with mechanical locking and interlocking equipment
- Use of chemicals, solvents and lubricants
- Fault detection techniques
Required skills:

- Communicate effectively with others when repairing and adjusting mechanical locking and interlocking signalling equipment
- Read and interpret instructions, procedures, information and signs relevant to the repair and adjustment of mechanical locking and interlocking signalling equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the repair and adjustment of mechanical locking and interlocking signalling equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when repairing and adjusting mechanical locking and interlocking signalling equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when repairing and adjusting mechanical locking and interlocking signalling equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when repairing and adjusting mechanical locking and interlocking signalling equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Operate mechanical locking and interlocking signalling equipment
- Correctly use protective paints and lubricants including appropriate painting techniques
- Select and use hand, portable, power and air tools
- Repair and replace mechanical locking and interlocking equipment
- Apply relevant test procedures
- Operate mechanical signalling equipment

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions
Equipment may include:
- both locking and interlocking equipment including:
  - signals
  - points equipment
  - ground frames
  - level crossing and tramway crossing mechanisms
  - frames
  - rods
  - bars
  - platforms
  - structures
  - housings
  - boxes
  - signage

Repairs may include:
- filing
- grinding
- replacement of components including:
  - bushes
  - pivot pins
  - gears
  - wear plates
  - welding
  - joining

Adjustments may include:
- designed adjustment components
- shimming
- checking of clearances and tolerances

Cleaning and lubrication includes:
- all cleaning operations by hand, chemical or steam cleaning
- the application of protective paints or sealing agents
- the application of lubricating oils and greases

Operational compliance includes:
- manufacturers or workplace specifications for functional movements, operations and outcomes

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Tools and equipment may include:
- hand tools
- portable power generators
- air compressors
- measuring rules
- gauges
Communication equipment may include:
- two-way radios
- telephones

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant log or record books
- maintenance notices, records and requests
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB5807B Maintain aerial signal/telecommunications lines and cables

Unit Descriptor
This unit involves the skills and knowledge required to maintain aerial signal/telecommunications lines and cables in accordance with safeworking and regulatory requirements and workplace procedures, including inspecting and servicing line and cable routes, diagnosing any identified line and cable faults and repairing any line and cable faults to the standards specified to ensure system integrity. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the maintenance of aerial signal/telecommunications lines and cables as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Inspect and service line and cable routes
1.1 Routes are inspected and recorded and arrangements are made for the removal of any obstructions, damage, infringing vegetation to provide free access to cables/aerials
1.2 Routes are physically inspected to determine any breaks, misalignments, damage and insulation wear requiring repair
1.3 Poles are inspected for deterioration and a safety assessment is made

2 Diagnose line and cable faults
2.1 Permission to test isolated equipment is confirmed prior to any work being undertaken
2.2 Probable location of fault is identified from visual inspection and circuit tests are conducted to isolate fault area
2.3 The nature of the fault is identified from further tests and corrective action required is identified to enable appropriate arrangements for resources and for work to be performed
2.4 Disconnection/insulation procedures are applied to enable maintenance work to be carried out in isolation to systems where lines are in close proximity to high voltage services

3 Repair line and cable faults

3.1 Work site is made safe in accordance with organisations safety requirements to enable repair work to be safely undertaken
3.2 Aerial lines/cables are repaired to operational and technical requirements using appropriate jointing or replacement/repair procedures
3.3 Repaired/replaced line/cable is tested to specified standards to ensure conformity to operational and technical requirements
3.4 Appropriate personnel are notified of completed repairs/replacement and appropriate documentation is completed in accordance with organisations requirements and returned to appropriate organisation/department as required

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the maintenance of aerial signal/telecommunications lines and cables
- Problems that may occur during the maintenance of aerial signal/telecommunications lines and cables, and action that can be taken to report or resolve the problems
- Hazards that may exist when maintaining aerial signal/telecommunications lines and cables, and ways of controlling the risks involved
- Electrical theory and principles relevant to aerial cables
- Line/cable technical specifications
- Test equipment and procedures
- Fault diagnosis/problem solving
- Techniques for the operation of support equipment
- Pole top rescue procedures
- Common aerial cable system faults
- Clearance procedures from other services
- AS 3000 and AUSTEL requirements relevant to aerial cables
- Documentation and record keeping requirements
 Required skills:

- Communicate effectively with others when maintaining aerial signal/telecommunications lines and cables
- Read and interpret instructions, procedures, information, technical data and drawings relevant to the maintenance of aerial signal/telecommunications lines and cables
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the maintenance of aerial signal/telecommunications lines and cables
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when maintaining aerial signal/telecommunications lines and cables
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when maintaining aerial signal/telecommunications lines and cables in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when maintaining aerial signal/telecommunications lines and cables
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select and use hand tools, power tools and equipment
- Use relevant test equipment and aerial cable testing techniques
- Diagnose and repair aerial cable faults
- Carry out line/cable/conductor jointing and termination
- Use mechanised equipment
- Carry out a pole top rescue

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night  
- in all relevant weather conditions
Work may be conducted:
  • restricted spaces
  • exposed conditions
  • controlled or open environments

Work may involve exposure to:
  • chemicals
  • dangerous or hazardous substances
  • movements of equipment, materials and vehicles

Aerial signal/telecommunications lines and cables to be maintained may include:
  • all those in service in the Australian rail systems

Cables may include:
  • multi core wires
  • open wires
  • low voltage

All signalling cables and cable products must be:
  • supplied and installed to AS 3000 or appropriate organisational standards

Fittings may include:
  • poles
  • cross arms
  • insulators including spindles, stays and guards
  • aerial lines
  • transpositioning
  • joint sleeves
  • tie wires

Test equipment may include:
  • meggers
  • isolator and probe sets
  • wire test sets
  • pulse echo fault locaters
  • ohm meters
  • earth fault locaters
  • earth testers
  • arrestor testers
  • multi meters
  • test phones
  • tone generators
  • insulation and continuity testers
  • oscilloscopes
Faults may include:
- crossed wires
- high resistance joints
- broken/damaged insulators
- crossed/damaged lead-in cables
- circuit faults
- damage caused by bushfires
- storm damage
- wind damage
- earth conductors

Faults may be reported by:
- train crews
- public response
- fault centres
- fault indicators
- internal users
- train controllers

Communication equipment may include:
- two-way radios
- computers
- telephones

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- circuit diagrams and schematics
- engineering drawings
- line diagrams
- line field books
- signalling/telecommunication circuits
- pole testing technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292 and AS 3000
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific

- Performance is demonstrated consistently over a period
resources for assessment

Resources for assessment include:
- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB607C  Carry out inspection of vehicles designed to carry special loads

Unit Descriptor
This unit involves the skills and knowledge required to carry out an inspection of a commercial vehicle designed to carry a special load, including action to implement manufacturers specifications for routine checks of the vehicle and its associated equipment, to clean the vehicle and its associated equipment, and to ensure that all specified safety requirements are met and that the vehicle and equipment are operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations of the relevant roads and traffic authority and workplace procedures and policy concerning vehicle inspection.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine vehicle checking and maintenance principles and procedures to inspect a commercial vehicle designed to carry special loads across a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Check vehicle
1.1 A visual check of the internal and external condition of the vehicle is carried out in accordance with workplace procedures
1.2 Pre-operational inspections and checks of the vehicle's tyres, suspension, fluid levels and other critical features are carried out to ensure conformance with road safety standards
1.3 Associated equipment is tested to ensure it functions correctly to manufacturers specifications
1.4 Post start-up and shut-down checks are carried out after engine is started to identify possible engine or electrical problems
1.5 Warning systems (instruments and gauges) are checked to ensure they are operational
1.6 Where relevant, vehicle-monitoring device is logged on/off in accordance with manufacturers instructions and workplace policy
2 Clean vehicle and ancillary equipment

2.1 Vehicle and associated equipment is cleaned in accordance with workplace procedures and legislation

2.2 Special purpose ancillary equipment is cleaned in accordance with any relevant government regulations and workplace procedures

3 Complete documentation

3.1 Basic faults are identified and/or diagnosed and appropriate action taken to report or remedy them as required by workplace procedures and legislation

3.2 Records of inspection are updated and recommended repairs documented in accordance with workplace policies

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant duty of care requirements for the routine inspection of vehicles designed to carry special loads
- Relevant OH&S and environmental procedures and regulations
- Procedures for the checking and routine inspection of a commercial vehicle designed to carry special loads in accordance with workplace and manufacturers requirements and established safety rules and regulations including visual inspection procedures, pre-operational checking procedures and warning systems checking procedures
- Problems that may occur during the routine inspection of a vehicle and its associated ancillary equipment, and appropriate actions and solutions
- Techniques for the recognition of faults and vehicle/ancillary system irregularities
- Basic principles of operation of systems on commercial vehicles, including electrical systems, fuel systems, cooling systems, steering systems, exhaust systems, tyres, brakes, and relevant ancillary systems
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when carrying out the routine inspection of a vehicle and its associated ancillary equipment
- Read and interpret instructions, procedures, information, technical data and drawings relevant to the routine inspection of a vehicle and its associated ancillary equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the routine inspection of a vehicle and its associated ancillary equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out the routine inspection of a vehicle and its associated ancillary equipment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when carrying out the routine inspection of a vehicle and its associated ancillary equipment in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when carrying out the routine inspection of a vehicle and its associated ancillary equipment
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle may include all vehicles designed to carry special loads, for example:

• concrete agitator
• livestock transporter
• armoured car
• tanker
• refrigerated vehicle
• waste vehicle
• fresh produce vehicle
• car carrier
• container carrier
• recovery vehicle

Inspection may be carried out in typical road transport situations, including:

• at day or night
• typical weather conditions
• in confined spaces, exposed conditions and controlled or open environment
• while in a workplace, depot, base or warehouse
• while in the vehicle on the road
• while at a client's worksite
Ancillary equipment will be dependent on type of special load carried and may include:
- refrigeration systems
- concrete agitation systems
- car transporter systems
- livestock transporter systems
- waste loading/discharge systems
- recovery systems
- tanker pumping and related systems
- on-board cranes and hoists
- armoured car systems

Inspection may include:
- visual checks of vehicle
- routine checks of vehicle systems
- checks in accordance with a detailed inspection schedule

Routine checks may include:
- water levels
- oil levels
- air pressure in tyres
- brakes
- lights
- condition of tyres
- battery
- exhaust system
- suspension
- functions of associated ancillary equipment

Environmental hazards may include:
- leaking oil and fuel
- defective or inappropriately adjusted exhaust systems
- inappropriate disposal of vehicle fluids in drains or sewerage systems

Dependent of the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/records may include:

- workplace routine inspection procedures, checklists and instructions for both the vehicle and associated ancillary equipment
- relevant state/territory roads and traffic authority vehicle maintenance regulations
- inspection checklists and records
- manufacturers instructions, specifications and recommended procedures for both the vehicle and any associated ancillary equipment
- precautions and procedures to be adopted to protect the environment when inspecting and servicing vehicles designed to carry special loads
- OH&S procedures to be followed when inspecting and servicing vehicles designed to carry special loads

Applicable regulations and legislation may include:

- relevant state/territory roads and traffic authority regulations and requirements pertaining to the inspection of vehicles designed to carry special loads
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
# TLIB707C  Carry out maintenance of trailers

## Unit Descriptor
This unit involves the skills and knowledge required to carry out basic servicing and maintenance of a commercial trailer, including action to implement trailer manufacturers specifications for routine checks and maintenance, and to ensure that all specified safety requirements are met and that the trailer is operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

## Employability Skills
This unit contains employability skills.

## Application of the Unit
Work must be carried out in compliance with the regulations of the relevant roads and traffic authority.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine checking and maintenance principles and procedures to maintain a commercial trailer across a variety of operational contexts.

## Competency Field
B – Equipment Checking & Maintenance

## ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify faults and perform routine maintenance | 1.1 Trailer faults are identified and diagnosed in accordance with workplace procedures  
1.2 Trailer components are lubricated in accordance with manufacturers instructions and workplace procedures |
| 2 Carry out repairs on trailers | 2.1 Trailer's air/hydraulic brake system is inspected and adjusted, and any required minor maintenance or repairs carried out  
2.2 Trailer's electrical system is checked for correct operation and any required minor maintenance or repairs carried out  
2.3 Trailer's suspension and axles are inspected and identified faults repaired and/or reported in accordance with workplace procedures  
2.4 Trailer's wheels and tyres are inspected, removed, repaired and refitted, as required, in accordance with workplace policy |
| 3 Complete documentation | 3.1 Records of routine maintenance and repairs are kept in accordance with workplace procedures |
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant duty of care requirements for the routine servicing and maintenance of trailers
• Relevant OH&S and pollution control procedures
• Procedures for the checking, and routine service and maintenance of a commercial trailer in accordance with workplace and manufacturers requirements and established safety rules and regulations
• Problems that may occur during the routine servicing and maintenance of a trailer and appropriate actions and solutions
• Recognition and diagnosis of faults and trailer irregularities
• Basic principles of operation of systems on commercial trailers, including electrical systems, tyres, brakes and coupling systems
• Basic fault finding procedures required during routine servicing and maintenance of trailers
• Housekeeping standards required for routine servicing and maintenance
• Procedures for the use and maintenance of the materials, tools and parts required for routine servicing and maintenance
• Reporting and documentation requirements

Required skills:
• Communicate effectively with others during the routine servicing and maintenance of a trailer
• Read and interpret instructions, procedures, information and signs relevant to the routine servicing and maintenance of a trailer
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the routine servicing and maintenance of a trailer
• Operate electronic communication equipment to required protocol
• Work collaboratively with others during the routine servicing and maintenance of a trailer
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified during the routine servicing and maintenance of a trailer in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Service trailer and equipment in terms of maintenance schedule and standard operating procedures
• Carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Maintenance may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• in confined spaces, exposed conditions and controlled or open environment
• while in a depot, base or warehouse
• while in the vehicle on the road
• while at a client's workplace

Trailers may include:
• any commercial trailers attached to vehicles used in the Australian transport industry

Maintenance checks may include:
• routine inspections of trailer and its systems
• checks prior to operations
• checks on completion of operations
• checks on completion of maintenance activities

Minor routine repairs may include:
• the replacement of blown globes in trailer lights
• minor repairs to couplings
• repairs to rear tail-light lens
• changing of tyres
• repair of tyre punctures

Minor routine servicing may include:
• topping up of water levels
• lubrication of trailer components
• checking of air in tyres
• checking of air/hydraulic brake systems
• checking of suspension and axles

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Information/records may include:
- workplace routine servicing and maintenance procedures, checklists and instructions
- relevant state/territory roads and traffic authority trailer maintenance regulations
- maintenance checklists and records
- trailer manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when servicing and maintaining trailers
- OH&S procedures to be followed when servicing and maintaining trailers

Applicable regulations and legislation may include:
- relevant state/territory roads and traffic authority vehicle maintenance regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation.
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace.
TLIB7107B  Install and maintain pole mounted switches and transformers

Unit Descriptor
This unit involves the skills and knowledge required to install and maintain pole mounted switches and transformers in accordance with safeworking and regulatory requirements and workplace procedures, including planning the installation and maintenance, preparing the worksite, installing switches and transformers in accordance with workplace specifications, maintaining switches and transformers, and completing all work in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the installation and maintenance of pole mounted switches and transformers as part of workplace activities across a variety of operational contexts within the Australian rail system.

Persons working on energised overhead or underground systems or electrical equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent to carry out the work involved.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan installation and maintenance
1.1 Works order is analysed and confirmed, if necessary by site inspection
1.2 Resources required for the job are identified and scheduled according to organisation procedures
1.3 Switch equipment and transformer is transported to the worksite
1.4 Liaison and communication issues are resolved according to organisation negotiation procedures

2 Prepare the worksite
2.1 Work plan and resources required are confirmed/checked at
the work-site

2.2 Personnel participating in the activity, including plant operators and contractors, are fully briefed

2.3 Road signs, barriers and warning devices are positioned to ensure a safe worksite

2.4 Safeworking practices are observed on or about the running track/line

2.5 Work-site is laid out in accordance with the work plan so as to ensure a minimum of waste and rework

2.6 Systems/circuits are isolated as required, proved safe to work on in accordance with works order, and electrical permits are received/accepted/returned

3 Install switches and transformers

3.1 Switch equipment, transformers and earthing systems are installed and connected

3.2 Transformer is tested and voltage output adjusted

3.3 Visual inspection is carried out to confirm that equipment/apparatus is in a safe condition to test and/or commission

3.4 Commission is carried out according to works order/plan

4 Maintain switches and transformers

4.1 Maintenance requirement is confirmed by detailed diagnosis at site

4.2 Maintenance, including removal, repair, replacement and reinstatement, is carried out in accordance with the works order and the condition of equipment

5 Complete the work

5.1 Worksite is rehabilitated

5.2 Appropriate authority is notified on completion of work

5.3 Records and documentation for updating system data are completed

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the installation and maintenance of pole mounted switches and transformers
- Problems that may occur during the installation and maintenance of pole mounted switches and transformers
• Hazards that may exist when installing and maintaining pole mounted switches and transformers
• Switching or de-energising procedures and maintenance operations
• Characteristics, capabilities and uses of types of equipment included in the range of variables
• Visual inspection procedures
• Distribution system earthing procedures
• Relevant organisation and commercial publications, including construction manuals and technical instructions as they relate to the installation and maintenance of electrical equipment
• The responsibilities and rights of other authorities, clients and landowners
• Statutory/organisation traffic control requirements, rigging regulations and guidance signals for plan operations
• Live line working techniques and equipment
• Relevant electrical/electronic theory and principles
• Relevant recording and documentation procedures
• Relevant sections of Australian Standards AS 4292 and AS 3000

Required skills:
• Communicate effectively with others when installing and maintaining pole mounted switches and transformers
• Read and interpret instructions, procedures, information, technical data, manuals and drawings relevant to the installation and maintenance of pole mounted switches and transformers
• Interpret and follow operational instructions and prioritise work
• Communicate plans, intentions and safety criteria to others
• Complete documentation related to the installation and maintenance of pole mounted switches and transformers
• Operate electronic communication equipment to required protocol
• Perform calculations required for installation procedures
• Work collaboratively with others when installing and maintaining pole mounted switches and transformers
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and maintaining pole mounted switches and transformers in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use hand and power tools and equipment
• Select and use test equipment and testing techniques
• Apply appropriate repair/testing practices and procedures
• Rig/sling loads for lifting
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night • in all relevant weather conditions

Work may be conducted in: • restricted spaces • exposed conditions • controlled or open environments

Work may involve exposure to: • chemicals • dangerous or hazardous substances • movements of equipment, materials and vehicles

Switchgear covered by the unit may include: • sectionalisers • dropout fuses • disconnectors • isolators • air break switches • links • fuses • fuse switches • circuit-breakers

Electrical apparatus may include: • transformers • surge diverters • earthing systems

Liaison may involve: • personnel • plant • equipment • transport
Communication equipment may include:

- two-way radios
- computers
- telephones

Installation and maintenance work may be performed with:

- the system energised, subject to the organisation's procedures including those for the use of live line working techniques and equipment

Maintenance may include:

- the removal, repair and replacement of switching equipment and transformers including the repair, replacement and cleaning of associated hardware

Safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- works orders, including drawings, plans, materials and resource lists
- equipment/operational management information
- technical and engineering instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292 and AS 3000
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIB7307B  Clean road tankers

Unit Descriptor
This unit involves the skills and knowledge required to clean road tankers in accordance with workplace procedures and OH&S and environmental protection regulations, including preparing for cleaning operations, steam cleaning a tanker, cleaning a tanker using water and detergent, finalising cleaning operations, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with OH&S and environmental protection regulations and workplace procedures.

Work is performed under some supervision, usually in a team environment. Work involves the application of routine principles and procedures to clean commercial tankers across a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for cleaning operations

1.1 Vehicle is positioned under gantry in accordance with workplace procedures

1.2 Documentation is obtained from the vehicle driver to determine the product which has been previously carried in the tanker

1.3 The vehicle keys are taken from the driver to prevent 'accidental drive off' before the cleaning process is completed

1.4 Appropriate cleaning process is selected for type of tanker/load in accordance with workplace procedures

1.5 Cleaning materials are prepared in accordance with manufacturers instructions and workplace procedures

1.6 The required personal protection and safety equipment is selected and used in accordance with regulatory requirements and workplace procedures

2 Steam clean a tanker

2.1 The vehicle is earthed to prevent sparks and explosions

2.2 Valves are opened to allow draining of the wash materials and hoses attached in accordance with manufacturers instructions and workplace procedures

2.3 All access points, including vents and washing points, are opened and heat-sensitive auto fill probes removed in accordance with workplace procedures
2.4 Where the tank has held oil/diesel, a wash consisting of detergent wash and hot water rinse is carried out followed by the application of steam.

2.5 Where the tank has only held petrol, a steam clean only is carried out in accordance with workplace procedures.

2.6 After the wash, the unit is left to drain until liquid ceases to drain from the outlet valves and steam stops leaving the vents on the top of the tank.

2.7 All vents and valves are closed and the auto fill probes reconnected.

2.8 Plastic seals are placed on valves to signify the completed cleaning of the tanker where required in accordance with workplace procedures.

3 Clean a tanker using water and detergent

3.1 High pressure water and detergent is used to clean around the top of the tanker vents and hatches to remove dirt and they are rinsed clean with water.

3.2 Valves on the outlet manifold are opened and connected with flexible pipes to the waste storage facility or recycling tanks for the tank cleaner.

3.3 All hatches are opened and spray balls are placed into the tanks after checking visually for the condition of the tank. Where solid materials are present these are washed out with high pressure water prior to starting the cleaning cycle.

3.4 Tank is rinsed then washed with tank wash until waste is clear and then it is recycled into a holding tank for reuse leaving the tankers tank to drain.

3.5 Water in the holding tank is topped up and ph tested and solution is replaced if necessary in accordance with workplace procedures.

3.6 Tank is rinsed with water in short bursts until the liquid leaving the tank is clear.

3.7 Top of tank is hosed off again with water, and spray balls are removed.

3.8 The tank is visually checked, through the hatches with the aid of a torch, for cleanliness.

3.9 If cleanliness standards have not been achieved, the tanker is rewashed or re-rinsed as required. Hatches are closed.

3.10 At the conclusion of cleaning operations drainage hoses are removed, manifold checked for cleanliness, and drainage valves closed and sealed to indicate completed process in accordance with workplace procedures.

4 Complete cleaning operations

4.1 Due care is taken to ensure that the disposal of used cleaning materials is in accordance with environmental protection regulations and workplace procedures.
4.2 Wash water is suitably treated using available water cleaning and separation processes before draining into the sewerage system.

4.3 Cleaning equipment is cleaned, dried, checked and stored in accordance with workplace procedures.

4.4 Documentation on the cleaning operations is completed in accordance with workplace procedures and is returned to the driver along with the keys to the vehicle.

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant duty of care requirements for the routine cleaning of tankers.
- Relevant OH&S and pollution control procedures.
- Procedures for the cleaning of a commercial tanker in accordance with workplace and manufacturers requirements and established safety rules and regulations.
- Problems that may occur during the routine cleaning of a commercial road tanker and its associated ancillary equipment, and appropriate action and solutions.
- Processes for the recognition and diagnosis of faults and vehicle/ancillary system irregularities.
- Hazards that may exist during the cleaning of road tankers and ways of controlling the risks involved.
- Basic technical knowledge relevant to the cleaning of road tankers.
- Emergency procedures.
- Materials identification, handling and storage.
- Hazardous situations and related personal protection measures.
- Relevant recording and documentation procedures.
- Precautions and procedures to dispose of or reprocess cleaning wastes in accordance with environmental protection requirements.
- Housekeeping standards required for cleaning operations.

**Required skills:**
- Communicate effectively with others when cleaning road tankers.
- Read and interpret instructions, procedures, labels and manuals relevant to the cleaning of road tankers.
- Interpret and follow operational instructions and prioritise work.
- Complete documentation related to the cleaning of road tankers.
- Operate electronic communication equipment to required protocol.
- Work collaboratively with others when cleaning road tankers.
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others.
• Promptly report and/or rectify any identified problems that may occur when cleaning road tankers in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Carry out required cleaning operations
• Select and use appropriate cleaning equipment and materials
• Minimise waste during cleaning operations
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle may include:
• all tankers including those carrying petrol, diesel, oil, milk, wine and other liquid products

Cleaning operations may be carried out in appropriate facilities:
• by day or night
• in typical weather conditions
• in confined spaces, exposed conditions and controlled or open environment
• while in the a depot, base or warehouse
• while at a client's workplace

Cleaning operations may include:
• steam cleaning
• water and detergent cleaning

Equipment and materials may include:
• detergents and cleaning chemicals
• hoses and spray balls
• steam cleaning equipment
• waste recycling tanks/equipment
• cleaning tools
Safety hazards may include but are not limited to:

- fire/ignition risk
- vapours and noxious gases
- working at heights
- slippery, wet surfaces
- steam burns

Environmental hazards may include:

- leaking oil and fuel
- inappropriate disposal of washing fluids in drains or sewerage systems

Depending on work context, safety and protective equipment may include:

- high visibility waterproof clothing
- hearing protection
- gloves
- safety glasses, headwear and footwear
- safety harness for working on top of tankers

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/records may include:

- workplace tanker cleaning procedures, checklists and instructions for the vehicle, tanks and related ancillary equipment
- relevant state/territory roads and traffic authority regulations
- ADG Code as it applies to tanker cleaning
- material safety data sheets
- tanker cleaning checklists and records
- tanker manufacturers specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when cleaning tankers
- OH&S procedures to be followed when cleaning tankers
- emergency procedure manuals
- QA plans and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- relevant state/territory roads and traffic authority regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code as it applies to the cleaning of tankers

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB7507A  Inspect and prepare a motive power unit

Unit Descriptor
This unit involves the skills and knowledge required to inspect, prepare and start a motive power unit in accordance with relevant workplace practices, rail regulations and codes of practice. It includes the checking and preparing of the motive power unit, visually examining the motive power unit, conducting in-cab checks, and starting and positioning the motive power unit for service in accordance with workplace requirements. This unit replaces relevant sections of the previous units TDTB2501A Prepare, start and shut down motive power unit and TDTC1501A Prepare, operate, monitor and stable motive power unit. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Start motive power unit

1.1 Roster is checked and interpreted for day's train driving activities

1.2 Allocation of motive power units is checked in conjunction with train controllers and roster clerk

1.3 Motive power unit to be inspected and prepared is located in the yard

1.4 Motive power unit is started in accordance with manufacturers instructions and any operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up

1.5 In the case of safety, critical or serious equipment faults that cannot be readily rectified, the motive power unit is shut down, the faulty equipment isolated and tagged and the problem reported for rectification

1.6 All instruments and gauges are observed and readings interpreted to confirm effective operation, including air and electrical. Where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
1.7 Fluid levels are rechecked after starting and appropriate action taken if required
1.8 Pre-departure checks are carried out to ensure motive power unit is braking and powering effectively and is safe to move

2 Prepare for work activities

2.1 Roster is checked and interpreted for day's train driving activities
2.2 Allocation of motive power units is checked as per notices in conjunction with train controllers and roster clerk
2.3 Trackside safety and basic electrification awareness procedures are followed while locating the allocated motive power unit in the yard
2.4 Motive power unit inspection and preparation duties are identified and interpreted
2.5 Train schedules and notices and other operational and regulatory documentation is accessed and interpreted in accordance with workplace procedures
2.6 Communication equipment required for the day's operations is obtained and checked to ensure that it is functional
2.7 Required personal protective equipment is obtained for use during the day's train driving activities
2.8 Motive power unit to be inspected and prepared is located in the yard

3 Inspect and prepare motive power unit

3.1 Features, functions and location of motive power unit and associated equipment are identified
3.2 Log book is checked to confirm serviceability of unit
3.3 Preparation and safety checks are conducted, in accordance with OH&S and other workplace policies and procedures
3.4 Motive power unit, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged (where applicable) or reported as per workplace procedures and regulatory requirements
3.5 Availability of appropriate fuel, lubricating oils, water, coolant and sand quantities (where applicable) are checked against journey requirements and appropriate action is taken to replenish them if required
3.6 Relevant OH&S and regulatory requirements are followed

4 Conduct in-cab checks

4.1 Motive power unit is checked in correct sequence and all equipment is confirmed to be operating to optimum requirements
4.2 Cab layout is checked and confirmed to meet operating requirements
4.3 Pre-departure mechanical checks are correctly performed and
correct functioning of all equipment is confirmed as per workplace procedures and manufacturers operating requirements

4.4 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly

4.5 Communication equipment is checked to ensure that it is functioning correctly and appropriate action is taken if it is not working correctly

4.6 Seat, windows, blinds, air conditioners, heaters and other personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort

4.7 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements

4.8 Fire extinguisher and emergency toolbox are checked to confirm that they are in position and meet operational requirements

5 Complete documentation

5.1 All required documentation concerning the inspection of the motive power unit is completed in accordance with workplace procedures and regulatory requirements

5.2 Log book and other service records on the motive power unit are completed in accordance with workplace procedures and regulatory requirements

6 Position motive power unit

6.1 Authority to move and position motive power unit is obtained and relevant personnel are advised of intention and procedures

6.2 Motive power unit is operated in accordance with standard procedures and regulatory requirements and within operating and operational constraints

6.3 Motive power unit is positioned in accordance with operational requirements and directions

6.4 Motive power unit performance is monitored during operation in order to confirm effective operation or to identify defects

6.5 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance

6.6 Relevant OH&S and regulatory requirements are followed to ensure safety and to prevent injury and damage

6.7 Train controller and other relevant personnel are advised that the motive power unit is secured in the required position and is ready for service

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines

Relevant OH&S and environmental procedures and regulations

Principles, purpose and location of controls, monitoring devices, braking, power source and traction systems

Inspection procedures for a motive power unit

In-cab pre-operational checks for a motive power unit

Start-up procedures for motive power units

Operating procedures for motive power units

Braking and safety system procedures for motive power units

Operating controls to start, accelerate, decelerate and stop a motive power unit

Procedures for adjusting controls to optimise the operation of a motive power unit

Procedures for managing and controlling hazardous situations when preparing and starting up a motive power unit

Procedures for starting and operating auxiliary systems on a motive power unit

Procedures for checking fuel and fluid levels and carrying out lubrication processes on a motive power unit

External features of a motive power unit that must be checked during a pre-operational visual inspection

Procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements

Procedures for identifying equipment defects and assessing for appropriate action

Typical defects that can occur on a motive power unit and related action that should be taken

Requirements for completing relevant documentation when inspecting and preparing a motive power unit

Procedures to be followed in the event of an emergency

Functions of all supervisory indicators and controls and related checks for correct operation

Communication equipment checks

Lubrication requirements for a motive power unit

Cleaning requirements for a motive power unit

Functions of auxiliary systems on a motive power unit and related checks for correct operation

Fuel tank capacity and range (where applicable)

Procedures for raising and lowering a pantograph on electric motive power units

Local procedures and operating requirements

Procedures for operating electronic communications equipment with required protocol

**Required skills:**

- Communicate effectively with others when inspecting and preparing a motive power unit
- Operate electronic communication equipment to required protocol
• Read and interpret instructions, procedures and information and signs relevant to the visual inspection, preparation, start-up and positioning of a motive power unit
• Document outcomes of inspection of a motive power unit
• Complete documentation related to the preparation and positioning of a motive power unit
• Work collaboratively with others inspecting and preparing a motive power unit
• Interpret and follow instructions and prioritise work
• Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
• Implement contingency plans for unplanned events
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in motive power units and associated equipment and procedures
• Monitor and anticipate operational problems and hazards and take appropriate action
• Check and replenish fluids and carry out lubrication requirements on a motive power unit
• Conduct a visual inspection of a motive power units and associated equipment
• Prepare a motive power unit prior to service
• Position a motive power unit in readiness for service

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all relevant weather conditions

Motive power units may include all motive power units in service within Australian rail systems and may include:
• diesel locomotives
• electric locomotives
• railcars
• multiple units (including electric multiple units)
Motive power equipment may include:

- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Inspection of a motive power unit may include:

- lights
- hoses
- couplings
- destination boards (electric urban train services)
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand and fuel (regional diesel train services)
- pantographs (in case of electric MPUs)
- electrical cables
- glass windows and doors
- compressor oil levels
- automatic power cut out sensors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)
In-cab pre-operational checks will include:

- brake checks
- electro-pneumatic brake cut out test (for electric urban trains)
- driver's safety control test
- functionality checks of supervisory controls and indicators
- traction
- in-cab check of communication equipment (depending on type of MPU this may include radio, intercom, PA systems, passenger emergency intercom, passenger emergency systems, etc.)
- radio communication check with train controller
- seat
- windows and blinds
- air conditioners and heaters
- door locks
- fire extinguishers
- emergency toolbox
- passenger service resources

Electric motive power unit start-up sequence will include:

- check that handbrake is on
- check log book
- switch batteries on
- switch auxiliary compressor on
- pantograph up
- close main circuit breaker
- observe and interpret gauges (electric and air)
- take appropriate action if gauge readings outside normal operation range
- recheck fluid levels
- start motive power unit
Diesel motive power unit start-up sequence will include:

- check that handbrake is on
- check log book
- check all fluid levels (including radiator, crankcase oil, water, compressor oil and governor oil) and take appropriate action if outside required levels
- battery switch on
- isolation switch to 'start'
- all circuit breakers on
- observe and interpret gauges (electric and air)
- take appropriate action if gauge readings outside normal operation range
- recheck fluid levels
- start motive power unit

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- electric train service supervisor
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement
Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Positioning of motive power unit may involve:

- operation of manual points
- operation of turntable
- coupling/uncoupling to other rolling stock

Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- notices in drivers' notice board/box
- reference cards
- train driver roster sheet and/or table card
- operational instructions, policies and procedures:
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB7607A Inspect and prepare a heritage motive power unit

Unit Descriptor
This unit involves the skills and knowledge required to inspect and prepare a heritage motive power unit in accordance with workplace procedures and the requirements of relevant rail regulations and codes of practice. It includes the checking and preparing of the motive power unit, visually examining the motive power unit, conducting in-cab checks, and starting and positioning the motive power unit for service in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of heritage railway systems.

Work is performed under some supervision, generally within a team environment.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Start heritage motive power unit
1.1 Roster is checked and interpreted for day's train driving activities
1.2 Allocation of motive power units is checked in conjunction with train controllers and roster clerk
1.3 Motive power unit to be inspected and prepared is located in the yard
1.4 Motive power unit is started in accordance with manufacturers instructions and any operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
1.5 In the case of safety, critical or serious equipment faults that cannot be readily rectified, the motive power unit is shut down, the faulty equipment isolated and tagged and the problem reported for rectification
1.6 All instruments and gauges are observed and readings interpreted to confirm effective operation, including air and electrical. Where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
1.7 Fluid levels are rechecked after starting and appropriate action taken if required
1.8 Pre-departure checks are carried out to ensure heritage motive power unit is braking and powering effectively and is safe to move

2 Prepare for motive power unit work activities

2.1 Roster is checked and interpreted for day's train driving activities
2.2 Allocation of motive power units is checked as per notices in conjunction with train controllers and roster clerk
2.3 Trackside safety and basic electrification awareness procedures are followed while locating the allocated motive power unit in the yard
2.4 Motive power unit inspection and preparation duties are identified and interpreted
2.5 Train schedules and notices and other operational and regulatory documentation is accessed and interpreted in accordance with workplace procedures
2.6 Communication equipment required for the day's operations is obtained and checked to ensure that it is functional
2.7 Required personal protective equipment is obtained for use during the day's train driving activities
2.8 Motive power unit to be inspected and prepared is located in the yard

3 Inspect and prepare motive power unit

3.1 Features, functions and location of motive power unit and associated equipment are identified
3.2 Log book is checked to confirm serviceability of unit
3.3 Preparation and safety checks are conducted, in accordance with OH&S and other workplace policies and procedures
3.4 Motive power unit, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged (where applicable) or reported as per workplace procedures and regulatory requirements
3.5 Availability of appropriate fuel, lubricating oils, water, coolant and sand quantities (where applicable) are checked against journey requirements and appropriate action is taken to replenish them if required
3.6 Relevant OH&S and regulatory requirements are followed

4 Conduct in-cab checks

4.1 Motive power unit is checked in correct sequence and all equipment is confirmed to be operating to optimum requirements
4.2 Cab layout is checked and confirmed to meet operating requirements
4.3 Pre-departure mechanical checks are correctly performed and correct functioning of all equipment is confirmed as per workplace procedures and manufacturers operating requirements

4.4 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly

4.5 Communication equipment is checked to ensure that it is functioning correctly and appropriate action is taken if it is not working correctly

4.6 Seat, windows, blinds, air conditioners, heaters and other personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort

4.7 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements

4.8 Fire extinguisher, emergency toolbox and other required equipment are checked to confirm that they are in position and meet operational requirements

5 Complete documentation

5.1 All required documentation concerning the inspection of the motive power unit is completed in accordance with workplace procedures and regulatory requirements

5.2 Log book and other service records on the motive power unit are completed in accordance with workplace procedures and regulatory requirements

6 Position motive power unit

6.1 Authority to move and position heritage motive power unit is obtained and relevant personnel are advised of intention and procedures

6.2 Motive power unit is operated in accordance with standard procedures and regulatory requirements and within operating and operational constraints

6.3 Motive power unit is positioned in accordance with operational requirements and directions

6.4 Motive power unit performance is monitored during operation in order to confirm effective operation or to identify defects

6.5 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance

6.6 Relevant OH&S and regulatory requirements are followed to ensure safety and to prevent injury and damage

6.7 Train controller and other relevant personnel are advised that the motive power unit is secured in the required position and is ready for service
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations
- Relevant OH&S and environmental procedures and regulations
- Principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- Visual inspection procedures for a heritage motive power unit
- In-cab pre-operational checks for a heritage motive power unit
- Start-up procedures for motive power units
- Operating procedures for motive power units
- Braking and safety system procedures for motive power units
- Operating controls to start, accelerate, decelerate and stop a motive power unit
- Procedures for adjusting controls to optimise the operation of a motive power unit
- Procedures for managing and controlling hazardous situations when preparing and starting up a motive power unit
- Procedures for starting and operating auxiliary systems on a motive power unit
- Procedures for checking fuel and fluid levels and carrying out lubrication processes on a motive power unit
- External features of a motive power unit that must be checked during a pre-operational visual inspection
- Procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements
- Procedures for identifying equipment defects and assessing for appropriate action
- Typical defects that can occur on a motive power unit and related action that should be taken
- Requirements for completing relevant documentation when inspecting and preparing a heritage motive power unit
- Procedures to be followed in the event of an emergency
- Functions of all supervisory indicators and controls and related checks for correct operation
- Communication equipment checks
- Lubrication requirements for a motive power unit
- Cleaning requirements for a motive power unit
- Functions of auxiliary systems on a motive power unit and related checks for correct operation
- Fuel tank capacity and range (where applicable)
- Procedures for raising and lowering a pantograph on electric motive power units
- Local procedures and operating requirements
- Procedures for operating electronic communications equipment with required protocol
**Required skills:**

- Communicate effectively with others when inspecting and preparing a heritage motive power unit
- Operate electronic communication equipment to required protocol
- Read and interpret instructions, procedures and information and signs relevant to the visual inspection, preparation, start-up and positioning of a motive power unit
- Document outcomes of visual inspection of a motive power unit
- Complete documentation related to the preparation and positioning of a motive power unit
- Work collaboratively with others as part of a train crew
- Interpret and follow instructions and prioritise work
- Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in motive power units and associated equipment and procedures
- Monitor and anticipate operational problems and hazards and take appropriate action
- Check and replenish fluids and carry out lubrication requirements on a motive power unit
- Conduct a visual inspection of a motive power units and associated equipment
- Prepare a motive power unit prior to service
- Position a motive power unit in readiness for service

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**

- by day or night
- in all relevant weather conditions

**Heritage motive power units may include all heritage motive power units in service within Australian rail systems and may include:**

- diesel locomotives
- electric locomotives
- railcars
- multiple units (including electric multiple units)
Motive power equipment may include:

- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Inspection of a heritage motive power unit may include:

- lights
- hoses
- couplings
- destination boards (electric urban train services)
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand and fuel (regional diesel train services)
- pantographs (in case of electric MPUs)
- electrical cables
- glass windows and doors
- compressor oil levels
- automatic power cut out sensors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)
In-cab pre-operational checks will include:

- brake checks
- electro-pneumatic brake cut out test (for electric urban trains)
- driver’s safety control test
- functionality checks of supervisory controls and indicators
- traction
- in-cab check of communication equipment (depending on type of MPU this may include radio, intercom, PA systems, passenger emergency intercom, passenger emergency systems, etc.)
- radio communication check with train controller
- seat
- windows and blinds
- air conditioners and heaters
- door locks
- fire extinguishers
- emergency toolbox
- passenger service resources

Electric heritage motive power unit start-up sequence will include:

- check that handbrake is on
- check log book
- switch batteries on
- switch auxiliary compressor on
- pantograph up
- close main circuit breaker
- observes and interpret gauges (electric and air)
- take appropriate action if gauge readings outside normal operation range
- recheck fluid levels
- start heritage motive power unit
Diesel motive power unit start-up sequence will include:

- check log book
- check all fluid levels (including radiator, crankcase oil, water, compressor oil and governor oil) and take appropriate action if outside required levels
- battery switch on
- isolation switch to 'start'
- all circuit breakers on
- handbrake on
- observes and interpret gauges (electric and air)
- take appropriate action if gauge readings outside normal operation range
- recheck fluid levels
- start heritage motive power unit

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- electric train service supervisor
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement
Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Positioning of heritage motive power unit may involve:

- operation of manual points
- operation of turntable
- coupling/uncoupling to other rolling stock

Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- notices in drivers' notice board/box
- reference cards
- train driver roster sheet and/or table card
- operational instructions, policies and procedures:
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB7707A   Inspect and prepare a heritage steam locomotive

Unit Descriptor
This unit involves the skills and knowledge required to inspect and prepare a heritage steam locomotive with relevant workplace practices, rail regulations and codes of practice. It includes the checking and preparation of a heritage steam locomotive, visually examining the locomotive, conducting in-cab checks, and moving and positioning the locomotive for service in accordance with workplace requirements. This unit replaces part of the previous unit TDTC1401A Prepare, operate, monitor and stable steam locomotive. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of heritage railway systems.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to inspect, prepare and position a steam locomotive as part of workplace activities across a variety of operational contexts in the Australian heritage rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Light fire and raise steam

1.1 Roster is checked and interpreted for day's train driving activities
1.2 Allocation of locomotives is checked as per notices and in conjunction with train controllers and roster clerk
1.3 Locomotive to be inspected and prepared is located in the yard
1.4 Pre-light-up procedures applicable to the type of fire box are identified and followed to enable safe boiler operation
1.5 Light-up procedures and safety practices are followed to build up steam within the boiler and to ensure 'smoking' is minimised
1.6 Instruments and equipment are monitored to ensure safe and efficient operation as steam pressure is raised to operating level
1.7 Where a problem is indicated, action is taken to determine the cause and to rectify or report the situation

2 Prepare for steam locomotive work activities

2.1 Roster is checked and interpreted for day's train driving activities
2.2 Allocation of locomotives is checked as per notices and in conjunction with train controllers and roster clerk
2.3 Trackside safety and basic electrification awareness procedures are followed while locating the allocated locomotive in the yard
2.4 Locomotive inspection and preparation duties are identified and interpreted
2.5 Train schedules and notices and other operational and regulatory documentation is accessed and interpreted
2.6 Communication equipment required for the day's operations is obtained and checked to ensure that it is functional
2.7 Required personal protective equipment is obtained for use during the day's train driving activities
2.8 Locomotive to be inspected and prepared is located in the yard

3 Inspect and prepare locomotive

3.1 Features, functions and location of locomotive and associated equipment are identified
3.2 Log book is checked to confirm serviceability of locomotive
3.3 Preparation and safety checks are conducted, in accordance with OH&S and other workplace policies and procedures
3.4 Locomotive, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged (where applicable) or reported as per workplace procedures and regulatory requirements
3.5 Availability of appropriate fuel, lubricating oils, water and sand quantities (where applicable) are checked against journey requirements and appropriate action is taken to replenish them if required
3.6 Relevant OH&S and regulatory requirements are followed

4 Conduct in-cab checks

4.1 Locomotive is checked in correct sequence and all equipment is confirmed operating to optimum requirements
4.2 Cab layout is checked and confirmed to meet operating requirements
4.3 Pre-departure mechanical checks are correctly performed and correct functioning of all equipment is confirmed as per workplace procedures and operating requirements
4.4 Operational controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
4.5 Communication equipment is checked to ensure that it is functioning correctly and appropriate action is taken if it is not working correctly

4.6 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements

4.7 Fire extinguisher, safety equipment, emergency toolbox and any other required equipment are checked to confirm they are in position and meet operational requirements

4.8 Pre-departure checks are carried out to ensure locomotive is braking and powering effectively and is safe to move

5 Complete documentation

5.1 All required documentation concerning the inspection, preparation and start up of the locomotive is completed in accordance with workplace procedures and regulatory requirements

5.2 Log book and other service records on the locomotive are completed in accordance with workplace procedures and regulatory requirements

6 Position motive power unit

6.1 Authority to move and position locomotive is obtained and relevant personnel are advised of intention and procedures

6.2 Locomotive is operated in accordance with standard procedures and regulatory requirements and within operating and operational constraints

6.3 Locomotive is positioned in accordance with operational requirements and directions

6.4 Locomotive performance is monitored during operation in order to confirm effective operation or to identify defects

6.5 Equipment defects are identified, rectified and recorded or relevant personnel are advised for assistance

6.6 Relevant OH&S and regulatory requirements are followed to ensure safety and to prevent injury and damage

6.7 Train controller and other relevant personnel are advised that the locomotive is secured in the required position and is ready for service

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations

- Relevant OH&S and environmental procedures and regulations

- Locomotive controls, instruments and indicators and their purpose, location and use
• Inspection procedures for a heritage steam locomotive
• In-cab pre-operational checks for a heritage steam locomotive
• Procedures for lighting fire and raising steam on heritage steam locomotives
• Operating procedures for locomotives
• Braking and safety system procedures for steam locomotives
• Operating controls to start, accelerate, decelerate and stop a heritage steam locomotive
• Procedures for adjusting controls to optimise the operation of a heritage steam locomotive
• Procedures for managing and controlling hazardous situations when preparing and firing up a heritage steam locomotive
• Procedures for starting and operating auxiliary systems on a locomotive
• Procedures for checking fuel and fluid levels and carrying out lubrication processes on a locomotive
• Principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
• External features of a steam locomotive that must be checked during a pre-operational visual inspection
• Procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements
• Procedures for identifying equipment defects, assessing and reporting for appropriate action
• Typical defects that can occur on a steam locomotive and related action that should be taken
• Requirements for completing relevant documentation when inspecting and preparing a steam locomotive
• Procedures to be followed in the event of an emergency
• Functions of all supervisory indicators and controls and related checks for correct operation
• Communication equipment checks and operating procedures
• Lubrication requirements for a heritage steam locomotive
• Cleaning requirements for a heritage steam locomotive
• Functions of auxiliary systems on a heritage steam locomotive and related checks for correct operation
• Fuel capacity and range (where applicable)
• Local procedures and operating requirements
• Procedures for operating communications equipment with required protocol

**Required skills:**
• Communicate effectively with others when inspecting and preparing a heritage steam locomotive
• Operate electronic communication equipment to required protocol
• Read and interpret instructions, procedures and information and signs relevant to the visual inspection, preparation and positioning of a heritage steam locomotive
• Document outcomes of visual inspection of a heritage steam locomotive
• Complete documentation related to the preparation and positioning of a steam locomotive
• Work collaboratively with others as part of a train crew
• Interpret and follow instructions and prioritise work
• Identify and assess steam locomotive defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
• Implement contingency plans for unplanned events
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in steam locomotives and associated equipment and procedures
• Monitor and anticipate operational problems and hazards and take appropriate action
• Check and replenish fluids and carry out lubrication requirements on a steam locomotive
• Conduct an inspection of a steam locomotives and associated equipment
• Prepare a steam locomotive prior to service
• Light fire and raise steam on a steam locomotive
• Position a steam locomotive in readiness for service

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all relevant weather conditions

Heritage steam locomotives may include:
• any heritage steam locomotives in service within Australia

Equipment on a heritage steam locomotive may include:
• steam locomotive instrumentation (gauges)
• feed water controls
• boiler controls and safety devices
• braking systems
• driving and other operational controls
• communication systems
• warning equipment
• ancillary systems
• vigilance systems
• traction systems
• head and marker lights

Communications equipment may include:
• portable and fixed two way radio
• mobile phone
Inspection of a heritage steam locomotive may include:

- lights
- hoses
- couplings
- brake equipment
- wheels
- seals
- sand and fuel
- glass windows and doors
- audible faults (e.g. hiss of escaping air or steam)
- visible faults (e.g. oil leaks, tears and cracks)

Pre-operational checks will include:

- brake checks
- driver's safety control test
- functionality checks of supervisory controls and indicators
- check of communication equipment (depending on type of locomotive, this may include radio, passenger emergency systems, etc.)
- radio communication check with train controller
- windows and blinds
- fire extinguishers
- emergency toolbox

Auxiliary equipment may include:

- steam regulator
- cab sprinkler
- gauges
- generator
- sandboxes
- whistle
- steam turbine generator
- all ancillary valves
- hand brake
- injectors
- lubricators
- gauge glasses
- blower
- damper
- cylinder cocks
- mechanical stoker
- oil burning apparatus
Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Positioning of steam locomotive may involve:

- operation of manual points
- operation of turntable
- coupling/uncoupling to other rolling stock

Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- steam locomotive operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- roadworthy certificate
- operational instructions, policies and procedures, including: those related to preventing steam locomotives from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- documented details of the train including length and weight
- emergency procedures manual
Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIB7807A**  
**Inspect, prepare and start an electric tram**

### Unit Descriptor
This unit involves the skills and knowledge required to inspect, prepare and start an electric tram in accordance with relevant regulations and workplace practices. It includes the checking and preparing of the electric tram, visually examining the electric tram, conducting on-tram checks, and starting and positioning the electric tram for service in accordance with workplace requirements. This unit replaces part of the previous unit TDTC2101A Drive tram Licensing, legislative, regulatory or certification requirements are applicable to this unit.

