- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory mass and loading regulations
- Australian regulations relevant to the transfer of dry bulk product
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID2207C  Conduct weighbridge operations

Unit Descriptor
This unit involves the skills and knowledge required to conduct weighbridge operations in accordance with regulatory requirements and workplace procedures, including setting up for weighbridge operations, weighing loaded vehicles, weighing unloaded vehicles, finalising weighbridge operations, and completing required records and documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to weighbridge operations.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures when conducting weighbridge operations in the transport, warehousing, distribution and/or storage industries.

Competency Field
D – Load Handling

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Set up for weighbridge operations

1.1 Weighbridge systems, including equipment, computer and recording arrangements are checked for operational status

1.2 Tests to confirm accuracy of weighbridge operation and related functions are conducted in accordance with workplace procedures, manufacturers instructions and relevant legislation

1.3 Accurate reporting of the results of the inspection and testing is kept in accordance with statutory requirements, workplace policy and industry guidelines

1.4 Faults/discrepancies in weighbridge operation are identified and action is undertaken in accordance with workplace procedures

2 Weigh loaded vehicles

2.1 Vehicles likely to exceed weighbridge weight limit are turned away

2.2 Vehicles are directed onto platform to obtain accurate weight

2.3 Weight of loaded stationary vehicle is registered against vehicle and load identification

2.4 Vehicle and load information is entered into workplace recording system and driver is issued with receipt and/or statement
2.5 Areas of dispute are resolved or forwarded for further action undertaken in accordance with workplace procedures

3 Weigh unloaded vehicles

3.1 Vehicles are directed onto platform to obtain accurate weight
3.2 Weight of unloaded stationary vehicle is registered against vehicle
3.3 Proposed load weight is assessed for conformance to statutory requirements
3.4 Where appropriate, loading operations are commenced in accordance with legal loading weight, customer requirements and workplace procedures with vehicle re-weighed to establish final load weight
3.5 Vehicle and load information is entered into workplace recording system and invoice is issued to driver where appropriate
3.6 Driver signatures on weighbridge documents, invoices or receipts are obtained in accordance with statutory and workplace requirements
3.7 Areas of dispute are resolved or forwarded for further action to be undertaken in accordance with workplace procedures

4 Complete weighbridge operations

4.1 Weighbridge systems, including equipment, computer and recording arrangements are secured or made ready for next shift
4.2 Record of operations is maintained and filed in accordance with workplace procedures and statutory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the conduct of weighbridge operations including Australian Dangerous Goods Code where applicable
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the conduct of weighbridge operations
- Problems that may occur when conducting weighbridge operations and appropriate action that can be taken to resolve the problems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Records and documentation requirements for weighbridge operations
- Classification procedures
- Despatch procedures
- Calculation method and approaches for both metric and imperial systems
- Correct weighing procedures including statutory and workplace requirements
- Emergency response procedures
Site layout

**Required skills:**
- Communicate effectively with others when conducting weighbridge operations
- Read and interpret instructions, procedures and information relevant to the conduct of weighbridge operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the conduct of weighbridge operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting weighbridge operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, errors or malfunctions that may occur when conducting weighbridge operations in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of weighbridge operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Set up and maintain weighbridge equipment
- Identify, select and efficiently and effectively use weighbridge equipment
- Monitor performance of weighbridge equipment

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Work may be conducted:**
- in a range of work environments
- by day or night

**Customers may be:**
- internal or external

**Workplaces may comprise:**
- large, medium or small worksites

**Workplace environment may include:**
- movement of equipment, goods, products, materials and vehicular traffic
Weighbridge operations may be:  
• inclusive of a single operation involving the loading of vehicles and despatch functions

Weighbridge operation may be:  
• electro/mechanical
• electronic
• computerised

Vehicles may include  
• trucks
• articulated road vehicles
• trailers
• wagons

Calibration and/or testing of equipment may be:  
• required prior to and during operations

Hazards in the work area may include exposure to:  
• chemicals and pesticides
• dangerous or hazardous substances
• stationary and moving equipment, parts and materials
• noise, light, energy sources
• electrical equipment
• humidity, air temperature, radiant heat
• faulty equipment

Personal protective equipment may include:  
• gloves
• safety headwear and footwear
• safety glasses
• two-way radios
• protective clothing
• respirators and fume/dust masks
• high visibility clothing

Requirements for work may include:  
• site restrictions and procedures
• use of safety and personal protective equipment
• communications/recording equipment
• authorities and permits
• breakdown procedures
• emergency procedures
Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- existing and potential customers/clients
- drivers
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- workplace procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- operations manuals, job specifications and procedures
- induction documentation
- competency standards and training materials
- manufacturers specifications and instructions for the operation of weighbridge equipment
- material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, workplace bargaining agreement, other industrial arrangements
- OH&S procedures
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to weighbridge operations
- traffic acts and road transport mass and loading regulations
- ADG Code and regulations pertaining to the storage and handling of dangerous and hazardous goods
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian and international standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLID2307C Use specialised liquid bulk gas transfer equipment**

**Unit Descriptor**
This unit involves the skills and knowledge required to use specialised bulk gas transfer equipment including planning the work; transferring the gas according to regulatory and operational requirements; monitoring and operating controls; and completing all operations, as required. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the ADG Code and relevant state/territory regulations concerning the use of specialised equipment for the transfer of liquid bulk gas.