### Employability Skills
This unit contains employability skills.

### Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines, as well as relevant road rules and tramway regulatory requirements of the states/territories concerned.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to inspect, prepare, start and position an electric tram as part of workplace activities across a variety of operational contexts.

### Competency Field
B – Equipment Checking & Maintenance

### ELEMENT
Elements describe the essential outcomes of a unit of competency.

### PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan and prepare an electric tram | 1.1 Roster is checked and interpreted for day's tram driving activities  
1.2 Allocation of electric trams is checked in conjunction with tram controllers and roster clerk  
1.3 Electric tram inspection and preparation duties are identified and interpreted  
1.4 Tram schedules and notices and other operational and regulatory documentation is accessed and interpreted in accordance with workplace procedures  
1.5 Communication equipment required for the day's operations is obtained and checked to ensure that it is functional  
1.6 Required personal protective equipment is obtained for use during the day's tram driving activities  
1.7 Electric tram to be inspected and prepared is located in the depot |
1.8 Depot safety and basic electrical equipment awareness procedures are followed while locating the tram in the depot.

2 Visually inspect and prepare electric tram

2.1 Features, functions and location of electric tram and associated equipment are identified

2.2 Log book is checked to confirm serviceability of unit

2.3 Pre-start internal and external safety and maintenance checks are conducted, in accordance with OH&S and other workplace policies and procedures

2.4 Electric tram and equipment are checked by visual inspection and defects and deficiencies are recorded and rectified, isolated, tagged (where applicable) or reported as per workplace procedures and regulatory requirements

2.5 Availability of traction power and sand if required are checked against journey requirements as per workplace procedures and regulatory requirements

2.6 Relevant OH&S and regulatory requirements are followed

3 Conduct on-tram checks

3.1 Electric tram is checked in correct sequence and all lights are confirmed operating to optimum requirements

3.2 Pre-departure mechanical checks are correctly performed and correct functioning of all equipment is confirmed as per workplace procedures and manufacturers operating requirements

3.3 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly

3.4 Communication equipment is checked to ensure that it is functioning correctly and appropriate action is taken if it is not working correctly

3.5 Seat, windows, blinds and other personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort

3.6 Ancillary equipment is checked and is confirmed to be operational in accordance with operating requirements

3.7 Fire extinguisher, point bars and any other required tools are checked to confirm that they are in position and meet operational requirements

4 Start electric tram

4.1 Electric tram is started in accordance with instructions and any operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up

4.2 In the case of safety, critical or serious equipment faults that cannot be readily rectified, the electric tram is shut down and reported for rectification in accordance with procedures
4.3 All instruments and gauges are observed and readings interpreted to confirm effective operation, including air and electrical. Where a problem is indicated, action is taken to determine the cause and to rectify or report the situation

4.4 Sand operation (if applicable) is checked after starting and appropriate action is taken if not effectively functioning

4.5 Pre-departure checks are carried out to ensure electric tram is braking and powering effectively and is safe to move

5 **Position electric tram**

5.1 Authority to move and position electric tram is obtained and relevant personnel are advised of intention and procedures

5.2 Electric tram is operated in accordance with standard procedures and regulatory requirements and within operating and operational constraints

5.3 Electric tram is positioned in accordance with operational requirements and directions

5.4 Tram performance is monitored during operation in order to confirm effective operation or to identify defects

5.5 Equipment defects are identified, rectified and recorded or relevant personnel are advised for assistance

5.6 Relevant OH&S and regulatory requirements are followed to ensure safety and to prevent injury and damage

5.7 Relevant personnel are advised that the electric tram is secured in the required position and is ready for service

6 **Complete documentation**

6.1 All required documentation concerning the inspection, preparation and start-up of the electric tram is completed in accordance with workplace procedures and regulatory requirements

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant state/territory roads and traffic authority and tramway operating procedures
- Relevant OH&S and environmental procedures and regulations
- Electric tram controls, instruments and indicators and their purpose, location and use
- Monitoring devices; braking and power equipment; safety systems; ancillary systems; and any signalling systems
- Visual inspection procedures for an electric tram
- On-tram pre-operational checks for an electric tram
- Start-up procedures for an electric tram
- Braking and safety system procedures for electric trams
Operating controls to start, accelerate, decelerate and stop an electric tram
Procedures for adjusting controls to optimise the operation of an electric tram
Procedures for managing and controlling hazardous situations when preparing and starting up an electric tram
Procedures for starting and operating ancillary systems on an electric tram
Functions of sand as used on an electric tram and the procedures for checking and refilling sand levels and carrying out sand system testing processes on an electric tram
Principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
External features of an electric tram that must be checked during a pre-operational visual inspection
Procedures for minor maintenance including cleaning
Procedures for identifying equipment defects and assessing for appropriate action
Typical defects that can occur on an electric tram and related action that should be taken
Requirements for completing relevant documentation when inspecting, preparing and starting an electric tram
Procedures to be followed in the event of an emergency
Functions of all supervisory indicators and controls and related checks for correct operation
Communication equipment checks
Cleaning requirements for an electric tram
Functions of ancillary systems on an electric tram and related checks for correct operation
Procedures for raising and lowering a pantograph or trolley pole on an electric tram
Procedures for operating any electronic communications equipment with required protocol
Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long term management of fatigue

Required skills:

Communicate effectively with others when inspecting, preparing, starting up and positioning an electric tram
Operate any electronic communication equipment to required protocol
Read and interpret instructions, procedures and information and signs relevant to the visual inspection, preparation, starting and positioning of an electric tram
Document outcomes of visual inspection of an electric tram
Complete documentation related to the inspection, preparation, start up and positioning of an electric tram
Work collaboratively with others during the inspection, preparation, start up and positioning of an electric tram
Interpret and follow instructions and prioritise work
Identify and assess tram defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in trams and associated equipment and procedures
- Monitor and anticipate operational problems and hazards and take appropriate action
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Check and replenish sand (where applicable) on an electric tram
- Conduct a visual inspection of an electric tram and associated equipment
- Prepare and start an electric tram prior to service
- Position an electric tram in readiness for service
- Apply fatigue management knowledge and techniques

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Electric trams include all electric trams in service within Australian transport systems and may include:
- hand-operated or foot pedal control systems or both

Electric tram equipment may include:
- ancillary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems

Pre-operation checks may include:
- sand levels
- brake testing
- lights – internal and external
- air systems
- interlocks and door controls
Visual inspection of an electric tram may include:

- lights
- hoses
- couplings
- destination indicators or signs
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand
- pantographs or trolley poles
- electrical cables
- glass windows and doors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)

In-cab pre-operational checks may include:

- brake checks
- driver's safety control test
- functionality checks of supervisory controls and indicators
- traction controls
- in-cab check of communication equipment (depending on type of tram this may include radio, intercom, PA systems, passenger emergency intercom, passenger emergency systems, etc.)
- radio communication check with tram controller
- seat (ergonomic setting for safety, function and comfort)
- windows and blinds
- door locks
- fire extinguishers
- point bars, any other tools and tool boxes
Electric tram start-up sequence may include:

- check log book
- pantograph or trolley pole up
- switch on batteries, if any
- switch on compressor, if any
- close all power control switches
- close all light switches and set lights for proposed direction of travel
- check sand levels and functions
- check handbrake/park brake is functioning correctly
- observe and interpret gauges
- take appropriate action if gauge readings outside normal operation range
- start tram

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- tram crew
- tram controllers
- rostering supervisors and staff
- other tram drivers and crews
- depot coordinators
- supervisors and other operational personnel
- maintenance personnel
- immediate internal or external customers
- internal and external suppliers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information and documents may include:

- relevant national and state or territory transport regulations and codes of practice
- notices in drivers’ notice board/box
- reference cards
- tram driver roster sheet and/or table card
- operational instructions, policies and procedures:
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory road rules and tramway codes of practice
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIB7907A Set up and secure a towing situation

Unit Descriptor
This unit involves the skills and knowledge required to plan a towing job and set up towing situation, including obtaining and confirming job instructions, assessing towing requirements, determining a plan of action, and carrying out all required action to set up and secure a towing situation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable OH&S legislation and other relevant regulations covering the setting up and securing of a towing situation.

Work is performed under limited supervision. It involves the application of regulatory requirements and standard operating procedures to the setting up and securing of a towing situation.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA

1 Obtain information on towing job
1.1 Information on the towing job is obtained from base or depot as per procedures
1.2 Further information on towing requirements is obtained at the scene of the job

2 Assess towing requirements
2.1 Equipment requirements and techniques to carry out the towing job are assessed
2.2 Potential hazards that may be experienced at the towing site and during the towing operation are identified and appropriate precautions and strategies are adopted to manage and control the risks involved
2.3 Type of vehicle to be towed is identified and critical aspects of vehicle design determined as they relate to allowable towing arrangements and configurations

3 Determine appropriate plan of action
3.1 Sequence of action and plan for the towing activity and the safety and security of persons, vehicles and property are determined as per regulatory requirements and standard operating procedures
3.2 Towing vehicle and associated equipment to carry out the job are organised to be available for the work

4 Set up and secure the
4.1 The setting up and securing of a towing situation are carried
out in accordance with the established action plan

4.2 Safety equipment, witch's hats and safety signs are deployed as per standard operating procedures and regulatory requirements

4.3 Onlookers and other personnel in the vicinity of the towing situation are managed as per applicable safety management procedures and security requirements

4.4 Vehicle or equipment to be towed is manoeuvred into position using relevant equipment as per standard operating procedures and regulatory requirements

4.5 Vehicle or equipment to be towed is secured using appropriate winches, ropes and cables as per relevant load restraint regulations and standard operating procedures

5 Record and report results of inspection and testing

5.1 The assessment of the towing situation and action taken are accurately reported in accordance with regulatory requirements, workplace policy and industry guidelines

5.2 Records are clear, unambiguous and concisely kept in accordance with workplace procedures

5.3 Clear reference is made to any issues, hazards or incidents that may have arisen when attending the towing situation and any related action taken

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Regulations and standards relevant to the setting up and securing of a towing situation
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the checking and assessing of the operational capability of equipment
• Focus of operation of work systems, equipment, management and workplace standard operating systems for the checking and assessing of the operational capability of equipment
• The characteristics, applications, capabilities and limitations of the towing equipment
• Tools and equipment used when setting up and securing a towing situation and the precautions and procedures that should be followed in their use
• Problems that may occur when setting up and securing of a towing situation and appropriate action that can be taken to resolve the problems
• Operational safety requirements for the equipment concerned
• Hazards that may exist when setting up and securing of a towing situation and precautions and action that should be taken to minimise or eliminate the hazards concerned
• Documentation and record requirements when checking and assessing the operational capability of equipment
• Housekeeping standards and procedures required when setting up and securing a towing situation
Required skills:
- Communicate effectively with others when setting up and securing a towing situation
- Read and interpret instructions, procedures and information relevant to the setting up and securing of a towing situation
- Read and comprehend simple statements in English
- Complete documentation related to the setting up and securing of a towing situation
- Work safely and collaboratively with others when setting up and securing a towing situation
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Modify activities depending on differing workplace contexts, risk situations and towing situations
- Recognise problems concerning the setting up and securing of a towing situation and take appropriate action
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Prioritise work activities when setting up and securing a towing situation
- Select and use personal protective equipment as per OH&S requirements
- Select and use equipment and tools required when setting up and securing a towing situation

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of towing situations
- by day or night
- in a range of weather conditions

Customers may be:
- vehicle owners
- operators of expressways, freeways, tollways or tunnels
- police and other emergency services personnel
- local government authorities
- car park operators
- road traffic authorities
- owners and operators of equipment elevating work platforms, forklifts, small load shifting equipment, etc.
Towing situations may include:

- vehicle accidents
- vehicle breakdowns
- expressway breakdowns and accidents
- tunnel breakdowns and accidents
- stolen cars
- vehicles illegally parked on clearways
- vehicles illegally parked in car parks
- abandoned vehicles
- carriage of equipment such as elevating work platforms, forklifts, small load shifting equipment, etc.

Required towing vehicle may include:

- tilt tray tow truck with winch (5 tonne, 7.5 tonne and 10 tonne capacity)
- tow truck with crane and cradle
- towing vehicle with a detachable self loading table top
- articulated drop-deck low loader
- trailer

Potential hazards that may occur in various towing situations may include:

- vehicular traffic at the scene
- live electrical wires
- contaminated blood at scene
- weather conditions
- oil on vehicle trays (slippery surfaces)
- unsafe or damaged equipment
- unsafe procedures in the use of towing equipment
- fire at the scene
- spilt or leaking fuel or dangerous or hazardous goods or substances
- unsafe manual lifting procedures
- sharps that may be contaminated with transmittable diseases
Hazard control strategies may include:

- use of flashing lights on vehicles
- deployment of safety equipment such as warning signs or witch's hats
- strategic positioning of towing vehicle
- use of appropriate personal protective equipment, including reflective vests and raincoats
- use of safe procedures in the use of towing equipment
- checking equipment and isolating, rectifying or reporting any defective equipment
- following correct safety procedures in the event of live fallen electrical wires at an accident scene
- following correct procedures in the event of spilt or leaking fuel or dangerous or hazardous goods or substances as per the Australian Dangerous Goods Code
- using correct portable firefighting equipment to control a fire at the scene
- correct manual lifting strategies
- cleaning of vehicles (including removal of oil from vehicle trays)

Depending on the organisation concerned, operating procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing (raincoats and vests)
- portable fire extinguishers

Communication at towing sites and in the work area may include:

- mobile phone
- fax
- email
- internet
- RF communications
- oral, aural or signed communications
Information and documents may include:

- standard procedures and policies for the setting up and securing a towing situation
- manufacturers specifications for towing vehicle, equipment and tools
- workplace and client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- quality assurance standards
- emergency procedures

Applicable legislation, regulations and codes may include:

- relevant standards and codes pertaining to the setting up and securing of a towing situation
- relevant state/territory regulations and licence/permit requirements pertaining to the operation of tow trucks
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant
operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB8007A  Use, clean and maintain towing equipment

Unit Descriptor

This unit involves the skills and knowledge required to use, clean and maintain towing equipment in accordance with workplace requirements. It includes carrying out pre-operation checks on equipment, carrying out basic routine servicing of the equipment, using the towing equipment, cleaning the equipment, and recording and reporting the results of checks in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the OH&S legislation and other relevant regulations covering the use, cleaning and basic servicing of the towing vehicle and the equipment concerned.

Work is performed under limited supervision. It involves the application of regulatory requirements and standard operating procedures to the use, cleaning and servicing of a towing vehicle and its equipment.

Competency Field

B – Equipment Checking & Maintenance

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Visually inspect vehicle and towing equipment

1.1 Towing vehicle and equipment are visually inspected prior to operations as per standard pre-operational functional and safety check procedures and manufacturers specifications

1.2 Aspects of vehicle or equipment found to be faulty or outside manufacturers or workplace specifications are reported to designated persons for appropriate action

2 Check vehicle and towing equipment for operational capability

2.1 Towing vehicle and equipment are checked to ensure that they can be operated in accordance with manufacturers specifications and standard operating procedures

2.2 Safety systems are all checked for operational effectiveness

2.3 Routine servicing and lubrication checks of the tow truck and its equipment are carried out in accordance with the service schedule for the vehicle and the equipment concerned

3 Identify and assess impact of faults on towing operations

3.1 The effect of any identified faults on the operation of the towing vehicle and equipment is assessed

3.2 Faulty equipment or components that may affect the safe operation of the vehicle and equipment are isolated, tagged
and reported to the appropriate personnel for rectification

4 Use towing equipment on vehicle

4.1 Towing equipment is operated in accordance with manufacturers specifications and regulatory requirements

4.2 Attachment points used in the towing operation and the weight of the vehicle being towed or load being carried are checked to ensure that they are consistent with established towing practice, regulatory requirements and the permissible safe working loads for the tow truck and its associated towing equipment

4.3 Safety precautions are followed when using the towing equipment on a tow truck in accordance with standard operating procedures and occupational health and safety requirements

4.4 Personal protective equipment is worn in accordance with standard operating procedures and occupational health and safety requirements

5 Clean towing vehicle and its equipment

5.1 Appropriate cleaning process is selected for type of towing vehicle and its equipment in accordance with standard operating procedures

5.2 Cleaning materials are prepared in accordance with manufacturers instructions and standard operating procedures

5.3 The required personal protective and safety equipment is selected and used in accordance with regulatory requirements and standard operating procedures

5.4 Towing vehicle is cleaned using appropriate cleaning materials and tools as per standard procedures

6 Record and report results of visual inspection and operational checks

6.1 The results of the visual inspection and operational checks are accurately reported in accordance with regulatory requirements, workplace policy and standard procedures

6.2 Records are clear, unambiguous and concisely kept in accordance with workplace policy

6.3 Clear reference is made to any items which may affect the future safety of the towing vehicle or equipment

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations and standards relevant to the use, cleaning and servicing of a towing vehicle and its equipment
- Relevant OH&S and environmental protection procedures and guidelines
- Standard operating procedures and policies for the use, cleaning and servicing of a towing vehicle and its equipment
• Focus of operation of work systems, equipment, management and workplace standard operating systems for the use, cleaning and servicing of a towing vehicle and its equipment
• The characteristics, capabilities and limitations of the towing vehicle and its equipment
• Tools, materials and equipment used during the use, cleaning and maintenance of a towing vehicle and its equipment and the precautions and procedures that should be followed in their use
• Problems that may occur when using, cleaning and servicing a towing vehicle and its equipment and appropriate action that can be taken to resolve the problems
• Operational safety requirements for the towing vehicle and equipment concerned
• Documentation and record requirements when using, cleaning and servicing a towing vehicle and its equipment
• Housekeeping standards and procedures required when operating and servicing a tow truck and its equipment
• Hazards that may exist when using, cleaning and servicing a towing vehicle and its equipment and the precautions and action that should be taken to minimise or eliminate the hazards concerned

Required skills:
• Communicate effectively with others when using, cleaning and servicing a towing vehicle and its equipment
• Read and interpret instructions, procedures and labels relevant to the operation, cleaning and servicing of a towing vehicle and its equipment
• Complete documentation related to the operation, cleaning and servicing of a towing vehicle and its equipment
• Work safely and collaboratively with others when using, cleaning and servicing a towing vehicle and its equipment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Modify activities depending on differing towing contexts, risk situations and environments
• Recognise problems concerning the safety and operational capability of the towing vehicle and its equipment and take appropriate action
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating, cleaning and servicing a towing vehicle and its equipment
• Plan own work including predicting consequences and identifying improvements
• Adapt to changes in towing vehicles and associated equipment and procedures
• Use required personal protective equipment conforming to industry and OH&S standards including the operation of portable fire extinguishers
• Select and use relevant equipment, tools and cleaning agents when using, cleaning and servicing a towing vehicle and its equipment
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of towing situations
- by day or night
- in a range of weather conditions

Customers may be:
- vehicle owners
- operators of expressways, freeways, tollways or tunnels
- police and other emergency services personnel
- local government authorities
- car park operators
- road traffic authorities
- owners and operators of equipment elevating work platforms, forklifts, small load shifting equipment, etc.

Towing situations may include:
- vehicle accidents
- vehicle breakdowns
- expressway breakdowns and accidents
- tunnel breakdowns and accidents
- stolen cars
- vehicles illegally parked on clearways
- vehicles illegally parked in car parks
- abandoned vehicles
- carriage of equipment such as elevating work platforms, forklifts, small load shifting equipment, etc.

Required towing vehicle may include:
- tilt tray tow truck with winch (5 tonne, 7.5 tonne and 10 tonne capacity)
- tow truck with crane and cradle
- towing vehicle with a detachable self loading table top
- articulated drop-deck low loader
- trailer

Purpose of equipment checking and inspection is to ensure:
- it is free from damage and faults that may prejudice safety or limit operational capability

Safety and operational capability checks may be performed:
- on a range of towing vehicles and their associated equipment

Operational and servicing checks may be performed by:
- operating and checking the functionality of various pieces of safety and component equipment (where applicable)
- completing a service checklist for the towing vehicle and its equipment
Potential problems that may be identified during visual inspections and service checks:
- fluid leaks
- low fluid levels
- damaged or worn cables and ropes
- broken equipment or parts
- cracks, surface or structural faults or other damage
- tightness of bolts, fixtures and fittings within specifications

Records and results of pre-operation and operational checks may include:
- details of faulty equipment or specific components
- action taken
- results of checks
- completion of a service checklist or schedules
- details of repair and maintenance work to be undertaken

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing (raincoats and vests)
- portable fire extinguishers

Depending on the organisation concerned workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:
- mobile phone
- fax
- email
- internet
- RF communications
- oral, aural or signed communications
Information and documents may include:

- standard procedures and policies for the operation, checking and servicing of towing vehicle, equipment and tools
- manufacturers specifications for towing vehicle, equipment and tools
- workplace and client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- industry code of practice
- relevant legislation, regulations and related documentation
- quality assurance standards
- emergency procedures

Applicable legislation, regulations and codes may include:

- relevant standards, codes and regulations pertaining to the towing vehicle and its equipment
- relevant state and territory OH&S legislation
- relevant state and territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
TLIB807C  Carry out inspection of trailers

Unit Descriptor
This unit involves the skills and knowledge required to carry out an inspection of a commercial trailer, including action to implement trailer manufacturers specifications for routine checks, to clean the trailer, and to ensure that all specified safety requirements are met and that the trailer is operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations of the relevant roads and traffic authority concerned with the inspection of commercial trailers.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine inspection principles and procedures to check a commercial trailer across a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Check the trailer
1.1 A visual check of the internal and external condition of the trailer is carried out following workplace procedures
1.2 Pre-operational inspections and checks of the trailer's brake systems, suspension and axles, electrical systems and wheels and tyres are carried out to ensure conformance with road safety standards
1.3 Associated equipment is tested to ensure it functions correctly to manufacturers specification

2 Clean trailer
2.1 Trailer and associated equipment is cleaned in accordance with workplace procedures and legislation

3 Complete documentation
3.1 Basic faults are identified and/or diagnosed and appropriate action taken to report or remedy them as required by workplace procedures and legislation
3.2 Records of inspection are updated and recommended repairs documented in accordance with workplace policies
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant duty of care requirements for the routine inspection of trailers
- Relevant OH&S and pollution control procedures
- Procedures for the routine inspection of a commercial trailer in accordance with workplace and manufacturers requirements and established safety rules and regulations including visual inspection procedures and pre-operational checking procedures
- Problems that may occur during the routine inspection of a trailer and appropriate actions and solutions
- Basic principles of operation of systems on commercial trailers, including electrical systems, tyres, brakes and coupling systems
- Reporting and documentation requirements

Required skills:
- Communicate effectively with others during the routine inspection of a trailer
- Read and interpret instructions, procedures and other information relevant to the routine inspection of a trailer
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the routine inspection of a trailer
- Work collaboratively with others during the routine inspection of a trailer
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified during the routine inspection of a trailer in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor and check condition of trailer and its equipment in terms of maintenance schedule and standard operating procedures
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Maintenance may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- in confined spaces, exposed conditions and controlled or open environment
- while in a depot, base or warehouse
- while in the trailer on the road
- while at a client's workplace

Trailers may include:
- any commercial trailers attached to vehicles used in the Australian transport industry

Inspection may include:
- visual checks of trailer
- routine checks of trailer systems
- checks in accordance with a trailer inspection schedule

Routine checks may include:
- air pressure in tyres
- brakes
- lights
- condition of tyres
- suspension
- coupling systems

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/records may include:
- workplace routine inspection procedures, checklists and instructions
- relevant state/territory roads and traffic authority trailer maintenance regulations
- trailer manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when inspecting, servicing and maintaining trailers
- OH&S procedures to be followed when inspecting trailers
Applicable regulations and legislation may include:

- relevant state/territory roads and traffic authority trailer maintenance regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIB8109A Repair timber structures**

**Unit Descriptor**
This unit involves the skills and knowledge required to repair timber structures and their components in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, preparing and maintaining components, performing repairs, cleaning up the site after maintenance activities, and completing documentation. Licensing or certification requirements are not applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the repair of structures and their components as part of workplace activities across a variety of operational contexts within the Australian rail system.

**Competency Field**
B – Equipment Checking & Maintenance

**ELEMENT PERFORMANCE CRITERIA**
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

**1 Determine job requirements**

1.1 Structures are inspected as necessary to locate defects

1.2 Job requirements are determined in accordance with workplace procedures, including identification of scope of work and resources required

**2 Prepare component for repair**

2.1 Components requiring replacement are checked against standards and are measured for preparation of replacement component

2.2 Materials required for job are identified and organised as required to enable appropriate replacement of components

2.3 Replacement components are cut and shaped to the required standard in accordance with workplace procedures

2.4 Surfaces of components are treated using appropriate methods and materials as required

**3 Perform repairs**

3.1 Component is replaced to required standard in accordance with workplace procedures

3.2 Connections between timber members are tightened, repaired
or replaced using approved material and techniques

3.3 External timber deficiencies in components are treated with suitable materials as required to minimise degradation of components

4 **Clean up site**

4.1 Site is cleaned up to ensure it is restored and environmentally sound and safe in accordance with workplace procedures and environmental regulations and standards

5 **Complete documentation**

5.1 Work as executed documentation is completed as required in accordance with workplace procedures

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the repair of timber structures and/or components
- Problems that may occur during the repair of structures and/or components, and action that can be taken to report or resolve the problems
- Hazards that may exist when repairing structures and/or components, and ways of controlling the risks involved
- Functions of different types of timber structures
- Timber structures repair methods and techniques
- Types of timber and their characteristics and features
- Carpentry principles
- Relevant recording and documentation procedures

**Required skills:**

- Communicate effectively with others when repairing timber structures
- Read and interpret plans and specifications relevant to the repair of timber structures
- Follow operational instructions and work sequences when undertaking timber structures repair
- Complete documentation related to the repair of timber structures
- Operate communication equipment to required protocol
- Work collaboratively with others when repairing timber structures
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when repairing timber structures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise during the repair of timber structures
- Apply precautions to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Select and use relevant tools and equipment
• Adapt to differences in tools and equipment and work requirements in accordance with standard operating procedures
• Select and use required personal protective equipment
• Identify defects

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all weather conditions

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve:
• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Structures may include:
• underbridges, overbridges, footbridges
• culverts
• retaining walls
• platforms

Equipment may include:
• welding, oxy and cutting equipment
• temporary supports
• manual tools
• small power tools
• air tools and compressor
• scaffolding
• ladders
• elevated work platform (EWP)
• boat/barge
Materials may include:
- timber
- structural steel
- epoxy grouts
- paint (protective treatment)
- bolts and fasteners
- carbon fibre
- concrete

Maintenance methods may include:
- replacing
- repairing
- splicing
- bolting
- bonding
- screwing up
- painting (protective treatment)
- temporarily supporting
- shoring
- formwork

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communication systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:
- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- safety harness
- torch
- safety devices
- respirator

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - replacing timber components
  - repairing existing timber structures using a range of repair techniques
  - repairing a range of defect types

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
TLIB8209A  Repair steel structures

Unit Descriptor
This unit involves the skills and knowledge required to repair steel structures and their components in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, preparing and maintaining components, performing repairs, cleaning up the site after maintenance activities, and completing documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the repair of structures and their components as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine job requirements
1.1 Structures are inspected as necessary to locate defects
1.2 Job requirements are determined in accordance with workplace procedures, including identification of scope of work and resources required

2 Prepare component for repair
2.1 Components requiring repair are prepared according to requirements
2.2 Materials required for job are identified and organised as required to enable appropriate repair of components
2.3 Surfaces of components are treated using appropriate methods and materials as required
2.4 Components are assembled using appropriate lifting methods to ensure safety
2.5 Connection locations are checked for clearances and tolerances to allow smooth fitting of components
2.6 Fastening of components is performed to specification as required

3 Perform repairs
3.1 Steel members are accurately marked, drilled and cut in
accordance with workplace procedures

3.2 Component is replaced or repaired to required standard in accordance with workplace procedures

3.3 Replaced or repaired components are connected to the structure by approved methods in accordance with workplace procedures

3.4 Connections between steel members are tightened, repaired or replaced using approved material and techniques

3.5 External steel deficiencies in components are treated with suitable materials as required to minimise degradation of components

4 Clean up site

4.1 Site is cleaned up to ensure it is restored and environmentally sound and safe in accordance with workplace procedures and environmental regulations and standards

5 Complete documentation

5.1 Work as executed documentation is completed as required in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the repair of steel structures
- Problems that may occur during the repair of steel structures, and action that can be taken to report or resolve the problems
- Hazards that may exist when repairing structures and/or components, and ways of controlling the risks involved
- Functions of different types of steel structures
- Steel structures repair methods and techniques
- Information on the use of epoxy and grouts for mortar pads
- Basic steel components assembly techniques
- Relevant recording and documentation procedures

Required skills:
- Communicate effectively with others when repairing steel structures
- Read and interpret plans and specifications relevant to the repair of steel structures
- Follow operational instructions and work sequences when undertaking steel structures repair
- Complete documentation related to the repair of steel structures
- Operate communication equipment to required protocol
- Work collaboratively with others when repairing steel structures
Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when repairing steel structures in accordance with regulatory requirements and workplace procedures.

Implement contingency plans for unexpected events that may arise during the repair of steel structures.

Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities.

Modify activities depending on differing operational contingencies, risk situations and environments.

Select and use relevant tools and equipment.

Adapt to differences in tools and equipment and work requirements in accordance with standard operating procedures.

Select and use required personal protective equipment.

Identify defects.

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night • in all weather conditions

Work may be conducted in: • restricted spaces • exposed conditions • controlled or open environments

Work may involve: • exposure to chemicals, and dangerous or hazardous substances • movements of equipment, goods and vehicles

Structures and components may include: • underbridges, overbridges, footbridges • culverts • tunnels • retaining walls • platforms • overhead wiring structures • signal gantries
Equipment may include:

- welding, oxy and cutting equipment
- temporary supports
- manual tools
- small power tools
- air tools and compressor
- scaffolding
- ladders
- elevated work platform (EWP)
- boat/barge

Materials may include:

- structural steel
- epoxy grouts
- cement grouts
- paint (protective treatment)
- bolts and fasteners
- carbon fibre

Structures maintenance methods may include:

- replacing
- repairing
- bolting
- bonding
- welding
- painting (protective treatment)

Liaison may include:

- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communication equipment may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- trackside signals
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- safety harness and ropes
- torch
- safety devices
- respirator

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - replacing steel components
  - repairing existing steel structures using a range of repair techniques
  - repairing a range of defect types

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
TLIB8309A Maintain bridge bearings

Unit Descriptor
This unit involves the skills and knowledge required to maintain bridge bearings in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, maintaining bridge bearings, cleaning up the site after maintenance activities, and completing documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the maintenance of bridge bearings as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine job requirements
1.1 Bridges are inspected as necessary to locate bearings requiring maintenance
1.2 Job requirements are determined in accordance with workplace procedures, including identification of scope of work and resources required

2 Perform bearing maintenance
2.1 Components requiring maintenance are cleaned and prepared in accordance with workplace procedures
2.2 Bearing components are maintained to standard in accordance with workplace procedures

3 Clean up site
3.1 Site is cleaned up to ensure it is restored and environmentally sound and safe in accordance with workplace procedures and environmental regulations and standards

4 Complete documentation
4.1 Work report documentation is completed as required in accordance with workplace procedures
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant safety, OH&S and environmental procedures and regulations
• Workplace procedures for the maintenance of bridge bearings
• Problems that may occur during the maintenance of bridge bearings, and action that can be taken to report or resolve the problems
• Hazards that may exist when maintaining bridge bearings, and ways of controlling the risks involved
• Functions of different types of bridge bearings
• Routine maintenance methods and techniques
• Relevant recording and documentation procedures

Required skills:
• Communicate effectively with others when maintaining bridge bearings
• Read and interpret plans and specifications relevant to the maintenance of bridge bearings
• Follow operational instructions and work sequences when undertaking the maintenance of bridge bearings
• Complete documentation related to the maintenance of bridge bearings
• Operate communication equipment to required protocol
• Work collaboratively with others when doing the maintenance of bridge bearings
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when doing the maintenance of bridge bearings in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may arise during the maintenance of bridge bearings
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Select and use relevant tools and equipment
• Adapt to differences in tools and equipment and work requirements in accordance with standard operating procedures
• Select and use required personal protective equipment
• Identify minor defects
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  • by day or night
                                      • in all weather conditions

Work may involve:  • exposure to chemicals, and dangerous or hazardous substances
                   • movements of equipment, goods and vehicles

Structures may include:  • underbridges
                         • overbridges
                         • footbridges

Bearing types may include:  • fixed
                           • sliding
                           • floating

Equipment may include:  • manual tools
                        • small power tools
                        • jacks
                        • scaffolding
                        • ladders
                        • elevated work platform (EWP)
                        • boat/barge

Materials may include:  • cleaning products
                      • oil and grease
                      • bolts and fasteners

Structures maintenance methods may include:  • cleaning housings
                                              • clearing vegetation
                                              • tightening bolts
                                              • removing corrosion
                                              • resetting
                                              • oiling and/or greasing

Liaison may include:  • internal/external personnel from other work areas (e.g. train controllers)
                      • road authorities
                      • local councils
                      • landowners
Communication equipment systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radio/mobile phone
- hand lamps
- flags
- respirators
- safety devices

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authorities procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - inspecting bearings and determining work requirements
  - routine cleaning and servicing of bridge bearings
  - cleaning up worksite
  - completing workplace documentation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including
workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
TLIB8409A Carry out routine maintenance of structures

Unit Descriptor
This unit involves the skills and knowledge required to carry out routine maintenance of structures in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, performing routine maintenance, cleaning up the site after maintenance activities, and completing documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the maintenance of structures and their components as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine job requirements
1.1 Structures are inspected to locate and evaluate defects
1.2 Job requirements are determined in accordance with workplace procedures, including identification of scope of work and resources required

2 Perform routine maintenance
2.1 Components are cleaned and cleared in accordance with workplace procedures
2.2 Fastenings are tightened to required standard in accordance with workplace procedures
2.3 Where minor defects cannot be rectified they are reported in accordance with workplace procedures

3 Clean up site
3.1 Site is cleaned up to ensure it is restored and environmentally sound and safe in accordance with workplace procedures and environmental regulations and standards

4 Complete documentation
4.1 Work report documentation is completed as required in accordance with workplace procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant safety, OH&S and environmental procedures and regulations
• Workplace procedures for the maintenance of structures
• Problems that may occur during the routine maintenance of structures, and action that can be taken to report or resolve the problems
• Hazards that may exist when completing routine maintenance of structures, and ways of controlling the risks involved
• Routine maintenance methods and techniques
• Relevant recording and documentation procedures

Required skills:
• Communicate effectively with others during the routine maintenance of structures
• Follow operational instructions and work sequences when undertaking routine structures maintenance
• Complete documentation related to the routine maintenance of structures
• Operate communication equipment to required protocol
• Work collaboratively with others when completing routine maintenance of structures
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when doing routine maintenance of structures in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may arise during the routine maintenance of structures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Select and use required tools and equipment
• Adapt to differences in tools and equipment and work requirements in accordance with standard operating procedures
• Select and use required personal protective equipment
• Identify defects and remedies

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night• in all relevant weather conditions
Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:

- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Structures may include:

- underbridges
- overbridges
- footbridges
- culverts
- tunnels
- retaining walls
- platforms
- overhead wiring structures
- signal gantries
- noise barriers
- service crossings
- buffer stops
- lighting towers
- water towers
- turntables
- elevated roads

Equipment may include:

- manual tools
- small power tools
- scaffolding
- ladders
- elevated work platform (EWP)
- boat/barge

Materials may include:

- bolts and fasteners

Structures maintenance methods may include:

- clearing debris
- clearing vegetation
- clearing drainage
- cleaning weepholes
| Liaison may include: | • internal/external personnel from other work areas (e.g. train controllers)  
| | • road authorities  
| | • local councils  
| | • landowners  
| Communication equipment may include: | • two-way radios  
| | • computers  
| | • telephones/mobile phones  
| | • agreed audible or hand signals  
| Information may be provided: | • electronically  
| | • in writing, via forms/documents/plans  
| | • orally, via face-to-face communications  
| | • via trackside signals  
| Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: | • company procedures  
| | • enterprise procedures  
| | • organisational procedures  
| | • established procedures  
| Depending on the work context safety and personal protective equipment may include: | • high visibility clothing  
| | • hearing protection  
| | • gloves  
| | • sunscreen  
| | • sunglasses  
| | • safety glasses  
| | • insect repellent  
| | • safety headwear  
| | • safety footwear  
| | • portable radio/mobile phone  
| | • hand lamps  
| | • flags  
| | • safety devices |
Information/documents may include:
- operational instructions, policies and workplace procedures
- local authorities procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  o routine cleaning of structures and components
  o tightening a range of fastener types

Context of and specific
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
TLIB8509A Apply track fundamentals

Unit Descriptor
This unit involves the skills and knowledge required to understand fundamentals of track maintenance and construction and carry out basic track measurement, in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes identifying track terminology, track components and track tools and equipment; and undertaking basic track measurement. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the understanding of fundamentals of track maintenance and construction as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify track and structures terminology
1.1 Basic terminology for track and structures infrastructure is identified
1.2 Features of track geometry are identified

2 Identify track components
2.1 Principal track components are identified and their purpose is understood
2.2 Principal turnout components are identified and their purpose is understood

3 Identify track tools and equipment
3.1 Tools and equipment for track installation and maintenance are identified
3.2 Track machines for track installation and maintenance are identified

4 Undertake basic track measurement
4.1 Basic terminology for track measurement is identified and defined
4.2 Measuring equipment is identified and relevant equipment is
selected for taking basic track measurements
4.3 Measuring equipment is checked for accuracy
4.4 Measurements are taken accurately and recorded in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the basic measurement of track
- Problems that may occur during the basic measurement of track, and action that can be taken to report or resolve the problems
- Hazards that may exist when taking basic track measurements, and ways of controlling the risks involved
- Track terms
- Fundamentals of track structures
- Fundamentals of track layout and geometry
- Track components
- Tools and equipment used in track construction and repair
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures

Required skills:
- Communicate effectively with others when taking basic track measurements
- Read and interpret instructions, procedures, information, technical data, standards and drawings relevant to taking basic track measurements
- Interpret and follow operational instructions
- Complete documentation related to basic track measurement
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when taking basic track measurements in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when taking basic track measurements
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Select equipment used for basic track measurement
• Undertake basic track measurement
• Identify basic track tools and equipment

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**
- by day or night
- in all weather conditions

**Work may be conducted in:**
- restricted spaces
- exposed conditions
- controlled or open environments

**Work may involve exposure to:**
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

**Basic track measurements may include:**
- length, depth, width, diameter
- gauge, foot gauge
- alignment, superelevation, track centres
- rail gaps, rail temperature

**Measuring equipment may include:**
- tape measures
- gauge boards
- stringline
- plumb bob
- gap gauge
- rail thermometer
Tools and equipment may include:

- mechanical handling/lifting equipment
- track machines
- hand tools including impact and tension wrenches, grinders, friction rail saws, rail borers, tie tampers, track jacks, spiking hammers and bars
- rail tensors
- cutting and boring equipment
- fastening equipment
- on-track equipment including sleeper spacers
- rail heaters
- rail threaders
- dog pullers

Track components may include:

- rails, rail fastenings and welds
- sleepers and sleeper fastenings
- ballast
- formation and earthworks

Track layout may include:

- plain track
- turnouts
- special trackwork including catchpoints, expansion switches, diamond crossings and slips

Basic track geometry may include:

- tangent track
- curves
- transitions
- superelevation

Track maintenance and construction methods may include:

- basic fettling
- resleepering
- rerailing
- ballasting
- track resurfacing
- ballast cleaning
- rail grinding
- concrete sleeper laying

Liaison may include:

- internal or external personnel from other work areas (e.g. train controllers)

Communication equipment may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signal
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- works orders
- information provided by other workplace personnel
- rail inspections and timekeeping records
- trackworker standard manual
- bridge workers manual
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292
- local authority regulations
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying a range of track terminology
  - identifying a number of different track components
  - identifying track tools and equipment relevant to their job role
  - undertaking basic track measurements

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including
workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIB8609A  Apply awareness of structures fundamentals

Unit Descriptor
This unit involves the skills and knowledge required to understand and apply awareness of structures fundamentals in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes identifying types of structures, structures terminology and conventions, and defect categories; and locating and identifying defects in structures. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the awareness of structures fundamentals as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify types of bridges and structures
1.1 Principal bridge types and their purpose are identified
1.2 Other principal structure types and their purpose are identified

2 Identify structures terminology and conventions
2.1 Basic terminology for structures infrastructure is defined
2.2 Principal components of structures and their purpose are identified
2.3 Conventions for numbering structures and their components are identified

3 Identify defect categories
3.1 Types of defect are identified
3.2 Conventions for categorising defects are identified

4 Locate structures defects
4.1 Tools and equipment for visual inspection of structures are identified and selected
4.2 Defects in structures are located and identified
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for locating defects in structures
- Problems that may occur locating defects in structures, and action that can be taken to report or resolve the problems
- Hazards that may exist when locating defects in structures, and ways of controlling the risks involved
- Structures terms and conventions
- Fundamentals of structure types
- Types of structures defects
- Structures components
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures

Required skills:
- Communicate effectively with others when locating defects in structures
- Read and interpret instructions, procedures, information, technical data, standards and drawings relevant to locating defects in structures
- Follow operational instructions and work sequences when locating defects in structures
- Operate electronic communication equipment to required protocols
- Work collaboratively with others when locating defects in structures
- Select and use required personal protective equipment
- Select equipment used for basic structures inspection
- Locate previously identified defects

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles
Structures may include:
- underbridges
- overbridges
- footbridges
- culverts
- tunnels
- retaining walls
- platforms
- overhead wiring structures
- signal gantries
- noise barriers
- service crossings
- buffer stops
- lighting towers
- water towers
- turntables
- elevated roads
- track slabs

Materials may include:
- timber
- steel
- concrete/masonry

Equipment may include:
- torch
- geologists hammer
- scaffolding
- extension ladder
- elevated work platforms (EWP)
- boat or barge

Structures components may include:
- girders, corbels, headstocks
- piers, abutments, trestles, piles
- bolts, fasteners
- protective coatings

Methods for locating defects may include:
- visual inspection

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners
Communication equipment systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radio/mobile phones
- hand lamps
- flags
- safety harness and ropes
- breathing apparatus
- safety mask
- air monitors
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- previous reports
- works orders
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- trackside signals

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying different types of structures and components
  - undertaking basic inspection of structures
  - locating defects in structures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
apply applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
**TLIB8709A**  
**Examine timber structures**

**Unit Descriptor**  
This unit involves the skills and knowledge required to examine timber structures in accordance with safeworking and regulatory requirements and workplace procedures. It includes obtaining all relevant previous reports, performing the detailed examination, initiating appropriate necessary actions if any, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the conduct of a detailed timber structures examination as part of workplace activities across a variety of operational contexts within the Australian rail system.