Work is performed under general supervision. It involves the application of basic principles, routine procedures and regulatory requirements to the use of specialised bulk transfer equipment to load and unload liquid bulk gas.

**Competency Field**
D – Load Handling

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

**1 Plan work**

1.1 Gas transfer method is identified for loading and unloading as liquefied or gaseous state

1.2 Precautions are undertaken to eliminate all ignition sources

1.3 Specialised handling requirements for the particular gas are identified and relevant procedures are taken into account when planning the work

1.4 Traffic flow, vehicle positioning and work area conditions are assessed to ensure safe operation and no injury to people, or damage to equipment, loads or facilities

1.5 Characteristics of the gas, transfer and holding method are taken into account when evaluating procedural requirements, special precautions for method, equipment and, where applicable, appropriate attachments to transfer the load

1.6 Any potential occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel

1.7 Gas transfer is planned, taking into account the requirements of the load, transfer method, storage facility and transport mode, load weight, volume and viscosity and the capacity of the equipment

1.8 Load is checked prior to and at the completion of transfer to
ensure ullage and/or maximum permitted capacity complies with ADG Code

1.9 Adjustments are made to process to accommodate special requirements such as temperature control, combustion, etc.

1.10 Required personal protective equipment, signage, barriers and special precautions are identified in the plan and utilised

1.11 Procedures to deal with leakages and ruptures are identified

2 Transfer material

2.1 Equipment is prepared and any appropriate attachment fitted

2.2 Equipment controls are checked for correct operational status before commencing transfer

2.3 Instruments and gauges are monitored during operations to ensure that operation is within manufacturers specifications and enterprise schedule and safety requirements

2.4 Speed of operation is managed for safety and efficiency of materials movement and equipment operations

2.5 Any faults or damage to equipment are immediately reported to the appropriate personnel

3 Monitor and operate controls

3.1 Equipment controls are monitored and operated in accordance with manufacturers operating instructions

3.2 Control systems are monitored in accordance with statutory authority regulations, manufacturers guidelines and site operating procedures

3.3 Gas is transferred ensuring no injury to personnel or damage to equipment or goods

3.4 Faults are identified and reported in accordance with enterprise guidelines

4 Complete operations

4.1 Equipment is shut down within manufacturers guidelines without injury to personnel or damage to equipment, loads or facilities in accordance with enterprise procedures

4.2 Clean up methods for transfer equipment are completed following workplace procedures

4.3 Equipment is secured in accordance with securing procedures for the appropriate equipment

4.4 Workplace documentation is completed and filed following enterprise procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian Dangerous Goods Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting liquid bulk gas
• OH&S procedures and guidelines concerning the use of specialised bulk transfer equipment
• Risks when transferring liquid bulk gas and related precautions to control the risk
• Workplace procedures and policies for the efficient use of specialised equipment to transfer liquid bulk gas
• Housekeeping standards procedures required in the workplace
• Methods of securing a vehicle following transfer of liquid bulk gas
• Relevant permit and licence requirements

Required skills:
• Communicate effectively with others when using specialised equipment to transfer liquid bulk gas
• Read and interpret instructions, procedures, information and signs relevant to the transfer of liquid bulk gas using specialised equipment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the transfer of liquid bulk gas using specialised equipment
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when using specialised equipment to transfer liquid bulk gas
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using specialised equipment to transfer liquid bulk gas in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may arise when using specialised equipment to transfer liquid bulk gas
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the transfer of liquid bulk gas using specialised equipment
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to product or equipment
• Operate and adapt to differences in transfer equipment in accordance with standard operating procedures
• Monitor performance of transfer equipment
• Service transfer equipment in terms of maintenance schedule and standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments • by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • restricted spaces • exposed conditions • controlled or open environments

Liquid bulk gas to be transferred may: • require special precautions

Hazards in the work area may include exposure to: • hazardous or dangerous materials • contamination of, or from, materials being handled • noise, light, energy sources • stationary and moving machinery, parts or components • service lines • spills, leakages, ruptures • dust/vapours

Hazard management is: • consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include: • gloves • safety headwear and footwear • safety glasses • mask or respirator • high visibility clothing

Exposure during work operations may be to: • corrosive chemicals • solvents and adhesives • toxic, explosive and other harmful substances • movement of equipment, goods, vehicles
Regulatory controls and enterprise procedures may govern requirements for:

- transport
- storage
- volume
- mass
- required controls

Ignition sources include:

- naked flames and static sources

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- management and union representatives
- industrial relations, OH&S specialists, and other maintenance, professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures
Information/documents may include:

- Safe Working Load (SWL) and Working Load Limit (WLL)
- manifests, bar codes, goods and product identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the transfer of liquid bulk gas
- goods identification numbers and codes, including ADG and IMDG markings and HAZCHEM signs
- supplier and/or client instructions
- codes of practice including the Australian Dangerous Goods Code, relevant Australian Standards and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures
- material safety data sheets

Applicable regulations and legislation may include:

- state/territory mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- Australian and state/territory regulations related to the transfer of liquid bulk gas
- relevant Australian Standards, including AS 2809.1, AS 2809.3, AS 2931, AS 2430.1, AS 2430.3.4, AS 2430.3.7
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to**
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
demonstrate competency in this unit

requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLID2407C  Use specialised liquid bulk transfer equipment (gravity/pressurised)

Unit Descriptor
This unit involves the skills and knowledge required to use specialised gravity and pressurised liquid bulk transfer equipment including planning the work; transferring the bulk according to regulatory and operational requirements; monitoring and operating controls; and completing all operations, as required. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the ADG Code and relevant state/territory regulations concerning the use of specialised gravity and pressurised equipment for the transfer of liquid bulk product.