**Competency Field**  
B – Equipment Checking & Maintenance

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Obtain previous reports

1.1 Operational history of structure is reviewed from available sources

1.2 Previous defects identified in reports are noted to enable rechecking of problem areas

1.3 Relevant personnel are contacted to identify any reported complaints or indications of wear or damage

2 Perform detailed examination

2.1 Timber structures and components are visually inspected and checked for signs of movement, deterioration and damage in accordance with workplace procedures

2.2 Connections between timber components are visually inspected and checked for signs of wear, looseness, corrosion, deterioration and damage in accordance with workplace procedures

2.3 Relevant inspection aids are used to perform detailed inspection to identify defects in accordance with workplace procedures

2.4 Defects or deficiencies are identified in accordance with
workplace procedures

3 Take appropriate actions

3.1 Major defects affecting safe passage are acted on as soon as possible in accordance with workplace procedures
3.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner

4 Complete documentation

4.1 Examination schedule or work report data is completed in accordance with workplace procedures
4.2 Documentation on work undertaken is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the conduct of a detailed timber structures examination
- Problems that may occur during the conduct of a detailed timber structures examination, and action that can be taken to report or resolve the problems
- Hazards that may exist when conducting a detailed timber structures examination, and ways of controlling the risks involved
- Timber structures examination methods and techniques
- Fault detection techniques
- Relevant recording and documentation procedures

Required skills:
- Communicate effectively with others when conducting a detailed timber structures examination
- Read and interpret plans and specifications relevant to a detailed timber structures examination
- Follow operational instructions and work sequences when undertaking timber structures examination
- Identify defects
- Complete documentation related to a detailed timber structures examination
- Operate communication equipment to required protocol
- Work collaboratively with others when conducting a detailed timber structures examination
- Promptly report and/or rectify any identified problems, faults or malfunctions when conducting a detailed timber structures examination in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan and organise remedial work
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify, select and use measuring instruments and equipment
• Select and use required personal protective equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all weather conditions

Work may be conducted in: • restricted spaces or exposed conditions
• controlled or open environments

Work may involve exposure to: • chemicals, dangerous or hazardous substances
• movements of equipment, materials and vehicles

Structures may include: • underbridges
• overbridges
• footbridges
• culverts
• retaining walls
• platforms
• buffer stops
• elevated roads/pits
Equipment may include:
- torch
- geologists hammer
- measuring tape
- spirit level with straight edge
- plumb bob
- boring equipment and probe
- camera
- binoculars
- mirror
- vernier calipers
- demec gauge, points and adhesive
- scaffolding
- extension ladder
- elevated work platforms (EWP)
- boat or barge

Structures examination methods may include:
- visual examination
- hammer test
- bore and probe
- deflection test

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communication equipment systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Information/documents may include:

- local authority regulations and procedures
- work orders
- examination reports and defect lists
- relevant log or record book
- local instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - examining a range of structure types
  - taking appropriate action for identified defects
  - completing documentation of examination results

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including
workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIB8809A  Examine steel structures

Unit Descriptor
This unit involves the skills and knowledge required to examine steel structures in accordance with safeworking and regulatory requirements and workplace procedures. It includes obtaining all relevant previous reports, performing the detailed examination, initiating appropriate necessary actions if any, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the conduct of a detailed steel structures examination as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Obtain previous reports
1.1 Operational history of structure is reviewed from available sources
1.2 Previous defects identified in reports are noted to enable rechecking of problem areas
1.3 Relevant personnel are contacted to identify any reported complaints or indications of wear or damage

2 Perform detailed examination
2.1 Steel structures and components are visually inspected and checked for signs of buckling, cracking, corrosion, deterioration and damage in accordance with workplace procedures
2.2 Connections between steel components are visually inspected and checked for signs of wear looseness, cracking, corrosion, deterioration and damage in accordance with workplace procedures
2.3 Protective coatings on steel structures and components are visually inspected and checked for condition
2.4 Relevant inspection aids are used to perform detailed inspection to identify defects in accordance with workplace procedures
procedures

2.5 Defects or deficiencies are identified in accordance with workplace procedures

3 Take appropriate actions

3.1 Major defects affecting safe passage are acted on as soon as possible in accordance with workplace procedures

3.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner

4 Complete documentation

4.1 Examination schedule or work report data is completed in accordance with workplace procedures

4.2 Documentation on work undertaken is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the conduct of a detailed steel structures examination
- Problems that may occur during the conduct of a detailed steel structures examination, and action that can be taken to report or resolve the problems
- Hazards that may exist when conducting a detailed steel structures examination, and ways of controlling the risks involved
- Steel structures examination methods and techniques
- Fault detection techniques
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when conducting a detailed steel structures examination
- Read and interpret plans and specifications relevant to a detailed steel structures examination
- Follow operational instructions and work sequences when undertaking steel structures examination
- Identify defects
- Complete documentation related to a detailed steel structures examination
- Operate communication equipment to required protocol
- Work collaboratively with others when conducting a detailed steel structures examination
- Promptly report and/or rectify any identified problems, faults or malfunctions when conducting a detailed steel structures examination in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan and organise remedial work
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify, select and use measuring instruments and equipment
• Select and use required personal protective equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all weather conditions

Work may be conducted in:
• restricted spaces or exposed conditions
• controlled or open environments

Work may involve exposure to:
• chemicals, dangerous or hazardous substances
• movements of equipment, materials and vehicles

Structures may include:
• underbridges
• overbridges
• footbridges
• culverts
• tunnels
• retaining walls
• platforms
• overhead wiring structures
• signal gantries
• noise barriers
• service crossings
• buffer stops
• lighting towers
• water towers
• turntables
• elevated roads
Equipment may include:

- torch
- geologists hammer
- measuring tape
- wire brush
- spirit level with straight edge
- plumb bob
- camera
- binoculars
- mirror
- vernier calipers
- ultrasonic tester
- dry film thickness gauge
- demec gauge, points and adhesive
- scaffolding
- extension ladder
- elevated work platforms (EWP)
- boat or barge

Structures examination methods may include:

- visual examination
- hammer test
- magnetic or electronic gauges
- dye penetrant
- magnetic particle
- ultrasonic testing
- x-ray

Liaison may include:

- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communication equipment systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- tripods
- harness and ropes
- respirator
- safety mask
- gas detectors
- safety devices

Information/documents may include:

- local authority regulations and procedures
- work orders
- examination reports and defect lists
- relevant log or record book
- local instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - examining a range of structure types
  - taking appropriate action for identified defects
  - completing documentation of examination results

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including
workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
TLIB9009A  Use communication systems in a taxicab

Unit Descriptor
This unit involves the skills and knowledge required to use communication systems in a taxicab. It includes identifying features of the taxicab communication system and operating it effectively; using appropriate communication protocols and communicating with a base; and identifying faulty operation of communication equipment and taking appropriate action. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the use of taxicab communication systems in the taxi industry.

Safety checks and equipment tests are performed under limited supervision.

This unit involves the application of established communication principles and practice for taxi drivers and the use of local technical and colloquial language and vocabulary in day-to-day communications.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify features of taxi communication system
1.1 The features and functions of the taxi radio system are identified
1.2 The features and functions of the taxi computer dispatch system are identified
1.3 The features and functions of the taxi duress alarm system are identified (if fitted)

2 Operate taxi communication system
2.1 Checks are carried out to confirm communication system is operational in accordance with the manufacturers instructions and workplace procedures
2.2 Communication system is used in a manner consistent with road laws and safe driving practices
2.3 Communication security is maintained in accordance with workplace procedures

3 Use appropriate communication
3.1 Received messages are interpreted and recorded where required in accordance with workplace procedures
3.2 Messages are transmitted clearly and precisely with due observation of ethics and protocols required of users

3.3 Incoming messages are received and answered promptly and courteously within operating procedures and (any) regulatory requirements

3.4 Vocal communication is clear, unambiguous and uses appropriate procedures, language and codes

3.5 Appropriate protocols and procedures are followed when using communications systems during emergencies

4.1 Equipment is checked and maintained in working order in accordance with workplace procedures

4.2 Minor faults in the communications systems are promptly identified, diagnosed and repaired or reported in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant codes of practice and legislative requirements including local regulations
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures and policies for the use of communication systems in a taxicab
- Procedures and protocols for the use of communication systems during an emergency
- Features of various communication systems
- Basic communication techniques including the phonetic alphabet
- Basic principles of effective communication
- Basic barriers to effective communication and how to overcome them

Required skills:
- Communicate effectively with others when using communication systems in a taxicab, including both during transmission and receipt of information
- Communicate effectively with multilingual persons or persons with limited ability to speak or understand English
- Read and interpret operating instructions, procedures, information and signs relevant to the use of communication systems in a taxicab
- Apply relevant codes of practice
- Complete documentation related to the use of communication systems in a taxicab
- Operate electronic communication equipment to required protocol
- Interpret and follow operational instructions and prioritise work
- Work collaboratively with others when using communication systems in a taxicab
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Identify, report and/or rectify any problems that may arise when using communication systems in a taxicab in accordance with workplace procedures
• Implement contingency plans for unanticipated situations that may occur when using communication systems in a taxicab
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Undertake pre-operational checks for communications systems and equipment
• Carry out minor routine maintenance procedures for communications equipment
• Plan own work including predicting consequences, identifying improvements and interpreting information from the communication systems to increase opportunities for fares

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communication system may include:
• computer dispatch
• mobile phone, both on person or hands-free
• vehicle mounted radio
• security equipment, including duress alarm and camera (if fitted)

Equipment and technology may include:
• taxicab
• taxi meter
• radio/computer dispatch
• street directory
• mobile phone
• toll tags

Messages are interpreted by:
• active listening
• two-way conversation
• questioning to obtain information and/or clarify information and understanding
• routine oral reporting
Communication may involve:  
- English speaking people  
- people with limited ability to communicate in English  
- people with communication disabilities  
- use of phonetic alphabet

Communication problems may include:  
- misunderstanding  
- limited ability of others to communicate in English  
- noisy environments or communication channels  
- illegible writing or print  
- use of non-standard vocabulary  
- incorrect assumption that message has been received and or correctly understood  
- not following correct communication protocols and procedures

Workplace procedures may include:  
- relevant regulations, standards and codes of practice  
- relevant Australian and state/territory OH&S legislation  
- equal opportunity legislation and related policies

Information/documentation may include:  
- workplace communication procedures, protocols, checklists and instructions  
- manufacturers specifications for communications equipment  
- communication records  
- legislation, regulations and related documentation  
- emergency procedures

Worksite environment may include:  
- customers  
- depot personnel  
- other drivers  
- managers  
- police and other emergency service personnel

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit  
The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:  
- operating a taxicab communication system effectively  
- communicating effectively using
communication systems
o maintaining communication equipment operational status
o using communication system during emergencies
o identifying communication system problems or faults and taking appropriate action
o maintaining workplace records and documentation
o completing work systematically with the required attention to detail without damage to goods or equipment
o showing evidence of application of relevant workplace procedures
o showing evidence of an understanding of relevant regulations and codes
o showing evidence of an understanding of OH&S regulations and hazard prevention policies and procedures
o showing evidence of an understanding of workplace procedures and work instructions relating to the use of communication equipment

Context of and specific resources for assessment
• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the
workplace

- Assessment of this unit must be undertaken on actual taxi radio equipment
TLIB907C  Check conveyor operational status

Unit Descriptor
This unit involves the skills and knowledge required to check conveyor operational status in accordance with workplace requirements, including inspecting conveyor system and work area, checking equipment operational capability, and identifying and assessing faults and reporting results of inspection and testing in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the checking and assessment of the operational capability of equipment.

Safety checks and equipment tests are performed under limited supervision.

Work involves the application of regulatory requirements and workplace procedures to the checking and assessment of the operational capability of equipment in the stevedoring, transport, warehousing, distribution and/or storage industries.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Inspect conveyor system and work area
1.1 The conveyor equipment is checked prior to start-up in accordance with workplace procedures, manufacturers safety checks and specifications to ensure it is free from damage and obstructions that may limit operational capability
1.2 Work area is checked to ensure that it is safe and appropriate for the required task

2 Check equipment operational capability
2.1 Conveyors are inspected after start-up in accordance with manufacturers specifications and workplace inspection specifications and procedures
2.2 Warning systems are checked for operational effectiveness
2.3 Records are checked to determine maintenance history and requirements and goods carried

3 Identify, assess faults and report results of inspection and testing
3.1 Faults are identified and assessments made of the potential effect on the operation of the equipment for the required work, and details forwarded to relevant personnel in accordance with workplace procedures
3.2 Accurate reporting of the results of the inspection and testing is kept in accordance with regulatory requirements, workplace policy and industry guidelines

3.3 Clear reference is made to any items which may affect the future safety/operation of the equipment

3.4 Conveyor system is continually monitored for safe and efficient operation

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the checking and assessing of the operational capability of conveyor, including, where relevant, the ADG Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the checking and assessing of the operational capability of conveyor
- Focus of operation of work systems, equipment, management and site operating systems for the checking and assessing of the operational capability of conveyor
- The purpose, characteristics, capabilities, requirements and limitations of the conveyor
- Conveyed materials' potential for toxicity, reactivity, material grade, type and purpose including information from relevant material data safety sheets and ADG Code documentation (where applicable)
- Function and principles of operation of belt cleaning systems
- Tools and equipment used during the checking and assessing of the operational capability of conveyor and the precautions and procedures that should be followed in their use
- Problems that may occur when checking and assessing the operational capability of conveyor and appropriate action that can be taken to resolve the problems
- Operational safety requirements for the conveyor concerned
- Documentation and record requirements
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when checking and assessing the operational capability of a conveyor
- Read and interpret instructions, procedures, information and labels relevant to the checking and assessment of the operational status of a conveyor
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the checking and assessment of the operational status of a conveyor
- Operate electronic communication equipment to required protocol
• Work collaboratively with others when checking and assessing the operational capability of a conveyor
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when checking and assessing the operational capability of a conveyor in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of conveyor equipment
• Service conveyor equipment in terms of maintenance schedule and standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
• exposed conditions
• controlled or open environments

Purposes of conveyor checks/inspections are: • to ensure that the conveyor and its safety devices and warning systems are operational, are in accordance with specifications, and are free from faults that may prejudice safety or limit operational capability
Conveyor may be enclosed or exposed, above or underground. Conveyor belt construction and materials may vary. Types of conveyors may include:

- buckets
- rollers
- air slides
- drag chains
- gravity systems

Aspects of conveyor equipment covered by workplace inspection specifications and procedures may include but is not limited to:

- belt surface and edges
- frame
- idlers
- motive power source
- tensions
- tracking
- speed
- guides

Checks may include but are not limited to:

- visual checks in accordance with manufacturers instructions
- monitoring of operational performance
- service checks in accordance with manufacturers instructions
- tests and checks of safety devices and warning indicators in accordance with workplace and regulatory requirements
- checks on adjustments against specifications
- checks of readings on gauges and monitors against specifications

Records/results of checks may include:

- details of out-of-performance indications
- details of faulty equipment or specific components
- details of action taken
- results of checks/tests
- details of repair and maintenance work to be undertaken

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operations
- authorities and permits
Hazards in the work area may include exposure to:

- chemicals and fumes
- dangerous or hazardous substances
- stationary and moving machinery, goods, materials and vehicular traffic
- contamination of, or from, materials being handled
- a fire or explosion
- service lines
- spills, leakages and ruptures
- dust/vapours
- faulty equipment/tools

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- equipment manufacturers
- site visitors
- contractors
- official representatives

Dependent of the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- respirators and fume masks
- protective clothing
- high visibility clothing

Communication in the work area may include:

- phone
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications
Information/documents may include:

- workplace procedures and policies for the checking and assessment of the equipment concerned
- manufacturers specifications for equipment/tools
- equipment identification labels, barcodes and serial numbers
- supplier and/or client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the checking and operation of the conveyor system concerned including the ADG Code where applicable
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIB9109A Measure and record track geometry

Unit Descriptor
This unit involves the skills and knowledge required to measure and record track geometry in accordance with safeworking and regulatory requirements and workplace procedures. It includes measuring and recording track geometry, and reporting results. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to measure and record track geometry across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Measure geometry
1.1 Equipment appropriate to task is selected and checked for correct operation in accordance with manufacturers instructions and workplace procedures
1.2 Equipment is operated in accordance with manufacturers or work instructions to provide appropriate data for analysis

2 Record results
2.1 Data is recorded in a complete and accurate manner
2.2 Required documentation is completed in accordance with workplace procedures

3 Use/report data
3.1 Data is compared to maintenance/construction tolerances in accordance with workplace procedures
3.2 Results are reported in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
• Track geometry parameters e.g. alignment, top, line, twist, superelevation associated with maintenance and/or construction
• Workplace procedures for the measuring and recording of track parameters
• Problems that may occur during the measurement and recording of track geometry, and action that can be taken to report or resolve the problems
• Hazards that may exist when measuring and recording track geometry, and ways of controlling the risks involved
• Relevant records procedures
• Details of local authority procedures

Required skills:
• Communicate effectively with others when measuring and recording track parameters
• Read and interpret instructions, procedures, information, plans, drawings and specifications relevant to the measurement and recording of track parameters
• Read recorded track geometry data
• Interpret and follow operational instructions
• Complete documentation related to the measurement and recording of track geometry
• Work collaboratively with others
• Promptly report and/or rectify any identified problems when measuring and recording track geometry in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Adapt to differences in equipment in accordance with workplace procedures
• Identify, select and use tools and equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted:  
  • by day or night
  • in all weather conditions
Recording of track geometry may include measurement of:

- top, surface
- line, alignment
- twist, superelevation
- gauge
- track centres, lateral or vertical clearances

Measurement equipment may include:

- stringline and measuring rules
- gauge and superelevation boards
- tape measures
- measuring trolleys
- electronic measurement devices

Recording equipment may include:

- paper forms, notes
- electronic data entry devices
- paper data capture devices
- electronic data capture devices

Liaison may include:

- internal or external personnel from other work areas (e.g. work teams)

Communication equipment systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:
- maintenance notices, records and requests
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  o using appropriate measurement tools to measure the range of geometry elements
  o accurately recording and reporting results

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
• access to an appropriate range of relevant situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIB9209A Operate minor mechanical equipment

Unit Descriptor
This unit involves the skills and knowledge required to operate and maintain minor mechanical equipment in accordance with safeworking and regulatory requirements and workplace procedures. It includes carrying out pre-operation checks on equipment, operating mechanical equipment, conducting routine maintenance, and securing and storing equipment. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine procedures to operate and maintain minor mechanical equipment across a variety of operational contexts.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Carry out pre-operation checks
1.1 Pre-operational checks are conducted to manufacturers specifications to ensure optimum functionality of equipment
1.2 Necessary adjustments to equipment are made to ensure efficient operation, according to manufacturers instructions
1.3 Faulty equipment is reported to relevant person to ensure equipment is safe and effective to use

2 Operate mechanical equipment
2.1 Equipment is operated in accordance with manufacturers or workplace operating instructions to ensure safe and effective operation
2.2 Appropriate personal safety protection is used to minimise the risk of injury to operator
2.3 Work operational hazards are eliminated or controlled appropriately when using equipment to ensure safeworking conditions
2.4 Assisting personnel are given clear instructions about their duties if required to ensure safe and effective working conditions

3 Conduct routine
3.1 Equipment is cleaned and maintained in accordance with
maintenance manufacturers specifications to ensure optimum functionality

3.2 Records are maintained according to workplace procedures

4 Secure and store

4.1 Equipment is handled and transported in a safe, secure, efficient manner to minimise risk of injury to personnel and damage to equipment

4.2 Equipment is stored and secured according to manufacturers or workplace procedures to prevent damage and losses of equipment

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures and policies for the operation and maintenance of minor mechanical equipment
- Problems that can occur when operating and maintaining minor mechanical equipment, and related action that should be taken
- Tools and equipment used when operating and maintaining minor mechanical equipment, and the procedures and precautions for their care, use and storage
- Workplace documentation and records requirements
- Procedures to be followed in the event of an emergency

Required skills:

- Communicate effectively with others when operating and maintaining minor mechanical equipment
- Read and interpret instructions, procedures, information and signs relevant to operating and maintaining minor mechanical equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to operating and maintaining minor mechanical equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating and maintaining minor mechanical equipment
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when operating and maintaining minor mechanical equipment in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify, select and efficiently and effectively use relevant tools and equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: 
• by day or night
• in any weather conditions

Work may be conducted in: 
• restricted spaces
• exposed conditions
• controlled or open environments

Minor mechanical equipment may include: 
• mechanical handling/lifting equipment
• compressors
• small plant such as motorised borers and saws
• generators

Materials may include: 
• servicing materials such as lubricants
• related materials and consumables needed when using tools, e.g. nails, screws, grease, saw blades, grinding wheels, drill bits, etc.

Safety and personal protective equipment may include: 
• high visibility clothing
• sunscreen and sun glasses
• insect repellent
• gloves
• safety headwear
• mask
• footwear
• safety glasses and hearing protection
• portable radios/mobile phones
• flags and hand lamps
• safety devices
Environmental hazards may include:
- leaking oil and fuel
- inappropriate disposal of fluids in drains or sewerage systems
- inappropriate disposal of waste and rubbish

Liaison may include:
- internal or external personnel from other work areas

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Contingency processes may relate to:
- personal injury
- tool malfunctions

Information/records may include:
- workplace operational and technical instructions and procedures for the use and maintenance of minor mechanical equipment
- relevant regulations including state/territory safety codes of practice and safeworking regulations
- maintenance checklists and records for the use and maintenance of minor mechanical equipment
- work orders
- tool/equipment manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when operating and maintaining minor mechanical equipment
- OH&S procedures
- QA plans, data and document control
- data and document control procedures
- relevant Australian standards and certification requirements
- emergency procedures manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant state/territory OH&S legislation
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation

Communication equipment systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - carrying out pre-operation checks
  - operating mechanical equipment correctly
  - performing routine maintenance on mechanical equipment
  - storing mechanical equipment appropriately

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies
    and/or other simulated practical and
    knowledge assessment, and/or
  o access to an appropriate range of relevant
    operational situations in the workplace

• In a real or simulated environment, access is required to:
  o relevant and appropriate materials and
    equipment, and
  o applicable documentation including
    workplace procedures, regulations, codes of
    practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a
  registered training organisation

• As a minimum, assessment of knowledge must be
  conducted through appropriate written/oral tests

• Practical assessment must occur:
  o through activities in an appropriately
    simulated environment, and/or
  o in an appropriate range of situations in the
    workplace
TLIB9309A  Clean equipment and restore worksite

Unit Descriptor
This unit involves the skills and knowledge required to clean up plant, equipment and worksite in accordance with safeworking and regulatory requirements and workplace procedures. It includes planning and preparing work, arranging the clear up and disposal/reclamation of material, operating cleaning equipment and mobile plant, finalising the work and restoring the site. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the cleaning up of plant, equipment and worksites as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT | PERFORMANCE CRITERIA
--- | ---
**ELEMENT** | Elements describe the essential outcomes of a unit of competency.
**PERFORMANCE CRITERIA** | Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan and prepare work
1.1 Details of cleaning requirements are identified by instructions, inspections, work orders and schedules
1.2 Materials and equipment are identified and obtained
1.3 Required materials to be removed and methods of removal are identified to facilitate clean up

2 Clear up and dispose of or reclaim material
2.1 Storage/disposal areas and quarantine zones are identified to ensure environmentally sound disposal
2.2 Reclaimed material is removed to storage areas using appropriate methods
2.3 Non-required materials/services are removed and disposed of in appropriate manner to ensure clean and environmentally stable site
2.4 Site is inspected for overlooked materials to minimise wastage and losses

3 Operate cleaning equipment and mobile
3.1 Cleaning and mobile plant is operated to site/manufacturers requirements
plant

3.2 Operator maintenance is performed to manufacturers/site standards
3.3 Cleaning equipment is cleaned and stored

4 Finalise work and restore site

4.1 Where used, barriers are removed or checked for integrity to ensure access to correct areas
4.2 Site is left in suitable surface condition to ensure an environmentally sound, safe and clean site

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the cleaning up of plant, equipment and worksites
- Problems that may occur during the cleaning up of plant, equipment and worksites, and action that can be taken to report or resolve the problems
- Hazards that may exist when cleaning up plant, equipment and worksites, and ways of controlling the risks involved
- Cleaning agents/sealants and their properties and precautions for their use
- Cleaning equipment and related materials and their applications
- Relevant recording and documentation requirements
- Manufacturers instructions for the cleaning of equipment
- Material safety data sheets (MSDS)

Required skills:
- Read and interpret instructions, procedures, information and signs relevant to the cleaning up of plant, equipment and worksites
- Interpret and follow operational instructions
- Complete documentation related to the cleaning up of plant, equipment and worksites
- Operate communication equipment to required protocol
- Promptly report and/or rectify any identified problems in accordance with workplace procedures
- Apply precautions to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment and sites in accordance with standard operating procedures
• Apply cleaning agents, sealants and chemicals
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify and reclaim salvageable materials
• Identify and remove water/waste/surplus materials
• Operate and maintain relevant cleaning equipment
• Use barriers correctly

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all relevant weather conditions

Materials may include:
• floor stripper
• floor polish
• floor cleaner
• disinfectant
• degreaser
• bleach
• petrochemicals

Tools may include:
• cleaning tools
• hand tools

Cleaning equipment may include:
• hoses
• lances
• pneumatic tube hones
• high speed polishers
• vacuum cleaners
• steam cleaners
• brooms
• buckets
• mops
• shovels
• duster
• internal combustion driven vacuum cleaner

Cleaning operations may also include:
• water lancing
• internal boiler washing
Communication methods may include:
- written
- verbal
- radio/mobile phone

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:
- high visibility clothing
- hearing protection and gloves
- sunscreen
- sunglasses and safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices

Disposal of material may involve:
- the use of a quarantine zone in accordance with environmental regulations and requirements

Information/documents may include:
- operational instructions, policies and workplace procedures
- relevant logs or record books
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- environmental regulations and associated requirements
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying and obtaining correct materials and equipment
  - operating cleaning equipment correctly
  - disposing of waste materials correctly
  - leaving site in a suitable condition

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessments, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a
registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIB9409A
Check and repair track geometry

Unit Descriptor
This unit involves the skills and knowledge required to check and repair track geometry in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining the job requirements, restoring track geometry, certifying track after work, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the checking and repairing of track geometry as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine job requirements
1.1 Faults and deficiencies in track geometry are identified, and work required for restoration of track to required standard is determined
1.2 Appropriate repair methods are identified to enable repairs to be effected
1.3 Job requirements and resources are determined in accordance with workplace procedures and as per scope of work

2 Restore track geometry
2.1 Survey data are used where required to establish correct geometry
2.2 Appropriate lifting and lining methods and equipment are used to lift and line track to restore running surface to required geometry in accordance with workplace standards and procedures

3 Certify track after work
3.1 Track geometry is checked for compliance with acceptance standards
3.2 Vertical and horizontal structural and overhead clearances are checked against required standards to allow safe passage of
trains

3.3 Track structure where work has been undertaken is checked for compliance to standards required to enable reinstatement of service

3.4 Appropriate operating conditions are applied in accordance with workplace procedures

4 Complete documentation

4.1 Documentation on work undertaken is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the checking and repair of track geometry
- Problems that may occur when carrying out work activities to check and repair track geometry, and action that can be taken to report or resolve the problems
- Hazards that may exist when carrying out work activities to check and repair track geometry, and ways of controlling the risks involved
- Relevant Australian Standards, technical specifications and manuals
- Documentation/authorisation processes and procedures
- Fault detection techniques
- Track geometry maintenance methods and techniques
- Defects in track structure (sleeper condition, spacing, fastening condition, rail joint condition, ballast profile and packing) that can affect safe operation
- Clearance defects that can affect safe operation
- Defects in earthworks that can affect safe operation
- Track stability and the work requirements for differing weather conditions
- Track geometry acceptance standards
- Track certification techniques
- Organisational requirements/regulations
- Relevant records procedures
- Procedures to be followed in the event of an emergency
- Details of relevant local authority procedures

Required skills:

- Communicate effectively with others when carrying out work activities to check and repair track geometry
- Read and interpret instructions, procedures, information, plans, drawings and specifications relevant to work activities to check and repair track geometry
- Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities to check and repair track geometry
• Record and report results of track work in required format
• Operate electronic communication equipment to required protocol
• Promptly report and/or rectify any identified problems when carrying out work activities in accordance with regulatory requirements and workplace procedures
• Plan and organise work
• Implement contingency plans for unexpected events when carrying out work activities
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Adapt to differences in equipment in accordance with standard operating procedures
• Identify, select and use tools and equipment required in work activities to check and repair track geometry
• Select and use required personal protective equipment
• Identify track geometry defects
• Determine work requirements and work methods
• Select and use appropriate lifting and lining methods and equipment to correct geometry defects
• Use appropriate measurement methods to assess and correct geometry defects
• Identify defects in track structure (sleeper condition, spacing, fastening condition, rail joint condition, ballast profile and packing) affecting safe operation
• Identify structure and track centre clearance defects affecting safe operation
• Identify defects in earthworks affecting safe operation
• Assess defects against acceptance standards and apply appropriate restrictions

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all weather conditions

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve: • exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles
Ballasted track geometry to be checked and repaired may include:

- plain track
- turnouts and special trackwork

Track geometry repair methods may include:

- manual fettling with hand tools and light equipment
- manual fettling with small on-track or off-track plant (spot tampers etc.)
- resurfacing with large on-track plant

Manual fettling includes:

- any operation where measurement of geometry (before and after) is conducted by hand-held equipment and lifts and pulls are manually calculated

Resurfacing operations include:

- any operation where measurements and calculations of lifts and pulls are carried out automatically or semi-automatically by resurfacing plant

Equipment may include:

- mechanical lifting and handling devices
- basic hand tools and small plant
- track jacks
- on-track machines (tampers, liners, regulators, etc.)
- manual and electronic measuring equipment

Certifying track after work includes any of the the following works:

- erection of any structure adjacent to or over the track (safe clearances)

Reinstatement of service may include:

- unrestricted operation of rail traffic
- operation under speed restriction
- restricted clearance operation
- operation under tonnage restrictions

Liaison may include:

- internal or external personnel from other work areas

Communication equipment systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- dust mask
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radio/mobile phone
- hand lamps
- flags
- safety devices

Information/documents may include:

- maintenance notices, records and requests
- local instructions
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- two-way radio/mobile phone operation procedures
- emergency procedures manual
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying a number of different faults and deficiencies
  - correctly determining appropriate repair methods for identified faults
  - using appropriate lifting and lining methods and equipment to restore running surface to required geometry
  - after work is completed, certifying track to operational standards
  - completing documentation in accordance with standards and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through activities in an appropriately simulated environment, and/or
  o in an appropriate range of situations in the workplace
TLIB9509A  Check and repair points and crossings

**Unit Descriptor**
This unit involves the skills and knowledge required to check and repair points and crossings in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, maintaining components and tolerances, installing components, conducting post-installation checks, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the checking and repair of points and crossings as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

**Competency Field**
B – Equipment Checking & Maintenance

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  **Determine job requirements**
   1.1 Faults and deficiencies in points and crossings are identified and work required for restoration of track to required standard is determined
   1.2 Appropriate repair methods are identified to enable repairs to be effected
   1.3 Job requirements are determined in accordance with workplace procedures, including identification of the scope of work activities and resources required

2  **Maintain components and tolerances**
   2.1 Clearances are adjusted to specifications to ensure correct functioning
   2.2 Wearing surfaces are cleaned and lubricated as required to minimise wear and ensure correct functioning
3 Install components

3.1 New components are prepared to specifications ready for installation
3.2 New components are installed in accordance with standards and workplace procedures

4 Conduct post-installation checks

4.1 Functional checks are carried out to ensure correct operation
4.2 Completed work is checked for compliance to acceptance standards in accordance with workplace procedures
4.3 Appropriate operating conditions are applied in accordance with workplace procedures

5 Complete documentation

5.1 Required documentation is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the checking and repair of points and crossings
- Problems that may occur during the checking and repair of points and crossings, and action that can be taken to report or resolve the problems
- Hazards that may exist when checking and repairing points and crossings, and ways of controlling the risks involved
- Features and principles of operation of points and crossings
- Special maintenance requirements for points and crossings
- Defects that can occur in points and crossings
- Measurement techniques
- Types of lubricants
- Clearances/tolerances
- Tension of fittings
- Defect tolerances and maintenance techniques
- Component replacement techniques
- Installation and maintenance requirements for manual points equipment
- Points and crossings acceptance standards
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record keeping requirements

Required skills:
- Communicate effectively with others when checking and repairing points and crossings
• Read and interpret instructions, procedures, information, technical data, standards and drawings relevant to the checking and repair of points and crossings
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the checking and repair of points and crossings
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when checking and repairing points and crossings
• Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when checking and repairing points and crossings in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when checking and repairing points and crossings
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment
• Select and use hand tools, power tools and equipment
• Identify/locate defects in points and crossings
• Use relevant plant and mechanised equipment
• Use appropriate equipment and methods to make accurate measurements on points and crossings
• Determine work requirements and work methods
• Select and use appropriate installation and repair techniques and equipment to correct defects in points and crossings
• Select and apply appropriate lubricants
• Undertake functional checks after work has been completed
• Measure and compare completed work to construction or maintenance acceptance limits
• Identify defects in special trackwork affecting safe operation
• Complete relevant documentation accurately

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
• by day or night
• in all weather conditions
Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Equipment may include:

- off-track plant, cranes
- mechanical lifting and handling devices
- hand tools and small plant
- rail saws, rail drills

Maintenance may include:

- adjusting switch bearing
- adjusting switch set
- adjusting switch housings
- adjusting clearances at crossings and switches
- tightening or replacing fastenings
- replacing switches, switch housings, stockrails, closure rails, crossings and checkrail units
- drilling switches and stockrails
- replacing plates, studs and chocks
- adjusting bearer spacing

Points and crossing may include:

- turnouts
- diamond crossings
- slips
- catchpoints
- expansion switches
Components may include:

- switches
- crossings
- stockrails
- closure rails
- rail braces
- bearer plates
- bolts, clips
- studs/switch stops
- heel blocks
- housings
- anti-creep devices
- chairs
- switch rollers
- checkrails
- chocks
- manual points equipment

Crossings may include:

- fabricated cant
- Rail Bound Manganese
- monoblock
- Davis
- compound crossings
- swing nose
- spring wing type crossings
- single or dual gauge

Bearers may include:

- timber
- concrete
- steel

Fastenings may include:

- slip/friction
- resilient

Measuring equipment may include:

- measuring tapes
- stringline
- rail gauges (switch, crossing)
- gauge boards

Manual points equipment may be:

- asymmetrical
- conventional
- undercut
- housed
Heels of switches may be:  
- fixed  
- flexible

Operations of switches may be:  
- manual  
- interlocked

Communication equipment/systems may include:  
- two-way radios  
- computers  
- telephones/mobile phones  
- agreed audible or hand signals

Safety and personal protective equipment may include:  
- high visibility clothing  
- hearing protection  
- gloves  
- sunscreen  
- sunglasses  
- dust mask  
- safety glasses  
- insect repellent  
- safety headwear  
- safety footwear  
- portable radios/mobile phones  
- hand lamps  
- flags  
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:  
- company procedures  
- enterprise procedures  
- organisational procedures  
- established procedures
Information/documents may include:

- operational instructions, policies and workplace procedures
- works orders
- information provided by other workplace personnel
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Liaison may include:

- internal or external personnel from other work areas (e.g. signals staff)

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- trackside signals

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292 and AS 3000
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of
situations:
  o identifying faults and appropriate repair methods
  o cleaning and adjusting components, and/or
  o preparing and installing replacement components
  o conducting functional checks on completed works
  o completing documentation to required workplace standards

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through activities in an appropriately simulated environment, and/or
  o in an appropriate range of situations in the workplace
TLIB9609A  Repair concrete/masonry structures

Unit Descriptor
This unit involves the skills and knowledge required to repair concrete/masonry structures and their components in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, preparing components, performing repairs, and cleaning up the site after maintenance activities. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the repair of concrete/masonry structures and their components as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine job requirements
1.1 Structures are inspected as necessary to locate defects
1.2 Job requirements are determined in accordance with workplace procedures, including identification of scope of work and resources required

2 Prepare components for repair
2.1 Components requiring repair are prepared in accordance with workplace procedures
2.2 Materials required for job are identified and organised as required to enable appropriate repair of components

3 Perform repairs
3.1 Defective area is removed in accordance with workplace procedures
3.2 Repairs are carried out to required standard in accordance with workplace procedures

4 Clean up site
4.1 Site is cleaned up to ensure it is restored and environmentally sound and safe in accordance with workplace procedures and environmental regulations and standards
5 Complete documentation

5.1 Documentation is completed as required in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the repair of concrete/masonry structures
- Problems that may occur during the repair of structures, and action that can be taken to report or resolve the problems
- Hazards that may exist when repairing concrete/masonry structures, and ways of controlling the risks involved
- Functions of different types of concrete/masonry structures
- Concrete/masonry structures repair methods and techniques
- Information on the use of epoxy and grouts for mortar pads and cracks
- Basic concrete construction techniques
- Relevant recording and documentation procedures

**Required skills:**
- Communicate effectively with others when repairing concrete/masonry structures
- Read and interpret plans and specifications relevant to the repair of concrete/masonry structures
- Follow operational instructions and work sequences when undertaking concrete/masonry structures repair
- Complete documentation related to the repair of concrete/masonry structures
- Operate communication equipment to required protocol
- Work collaboratively with others when repairing concrete/masonry structures
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when repairing concrete/masonry structures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise during the repair of concrete/masonry structures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and use relevant tools and equipment
- Adapt to differences in tools and equipment and work requirements in accordance with standard operating procedures
• Select and use required personal protective equipment
• Identify defects

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in dry weather conditions

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve:
• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Structures and components may include:
• concrete structures
• masonry structures
• underbridges, overbridges, footbridges
• culverts
• tunnels
• retaining walls
• platforms
• overhead wiring structures
• signal gantries

Equipment may include:
• welding, oxy and cutting equipment
• temporary supports
• manual tools
• air tools and compressor
• small power tools
• scaffolding
• ladders
• elevated work platforms (EWP)
• boat/barge

Materials may include:
• epoxy grouts
• cement grouts
• paint (protective treatment)
• carbon fibre
• bolts and fasteners
• reinforcement
Maintenance methods may include:

- repairing
- painting (protective treatment)
- cathodic protection
- bonding

Liaison may include:

- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communication systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- safety harness
- torch
- safety devices
- respirator
Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- material safety data sheets (MSDS)
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - preparing components to be repaired
  - repairing existing concrete/masonry structures using a range of repair techniques
  - repairing a range of defect types
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
TLIBM09A Install and maintain guard rails

Unit Descriptor
This unit involves the skills and knowledge required to install and maintain guard rails in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, installing guard rails, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the installation and maintenance of guard rails as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine job requirements
1.1 Worksite is identified
1.2 Obstructions are cleared from gangways/flangeways to ensure safe passage of trains
1.3 Installation, replacement or repair method is selected to meet work requirements in accordance with worksite standards and procedures
1.4 Plant, equipment and materials are prepared for work

2 Install guard rail
2.1 Existing rail is removed, if required, to enable fitting of new rail
2.2 New or replacement guard rail is installed to standards using suitable equipment and fastening system to restore functionality of guard rail
2.3 Final job is checked for compliance to standards to enable services to be restored safely

3 Complete documentation
3.1 Documentation on work undertaken is completed in accordance with workplace requirements
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and maintenance of guard rails
- Problems that may occur during the installation and maintenance of guard rails, and action that can be taken to report or resolve the problems
- Hazards that may exist when carrying out the installation and maintenance of guard rails, and ways of controlling the risks involved
- Principles of guard rail function
- Guard rail installation and maintenance techniques and processes
- Technical manuals and instructions which relate to the installation and maintenance of guard rails
- Standards applicable to use of guard rails
- Emergency procedures

Required skills:
- Read and interpret instructions, procedures, information and signs relevant to the installation and maintenance of guard rails
- Interpret and follow operational instructions
- Complete documentation related to the installation and maintenance of guard rails
- Operate communication systems to required protocol
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when carrying out the installation and maintenance of guard rails in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to materials or equipment
- Select appropriate material for guard rails
- Install and remove guard rails
- Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Guard rails include:
- guard rails installed on level crossings and sharp curves to prevent derailment
- guard rails installed on underbridges and near vulnerable structures to limit lateral movement of derailed wagons

Types of guard rail may vary according to:
- rail mass
- rail type
- bearer type
- location of guard rail (between the running rails or outside the running rails)

Tools may include:
- rail tongs
- mechanical lifting and handling devices
- hand tools
- small plant
- on-track equipment (e.g. dog puller)

Materials may include:
- fastening components
- new or part worn rail for guard rails
- special steel section guard rails
- splay rails
- specially fabricated 'vee'

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Work may involve:
- exposure to chemicals, dangerous or hazardous substances
- movements of equipment, materials and vehicles

Communication equipment systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- notices, records and requests
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - installing or maintaining the guard rails on underbridges, level crossings in open track
  - ensuring completed work meets track geometry requirements

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
TLIB9809A       Examine concrete/masonry structures

Unit Descriptor
This unit involves the skills and knowledge required to examine concrete/masonry structures in accordance with safeworking and regulatory requirements and workplace procedures. It includes obtaining all relevant previous reports, performing the detailed examination, initiating appropriate necessary actions, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the conduct of a detailed concrete/masonry structures examination as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Obtain previous reports
1.1 Operational history of structure is reviewed from available sources
1.2 Previous defects identified in reports are noted to enable rechecking of problem areas
1.3 Relevant personnel are contacted to identify any reported complaints or indications of wear or damage

2 Perform detailed examination
2.1 Concrete and masonry structures and components are visually inspected and checked for signs of movement, deterioration and damage in accordance with workplace procedures
2.2 Relevant inspection aids are used to perform detailed inspection to identify defects in accordance with workplace procedures
2.3 Defects or deficiencies are identified in accordance with workplace procedures

3 Take appropriate actions
3.1 Major defects affecting safe passage are acted on as soon as possible in accordance with workplace procedures
3.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner

4 Complete documentation

4.1 Examination schedule or work report data is completed in accordance with workplace procedures
4.2 Documentation on work undertaken is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant safety, OH&S and environmental procedures and regulations
• Workplace procedures for conducting concrete/masonry structures examinations
• Problems that may occur during the conduct of a detailed concrete/masonry structures examination, and action that can be taken to report or resolve the problems
• Hazards that may exist when conducting a detailed concrete/masonry structures examination, and ways of controlling the risks involved
• Concrete/masonry structures examination methods and techniques
• Fault detection techniques
• Relevant recording and documentation procedures

Required skills:
• Communicate effectively with others when conducting a detailed concrete/masonry structures examination
• Read and interpret plans and specifications relevant to a detailed concrete/masonry structures examination
• Follow operational instructions and work sequences when undertaking concrete/masonry structures examination
• Identify defects
• Complete documentation related to a detailed concrete/masonry structures examination
• Operate communication equipment to required protocol
• Work collaboratively with others when conducting a detailed concrete/masonry structures examination
• Promptly report and/or rectify any identified problems, faults or malfunctions when conducting a detailed concrete/masonry structures examination in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify, select and use measuring instruments and equipment
- Select and use required personal protective equipment

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces or exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals, dangerous or hazardous substances
- movements of equipment, materials and vehicles

Structures may include:
- underbridges
- overbridges
- footbridges
- culverts
- tunnels
- retaining walls
- platforms
- overhead wiring structures
- signal gantries
- noise barriers
- service crossings
- buffer stops
- track slabs
Equipment may include:
  - torch
  - geologists hammer
  - measuring tape
  - spirit level with straight edge
  - plumb bob
  - camera
  - binoculars
  - mirror
  - vernier calipers
  - demec gauge, points and adhesive
  - scaffolding
  - extension ladder
  - elevated work platforms
  - boat or barge
  - corer meter

Structures examination methods may include:
  - visual examination
  - hammer test
  - corer meter testing

Liaison may include:
  - internal/external personnel from other work areas (e.g. train controllers)
  - road authorities
  - local councils
  - landowners

Communication equipment systems may include:
  - two-way radios
  - telephones/mobile telephones
  - agreed audible or hand signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
  - company procedures
  - enterprise procedures
  - organisational procedures
  - established procedures
Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- tripods
- harness and ropes
- respirator
- safety mask
- gas detectors
- safety devices

Information/documents may include:

- local authority regulations and procedures
- work orders
- examination reports and defect lists
- relevant log or record book
- local instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals
Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - examining a range of structure types
  - taking appropriate action for identified defects
  - completing documentation of examination results

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including
workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
TLIB9909A  Examine track infrastructure

Unit Descriptor
This unit involves the skills and knowledge required to examine track and right of way infrastructure in accordance with safeworking and regulatory requirements and workplace procedures. It includes preparing for examination, examining track and right of way, analysing examination results, and reporting findings. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the examination of track infrastructure as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
B – Equipment Checking & Maintenance

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for examination
1.1 Examination task is reviewed to establish requirements
1.2 Equipment appropriate to task is selected and checked for correct operation in accordance with manufacturers instructions and workplace procedures

2 Examine track
2.1 Examination task is undertaken in accordance with workplace procedures
2.2 Condition of track or right of way infrastructure being examined is recorded in accordance with workplace procedures
2.3 Measurements of track or right of way infrastructure being examined are taken and recorded in accordance with workplace procedures

3 Analyse examination results
3.1 Available data is analysed to identify trends, defects or variations from allowable tolerances
3.2 Appropriate action is taken to safeguard operation of the rail system
4 Report findings

4.1 Examination schedule or work report data is completed in accordance with workplace procedures.
4.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner.
4.3 Results of analysis are prioritised and reported to relevant personnel in accordance with workplace procedures.
4.4 Required documentation is completed in accordance with workplace procedures.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the examination, recording and reporting of track and right of way infrastructure
- Track and right of way infrastructure condition standards
- Problems that may occur during the examination of track and right of way
- Hazards that may exist when examining track and right of way infrastructure, and ways of controlling the risks involved
- Track measurement equipment and techniques
- Track and right of way defects and their causes
- Track deterioration rates under differing operating conditions
- Data analysis techniques for the analysis of track and right of way infrastructure parameters
- Relevant records procedures

Required skills:

- Read and interpret instructions, procedures, information, plans, drawings and specifications relevant to the examination of track and right of way infrastructure
- Read and interpret track recording data
- Apply track and right of way infrastructure condition standards
- Undertake track and right of way infrastructure examination tasks
- Identify condition of track and right of way infrastructure
- Measure, calculate and record data accurately
- Analyse data and prioritise identified defects
- Take appropriate action to repair or protect defects
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the examination of track and right of way infrastructure
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when examining track and right of way infrastructure
- Promptly report and/or rectify any identified problems when examining track and right of way infrastructure in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events
• Monitor work activities in terms of planned schedule
• Work systematically with required attention to detail without injury to self or others
• Identify, select and use tools
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all relevant weather conditions

Work may involve:
• exposure to chemicals, and dangerous or hazardous substances
• movements of equipment, goods and vehicles

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Track and right of way infrastructure may include:
• track components
• turnouts
• formation
• drainage
• earthworks
• tracksides signs
• fencing
• level crossings

Examination methods may include:
• visual assessment
• measurement of parameters
• analysis of recorded data

Examination tasks may include:
• component condition and wear
• geometry
• clearances
• stability
• post irregularity examinations
• special seasonal examinations
Available data may include:
- previous examination results
- current examination results
- track recording car data
- track patrol reports
- work reports
- track condition history

Depending on the type and seriousness of identified defects, appropriate action may include:
- stop trains
- speed restrictions
- immediate repair action
- report for programmed repair action
- monitor for further deterioration

Liaison may include:
- internal or external personnel from other work areas

Tools and equipment may include:
- hand tools
- track boards
- measuring rules
- gauges
- electronic measuring equipment

Communication equipment may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- maintenance notices, records and requests
- local authority regulations and procedures
- work orders
- technical instructions
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit:

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
o the underpinning knowledge and skills
o relevant legislation and workplace procedures
o other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  o preparing for examination
  o examining track and right of way
  o analysing examination results
  o reporting findings

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and equipment, and
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through activities in an appropriately simulated environment, and/or
  o in an appropriate range of situations in the workplace
TLIC1007C  Pilot or escort oversized and/or overmassed loads

Unit Descriptor
This unit involves the skills and knowledge required to undertake pilot or escort activities in the movement of oversized and/or overmassed loads including preparing for pilot/escort operation, carrying out communications regarding pilot or escort operation, and fulfilling all functions related to the piloting and escorting of vehicles carrying oversized and overmassed loads. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory roads and traffic authority pertaining to the piloting and escorting of oversized and overmassed loads.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to pilot or escort an oversized or overmassed vehicle in a variety of operational contexts.

Competency Field
C – Driving Vehicle

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for pilot or escort operation

1.1 Maintenance needs of pilot and/or escort vehicles and associated equipment are identified according to maintenance schedule or reports of faults

1.2 Pilot and/or escort vehicles and associated equipment are prepared for operation to manufacturers specifications, workplace procedures and government regulations

1.3 Minor maintenance on vehicles is carried out in accordance with workplace policies and to manufacturers specifications

1.4 Post-maintenance inspections and tests of pilot and/or escort vehicles and associated equipment are completed

1.5 The outcomes of inspections, identified faults and repairs are recorded in accordance with workplace procedures

2 Carry out communications regarding pilot or escort operation

2.1 Transport companies whose vehicles are scheduled for escort are consulted to confirm requirements for escort operation

2.2 The escort permit is verified for completeness and accuracy and convoy is checked to ensure compliance with the permit
in accordance with government rules and regulations and government policy

2.3 The permit holder is advised of the results of the check

2.4 Convoy is briefed and given instructions and directions on the escort operation

3 Conduct pilot and/or escort operation

3.1 Required vehicle positioning, traffic warning and directional signalling procedures are implemented to enable safe passage of the load

3.2 Safety equipment is operated and roadside obstacles are positioned to ensure safe passage of the load in accordance with government rules and regulations and workplace procedures

3.3 Precautions are taken to ensure that convoy personnel are aware of road and other conditions that may impact on load and vehicle security

3.4 All required liaison with relevant authorities is undertaken

3.5 Documentation is completed in accordance with government rules and regulations and workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory roads and traffic authority pertaining to the piloting and escorting of oversized and overmassed loads
- Relevant OH&S and environmental procedures and regulations
- Vehicle controls, instruments and indicators and their use
- Vehicle handling procedures
- Procedures to be followed in the event of a driving/piloting/escort emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Map reading and road navigation techniques
- Driving hazards and related defensive driving techniques
- Principles of stress management when carrying out pilot/escort functions
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Workplace driving and operational instructions
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
• Fatigue management techniques
• Lifestyles which promote the effective long-term management of fatigue
• Documentation requirements for piloting and escorting oversized/overmassed loads

Required skills:
• Communicate effectively with others when piloting and escorting vehicles with oversized and overmassed loads
• Read and interpret instructions, procedures, information and signs relevant to the piloting and escorting of vehicles with oversized and overmassed loads
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the piloting and escorting of vehicles with oversized and overmassed loads
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when piloting and escorting vehicles with oversized and overmassed loads
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when piloting and escorting vehicles with oversized and overmassed loads in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when piloting and escorting vehicles with oversized and overmassed loads
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations include:
• all pilot and escort vehicle operations

Pilot and escort operations may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road
Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators including warning indicators
- checks of brakes

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory pilot/escort permit/regulatory requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to piloting and escort functions
- relevant state/territory road rules
- relevant state/territory oversized and overmassed permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC107C  Drive vehicle

Unit Descriptor  This unit involves the skills and knowledge required to drive commercial light vehicles and cars safely, including the systematic, safe and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition, and performance and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills  This unit contains employability skills.

Application of the Unit  Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial vehicle across a variety of driving contexts.

Competency Field  C – Driving Vehicle

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Drive the vehicle  1.1 Vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions
1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage
1.3 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
1.4 The vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
1.5 Vehicle lights and indicators are used in accordance with traffic regulations and manufacturers instructions
1.6 The vehicle is parked, shut down and secured in accordance with manufacturers specifications, traffic regulations and workplace procedures
1.7 Appropriate procedures are followed in the event of a driving emergency
2 Monitor traffic and road conditions

2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations.

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities.

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle.

3.2 Performance and efficiency of vehicle operation is monitored during use.

3.3 Defective or irregular performance or malfunctions are reported to the appropriate authority.

3.4 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Vehicle controls, instruments and indicators and their use
- Vehicle handling procedures
- Workplace driving and operational instructions
- Driving hazards and related defensive driving techniques
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Map reading and road navigation techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue
Required skills:

- Communicate effectively with others when driving a commercial vehicle
- Read and interpret instructions, procedures, information and signs relevant to the driving of a commercial vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a commercial vehicle
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when driving a commercial vehicle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when driving a commercial vehicle in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when driving a commercial vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a commercial vehicle
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Monitor performance of vehicle and take appropriate action where required
- Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:

- cars and vehicles equal to or less than 4.5 tonnes GVM and seating up to 12 adults, including the driver, and all types of transmission

Driving may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site
Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including pre-operational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to the class of vehicle
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC1107C  Transport passengers with disabilities

Unit Descriptor
This unit involves the skills and knowledge required to operate vehicles used for the transport of people with disabilities including pre-operational checks of the vehicle and its ancillary equipment; assistance to passengers in the use of restraints and ancillary equipment; provision of appropriate support to passengers during their journey; and manoeuvring the vehicle with due consideration of passengers' disabilities and the requirements of relevant government regulations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Transporting of passengers with disabilities must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial vehicle conveying persons with disabilities across a variety of driving contexts.

Competency Field
C – Driving Vehicle

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Carry out pre-operational checks on vehicles
1.1 The pre-operational checks for the vehicle and its associated ancillary equipment are carried out in accordance with manufacturers requirements, government regulations and workplace policies and procedures
1.2 All faults and defects identified during checks are repaired or reported in accordance with workplace procedures

2 Drive a vehicle used by passengers with disabilities
2.1 Passengers are assisted in a courteous manner, sensitive to the disability
2.2 Passengers are assisted to use restraints, and the ancillary equipment which accompanies them, where appropriate
2.3 Ongoing support is provided to the passenger to maximise their travelling comfort
2.4 Ancillary equipment is stowed safely in vehicle following relevant regulations, where appropriate
2.5 The vehicle is manoeuvred in accordance with the regulations for the class of vehicle involved
2.6 The vehicle is manoeuvred with due consideration to any required precautions related to the disability of the passengers or relevant government regulations pertaining to the special load

2.7 Signs or indicators are fixed to the vehicle if required

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Relevant anti-discrimination legislation
- Duty of care responsibilities when driving vehicles used by passengers with disabilities
- Vehicle and ancillary equipment controls, instruments and indicators and their use
- Vehicle handling procedures and procedures for operating ancillary equipment
- Techniques for driving vehicles used by passengers with disabilities
- Pre-operational checks carried out on vehicle and ancillary equipment and related action
- Driving hazards and related defensive driving techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Workplace driving and operational instructions

Required skills:
- Communicate effectively with others when transporting passengers with disabilities
- Read and interpret instructions, procedures, information and signs relevant to the transporting of passengers with disabilities
- Interpret and follow operational instructions and prioritise work
- Interact with passengers with disabilities
- Complete documentation related to the transporting of passengers with disabilities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when transporting passengers with disabilities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when transporting passengers with disabilities in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:
• cars and vehicles designed to transport passengers with disabilities

Transporting of passengers may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road
• while at a depot, base or warehouse
• while at a client's workplace or worksite

Vehicle handling procedures may include:
• starting a vehicle
• steering and manoeuvring a vehicle
• accelerating and braking
• positioning and stopping a vehicle
• reversing a vehicle
• operating the controls, instruments and indicators of the vehicle and ancillary equipment
• using defensive driving techniques
• managing engine performance

Driving hazards may include (examples only):
• wet and iced roads
• oil on road
• animals and objects on road
• fire in vehicle
• leaking fuel
• faulty brakes
• parked vehicles on the road
• faulty steering mechanism on vehicle
• pedestrians crossing the road
• flooded sections of road
• windy sections of road
• foggy conditions
Pre-operational checks may include:
- visual check of vehicle and ancillary equipment
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:
- state/territory driving licence requirements
- state/territory road rules
- workplace instructions and procedures for the transport of passengers with disabilities
- manufacturers instructions, specifications and recommended operating procedures for both vehicle and ancillary equipment, including pre-operational checks
- emergency procedures
- vehicle log book or record book (where required)
Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to the class of vehicle
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant anti-discrimination legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIC1207C**  Ride courier/delivery motorcycle

**Unit Descriptor**
This unit involves the skills and knowledge required to ride a courier/delivery motorcycle while safely carrying loads. This includes pre-operational checks of the motorcycle; the systematic, safe and efficient control of all functions; and effective management of hazardous situations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the regulations/permit requirements of the relevant state/territory roads and traffic authority pertaining to the riding of a motorcycle on public roads.

Work is generally performed with indirect supervision, and with limited accountability and responsibility for self in achieving the prescribed outcomes.

Driving involves the application of routine procedures to pick up and deliver products, documents and materials from and to customers across a variety of operational contexts.

**Competency Field**
C – Driving Vehicle

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Ride the courier motorcycle**

1.1 Motorcycle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturers instructions and workplace policy

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage

1.3 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.4 The motorcycle is parked, shut down and secured in accordance with manufacturers specifications, traffic regulations and workplace procedures

1.5 Motorcycles carrying dangerous goods are driven along designated routes in accordance with the AE or ADG codes, relevant government regulations and workplace policies

1.6 Load is checked to confirm compliance with the load limit of the motorcycle

1.7 The load is secured, transported and the motorcycle is manoeuvred with due consideration to any required precautions related to characteristics of the load and/or relevant government regulations pertaining to special loads
1.8 Any required signs or indicators are fixed to the motorcycle
1.9 Personal protective equipment and clothing is identified, worn and adjusted to meet legislative, regulatory or policy requirements

### 2 Monitor traffic and road conditions

2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations
2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities

### 3 Monitor and maintain motorcycle performance

3.1 Motorcycle performance is maintained through pre-operational inspections and checks of the motorcycle
3.2 Performance and efficiency of motorcycle operation is monitored during use
3.3 Defective or irregular performance or malfunctions are reported to the appropriate authority
3.4 Motorcycle records are maintained/updated and information is processed in accordance with workplace procedures

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Motorcycle handling procedures
- Workplace operational instructions
- Procedures to be followed in the event of an emergency
- Pre-operational checks carried out on motorcycle and related action
- Map reading and road navigation techniques
- Motorcycling hazards and related defensive riding techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a courier motorcyclist
- Requirements of courier work systems/operations and relevant equipment
- Procedures and policies concerning the identification, acceptance and carrying of dangerous/hazardous goods

**Required skills:**

- Communicate effectively with others when riding a commercial courier or delivery motorcycle
• Read and interpret instructions, procedures, information and signs relevant to the riding of a commercial courier or delivery motorcycle
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the riding of a commercial courier or delivery motorcycle
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when riding a commercial courier or delivery motorcycle
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when riding a commercial courier or delivery motorcycle
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of motorcycle and take appropriate action

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be carried out in typical road transport situations, including:
• operations conducted day or night
• typical weather conditions
• on the open road
• on a private road
• while at a depot or base
• while at a customer's workplace or premises

Customers may be:
• internal or external
Motorcycle handling procedures may include:

- starting a motorcycle
- steering and manoeuvring a motorcycle
- accelerating and braking
- stopping and parking
- using defensive riding techniques

Pre-operational checks may include:

- visual check of motorcycle for operational capability
- checking and topping up fluid levels
- checks of tyre pressures
- checks of operation of lights
- checks of gearing, steering and brakes
- check of seat adjustment

Minor routine repairs may include:

- replacement of blown globes in motorcycle lights
- changing of tyres
- repair of tyre punctures

Hazards may include:

- vehicular traffic and pedestrians
- uneven ground, steps, road surfaces
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature and radiant heat
- light including UV
- noise
- wet and iced roads
- oil on road
- animals and objects on road

Personal protective equipment may include:

- helmet
- sunglasses
- sun cream

Hazardous or dangerous goods may include:

- medical samples or supplies
- explosives
- acids, alkalines or solvents
Consultative processes may involve:

- customers
- other employees and supervisors
- management
- union representatives
- industrial relations, Occupational Health and Safety specialists
- other professional or technical staff
- local government authorities

Factors that can cause traffic delays and diversions may include:

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- road closures for special events such as marches, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information and documentation may include:

- state/territory licence requirements relevant to courier motorcyclists
- state/territory road rules
- workplace instructions and procedures for courier motorcyclists including emergency procedures
- motorcycle manufacturers instructions, specifications and recommended riding and servicing procedures including preoperational checks of motorcycle
- operations manuals including quality assurance procedures
- induction documentation
- competency standards and training materials
- HAZCHEM codes and dangerous/hazardous goods codes and procedures
- supplier and/or client instructions
- material safety data sheets
- communications technology equipment, oral, aural or signed communications
- conditions of service, legislation and industrial agreements
- OH&S procedures

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority regulations and licence requirements pertaining to the courier motorcyclists
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- applicable dangerous/hazardous goods codes and legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC1307C  Ride courier/delivery bicycle

Unit Descriptor
This unit involves the skills and knowledge required to ride a courier/delivery bicycle while safely carrying loads. This includes pre-operational checks of the bicycle; the systematic, safe and efficient control of all functions; and effective management of hazardous situations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations/permit requirements of the relevant state/territory roads and traffic authority pertaining to the riding of the bicycle on public roads.

Work is generally performed with indirect supervision, and with limited accountability and responsibility for self in achieving the prescribed outcomes.

Driving involves the application of routine procedures to pick up and deliver products, documents and materials from and to customers across a variety of operational contexts.

Competency Field
C – Driving Vehicle

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Inspect bicycle for operational capability

1.1 Work area is checked to ensure that operational checks of bicycle may be conducted safely

1.2 The bicycle is checked prior to operation in accordance with manufacturers safety checks, specifications and workplace procedures to ensure it is free from damage that may limit operational capability

1.3 Component operation is tested in accordance with manufacturers specifications and workplace procedures

1.4 Warning systems are all checked for operational effectiveness

1.5 Air pressure and lubrication are checked against specifications

1.6 Where required, appropriate products are used to maintain specified levels

1.7 Faults are identified and assessments made of their potential effect on the operation of the bicycle for the required work operations, and are reported to the appropriate personnel for rectification

1.8 Personal protective equipment is identified, worn and adjusted to meet recommended Australian Standards, legislative, regulatory or policy requirements
2 Ride the bicycle

2.1 Road area is checked for hazards prior to and during journey(s)

2.2 Bicycle is steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturers instructions and workplace policy

2.3 Gears are managed to ensure efficiency and performance and to minimise gear damage and fatigue

2.4 Hazards are identified and/or anticipated and avoided or controlled through defensive riding

2.5 The bicycle is parked and secured in accordance with manufacturers specifications, traffic regulations and workplace procedures

2.6 The bicycle is securely loaded and manoeuvred with due consideration to any required precautions related to characteristics of the load and/or relevant government regulations pertaining to special loads

2.7 Any required signs or indicators are fixed to the bicycle

3 Monitor traffic and road conditions

3.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations

3.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities

4 Monitor and maintain bicycle performance

4.1 Performance of bicycle operation is monitored during use

4.2 Defective or irregular performance or malfunctions are reported to the appropriate authority

4.3 Records are maintained/updated and information is processed in accordance with workplace procedures

4.4 Clear reference in any reports is made to any items which may affect the future efficient use and/or safety of the equipment

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Bicycle handling procedures
- Workplace operational instructions
- Procedures to be followed in the event of an emergency
• Pre-operational checks carried out on bicycle and related action
• Map reading and road navigation techniques
• Cycling hazards and related defensive riding techniques
• Factors which may cause traffic delays and diversions and related action that can be taken by a courier cyclist
• Requirements of courier work systems/operations and relevant equipment
• Procedures and policies concerning the identification, acceptance and carrying of dangerous/hazardous goods

Required skills:
• Communicate effectively with others when riding a commercial courier or delivery bicycle
• Read and interpret instructions, procedures, information and signs relevant to the riding of a commercial courier or delivery bicycle
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the riding of a commercial courier or delivery bicycle
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when riding a commercial courier or delivery bicycle
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when riding a commercial courier or delivery bicycle in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may occur when riding a commercial courier or delivery bicycle
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques when riding a commercial courier or delivery bicycle
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of bicycle and its equipment and take appropriate action if required
• Service bicycle in terms of maintenance schedule and standard operating procedures
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot or base
- while at a customer's workplace or premises

Customers may be:

- internal or external

Bicycle handling procedures may include:

- steering and manoeuvring a bicycle
- accelerating and braking
- parking
- using defensive riding techniques

Pre-operational checks may include:

- visual check of bicycle for operational capability
- checks of tyre pressures
- checks of operation of lights
- checks of gearing, steering and brakes
- check of seat adjustment

Minor routine repairs may include:

- replacement of blown globes in bicycle lights
- changing tyres
- repairing tyre punctures

Hazards may include:

- vehicular traffic and pedestrians
- uneven ground, steps, road surfaces
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature and radiant heat
- light including UV
- noise
- wet and iced roads
- oil on road
- animals and objects on road

Personal protective equipment may include:

- helmet
- sunglasses
- sun cream
| Hazardous or dangerous goods may include:                          | • medical samples or supplies  
|                                                                | • acids, alkalines or solvents |
| Consultative processes may involve:                             | • customers  
|                                                                | • other employees and supervisors  
|                                                                | • management  
|                                                                | • union representatives  
|                                                                | • industrial relations, Occupational Health and Safety specialists  
|                                                                | • other professional or technical staff  
|                                                                | • local government authorities |
| Factors that can cause traffic delays and diversions may include: | • traffic accidents  
|                                                                | • flooded sections of road  
|                                                                | • road damage  
|                                                                | • bridge/tunnel damage  
|                                                                | • road works  
|                                                                | • building construction  
|                                                                | • road closures for special events such as marches, sporting events, etc.  
|                                                                | • holiday traffic  
|                                                                | • road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc. |

| Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: | • company procedures  
|                                                                                           | • enterprise procedures  
|                                                                                           | • organisational procedures  
|                                                                                           | • established procedures |
Information and documentation may include:

- state/territory licence requirements relevant to courier cyclists
- state/territory road rules
- workplace instructions and procedures for courier cyclists including emergency procedures
- bicycle manufacturers instructions, specifications and recommended riding procedures including pre-operational checks of bicycle
- operations manuals including quality assurance procedures
- induction documentation
- competency standards and training materials
- HAZCHEM codes and dangerous/hazardous goods codes and procedures
- supplier and/or client instructions
- material safety data sheets
- communications technology equipment, oral, aural or signed communications
- conditions of service, legislation and industrial agreements
- OH&S procedures

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority regulations and licence requirements pertaining to the courier cyclist
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- applicable dangerous/hazardous goods codes and legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
other relevant aspects of the range statement

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC1607B Conduct marshalling operations

Unit Descriptor
This unit involves the skills and knowledge required to conduct marshalling operations in accordance with safeworking and regulatory requirements and workplace procedures including the planning and organisation of the efficient movement and positioning of rolling stock to make up a train, break up a train, load or unload. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to carry out marshalling across a variety of operational contexts.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Establish marshalling requirements
1.1 Job specifications and instructions are interpreted in order to clarify the train consist requirements
1.2 Personnel requirements and availability to make up the train consist are identified and confirmed
1.3 Equipment requirements are identified, obtained, and prepared for use
1.4 Relevant OH&S legislation, codes of practice, organisational policies and procedures and safeworking systems and requirements related to marshalling and shunting are identified

2 Plan rolling stock movements
2.1 Rolling stock is located and movements are planned to ensure that track use and/or rolling stock placements are appropriate
2.2 Rolling stock cards are checked to determine availability and appropriateness to the consist

3 Position rolling stock
3.1 Sequence of rolling stock movements is determined to achieve correct consist
3.2 Rolling stock is sorted, organised in correct sequence,
positioned and coupled for efficient movement

3.3 Marshalling strategy minimises rolling stock movement and restrictions to track access

3.4 Marshalling strategy ensures that rolling stock is moved and placed safely by following relevant safeworking systems and requirements

3.5 Radio and line of sight communication tools are used in accordance with standard operational procedures and conventions

3.6 Contingency plans are implemented, when necessary, to overcome unplanned events

3.7 Appropriate end-of-train monitoring unit/signals are fitted and operation is confirmed prior to departure

3.8 Train is finalised in accordance with operational requirements, and irregularities are reported and rectified to ensure movement will be safe for personnel and load

3.9 Relevant OH&S requirements are followed to prevent injury and damage

4 Prepare and distribute documentation

4.1 Train consist information is prepared and filed and/or computer entered, according to operational requirements

4.2 Appropriate documentation is delivered to train crews and yard personnel to meet operational requirements

4.3 Documentation is provided to other relevant personnel, including those responsible for marshalling/shunting operations en route, to achieve operational requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Dangerous Goods Codes and regulations
- Marshalling plan and instructions
- Loading and unloading procedures
- Procedures for getting on and off rolling stock in an appropriate manner
- Procedures for coupling and uncoupling rolling stock
- Procedures for operating points and signals
- Procedures for managing hazardous situations when marshalling rolling stock
- Radio communication protocol
- Procedures for completing relevant documentation
Yard features
• Characteristics and features of wagons and other rolling stock
• Principles of operation of protective devices, air brakes, handbrakes, derailleurs
• Local track and signal layouts
• Draw gear capacities and related operating procedures
• Safeworking systems and requirements
• Shunting signals and commands and line of sight communication systems
• Relevant documentation
• Procedures to be followed in the event of an emergency
• Procedures for identifying equipment defects and assessing for appropriate action
• Local procedures and operating requirements
• Defects that can occur on marshalling gear and equipment and related action that should be taken
• Procedures for operating mechanical, electronic and other line of sight communications equipment within required protocols

Required skills:
• Communicate effectively with others when conducting marshalling activities
• Read and interpret instructions, plans, procedures, information and signs relevant to the conduct of marshalling activities
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the conduct of marshalling activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when conducting marshalling activities
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when conducting marshalling activities in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when conducting marshalling activities
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques when conducting marshalling activities
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rolling stock includes:
- all rolling stock in service within Australian rail systems

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Equipment may include:
- draw gear
- air brake system components and handbrakes
- rail tractors
- rolling stock
- communication equipment
- switching equipment
- turntables
- motor vehicles
- fixed signals

OH&S requirements are those necessary to meet applicable organisational, state/territory and national policies and procedures and may include the use of:
- gloves
- sunscreen, sunglasses and safety glasses
- hearing protection
- insect repellent
- safety headwear and footwear
- portable radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- breakdown equipment
- emergency containers
- end-of-train unit or marker
- equipment for handling electrical cables
- emergency warning devices
- portable signs and markers
Contingencies may include:

- derailments
- collisions
- breakdowns
- injuries and fatalities
- hazardous materials spills
- fires and leaks
- track damage
- powerline damage

Contingency plans and contingencies may involve:

- emergency procedures manuals
- ADG Code and other regulations pertaining to the carriage of dangerous goods
- safeworking systems and requirements

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where marshalling operations are carried out on that network
- order books
- cards/deck sheets
- noticeboards
- special train notices
- yard orders
- periodical circulars
- transport authority rules and operating procedures
- computer-based data systems
- timetables
- train consist
- incident reports
- drivers advice
- train register book
- safeworking forms
- dangerous goods manifest
- marshalling plan
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where marshalling operations are carried out on that network
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- Railways of Australia Code of Practice and Conditions for the Carriage of Dangerous Goods
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIC1707B Shunt rolling stock**

**Unit Descriptor**
This unit involves the skills and knowledge required to safely shunt rolling stock in accordance with safeworking and regulatory requirements and workplace procedures, including controlling and directing the physical movement of rolling stock and operating relevant equipment to carry out a developed shunting strategy. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to carry out shunting activities as part of workplace activities across a variety of operational contexts within the Australian rail system.

**Competency Field**
C – Driving Vehicle

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Plan and prepare for shunting operation**

1.1 Shunting requirements are interpreted and clarified and vehicles and equipment are obtained and prepared in accordance with shunting strategy

1.2 Rolling stock movements, availability and locations are established in order to determine appropriate siding and/or track locations for vehicle placement

1.3 Relevant OH&S legislation, codes of practice, organisational policies and procedures and safeworking systems and requirements related to shunting are identified

2 **Carry out shunting control procedures**

2.1 Points, levers, switches, signals and line of sight communications are used to assist the control of rolling stock movement

2.2 Hand, light and radio shunting commands used are uniform and conform with operational and statutory requirements

2.3 Relevant OH&S requirements are followed to prevent injury and damage

2.4 Wagon cards are checked and wagons are obtained and sorted
to comply with shunting requirements
2.5 Shunting control techniques are applied to prevent damage of rolling stock and loads/contents

3 Shunt rolling stock
3.1 Workplace procedures for shunting are identified and applied
3.2 Rolling stock is positioned to meet shunting requirements
3.3 Coupling systems are identified and applied to attach and detach rolling stock
3.4 Connecting brake hoses, electrical couplings and hand brakes are connected/disconnected and applied/released in accordance with operational and OH&S requirements
3.5 Shunting occurs with the minimum of necessary moves within governing safety requirements and limitations

4 Finalise train consist
4.1 Train consists are made up according to operational procedures within timetabling requirements
4.2 Irregularities and defects with equipment rolling stock are reported in accordance with operational requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Dangerous Goods Codes and regulations
- Shunting plan and instructions
- Procedures for prioritising work
- Loading and unloading procedures
- Procedures for getting on and off rolling stock in an appropriate manner
- Procedures for coupling and uncoupling rolling stock
- Procedures for operating points and signals
- Procedures for solving problems associated with shunting operations
- Procedures for identifying and reporting hazards
- Radio communication protocol
- Procedures for completing relevant documentation
- Wagon mechanisms
- Yard features
- Characteristics and features of wagons and other rolling stock
- Principles of operation of protective devices, air brakes, handbrakes, derailleurs
• Location and operation of signals and points
• Local track and signal layouts
• Draw gear capacities and related operating procedures
• Safeworking systems and requirements
• Shunting signals and commands and line of sight communication systems
• Procedures to be followed in the event of an emergency
• Defects that can occur on a shunting gear and equipment and related action that should be taken
• Procedures for identifying equipment defects and assessing for appropriate action
• Local procedures and operating requirements
• Procedures for operating mechanical, electronic and other line of sight communications equipment with required protocols

Required skills:
• Communicate effectively with others when shunting rolling stock
• Read and interpret instructions, procedures, information and signs relevant to the shunting of rolling stock
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the shunting of rolling stock
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when shunting rolling stock
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when shunting rolling stock in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when shunting rolling stock
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Monitor condition and performance of equipment and take appropriate action if required
• Check gear and equipment in terms of service schedule and standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rolling stock may include:  • all rolling stock in service within Australian rail systems

Operations may be conducted:  • by day or night
• in all relevant weather conditions

Equipment may include:  • draw gear
• air brake system components and handbrakes
• rail tractors
• rolling stock
• communication equipment
• switching equipment
• turntables
• motor vehicles
• fixed signals

OH&S requirements are those necessary to meet applicable workplace, state/territory and national policies and procedures and may include the use of:

• gloves
• sunscreen, sunglasses and safety glasses
• hearing protection
• insect repellent
• safety headwear and footwear
• portable radios
• hand lamps
• flags
• safety devices
• audible indicators
• breathing equipment
• fire extinguishers
• high visibility clothing
• breakdown equipment
• emergency containers
• end-of-train unit or marker
• equipment for handling electrical cables
• emergency warning devices
• portable signs and markers
Contingencies may include:

- derailments
- collisions
- breakdowns
- injuries and fatalities
- hazardous materials spills
- fires and leaks
- track damage
- powerline damage

Contingency plans and contingencies may involve:

- emergency procedures manuals
- ADG Code and other relevant dangerous goods regulations
- safeworking systems and requirements

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where shunting operations are carried out on that network
- order books
- cards/deck sheets
- noticeboards
- special train notices
- yard orders
- periodical circulars
- transport authority rules and operating procedures
- computer-based data systems
- timetables
- train consist
- incident reports
- drivers advice
- train register book
- safeworking forms
- dangerous goods manifest
- marshalling plan and shunting lists
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where shunting operations are carried out on that network
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- Railways of Australia Code of Practice and Conditions for the Carriage of Dangerous Goods
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

### Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLIC1807B Operate on-train remote control system

#### Unit Descriptor

This unit involves the skills and knowledge required to operate an on-train remote control unit in accordance with safeworking and regulatory requirements and workplace procedures including preparing motive power units before setting up on-train remote control equipment, operating the system after the set-up is complete and shutting it down after operation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

#### Employability Skills

This unit contains employability skills.

#### Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the operation of the on-train remote control system as part of workplace activities across a variety of operational contexts within the Australian rail system.

#### Competency Field

C – Driving Vehicle

#### ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Position equipment and motive power unit | 1.1 Remote control equipment and motive power units are positioned in required locations  
1.2 Brake test is conducted on each train section using appropriate personnel  
1.3 Front and rear train consists are coupled together to form one train, applying safeworking techniques  
1.4 Relevant OH&S requirements are followed to prevent injury and damage  
1.5 Relevant codes of practice and safeworking systems and requirements are followed |
| 2 Monitor and operate remote control equipment | 2.1 Motive power units and control system set-up are checked to ensure safe operational status  
2.2 Remote control equipment is operated and monitored in accordance with operational requirements during train movements to provide safe train handling and control  
2.3 Any operational difficulties encountered are addressed by re- |
establishing control of the motive power unit(s) with minimum risk to personnel and equipment

3 Shut down remote control equipment

3.1 Shut-down procedures of lead and remote control equipment are followed to ensure train security and deactivation of the system

3.2 Equipment indicators or functions are operated to ensure the shut-down process is correct and complete

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
• Relevant OH&S and environmental procedures and regulations
• On-train remote control unit controls, instruments and indicators and their purpose, location and use
• Positioning procedures
• Shut-down procedures
• Braking and safety system procedures
• Procedures for the control of motive power units
• Procedures for the operation of remote control units
• Motive power operating techniques
• Procedures for managing hazardous situations involving on-line remote control systems
• Operational instructions
• Shunting and marshalling procedures
• Procedures for identifying equipment defects in remote control units and assessing for appropriate action including compatible coupling, braking and drive equipment, ancillary systems and signalling systems
• Procedures for operating electronic communications equipment with required protocol

Required skills:

• Communicate effectively with others when operating on-train remote control system
• Read and interpret instructions, procedures, information and signs relevant to the operation of on-train remote control system
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the operation of on-train remote control system
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when operating on-train remote control system
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when operating on-train remote control system in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when operating on-train remote control system
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Judge train speeds and movements
• Monitor performance of equipment and take appropriate action if required

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all relevant weather conditions

On-train remote control equipment is:
• that using any mechanism and operating system to allow the control of one motive power unit which is part of a train from another unit which is part of the same train

Motive power units include all motive power units in service within Australian rail systems and may include:
• diesel locomotives
• electric locomotives
• railcars
• multiple units including electric
• non-operational units
• multiple units

Remote control operation may be used:
• within a yard for the purpose of marshalling or shunting, or on running lines

Action taken as a result of identified faults, defects or deficiencies may include:
• carrying out repairs or adjustments, depending on the level and extent of work required
• reporting to appropriate personnel
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant log or record book
- maintenance notices, records and requests
- local instructions
- equipment operation manuals
- operational instructions, policies and procedures
- emergency procedure manuals
- two-way radio operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC1907B  Drive train to operational requirements

Unit Descriptor
This unit involves the skills and knowledge required to drive a train to operational requirements in accordance with safeworking and regulatory requirements and workplace procedures. This includes applying train management techniques to manage the movement of a train and, as the driver of a motive power unit, to conduct all movements and related activities required to achieve operational requirements. It also includes responding effectively to external factors and emergencies, handing over a train to a relief crew and stabling it at the end of a journey. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to drive trains to operational requirements as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
C – Driving Vehicle

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Drive train efficiently and effectively
1.1 Motive power unit is operated in accordance with the relevant codes of practice, workplace procedures and instructions
1.2 Motive power unit is operated safely within track/road characteristics and conditions and to minimise wear and fuel use and avoid damage
1.3 Motive power unit is operated with due care for passenger comfort and/or condition of freight
1.4 Performance of equipment and rolling stock is monitored to maintain optimum running conditions and identify faults, defects and efficiencies
1.5 Relevant codes of practice, OH&S and environmental requirements are followed to prevent injury and damage

2 Complete train journey
2.1 Train documentation is received, interpreted and followed
2.2 Train is operated in accordance with train documentation and procedures
2.3 Events and circumstances affecting planned running schedule are communicated to relevant personnel en route
2.4 Relevant codes of practice, safeworking and signalling requirements are followed throughout train operations
2.5 Train control instructions and other instructions are received, interpreted and applied to ensure safe and effective control of the train
2.6 Communications are maintained with train control and other relevant officers during the train journey in accordance with the relevant codes of practice and safeworking systems
2.7 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient running

3 Respond effectively to external operating factors

3.1 Instructions are verified, when required, interpreted and followed, in accordance with relevant codes of practice, safeworking systems and requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe
3.2 Fixed and hand signals and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure that actions taken are appropriate and safe
3.3 Hazardous situations are recognised and appropriate action taken to minimise risk to personnel and equipment

4 Prepare train for crew hand-over

4.1 Relevant personnel are advised of condition and location of the train
4.2 Documentation is updated and faults identified en route are reported to relevant personnel in accordance with established policies and procedures
4.3 Incidents or unusual occurrences are recorded and reported to relevant personnel in accordance with established policies and procedures

5 Stable train

5.1 Location for stabling of the train is confirmed with relevant personnel
5.2 Train is shunted and secured in accordance with directions, workplace procedures and relevant rail regulations
5.3 Train is stabled in accordance with organisational policies and procedures
5.4 Safety devices are activated or put in position to ensure the safety of personnel and equipment
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Operational instructions
- Motive power unit controls, instruments and indicators and their purpose, location and use
- Starting-up and shutting-down procedures
- Train driving procedures
- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop
- Techniques and procedures for complying with speed and load limits
- Processes for adjusting controls to maximise efficient and safe running
- Procedures for managing hazardous situations and emergencies
- Procedures for operating and monitoring the performance of ancillary systems on a train
- Procedures for refuelling and lubricating a motive power unit (as applicable for various types of MPUs)
- Procedures for minor maintenance, cleaning, lubricating and servicing of motive power unit
- Procedures for identifying equipment defects and assessing for appropriate action
- Requirements for completing relevant documentation
- Train characteristics including: track and train dynamics; monitoring principles and procedures; load types and security; fault finding procedures and signalling systems
- Motive power unit equipment and systems including: monitoring devices; braking and drive equipment; ancillary systems and signalling systems
- Track and road characteristics including: track and bridge limitations; speed limitations; gauge limitation; curves and gradients; curfews; location of signals and crossings; emergency cross-overs; and yard and siding layouts
- Local procedures and operating requirements
- Typical defects that can occur on a motive power unit and related action that should be taken
- Procedures for operating electronic communications equipment with required protocol
- Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long term management of fatigue

Required skills:

- Communicate effectively with others when driving a train to operational requirements
- Read and interpret instructions, procedures, information and signs relevant to driving a train
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a train to operational requirements
- Operate electronic communication equipment to required protocol
- Work collaboratively with others as part of a train crew
- Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a train to operational requirements
- Recognise problems that may arise when driving a train and take appropriate action
- Check and replenish fluids and carry out lubrication processes in the course of train operations
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods, vehicles or equipment
- Adapt to differences in trains, associated motive power units and ancillary equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor train performance and security of load to facilitate optimum safe operation
- Apply information about the track or road to train operations
- Stable and secure a train
- Monitor journey schedule
- Apply fatigue management knowledge and techniques

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: - by day or night in all relevant weather conditions
Motive power units may include all motive power units in service within Australian rail systems and may include: - diesel locomotives
- electric locomotives
- railcars
- multiple units including electric
Rolling stock includes: - any rolling stock in service within Australian rail systems
Safety devices can include: - power brakes
- hand brakes
- chocks
- lock-out equipment to prevent train from moving
- emergency and safety equipment such as vigilance control and deadman relays
Track and road characteristics include:

- track and bridge limitations
- speed limitations
- gauge limitation
- curves and gradients
- curfews
- location of signals and crossings
- emergency cross-overs

Relevant personnel can include:

- train controllers
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel
- those providing operational assistance
- signals staff
- passengers
- station staff

Communication protocols may include:

- general safety
- emergency messages
- testing communications equipment
- transmitting and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures

Communications equipment may include:

- oral, aural or signed communications
- hand held or portable two way radio equipment
- fixed and mobile telephone equipment
- Direct Traffic Control (DTC) communications
- email

Depending on the type of organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures
Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- motive power unit log book
- train running sheets
- time sheets
- roadworthy certificate
- equipment operation manuals and maintenance specifications
- emergency procedure manuals relevant maintenance specifications
- two-way radio operation procedures
- maintenance notices, records and requests
- isolation and lock-out procedures
- procedures for using protective clothing and equipment
- specified operating limits for motive power units
- local instructions
- emergency procedures manual

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge
assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
## TLIC207C  Drive light rigid vehicle

### Unit Descriptor
This unit involves the skills and knowledge required to drive a light rigid vehicle safely including systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition, and performance and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

### Employability Skills
This unit contains employability skills.

### Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to light rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial light rigid vehicle across a variety of driving contexts.

### Competency Field
C – Driving Vehicle

### ELEMENT | PERFORMANCE CRITERIA
--- | ---

**1  Drive the light rigid vehicle**

1.1 The light rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage

1.3 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.4 The light rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning

1.5 The light rigid vehicle is parked, shut down and secured in accordance with manufacturers specifications, traffic regulations and workplace procedures

1.6 Appropriate procedures are followed in the event of a driving emergency

**2  Monitor traffic and road conditions**

2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards
2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities.

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle.
3.2 Performance and efficiency of vehicle operation is monitored during use.
3.3 Defective or irregular performance or malfunctions are reported to the appropriate authority.
3.4 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Light rigid vehicle controls, instruments and indicators and their use
- Light rigid vehicle handling procedures
- Driving hazards and related defensive driving techniques
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Map reading and road navigation techniques including the use of a GPS device where applicable
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Workplace driving and operational instructions
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:
- Communicate effectively with others when driving a commercial light rigid vehicle
• Read and interpret instructions, procedures, information and signs relevant to the driving of a commercial light rigid vehicle
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the driving of a commercial light rigid vehicle
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when driving a commercial light rigid vehicle
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when driving a commercial light rigid vehicle
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a commercial light rigid vehicle
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor and anticipate traffic hazards and take appropriate action
• Carry out pre-operational checks on the vehicle in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes: • all light rigid vehicles including trucks and buses greater than 4.5 tonnes or seating more than 12 adults including the driver

Driving may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road
• while at a depot, base or warehouse
• while at a client's workplace or work site
Vehicle handling procedures may include:
- starting a vehicle
- steering and manouevring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory light rigid vehicle driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to light rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC2307B Operate train with due consideration of route conditions

Unit Descriptor
This unit involves the skills and knowledge required to operate a train with due consideration of route conditions in accordance with safeworking and regulatory requirements and workplace procedures. This includes identifying route requirements, applying route knowledge to the planning of a train journey, and using route knowledge during a train journey in accordance with workplace requirements and standards. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to operate a train with due consideration of route conditions as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify route requirements
1.1 Sources of information on critical aspects of a train route are accessed in accordance with workplace procedures
1.2 Information on critical aspects of a train route are interpreted and analysed for use when planning a train journey and operating a train during a journey

2 Apply route knowledge when planning a train journey
2.1 Route information is applied to the planning of a train journey in accordance with workplace procedures and safeworking codes of practice and regulations
2.2 Events and circumstances likely to affect planned running schedule are communicated to relevant personnel en route
2.3 Relevant codes of practice, safeworking and signalling requirements are applied when planning train operations
2.4 Instructions concerning planned train operation are communicated to relevant personnel to ensure safe and efficient on-time running
3 Use route knowledge during a train journey

3.1 Route information is evaluated and applied to the management of train operations during a train journey in accordance with workplace procedures and safeworking codes of practice and regulations

3.2 Hazardous situations along the train route are recognised and appropriate action is taken to minimise risk to personnel and equipment

3.3 Communications are maintained with traffic control and other relevant officers during the train journey in accordance with the relevant codes of practice and safeworking systems

3.4 Train control and other instructions are received, interpreted and applied to ensure safe and effective control of the train

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Route information including track/bridge limitations, speed limitations, gauge limitation, curves and gradients, curfews, location of signals and crossings, emergency cross-overs, weather conditions along the route, track work along the route, reports of accidents or breakdowns along the route, yard and siding layouts and typical problems that can occur along a train route
- Procedures for identifying and/or anticipating route problems and related action that can be taken
- Operational instructions
- Procedures to be followed in the event of an emergency
- Local procedures and operating requirements
- Safe operational procedures and techniques for optimising efficiency, minimising wear and tear on rolling stock and motive power units, using route knowledge and terrain for advantage and optimising the quality of ride for passengers
- Procedures for operating electronic communications equipment with required protocol
- Motive power unit controls, instruments and indicators and their purpose, location and use
- Driving procedures
- Braking and safety system procedures
- Procedures for operating controls to start, accelerate, decelerate and stop
- Procedures for complying with speed and load limits
- Procedures for adjusting controls to maximise efficient and safe running
- Procedures for managing hazardous situations
- Procedures for operating ancillary systems
• Motive power unit systems and equipment including monitoring devices, braking and drive equipment, ancillary systems and signalling systems

**Required skills:**

• Communicate effectively with others when operating a train with due consideration of route conditions including fixed and hand signals and the use of train communications equipment

• Read and interpret instructions, procedures, route information and signs relevant to the operation of a train with due consideration of route conditions

• Interpret and follow operational instructions and prioritise work

• Complete documentation related to the operation of a train with due consideration of route conditions

• Operate electronic communication equipment to required protocol

• Work collaboratively with others when operating a train with due consideration of route conditions

• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

• Promptly report and/or rectify any identified problems that may occur when operating a train with due consideration of route conditions in accordance with regulatory requirements and workplace procedures

• Implement contingency plans for unexpected events when operating a train with due consideration of route conditions

• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities

• Monitor work activities in terms of planned schedule

• Modify activities depending on differing operational contingencies, risk situations and environments

• Apply fatigue management knowledge and techniques

• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

• Operate and adapt to differences in equipment in accordance with standard operating procedures

• Apply route knowledge to train operations

• Monitor train performance and its security to facilitate optimum safe operation and quality of ride to passengers (where applicable)

• Service train and its equipment in terms of maintenance schedule and standard operating procedures

• Check and replenish fluids and carry out lubrication processes in the course of work activities

• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Trains may be operated: • over tracks owned and maintained by different organisations

Motive power units include any motive power units in service within Australian rail systems and may include:
• diesel locomotives
• electric locomotives
• railcars
• multiple units
• electric multiple units

Rolling stock includes: • any rolling stock in service within Australian rail systems

Operations may be conducted:
• by day or night
• in all relevant weather conditions

Critical route information may include but is not limited to:
• track/bridge limitations
• speed limitations
• gauge limitation
• curves and gradients
• curfews
• location of signals and crossings
• emergency cross-overs
• weather conditions along the route
• track work along the route
• reports of accidents or breakdowns along the route

Depending on context, train management considerations to which route information may be applied may include but are not limited to:
• safety of the train and passengers/freight
• comfort and quality of ride of passengers
• use of track terrain for the advantage of train operations
• optimisation of the efficiency of operations
• on-time running
• wear and tear on rolling stock and motive power units
• security of freight in the case of a freight train
• size and dimensions of a freight train and its load
Relevant personnel may include:

- train controllers
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel
- those providing operational assistance
- signals staff
- passengers
- station staff

Communication protocols may include but are not limited to:

- general safety
- emergency messages
- testing communications equipment
- transmitting and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures

Communications equipment may include but is not limited to:

- train intercom
- hand-held or portable radio equipment
- fixed radio equipment
- computer-based communications equipment
- specialised testing facilities

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- motive power unit log book
- train running sheets
- route information
- local instructions
- track speed, length and load limitations
- train notices, records and requests
- weather information and alerts
- specified operating limits and optimum efficiency running speeds for motive power units
- operational instructions, protocols, policies and procedures, including:
  - those related to preventing trains from moving
  - track speed, length and load limitations
  - monitoring and complying with signals
  - operating in accordance with track condition
- equipment operation manuals and maintenance specifications
- emergency procedure manuals
- two-way radio operation procedures
- procedures for using protective clothing and equipment
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- relevant Australian standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC2407B Operate urban passenger train

Unit Descriptor
This unit involves the skills and knowledge required to operate an urban passenger train in accordance with safeworking and regulatory requirements and workplace procedures. This includes driving an urban train efficiently and effectively; assisting passengers as required; carrying out pre- and post-operation checks and terminus inspections; responding effectively to abnormal situations, incidents and external operating factors; and stabling an urban train in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is generally performed without direct supervision. It involves the application of routine operational principles and procedures to operate urban trains as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Drive urban train efficiently and effectively

1.1 Train is operated in accordance with the relevant codes of practice, workplace procedures and instructions
1.2 Train is operated safely within track/road characteristics and route conditions
1.3 Train operations are controlled to minimise wear and fuel use and avoid damage
1.4 Train is operated with due care for passenger comfort and quality of ride
1.5 Train is safely operated to specified timetable and schedule in accordance with on-time running standards
1.6 Performance of equipment and rolling stock is monitored to maintain optimum running conditions and identify faults, defects and efficiencies
1.7 Relevant codes of practice, OH&S and environmental requirements are followed to prevent injury and damage
2 Assist passengers

2.1 Passenger needs when boarding the train are monitored and identified in accordance with workplace procedures and customer service standards

2.2 Passengers are given appropriate assistance in accordance with workplace procedures

2.3 Passengers with disabilities and/or difficulties are identified and given appropriate assistance when embarking/disembarking to/from the train

2.4 Where applicable, passengers are advised of station identification, emergency situations and other critical information, using the train communications system

2.5 Train control and other instructions are received, interpreted and applied to ensure safe and effective control of the train

2.6 Communications are maintained with traffic control and other relevant officers during the train journey in accordance with the workplace procedures, relevant codes of practice and safeworking systems

2.7 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient on-time running

3 Carry out train inspections

3.1 Pre- and post-operation checks and terminus inspections are carried out in accordance with workplace procedures

3.2 Train visual checks are made in accordance with workplace procedures

3.3 Problems and defects are identified and reported/rectified in accordance with workplace procedures, other regulatory requirements and manufacturers instructions

3.4 Cleanliness and tidiness of train are checked, if required, and appropriate action is taken to maintain quality standards in accordance with workplace procedures

3.5 Incidents or unusual occurrences are recorded and reported to relevant personnel in accordance with established policies and procedures

4 Respond effectively to abnormal situations and external operating factors

4.1 Abnormal operating situations are identified and appropriate action is taken to report and/or respond to the situations in accordance with workplace procedures and regulatory requirements

4.2 Hazardous situations are recognised and appropriate action is taken to minimise risk to personnel and equipment in accordance with workplace procedures and OH&S and regulatory requirements

4.3 Safety and other incidents are identified and dealt with in accordance with workplace procedures and OH&S and regulatory requirements

4.4 Appropriate communications are maintained with relevant
personnel during safety and other incidents in accordance with workplace procedures and OH&S and regulatory requirements

4.5 Instructions are verified, when required, interpreted and followed, in accordance with relevant codes of practice, safeworking systems and requirements and workplace policies and procedures, to ensure that actions taken are appropriate and safe

4.6 Fixed and hand signals and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and workplace policies and procedures, to ensure that actions taken are appropriate and safe

4.7 Reports on safety and other incidents are completed and referred to appropriate personnel in accordance with workplace procedures and regulatory requirements

5 Stable urban train

5.1 Urban train is stabled in accordance with workplace instructions and procedures

5.2 Post-operational checks of the train are conducted in accordance with workplace procedures

5.3 If required, problems and defects are identified and reported/rectified in accordance with workplace procedures, regulatory requirements and manufacturers instructions

5.4 Safety devices are activated or put in position to ensure the safety of personnel and equipment

5.5 Required documentation on train operations is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Operational instructions including start-up and shut-down procedures
- Urban train operating procedures including driving procedures, braking and safety system procedures, operating controls to start, accelerate, decelerate and stop, complying with speed and load limits, adjusting controls to maximise efficient and safe running, managing hazardous situations and ancillary system procedures
- Procedures for operating electronic communications equipment with required protocol
- Procedures for pre-and post-operational checks
- Procedures for carrying out terminus checks
- Procedures for fuelling (where relevant) and lubrication of motive power units
- Procedures to be followed in the event of an emergency
• Train controls, instruments and indicators and their purpose, location and use
• Safe operational procedures and techniques for optimising efficiency, minimising wear and tear on rolling stock and motive power units, using route knowledge and terrain for advantage and optimising the quality of ride for passengers
• Route information including track/bridge limitations, speed limitations, gauge limitation, curves and gradients, location of signals and crossings, emergency cross-overs, track work along the route, reports of accidents or breakdowns along the route, typical problems that can occur along an urban train route and procedures for identifying and/or anticipating route problems and related action that can be taken
• Urban train operating equipment and systems including monitoring devices, braking and drive equipment, ancillary systems and signalling systems
• Customer services policies, standards and procedures