Work is performed under general supervision. It involves the application of basic principles, routine procedures and regulatory requirements to the use of specialised gravity and pressurised bulk transfer equipment to load and unload liquid bulk product.

Competency Field
D – Load Handling

ELEMENT
Elements describe the essential outcomes of a unit of competency.

1 Plan work
1.1 Liquid transfer method is identified for loading and unloading as gravity or pressure
1.2 Dangerous or hazardous (including regulated waste) or other materials requiring specialised handling are identified and relevant procedures are taken into account when planning the work
1.3 Precautions are undertaken to eliminate all ignition sources
1.4 Traffic flow, vehicle positioning and work area conditions are assessed to ensure safe operation and no injury to people, or damage to equipment, loads or facilities
1.5 Characteristics of the liquid, transfer and holding method are taken into account when evaluating procedural requirements, special precautions for method, equipment and, where applicable, appropriate attachments to transfer the load
1.6 Potential occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel
1.7 Liquid transfer is planned, taking into account the requirements of the load, transfer method, storage facility and
transport mode, load weight, volume and viscosity and the capacity of the equipment

1.8 Load is checked prior to and at the completion of transfer to ensure ullage and/or maximum permitted capacity complies with ADG Code

1.9 Adjustments are made to process to accommodate special requirements such as temperature control, combustion, etc.

1.10 Required personal protective equipment, signage, barriers and special precautions are identified in the plan and utilised

1.11 Procedures to deal with spills, leakages and ruptures are identified

2 Transfer material

2.1 Equipment is prepared and any appropriate attachments fitted

2.2 Equipment controls are checked for correct operational status before commencing transfer

2.3 Instruments and gauges are monitored during operations to ensure that operation is within manufacturers specifications and workplace schedule and safety requirements

2.4 Speed of operation is managed for safety and efficiency of materials movement and equipment operations

2.5 Faults or damage to equipment are immediately reported to the appropriate personnel

3 Monitor and operate controls

3.1 Equipment controls are monitored and operated in accordance with manufacturers operating instructions

3.2 Control systems are monitored in accordance with statutory authority regulations, manufacturers guidelines and site operating procedures

3.3 Materials are moved ensuring no injury to personnel or damage to equipment or goods

3.4 Faults are identified and reported in accordance with workplace procedures

4 Complete operations

4.1 Equipment is shut down within manufacturers guidelines without injury to personnel or damage to equipment, loads or facilities in accordance with workplace procedures

4.2 Clean up methods for transfer equipment are completed following workplace procedures

4.3 Equipment is secured in accordance with securing procedures for the appropriate equipment

4.4 Workplace documentation is completed and filed following workplace procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian Dangerous Goods Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting liquid bulk product
- OH&S procedures and guidelines concerning the use of specialised liquid bulk transfer equipment
- Risks when transferring liquid bulk product and related precautions to control the risk
- Workplace procedures and policies for the efficient use of specialised gravity and pressurised equipment to transfer liquid bulk product
- Problems, faults or malfunctions that may occur when transferring liquid bulk product using specialised equipment and action that should be taken to prevent or resolve them
- Hazards involved in transferring liquid bulk product using specialised equipment when transferring liquid bulk product and ways and means of controlling the risks involved
- Housekeeping standards procedures required in the workplace
- Methods of securing a vehicle following transfer of liquid bulk product
- Relevant permit and health and safety requirements

Required skills:
- Communicate effectively with others when transferring liquid bulk product using specialised equipment
- Read and interpret instructions, procedures, information and signs relevant to the transfer of liquid bulk product using specialised equipment
- Identify goods coding, IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the transfer of liquid bulk product using specialised equipment
- Operate electronic communication equipment to required protocol
- Estimate the mass, volume and special requirements of liquid bulk product
- Work collaboratively with others when transferring liquid bulk product using specialised equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when transferring liquid bulk product using specialised equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when transferring liquid bulk product using specialised equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the transfer of liquid bulk product using specialised equipment
- Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in transfer equipment in accordance with standard operating procedures
• Identify and correctly use equipment required to transfer liquid bulk product
• Monitor performance of transfer equipment
• Service transfer equipment in terms of maintenance schedule and standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments and weather conditions
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Liquid bulk product to be transferred may require: • special precautions

Hazards in the work area may include exposure to: • hazardous or dangerous materials
• contamination of, or from, materials being handled
• noise, light, energy sources
• stationary and moving machinery, parts or components
• service lines
• spills, leakages, ruptures
• dust/vapours