Required skills:
• Communicate effectively with others when operating an urban passenger train including the use of train communications equipment
• Read and interpret instructions, procedures, information and signs relevant to work activities
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to urban passenger train operations
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when operating an urban passenger train
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when operating an urban passenger train in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when operating an urban passenger train
• Respond appropriately to abnormal situations, safety incidents and emergencies
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor and anticipate operational hazards and take appropriate action
• Modify activities to cater for variations in workplace contexts, route conditions and environment
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor train performance to facilitate optimum safe operation and quality of ride to passengers (where applicable)
• Carry out required pre-operational, terminus and post-operational checks of train
• Apply route information to train operations
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Trains may be: • any urban train operated in the Australian rail system
Operations may be conducted: • by day or night in all relevant weather conditions
Safety devices may include: • power brakes
• hand brakes
• chocks
• lock-out equipment to prevent train from moving
• emergency and safety equipment such as vigilance control and deadman relays
Track/road characteristics include: • track/bridge limitations
• speed limitations
• gauge limitation
• curves and gradients
• curfews
• location of signals and crossings
• emergency cross-overs
Abnormal situations may include but are not limited to: • technology failure
• illness
• signals in stop mode
• assault
• brawls
• false alarm
• passenger initiated alarm
• track obstructions
• passenger caught in self-closing doors
• pedestrians crossing the track
• suicide on the track
• level crossing accidents
• incorrect information or failure in communications
• overhead wiring failure
Relevant personnel can include:
- train controllers
- train examiners
- maintenance personnel
- those providing operational assistance
- signals staff
- passengers
- station staff

Communication protocols may include but are not limited to:
- general safety
- emergency messages
- testing communications equipment
- sending and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures

Communications equipment may include but is not limited to:
- train intercom
- hand-held or portable radio equipment
- fixed radio equipment
- computer-based communications equipment
- specialised testing facilities

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, protocols, policies and procedures, including:
  - train operation procedures
  - pre- and post-operation and terminus inspection procedures
  - procedures to prevent trains from moving unintentionally or against safeworking rules
  - track speed, length and limitations
  - procedures for monitoring and complying with signals
  - procedures for operating in accordance with track/route conditions
- train log or record book
- train running sheets
- procedures/instructions for dealing with emergencies or abnormal situations
- quality and customer service standards, policies and procedures
- maintenance notices, records and requests
- specified operating limits for trains
- local instructions
- communication equipment procedures
- equipment operation manuals and maintenance specifications
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- relevant Australian standards and related requirements including AS 4292 Part 1
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
demonstrate competency in this unit

requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC2507B Operate four wheel drive vehicle

Unit Descriptor
This unit involves the skills and knowledge required to operate a four wheel drive vehicle safely in a range of conditions. These include driving a four wheel drive vehicle on normal roads, traversing slopes, ascending and descending steep slopes and stall recovery. It also includes operation of the vehicle in rugged terrain, the use of a jack and the completion of all pre- and post-operational checks. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory road traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of four wheel drive vehicle operating principles and procedures to maintain the safety and operation of a commercial four wheel drive vehicle across a variety of on-road and off-road contexts.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Operate four wheel drive vehicles on normal roads
1.1 Pre-start checks of vehicle and equipment are carried out to manufacturers specifications and roadworthy requirements
1.2 Tyres are checked for pressure suitable for terrain and/or changed in accordance with workplace procedures
1.3 Loads are secured in accordance with workplace and legislative requirements
1.4 Vehicle is driven on and off road to legislative and workplace requirements, at appropriate speeds for conditions and hazards
1.5 Vehicle is parked and shut down in accordance with workplace and manufacturers requirements

2 Operate vehicle on, or across, a slope
2.1 Pre-start checks of vehicle and equipment are carried out to manufacturers specifications and roadworthy requirements
2.2 Tyres are checked for pressure suitable for terrain and/or
changed to operational guidelines
2.3 Loads are secured in accordance with workplace and legislative requirements
2.4 Vehicle is driven on and off road to regulatory and workplace requirements at appropriate speeds for conditions and hazards

3 Operate vehicle ascending a steep slope including stall recovery
3.1 Intended vehicle path is inspected prior to negotiation of slope
3.2 Appropriate gear is selected to ascend grade, and engine revolutions maintained to ensure constant traction
3.3 Air-conditioning unit is turned off to avoid engine acceleration
3.4 Foot brake is applied as vehicle stalls, handbrake applied and ignition turned off
3.5 Clutch is depressed and reverse gear selected
3.6 Clutch is released and handbrake is slowly released
3.7 Ignition is turned on and brakes are released
3.8 Vehicle is started and allowed to reverse down the slope
3.9 Brakes are applied as necessary to control descent

4 Operate vehicle descending a steep slope including stall recovery
4.1 Intended vehicle path is inspected prior to negotiation of the slope
4.2 Appropriate gear is selected to ascend grade, and engine revolutions maintained to ensure constant traction
4.3 Air-conditioning unit is turned off to avoid engine acceleration
4.4 Braking is used to control decent and skidding is avoided by the application of brakes to emulate ABS
4.5 Ignition is turned off, foot brake is applied, and handbrake engaged
4.6 Clutch is depressed and low gear is selected
4.7 Clutch is released and handbrake is slowly released
4.8 Ignition is turned on and brakes are released
4.9 Vehicle is started and allowed to continue down the slope
4.10 Brakes are applied as necessary to control descent and skids are steered into

5 Operate vehicle in rugged terrain
5.1 Intended vehicle path is inspected prior to negotiation of rugged terrain
5.2 Correct gear/range is selected to negotiate terrain
5.3 Freewheel hubs are engaged and disengaged in accordance with driving conditions
5.4 Vehicle controls are set in accordance with manufacturers instructions for operation in the surrounding terrain
5.5 Traction is maintained in accordance with requirements of the vehicle and the surrounding terrain
5.6 Selection of appropriate gear/range before negotiating terrain is demonstrated
5.7 Where necessary, chains are fitted to vehicle in accordance with manufacturers instructions
5.8 Vehicle load is inspected, positioned and secured to maximise traction for four wheel driving.
5.9 Terrain is negotiated in accordance with requirements for specific driving conditions

6 Operate jack
6.1 Jack is located under vehicle in accordance with vehicle manufacturers specifications and workplace procedures
6.2 Jack is used and operated in accordance with manufacturers specifications and workplace procedures

7 Complete operations
7.1 Vehicle is parked and shut down to workplace and manufacturers requirements
7.2 Faults or malfunctions are corrected and/or reported in accordance with workplace requirements
7.3 Vehicle and equipment are cleaned and stored after use in accordance with workplace requirements
7.4 Any log books or reports required by the workplace are completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the operation of four wheel drive vehicle in both on-road and off-road situations
- Problems that may occur when operating a four wheel drive vehicle, and action that can be taken to report or resolve the problems
- Hazards that may exist when operating a four wheel drive vehicle in both on-road and off-road situations, and ways of controlling the risks involved
- Vehicle controls, instruments and indicators and their use
- Vehicle handling procedures and techniques for a range of conditions, including rock, mud, sand, ice and snow
- Procedures to be followed in the event of a driving emergency
- Efficient driving techniques and safe driving strategies
- The effect on the centre of gravity of changing fluid loads
- Hazards and risks associated with traversing cross slopes
- Effects of hard surface driving (e.g. Highway wind up) on the 4x4 system
• The appropriate use of diff locks
• Pre-and post-operational checks and related action
• Documentation and record keeping requirements

**Required skills:**
• Communicate effectively with others when operating a four wheel drive vehicle
• Read and interpret instructions, procedures, information and signs relevant to the operation of a four wheel drive vehicle
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when operating a four wheel drive vehicle
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating a four wheel drive vehicle in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected situations that may arise when operating a four wheel drive vehicle
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of four wheel drive vehicle and its equipment and take appropriate action if required
• Conduct pre-start checks
• Monitor and anticipate traffic hazards and take appropriate action drive vehicles in a range of conditions
• Demonstrate emergency procedures in the operation of vehicles
• Identify and correct minor operational faults
• Clean and store vehicles and equipment
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Vehicles include:
- all terrain vehicles
- cars and utilities
- a range of trailers
- light trucks

Operations may be carried out in typical four wheel drive situations, including:
- operations may be conducted day or night
- typical weather conditions
- on the open road
- in rugged terrain off-road conditions that can be smooth, rough, uneven, slippery, boggy, sandy, steep or hilly
- on a steep slope
- during emergency response
- while at a client's workplace or worksite

Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Considerations when driving may include:
- operational characteristics of the type of four wheel drive vehicle
- workplace procedures
- traffic conditions
- levels of emergency response
- adverse weather
- traffic regulations
- warning devices
- adverse terrain
Traffic conditions to be taken into account when driving may include:

- speed limits for operation
- legal parking
- traffic pattern and density
- known peak periods and special community functions
- effects of weather on roads
- road surface/off-road terrain
- visibility

Operational hazards may include (examples only):

- steep slopes and rugged terrain
- wet and iced road/terrain
- flooded road/terrain
- oil on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- animals and objects on road
- windy or foggy sections of road/terrain

Workplace guidelines/procedures may include:

- pre- and post-operation checks
- standards of operation
- storage and usage of fuels and lubricants
- policies and routines relating to wear and damage
- precautions and safeguards
- emergency response driving
- driving in adverse terrain
- driving in special environments
- reporting routines
Pre-start checks may include:
- fuel, water, oil
- brake and transmission fluid levels
- battery water levels and electrolyte checks
- tyres
- belts
- leads
- hydraulic lines and connections
- air cleaners
- air-conditioners
- brakes
- off-road safety equipment in line with manufacturers recommendations

Manufacturers specifications may include:
- engine characteristics
- systems warning function
- four wheel drive operation
- radius of turning circle
- safety procedures

Installed devices may include:
- warning lights
- tachometer
- temperature gauge
- electrical charging
- ancillary systems indicator
- speedometer
- oil pressure
- brake warning lights
- audible warning devices
- hose

Minor routine servicing may include:
- the replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory driving license requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and license requirements pertaining to the class of four wheel drive vehicle
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant
operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC2607A Operate and monitor a motive power unit

Unit Descriptor
This unit involves the skills and knowledge required to operate and monitor a motive power unit in accordance with relevant workplace practices, rail regulations and codes of practice. It includes operating the controls of the motive power unit, and monitoring its performance and maintaining its operational condition during a journey. It also includes working collaboratively with other train crew and relevant personnel. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to maintain the safety and operation of a motive power unit across a variety of operational contexts in the Australian rail system.

Competency Field
C – Driving Vehicle

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Operate motive power unit
1.1 Motive power unit handling techniques and track and road knowledge are interpreted and applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load
1.2 Acceleration and braking techniques are applied safely within track and road and weather conditions
1.3 Movement of motive power unit between sections ensures that all rolling stock is positioned safely in accordance with relevant codes of practice, safeworking systems, and related requirements

2 Operate and monitor on-board equipment
2.1 Motive power unit equipment is monitored and operated to maintain optimum running conditions and identify faults, defects and deficiencies
2.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of motive power unit, including communications with operations controller where necessary
2.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel

<table>
<thead>
<tr>
<th>3 Respond effectively to external operating factors</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.1 Instructions are verified, when required, interpreted and followed, in accordance with relevant codes of practice, rail regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe</td>
</tr>
<tr>
<td>3.2 Fixed and hand signals and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure that actions taken are appropriate and safe</td>
</tr>
<tr>
<td>3.3 Hazardous situations are recognised and interpreted and appropriate initiatives and action are taken to minimise risk to personnel and equipment as per workplace procedures and applicable regulatory requirements</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>4 Work collaboratively with other train crew and relevant personnel</th>

<td>5.1 Regular communication is maintained with train crew, train controllers, drivers of other trains and other relevant personnel in the course of operation of the motive power unit as per workplace procedures and regulatory requirements</td>
</tr>
<tr>
<td>5.2 Train crew, train controllers, drivers of other trains and other relevant personnel are advised of operational problems, delays, and safety incident and emergency situations that may arise in the course of operation of the motive power unit</td>
</tr>
<tr>
<td>5.3 Information provided by train crew, train controllers, drivers of other trains and other relevant personnel relevant to the ongoing operation of the motive power unit is interpreted and applied to driving activities as per workplace procedures and applicable regulatory requirements</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>6 Follow all applicable rail regulatory requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.1 Rail regulatory requirements applicable to the operation of the motive power unit and the train and track or road concerned are accessed, understood and interpreted</td>
</tr>
</tbody>
</table>
6.2 Relevant rail regulatory requirements are applied and followed in the course of operation of the motive power unit
6.3 Principles of rail resource management are applied in all rail operations involving the motive power unit as per workplace procedures and applicable rail regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Motive power unit controls, instruments and indicators and their purpose, location and use
- Procedures for operating and monitoring the motive power unit
- Motive power unit knowledge including: monitoring devices, braking and drive equipment, ancillary systems, and signalling systems
- Track and road knowledge including: track/bridge limitations, speed limitations, gauge limitations, curves and gradients, curfews, location of signals and crossings, emergency crossovers, and operation of a turntable
- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop the motive power unit
- Speed and load limits for the motive power unit
- Procedures for adjusting controls to maximise efficient and safe running
- Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a motive power unit
- Procedures for operating and monitoring ancillary equipment on the motive power unit
- Procedures for checking the battery and fluid levels and lubricating a diesel motive power unit (where applicable)
- Procedures for checking the battery and fluid levels and lubricating an electric motive power unit (where applicable)
- Procedures for identifying equipment defects and assessing them for appropriate action
- Procedures for minor maintenance, cleaning, lubricating and servicing of a motive power unit
- Typical faults that can occur on a motive power unit and related action that should be taken for repair, isolation, replacement, reporting and recording of the faulty equipment
- Procedures for raising and lowering the pantograph on an electric motive power unit (where applicable)
- Requirements for completing relevant documentation during and after operation and monitoring of a motive power unit
- Train schedules, motive power unit allocation and operational instructions
- Requirements for communicating and working collaboratively with other members of the train crew, train controllers and other relevant personnel
- Procedures to be followed in the event of an emergency when operating a motive power unit
• Personal protective equipment required when operating a motive power unit and procedures for its use
• Local procedures and operating requirements
• Procedures for operating electronic communications equipment with required protocol

**Required skills:**
• Communicate effectively with others when operating and monitoring a motive power unit
• Read and interpret instructions, procedures, information and signs relevant to the operation and monitoring of a motive power unit
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the operation and monitoring of a motive power unit
• Operate electronic communication equipment to required protocol
• Work collaboratively with others as part of a train crew
• Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and monitoring a motive power unit
• Recognise problems that may arise when operating and monitoring a motive power unit and take appropriate action
• Check and replenish fuel and fluids and carry out lubrication processes on a motive power unit
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in motive power units and associated equipment and procedures
• Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
• Operate a motive power unit
• Monitor the performance of a motive power unit

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night in all relevant weather conditions

Motive power units may include:
• diesel MPUs
• electric MPUs
• railcars
Motive power equipment may include:
- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Risk minimisation may require differentiating between faults, defects and deficiencies that:
- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:
- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- electric train service supervisor
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:
- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement
Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- motive power unit operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- roadworthy certificate
- train wire (MPU status list, dangerous goods list, consist information, etc.)
- automatic train protection parameters
- operational instructions, policies and procedures, including: those related to preventing motive power units from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- documented details of the train including length and weight
- emergency procedures manual
Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC2707A Stable a motive power unit

Unit Descriptor
This unit involves the skills and knowledge required to stable a motive power unit in accordance with relevant workplace practices, rail regulations and codes of practice. It includes determining the required stabling location, shunting and securing the train, stabling and securing the motive power unit, carrying out all required post-operational checks and completing post-operational paperwork. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of railway systems.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the stabling and securing of a motive power unit across a variety of operational contexts in the Australian rail system.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine stabling location
1.1 Contact is made with train controller and yard staff to determine planned location for stabling the motive power unit
1.2 Directions of train traffic controller and yard staff are interpreted and followed
1.3 Care is taken to keep clear of other roads

2 Stable motive power unit
2.1 Train is shunted and secured in accordance with directions, workplace procedures and rail regulations
2.2 Motive power unit is stabled as directed
2.3 Derailleurs are set in place as per workplace procedures and rail regulations
2.4 Handbrakes are applied
2.5 Power brakes are applied
2.6 Motive power unit is shut down as per manufacturers
instructions and workplace procedures
2.7 Cab is secured as per workplace procedures

3 Carry out post-operational checks
3.1 Fuel and fluid levels are checked and any required action is taken to replenish them
3.2 Inspection is made of motive power unit as per workplace procedures
3.3 Any identified faults and defects are fixed or reported and recorded as per workplace procedures
3.4 Faulty and defective equipment that presents a safety risk is isolated and tagged as per workplace procedures and rail regulations
3.5 Outcomes of post-operational checks are recorded as per workplace procedures

4 Complete post-operational paperwork
4.1 All required safeworking documentation is completed as per workplace procedures and rail regulations
4.2 All equipment is returned and stowed as per workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Motive power unit controls, instruments and indicators and their purpose, location and use
- Procedures for stabling a motive power unit
- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop a motive power unit
- Speed and load limits compliance requirements
- Procedures for managing hazardous situations when operating and stabling a motive power unit
- Procedures for operating and shutting down auxiliary systems
- Procedure for completing relevant documentation when stabling a motive power unit
- Procedures to be followed in the event of an emergency
- Procedures for minor maintenance, cleaning, lubricating and servicing of motive power unit
- Procedures for identifying equipment defects and assessing for appropriate action
- Motive power unit knowledge may include: monitoring devices; braking and power equipment; ancillary systems; and signalling systems
- Local procedures and operating requirements
- Typical defects that can occur on a motive power unit and related action that should be taken
• Procedures for operating electronic communications equipment with required protocol

**Required skills:**
• Communicate effectively with others when stabling a motive power unit
• Read and interpret instructions, procedures and information relevant to the inspection, preparation, start up and positioning of a motive power unit
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the stabling of a motive power unit
• Operate electronic communications equipment to required protocol
• Work collaboratively with others as part of a train crew
• Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when stabling a motive power unit
• Recognise problems that may arise when stabling a motive power unit and take appropriate action
• Check and replenish fuel and fluids and carry out lubrication requirements on a motive power unit
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in motive power units and associated equipment and procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Conduct a visual inspection of a motive power unit
• Document outcomes of an inspection of a motive power unit
• Shut down a motive power unit after service

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night in all relevant weather conditions

Motive power units may include all motive power units in service within Australian rail systems and may include:
• diesel locomotives
• electric locomotives
• railcars
• multiple units (including electric multiple units)
Motive power equipment may include:

- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Inspection of a motive power unit may include:

- lights
- hoses
- couplings
- destination boards (electric urban train services)
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand and fuel (regional diesel train services)
- pantographs (in case of electric MPUs)
- electrical cables
- glass windows and doors
- compressor oil levels
- automatic power cut out sensors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)

Post operation checks may include:

- lubrication system
- checking for fluid leaks
- brake testing
- checking of fluid levels
Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- electric train service supervisor
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- motive power unit operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- safe working documentation
- automatic train protection parameters
- operational instructions, policies and procedures, including: those related to preventing motive power units from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- emergency procedures manual

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC2807A Operate and monitor a heritage motive power unit

Unit Descriptor
This unit involves the skills and knowledge required to operate and monitor a heritage motive power unit in accordance with relevant workplace practices, rail regulations and codes of practice. It includes operating the controls of the motive power unit; and monitoring its performance and maintaining its operational condition during a journey. It also includes working collaboratively with other train crew and relevant personnel.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of heritage railway systems.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to maintain the safety and operation of a motive power unit across a variety of operational contexts in the Australian heritage rail system.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Operate motive power unit
1.1 Motive power unit handling techniques and track and road knowledge are interpreted and applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load
1.2 Acceleration and braking techniques are applied safely within track and road and weather conditions
1.3 Movement of motive power unit between sections ensures that all rolling stock is positioned safely in accordance with relevant codes of practice, safeworking systems, and related requirements

2 Operate and monitor on-board equipment
2.1 Motive power unit equipment is monitored and operated to maintain optimum running conditions and identify faults, defects and deficiencies
2.2 Appropriate action is taken in response to identified faults,
defects and deficiencies to ensure safe operation of motive power unit, including communications with operations controller where necessary

2.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel

### 3 Respond effectively to external operating factors

3.1 Instructions are verified, when required, interpreted and followed, in accordance with relevant codes of practice, rail regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe

3.2 Fixed and hand signals and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure that actions taken are appropriate and safe

3.3 Hazardous situations are recognised and interpreted and appropriate initiatives and action are taken to minimise risk to personnel and equipment as per workplace procedures and applicable regulatory requirements

### 4 Work collaboratively with other train crew and relevant personnel

4.1 Safe operation and monitoring of the motive power unit is maintained in collaboration with other members of the train crew, train controllers and other relevant personnel as per workplace requirements and the principles of rail resource management

4.2 Any potential or actual conflicts or grievances with other members of the train crew, train controllers and other relevant personnel during the operation of the motive power unit are recognised and resolved in accordance with workplace procedures and the principles of rail resource management

### 5 Communicate with train crew, train controllers and other personnel

5.1 Regular communication is maintained with train crew, train controllers, drivers of other trains and other relevant personnel in the course of operation of the motive power unit as per workplace procedures and regulatory requirements

5.2 Train crew, train controllers, drivers of other trains and other relevant personnel are advised of operational problems, delays, safety incident and emergency situations that may arise in the course of operation of the motive power unit

5.3 Information provided by train crew, train controllers, drivers of other trains and other relevant personnel relevant to the ongoing operation of the motive power unit is interpreted and applied to driving activities as per workplace procedures and applicable regulatory requirements

### 6 Follow all applicable

6.1 Rail regulatory requirements applicable to the operation of the
rail regulatory requirements

motive power unit and the train and track or road concerned are accessed, understood and interpreted

6.2 Relevant rail regulatory requirement are applied and followed in the course of operation of the motive power unit

6.3 Principles of rail resource management are applied in all rail operations involving the motive power unit as per workplace procedures and applicable rail regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations

• Relevant OH&S and environmental procedures and regulations

• Motive power unit controls, instruments and indicators and their purpose, location and use

• Procedures for operating and monitoring the motive power unit

• Motive power unit knowledge including: monitoring devices, braking and drive equipment, ancillary systems, and signalling systems

• Track and road knowledge including: track/bridge limitations, speed limitations, gauge limitations, curves and gradients, curfews, location of signals and crossings, emergency crossovers, and operation of a turntable

• Braking and safety system procedures

• Operating controls to start, accelerate, decelerate and stop the motive power unit

• Speed and load limits for the motive power unit

• Procedures for adjusting controls to maximise efficient and safe running

• Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a motive power unit

• Procedures for operating and monitoring ancillary equipment on the motive power unit

• Procedures for checking the battery and fluid levels and lubricating a diesel motive power unit (where applicable)

• Procedures for checking the battery and fluid levels and lubricating on an electric motive power unit (where applicable)

• Procedures for identifying equipment defects and assessing them for appropriate action

• Procedures for minor maintenance, cleaning, lubricating and servicing of a motive power unit

• Typical faults that can occur on a motive power unit and related action that should be taken for repair, isolation, replacement, reporting and recording of the faulty equipment

• Procedures for raising and lowering the pantograph on an electric motive power unit (where applicable)

• Requirements for completing relevant documentation during and after operation and monitoring of a motive power unit

• Train schedules, motive power unit allocation and operational instructions
- Requirements for communicating and working collaboratively with other members of the train crew, train controllers and other relevant personnel
- Procedures to be followed in the event of an emergency when operating a motive power unit
- Personal protective equipment required when operating a motive power unit and procedures for its use
- Local procedures and operating requirements
- Procedures for operating electronic communications equipment with required protocol

**Required skills:**
- Communicate effectively with others in the course of operating and monitoring a motive power unit
- Read and interpret instructions, procedures, information and signs relevant to the operation and monitoring of a motive power unit
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation and monitoring of a motive power unit
- Operate electronic communication equipment to required protocol
- Work collaboratively with others as part of a train crew
- Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and monitoring a motive power unit
- Recognise problems that may arise when operating and monitoring a motive power unit and take appropriate action
- Check and replenish fuel and fluids and carry out lubrication processes on a motive power unit
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in motive power units and associated equipment and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Operate a motive power unit
- Monitor the performance of a motive power unit

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night in all relevant weather conditions
Heritage motive power units may include all heritage motive power units in service within Australian rail systems and may include:

- diesel MPUs
- electric MPUs
- railcars

Motive power equipment may include:

- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- electric train service supervisor
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers
Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection
Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- motive power unit operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- roadworthy certificate
- train wire (MPU status list, dangerous goods list, consist information, etc.)
- automatic train protection parameters
- operational instructions, policies and procedures, including: those related to preventing motive power units from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- documented details of the train including length and weight
- emergency procedures manual

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific**

- Performance is demonstrated consistently over a period
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC2907A  Stable a heritage motive power unit

Unit Descriptor
This unit involves the skills and knowledge required to stable a motive power unit in accordance with relevant workplace practices, rail regulations and codes of practice. It includes determining the required stabling location, shunting and securing the train, stabling and securing the motive power unit, carrying out all required post-operational checks and completing post-operational paperwork. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of heritage railway systems.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the stabling and securing of a motive power unit across a variety of operational contexts in the Australian heritage rail system.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine stabling location
1.1 Contact is made with train controller and yard staff to determine planned location for stabling the motive power unit
1.2 Directions of train controller and yard staff are interpreted and followed
1.3 Care is taken to keep clear of other roads

2 Stable motive power unit
2.1 Train is shunted and secured in accordance with directions, workplace procedures and rail regulations
2.2 Motive power unit is stabled as directed
2.3 Derailers are set in place as per workplace procedures and rail regulations
2.4 Handbrakes are applied
2.5 Power brakes are applied
2.6 Motive power unit is shut down as per manufacturers
instructions and workplace procedures
2.7 Cab is secured as per workplace procedures

3 Carry out post-operational checks

3.1 Fuel and fluid levels are checked and any required action is taken to replenish them
3.2 Inspection is made of motive power unit as per workplace procedures
3.3 Any identified faults and defects are fixed or reported and recorded as per workplace procedures
3.4 Faulty and defective equipment that presents a safety risk is isolated and tagged as per workplace procedures and rail regulations
3.5 Outcomes of post-operational checks are recorded as per workplace procedures

4 Complete post-operational paperwork

4.1 All required safeworking documentation is completed as per workplace procedures and rail regulations
4.2 All equipment is returned and stowed as per workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations
• Relevant OH&S and environmental procedures and regulations
• Motive power unit controls, instruments and indicators and their purpose, location and use
• Procedures for stabling a motive power unit
• Braking and safety system procedures
• Operating controls to start, accelerate, decelerate and stop a motive power unit
• Speed and load limits compliance requirements
• Procedures for managing hazardous situations when operating and stabling a motive power unit
• Procedures for operating and shutting down auxiliary systems
• Procedure for completing relevant documentation when stabling a motive power unit
• Procedures to be followed in the event of an emergency
• Procedures for minor maintenance, cleaning, lubricating and servicing of motive power unit
• Procedures for identifying equipment defects and assessing for appropriate action
• Motive power unit knowledge may include: monitoring devices; braking and power equipment; ancillary systems; and signalling systems
• Local procedures and operating requirements
• Typical defects that can occur on a motive power unit and related action that should be taken
• Procedures for operating electronic communications equipment with required protocol

**Required skills:**
• Communicate effectively with others when stabling a heritage motive power unit
• Read and interpret instructions, procedures and information relevant to the inspection, preparation, start up and positioning of a motive power unit
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the stabling of a motive power unit
• Operate electronic communications equipment to required protocol
• Work collaboratively with others as part of a train crew
• Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when stabling a motive power unit
• Recognise problems that may arise when stabling a motive power unit and take appropriate action
• Check and replenish fuel and fluids and carry out lubrication requirements on a motive power unit
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in motive power units and associated equipment and procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Conduct a visual inspection of a motive power unit
• Document outcomes of an inspection of a motive power unit
• Shut down a motive power unit after service

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night in all relevant weather conditions

Heritage motive power units may include all heritage motive power units in service within Australian rail systems and may include:
• diesel locomotives
• electric locomotives
• railcars
• multiple units (including electric multiple units)
Motive power equipment may include:

- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Inspection of a heritage motive power unit may include:

- lights
- hoses
- couplings
- destination boards (electric urban train services)
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand and fuel (regional diesel train services)
- pantographs (in case of electric MPUs)
- electrical cables
- glass windows and doors
- compressor oil levels
- automatic power cut out sensors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)

Post operation checks may include:

- lubrication system
- checking for fluid leaks
- brake testing
- checking of fluid levels
Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- electric train service supervisor
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- motive power unit operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- safe working documentation
- automatic train protection parameters
- operational instructions, policies and procedures, including: those related to preventing motive power units from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- emergency procedures manual

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC3007A Operate and monitor a heritage steam locomotive

Unit Descriptor
This unit involves the skills and knowledge required to operate and monitor a heritage steam locomotive in accordance with relevant workplace practices, rail regulations and codes of practice. It includes operating the controls of a steam locomotive; and monitoring its performance and maintaining its operational condition during a journey. It also includes working collaboratively with other train crew and relevant personnel. This unit replaces part of the previous unit TDTC1401A Prepare, operate, monitor and stable steam locomotive. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of heritage railway systems.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to maintain the safety and operation of a steam locomotive across a variety of operational contexts in the Australian heritage rail system.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Operate steam locomotive

1.1 Steam locomotive handling techniques and track and road knowledge are interpreted and applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load

1.2 Acceleration and braking techniques are applied safely within track and road and weather conditions

1.3 Movement of steam locomotive between sections ensures that all rolling stock is positioned safely in accordance with relevant codes of practice, safeworking systems, and related requirements

2 Operate and monitor on-board equipment

2.1 Steam locomotive equipment is monitored and operated to maintain optimum running conditions and identify faults,
defects and deficiencies

2.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of steam locomotive, including communications with operations controller where necessary.

2.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel

3 Respond effectively to external operating factors

3.1 Instructions are verified, when required, interpreted and followed, in accordance with relevant codes of practice, rail regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe

3.2 Fixed and hand signals and verbal movement commands are interpreted and followed, in accordance with relevant rail regulations and codes of practice and workplace policies and procedures, to ensure that actions taken are appropriate and safe

3.3 Hazardous situations are recognised and interpreted and appropriate initiatives and action are taken to minimise risk to personnel and equipment as per workplace procedures and applicable regulatory requirements

4 Work collaboratively with other train crew and relevant personnel

4.1 Safe operation and monitoring of the steam locomotive is maintained in collaboration with other members of the train crew, train controllers and other relevant personnel as per workplace requirements and the principles of rail resource management

4.2 Any potential or actual conflicts or grievances with other members of the train crew, train controllers and other relevant personnel during the operation of the steam locomotive are recognised and resolved in accordance with workplace procedures and the principles of rail resource management

5 Communicate with train crew, train controllers and other personnel

5.1 Regular communication is maintained with train crew, train controllers, drivers of other trains and other relevant personnel in the course of operation of the steam locomotive as per workplace procedures and regulatory requirements

5.2 Train crew, train controllers, drivers of other trains and other relevant personnel are advised of operational problems, delays, safety incidents and emergency situations that may arise in the course of operation of the heritage steam locomotive

5.3 Information provided by train crew, train controllers, drivers of other trains and other relevant personnel relevant to the ongoing operation of the steam locomotive is interpreted and applied to driving activities as per workplace procedures and
applicable regulatory requirements

6 Follow all applicable rail regulatory requirements

6.1 Rail regulatory requirements applicable to the operation of the steam locomotive and the train and track or road concerned are accessed, understood and interpreted

6.2 Relevant rail regulatory requirement are applied and followed in the course of operation of the steam locomotive

6.3 Principles of rail resource management are applied in all rail operations involving the steam locomotive as per workplace procedures and applicable rail regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations
- Principles of rail resource management as they apply to the operation and monitoring of the performance of a steam locomotive
- Relevant OH&S and environmental procedures and regulations
- Steam locomotive controls, instruments and indicators and their purpose, location and use
- Procedures for operating and monitoring the steam locomotive
- Steam locomotive knowledge including: basic principles of steam engine operation, monitoring devices, braking equipment, ancillary systems, and signalling systems
- Track and road knowledge including: track and bridge limitations, speed limitations, gauge limitations, curves and gradients, curfews, location of signals and crossings, emergency crossovers, and operation of a turntable
- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop a steam locomotive
- Speed and load limits for the steam locomotive
- Procedures for adjusting controls to maximise efficient and safe running
- Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring the performance of a steam locomotive
- Procedures for operating and monitoring the performance of ancillary equipment on the steam locomotive
- Procedures for identifying equipment defects and assessing them for appropriate action
- Procedures for minor maintenance, cleaning, lubricating and servicing of a steam locomotive
- Typical faults that can occur on a steam locomotive and related action that should be taken for repair, isolation, replacement, reporting and recording of the faulty equipment
- Requirements for completing relevant documentation during and after operation and monitoring of the performance of a steam locomotive
- Train schedules, steam locomotive allocation and operational instructions
• Requirements for communicating and working collaboratively with other members of the train crew, train controllers and other relevant personnel
• Procedures to be followed in the event of an emergency when operating a steam locomotive
• Personal protective equipment required when operating a steam locomotive and procedures for its use
• Local procedures and operating requirements
• Procedures for operating communications equipment with required protocol

**Required skills:**
• Communicate effectively with others in the course of operating and monitoring the performance of a steam locomotive
• Read and interpret instructions, procedures, information and signs relevant to the operation and monitoring of a steam locomotive
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the operation and monitoring the performance of a steam locomotive
• Operate electronic communication equipment to required protocol
• Work collaboratively with others as part of a train crew
• Identify and assess steam locomotive defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and monitoring a steam locomotive
• Recognise problems that may arise when operating and monitoring a steam locomotive and take appropriate action
• Check and replenish fluids and carry out lubrication processes on a steam locomotive
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in steam locomotives and associated equipment and procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Operate a steam locomotive
• Monitor the performance of a steam locomotive

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night in all relevant weather conditions

Heritage steam locomotives may include:
• any heritage steam locomotives in service within Australia
Equipment on a steam locomotive may include:

- steam locomotive instrumentation (gauges)
- feed water controls
- boiler controls and safety devices
- braking systems
- driving and other operational controls
- communication systems
- warning equipment
- ancillary systems
- vigilance systems
- traction systems
- head and marker lights

Communications equipment may include:

- portable and fixed two way radio
- mobile phone

Auxiliary equipment may include:

- steam regulator
- cab sprinkler
- gauges
- generator
- sandboxes
- whistle
- steam turbine generator
- all ancillary valves
- hand brake
- injectors
- lubricators
- gauge glasses
- blower
- damper
- cylinder cocks
- mechanical stoker
- oil burning apparatus

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention
Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- station yard staff
- maintenance personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection
Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- steam locomotive operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- roadworthy certificate
- train wire (status list, dangerous goods list, consist information, etc.)
- automatic train protection parameters
- operational instructions, policies and procedures, including: those related to preventing steam locomotives from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- documented details of the train including length and weight
- emergency procedures manual

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific

- Performance is demonstrated consistently over a period
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC307C Drive medium rigid vehicle

Unit Descriptor
This unit involves the skills and knowledge required to drive a medium rigid vehicle safely including systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to medium rigid vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial medium rigid vehicle across a variety of driving contexts.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Drive the medium rigid vehicle

1.1 The medium rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage

1.3 Engine operation is maintained within the manufacturer's specified torque range and temperature through effective transmission use

1.4 Braking system of medium rigid vehicle is managed and operated to ensure effective control of the vehicle under all conditions

1.5 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.6 The medium rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning

1.7 The medium rigid vehicle is parked, shut down and secured in
accordance with manufacturers specifications, traffic regulations and workplace procedures

1.8 Appropriate procedures are followed in the event of a driving emergency

2 Monitor traffic and road conditions

2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle

3.2 Performance and efficiency of vehicle operation is monitored during use

3.3 Defective or irregular performance or malfunctions are reported to the appropriate authority

3.4 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Medium rigid vehicle controls, instruments and indicators and their use
- Medium rigid vehicle handling procedures
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Workplace driving and operational instructions
- Driving hazards and related defensive driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Principles of operation of air brakes and procedures for their use
- Principles of stress management when driving a vehicle
- Map reading and road navigation techniques including the use of a GPS device where applicable
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
• Causes and effects of fatigue on drivers
• Factors which increase fatigue-related accidents
• Fatigue management strategies including on-road techniques
• Lifestyles which promote the effective long-term management of fatigue

Required skills:
• Communicate effectively with others when driving a medium rigid vehicle
• Read and interpret instructions, procedures, information and signs relevant to work activities
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when driving a medium rigid vehicle
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when driving a medium rigid vehicle in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when driving a medium rigid vehicle
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of equipment
• Monitor and anticipate traffic hazards and take appropriate action
• Carry out pre-operational checks on a medium rigid vehicle
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes: all medium rigid vehicles, for example any 2-axle rigid vehicle, including truck and bus greater than 8 tonnes GVM
Driving may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include:

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory medium rigid vehicle driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)
Applicable procedures and codes may include:
- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to medium rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at
the registered training organisation, and/or

- in an appropriate range of situations in the workplace
TLIC3107A Stable a heritage steam locomotive

Unit Descriptor
This unit involves the skills and knowledge required to stable a heritage steam locomotive in accordance with relevant workplace practices, rail regulations and codes of practice. It includes determining the required stabling location, shunting and securing the train, stabling and securing the heritage steam locomotive, carrying out all required post-operational checks and completing post-operational paperwork. This unit replaces part of the previous unit TDTC1401A Prepare, operate, monitor and stable heritage steam locomotive. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of heritage railway systems.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the stabling and securing a steam locomotive across a variety of operational contexts in the Australian heritage rail system.

Competency Field
C – Driving Vehicle

ELEMENT | PERFORMANCE CRITERIA
--- | ---
1 Determine stabling location | 1.1 Contact is made with train controller and yard staff to determine planned location for stabling the steam locomotive
1.2 Directions of train controller and yard staff are interpreted and followed
1.3 Care is taken to keep clear of other roads

2 Stable and shut down steam locomotive | 2.1 Carriages or vehicles are shunted and secured in accordance with directions, workplace procedures and rail regulations
2.2 Steam locomotive is stabled in correct location as directed
2.3 Derailers are set in place as per workplace procedures and rail regulations
2.4 Handbrakes are applied
2.5 Park brakes are secured
2.6 Steam locomotive is stabled as per operator's instructions and
workplace procedures
2.7 Cab is secured as per workplace procedures

3 Carry out post-operational checks
3.1 Fluid and fuel levels are checked and any required action is taken to top up levels
3.2 Visual check is made of steam locomotive as per workplace procedures
3.3 Any identified faults and defects are fixed or reported and recorded as per workplace procedures
3.4 Faulty and defective equipment that presents a safety risk is isolated and tagged as per workplace procedures and rail regulations
3.5 Outcomes of post-operational checks are recorded as per workplace procedures

4 Complete post-operational paperwork
4.1 Timesheet or other work record is completed
4.2 Roster is checked for future work allocation
4.3 Issues and variations are discussed and resolved with roster clerk
4.4 All required safeworking documentation and actions are completed as per workplace procedures and rail regulations
4.5 All equipment is returned and stowed as per workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations
- Relevant OH&S and environmental procedures and regulations
- Steam locomotive controls, instruments and indicators and their purpose, location and use
- Procedures for operating and stabling a steam locomotive
- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop a steam locomotive
- Speed and load limits
- Procedures for managing hazardous situations when operating and stabling a steam locomotive
- Procedures for operating and shutting down ancillary systems
- Procedure for completing relevant documentation when stabling a steam locomotive
- Procedures to be followed in the event of an emergency
- Procedures for minor maintenance, cleaning, lubricating and servicing of steam locomotives
• Procedures for identifying equipment defects, assessing and reporting for appropriate action
• Monitoring devices; braking and power equipment, auxiliary systems, and signalling systems
• Local procedures and operating requirements
• Typical defects that can occur on a steam locomotive and related action that should be taken
• Procedures for operating electronic communications equipment with required protocol

Required skills:
• Communicate effectively with others when stabling a heritage steam locomotive
• Read and interpret instructions, procedures and information relevant to the stabling of a steam locomotive
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the stabling of a steam locomotive
• Operate electronic communications equipment to required protocol
• Work collaboratively with others when stabling a steam locomotive
• Identify and assess steam locomotive defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
• Satisfactorily manage unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when stabling a steam locomotive
• Recognise problems that may arise when stabling a steam locomotive and take appropriate action
• Check and replenish fluids and fuel and carry out lubrication requirements on a steam locomotive
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in steam locomotives and associated equipment and procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Conduct an inspection of a steam locomotive
• Document outcomes of inspection of a steam locomotive
• Stable a steam locomotive after service

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night in all relevant weather conditions

Heritage steam locomotives may include:
• any heritage steam locomotives in service within Australia
Equipment on a steam locomotive may include:

- steam locomotive instrumentation (gauges)
- feed water controls
- boiler controls and safety devices
- braking systems
- driving and other operational controls
- communication systems
- warning equipment
- ancillary systems
- vigilance systems
- traction systems
- head and marker lights

Inspection of a heritage steam locomotive may include:

- lights and power systems
- hoses
- couplings
- head boards
- doors and door locks
- suspension
- brake equipment
- wheels
- seals
- sand and fuel
- boiler and mountings
- cables
- glass windows and doors
- audible faults (e.g. hiss of escaping air or steam)
- visible faults (e.g. oil leaks, tears and cracks)

Communications equipment may include:

- portable and fixed two way radio
- mobile phone
Auxiliary equipment may include:
- steam regulator
- cab sprinkler
- gauges
- generator
- sandboxes
- whistle
- steam turbine generator
- all ancillary valves
- hand brake
- injectors
- lubricators
- gauge glasses
- blower
- damper
- cylinder cocks
- mechanical stoker
- oil burning apparatus

Post operation checks may include:
- lubrication system
- checking for fluid leaks
- brake testing
- checking of fluid and fuel levels

Risk minimisation may require differentiating between faults, defects and deficiencies that:
- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:
- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- station yard staff
- maintenance personnel
- immediate internal or external customers
Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or
- isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Positioning of heritage motive power unit may involve:

- operation of manual points
- operation of turntable
- coupling/uncoupling to other rolling stock
Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- steam locomotive operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- roadworthy certificate
- train wire (status list, dangerous goods list, consist information, etc.)
- operational instructions, policies and procedures, including: those related to preventing steam locomotives from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- emergency procedures manual

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge
assessment, and/or
- access to an appropriate range of relevant
  operational situations in the workplace
- In both real and simulated environments, access is
  required to:
  - relevant and appropriate materials and/or
    equipment, and/or
  - applicable documentation including
    workplace procedures, regulations, codes of
    practice and operation manuals

**Method of assessment**
- Assessment of this unit must be undertaken by a
  registered training organisation
- As a minimum, assessment of knowledge must be
  conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at
    the registered training organisation, and/or
  - in an appropriate range of situations in the
    workplace
TLIC3207A  Operate and monitor a passenger electric tram

Unit Descriptor
This unit involves the skills and knowledge required to operate and monitor a passenger electric tram in accordance with relevant workplace practices, tramway regulations and codes of practice. This includes planning and preparing the tram for passenger service, operating the tram, operating the revenue collection system (where applicable), monitoring the tram's performance during service, and communicating effectively with other personnel. This unit replaces the unit TDTC2201A Operate a passenger tram. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines, as well as relevant road rules and tramway regulatory requirements of the states/territories concerned.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to operate and monitor a passenger electric tram across a variety of operational contexts.

Competency Field
C – Driving Vehicle

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan and identify a passenger electric tram for operations

1.1 Driving requirement is identified and confirmed from roster, shift-card or other authorised documentation

1.2 Sign-on/log-on procedures at the depot are completed and the tram to be driven is correctly identified and located

1.3 Resources are identified and obtained, including documentation

1.4 Procedures for reporting incidents and the cancellation and non-operation of services are identified and followed

2 Operate a passenger electric tram

2.1 Tram is operated within specifications and organisational requirements to meet required schedules, routes, timetables and special services

2.2 On-board equipment is confirmed as being serviceable, and is operated in accordance with specifications and organisation's requirements
2.3 Warning devices and gauges are monitored and responded to in accordance with organisation's requirements
2.4 Operational restrictions established by the organisation and relevant legislation are observed
2.5 Tram is stopped in designated and approved locations and within limitations, to permit safe embarkation and alighting of all kinds of passengers
2.6 Destination signs are adjusted in accordance with work schedules
2.7 Wheelchair equipment where provided is operated when required in accordance with workplace procedures

### 3 Respond effectively to external operating factors

3.1 Instructions are verified, when required, interpreted and followed, in accordance with relevant regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe
3.2 Fixed traffic and hand signals and verbal movement commands are interpreted and followed, in accordance with regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe
3.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to personnel and equipment
3.4 Defensive driving practices are employed at all times

### 4 Operate revenue collection systems (where applicable)

4.1 Start-up check is completed in accordance with workplace procedures
4.2 Ticketing system is activated, operated and updated in accordance with workplace procedures
4.3 Ticketing system defects are reported in accordance with workplace procedures
4.4 Ticketing system is closed down, in accordance with authorised organisation procedures

### 5 Operate and monitor on-board equipment

5.1 Electric tram equipment is monitored and operated to maintain optimum running conditions and identify faults, defects and deficiencies
5.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of tram, including communications with operations controller where necessary
5.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel
5.4 Defects are reported and/or recorded
### 6 Work collaboratively with other personnel (where applicable)

6.1 Safe operation and monitoring of the tram is maintained in collaboration with other members of the tram crew, tram controllers and other relevant personnel as per workplace requirements.

6.2 Any potential or actual conflicts or grievances with other members of the tram crew, tram controllers and other relevant personnel during the operation of the tram are recognised and resolved in accordance with workplace procedures.

### 7 Communicate with tram crew and other personnel

7.1 Regular communication is maintained with tram crew, drivers of other passenger electric trams and other relevant personnel in the course of operation of the tram as per workplace procedures and regulatory requirements.

7.2 Tram crew, tram controllers, drivers of other passenger electric trams and other relevant personnel are advised of operational problems, delays, safety incidents and emergency situations that may arise in the course of operation of the tram.

7.3 Information provided by tram crew, drivers of other passenger electric trams and other relevant personnel relevant to the ongoing operation of the passenger electric tram is interpreted and applied to driving activities as per workplace procedures and applicable regulatory requirements.

### 8 Follow all applicable tramway regulatory requirements

8.1 Tramway regulatory requirements applicable to the operation of the tram and the track or road concerned are accessed, understood and interpreted.

8.2 Relevant tramway regulatory requirements are applied and followed in the course of operation of the passenger electric tram.