Hazard management is: • consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- mask or respirator
- high visibility clothing

Exposure during work operations may be to:
- corrosive chemicals
- solvents and adhesives
- toxic, explosive and other harmful substances
- movement of equipment, goods, vehicles

Regulatory controls and enterprise procedures may govern requirements for:
- transport
- storage
- volume
- mass
- required controls

Ignition sources include:
- naked flames and static sources

Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits

Consultative processes may involve:
- other employees and supervisors
- suppliers, potential customers and existing clients
- management and union representatives
- industrial relations, OH&S specialists, and other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Information/documents may include:

- Safe Working Load (SWL) and Working Load Limit (WLL)
- manifests, bar codes, goods and product identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the transfer of liquid bulk product
- goods identification numbers and codes, including ADG and IMDG markings and HAZCHEM signs
- supplier and/or client instructions
- codes of practice including the Australian Dangerous Goods Code, relevant Australian Standards and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements

- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- Australian and state/territory regulations related to the transfer of liquid bulk product
- relevant Australian Standards, including AS 2809.1, AS 2809.2, AS 2931, AS 2430
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLID2707D**  
**Prepare for transport of dangerous goods**

**Unit Descriptor**  
This unit involves the skills and knowledge required to prepare for the transport of dangerous goods, including checking the dangerous goods load; assessing vehicle suitability to transport the intended load; checking emergency procedures and equipment; evaluating documented route plan; and completing required assessment process. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Work must be carried out in compliance with the relevant state/territory regulations concerning the transport of dangerous goods, including the current ADG Code.

Work is performed under general supervision. It involves the application of basic principles, routine procedures and regulatory requirements to the preparation of dangerous goods for transport.

**Competency Field**  
D – Load Handling

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

**ELEMENT**  
**1 Check dangerous goods load**

1.1 Load is compared against transport documentation and discrepancies are noted

1.2 Load is checked to ensure that dangerous goods labels are clearly visible and legible, and that packaged goods are correctly labelled

1.3 Load is checked to ensure containers are not damaged

1.4 Vehicle load is checked for compatibility or, where not compatible, is checked for appropriate segregation in accordance with regulatory requirements

1.5 Load is assessed to ensure that it is stowed and secured in or on vehicles in accordance with the current ADG Code and the National Load Restraint Guide

1.6 Shipping documentation and other relevant documents are located in the cabin in accordance with regulatory requirements

**ELEMENT**  
**2 Assess vehicle suitability to transport intended load**

2.1 Vehicle is assessed for suitability and appropriateness to carry designated dangerous goods including classification, mass and configuration

2.2 Licence and insurance requirements (where relevant) are checked for conformity with the current Australian Code for the Transport of Dangerous Goods by Road and Rail and/or
other applicable regulatory requirements

2.3 Load restraint system(s) is/are checked for serviceability and appropriateness to secure intended load

2.4 Vehicle is checked to ensure that it is correctly and clearly marked/placarded for the load being carried

3 Check emergency procedures and equipment

3.1 Emergency information for each type of transported dangerous good is noted

3.2 Regulatory and workplace procedures for an incident are noted including notification of relevant personnel and authorities and, where appropriate, use of equipment for containment, clean up or recovery

3.3 Personal protective equipment and safety equipment are checked for operational capability and appropriateness to the proposed load

3.4 Emergency information is located in the cabin in accordance with current ADG Code requirements

4 Evaluate documented route plan

4.1 Selected route plan and potential difficulties including regulatory restrictions, traffic flow and conditions, obstacles, road standards and construction activities are assessed

4.2 Regulatory and workplace procedures for driving, parking, loading and unloading are identified including actions for disengaging and/or securing the vehicle

5 Complete documentation

5.1 The load is inspected and checked for security to travel in accordance with relevant regulations/permit requirements and the current ADG Code

5.2 All required documentation for the dangerous goods is completed in accordance with regulatory and workplace requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Current Australian Dangerous Goods Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting dangerous goods
- OH&S procedures and guidelines concerning the transport of dangerous goods
- Risks when transporting dangerous goods and related precautions to control the risk
- Workplace procedures and policies for the preparation of dangerous goods
- Problems that may occur when preparing for the transport of dangerous goods and action that should be taken to prevent or solve them
- Housekeeping standards procedures required in the workplace
- Methods of securing a vehicle following loading of dangerous goods
• Relevant permit and licence requirements

**Required skills:**
• Communicate effectively with others when preparing for the transport of dangerous goods
• Read and interpret instructions, procedures, information and signs relevant to the preparation of dangerous goods for transport
• Identify goods coding, markings and, where applicable, emergency information panels for the mode of transport/storage selected
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the preparation of dangerous goods for transport
• Operate electronic communication equipment to required protocol
• Estimate the mass, volume and special requirements of a load
• Work collaboratively with others when preparing for the transport of dangerous goods
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when preparing for the transport of dangerous goods in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events that may arise when preparing for the transport of dangerous goods
• Recognise the hazards and apply precautions and required action to minimise, control or eliminate hazards that may exist during the preparation of dangerous goods for transport
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify and correctly use equipment required to load dangerous goods
• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• in a range of work environments and weather conditions
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites
Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Vehicle refers to:
- all applicable transportation modes

Hazards in the work area may include exposure to:
- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spills, leakages, ruptures
- dust/vapours

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- mask or respirator
- breathing apparatus
- high visibility clothing

Load restraint systems are:
- as detailed in the National Load Restraint Guide

Preparation of packaged dangerous goods for transport may:
- require special precautions as specified by the manufacturer

Transport documentation may include:
- Initial Emergency Response Guide
- Emergency Procedure Guide
- Material Safety Data Sheet (MSDS)
- descriptions for dangerous goods (i.e. proper shipping name, class and division number, packing group, subsidiary risk(s) if any)
- UN or ID number
Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits

Consultative processes may involve:
- other employees and supervisors
- suppliers, potential customers and existing clients
- management and union representatives
- industrial relations, OH&S specialists, and other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Safety equipment on vehicle may include:
- fire extinguishers
- portable warning devices
- eye wash kit
Information/documents may include:

- current Australian Dangerous Goods Code, relevant Australian Standards and International Standards
- Safe Working Load (SWL) and Working Load Limit (WLL)
- manifests, bar codes, goods and product identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the transfer of product
- goods identification numbers, codes and signs
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures
- manufacturers specifications, instructions and labelling advice for the packaged dangerous goods, including material safety data sheets

Applicable regulations and legislation may include:

- state/territory mass and loading regulations
- current Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - International Air Transport Association (IATA) Dangerous Goods by Air regulations
- Australian and state/territory regulations related to the carriage of dangerous goods
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- relevant Australian and International Standards
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - assessing operational suitability of equipment and vehicles pertinent to dangerous goods transportation
  - estimating weight and dimensions of load and any special requirements
  - applying hierarchy of hazard control
  - maintaining workplace records and documentation including completion of dangerous goods declaration
  - determining (any) required permits
  - identifying hazards and planning work to minimise risks when transporting dangerous goods
  - selecting appropriate equipment and work systems to enable safe, efficient work

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the
workplace
TLID2907C  Prepare articles for delivery

Unit Descriptor
This unit involves the skills and knowledge required to prepare mail articles for delivery, including checking and organising articles for delivery, storing articles for delivery, and maintaining all required records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations for the transport of articles for courier delivery.

Work is performed under indirect supervision. It involves the application of the basic principles and routine procedures to the preparation of articles for delivery.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Check and organise articles for delivery

1.1 Articles are inspected to ensure that they meet all specified criteria

1.2 Articles for delivery are sorted into groups according to specified sorting criteria

1.3 Articles which cannot be delivered due to defects or other mitigating factors are sorted and dealt with in accordance with workplace procedures

1.4 Processing of articles is monitored to ensure a secure and effective workflow

2 Store articles for delivery

2.1 Appropriate manual handling practices are used to shift and sort articles

2.2 Groups of articles for delivery are stored in appropriate areas and clearly identified for delivery type and run

2.3 Security requirements and activities to ensure appropriate access to stored articles are followed in accordance with workplace procedures

3 Maintain records

3.1 Required records and/or notices for registered mail, classified mail, parcels and defective mail articles are completed in accordance with workplace procedures

3.2 Records are stored in accordance with workplace procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state/territory mass and loading regulations
- OH&S procedures and guidelines concerning the preparation of articles for mail delivery
- Risks when preparing articles for delivery and related precautions to control the risk
- Workplace procedures and policies for the preparation of articles for the sorting and storing of mail
- Problems that may arise when preparing articles for delivery and actions that should be taken to prevent or solve them
- Housekeeping standards procedures required in the workplace
- Methods of securing mail articles

Required skills:
- Communicate effectively with others when preparing articles for delivery
- Read and interpret instructions, procedures, information and signs relevant to the preparation of articles for delivery
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the preparation of articles for delivery
- Estimate the size, shape and special delivery requirements of mail articles
- Work collaboratively with others when preparing articles for delivery
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when preparing articles for delivery in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the preparation of articles for delivery
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and correctly use equipment required to sort and store mail
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments and weather conditions
  • by day or night

Customers may be: • internal or external

Operations may be undertaken: • on or off base site

Specified inspection criteria for mail may include: • address details are complete
  • correct postage is paid for the size, weight and type of article
  • the packaging of articles is secure to prevent loss or damage of contents during delivery

Sorting criteria for mail may include: • address and delivery run
  • the type of article or postage delivery paid
  • the priority of delivery
  • workplace procedures/practices

Hazards may include: • vehicular traffic and pedestrians
  • uneven ground, steps, road surfaces
  • dust and vapours
  • hazardous or dangerous materials
  • humidity, air temperature and radiant heat
  • light including UV
  • noise

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
  • company procedures
  • enterprise procedures
  • organisational procedures
  • established procedures

Personal protective equipment may include:
  • gloves
  • safety headwear and footwear
  • sunglasses and UV protection
  • two-way radios
  • high visibility clothing
Consultative processes may involve:

- clients
- other employees and supervisors
- management
- union representatives
- industrial relations, OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- fixed phone
- mobile phone
- fax
- email
- internet
- radio
- oral, aural or signed communications

Information/documents may include:

- operations manuals
- induction documentation
- competency standards and training materials
- manufacturers specifications for relevant equipment
- Dangerous Goods Code, Explosives Code, HAZCHEM codes and other regulations pertaining to the delivery of mail
- workplace procedures and policies for the preparation of mail for delivery
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory roads and traffic authority road rule and licence requirements
- Australian Dangerous Goods Code, Explosives Code, HAZCHEM codes, and other relevant regulations pertaining to the delivery of mail
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID3007C Supervise mobile crane operations

Unit Descriptor
This unit involves the skills and knowledge required to supervise mobile crane operations, including implementing the operational plan for a mobile crane lift, directing operations, supporting crane personnel in their work, and negotiating and resolving site problems on request. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed under general supervision. It involves the application of some judgement and routine principles and procedures to the supervision of mobile crane operations.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Implement operational plan
1.1 Checks are made that customer has fulfilled agreed obligations and required personnel and equipment are on site
1.2 Plan is implemented in accordance with legislative and workplace requirements
1.3 Check is made that hazards have been identified and hazard control strategies implemented

2 Direct operations
2.1 Customer is kept advised of any changes to operation method and any concerns are addressed promptly
2.2 Crane personnel are encouraged to provide input to the operation
2.3 In the event of unanticipated situations, alternative options are developed and discussed with site and crane personnel
2.4 Emergency situations are responded to in line with workplace procedures in a manner that minimises risk to personnel and equipment
2.5 Responsibilities of crane personnel are clarified throughout operation
2.6 Crane personnel are coordinated and directed to ensure safe and efficient operation

3 Support crane
3.1 Assistance with rigging/operating duties is provided as necessary within legislative and site requirements
personnel

3.2 Additional equipment and personnel are arranged as necessary in line with legislative requirements
3.3 Facilities and amenities are arranged as necessary

4 Resolve site problems on request

4.1 Problem is clarified as far as possible prior to site visit to enable prioritising of work
4.2 Problem is assessed through on-site consultation with crane personnel
4.3 Customer's perspective on the problem is sought where relevant
4.4 Decision is made regarding appropriate alternative solutions to the problem, taking into account safety and workplace requirements and customer expectations
4.5 Action to be taken is agreed with crane personnel and customer
4.6 Agreed commitments are met in a timely manner and undertakings of others are followed up to ensure personnel and customer satisfaction with the outcome
4.7 Required workplace records are updated accurately, legibly and promptly

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Prioritising and multi-tasking work
- Workplace procedures concerning the supervision of mobile crane operations at a work site
- Problems that may arise when supervising mobile crane operations and actions that should be taken to prevent or solve them
- Focus of operation of work systems and equipment

Required skills:
- Communicate effectively with others when supervising mobile crane operations
- Read and interpret instructions, procedures, information and signs relevant to the supervision of mobile crane operations
- Interpret and follow operational instructions and prioritise work
- Discuss and negotiate with clients and crew on issues related to the access to the site, setting up of the crane and the lift
• Complete documentation related to the supervision of mobile crane operations
• Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when supervising mobile crane operations
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when supervising mobile crane operations in accordance with regulatory requirements and workplace procedures
• Plan and guide the work of others, including predicting consequences and identifying improvements
• Implement contingency plans for unexpected situations that may occur when supervising mobile crane operations
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the supervision of mobile crane operations
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Ensure the application of fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and direct the use of equipment, processes and procedures
• Operate and adapt to differences in equipment and operating environment in accordance with standard operating procedures
• Ensure the use of required personal protective equipment conforming to industry and OH&S standards
• Ensure the servicing of mobile crane equipment in terms of maintenance schedule and standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• day or night
• in a variety of weather conditions

Environment may include movement of:
• equipment
• goods
• materials
• vehicular traffic

Customers may be:
• internal or external
Mobile crane may be involved in work in a range of industry sectors including:

- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Mobile crane operations being supervised may include:

- set-up
- access requirements
- lift requirements of customer
Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures
Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- material safety data sheets
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- equal opportunity, equal employment opportunity and affirmative action legislation
- Workplace Relations Act(s)

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
o relevant legislation and workplace procedures
o other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID307E  Handle dangerous goods/hazardous substances

Unit Descriptor
This unit involves the skills and knowledge required to handle dangerous goods and hazardous substances, including identifying requirements for working with dangerous goods and/or hazardous substances; confirming site incident procedures; and selecting handling techniques. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit covers anyone working in the transport, warehousing, distribution and storage industries who may handle dangerous goods and/or hazardous substances.

Work must be carried out in compliance with the relevant OH&S regulations concerning the safe handling of dangerous goods and hazardous substances.