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.
- Relevant road rules of the relevant state/territory roads and traffic authority, where applicable.
- Relevant state/territory roads and traffic authority and tramway operating procedures.
- Relevant OH&S and environmental procedures and regulations.
- Relevant driver identification procedures, licences and authorities required to drive an electric tram.
- Passenger electric tram controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop the tram.
- Passenger electric tram operating characteristics, capabilities and limitations.
- Procedures for operating and monitoring the passenger electric tram.
• Procedures for adjusting controls to maximise efficient and safe running
• Speed and load limits for the tram
• Operational instructions
• Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a passenger electric tram
• Procedures for operating and monitoring ancillary equipment on the tram
• Functions of sand as used on an electric tram and the procedures for checking and refilling sand levels and carrying out sand system testing processes on a passenger electric tram
• Passenger electric tram knowledge may include monitoring devices, braking and drive equipment, ancillary systems and signalling systems
• Track, road and route knowledge including: track limitations, speed limitations, curves and gradients and location of any signals, indicators and points
• Procedures for identifying equipment defects and assessing for appropriate action
• Typical defects that can occur on a passenger electric tram and related action that should be taken
• Principles of defensive driving
• Procedures to be followed in the event of an emergency when operating a passenger electric tram
• Procedures for operating any electronic communications equipment with required protocol
• Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long term management of fatigue

Required skills:
• Communicate effectively with others when operating and monitoring a passenger electric tram
• Operate any electronic communication equipment to required protocol
• Read and interpret instructions, procedures, information and signs relevant to the operation and monitoring of a passenger electric tram
• Interpret and follow instructions and prioritise work
• Complete documentation related to the operation and monitoring of a passenger electric tram
• Work collaboratively with others when operating and monitoring a passenger electric tram
• Identify and assess tram defects and deficiencies and take appropriate action to report any identified defective equipment as per workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and monitoring a passenger electric tram
• Recognise problems that may arise when operating and monitoring a passenger electric tram and take appropriate action
• Check and refill sand boxes where provided and carry out sand system testing processes on a passenger electric tram
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in trams and associated equipment and procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Operate a passenger electric tram and monitor its performance to facilitate optimum safe operation
• Apply track and road knowledge when driving a passenger electric tram
• Monitor journey schedule
• Apply fatigue management knowledge and techniques

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night in all relevant weather conditions

Passenger electric trams include all passenger electric trams in service within Australian transport systems and may include:

Passenger electric tram equipment may include:
• ancillary systems
• automatic control systems
• braking systems
• drive systems
• instrumentation
• manual controls
• communication systems
• warning equipment
• power source
• vigilance systems
• traction systems

Action taken upon the identification of faults, defects or deficiencies may include:
• reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement
Relevant personnel may include:

• tram crew
• tram controllers
• rostering supervisors and staff
• other tram drivers and crews
• depot coordinators
• supervisors and other operational personnel
• maintenance personnel
• immediate internal or external customers
• internal and external suppliers

Risk minimisation may require differentiating between faults, defects and deficiencies that:

• do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
• present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
• present an immediate hazard and require immediate attention

Depending on the organisation concerned workplace procedures may be called:

• standard operating procedures
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Information and documents may include:

• relevant National and state or territory transport regulations and codes of practice
• notices in drivers' notice board/box
• reference cards
• tram driver roster sheet and/or table card
• operational instructions, policies and procedures:
• emergency procedures manual
• conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory road rules and tramway codes of practice
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
in an appropriate range of situations in the workplace
TLIC3307A  Drive an electric tram to operational requirements

Unit Descriptor
This unit involves the skills and knowledge required to drive an electric tram to operational requirements in accordance with relevant regulations and workplace practices. It includes operating the tram efficiently and effectively; driving the tram; completing the journey; and responding effectively to external factors and emergencies. This unit replaces part of the previous unit TDTC2101A Drive tram Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines, as well as relevant road rules and tramway regulatory requirements of the states/territories concerned.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to drive an electric tram as part of workplace activities across a variety of operational contexts.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Operate tram efficiently and effectively
1.1 Electric tram is operated in accordance with the relevant codes of practice, workplace procedures and instructions
1.2 Electric tram is operated safely in accordance with traffic regulations
1.3 Electric tram is operated with due care of the vehicle
1.4 Movements are within limits of vehicle and road dimensions and in line with specifications
1.5 Movements are smooth and controlled
1.6 Performance of the electric tram is monitored to maintain optimum running condition and identify faults, defects and efficiencies in accordance with organisation's requirements

2 Drive tram
2.1 Traffic flows are anticipated and appropriate defensive action is taken to maintain the efficiency of tram operation
2.2 Electric tram is constantly monitored for any malfunctions or
factors which may affect tram performance

3  Complete tram journey

3.1 Tram documentation is received, interpreted and followed
3.2 Electric tram is operated and manoeuvred in accordance with tram documentation and procedures
3.3 Events and circumstances affecting planned running schedule are communicated to relevant personnel en route
3.4 Tram control and other instructions are received, interpreted and applied to ensure safe and effective control of the tram
3.5 Communications are maintained with tram controllers during the tram journey in accordance with the relevant organisational requirements
3.6 Instructions concerning tram operation are given to relevant personnel to ensure safe and efficient running

4  Respond effectively to external operating factors

4.1 Instructions are verified, when required, interpreted and followed, in accordance with relevant regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe
4.2 Fixed traffic and hand signals and verbal movement commands are interpreted and followed, in accordance with regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe
4.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to personnel and equipment

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant state/territory roads and traffic authority and tramway operating procedures
- Where relevant, road rules of the relevant state/territory roads and traffic authority
- Relevant OH&S and environmental procedures and regulations
- Relevant driver identification procedures, licences and authorities required to drive an electric tram
- Electric tram controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop the tram
- Electric tram operating characteristics, capabilities and limitations
- Procedures for operating and monitoring the electric tram
- Procedures for adjusting controls to maximise efficient and safe running
- Braking and safety system procedures
• Speed limits for the tram
• Operational instructions
• Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring an electric tram
• Functions of sand as used on an electric tram and the procedures for checking and refilling sand levels and carrying out sand system testing processes on an electric tram
• Electric tram knowledge may include monitoring devices, braking and drive equipment, ancillary systems and signalling systems
• Track, road and route knowledge may include: tram routes, tramway limitations, speed limitations, curves and gradients and location of any signals, indicators and points
• Procedures for identifying equipment defects and assessing for appropriate action
• Typical defects that can occur on an electric tram and related action that should be taken
• Principles of defensive driving
• Procedures to be followed in the event of an emergency when operating an electric tram
• Procedures for operating any electronic communications equipment with required protocol
• Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long term-management of fatigue

**Required skills:**
• Communicate effectively with others when driving an electric tram to operational requirements
• Operate any electronic communication equipment to required protocol
• Read and interpret instructions, procedures, information and signs relevant to driving an electric tram
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the driving of an electric tram to operational requirements
• Work collaboratively with others as when operating and monitoring an electric tram
• Identify and assess tram defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
• Implement contingency plans for unplanned events
• Drive defensively, apply precautions and required action to minimise, control or eliminate hazards that may exist when driving an electric tram to operational requirements
• Recognise problems that may arise when driving an electric tram and take appropriate action
• Check and refill sand boxes where provided and carrying out sand system testing processes on a tram
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in trams, associated trams and ancillary equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Operate an electric tram and monitor its performance to facilitate optimum safe operation
- Apply track and road knowledge when driving an electric tram
- Monitor journey schedule
- Apply fatigue management knowledge and techniques

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: 
- by day or night in all relevant weather conditions

Electric trams include all electric trams in service within Australian transport systems and may include:
- hand-operated or foot pedal control systems or both

Electric tram equipment may include:
- ancillary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems

Action taken upon the identification of faults, defects or deficiencies may include:
- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Relevant personnel may include:
- tram crew
- tram controllers
- rostering supervisors and staff
- other tram drivers and crews
- depot coordinators
- supervisors and other operational personnel
- maintenance personnel
- immediate internal or external customers
- internal and external suppliers
Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:

- relevant national and state or territory transport regulations and codes of practice
- notices in drivers' notice board/box
- reference cards
- tram driver roster sheet and/or table card
- operational instructions, policies and procedures:
  - emergency procedures manual
  - conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory road rules and tramway codes of practice
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC3407A | Berth and shut down an electric tram

Unit Descriptor
This unit involves the skills and knowledge required to berth and shut down an electric tram including determining the required berthing location; berthing, shutting down and securing the tram; carrying out all required post-operational activities; and completing post-operational paperwork. This unit replaces part of the previous unit TDTC2101A Drive tram. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines, as well as relevant road rules and tramway regulatory requirements of the states/territories concerned.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to berth and shut down an electric tram as part of workplace activities across a variety of operational contexts.

Competency Field
C – Driving Vehicle

ELEMENT | PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine berthing location
1.1 Contact is made with tram controller and depot staff, or information is obtained from an information board, to determine planned location for berthing the tram
1.2 Directions of tram controller and depot staff are interpreted and followed

2 Berth and shut down an electric tram
2.1 Electric tram is berthed in accordance with organisation's and site requirements
2.2 Shut-down procedures are carried out in accordance with specifications and organisation's requirements

3 Carry out post-operational checks
3.1 Visual and other checks are made of tram as per workplace procedures
3.2 Any identified faults and defects are fixed or reported and recorded as per workplace procedures
3.3 Faulty and defective equipment that presents a safety risk is reported as per workplace procedures and relevant regulations
3.4 Outcomes of post-operational checks are recorded as per workplace procedures

4 Secure an electric tram
   4.1 Brakes are applied as per workplace procedures
   4.2 Electric tram is secured in accordance with depot requirements

5 Complete post-operational paperwork
   5.1 Timesheet or other work record is completed
   5.2 Roster is checked for future work allocation
   5.3 Issues and variations are discussed and resolved with roster clerk
   5.4 All required documentation is completed as per workplace procedures
   5.5 All equipment is returned and stowed as per workplace requirements
   5.6 Records of the electric tram are completed in accordance with workplace procedures and regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant state/territory roads and traffic authority and tramway operating procedures
- Relevant OH&S and environmental procedures and regulations
- Electric tram controls, instruments and indicators and their purpose, location and use
- Monitoring devices; braking and power equipment; safety systems, ancillary systems; and signalling systems
- Procedures for operating, berthing and shutting down an electric tram
- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop an electric tram
- Speed and load limits compliance requirements
- Procedures for managing hazardous situations when berthing and shutting down an electric tram
- Procedures for operating and shutting down ancillary systems
- Procedure for completing relevant documentation when berthing and shutting down an electric tram
- Procedures to be followed in the event of an emergency
- Procedures for any other work necessary to berth and shut down a tram
- Procedures for identifying equipment defects and assessing for appropriate action
- Typical defects that can occur on an electric tram and related action that should be taken
- Procedures for operating any electronic communications equipment with required protocol
• Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long-term management of fatigue

**Required skills:**

• Communicate effectively with others when berthing and shutting down an electric tram
• Read and interpret instructions, procedures and information relevant to the berthing and shutting down of an electric tram
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the berthing and shutting down of an electric tram
• Operate electronic communications equipment to required protocol
• Work collaboratively with others when berthing and shutting down an electric tram
• Identify and assess tram defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when berthing and shutting down an electric tram
• Recognise problems that may arise when berthing and shutting down an electric tram and take appropriate action
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in trams and associated equipment and procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Conduct a visual inspection of an electric tram
• Document outcomes of visual inspection of an electric tram
• Shut down an electric tram after service
• Apply fatigue management knowledge and techniques

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night in all relevant weather conditions

Electric trams include all electric trams in service within Australian transport systems and may include:

- hand-operated or foot pedal control systems or both
Electric tram equipment may include:

- ancillary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems

Visual inspection of an electric tram may include:

- lights
- hoses
- couplings
- destination indicators or signs
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand
- pantographs or trolley poles
- electrical cables
- glass windows and doors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)

Post operation checks may include:

- sand levels
- brake testing
- internal and external lights
- air systems
- interlocks and door controls
Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- tram crew
- tram controllers
- rostering supervisors and staff
- other tram drivers and crews
- depot coordinators
- supervisors and other operational personnel
- maintenance personnel
- immediate internal or external customers
- internal and external suppliers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:

- relevant national and state or territory transport regulations and codes of practice
- notices in drivers' notice board/box
- reference cards
- tram driver roster sheet and/or table card
- operational instructions, policies and procedures:
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory road rules and tramway codes of practice
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
in an appropriate range of situations in the workplace
Manage the operation of a tow truck

Unit Descriptor
This unit involves the skills and knowledge required to manage tow truck operations including carrying out pre-operational checks on a tow truck; driving a tow truck carrying/towing a load; operating ancillary equipment; and completing documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislation and relevant regulations covering the operation of the tow truck and related equipment, including tow truck regulations, road rules, load restraint regulations, OH&S regulations and environmental protection requirements.

Work is performed with minimum supervision. It involves the application of application of driving principles and procedures for safe tow truck operations.

Competency Field
C – Driving Vehicle

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Carry out pre-operational checks on the tow truck
1.1 The pre-operational checks for the tow truck are carried out as per government regulations, manufacturers requirements, and workplace policies and procedures
1.2 All faults and defects identified during checks are repaired or reported in accordance with workplace procedures
1.3 Checks are made to ensure that the vehicle or load being towed or carried is secured as per tow truck operational practice and regulatory requirements

2 Drive a tow truck carrying or towing a vehicle or other load
2.1 The tow truck is manoeuvred in accordance with the established towing practice, regulations/permit requirements for the class of vehicle involved and the vehicle being towed or the load being carried
2.2 Appropriate defensive driving techniques are applied for the prevailing road, traffic and weather conditions
2.3 The tow truck is driven along appropriate routes in accordance with the relevant codes, relevant government regulations and workplace policies
2.4 The vehicle or load is transported and the vehicle manoeuvred in accordance with any required precautions relating to unusual/special characteristics of the load and/or relevant
2.5 Signs or indicators are fixed to the vehicle if required
2.6 In the event of a driving emergency, appropriate procedures are followed taking into account the vehicle being towed or the load being carried
2.7 Symptoms of fatigue are recognised and appropriate fatigue management strategies are applied during towing operations

3 Operate ancillary equipment on the tow truck
3.1 A visual check of the internal and external condition of the ancillary equipment on the tow truck is carried out in accordance with workplace procedures
3.2 Towing equipment is tested to ensure it functions correctly to manufacturers specifications
3.3 Towing equipment is operated in accordance with manufacturers specifications and regulatory requirements
3.4 Attachment points used in the towing operation and the weight of the vehicle being towed or load being carried are checked to ensure that they are consistent with established towing practice, regulatory requirements and the permissible safe working loads for the tow truck and its associated towing equipment

4 Complete documentation
4.1 Records of tow truck operations and related maintenance of the tow truck and ancillary equipment are kept in accordance with workplace procedures
4.2 All forms and official record requirements related to towing operations are completed in accordance with regulatory requirements and company procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant towing permit and licence requirements of the state/territory road traffic authority concerned
- Relevant road rules and related regulations of the state/territory road traffic authority concerned
- Relevant OH&S and environmental procedures and regulations
- Tow truck controls, instruments and indicators and their use
- Tow truck handling procedures both with and without a tow or load
- Driving hazards and related defensive driving techniques
- Workplace driving and operational instructions
- Procedures to be followed in the event of an emergency when operating a tow truck including the use of portable fire extinguishers
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on a tow truck and its towing equipment and related action that should be taken
- Differences between transmission types on various types of tow trucks and the implications for driving techniques
- Map reading and road navigation techniques relevant for the area of tow truck operations
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a tow truck
- Factors which increase fatigue-related accidents
- Causes and effects of fatigue on drivers
- Strategies and techniques to manage on-road fatigue
- Lifestyles which promote the effective long-term management of fatigue
- Records and documentation requirements for tow truck operations and procedures for their completion

**Required skills:**
- Communicate effectively with others when carrying out tow truck operations
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures, regulations, signs, charts, maps, and labels relevant to tow truck operations and apply them to towing activities
- Complete documentation required when carrying out tow truck operations
- Work safely and collaboratively with others when carrying out tow truck operations
- Modify activities and take appropriate initiatives depending on differing towing contexts, risk situations and environments
- Recognise symptoms of fatigue that may occur during tow truck operations and take appropriate action
- Recognise problems that may occur in the course of tow truck operations and take appropriate action
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when carrying out tow truck operations
- Adapt to changes in equipment and standard operating procedures required for tow truck operations
- Plan own work including predicting consequences and identifying improvements
- Participate in identifying and meeting own learning needs
- Provide information on towing services and their features
- Correctly use required personal protective equipment required for tow truck operations including the operation of portable fire extinguishers
- Identify, select and use equipment, processes and procedures relevant to required tow truck operations
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of towing situations
- by day or night
- in a range of weather conditions

Required towing vehicle may include:
- tilt tray tow truck with winch (5 tonne, 7.5 tonne and 10 tonne capacity)
- tow truck with crane and cradle
- towing vehicle with a detachable self loading table top
- articulated drop-deck low loader
- trailer

Customers may be:
- vehicle owners
- operators of expressways, freeways, tollways or tunnels
- police and other emergency services personnel
- local government authorities
- car park operators
- road traffic authorities
- owners and operators of equipment elevating work platforms, forklifts, small load shifting equipment, etc.

Towing situations may include:
- vehicle accidents
- vehicle breakdowns
- expressway breakdowns and accidents
- tunnel breakdowns and accidents
- stolen cars
- vehicles illegally parked on clearways
- vehicles illegally parked in car parks
- abandoned vehicles
- carriage of equipment such as elevating work platforms, forklifts, small load shifting equipment, etc.

Purpose of equipment checking and inspection is to ensure:
- it is free from damage and faults that may prejudice safety or limit operational capability
- any identified faults or problems are rectified and/or reported as per company procedures prior to towing operations
Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
- repair or replacement of faulty towing equipment

Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in tow truck
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on tow truck
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.
Potential hazards that may occur in various towing situations may include:

- vehicular traffic at the scene
- live electrical wires
- contaminated blood at scene
- weather conditions
- oil on vehicle trays (slippery surfaces)
- unsafe or damaged equipment
- unsafe procedures in the use of towing equipment
- fire at the scene
- spilt or leaking fuel or dangerous or hazardous goods or substances
- unsafe manual lifting procedures
- sharps that may be contaminated with transmissible diseases

Hazard control strategies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- use of flashing lights on vehicles
- deployment of safety equipment such as warning signs or witch's hats
- strategic positioning of towing vehicle
- use of appropriate personal protective equipment and clothing
- use of safe procedures in the use of towing equipment
- checking equipment and isolating, rectifying or reporting any defective equipment
- following correct safety procedures in the event of live fallen electrical wires at an accident scene
- following correct procedures in the event of spilt or leaking fuel or dangerous or hazardous goods or substances as per the Australian Dangerous Goods Code
- using correct portable firefighting equipment to control a fire at the scene
- use of personal protective equipment
- use of reflective raincoats and vests
- correct manual lifting strategies
- cleaning of vehicles (including removal of oil from vehicle trays)
Depending on the organisation concerned, operating procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing (raincoats and vests)
- portable fire extinguishers

Communication at towing sites and in the work area may include:

- mobile phone
- fax
- email
- internet
- RF communications
- oral, aural or signed communications

Information and documents may include:

- state/territory tow truck driver licence certification requirements
- state/territory road rules
- workplace driving instructions and procedures for drivers of tow trucks
- tow truck manufacturers instructions, specifications and recommended operating procedures, including preoperational checks of the tow truck and its equipment
- standard procedures and policies for the operating a tow truck
- manufacturers specifications for towing vehicle, equipment and tools
- workplace and client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- quality assurance standards
- emergency procedures
Applicable legislation, regulations and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to the tow truck operations
- relevant state/territory load restraint regulations
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the
workplace

</tbody>
</table>
## Interpret and apply low-risk driving strategies

2.1 Risk factors contributing to the formation of opinions and beliefs about low-risk driving are understood and applied

2.2 Road safety information that reflects the changing road environment is clarified and taken into account in car driving activities

2.3 Human psychological and physiological aspects that can influence low-risk driving are acknowledged and taken into account in car driving activities

2.4 Low-risk driving strategies are understood, interpreted and applied consistently

## Interpret and apply road rules applicable to safe car driving

3.1 Relevant rules and regulations are identified, interpreted correctly and consistently applied

3.2 Road signs, signals and markings are identified and taken into account in car driving activities

3.3 Purpose of road rules and traffic safety laws in ensuring safe and efficient regulation of traffic flow is understood and taken into account in car driving activities

## Manage collision when driving a car

4.1 Common contributing collision factors, including age, experience, speed, drugs, alcohol, road conditions, fatigue and time of day are recognised, and appropriate actions are managed

4.2 External factors that could lead to collisions, including speed, space, vision, road conditions, vehicle condition and environmental conditions are understood and managed

4.3 Internal factors that could lead to collisions, including emotional factors, driver's own behaviours and driver's operation at high levels of risk are acknowledged and managed

4.4 Consequences of collisions in relation to relevant traffic laws and physical, financial and psychological costs to the individual and society are understood and managed

4.5 Functions of vehicle controls and how to recover control of the vehicle are understood and demonstrated

4.6 Corrective actions to be taken after a collision are understood and applied if required

## Demonstrate and maintain a high level of competence in car control skills

5.1 Appropriate action is taken to respond to various types of adverse conditions

5.2 Principles of braking are applied at a high level of competence

5.3 Principles of steering are applied at a high level of competence

5.4 Slow speed manoeuvres are carried out at a high level of competence
5.5 Vehicle is guided and controlled at a high level of competence

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian road law enforcement methodology
- Common external risk factors in collisions or crashes, such as speed, space, vision, road conditions, vehicle conditions and environmental conditions
- Common internal risk factors in collisions or crashes, such as age, experience, speed, drugs, alcohol, fatigue, time of driving (day or night), attitude, motivation, and beliefs or values
- Consequences of collisions or crashes in relation to physical, financial and psychological costs to individuals and to society
- Critical factors underpinning high-level driving competence
- Low-risk driving principles
- Driving hazards and related low-risk driving techniques
- Established and reviewed laws and penalties in relation to demerit point offences, such as driving while disqualified or under the influence of drugs and alcohol
- Importance of attitude in abiding by the road rules
- Importance of cooperation with other road users
- Importance of space and speed management to avoid a collision
- Importance of vision to avoid collision
- Processes for identifying and responding to hazards
- Purpose and benefits of road rules enforcement for safe car driving
- Rationale for ongoing development of traffic regulations to meet changing traffic conditions
- Risk management and low-risk driving
- Road safety issues, including fatigue management and effects of drugs, alcohol and medication on driving performance
- Road signs, signals and markings
- Road transport law (state or territory road rules and traffic safety legislation, e.g. driver licensing, vehicle registration, alcohol and drugs, and vehicle standards)
- Rules of braking
- Rules of observation
- Rules of steering
- Safe, proactive and responsible car driving behaviours
- Types of adverse driving conditions commonly encountered during driving activities

Required skills:
- Adapt appropriately to differences in vehicles, including their controls and safety devices, and the driving environment
- Apply basic and high-level road skills when driving a car

© Commonwealth of Australia 2009
TLI07 Transport and Logistics Training Package (Version 3)
To be reviewed by 2010
• Apply fatigue, attitude, motivation, concentration and anger management knowledge and techniques
• Apply observation skills in the course of vehicle operations
• Apply precautions and act to minimise, control or eliminate hazards that may exist while driving a vehicle
• Apply road positioning skills
• Apply safe car driving strategies
• Apply traffic management skills
• Carry out pre-operational checks and related action on vehicles
• Communicate effectively with others when applying safe car driving behaviours
• Deal effectively with adverse conditions while driving a vehicle
• Evaluate risk and behave accordingly
• Guide and control vehicles
• Implement contingency plans for unexpected events that may occur while driving a vehicle
• Interpret and follow operational instructions when applying safe car driving behaviours
• Manage speed and space while driving a vehicle
• Manoeuvre a vehicle at slow speed
• Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor and anticipate traffic hazards and take appropriate action
• Monitor performance of vehicle and take appropriate action where required
• Monitor traffic and road conditions and react appropriately
• Negotiate complex traffic and road conditions and make appropriate decisions
• Promptly report and/or rectify identified problems, faults or malfunctions that may arise when applying safe car driving behaviours
• Read and interpret instructions, road rules, procedures, jurisdictional requirements, information and signs relevant to safe car driving behaviours
• Work collaboratively with other road users when driving a vehicle
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Applicable regulations and legislation may include:
- road transport law, for example:
  - legislation and related regulations applicable to driving and using motor vehicles in relevant state or territory
  - motor vehicle driver learner permit, driver licence requirements and issue procedures applicable in relevant state or territory
  - occupational health and safety legislation in relevant state or territory
  - equal opportunity legislation in relevant state or territory
  - workplace relations legislation in relevant state or territory

Characteristics of car driving instructors may include information in relation to:
- gender
- age (within regulatory guidelines)
- driving experience
- fluency in English
- educational background and general knowledge
- diverse social and economic backgrounds and attitudes
- effects of prior and current learning
- individual learning styles

High level of driving competence is defined as:
- ability to consistently carry out car driving tasks across a wide range of simple and complex situations and conditions, including different types of vehicles, weather conditions, road conditions and diverse potential hazards. This also includes the management of attitude, motivation, fatigue, anger and concentration

Road positioning skills are:
- those required to maintain a safe legal position on the road when driving a vehicle. This includes observation, speed management, decision making, hazard perception and response to hazards, buffering from other vehicles, maintaining space when making turns at intersections, maintaining space from other vehicles when stopped, or reducing speed and maintaining space requirements during manoeuvres, such as kerb-side stopping, hill starts, u-turns, three-point turns and reverse parking
Communication may include:
- oral and aural
- written communication
- reading and interpreting maps, street directories and GPS navigation devices
- using own vehicle horn, indicators, brake lights and road positioning
- recognising and responding to signals from other vehicles
- recognising and responding to road signs, traffic signals and other authorised signalling systems
- non-verbal communication with other drivers and motorcycle riders e.g. gestures and nods

Factors that affect learning progress may include:
- effects of previous and current learning
- decision making skills in a range of driving situations
- optimism bias (tendency to view negative incidents such as road accidents as unlikely to happen to them; overestimation of driving ability; and underestimation of accident risk)
- causal attribution (explains that driver's actions often depend upon their interpretation of the cause of events, limiting the ability to make objective risk assessments and resulting in a tendency to blame external causes)
- learner characteristics and attitudes
- resources, e.g. time, location, space, people and costs
- vehicle type

Resources may include:
- training materials and publications
- location
- personnel
- dual control vehicle
- OH&S and other workplace resource requirements
- enterprise/industry standard operating procedures
- funding for training facilities, resources and staff

Road users may include:
- pedestrians
- cyclists
- drivers or riders of trams and trains, and motor vehicles, including motorcycles, light vehicles and heavy vehicles

Specific needs may relate to:
- age (within regulatory guidelines)
- disability (within regulatory guidelines)
- language, literacy and numeracy needs
- those requiring refresher training
Driving may be undertaken in/at:
- a range of vehicle types
- restricted spaces
- open roads, e.g. freeways, main and busy roads, country roads and suburban roads
- controlled or open environments
- a simulated environment
- a range of weather conditions
- time of day

Learning activities may include:
- demonstrations
- explanations
- problem solving
- mentoring
- coaching while driving
- self-paced learning
- assessment with feedback
- combinations of the above

Workplace documents and procedures may include:
- company/enterprise/organisational procedures and policies
- record of driving skills, knowledge and abilities
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Evidence guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - compliance with appropriate legislative, regulatory and procedural requirements while driving a vehicle
  - identification of risk factors which might impact on driving behaviours and implementing appropriate low-risk driving response measures
  - selection and use of vehicle controls and safety devices to enable safe car driving

Context of assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
Resources for assessment include:
- a range of relevant exercises, case studies and other simulated practical and knowledge assessment tasks
- access to an appropriate range of driving environments and situations

In both real and simulated environments, access is required to:
- relevant and appropriate resources and/or vehicles
- applicable documentation, including driving procedures, legislation, regulations and safe driving policies

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed

Access to assessment support must be provided when required.

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests, including how to:
  - explain
  - describe
  - interpret
  - convey understanding
- Practical assessment should occur:
  - in an appropriate range of situations in a variety of driving environments
  - in adverse driving conditions
- In all cases where practical assessment is used, it will be combined with targeted questioning to assess the underpinning knowledge
- Assessment method may include consideration of third-party reports and authenticated prior achievements, which include on-road assessment by a qualified person
TLIC3708A Apply safe heavy vehicle driving behaviours

Unit Descriptor
This unit involves the high-level safe driving skills and knowledge required by heavy vehicle drivers to enable them to apply safe driving behaviours. This includes higher order skills, such as hazard perception, risk control and safe driving judgment, decision making and multi-tasking. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit is required by heavy vehicle driving instructors and covers higher order heavy vehicle driving skills and knowledge that build upon basic driver licence requirements.

Safe heavy vehicle driving behaviours must be able to be applied without supervision. This involves the application of higher order heavy vehicle driving skills, such as hazard perception, judgement, decision making, multi-tasking, risk control and safe driving attitudes across a range of vehicles and driving situations.

Definition of a heavy vehicle (class LR, MR, HR, HC, and MC) in this context is a 'vehicle greater than 4.5 tonnes GVM and also includes a vehicle seating more than 12 adults, including the driver'.

Competency Field
C – Driving Vehicle

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Define and apply safe heavy vehicle driving behaviours

1.1 Requirements for safe heavy vehicle driving are acknowledged, interpreted and applied

1.2 Importance of attitude in abiding by the road rules in relation to level of risk faced by a driver is understood and taken into account in heavy vehicle driving activities

1.3 Importance of cooperation with other road users in order to drive safely is understood and taken into account in heavy vehicle driving activities

1.4 Motivation to drive safely is interpreted and described, including values, emotions and personal needs

1.5 Principles of proactive driving, also known as low-risk driving, that keep the driver at a low-level risk are interpreted and applied

1.6 Specific factors that constitute an actual risk of a collision are understood and applied, including options for avoiding a collision; crash avoidance space; variables affecting minimum space; effects of observation, perception and response time;
2 Interpret and apply low-risk driving strategies

2.1 Risk factors contributing to the formation of opinions and beliefs about low-risk driving are understood and applied

2.2 Road safety information that reflects the changing road environment is clarified and taken into account in heavy vehicle driving activities

2.3 Human psychological and physiological aspects that can influence low-risk driving are acknowledged and taken into account in heavy vehicle driving activities

2.4 Low-risk driving strategies are understood, interpreted and applied consistently

3 Interpret and apply road rules applicable to safe heavy vehicle driving

3.1 Relevant rules and regulations are identified, interpreted correctly and consistently applied

3.2 Road signs, signals and markings are identified and taken into account in heavy vehicle driving activities

3.3 Purpose of road rules and traffic safety laws in ensuring safe and efficient regulation of traffic flow is understood and taken into account in heavy vehicle driving activities

4 Manage collision when driving a heavy vehicle

4.1 Common contributing collision factors, including age, experience, speed, drugs, alcohol, road conditions, fatigue and time of day are recognised, and appropriate actions are managed

4.2 External factors that could lead to collisions, including speed, space, vision, road conditions, vehicle condition and environmental conditions are understood and managed

4.3 Internal factors that could lead to collisions, including emotional factors, driver’s own behaviours and driver’s operation at high levels of risk are acknowledged and managed

4.4 Consequences of collisions in relation to relevant traffic laws and physical, financial and psychological costs to the individual and society are understood and managed

4.5 Functions of vehicle controls and how to recover control of the vehicle are understood and demonstrated

4.6 Corrective actions to be taken after a collision are understood and applied if required

5 Demonstrate and maintain a high level of competence in heavy vehicle control skills

5.1 Appropriate action is taken to respond to various types of adverse conditions

5.2 Principles of braking are applied at a high level of competence

5.3 Principles of steering are applied at a high level of competence

5.4 Slow speed manoeuvres are carried out at a high level of
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian road law enforcement methodology
- Common external risk factors in collisions or crashes, such as speed, space, vision, road conditions, vehicle conditions and environmental conditions
- Common internal risk factors in collisions or crashes, such as age, experience, speed, drugs, alcohol, fatigue, time of driving (day or night), attitude, motivation, and beliefs or values
- Consequences of collisions or crashes in relation to physical, financial and psychological costs to individuals and to society
- Critical factors underpinning high-level driving competence
- Low-risk driving principles
- Driving hazards and related low-risk driving techniques
- Established and reviewed laws and penalties in relation to demerit point offences, such as driving while disqualified or under the influence of drugs and alcohol
- Importance of attitude in abiding by the road rules
- Importance of cooperation with other road users
- Importance of space and speed management to avoid a collision
- Importance of vision to avoid collision
- Processes for identifying and responding to hazards
- Purpose and benefits of road rules enforcement for safe heavy vehicle driving
- Rationale for ongoing development of traffic regulations to meet changing traffic conditions
- Risk management and low-risk driving
- Road safety issues, including fatigue management and effects of drugs, alcohol and medication on driving performance
- Road signs, signals and markings
- Road transport law (state or territory road rules and traffic safety legislation, e.g. driver licensing, vehicle registration, alcohol and drugs, and vehicle standards)
- Rules of braking
- Rules of observation
- Rules of steering
- Safe, proactive and responsible heavy vehicle driving behaviours
- Types of adverse driving conditions commonly encountered during driving activities

Required skills:
- Adapt appropriately to differences in vehicles including their controls, safety devices, and the driving environment
- Apply basic and high-level road skills when driving a heavy vehicle
• Apply fatigue, attitude, motivation, concentration and anger management knowledge and techniques
• Apply observation skills in the course of vehicle operations
• Apply precautions and act to minimise, control or eliminate hazards that may exist while driving a vehicle
• Apply road positioning skills
• Apply safe heavy vehicle driving strategies
• Apply traffic management skills
• Carry out pre-operational checks and related action on vehicles
• Communicate effectively with others when applying safe heavy vehicle driving behaviours
• Deal effectively with adverse conditions while driving a vehicle
• Evaluate risk and behave accordingly
• Guide and control vehicles
• Implement contingency plans for unexpected events that may occur while driving a vehicle
• Interpret and follow operational instructions when applying safe heavy vehicle driving behaviours
• Manage speed and space while driving a vehicle
• Manoeuvre a vehicle at slow speed
• Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor and anticipate traffic hazards and take appropriate action
• Monitor performance of vehicle and take appropriate action where required
• Monitor traffic and road conditions and react appropriately
• Negotiate complex traffic and road conditions and make appropriate decisions
• Promptly report and/or rectify identified problems, faults or malfunctions that may arise when applying safe heavy vehicle driving behaviours
• Read and interpret instructions, road rules, procedures, jurisdictional requirements, information and signs relevant to safe heavy vehicle driving behaviours
• Work collaboratively with other road users when driving a vehicle
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Applicable regulations and legislation may include:

- Road transport law, for example:
  - legislation and related regulations applicable to driving and using heavy vehicles in relevant state or territory
  - heavy vehicle driver learner permit, driver licence requirements and issue procedures applicable in relevant state or territory
  - occupational health and safety legislation in relevant state or territory
  - equal opportunity legislation in relevant state or territory
  - workplace relations legislation in relevant state or territory

Characteristics of heavy vehicle driving instructors may include information in relation to:

- gender
- age (within regulatory guidelines)
- driving experience
- fluency in English
- educational background and general knowledge
- diverse social and economic backgrounds and attitudes
- effects of prior and current learning
- individual learning styles

High level of heavy vehicle driving competence is defined as:

- ability to consistently carry out heavy vehicle driving tasks across a wide range of simple and complex situations and conditions, including different types of vehicles, weather conditions, road conditions and diverse potential hazards. This also includes the management of attitude, motivation, fatigue, anger and concentration

Road positioning skills are:

- those required to maintain a safe legal position on the road when driving a vehicle. This includes observation, speed management, decision making, hazard perception and response to hazards, buffering from other vehicles, maintaining space when making turns at intersections, maintaining space from other vehicles when stopped, or reducing speed and maintaining space requirements during manoeuvres, such as kerb-side stopping, hill starts, and reversing
Communication may include:

- oral and aural
- written communication
- reading and interpreting maps, street directories and GPS navigation devices
- using own vehicle horn, indicators, brake lights and road positioning
- recognising and responding to signals from other vehicles
- recognising and responding to road signs, traffic signals and other authorised signalling systems
- non-verbal communication with other drivers and motorcycle riders e.g. gestures and nods

Factors that affect learning progress may include:

- effects of previous and current learning
- decision making skills in a range of driving situations
- optimism bias (tendency to view negative incidents such as road accidents as unlikely to happen to them; overestimation of driving ability; and underestimation of accident risk)
- causal attribution (explains that a driver’s actions often depend upon their interpretation of the cause of events, limiting the ability to make objective risk assessments and resulting in a tendency to blame external causes)
- learner characteristics and attitudes
- resources, e.g. time, location, space, people and costs
- vehicle type

Resources may include:

- training materials and publications
- location
- personnel
- dual control vehicle
- OH&S and other workplace resource requirements
- enterprise/industry standard operating procedures
- funding for training facilities, resources and staff

Road users may include:

- pedestrians
- cyclists
- drivers or riders of trams and trains, and motor vehicles, including motorcycles, light vehicles and heavy vehicles

Specific needs may relate to:

- age (within regulatory guidelines)
- disability (within regulatory guidelines)
- language, literacy and numeracy needs
- those requiring refresher training
Driving may be undertaken in/at:  
- a range of heavy vehicle types  
- restricted spaces  
- open roads, e.g. freeways, main and busy roads, country roads and suburban roads

- standards and certification requirements  
- quality assurance procedures  
- emergency procedures  

**EVIDENCE GUIDE**  
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**  
- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:  
  - compliance with appropriate legislative, regulatory and procedural requirements while driving a heavy vehicle  
  - identification of risk factors which might impact on heavy vehicle driving behaviours and implementing appropriate low-risk driving response measures  
  - selection and use of vehicle controls and safety devices to enable safe heavy vehicle driving  

**Context of assessment**  
- Performance is demonstrated consistently over a period
of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment tasks
  - access to an appropriate range of heavy vehicle driving environments and situations

- In both real and simulated environments, access is required to:
  - relevant and appropriate resources and/or heavy vehicles
  - applicable documentation, including heavy vehicle driving procedures, legislation, regulations and safe heavy vehicle driving policies

- Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed

- Access to assessment support must be provided when required

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests, including how to:
  - explain
  - describe
  - interpret
  - convey understanding
- Practical assessment should occur:
  - in an appropriate range of situations in a variety of driving environments
  - in adverse driving conditions
- In all cases where practical assessment is used, it will be combined with targeted questioning to assess the underpinning knowledge
- Assessment method may include consideration of third-party reports and authenticated prior achievements, which include on-road assessment by a qualified person
TLIC3808A  Apply safe motorcycle riding behaviours

Unit Descriptor
This unit involves the high-level safe riding skills and knowledge required by motorcycle riders to enable them to apply safe riding behaviours. This includes higher order skills, such as hazard perception, risk control and safe riding judgement, decision making and multi-tasking. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit is required by motorcycle riding instructors and covers higher order riding skills and knowledge that build upon basic rider licence requirements.

Safe riding behaviours must be able to be applied without supervision. This involves the application of higher order riding skills, such as hazard perception, judgement, decision making, multi-tasking, risk control and safe riding attitudes across a range of motorcycles and riding situations.

Definition of a motorcycle (class R) in this context is a 'two or three wheel motorcycle/motorbike'.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Define and apply safe motorcycle riding behaviours

1.1 Requirements for safe riding are acknowledged, interpreted and applied

1.2 Importance of attitude in abiding by the road rules in relation to level of risk faced by a rider is understood and taken into account in motorcycle riding activities

1.3 Importance of cooperation with other road users in order to ride safely is understood and taken into account in motorcycle riding activities

1.4 Motivation to ride safely is interpreted and described, including values, emotions and personal needs

1.5 Principles of proactive riding, also known as low-risk riding, that keep the rider at a low-level risk are interpreted and applied

1.6 Specific factors that constitute an actual risk of a collision are understood and applied, including options for avoiding a collision; crash avoidance space; variables affecting minimum space; effects of observation, perception and response time; and consequences related to crash avoidance spaces
2 Interpret and apply low-risk riding strategies

2.1 Risk factors contributing to the formation of opinions and beliefs about low-risk riding are understood and applied
2.2 Road safety information that reflects the changing road environment is clarified and taken into account in motorcycle riding activities
2.3 Human psychological and physiological aspects that can influence low-risk riding are acknowledged and taken into account in motorcycle riding activities
2.4 Low-risk riding strategies are understood, interpreted and applied consistently
2.5 Features and benefits of protective clothing are understood and applied

3 Interpret and apply road rules applicable to safe motorcycle riding

3.1 Relevant rules and regulations are identified, interpreted correctly and consistently applied
3.2 Road signs, signals and markings are identified and taken into account in motorcycle riding activities
3.3 Purpose of road rules and traffic safety laws in ensuring safe and efficient regulation of traffic flow is understood and taken into account in motorcycle riding activities

4 Manage collision when riding a motorcycle

4.1 Common contributing collision factors, including age, experience, speed, drugs, alcohol, road conditions, fatigue and time of day are recognised, and appropriate actions are managed
4.2 External factors that could lead to collisions, including speed, space, vision, road conditions, motorcycle condition and environmental conditions are understood and managed
4.3 Internal factors that could lead to collisions, including emotional factors, rider’s own behaviours and rider’s operation at high levels of risk are acknowledged and managed
4.4 Consequences of collisions in relation to relevant traffic laws and physical, financial and psychological costs to the individual and society are understood and managed
4.5 Functions of motorcycle controls are understood and demonstrated
4.6 Corrective actions to be taken after a collision are understood and applied if required

5 Demonstrate and maintain a high level of competence in motorcycle control skills

5.1 Appropriate action is taken to respond to various types of adverse conditions
5.2 Principles of braking are applied at a high level of competence
5.3 Principles of steering and counter-steering are applied at a high level of competence
5.4 Slow speed manoeuvres are carried out at a high level of competence
5.5 Motorcycle is guided and controlled at a high level of competence
5.6 Principles of body weight transfer are applied at a high level of competence

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Australian road law enforcement methodology
- Common external risk factors in collisions or crashes, such as speed, space, vision, road conditions, motorcycle conditions and environmental conditions
- Common internal risk factors in collisions or crashes, such as age, experience, speed, drugs, alcohol, fatigue, time of riding (day or night), attitude, motivation, and beliefs or values
- Consequences of collisions or crashes in relation to physical, financial and psychological costs to individuals and to society
- Critical factors underpinning high-level riding competence
- Low-risk riding principles
- Riding hazards and related low-risk riding techniques
- Established and reviewed laws and penalties in relation to demerit point offences, such as riding while disqualified or under the influence of drugs and alcohol
- Importance of attitude in abiding by the road rules
- Importance of cooperation with other road users
- Importance of space and speed management to avoid a collision
- Importance of vision to avoid collision
- Processes for identifying and responding to hazards
- Purpose and benefits of road rules enforcement for safe motorcycle riding
- Rationale for ongoing development of traffic regulations to meet changing traffic conditions
- Risk management and low-risk riding
- Road safety issues, including fatigue management and effects of drugs, alcohol and medication on riding performance
- Road signs, signals and markings
- Road transport law (state or territory road rules and traffic safety legislation, e.g. rider licensing, motorcycle registration, alcohol and drugs, and motorcycle standards)
- Rules of braking
- Rules of observation
- Rules of steering and counter-steering
- Rules of body weight transfer
- Safe, proactive and responsible motorcycle riding behaviours
- Types of adverse riding conditions commonly encountered during riding activities
• Features and benefits of protective riding apparel
• Legal requirements of protective riding apparel

**Required skills:**
• Adapt appropriately to differences in motorcycles, including their controls and safety devices, and the riding environment
• Apply basic and high-level road skills when riding a motorcycle
• Apply fatigue, attitude, motivation, concentration and anger management knowledge and techniques
• Apply observation skills in the course of motorcycle operations
• Apply precautions and act to minimise, control or eliminate hazards that may exist while riding a motorcycle
• Apply road positioning skills
• Apply safe motorcycle riding strategies
• Apply traffic management skills
• Carry out pre-operational checks and related action on motorcycles
• Communicate effectively with others when applying safe motorcycle riding behaviours
• Deal effectively with adverse conditions while riding a motorcycle
• Evaluate risk and behave accordingly
• Guide and control motorcycles
• Implement contingency plans for unexpected events that may occur while riding a motorcycle
• Interpret and follow operational instructions when applying safe riding behaviours
• Manage speed and space while riding a motorcycle
• Manoeuvre a motorcycle at slow speed
• Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor and anticipate traffic hazards and take appropriate action
• Monitor performance of motorcycle and take appropriate action where required
• Monitor traffic and road conditions and react appropriately
• Negotiate complex traffic and road conditions and make appropriate decisions
• Promptly report and/or rectify identified problems, faults or malfunctions that may arise when applying safe motorcycle riding behaviours
• Read and interpret instructions, road rules, procedures, jurisdictional requirements, information and signs relevant to safe motorcycle riding behaviours
• Work collaboratively with other road users when riding a motorcycle
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Applicable regulations and legislation may include:
- road transport law, for example:
  - legislation and related regulations applicable to driving and using motorcycles in relevant state or territory
  - motorcycle rider learner permit, rider licence requirements and issue procedures applicable in relevant state or territory
  - occupational health and safety legislation in relevant state or territory
  - equal opportunity legislation in relevant state or territory
  - workplace relations legislation in relevant state or territory

Characteristics of motorcycle riding instructors may include information in relation to:
- gender
- age (within regulatory guidelines)
- riding experience
- fluency in English
- educational background and general knowledge
- diverse social and economic backgrounds and attitudes
- effects of prior and current learning
- individual learning styles

High level of motorcycle riding competence is defined as:
- ability to consistently carry out motorcycle riding tasks across a wide range of simple and complex situations and conditions, including different types of motorcycles, weather conditions, road conditions and diverse potential hazards. This also includes the management of attitude, motivation, fatigue, anger and concentration

Road positioning skills are:
- those required to maintain a safe legal position on the road when riding a motorcycle. This includes observation, speed management, decision making, hazard perception and response to hazards, buffering from other vehicles, maintaining space when making turns at intersections, maintaining space from other vehicles when stopped, or reducing speed and maintaining space requirements during manoeuvres, such as kerb-side stopping, hill starts, u-turns and reverse parking
Communication may include:

- oral and aural
- written communication
- reading and interpreting maps, street directories and GPS navigation devices
- using own motorcycle horn, indicators, brake lights and road positioning
- recognising and responding to signals from other vehicles
- recognising and responding to road signs, traffic signals and other authorised signalling systems
- non-verbal communication with other riders/drivers e.g. gestures and nods

Factors that affect learning progress may include:

- effects of previous and current learning
- decision making skills in a range of riding situations
- optimism bias (tendency to view negative incidents such as road accidents as unlikely to happen to them; overestimation of riding ability; and underestimation of accident risk)
- causal attribution (explains that rider’s actions often depend upon their interpretation of the cause of events, limiting the ability to make objective risk assessments and resulting in a tendency to blame external causes)
- learner characteristics and attitudes
- resources, e.g. time, location, space, people and costs
- motorcycle type

Resources may include:

- training materials and publications
- location
- personnel
- OH&S and other workplace resource requirements
- enterprise/industry standard operating procedures
- funding for training facilities, resources and staff

Road users may include:

- pedestrians
- cyclists
- drivers or riders of trams and trains, and motor vehicles, including motorcycles, light vehicles and heavy vehicles

Specific needs may relate to:

- age (within regulatory guidelines)
- disability (within regulatory guidelines)
- language, literacy and numeracy needs
- those requiring refresher training
Riding may be undertaken in/at:
- a range of motorcycle types
- restricted spaces
- open roads, e.g. freeways, main and busy roads, country roads and suburban roads
- controlled or open environments
- a simulated environment
- a range of weather conditions
- time of day

Learning activities may include:
- demonstrations
- explanations
- problem solving
- mentoring
- coaching while riding
- self-paced learning
- assessment with feedback
- combinations of the above

Workplace documents and procedures may include:
- company/enterprise/organisational procedures and policies
- record of riding skills, knowledge and abilities
- standards and certification requirements
- quality assurance procedures
- emergency procedures

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o compliance with appropriate legislative, regulatory and procedural requirements while riding a motorcycle
  o identification of risk factors which might impact on riding behaviours and implementing appropriate low-risk riding response measures
  o selection and use of motorcycle controls and safety devices to ensure safe riding

Context of assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment tasks
  o access to an appropriate range of riding environments and situations

• In both real and simulated environments, access is required to:
  o relevant and appropriate resources and/or motorcycles
  o applicable documentation, including riding procedures, legislation, regulations and safe riding policies

• Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed

• Access to assessment support must be provided when required.