Work is performed under general supervision. It involves the application of the codes of practice and established procedures for the safe handling of dangerous goods and hazardous substances.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify requirements for working with dangerous goods and/or hazardous substances
1.1 Dangerous goods and/or hazardous substances are identified from information including class labels, manifests and other documentation
1.2 Storage requirements for hazardous substances and/or dangerous goods are identified and applied
1.3 Legislative requirements for hazardous substances and/or dangerous goods are known and used to plan work activities
1.4 Handling procedures for different classes and characteristics of goods are observed
1.5 Confirmation is sought from relevant personnel where dangerous goods or hazardous materials do not appear to be appropriately marked

2 Confirm site incident procedures
2.1 Incident reporting processes are identified
2.2 Emergency equipment is located and checked according to workplace procedures and statutory regulations
2.3 Emergency procedures are identified and confirmed

3 Select handling
3.1 Load handling and shifting procedures are selected in
**techniques** accordance with identified requirements for particular goods

3.2 Handling equipment is checked for conformity with workplace requirements and manufacturers guidelines

3.3 Where relevant, suitable signage is checked for compliance with workplace procedures

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- All relevant regulations and codes concerning the handling of dangerous goods and hazardous substances
- Application of relevant aspects of current Australian Dangerous Goods Code and relevant Australian Standards
- Permit and licence requirements
- Workplace procedures for handling and storing dangerous goods/hazardous substances
- Problems that may arise during the handling of dangerous goods and hazardous substances and actions that should be taken to prevent or solve them
- Risks when handling dangerous goods and hazardous substances and related precautions to control the risk
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Housekeeping standards procedures required in the workplace

**Required skills:**

- Communicate effectively with others when handling dangerous goods and hazardous substances
- Read and interpret instructions, procedures, regulations, information and signs relevant to the handling of dangerous goods and hazardous substances
- Identify containers and goods coding, markings and, where applicable, emergency information panels for the mode of transport storage selected
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when handling dangerous goods and hazardous substances
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when handling dangerous goods and hazardous substances in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unanticipated situations that may arise when handling dangerous goods and hazardous substances
• Recognise hazards and apply precautions and required action to minimise, control or eliminate hazards that may exist during the handling of dangerous goods and hazardous substances
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The dangerous goods may be handled in a range of work environments by day or night and may be:
• for short-term storage
• for long-term storage
• in transit

Customers may be:
• internal or external

Workplace environment may include:
• movement of equipment
• movement of goods
• materials and vehicular traffic

Requirements for work may include:
• site restrictions and procedures
• use of safety and personal protective equipment
• communications equipment
• specialised lifting and/or handling equipment
• incident breakdown procedures
• authorities and permits
• hours of operations
• noise restrictions
• additional gear and equipment
• segmentation procedures
• emergency procedures, including response to spillage/leaks, evacuation and firefighting
Hazards may include:

- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spills, leakages, ruptures
- fire or ignition
- dust/vapours

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- representatives of regulatory authorities with jurisdiction over OH&S, dangerous goods and hazardous substances
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Identification of goods may be from:

- material safety data sheets
- packaging labels
- manifests
- stock lists
- HAZCHEM interpretative advice

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- mask and respirator
- protective clothing
- breathing apparatus

Information/documents may include:

- goods identification numbers and codes
- manifests, stock lists, packaging labels, bar codes, stock lists
- goods and container identification
- workplace procedures and policies concerning the handling of dangerous goods and hazardous substances
- supplier and/or client instructions
- material safety data sheets (MSDS)
- current Australian Dangerous Goods Code
- HAZCHEM interpretative advice
- relevant legislation, codes, regulations and related documentation concerning the handling of dangerous goods and hazardous substances
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures pertaining to dangerous goods and hazardous substances
Applicable regulations and legislation may include:

- relevant Australian and state/territory regulations relating to the handling of dangerous goods and hazardous substances
- current Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- all relevant Australian Standards
- relevant state/territory OH&S legislation
- workplace relations regulations
- equal employment opportunity and affirmative action legislation
- equal opportunity legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying dangerous goods/hazardous substances (from labels, IMDG markings, HAZCHEM signs and other relevant identification criteria)
  - identifying and selecting the safely requirements for handling dangerous goods/hazardous substances
  - maintaining workplace records and documentation
  - determining (any) required permits
  - identifying job and site hazards and planning work to minimise risks
  - selecting appropriate equipment and work systems including personal protection equipment
  - estimating weight and dimensions of load
and any special requirements
• identifying and assessing handling and storage precautions and requirements for dangerous goods/hazardous substances

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLID3107C Rig load

Unit Descriptor
This unit involves the skills and knowledge required to prepare and rig all types of loads in preparation for lifting by a crane, including preparing for the transfer of a load, assessing lifting requirements, securing a load, and detaching a load. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to the rigging of loads during mobile crane operations.

Work is performed with general supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the rigging of loads during mobile crane operations in a variety of operational contexts.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for transfer of load
1.1 Working area is prepared and maintained in accordance with national standards and safety codes and workplace operating procedures
1.2 Unsafe work practices and/or faulty equipment are reported in accordance with workplace procedures
1.3 Correct personal protective equipment is identified and worn

2 Assess lifting requirements
2.1 Work operations plan is examined and requirements for the lift identified including job method and sequence, control measures and safety procedures
2.2 Coordination requirements with other site personnel are confirmed
2.3 The mass, dimensions and centre of gravity of the load are determined
2.4 Appropriate lifting gear/equipment/packing, including slings, ropes, shackles, eye bolts, spreaders etc. is selected (from safety charts and SWL/WLL tags), assembled and checked for serviceability
2.5 Damaged or worn items are tagged, rejected and reported to appropriate personnel for follow-up action
3 Secure load