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests, including how to:
  o explain
  o describe
  o interpret
  o convey understanding

• Practical assessment should occur:
  o in an appropriate range of situations in a variety of riding environments
  o in adverse riding conditions

• In all cases where practical assessment is used, it will be combined with targeted questioning to assess the underpinning knowledge

• Assessment method may include consideration of third-party reports and authenticated prior achievements, which include on-road assessment by a qualified person
TLIC3909A Operate and monitor a monorail train

Unit Descriptor
This unit involves the skills and knowledge required to operate and monitor a monorail train in accordance with relevant workplace practices, regulations and codes of practice. This includes planning and identifying the monorail train for operations, operating the train, monitoring the train’s performance during service, and communicating effectively with the Controller and other personnel. Licensing or certification requirements are not applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to operate and monitor a monorail train across a variety of operational contexts.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan and identify a monorail train for operations
1.1 Driving requirement is identified and confirmed from roster, shift-card or other authorised documentation
1.2 Sign-on/log-on procedures at the depot are completed and the monorail train to be operated is correctly identified
1.3 Essential equipment is identified and obtained

2 Operate and monitor monorail train in normal operational mode
2.1 Monorail train is operated within specifications and organisational requirements to meet required schedules and special services
2.2 On-board equipment is confirmed as being serviceable, and is operated in accordance with specifications and organisation requirements
2.3 Warning devices and gauges are monitored and responded to in accordance with organisation requirements
2.4 Operational restrictions established by the organisation and relevant legislation are observed
2.5 Monorail train is stopped in designated and approved locations and within limitations, to permit safe embarkation and alighting of all kinds of passengers
3 Operate monorail train in abnormal situations

3.1 In the event of an abnormal situation occurring, Controller is contacted and their instructions are requested.
3.2 Appropriate mode of operation is selected and implemented when authorised by the Controller.
3.3 All instructions from the Controller are followed.

4 Monitor on-board equipment

4.1 Equipment is monitored to maintain optimum running conditions and identify faults, defects and deficiencies.
4.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of train, including communications with Operations Controller where necessary.
4.3 If instructed by the Controller, faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel.
4.4 Defects are reported and/or recorded.

5 Communicate with Controller

5.1 Regular communication is maintained with the Controller in the course of operation of the monorail train as per workplace procedures and regulatory requirements.
5.2 Controller is advised of operational problems, delays, safety incidents and emergency situations that may arise in the course of operation of the monorail train.
5.3 Information provided by the Controller relevant to the ongoing operation of the monorail train is interpreted and applied to driving activities as per workplace procedures and applicable regulatory requirements.

6 Follow all applicable regulatory requirements

6.1 Regulatory requirements applicable to the operation of the monorail train are accessed and interpreted.
6.2 Relevant regulatory requirements are applied and followed in the course of operation of the monorail train.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Monorail train controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop the train
- Monorail train operating characteristics, capabilities and limitations including all modes of operation
- Procedures for operating and monitoring the monorail train
- Procedures for adjusting controls to maximise efficient and safe running
• Operational instructions
• Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a monorail train
• Procedures for operating and monitoring ancillary equipment on the train
• Monorail train knowledge may include monitoring devices, braking and drive equipment and ancillary systems
• Track knowledge including track limitations, speed limitations, curves and gradients and location of any indicators
• Procedures for identifying equipment defects and assessing for appropriate action
• Typical defects that can occur on a monorail train and related action that should be taken
• Procedures to be followed in the event of an emergency when operating a monorail train
• Procedures for operating communications equipment with required protocol
• Fatigue management knowledge and techniques including causes and effects of fatigue, strategies to manage fatigue, factors which increase fatigue-related accidents, and lifestyles which promote the effective long-term management of fatigue

**Required skills:**
• Communicate effectively with the Controller when operating and monitoring a monorail train
• Operate communication equipment to required protocol
• Read and interpret instructions, procedures, information and signs relevant to the operation and monitoring of a monorail train
• Interpret and follow instructions
• Complete documentation related to the operation and monitoring of a monorail train
• Work collaboratively with others when operating and monitoring a monorail train
• Identify and assess train defects and deficiencies and take appropriate action to report any identified defective equipment as per workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and monitoring a monorail train
• Recognise problems that may arise when operating and monitoring a monorail train and take appropriate action
• Select and use required personal protective equipment
• Operate a monorail train and monitor its performance to facilitate optimum safe operation
• Apply track and road knowledge when driving a monorail train
• Apply fatigue management knowledge and techniques

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all normal weather conditions
Modes of operation include:
- fully automatic
- semi-automatic
- manual

Essential equipment includes:
- monorail procedures and announcements folder
- hand microphone
- keys
- pre-service sheet
- alarm sheet
- portable radio
- hold at station dial
- operator’s chair
- ‘no entry’ signs
- vigilance systems
- traction systems
- fire extinguisher

Abnormal situations may include:
- stoppage between stations
- computer failure
- mechanical failure
- electrical failure

Relevant personnel may include:
- controllers
- rostering supervisors and staff
- other monorail train drivers/supervisors
- supervisors and other operational personnel
- maintenance personnel
- immediate internal or external customers

Depending on the organisation concerned workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information and documents may include:

- relevant national and state or territory transport regulations and codes of practice
- notices in drivers' notice board/box
- train driver roster sheet
- operational instructions, policies and procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - driving monorail train in manual mode to organisational standards
  - operating monorail train in automatic and semi-automatic modes correctly
  - communicating appropriately and effectively with the Controller

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
Provide wheelchair accessible taxi services to passengers with disabilities

Unit Descriptor
This unit involves the skills and knowledge required to operate wheelchair accessible taxis used for the transport of people with disabilities. It includes carrying out pre-operational checks of the vehicle and its ancillary equipment; communicating effectively with passengers; securing passengers and ancillary/mobility equipment; providing appropriate support to passengers during their journey; and manoeuvring the vehicle with due consideration of the passenger’s disability. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit applies to all taxi drivers who are entering the role of drivers of wheelchair accessible taxis. Work involves transferring passengers, and applying both manual loading and unloading with the aid of equipment/appliances. The work involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial vehicle conveying people with disabilities in varying driving contexts. Transporting passengers with disabilities must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Competency Field
C – Driving Vehicle

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Carry out pre-operational checks on vehicles

1.1 The pre-operational checks for the vehicle and its associated ancillary equipment are carried out in accordance with manufacturers requirements, government regulations and workplace policies and procedures

1.2 All faults and defects identified during checks are repaired or reported in accordance with workplace procedures

2 Communicate effectively with passengers

2.1 Appropriate communication methods are selected and used to meet the requirements of passengers with disabilities

2.2 Appropriate and effective verbal and non-verbal communication skills are used including appropriate body language and language style

2.3 Effective listening skills are demonstrated
2.4 Questions are used to gain appropriate information

3 Assist passengers into and out of the vehicle in a manner suited to their disability

3.1 Passenger characteristics are identified and taken into account when determining appropriate assistance into and out of the vehicle
3.2 Compatibility of passenger’s mobility device and vehicle’s loading, anchoring and carrying equipment is assessed in accordance with regulations
3.3 Passengers are assisted into and out of the vehicle, demonstrating compliance with loading regulations and workplace safety requirements
3.4 Passengers and their mobility device/wheelchair are secured safely in accordance with vehicle and equipment specifications and regulations
3.5 Vehicle equipment is operated and stowed in accordance with company procedures and manufacturers instructions
3.6 Ancillary equipment is stowed safely in vehicle following relevant regulations
3.7 Passengers are picked up and set down in a safe and efficient manner, taking into account suitable locations and safe use of equipment
3.8 Relevant OH&S and passenger welfare is considered

4 Drive a vehicle used by passengers with disabilities

4.1 Ongoing support is provided to passengers to maximise their travelling comfort
4.2 The vehicle is driven safely in accordance with the regulations for the class of vehicle involved
4.3 The vehicle is driven in accordance with road and traffic conditions with due consideration to any required precautions related to the disability of the passengers and relevant government regulations
4.4 Signs or indicators are fixed to the vehicle if required
4.5 Documentation/transactions relevant to the provision of the taxi subsidy scheme is completed

5 Plan and organise daily work activities

5.1 Workload is assessed and prioritised
5.2 Daily routine is planned to take into account work schedules and network/communication bookings
5.3 Clarification of requirements of tasks is sought when appropriate
5.4 Achievable time and other performance measures are agreed
5.5 Tasks are completed with variations to plan identified and reported
6 Apply ethical behaviour

6.1 Ethical behaviour is applied that avoids any form of sexual harassment, or physical or mental abuse, or intimidation towards passengers with disabilities

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations and licence requirements of the relevant state/territory road traffic authority including the need to give priority to wheelchair passengers
- Equal opportunity/anti-discrimination legislation
- Relevant OH&S and environmental procedures and regulations
- Procedures and protocols for the provision of wheelchair accessible taxi services to customers
- Customer service policies and procedures
- Typical problems that can occur when providing wheelchair accessible taxi services to customers, and related appropriate action that can be taken to prevent or solve them
- Sources of information and documentation needed when providing wheelchair accessible taxi services to customers
- Characteristics of various disabilities: intellectual/physical, congenital/acquired
- Characteristics of permanent/temporary and multiple disabilities including (singularly or multiple): cerebral palsy, spina bifida, multiple sclerosis, paraplegia, quadriplegia, muscular dystrophy, epilepsy, arthritis, diabetes, asthma, psychological disabilities, visual/hearing impairment, intellectual disabilities
- Various types of mobility aids that cannot be secured safety in wheelchair accessible taxis
- Alternate transport modes if mobility aids cannot be safely secured in a wheelchair accessible taxi vehicle
- Passengers that cannot be seated in or on certain mobility aids whilst in transit
- Etiquette/protocols for interacting with passengers with disabilities
- Vehicle operational checks
- Methods of securing a range of wheelchair/mobility devices and passengers with various disabilities
- Procedures to be followed in the event of a driving emergency
- Taxi transport subsidy scheme bookings and fare concessions
- Vehicle and ancillary equipment controls, instructions and indicators and their use
- Duty of care responsibilities when transporting passengers with disabilities

Required skills:

- Communicate effectively with others when providing wheelchair accessible taxi services to customers
- Read and interpret instructions, procedures, information and signs relevant to the provision of wheelchair accessible taxi services to customers
- Interpret and follow operational instructions and prioritise work
• Complete documentation related to the provision wheelchair accessible taxi services to customers
• Operate electronic equipment to required protocol
• Work collaboratively with others when providing wheelchair accessible taxi services to customers
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Implement contingency plans for unanticipated situations that may occur when providing wheelchair accessible taxi services to customers
• Promptly report and/or rectify any identified problems that may arise when providing wheelchair accessible taxi services to customers, in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Apply relevant codes of practice and legislative requirements
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Assess risks and hazards when assisting passengers with disabilities into and out of the vehicle
• Take precautions to control risk when assisting passengers with disabilities into and out of the taxicab
• Ability to safely use manual handling techniques and to operate loading equipment
• Apply techniques for manoeuvring and driving vehicles transporting passengers with disabilities
• Monitor traffic and road conditions
• Conduct pre-operational checks on vehicle and ancillary equipment and take related action
• Apply fatigue management knowledge and techniques
• Monitor performance of taxicab and its equipment and take appropriate action where required
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Pre-operational checks may include:
- visual check of vehicle and ancillary equipment
- checking compatibility of mobility devices and vehicle loading, anchoring and carrying equipment
- checking and topping up fluid levels
- checking tyre pressure
- checking operation of vehicle lights and indicators
- checking brakes before moving vehicle

Ancillary equipment may include:
- ramps
- hoists

Workplace procedures may include:
- company policies and procedures
- established workplace procedures

Passengers may have a range of disabilities which may involve:
- intellectual/physical disability
- congenital/acquired disability
- permanent/temporary disability

Assistance into and out of the vehicle, picking up, setting down and transporting of passengers may include:
- operations conducted during the day or night
- in all weather conditions
- different terrain and road surfaces

Vehicle handling procedures must include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- reversing a vehicle
- operating the controls, instruments and indicators of the vehicle and the ancillary equipment
- using defensive driving techniques
- managing vehicle blind spots and height restrictions
- managing engine performance and its effect on the environment
Driving hazards may include but are not limited to:

- ‘unstable’ passengers
- wet and iced roads
- road damage
- bridge/tunnel damage
- road works
- oil on road
- animals and objects on road
- road closures for special events such as marches, parades
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas
- foggy conditions

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - exercising all required safety precautions and procedures during loading, unloading and driving operations
  - assisting passengers into and out of the vehicle in accordance with workplace procedures
  - securing passengers for safe transport in accordance with relevant standards and procedures
  - maintaining the comfort and dignity of passengers with disabilities
  - providing customer service and working effectively with others
  - carrying out pre-operational checks on vehicles used by passengers with disabilities
  - identifying driving hazards and using appropriate defensive driving techniques
  - following safe handling procedures for vehicles used by passengers with disabilities
  - recognising and adapting ethical behaviour that avoids any form of sexual harassment, or physical or mental abuse, or intimidation towards passengers with special needs
  - following emergency procedures when
monitoring and maintaining vehicle performance and its effect on the environment

- reporting and/or rectifying any identified vehicle faults or malfunctions in accordance with manufacturers instructions

- applying procedures for taxi subsidy scheme bookings and payments

- completing workplace documentation

- participating in a range of interactions with passengers with disabilities

- following OH&S regulations and legislation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - participation in a range of interactions with passengers with a range of disabilities
  - drive and operate a vehicle used to transport passengers with disabilities in a range of operational situations - this is not to be done in a simulated environment

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
  - practical assessment must occur using a wheelchair accessible taxi or taxi approved by the state regulations
**TLIC407D**  
**Drive heavy rigid vehicle**

**Unit Descriptor**  
This unit involves the skills and knowledge required to drive a heavy rigid vehicle safely including systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance, and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to heavy rigid vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial heavy rigid vehicle across a variety of driving contexts.

**Competency Field**  
C – Driving Vehicle

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Drive the heavy rigid vehicle  

1.1 The heavy rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage

1.3 Engine operation is maintained within the manufacturer's specified torque range and temperature through effective gear selection and smooth transition in gear changes

1.4 Braking system of heavy rigid vehicle is managed and operated to ensure effective control of the vehicle under all conditions

1.5 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.6 The heavy rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning.

1.7 The heavy rigid vehicle is parked, shut down and secured in
accordance with manufacturers specifications, traffic regulations and workplace procedures

1.8 Where required, overwidth and overweight permit applications are undertaken in accordance with relevant regulatory requirements

1.9 Appropriate procedures are followed in the event of a driving emergency

2 Monitor traffic and road conditions

2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment loads and facilities

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle

3.2 Performance and efficiency of vehicle operation is monitored during use

3.3 Defective or irregular performance or malfunctions are reported to the appropriate authority

3.4 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority

• Relevant OH&S and environmental procedures and regulations

• Heavy rigid vehicle controls, instruments and indicators and their use

• Heavy rigid vehicle handling procedures

• Procedures to be followed in the event of a driving emergency

• Engine power management and safe driving strategies

• Efficient driving techniques

• Pre-operational checks carried out on heavy rigid vehicle and related action

• Differences between transmission types

• Principles of operation of air brakes and procedures for their use

• Workplace driving and operational instructions

• Driving hazards and related defensive driving techniques

• Principles of stress management when driving a vehicle
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies and on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

**Required skills:**
- Communicate effectively with others when driving a commercial heavy rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to when the driving of a commercial heavy rigid vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a commercial heavy rigid vehicle
- Work collaboratively with others when driving a commercial heavy rigid vehicle
- Operate electronic communication equipment to required protocol
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when driving a commercial heavy rigid vehicle in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a commercial heavy rigid vehicle
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of the vehicle and its equipment and take appropriate action where required
- Carry out pre-operational checks in the course of work activities
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:

- all heavy rigid vehicles, for example any rigid vehicle with 3 or more axles, including trucks or buses, greater than 8 tonnes GVM

Driving may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
- work site hazards including power and service lines, buildings, structures, facilities, underground services, uneven or unstable ground and recently filled trenches, stationary and moving machinery and equipment, hazardous or dangerous materials, noise, light, energy sources, and obstructions

Factors that can cause traffic delays and diversions may include:
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Documentation/records may include:

- state/territory heavy rigid vehicle driving licence and permit requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)
- relevant standards and certification requirements
- quality assurance procedures

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to heavy rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC4109A Operate self-propelled equipment on track

Unit Descriptor
This unit involves the skills and knowledge required to operate self-propelled equipment on track in accordance with safeworking and regulatory requirements and workplace procedures. It includes performing pre-operational and post-operational checks, operation of the equipment, and the completion of required documentation. It encompasses the operation of all self-propelled equipment, on track including road/rail equipment operated in rail mode. Licensing or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed with some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to operate self-propelled equipment on track as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of self-propelled equipment on track may need to have fulfilled licence or certification requirements for the type of equipment being used.

Competency Field
C – Driving Vehicle

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Perform pre-operational equipment checks
1.1 Basic pre-operational equipment checks are conducted as per manufacturers specifications or local maintenance schedules
1.2 Service books are checked and completed accurately as required
1.3 Deficiencies with equipment are identified and rectified in accordance with workplace procedures
1.4 Relevant persons are notified of problems and/or documentation completed

2 Operate equipment
2.1 Equipment is placed on track and removed from track where applicable
2.2 Equipment is driven on track
2.3 Equipment is set up for work and prepared for travel after work
2.4 Equipment is operated in a safe and efficient manner in accordance with manufacturers instructions and workplace procedures
2.5 Equipment is operated with due regard for prevailing operating conditions to ensure safe working conditions and minimise potential accidents
2.6 Equipment is operated to achieve the outcome and quality of work in accordance with the workplace standards and procedures
2.7 Warning systems are monitored and responded to appropriately during operation to maintain correct functionality of equipment
2.8 Equipment is left stored in appropriate manner and location to ensure security and protection of equipment

3 Perform post-operational equipment procedures
3.1 Post-operational equipment checks are conducted as per manufacturers specifications or local maintenance schedules to identify defects and maintenance requirements
3.2 Deficiencies with equipment are identified and rectified in an appropriate manner to maintain correct functionality of equipment
3.3 Relevant persons are notified of problems and/or documentation is completed in accordance with instructions and the relevant codes of practice

4 Complete documentation
4.1 Service books are checked and completed accurately
4.2 Required documentation is completed in a timely, accurate and complete manner in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant safety, OH&S and environmental procedures and regulations
- Servicing schedules and procedures for pre- and post-operational checks of self-propelled equipment
- Equipment and materials for use when conducting pre- and post-operational checks of self-propelled equipment
- Components of self-propelled equipment and their applications
- Workplace procedures for the operation of self-propelled equipment
- Problems that may occur during the operation of self-propelled equipment, and action that can be taken to report or resolve the problems
- Setting up requirements in preparation for work
• Hazards that may exist when setting up and operating self-propelled equipment on track, and ways of controlling the risks involved
• Types of self-propelled equipment and their applications
• Technical specifications and manuals
• Impact of machine operation on track condition and geometry
• Defects that can occur in self-propelled equipment, and related action that should be taken
• Emergency procedures
• Local authority procedures

**Required skills:**

• Communicate effectively with others when operating self-propelled equipment on track
• Read and interpret instructions, procedures, information and signs relevant to the operation of self-propelled equipment on track
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when operating self-propelled equipment on track
• Promptly report and/or rectify any identified problems, faults or malfunctions when operating self-propelled equipment on track in accordance with regulatory requirements and workplace procedures
• Plan and organise work
• Implement contingency plans for unexpected events when operating self-propelled equipment on track
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment
• Identify, select and use tools and equipment
• Drive self-propelled equipment on track (for which certificated and/or licensed)

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**

• by day or night
• in all weather conditions
Work may be conducted in:

- exposed conditions
- controlled or open environments

Work may involve:

- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, materials and vehicles

Equipment may include:

- basic mechanical/hydraulic self-propelled equipment, including:
  - jacks
  - borers
  - pullers
  - (rail-mounted) lubricators
  - winches
  - tampers
  - rail adjusters
  - ballast scarifiers
  - equipment with multiple functions, including: ballast regulators, cranes, sleeper renewer, gantry, sleeper laying frame, disposal and distribution wagons, and road/rail equipment when operated in rail mode
- complex self-propelled equipment, including:
  - tamper liners
  - track laying machines
  - rail-mounted lubrication vehicles
  - rail planers
  - rail grinders
  - undercutters
  - ballast cleaning machines
  - ballast screening and collection units
  - track geometry recording and detection cars

Liaison may include:

- internal or external personnel from other work areas

Communication equipment/systems may include:

- two-way radios
- radio headsets
- telephones/mobile phones
- agreed audible or hand signal

Information may be provided:

- electronically
- in writing, via forms/documents
- orally, via face-to-face communications
Safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- relevant log or record book
- maintenance notices, records and requests
- local authority regulations and procedures
- technical instructions
- manufacturers or workplace equipment operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- information provided by other workplace personnel
- work orders
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - performing pre- and post-operational equipment checks
  - operating self-propelled equipment on track in travel and work mode

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through activities in an appropriately simulated environment, and/or
  o in an appropriate range of situations in the workplace
TLIC4209A Operate coach/bus

Unit Descriptor
This unit involves the skills and knowledge required to operate a passenger coach/bus safely. It includes maintaining systematic and efficient control of all coach/bus functions; monitoring traffic and road conditions; managing coach/bus condition and performance; and effectively managing hazardous situations. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Operation of a passenger coach/bus is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial coach/bus across a variety of contexts.

The entry requirement for this unit is the attainment of applicable licence from the state regulatory authority to operate a bus/coach.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Operate the coach/bus

1.1 The coach/bus is started, steered, manoeuvred, positioned and stopped in accordance with manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage

1.3 Engine operation is maintained within the manufacturers specified torque range and temperature through effective transmission use

1.4 Braking system of coach/bus is managed and operated to ensure effective control of the coach/bus under all conditions

1.5 Hazards are identified and/or anticipated and avoided or controlled through defensive driving techniques

1.6 The coach/bus is driven in reverse, maintaining visibility and achieving accurate positioning in accordance with workplace procedures

1.7 The coach/bus is parked, shut down and secured in accordance with manufacturers specifications and workplace procedures

1.8 The behaviours displayed by operators towards other road users is appropriately aligned with workplace procedures
2 Monitor and respond to traffic and road conditions

2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities

3 Monitor and maintain coach/bus performance

3.1 Coach/bus performance is maintained through pre-operational inspections and checks of the coach/bus and ancillary equipment

3.2 Performance and efficiency of coach/bus operation is monitored during use

3.3 Defective or irregular performance or malfunctions are repaired or reported to the appropriate authority in accordance with workplace procedures

3.4 Coach/bus records are maintained/updated and information is processed in accordance with workplace procedures

3.5 Vehicle monitoring devices (such as tachographs) are operated in accordance with workplace procedures

4 Operate the coach/bus safely

4.1 Passenger positioning and dispersion is in accordance with manufacturers instructions and workplace procedures

4.2 Bus/coach doors are operated safely for entry and exit from coach/bus in accordance with manufacturers and workplace instructions

4.3 Visual checks are conducted on entry to and exit from bus stops in accordance with workplace instructions

4.4 Vehicle positioning and movement are convenient and safe for passengers embarking and disembarking in accordance with regulatory and workplace instructions

5 Operate bus/coach associated equipment

5.1 All bus/coach associated equipment is operated in accordance with manufacturers and workplace instructions

5.2 Faults with all bus/coach associated equipment are reported according to manufacturers and workplace instructions

5.3 Route destination is clearly displayed on the vehicle as required by workplace instructions

6 Provide customer service to passengers on coach/bus

6.1 Comfort and wellbeing of passengers are in accordance with workplace instructions

6.2 Lost property processing is in accordance with organisational procedures

6.3 Assistance is provided for identified special needs and/or any luggage and ancillary equipment requirements in accordance with workplace instructions
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Relevant state and territory regulations and procedures in relation to bus stops
- Coach/bus controls, instruments and indicators and their use
- Coach/bus handling procedures
- Workplace driving and operational instructions
- Driving hazards and related defensive driving techniques
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on coaches/buses and related action
- Differences between transmission types
- Map reading and road navigation techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:
- Communicate effectively with others when driving a commercial coach or bus
- Read and interpret instructions, procedures, information and signs relevant to the operation of a commercial coach or bus
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of a commercial coach or bus
- Operate electronic communication equipment to required protocol including on-board intercom and communications equipment
- Work collaboratively with others when operating a commercial coach or bus
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when operating a commercial coach or bus in accordance with workplace procedures
- Implement contingency plans for unexpected events that may occur when operating a commercial coach or bus
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a commercial coach or bus
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of coach or bus and its equipment and take appropriate action where required
• Service coach or bus and its equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Type of vehicle includes:**
- all coaches and buses relevant to specific licence classifications

**Operate a passenger coach/bus may be carried out in typical road transport situations pertaining to a coach/bus, including:**
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site
- kerb side bus stops
- within shopping centres
- within railway complexes
- within tourist attractions car parks

**Special needs may include:**
- temporarily physically impaired persons
- visually and hearing impaired persons
- mentally impaired persons
- frail and elderly persons
- school children
Bus/coach associated equipment may include:
- ticket machines
- electronic doors
- manual doors
- toilet units

Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- operating door opening and closing equipment
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- exterior vehicle checks
- internal vehicle checks
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes
- microphone operational
- equipment such as jack, wheel brace, spare tyre
- trailers such as jockey wheel, coupling of trailer

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory coach/bus driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures
- coach/bus manufacturers instructions, specifications and recommended driving procedures, including pre-operational checks of coach/bus
- emergency procedures
- vehicle log book or record book (where required)
Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to coaches/buses
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - undertaking pre-operational checks & vehicle handling procedures
  - implementing responses to changing road conditions
  - applying knowledge of relevant legislation and workplace procedures
  - applying customer service skills in accordance with industry requirements and organisational procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIC507D  Drive heavy combination vehicle

Unit Descriptor
This unit involves the skills and knowledge required to drive a heavy combination vehicle safely including systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance, coupling and uncoupling of trailer, and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted, by or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to heavy combination vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial heavy combination vehicle across a variety of driving contexts.

 Competency Field
C – Driving Vehicle

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Drive the heavy combination vehicle

1.1 The heavy combination vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions
1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage
1.3 Engine operation is maintained within the manufacturer’s specified torque range and temperature through effective gear selection and smooth transition in gear changes
1.4 Braking system of heavy combination vehicle is managed and operated to ensure effective control of the vehicle under all conditions
1.5 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
1.6 The heavy combination vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
1.7 The heavy combination vehicle is parked, uncoupled, shut down and secured in accordance with manufacturers specifications, traffic regulations and workplace procedures

1.8 Where required, overwidth and overweight permit applications are undertaken in accordance with relevant regulatory requirements

1.9 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations

1.10 Appropriate procedures are followed in the event of a driving emergency

2 Monitor traffic and road conditions

2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment loads and facilities

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle

3.2 Prime mover and trailer are aligned and coupled in accordance with manufacturers instructions and workplace procedures

3.3 Coupled vehicle is checked and tested to ensure it is correctly secured and to confirm that it is fully operational

3.4 Performance and efficiency of vehicle operation is monitored during use

3.5 Defective or irregular performance or malfunctions are reported to the appropriate authority

3.6 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Heavy combination vehicle controls, instruments and indicators and their use
- Heavy combination vehicle handling procedures
- Workplace driving and operational instructions
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
• Efficient driving techniques
• Pre-operational checks carried out on heavy combination vehicle and related action
• Differences between transmission types
• Principles of operation of air brakes and procedures for their use
• Driving hazards and related defensive driving techniques
• Map reading and navigation of the vehicle and related action
• Factors which may cause traffic delays and diversions and related action that can be taken by a driver
• Principles of stress management when driving a vehicle
• Causes and effects of fatigue on drivers
• Factors which increase fatigue-related accidents
• Fatigue management strategies including on-road techniques
• Lifestyles which promote the effective long-term management of fatigue

Required skills:
• Communicate effectively with others when driving a heavy combination vehicle
• Read and interpret instructions, procedures, information and signs relevant to the driving of a heavy combination vehicle
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the driving of a heavy combination vehicle
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when driving a heavy combination vehicle
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when driving a heavy combination vehicle in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may arise when driving a heavy combination vehicle
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor and anticipate traffic hazards and take appropriate action
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Apply map reading and road navigation techniques to the operation of a heavy combination vehicle
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of vehicle, its trailers and its equipment and take appropriate action where required
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes: • all heavy combination vehicles that may be driven on public and private roads and work sites

Driving may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road
• while at a depot, base or warehouse
• while at a client's workplace or work site

Vehicle handling procedures may include:
• starting a vehicle
• steering and manoeuvring a vehicle
• accelerating and braking
• positioning and stopping a vehicle
• reversing a vehicle
• operating vehicle controls, instruments and indicators
• using air brakes
• using defensive driving techniques
• managing engine performance

Pre-operational checks may include:
• visual check of vehicle
• checking and topping up of fluid levels
• checks of tyre pressures
• checks of operation of vehicle lights and indicators
• checks of brakes
• checks of coupling equipment
Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
- work site hazards including power and service lines, buildings, structures, facilities, underground services, uneven or unstable ground and recently filled trenches, stationary and moving machinery and equipment, hazardous or dangerous materials, noise, light, energy sources, and obstructions

Factors that can cause traffic delays and diversions may include (examples only):
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory heavy combination vehicle driving licence/permit requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to heavy combination vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIC607C Drive multi-combination vehicle**

**Unit Descriptor**
This unit involves the skills and knowledge required to drive a multi-combination vehicle safely, including systematic and efficient control of all vehicle functions, coupling and uncoupling of dollies, monitoring of traffic and road conditions, management of vehicle condition and performance, and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to multi-combination vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial multi-combination vehicle across a variety of driving contexts.

**Competency Field**
C – Driving Vehicle

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Drive the multi-combination vehicle**

1.1 The multi-combination vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage

1.3 Braking system of multi-combination vehicle is managed and operated to ensure effective control of the vehicle under all conditions

1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.5 The multi-combination vehicle is driven in reverse, maintaining visibility and achieving accurate positioning

1.6 The multi-combination vehicle is parked, shut down, uncoupled and secured according to manufacturers specifications, traffic regulations and workplace procedures
1.7 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations

1.8 Appropriate procedures are followed in the event of a driving emergency

2 Monitor traffic and road conditions

2.1 The most efficient and permissible route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle

3.2 Prime mover, dollies and trailer are aligned and coupled in proper sequence in accordance with manufacturers instructions and workplace procedures

3.3 Coupled vehicle is checked and tested to ensure it is correctly secured and to confirm that it is fully operational

3.4 Performance and efficiency of vehicle operation is monitored during use

3.5 Defective or irregular performance or malfunctions are reported to the appropriate authority

3.6 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Multi-combination vehicle controls, instruments and indicators and their use
- Multi-combination vehicle handling procedures
- Workplace driving and operational instructions
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on multi-combination vehicle and related action
- Differences between transmission types
- Principles of operation of air brakes and procedures for their use
- Driving hazards and related defensive driving techniques
• Map reading and road navigation techniques
• Factors which may cause traffic delays and diversions and related action that can be taken by a driver
• Principles of stress management when driving a vehicle
• Causes and effects of fatigue on drivers
• Factors which increase fatigue-related accidents
• Fatigue management strategies including on-road techniques
• Lifestyles which promote the effective long-term management of fatigue

Required skills:
• Communicate effectively with others when driving a multi-combination vehicle
• Read and interpret instructions, procedures, information and signs relevant to the driving of a multi-combination vehicle
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the driving of a multi-combination vehicle
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when driving a multi-combination vehicle
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when driving a multi-combination vehicle in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when driving a multi-combination vehicle
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a multi-combination vehicle
• Monitor and anticipate traffic hazards and take appropriate action
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of vehicle, its trailers and its equipment and take appropriate action where required
• Service vehicle and its equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Type of vehicle includes:**
- all multi-combination vehicles that may be driven on public and private roads and work sites

**Driving may be carried out in typical road transport situations, including:**
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

**Vehicle handling procedures may include:**
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

**Pre-operational checks may include:**
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes
- checks of coupling equipment

**Minor routine repairs may include:**
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory multi-combination vehicle driving licence/permit requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)
Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to multi-combination vehicles
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the
workplace
**TLIC707C**

**Operate vehicle carrying special loads**

**Unit Descriptor**
This unit involves the skills and knowledge required to drive a vehicle carrying a special load safely including compliance with road traffic authority and other relevant government regulations and company policies; and effective management of hazardous situations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Driving must be carried out in compliance with the licence and permit requirements and regulations of the relevant state/territory roads and traffic authority as well as the specific regulatory and permit requirements pertaining to the special load being carried.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial vehicle carrying a special load across a variety of driving contexts.

**Competency Field**
C – Driving Vehicle

---

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Carry out pre-operational checks**
   - 1.1 The pre-operational checks for the special purpose vehicle and its associated ancillary equipment are carried out in accordance with manufacturers requirements, government regulations and workplace policies
   - 1.2 All faults and defects identified during checks are repaired or reported in accordance with workplace procedures

2. **Drive a vehicle carrying special loads**
   - 2.1 The vehicle is manoeuvred in accordance with the regulations/permit requirements for the class of vehicle involved and the load being carried
   - 2.2 Vehicles carrying explosives or dangerous goods are driven along designated routes in accordance with the relevant codes, relevant government regulations and workplace policies
   - 2.3 The load is transported and the vehicle manoeuvred in accordance with any required precautions relating to unusual/special characteristics of the load and/or relevant government regulations pertaining to the special load including the Australian Dangerous Goods Code and the
Australian Explosives Code

2.4 Signs or indicators are fixed to the vehicle if required
2.5 Appropriate procedures are followed for the load concerned in the event of a driving emergency

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Where applicable, Australian regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including the Australian Dangerous Goods Code and the Australian Explosives Code
- Relevant OH&S and environmental procedures and regulations
- Vehicle controls, instruments and indicators and their use
- Workplace driving and operational instructions
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Map reading and road navigation techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:
- Communicate effectively with others when driving a vehicle designed to carry special loads
- Read and interpret instructions, procedures, information and signs relevant to the driving of a vehicle designed to carry special loads
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a vehicle designed to carry special loads
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when driving a vehicle designed to carry special loads
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when driving a vehicle designed to carry special loads in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when driving a vehicle designed to carry special loads
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a vehicle designed to carry special loads
• Monitor and anticipate traffic hazards and take appropriate action
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of vehicle and its equipment and load and take appropriate action if required
• Service vehicle and its equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:
• all vehicles designed to carry special loads, for example concrete agitator, livestock transporter, armoured car, tanker, refrigerated vehicle, waste vehicle, fresh produce vehicle, car carrier, container carrier, recovery vehicle

Driving may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road
• while at a depot, base or warehouse
• while at a client's workplace or work site
Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Designated routes are:
- those that are determined by permit/regulatory requirements for a specific class of load such as explosives or dangerous goods

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc
- road closures for special events such as marches, parades, etc
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures for drivers of vehicles carrying the specific load concerned
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- procedures/designated routes prescribed by the relevant authority for vehicles carrying the specific loads concerned

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to the class of vehicle
- relevant regulations/permit requirements specific to the load being carried
- Australian regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including the Australian Dangerous Goods Code and the Australian Explosives Code
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant State/Territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIC807C  Drive coach/bus

Unit Descriptor
This unit involves the skills and knowledge required to drive a passenger coach/bus safely including systematic and efficient control of all coach/bus functions; monitoring of traffic and road conditions; management of coach/bus condition and performance; and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to the driving of a commercial coach/bus.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial coach/bus across a variety of driving contexts.

Competency Field
C – Driving Vehicle

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Drive the coach

1.1 The coach/bus is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage

1.3 Engine operation is maintained within the manufacturer's specified torque range and temperature through effective transmission use

1.4 Braking system of coach/bus is managed and operated to ensure effective control of the coach/bus under all conditions

1.5 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.6 The coach/bus is driven in reverse, maintaining visibility and achieving accurate positioning

1.7 The coach/bus is parked, shut down and secured in accordance with manufacturers specifications, traffic regulations and
workplace procedures

1.8 Appropriate procedures are followed in the event of a driving emergency

2 Monitor traffic and road conditions

2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities

3 Monitor and maintain coach/bus performance

3.1 Coach/bus performance is maintained through pre-operational inspections and checks of the coach/bus and ancillary equipment

3.2 Performance and efficiency of coach/bus operation is monitored during use

3.3 Defective or irregular performance or malfunctions are repaired or reported to the appropriate authority

3.4 Coach/bus records are maintained/updated and information is processed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Coach/bus controls, instruments and indicators and their use
- Coach/bus handling procedures
- Workplace driving and operational instructions
- Driving hazards and related defensive driving techniques
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on coaches/buses and related action
- Differences between transmission types
- Map reading and road navigation techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
• Fatigue management strategies including on-road techniques
• Lifestyles which promote the effective long-term management of fatigue

Required skills:
• Communicate effectively with others when driving a commercial coach or bus
• Read and interpret instructions, procedures, information and signs relevant to the driving of a commercial coach or bus
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the driving of a commercial coach or bus
• Operate electronic communication equipment to required protocol including on-board intercom and communications equipment
• Work collaboratively with others when driving a commercial coach or bus
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when driving a commercial coach or bus in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may occur when driving a commercial coach or bus
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a commercial coach or bus
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of coach or bus and its equipment and take appropriate action where required
• Service coach or bus and its equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes: • all coaches and buses relevant to specific licence classifications
Driving may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- operating door opening and closing equipment
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:
- state/territory coach/bus driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures
- coach/bus manufacturers instructions, specifications and recommended driving procedures including pre-operational checks of coach/bus
- emergency procedures
- vehicle log book or record book (where required)
Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to coaches/buses
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
workplace
TLIC907C  Drive taxi cab

Unit Descriptor
This unit involves the skills and knowledge required to drive a taxicab safely including systematic and efficient control of all taxi functions, monitoring of traffic and road conditions, management of taxi condition, and performance and effective management of hazardous situations. Assessment of this unit may be undertaken within a taxi driver licensing examination conducted by, or under the authority of, the relevant state/territory authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to a commercial taxicab.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a taxicab across a variety of driving contexts.

Competency Field
C – Driving Vehicle

ELEMENT

PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Drive the taxi

1.1 The taxi is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage

1.3 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.4 The taxi is driven in reverse, maintaining visibility and achieving accurate positioning

1.5 The taxi is parked, shut down and secured in accordance with manufacturers specifications, traffic regulations and workplace procedures

1.6 Taximeter is used in accordance with government regulations and workplace policy

1.7 Appropriate procedures are followed in the event of a driving emergency
2 Monitor traffic and road conditions

2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations.

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities.

3 Monitor and maintain vehicle performance

3.1 Taxi performance is maintained through pre-operational inspections and checks of the vehicle.

3.2 Taxi is maintained in accordance with state/territory licensing regulations and workplace standards.

3.3 Performance and efficiency of taxi operation is monitored during use.

3.4 Defective or irregular performance or malfunctions are repaired or reported to the appropriate authority in accordance with workplace procedures.

3.5 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic/taxicab control authority
- Relevant OH&S and environmental procedures and regulations
- Taxicab controls, instruments and indicators and their use
- Taxicab handling procedures
- Workplace driving and operational instructions
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Map reading and road navigation techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Driving hazards and related defensive driving techniques
- Taxicab security procedures and precautions
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
• Lifestyles which promote the effective long-term management of fatigue

Required skills:
• Communicate effectively with others when driving a taxicab
• Read and interpret instructions, procedures, information and signs relevant to the driving of a taxicab
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the driving of a taxicab
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when driving a taxicab
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or address any identified problems, security incidents, faults or malfunctions that may arise when driving a taxicab in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events or security incidents when driving a taxicab
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a taxicab
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Monitor performance of taxicab and its equipment and take appropriate action where required
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes: • all taxicabs relevant to specific licence classifications
Driving may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot or base
- while at a customer's workplace or work site

Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory taxicab driving licence/regulatory requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)
Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to taxicabs
- relevant state/territory road rules
- relevant state/territory taxicab control regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at
the registered training organisation, and/or
in an appropriate range of situations in the workplace
Operate a forklift

Unit Descriptor
This unit involves the skills and knowledge required to operate a forklift, including checking forklift condition, driving the forklift to fulfil operational requirements, monitoring site conditions, and monitoring and maintaining forklift performance. Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory OH&S authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Operation of a forklift must be carried out in compliance with the licence requirements and regulations of the relevant state/territory authority.

Operation of a forklift is performed under some supervision, generally within a team environment. It involves the application of routine equipment operation principles and procedures to maintain the safety and operation of a forklift in a variety of operational contexts.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Check forklift condition

1.1 Condition of forklift is checked for compliance with OH&S and workplace requirements for warning devices, manufacturers specifications and the nature of the load shifting task

1.2 Attachments are checked to ensure appropriate adjustment and operation

1.3 Mirrors and seats are adjusted for safe operation by the driver

1.4 Log books are checked and appropriate workplace documentation is completed in accordance with workplace requirements

2 Drive the forklift

2.1 Forklift is started, steered, manoeuvred, positioned and stopped in accordance with regulations and manufacturers instructions

2.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage

2.3 Operational hazards are identified and/or anticipated and avoided or controlled through defensive driving and appropriate hazard control techniques
2.4 Forklift is driven in reverse, maintaining visibility and achieving accurate positioning
2.5 The forklift is parked, shut down and secured in accordance with manufacturers specifications, regulations and workplace procedures

3 Operate a forklift to handle loads
3.1 The lifting task to be undertaken is appropriately planned and the correct lifting truck and attachments are selected
3.2 The load is lifted, carried, lowered and set down in accordance with OH&S legislation, manufacturers specifications and company procedures

4 Monitor site conditions
4.1 When selecting the most efficient route, hazards and traffic flow are identified and appropriate adjustments are made
4.2 Site conditions are assessed to enable safe operations and to ensure no injury to people or damage to property, equipment, loads or facilities occurs

5 Monitor and maintain forklift performance
5.1 Performance and efficiency of vehicle operation is monitored during use
5.2 Defective/irregular performance and malfunctions reported to relevant personnel
5.3 Forklift records are maintained/updated in accordance with workplace procedures and legislative requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant duty of care requirements pertaining to the operation of a forklift
- Relevant OH&S and environmental procedures and regulations
- Workplace operating procedures
- Forklift controls, instruments and indicators and their use
- Forklift handling procedures
- Procedures to be followed in the event of an operational emergency
- Engine power management and safe operating strategies
- Efficient driving techniques
- Operating hazards and related defensive driving and hazard control techniques
- Pre-operative checks carried out on forklift and related action
- Principles of stress management when driving a forklift
- Site layout and obstacles

Required skills:
• Communicate effectively with others when operating a forklift
• Read and interpret instructions, procedures, information and signs relevant to the operation of a forklift
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the operation of a forklift
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when operating a forklift
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when operating a forklift
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a forklift
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
• Monitor performance of forklift and its equipment and take appropriate action where required
• Ensure that a forklift and its equipment are maintained in terms of service schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Types of forklift may include:
• counterbalance trucks
• reach trucks
• pallet trucks
Operations may be carried out in typical forklift operational situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road or worksite
- while at a workplace

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites

Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Loads to be shifted may require:

- special precautions

Loads to be shifted may be:

- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled
- palleted or unpalleted

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Forklift handling procedures may include:

- starting a forklift
- steering and manoeuvring a forklift
- accelerating and braking
- positioning and stopping a forklift
- reversing a forklift
- operating forklift controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of forklift
- checking and topping up of fluid levels
- checks of tyres
- checks of operation of forklift lights and indicators
- checks of brakes
Hazards may include (examples only):
- wet and iced operating surfaces
- oil on operating surface
- faulty brakes
- workplace obstacles and other operational equipment and vehicles
- damaged loads and pallets
- other personnel in work area

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protection equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:
- goods identification numbers and codes, including IMDG markings and HAZCHEM signs
- manifests, bar codes, picking slips, merchandise transfers, stock requisitions, goods and container identification
- Australian Standard 2359 - Industrial Truck Code
- manufacturers specifications for forklift and associated equipment
- operations and service record book or log
- workplace procedures and policies for the operation of forklifts
- supplier and/or client instructions
- ADG Code and material safety data sheets
- regulatory requirements concerning the use of forklifts
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable procedures and codes may include:

- relevant state/territory regulations pertaining to the operation of forklifts
- relevant codes and standards, including Australian Standard 2359 - Industrial Truck Code
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the
workplace
TLID107C  Shift materials safely using manual handling methods

Unit Descriptor
This unit involves the skills and knowledge required to shift loads using manual handling methods, including assessing the risks associated with relocating the load, planning the relocation process and carrying out the relocation in accordance with the plan. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant OH&S regulations concerning the manual lifting and movement of loads.

Work is performed under some supervision generally within a team environment.

Work involves the application of the basic principles for the safe lifting and movement of loads when shifting materials using manual handling methods as part of day-to-day work.

Competency Field
D – Load Handling

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Assess risks arising from the relocation of the load
1.1 Products, goods or materials to be relocated are identified
1.2 Locations for storage are determined and potential routes to be followed are identified
1.3 Effect of load relocation on original load base is predicted
1.4 Points of balance are estimated
1.5 Required clearances are compared to available space and adjustments made
1.6 Effects of moving contents which may be loose, liquid, dangerous or hazardous are considered
1.7 Potential risks in route(s) which may be followed are considered
1.8 Risks to self are identified arising from the required lifting, load carrying, set down or movement of the goods
1.9 Manual handling procedures for lifting, lowering and carrying, pushing and pulling are identified
1.10 Team lifting processes are considered for application
1.11 Appropriate personal protective equipment is worn

2 Plan load relocation
2.1 Relocation of the load is planned consistent with the code of
practice for manual handling

2.2 Process for relocating load is proposed including predicting and planning for potential difficulties

2.3 Proposed process is checked against code of practice and workplace procedures for compliance

3 Relocate load

3.1 Actions for lifting, lowering and carrying, pulling and pushing a load are in accordance with workplace procedures and OH&S requirements

3.2 Applications appropriate for team relocation of load are identified

3.3 Team lifting tasks are coordinated

3.4 Planned process and route are followed

3.5 Relocated materials are set down without damage to goods, personnel or equipment and checked for stability

3.6 Relocation is checked to see that it meets work requirements, with any variance(s) reported

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant OH&S procedures and guidelines concerning the manual lifting and movement of loads

• Risks when manually lifting and handling materials and goods and related precautions to control the risk, including: the load on the spine during lifting; controlled actions on a movement during lifting; rotation and side movement of the spine during lifting; postures and positions during lifting; work layout; the type, weight and position of the load; frequency of shifting operations; distance over which load is to be shifted; and time allowed for the shifting of the load

• Workplace procedures and policies for the handling of furniture and effects

• Housekeeping standards procedures required in the workplace

• Site layout and obstacles

Required skills:

• Communicate effectively with others when manually lifting and handling materials and goods

• Read and interpret instructions, procedures and information relevant to the manual lifting and handling of materials and goods

• Interpret and follow operational instructions and prioritise work

• Work collaboratively with others when manually lifting and handling materials and goods

• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when manually lifting and handling materials and goods in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected situations that may occur when manually lifting and handling materials and goods
• Apply precautions and required action to minimise, control or eliminate risks that may exist when manually lifting and handling materials and goods
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in loads and materials in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The shifting operations may be conducted:

• in a range of work environments
• by day or night

Customers may be:

• internal or external

Workplaces may comprise:

• large, medium or small worksites

Work may be conducted in:

• restricted spaces
• exposed conditions
• controlled or open environments

Materials to be shifted may include:

• goods
• equipment and tools
• cleaning materials
• components and parts of vehicles and equipment such as tyres, batteries, lifting gear, etc.
• materials used in the course of work such as drums of fuel, raw materials, packaging, etc.

Loads to be shifted may be:

• irregularly shaped
• packaged or unpackaged
• labelled or unlabelled
Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Communication in the work area may include:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Information/documents may include:

• goods identification numbers and codes
• manifests, bar codes, goods and container identification
• manufacturers specifications for equipment/tools
• workplace procedures and policies
• supplier and/or client instructions
• material safety data sheets
• codes of practice including the National Standards for Manual Handling and the Industry Safety Code
• relevant legislation, regulations and related documentation
• award, enterprise bargaining agreement, other industrial arrangements
• standards and certification requirements
• quality assurance procedures
• emergency procedures

Applicable regulations and legislation may include:

• relevant state/territory OH&S legislation
• relevant state/territory environmental protection legislation
• workplace relations regulations
• workers compensation regulations
• licence, patent or copyright arrangements
• dangerous goods and air freight regulations
• export/import/quarantine/bond requirements
• marine orders

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  • the underpinning knowledge and skills
  • relevant legislation and workplace procedures
  • other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  • a range of relevant exercises, case studies and other simulated practical and knowledge
assessment, and/or
  o access to an appropriate range of relevant
    operational situations in the workplace

- In both real and simulated environments, access is
  required to:
  o relevant and appropriate materials and/or
    equipment, and/or
  o applicable documentation including
    workplace procedures, regulations, codes of
    practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
  registered training organisation

- As a minimum, assessment of knowledge must be
  conducted through appropriate written/oral tests

- Practical assessment must occur:
  o through appropriately simulated activities at
    the registered training organisation, and/or
  o in an appropriate range of situations in the
    workplace
TLID1107C   Conduct specialised forklift operations

Unit Descriptor
This unit involves the skills and knowledge required to operate a forklift with specialised attachments or all-terrain equipment, including checking attachments and worksite for suitability, selecting the type of forklift and accessories for required load shifting tasks, and shifting load and completing work in accordance with operational requirements. Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory OH&S authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Specialised operation of a forklift must be carried out in compliance with the licence requirements and regulations of the relevant state/territory authority.

Specialised operation of a forklift is performed under some supervision, generally within a team environment. It involves the application of equipment operation principles and procedures to maintain the safety and specialised operation of a forklift in a wide variety of operational contexts.

Competency Field
D – Load Handling

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Check attachments and worksite for suitability
1.1 Suitable work site is selected for operations
1.2 Work area is checked for overhead obstructions and proximity to service delivery lines
1.3 Barriers or warning signs are erected in areas subject to passing traffic
1.4 Attachments and platforms are securely fixed to carriage or tines
1.5 Personnel support platforms are inspected to ensure compliance with the relevant Australian Standard

2 Select type of forklift and accessories for the required workplace task
2.1 Special equipment, accessories or attachments are identified to match load characteristics and work requirements
2.2 Appropriate specialised equipment is selected
2.3 Existing attachments are removed and stored according to workplace procedures
2.4 Specialised equipment is fitted according to manufacturers instructions and workplace procedures
2.5 Designated staff are notified regarding specialist operations

3 Shift load and complete work

3.1 Equipment is operated within safe working limits and to maximise efficiency of operations
3.2 Load is lifted, carried and set down in accordance with workplace and manufacturers procedures and regulatory requirements
3.3 Documentation is completed reporting any damage or faults to goods or equipment
3.4 Specialist equipment and forklift are returned to appropriate storage/parking area

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant duty of care requirements pertaining to the specialised operation of a forklift
- Relevant OH&S and environmental procedures and regulations
- Workplace operating procedures
- Forklift controls, instruments and indicators and their use
- Types of forklift accessories and ancillary equipment, their purposes and procedures for their use
- Handling procedures for forklifts involved in specialised operations
- Procedures to be followed in the event of an operational emergency
- Operating hazards and related defensive driving and hazard control techniques
- Engine power management and safe operating strategies
- Efficient driving techniques
- Pre-operational checks carried out on forklift and accessories and related action
- Site layout and obstacles
- Principles of stress management when driving a forklift

Required skills:
- Communicate effectively with others when conducting specialised forklift operations
- Read and interpret instructions, procedures, information and signs relevant to specialised forklift operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to specialised forklift operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting specialised forklift operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when conducting specialised forklift operations in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may occur when conducting specialised forklift operations
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during specialised forklift operations
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Types of forklift may include: • counterbalance trucks
• reach trucks
• pallet trucks
• container-handling heavy forklifts
• vacuum
• top frame

Specialised forklift operations may be carried out in typical forklift operational situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road or worksite
• while at a workplace

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites
Specialised forklift may be used to assist in a range of workplace tasks, including:

- stock/goods/container handling
- loading and unloading vehicles
- stacking stock and goods
- lifting and moving equipment
- transporting materials and goods in a workplace

Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Loads to be shifted may require:

- special precautions

Specialised forklift operations may involve the use of a range of attachments and accessories, including:

- spikes
- drum carriers
- bale carriers
- tines
- personnel carriers
- high reaching
- pantograph
- jibs
- paper clamps
- hooks
- side lifters

Loads to be shifted may be:

- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled
- palleted or unpalleted
- containerised

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives
| Forklift operational procedures may include: | • starting a forklift (including pre-start checks)  
• steering and manoeuvring a forklift  
• accelerating and braking  
• positioning and stopping a forklift  
• reversing a forklift  
• operating forklift controls, instruments and indicators  
• using defensive driving techniques  
• managing engine performance |
| Pre-operational checks may include but are not limited to: | • visual checking of forklift and its associated accessories and equipment  
• checking and topping up of fluid levels  
• checks of tyres  
• checks of operation of forklift lights and indicators  
• checks of brakes |
| Post-operational checks may include but are not limited to: | • parking in a safe place  
• shutting down forklift  
• lowering all equipment  
• visually checking for faults or damage |
| Hazards may include (examples only): | • wet and iced operating surfaces  
• oil on operating surface  
• faulty brakes  
• workplace obstacles and other operational equipment and vehicles  
• damaged loads and pallets  
• other personnel in work area |
| Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: | • company procedures  
• enterprise procedures  
• organisational procedures  
• established procedures |
| Personal protective equipment may include: | • gloves  
• safety headwear and footwear  
• safety glasses  
• two-way radios  
• high visibility clothing |
Information/documents may include:

- goods identification numbers and codes, including IMDG markings and HAZCHEM signs
- manifests, bar codes, picking slips, merchandise transfers, stock requisitions, goods and container identification
- Australian Standard 2359 - Industrial Truck Code
- manufacturers specifications for forklift and associated accessories and equipment
- operations and service record book or log
- workplace procedures and policies for the operation of forklifts
- supplier and/or client instructions
- material safety data sheets
- regulatory requirements concerning the use of forklifts
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations pertaining to the operation of forklifts
- relevant codes and standards, including Australian Standard 2359 - Industrial Truck Code
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Operate specialised load shifting equipment

Unit Descriptor
This unit involves the skills and knowledge required to operate specialised load shifting equipment in accordance with workplace requirements and relevant regulatory requirements, including planning work for the current working conditions; using controls and equipment operating systems to manage movement of the unit and accessory operations; locating load and identifying load characteristics; moving materials and loads; monitoring and operating controls; and stopping, parking and securing equipment after operation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with codes, regulations, licence and/or permit and workplace requirements relevant to operation of the specialised load shifting equipment concerned. Safety checks and equipment tests are performed under limited supervision.

Work involves the application of regulatory requirements and workplace procedures to the operation of specialised load shifting equipment in the stevedoring, transport, warehousing, distribution and/or storage industries.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan work for the current working conditions
1.1 Traffic flow and work area conditions are constantly assessed and anticipated to allow safe operation to ensure no injury to people, or damage to equipment, loads or facilities
1.2 Characteristics of the load are taken into account to ensure that, where applicable, appropriate attachments are used to transport the load
1.3 Any occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel

2 Use controls and equipment operating systems to manage movement of the unit and accessory operations
2.1 Equipment is prepared and any appropriate attachment fitted
2.2 Gear and operational levers are checked to ensure that they are in the neutral position prior to inserting ignition key and starting engine
2.3 Engine is started in accordance with manufacturers guidelines to bring the engine to speed
2.4 Instruments and gauges are monitored during start-up and operations to ensure that operation is within manufacturers specifications and enterprise safety requirements
2.5 Engine power is managed for efficiency of equipment movement and economy of equipment operations
2.6 Equipment operations are conducted within the manufacturer’s specified torque range
2.7 Any faults or damage to equipment are immediately reported to the appropriate personnel

<table>
<thead>
<tr>
<th>3 Locate load and identify load characteristics</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.1 Load is located and identified according to instructions</td>
</tr>
<tr>
<td>3.2 Loading and unloading plans are followed to ensure efficiency and safety of operations</td>
</tr>
<tr>
<td>3.3 Characteristics of the load are taken into account to ensure that appropriate loading and unloading procedures are followed</td>
</tr>
<tr>
<td>3.4 Hazardous goods are identified and relevant procedures are taken into account when planning and conducting the work</td>
</tr>
<tr>
<td>3.5 Load weight and dimensions are within the capacity of the equipment</td>

</tr>
<tr>
<td>4.3 Materials are moved ensuring no injury to personnel or damage to equipment or goods</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>5 Monitor and operate controls</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.1 Equipment controls are monitored and operated in accordance with manufacturers operating instructions</td>
</tr>
<tr>
<td>5.2 Control systems are understood and acted upon in accordance with statutory authority regulations, manufacturers guidelines and site operating procedures</td>
</tr>
<tr>
<td>5.3 Control faults are identified and reported in accordance with manufacturers instructions and workplace guidelines</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>6 Stop, park and secure equipment</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.1 Equipment is brought to a controlled halt within manufacturers guidelines</td>
</tr>
<tr>
<td>6.2 Equipment is parked without injury to personnel or damage to equipment, loads or facilities in accordance with company procedures</td>
</tr>
<tr>
<td>6.3 Equipment is secured on a flat, even surface and not close to doorways, aisles, access-ways or blind corners and in accordance with securing procedures for the appropriate equipment</td>
</tr>
</tbody>
</table>
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Regulations relevant to the operation of specialised load shifting equipment, including, where relevant, the ADG Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the operation of the specialised load shifting equipment
- Focus of operation of work systems, equipment, management and site operating systems for the operation of the specialised load shifting equipment
- The purpose, characteristics, capabilities, requirements and limitations of the specialised load shifting equipment
- Conveyed materials' potential for toxicity, reactivity, material grade, type and purpose including information from relevant material safety data sheets and ADG Code documentation (where applicable)
- Problems that may occur when operating specialised load shifting equipment and appropriate action that can be taken to resolve the problems
- Operational safety requirements and precautions for the specialised load shifting equipment concerned
- Documentation and record requirements
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles
- Relevant permit and licence requirements

**Required skills:**
- Communicate effectively with others when operating specialised load shifting equipment
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of specialised load shifting equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating specialised load shifting equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when operating specialised load shifting equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when operating specialised load shifting equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of specialised load shifting equipment
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant gear and accessories when operating specialised load shifting equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of specialised load shifting equipment and take appropriate action where required
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- holds on ships
- exposed conditions
- controlled or open environments
- even or uneven surfaces
- wet or dry surfaces

Equipment may include:
- reach stackers
- straddle trucks
- excavators
- front-end loaders (over 10 tonne)
- bulldozers (both in transport and shipping terminals and in the holds of ships)
- straddle carriers
Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- additional gear and equipment
- noise restrictions
- hours of operations
- authorities and permits

Hazards in the work area may include exposure to:

- chemicals and fumes
- dangerous or hazardous substances
- stationary and moving machinery, goods, materials and vehicular traffic
- contamination of, or from, materials being handled
- service lines
- spills, leakages and ruptures
- dust/vapours
- faulty gear/equipment/tools

Consultative processes may involve:

- workplace personnel including supervisors and managers
- equipment manufacturers and suppliers
- site visitors and contractors
- union representatives, industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- phone
- fax
- email
- internet
- electronic data interchange (EDI)
- RF communications
- bar code readers
- oral, aural or signed communications

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- respirators and fume masks
- protective clothing
- high visibility clothing
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace procedures and policies for the operation of the specialised load shifting equipment concerned
- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- manufacturers specifications for equipment/tools
- equipment identification labels, bar codes and serial numbers
- supplier and/or client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes, regulations and licence/permit requirements pertaining to the operation of the specialised load shifting equipment concerned including the ADG Code (where applicable)
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID1307C Move materials mechanically using automated equipment

Unit Descriptor
This unit involves the skills and knowledge required to move materials mechanically using automated equipment such as automatic guided vehicles, tow motors, high level order pickers, conveyor systems, and mechanised pallet movers. This includes selecting appropriate mechanical moving equipment (where relevant), moving materials/goods in accordance with operational requirements, checking condition of materials/goods and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant OH&S regulations concerning the movement of materials mechanically using automated equipment.

Work is performed under limited or minimum supervision. It involves the application of the basic principles and routine procedures for the safe movement of materials mechanically using automated equipment.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Select load moving equipment
1.1 The mechanised handling equipment, the route to be taken and procedures to be used are selected appropriate to the characteristics of the goods
1.2 Dangerous goods and hazardous materials are identified and handled in accordance with codes of practice, OH&S requirements and workplace procedures

2 Move goods
2.1 Goods are moved using the selected materials handling equipment in accordance with occupational health and safety regulations, manufacturers instructions and company procedures
2.2 Problems in the movement of goods and materials using the automated equipment are identified and are reported in accordance with workplace procedures

3 Check goods and complete documentation
3.1 Moved goods are inspected for possible damage during transit/movement and appropriate action is taken
3.2 All required documentation is completed for the tracking of
the moved goods in accordance with company requirements

**REQUIRED KNOWLEDGE AND SKILLS**
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Regulations relevant to the use of automated equipment to move materials mechanically
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the use of automated equipment to move materials mechanically
- Focus of operation of work systems, equipment, management and site operating systems for the use of automated equipment to move materials mechanically
- The purpose, characteristics, capabilities, requirements and limitations of the automated materials moving equipment
- Problems that may occur during the use of automated equipment to move materials mechanically and appropriate action that can be taken to resolve the problems
- Risks when using automated equipment to move materials and related precautions to control the risks
- Documentation and record requirements
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

**Required skills:**
- Communicate effectively with others when using automated equipment to move materials mechanically
- Read and interpret instructions, procedures, information and signs relevant to the use of automated equipment to move materials mechanically
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the use of automated equipment to move materials mechanically
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when using automated equipment to move materials mechanically
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when using automated equipment to move materials mechanically in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of automated equipment and take appropriate action where required
- Ensure servicing of automated equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids (where applicable) and carry out lubrication processes in the course of work activities

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:
- in a range of work environments
- by day or night
- in a range of typical weather conditions

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Mechanised equipment may include a range of goods and materials handling equipment such as:
- automatic guided vehicle
- tow motors
- high level order picker
- conveyor system
- mechanised pallet mover

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- moving and rotating equipment and vehicles

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Communication in the work area may include:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers instructions concerning the use and servicing of automated mechanical equipment
- workplace procedures and policies
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- ADG Code and regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLID1407C Load and unload vehicles carrying special loads

**Unit Descriptor**
This unit involves the skills and knowledge required to load and unload vehicles carrying special loads, including loading and unloading the special load onto and from the vehicle, securing and protecting the vehicle and the load, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the licence and permit requirements and regulations of the relevant state/territory roads and traffic authority as well as the specific code, regulatory and permit requirements pertaining to the special load being carried.

Work is performed under some supervision generally within a team environment. It involves the application of the basic principles, routine procedures and regulatory requirements to the loading and unloading of vehicles designed to carry special loads.

**Competency Field**
D – Load Handling

vehicle and load protection equipment for different loads, vehicles and carriage conditions

2.2 The load is protected in accordance with legal and workplace safety requirements

2.3 The distribution of the load is checked to ensure that it is even, legal and within the safe working capacity of the vehicle

3 Complete documentation

3.1 The loaded vehicle is inspected and checked for security to travel

3.2 All required transportation documentation for the cargo is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state/territory mass and loading regulations and regulations pertaining to the various types of special loads, including Australian Dangerous Goods (ADG) and Australian Explosives Code where applicable
- OH&S procedures and guidelines concerning the lifting and movement of loads
- Characteristics of various types of special loads
- Risks and hazards when loading and unloading various types of special loads and related precautions to control the risk
- Workplace procedures and policies for the loading and unloading of vehicles designed to carry special loads
- Containers and goods coding, IMDG markings and where applicable emergency information panels, including their meaning and implications for loading and unloading processes
- Housekeeping standards procedures required in the workplace
- Methods of securing various types of special loads
- Site layout and obstacles

Required skills:

- Communicate effectively with others when loading and unloading special loads
- Read and interpret instructions, procedures, information and signs relevant to the loading and unloading of special loads
- Identify and interpret containers and goods coding, IMDG markings and where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the loading and unloading of special loads
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when loading and unloading special loads
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when loading and unloading special loads in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may arise when loading and unloading special loads
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the loading and unloading of special loads
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Identify and correctly use equipment required to load and unload the various types of special loads
• Safely use manual handling techniques and to operate manually

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle may include all vehicles designed to carry special loads, for example:
- concrete agitator
- livestock transporter
- armoured car
- tanker
- refrigerated vehicle
- waste vehicle
- fresh produce vehicle
- car carrier
- container carrier
- recovery vehicle
- vehicles carrying dangerous goods or explosives

Loading and unloading operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites
Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Loads to be shifted may be:
- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled
- palleted or unpalleted

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Communication in the work area may include:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Loading operations may be carried out:
- manually
- with the aid of lifting equipment and/or appliances

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Information/documents may include:

- goods identification numbers and codes, including ADG and IMDG markings and HAZCHEM signs
- manifests, bar codes, goods and container identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- National Load Restraint Guide
- Australian Truck Drivers Manual
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
  - Code of Practice for the Safe Transport of Radioactive Substances
  - state/territory legislation covering the safe handling of infectious substances
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to

- The evidence required to demonstrate competency in
demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLID1507D**  
**Identify and label explosives and dangerous goods**

**Unit Descriptor**  
This unit involves the skills and knowledge required to identify and label explosives and dangerous goods, including assessing explosives/dangerous goods; handling explosives/dangerous goods in accordance with regulatory requirements; labelling explosives/dangerous goods in accordance with regulatory requirements; and complying with all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Work must be carried out in compliance with the regulatory requirements of the relevant Australian state/territory authorities concerned with the carriage of explosives and dangerous goods including the current Australian Dangerous Goods and Australian Explosives Codes.

Work is performed under limited or minimum supervision. It involves the application of standard procedures and regulatory requirements for the identification and labelling of explosives and dangerous goods.

**Competency Field**  
D – Load Handling

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Assess explosives/dangerous goods**
   1.1 Load is checked for explosives/dangerous goods in accordance with the relevant codes and government regulations
   1.2 Types of explosives/dangerous goods are identified from labels, DG declarations and placarding in accordance with workplace procedures, and all required action is taken to ensure compliance with relevant government regulations and ADG/Australian Explosives Codes as applicable
   1.3 Hazards posed by load are identified from labels and material safety data sheets (MSDS)

2. **Handle explosives/dangerous goods**
   2.1 Identified explosives/dangerous goods are handled and loaded/unloaded in accordance with regulatory requirements, codes, National Load Restraint Guide, and employer policy
   2.2 Appropriate personal protective equipment is used when handling explosives/dangerous goods in accordance with class, subsidiary risk and MSDS information
   2.3 Handling of different types of load takes into account the
identified hazards posed by the explosives/dangerous goods concerned

2.4 When loading/storing explosives/dangerous goods, segregation procedures are followed according to the class and subsidiary risk information

3 Label explosives/dangerous goods

3.1 All packages/containers are labelled with the class and subsidiary risk in accordance with current ADG/Australian Explosives Codes as applicable

3.2 A dangerous goods declaration is included with manifest and other shipping documents

3.3 Vehicles carrying explosives and/or dangerous goods are placarded in accordance with current ADG/Australian Explosives Codes as applicable

4 Complete documentation

4.1 All required transport documents are completed in accordance with current ADG/Australian Explosives Codes as applicable

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant Australian and state/territory regulations and codes pertaining to the identification and labelling of explosives and dangerous goods including the current ADG and Australian Explosives Codes
• OH&S procedures and guidelines concerning the lifting and movement of loads
• Risks and hazards when loading, unloading and handling explosives and dangerous goods, and related precautions to control the risk
• Workplace procedures and policies for the identification and labelling of explosives and dangerous goods
• Characteristics of explosives and dangerous goods relevant to handling and transport
• Compatibility of various types of explosives and dangerous goods
• Site layout and obstacles
• Housekeeping standards procedures required in the workplace

Required skills:
• Communicate effectively with others when loading, unloading and handling explosives and dangerous goods
• Read and interpret instructions, procedures, information and signs relevant to the loading, unloading and handling of explosives and dangerous goods
• Interpret material safety data sheets, containers and goods coding, markings and other information describing explosives and dangerous goods including, where applicable, emergency information panels for the mode of transport/storage selected
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the loading, unloading and handling of explosives and dangerous goods
• Correctly mark/label explosives and dangerous goods
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when loading, unloading and handling explosives and dangerous goods
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when loading, unloading and handling explosives and dangerous goods in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may arise when loading, unloading and handling explosives and dangerous goods
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the loading, unloading and handling of explosives and dangerous goods
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• in a range of work environments and weather conditions
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments
• a workplace, warehouse or depot
• in a vehicle on the road
• at a client's workplace
Goods/cargo to be identified and classified may:
• require special precautions for handling and storage

Classes of dangerous goods and explosives are:
• as defined in the respective Australian codes

Standard marking and signage for identified explosives and dangerous goods is:
• as required in the respective Australian codes

Personnel in the work area may include:
• workplace personnel
• site visitors
• contractors
• official representatives

Communication in the work area may include:
• phone
• electronic data interchange
• fax
• email
• internet
• radio
• oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Personal protective equipment may include:
• gloves
• safety headwear and footwear
• safety glasses
• two-way radios
• high visibility clothing
Information/documents may include:

- goods identification numbers, codes, markings and signs
- codes of practice including the Australian/International Dangerous Goods Codes and the Australian/International Explosives Codes
- manifests, bar codes, goods and container identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the loading and unloading of vehicles
- supplier and/or client instructions
- material safety data sheets
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- current Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant state/territory environmental protection legislation
- equal opportunity legislation
- workplace relations regulations
- equal employment and affirmative action legislation
- relevant state/territory OH&S legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying explosives and dangerous goods from labels in accordance with regulatory requirements and practices
  - handling explosives and dangerous goods
to regulatory requirements, codes, National Load Restraint Guide and employer policy as appropriate

- locating, interpreting and applying relevant codes and regulations
- identifying the hazards from labels of explosives and dangerous goods
- identifying the personal protective equipment required when handling explosives and dangerous goods
- maintaining workplace records for the explosives and dangerous goods

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID1607D  Load and unload explosives and dangerous goods

Unit Descriptor
This unit involves the skills and knowledge required to load and unload explosives and dangerous goods, including identifying explosives/dangerous goods; loading and unloading explosives/dangerous goods using appropriate equipment; securing and protecting the vehicle load; and checking the vehicle to ensure the load is secure and the vehicle is marked in accordance with regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant Australian and state/territory regulations including the current Australian Dangerous Goods (ADG) Code, the current Australian Explosives Code, and mass and loading regulations.

Work is performed under limited or minimum supervision. It involves the application of the basic principles, routine procedures and specific regulatory requirements to the loading and unloading of explosives and dangerous goods in a range of operational situations.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Prepare to load and unload vehicle
1.1 Explosives and/or dangerous goods are identified and their characteristics taken into account when determining appropriate handling, loading and storage procedures including confirmation that the relevant emergency procedures are being carried out
1.2 Compatibility of explosives and/or dangerous goods is taken into account when assembling and segregating cargo for loading
1.3 Vehicle and/or loading equipment is checked to ensure it is suitable to handle/carry load

2  Load/unload vehicle
2.1 Vehicle is loaded/unloaded in accordance with workplace procedures and the current ADG/Australian Explosives Code as applicable
2.2 The load is segregated according to class and subsidiary risk, and the distribution of the load is checked in accordance with workplace procedures, relevant mass and loading regulations and the current ADG/Australian Explosives Code as
applicable

2.3 Personal protective equipment is used during the loading/unloading operations as required for the type of dangerous goods/explosive concerned

2.4 Emergency procedures are followed in the event of an incident or accident when loading or unloading explosives and/or dangerous goods

2.5 Emergency procedures are followed in the event of a safety incident or accident when loading dangerous goods or explosives

3 Secure and protect vehicle load

3.1 The vehicle load is secured using the correct load restraint and protection equipment for different loads, vehicles and carriage conditions concerned

3.2 The load is protected in accordance with legal and workplace safety requirements

3.3 The distribution of the load is checked to ensure that it is even, legal and within the safe working capacity of the vehicle

3.4 Vehicle is clearly marked/placarded to indicate the carriage of explosives and/or dangerous goods, in accordance with government regulations and company procedures

4 Check the vehicle

4.1 The loaded vehicle is inspected and checked to ensure that it is suitable to carry explosives and/or dangerous goods and the load weight and dimensions are within the vehicle's safe carrying capacity and equipment capability

4.2 The loaded vehicle is checked to ensure that it can be safely parked and secured

4.3 Dangerous goods declaration and all required transportation documentation for the cargo is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian and state/territory regulations and codes pertaining to the identification, handling and marking of explosives and dangerous goods
- Relevant state/territory mass and loading regulations
- OH&S procedures and guidelines concerning the lifting and movement of loads
- Risks and hazards when loading, unloading and handling explosives and dangerous goods, and related precautions to control the risk
- Workplace procedures and policies for the loading and unloading of explosives and dangerous goods
• Characteristics of various classes of explosives and dangerous goods relevant to handling and transport
• Compatibility of various types of explosives and dangerous goods
• Housekeeping standards procedures required in the workplace
• Manual handling techniques and manually-operated load shifting equipment required for the loading, unloading and handling of explosives and dangerous goods
• Methods of securing a load on a vehicle
• Methods of placarding or marking a vehicle carrying explosives/dangerous goods

Required skills:
• Communicate effectively with others when loading, unloading and handling explosives and dangerous goods
• Read and interpret instructions, procedures, information and signs relevant to the loading, unloading and handling of explosives and dangerous goods
• Identify and interpret containers and goods coding, markings and, where applicable, emergency information panels for the mode of transport/storage selected
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Estimate the size, shape and special requirements of loads
• Work collaboratively with others when loading, unloading and handling explosives and dangerous goods
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when loading, unloading and handling explosives and dangerous goods
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the loading, unloading and handling of explosives and dangerous goods
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Use manual handling techniques and operate manually-operated load shifting equipment when loading, unloading and handling explosives and dangerous goods
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  • in a range of work environments and weather conditions
                                   • by day or night

Customers may be:  • internal or external

Workplaces may comprise:  • large, medium or small worksites

Work may be conducted in:  • limited and restricted spaces
                          • exposed conditions
                          • controlled or open environments
                          • a workplace, warehouse or depot
                          • in a vehicle on the road
                          • at a client's workplace

Goods/cargo to be loaded and unloaded may require:  • special precautions for handling and stacking

Classes of dangerous goods and explosives are:  • as defined in the respective Australian codes

Standard placarding, marking and signage for identified explosives and dangerous goods are:  • as required in the respective Australian codes, including HAZCHEM Codes

Personnel in the work area may include:  • workplace personnel
                                        • site visitors
                                        • contractors
                                        • official representatives

Communication in the work area may include:  • phone
                                             • electronic data interchange
                                             • fax
                                             • email
                                             • internet
                                             • radio
                                             • oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:  • company procedures
                                                        • enterprise procedures
                                                        • organisational procedures
                                                        • established procedures
Loading operations may be carried out:

- manually
- with the aid of lifting equipment and/or appliances

Load restraint procedures and equipment are:

- as specified in mass and loading regulations and guidelines and current ADG Code/Australian Explosives Code as applicable

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- goods identification numbers and codes, including current ADG Code and IMDG markings and HAZCHEM signs
- relevant codes of practice, including the Australian Dangerous Goods Code, the Australian Explosives Code, the Industry Safety Code, and National Standards for Manual Handling
- manifests, bar codes, goods and container identification/serial number
- material safety data sheets
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the loading and unloading of vehicles
- supplier and/or client instructions
- National Load Restraint Guide
- Australian Truck Drivers Manual
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- Australian and state/territory mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
  - Code of Practice for the Safe Transport of Radioactive Substances
  - state/territory legislation covering the safe handling of infectious substances
- relevant state/territory environmental protection legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying load characteristics, loading equipment and related practices
  - identifying load label in accordance with identified classification and subsidiary risk information
  - identifying markings/placards for vehicle in accordance with relevant regulatory requirements
  - segregating, distributing and securing load for safe transport in accordance with regulations and current ADG/AEG Code requirements
  - safely loading and unloading explosives and dangerous goods in accordance with
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID1807C  Handle furniture and effects

Unit Descriptor
This unit involves the skills and knowledge required to handle furniture and effects during the course of a removal, including preparing for the removal, moving furniture items in accordance with the removal plan, and loading/unloading the furniture onto/from the removal vehicle. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant industry codes of practice for the handling of furniture and effects.

Work is performed under limited or minimum supervision generally within a team environment. It involves the application of the basic principles and routine procedures to the handling of furniture and effects in a range of furniture removal contexts.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for removal
1.1 Appropriate removals equipment and materials are selected and work areas are organised in consultation with the client upon arrival at the client's premises
1.2 Hazardous items are identified through consultation with client in accordance with workplace procedures
1.3 Protective coverings and drop cloths are placed in packing and traffic areas in accordance with workplace procedures
1.4 Checks are made that the client has prepared specific items for removal as required by workplace policy
1.5 Routes for the lifting and movement of furniture and effects to the vehicle are identified, and floors, pathways and/or stairs are checked to ensure they are free of obstacles and hazards before any goods are handled

2 Move furniture items
2.1 Furniture and effects are selected, lifted, moved and loaded onto the vehicle in accordance with removals documentation, OH&S regulations and workplace procedures
2.2 Special lifting and moving equipment is selected and used in accordance with OH&S regulations and workplace procedures

3 Load vehicle
3.1 Vehicle/container is prepared for the loading process and furniture and effects are stowed and secured in accordance with removals documentation, client's requirements and
workplace procedures
3.2 Furniture and effects are unloaded from vehicle/container and stored in accordance with removals documentation and workplace policy
3.3 All required removals documentation is completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• OH&S procedures and guidelines concerning the lifting and movement of loads
• Risks when handling furniture and effects during a removal and related precautions to control the risk
• Workplace procedures and policies for the handling of furniture and effects
• Specialised lifting equipment and procedures for its use
• Insurance rights and responsibilities
• Housekeeping standards and procedures during a removal
• Methods of securing a load on a removal vehicle

Required skills:
• Communicate effectively with others when handling furniture and effects during removal operations
• Read and interpret instructions, procedures, information and signs relevant to the handling of furniture and effects during removal operations
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the handling of furniture and effects during removal operations
• Work collaboratively with others when handling furniture and effects during removal operations
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when handling furniture and effects during removal operations in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when handling furniture and effects during removal operations
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to furniture or equipment
• Operate and adapt to differences in furniture, equipment and operating environment in accordance with standard operating procedures
• Identify and correctly use equipment required to handle furniture and effects
• Identify dangerous goods and other items that are prohibited carriage during a removal and take appropriate action as per regulatory requirements and standard operating procedures
• Service equipment in terms of maintenance schedule and standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Removal load may include:
• any household and workplace furniture and effects including fridges, freezers, washing machines, bed ends, mattresses and bases, lamp shades, pendulum clocks, carpets, tables and chairs, television sets, stereo and audio equipment

Customers may be:
• internal or external

Operations may be conducted:
• in a range of work environments and weather conditions
• by day or night

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments
• a workplace, warehouse or depot
• in a vehicle on the road
• at a client's home/workplace

Furniture and effects to be handled may:
• require special precautions

Principles of loading a removal vehicle include:
• light over heavy
• glass turned inside
• handles covered
• proper use of hessians and pads on all items
• tightly pack and secure all items
Hazards during the handling of furniture and effects may include:

- lifting injuries
- fire
- vehicle movement during furniture loading/unloading operations
- accident in use of equipment
- being run over by load shifting equipment
- broken glass
- protruding features of furniture
- dangerous goods

Handling operations may be carried out:

- manually
- with the aid of lifting equipment and/or appliance

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety footwear
- safety glasses

Information/documents may include:

- industry codes for furniture removal operations
- removals documentation
- client instructions
- workplace procedures and policies for the handling of furniture and effects during a removal
- manufacturers specifications for equipment/tools
- material safety data sheets where relevant
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory mass and loading regulations
- Australian Dangerous Goods Code and associated regulations
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID1907C  Pack and unpack cartons during a removal

Unit Descriptor
This unit involves the skills and knowledge required to pack and unpack cartons during a removal, including preparing for packing, packing and unpacking cartons, and completing packing/unpacking process. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant industry codes of practice for the packing and unpacking of cartons during a removal.

Work is performed under limited or minimum supervision generally within a team environment. It involves the application of the basic principles and routine procedures to the handling of furniture and effects in a range of furniture removal contexts.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for packing

1.1 Convenient, suitable and unrestricted work area is selected and prepared in consultation with the client for either packing or unpacking

1.2 The items for removal are identified and the order of packing is determined in accordance with removals documentation

1.3 Cartons, protective and other materials are selected and located in an accessible area

1.4 Items ineligible for removal are identified in accordance with industry standards and company policy and appropriate action taken in consultation with client

2 Pack and unpack cartons

2.1 Items for removal are wrapped and packed in accordance with industry standards and company procedures

2.2 Fragile or valuable items are specially wrapped and positioned in accordance with company procedures and industry standards

2.3 Cartons are sealed and labelled in accordance with removals documentation and company procedures

2.4 Cartons are unpacked and goods unwrapped and stored in accordance with removals documentation and company procedures

2.5 Hazardous items are identified and appropriately transported
3 Complete packing/unpacking process

3.1 Used cartons are folded and removed and rubbish disposed of in accordance with company procedures

3.2 All required removals documentation is completed in accordance with company requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- OH&S procedures and guidelines concerning packing and unpacking of furniture and effects
- Risks when packing and unpacking furniture and effects during a removal and related precautions to control the risk
- Workplace procedures and policies for the packing and unpacking of furniture and effects
- Packing techniques for various types of furniture and effects
- Packing materials and tools
- Insurance rights and responsibilities
- Housekeeping standards and procedures during a removal
- Methods of securing a load on a removal vehicle

Required skills:
- Communicate effectively with others when packing and unpacking furniture and effects during a removal
- Read and interpret instructions, procedures and information relevant to the packing and unpacking of furniture and effects during a removal
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the packing and unpacking of furniture and effects during a removal including the completion of labels and packing lists
- Work collaboratively with others when packing and unpacking furniture and effects during a removal
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when packing and unpacking furniture and effects during a removal in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected situations that may arise when packing and unpacking furniture and effects during a removal
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the packing and unpacking of furniture and effects during a removal
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in furniture and effects in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Items to be packed/unpacked during a removal may include, for example:
• crockery
• books
• household effects and furniture
• office effects and furniture
• glassware
• electrical/electronic equipment

Customers may be:
• internal or external

Operations may be conducted:
• in a range of work environments and weather conditions
• by day or night

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments
• a workplace, warehouse or depot
• in a vehicle on the road
• at a client's home/workplace

Furniture and effects to be packed/unpacked may require:
• special precautions

Hazards during the packing and unpacking of cartons may include:
• heavy items
• fragile items
• broken glass/crockery
• dangerous goods

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Personal protective equipment may include:
• gloves
• safety footwear
• safety glasses
Information/documents may include:

- industry codes for furniture removal operations
- removals documentation
- client instructions
- workplace procedures and policies for packing and unpacking of cartons, including identifying, handling, wrapping and packing various types of items
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLID2007C  Care for livestock in transit

**Unit Descriptor**

This unit involves the skills and knowledge required to prepare and care for livestock in transit, including making preparations to transport livestock, caring for and controlling livestock in transit, and using appropriate animal husbandry techniques, as required. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Work must be carried out in compliance with the relevant regulations and industry codes of practice for the care of livestock in transit.

Work is performed under limited or minimum supervision generally within a team environment. It involves the application of the basic principles and routine procedures to the care of livestock during transit.

**Competency Field**

D – Load Handling

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1 Prepare to transport livestock</strong></td>
<td>1.1 Condition, quality and quantity of livestock to be transported is checked prior to transport operation in accordance with client requirements and workplace policy</td>
</tr>
<tr>
<td></td>
<td>1.2 Any poor quality livestock is identified and reported to specified personnel in accordance with workplace policy</td>
</tr>
<tr>
<td></td>
<td>1.3 Feed provisions and other requirements for livestock prior to and during transit are identified and organised</td>
</tr>
<tr>
<td></td>
<td>1.4 Portable stockyards are assembled as required</td>
</tr>
<tr>
<td><strong>2 Care for and control livestock in transit</strong></td>
<td>2.1 Condition of livestock is regularly monitored during loading, transit and unloading and appropriate action is taken in terms of relevant government regulations, workplace policy, and humane and permit requirements</td>
</tr>
<tr>
<td></td>
<td>2.2 Working dogs and appropriate handling equipment are used to aid the handling of livestock during loading and unloading operations in accordance with regulations and workplace procedures</td>
</tr>
<tr>
<td></td>
<td>2.3 Required action is taken for the care and well-being of animals in the event of an accident during transit</td>
</tr>
<tr>
<td></td>
<td>2.4 Distressed stock is handled in an appropriate manner in accordance with government regulations and workplace policies</td>
</tr>
</tbody>
</table>
3 Use animal husbandry techniques

3.1 Symptoms of animal diseases and parasites are identified and appropriate action is taken to control them in terms of relevant government regulations, workplace policy, and humane and permit requirements.

3.2 Prescribed medication is administered to livestock in accordance with veterinary directions and workplace policy.

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant regulations concerning the care for livestock in transit
• OH&S procedures and guidelines concerning the lifting and movement of loads
• Risks when caring for livestock during transit and related precautions to control the risk
• Workplace procedures and policies for the caring for livestock during transit
• Specialised livestock handling equipment and procedures for its use
• Insurance rights and responsibilities
• Housekeeping standards and procedures when caring for livestock during transit
• Methods of securing livestock during transit

Required skills:
• Communicate effectively with others when caring for livestock in transit
• Read and interpret instructions, procedures and information relevant to the care of livestock in transit
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the care of livestock in transit
• Work collaboratively with others when caring for livestock in transit
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when caring for livestock in transit in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events during the care of livestock in transit
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to animals or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify and correctly use equipment required to care for livestock during transit
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Livestock being cared for in transit may include any livestock able to be transported, such as:
- sheep
- cattle
- horses
- goats
- pigs
- chickens

Customers may be:
- internal or external

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments
- a workplace, warehouse or depot
- in a vehicle on the road
- at a client's workplace

Handling operations may be carried out both manually and with the aid of working dogs and livestock handling equipment, including:
- cattle prods
- restraining devices
- portable cattle yards

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear
- safety footwear
Information/documents may include:

- industry codes and government regulations for the care of livestock during transit
- workplace documentation
- client instructions
- workplace procedures and policies for the care of livestock during transit
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- guidelines on livestock husbandry relevant to the care of livestock during transit
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory mass and loading regulations
- Australian and state/territory regulations relevant to the care of livestock during transit
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLID207C Shift a load using manually-operated equipment

Unit Descriptor
This unit involves the skills and knowledge required to shift loads using manually-operated mechanical equipment, including assessing the risks associated with relocating the load, planning the relocation process and carrying out the relocation with the aid of the equipment in accordance with the plan. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant OH&S regulations concerning the shifting and movement of loads using manually-operated equipment.

Work is performed under some supervision generally within a team environment. It involves the application of the basic principles for the safe shifting of loads using manually-operated equipment.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Assess risks arising from the relocation of the load

1.1 Products, goods or materials to be relocated are identified
1.2 Location for storage is determined
1.3 Routes to be followed are identified
1.4 Points of balance are estimated
1.5 Effect of moving contents which may be loose, liquid, dangerous or hazardous are considered
1.6 Potential risks in route(s) which may be followed are considered
1.7 Lifting equipment to minimise potential risks is identified
1.8 Appropriate personal protective equipment is worn

2 Plan load relocation

2.1 Load shifting equipment is selected in accordance with workplace procedures
2.2 Safe procedures for using lifting equipment are identified, including the calculation of Safe Working Load (SWL) and/or Working Load Limit (WLL) for weight of goods to be moved
2.3 Process for relocating load is proposed including predicting and planning for potential difficulties
2.4 Proposed process is checked against relevant code of practice
and workplace procedures for compliance

2.5 Lifting equipment and accessories are checked for safe operation in accordance with manufacturers instructions and workplace procedures

3 Relocate load

3.1 Any unsafe equipment is reported to appropriate personnel in accordance with workplace procedures
3.2 Planned process and route are followed using equipment within necessary range of limitations
3.3 Relocated materials are set down without damage to goods, personnel or equipment and checked for stability
3.4 Relocation is checked to see that it meets work requirements, and any variances are reported
3.5 Equipment is returned to storage area in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant OH&S procedures and guidelines concerning the use of manually-operated equipment to shift loads
• Risks when using manually-operated equipment to shift loads and related precautions to control the risk
• Workplace procedures and policies for the shifting of goods and materials using manually-operated equipment
• Problems that may arise when using manually-operated equipment to shift loads and actions that should be taken to prevent or solve them
• Housekeeping standards procedures required in the workplace
• Site layout and obstacles

Required skills:

• Communicate effectively with others when using manually-operated equipment to shift loads
• Read and interpret instructions, procedures, information and signs relevant to the shifting of loads using manually-operated equipment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Work collaboratively with others when using manually-operated equipment to shift loads
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when using manually-operated equipment to shift loads in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the shifting of loads using manually-operated equipment
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The shifting operations may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Materials to be shifted may include:
• goods
• equipment and tools
• cleaning materials
• components and parts of vehicles and equipment such as tyres, batteries, lifting gear, etc.
• materials used in the course of work such as drums of fuel, raw materials, packaging, etc.

 Loads to be shifted may be:
• irregularly shaped
• packaged or unpackaged
• labelled or unlabelled
• palleted or unpalleted

Hazards in the work area may include exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, goods and materials
| Personnel in the work area may include: | Workplace personnel |
| Communication in the work area may include: | Site visitors |
| Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: | Contractors |
| | Official representatives |
| | Phone |
| | Electronic data interchange |
| | Fax |
| | Email |
| | Internet |
| | Radio |
| | Oral, aural or signed communications |
| Personal protective equipment may include: | Company procedures |
| | Enterprise procedures |
| | Organisational procedures |
| | Established procedures |
| | Gloves |
| | Safety headwear and footwear |
| | Safety glasses |
| | Two-way radios |
| | High visibility clothing |
| Information/documents may include: | Goods identification numbers and codes |
| | Manifests, bar codes, goods and container identification |
| | Manufacturers instructions concerning the use and servicing of manually-operated load shifting equipment |
| | Workplace procedures and policies |
| | Supplier and/or client instructions |
| | Material safety data sheets |
| | Codes of practice including the National Standards for Manual Handling and the Industry Safety Code |
| | Relevant legislation, regulations and related documentation |
| | Award, enterprise bargaining agreement, other industrial arrangements |
| | Standards and certification requirements |
| | Quality assurance procedures |
| | Emergency procedures |
Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- licence, patent or copyright arrangements
- dangerous goods and air freight regulations
- export/import/quarantine/bond requirements
- marine orders

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
0 in an appropriate range of situations in the workplace
TLID2107C  Use specialised bulk transfer equipment (dry)

Unit Descriptor
This unit involves the skills and knowledge required to use specialised bulk transfer equipment for dry materials, including planning the work, transferring the material according to regulatory and operational requirements, monitoring and operating controls, and completing all operations, as required. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant state/territory regulations concerning the use of specialised equipment for the transfer of dry bulk product.

Work is performed under general supervision. It involves the application of basic principles, routine procedures and regulatory requirements to the use of specialised bulk transfer equipment to load and unload dry bulk products.

Competency Field
D – Load Handling

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

ELEMENT  PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Plan work

1.1 Dangerous or hazardous (including regulated waste), or other materials requiring specialised handling are identified and relevant procedures are taken into account when planning the work.

1.2 Traffic flow and work area conditions are assessed and anticipated to ensure safe operation and no injury to people, or damage to equipment, loads, facilities or environment.

1.3 Characteristics of the load are taken into account when selecting method, equipment and, where applicable, appropriate attachments to transfer the load.

1.4 Any potential occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel.

1.5 Bulk transfer of dry materials is planned, taking into account the requirements of the load, transfer method, storage facility and transport mode, load weight and dimensions and the capacity of the equipment.

1.6 Required personal safety equipment, signage, barriers and special precautions are identified in the plan and utilised.

1.7 Procedures to deal with spills, leakages and ruptures are identified.
1.8 Customer requests for variation to agreed operations are actioned within scope of authority or referred to appropriate personnel

2 Transfer material

2.1 Equipment is prepared and any appropriate attachment fitted
2.2 Equipment controls are checked for correct operational status before commencing transfer
2.3 Adjustments are made to process to accommodate special requirements such as temperature control, combustion etc.
2.4 Instruments and gauges are monitored during operations to ensure that operation is consistent with workplace procedures, manufacturers specifications and enterprise schedule and safety requirements
2.5 Speed of operation is managed for safety and efficiency of materials movement and equipment operations
2.6 Any faults or damage to equipment are immediately reported to the appropriate personnel

3 Monitor and operate controls

3.1 Equipment controls are monitored and operated in accordance with manufacturers operating instructions
3.2 Control systems are monitored to ensure that operation is consistent with workplace procedures, manufacturers specifications, workplace schedule, safety requirements and statutory regulations
3.3 Materials are moved ensuring no injury to personnel or damage to equipment or goods
3.4 Faults are identified and reported in accordance with enterprise guidelines

4 Complete operations

4.1 Equipment is shut down within manufacturers guidelines without injury to personnel or damage to equipment, loads or facilities in accordance with enterprise procedures
4.2 Clean up methods for transfer equipment are completed following workplace procedures
4.3 Equipment is secured in accordance with securing procedures for the appropriate equipment
4.4 Workplace documentation is completed and filed following workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian Dangerous Goods Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting dry bulk product
• OH&S procedures and guidelines concerning the use of specialised bulk transfer equipment
• Risks when transferring dry bulk product and related precautions to control the risk
• Workplace procedures and policies for the efficient use of specialised equipment to transfer dry bulk loads
• Housekeeping standards procedures required in the workplace
• Methods of securing a vehicle following transfer of dry bulk product
• Relevant regulatory, permit and licence requirements including ADG Code

**Required skills:**
• Communicate effectively with others when using specialised equipment to transfer dry bulk product
• Read and interpret instructions, procedures, information and signs relevant to the transfer of dry bulk product using specialised equipment
• Identify goods coding, IMDG markings and, where applicable, emergency information panels
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the transfer of dry bulk product using specialised equipment
• Operate electronic communication equipment to required protocol
• Estimate the mass, volume and special requirements of dry bulk products
• Work collaboratively with others when using specialised equipment to transfer dry bulk product
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using specialised equipment to transfer dry bulk product in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when using specialised equipment to transfer dry bulk product
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the transfer of dry bulk product using specialised equipment
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to product or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify and correctly use equipment required to transfer dry bulk product
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Dry bulk product to be transferred may require:
- special precautions

Hazards in the work area may include exposure to:
- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spills, leakages, ruptures
- dust/vapours

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- mask or respirator
- high visibility clothing

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Exposure during work operations may be to:
- corrosive chemicals
- solvents and adhesives
- toxic, explosive and other harmful substances
- movement of equipment, goods, vehicles
Regulatory controls and enterprise procedures may govern requirements for:

- transport
- storage
- volume
- mass
- required controls

Relevant transfer systems may include:

- ducted
- conveyor
- mobile plant
- pipelines
- elevators
- augers

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- management and union representatives
- industrial relations, OH&S specialists, and other maintenance, professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures
Information/documents may include:

- Safe Working Load (SWL) and Working Load Limit (WLL)
- manifests, bar codes, goods and product identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the transfer of dry bulk product
- supplier and/or client instructions