3.1 Lifting/anchorage points are correctly identified
3.2 Lifting gear/equipment/packing is connected to the load, and load is secured to lifting device in accordance with workplace and manufacturers specifications, guidelines and regulatory requirements
3.3 Load is lifted and suspended off the lifting plane and checked to ensure it is appropriately rigged and secured
3.4 Corrective action is undertaken where preliminary lift assessment reveals unacceptable operational situation
3.5 Tag lines are fixed to load in accordance with work operation plan and/or, in consultation with other personnel, where required due to wind conditions and site hazards/obstacles

4 Detach load

4.1 Slinging attachments are released from load ensuring no injury to personnel or damage to workplace operating procedures
4.2 Damage to load/site is identified and reported in accordance with workplace procedures
4.3 Lifting gear/equipment/packing is maintained and stored in accordance with workplace and manufacturers specifications, guidelines and regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to rigging of loads during mobile crane operations
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Requirements for Safe Working Load (SWL) or Working Load Limit (WLL)
- Prioritising and multi-tasking work
- Workplace procedures concerning the rigging of loads during mobile crane operations
- Problems that may arise when rigging a load during mobile crane operations and actions that should be taken to prevent or solve them
- Focus of operation of work systems and equipment

Required skills:

- Communicate effectively with others when rigging a load during mobile crane operations
- Read and interpret instructions, procedures, information and signs relevant to the rigging of a load during mobile crane operations
- Interpret and follow operational instructions and prioritise work
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when rigging a load during mobile crane operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when rigging a load during mobile crane operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected situations that may arise when rigging a load during mobile crane operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the rigging of a load as part of mobile crane operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and correctly use equipment, processes and procedures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor condition and performance of gear and equipment and take appropriate action where required
- Service gear and equipment in terms of maintenance schedule and standard operating procedures

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include movement of:
- equipment
- goods
- materials
- vehicular traffic

Customers may be:
- internal or external
Mobile crane may be involved in work in a range of industry sectors including:

- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Loads to be shifted are:

- rigged and secured in accordance with workplace and regulatory standards/codes of practice
Requirements for access and/or lift may include:
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures
Documentation/records may include:

- operations manuals including load charts and crane and rigging manuals
- Safe Working Load (SWL) and Working Load Limit (WLL)
- lifting gear safety charts
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- material safety data sheets
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID3207C  Plan and conduct specialised lift

Unit Descriptor
This unit involves the skills and knowledge required to plan and conduct a specialised lift by a mobile crane (excluding demolition work). It involves a lift which may be specialised in terms of job and equipment requirements, the qualities of the load, or the critical aspects of the location(s) of the lift. It includes inspecting the site, planning the lift, setting up the lift, working effectively in a team, lifting and moving the load, and following up on the job. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to specialised mobile crane operations.

Work is performed under general supervision. It involves the application of some judgement and routine principles and procedures to the planning and conduct of specialised lifts in a variety of operational contexts.

Competency Field
D – Load Handling

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Inspect site
1.1 Site is inspected as required with other relevant personnel to assess job requirements
1.2 All necessary parameters are measured to ensure accuracy of calculations
1.3 Hazards are identified through inspection of site and load
1.4 Additional information regarding load and possible hazards is sought from customer and expert personnel
1.5 Special site requirements are identified

2 Plan the lift
2.1 Operation plan is developed in consultation with other relevant personnel to include hazard prevention/control measures in line with workplace procedures, applicable Australian standards and codes of practice
2.2 Where required, approval to carry out lift is obtained from the appropriate statutory authority
2.3 Multiple crane lifts are planned (as applicable) to encompass the determination of the types of cranes suitable for use and an assessment of the share of the load to be carried by each crane
2.4 Cranes load chart is interpreted and information on
permissible loads, radii, weights, boom and jib taken into account in planning the job

2.5 Safe Working Load (SWL) or Working Load Limit (WLL) is calculated

2.6 Appropriate drawings and simulations are created to check feasibility of planned operations

2.7 Information from previous lifts is used in developing the operational plan

2.8 A range of different alternatives is considered to ensure effective and safe lift

2.9 Unsolicited, irrelevant information is disregarded to focus on the task at hand

2.10 Need for additional/specialised equipment is ascertained and arrangements made for collection/delivery to site

2.11 Communication system is determined and all team members are briefed on its use in conducting lift

### 3 Set up lift

3.1 Site measurements are checked to verify accuracy

3.2 Operating and emergency controls are checked to ensure the crane is in safe working order

3.3 Appropriate personal protective equipment is selected and worn in accordance with manufacturers specifications and site requirements

3.4 Site is isolated as necessary and, when required, assistance sought to ensure public safety

3.5 Other personnel on site are directed as necessary to ensure risks to personnel and equipment are minimised

3.6 Variables which affect the predictability of the operation are eliminated wherever possible

### 4 Work effectively in team

4.1 The advice of all team members is sought in developing the operational plan

4.2 Ideas are discussed and evaluated with team members to determine viability and reach consensus on an effective plan

4.3 Individual roles and responsibilities are clarified and agreed

4.4 Other team members are assisted as necessary to ensure the operation can be completed safety and efficiently

### 5 Lift and move load

5.1 Nominated authorised person is recognised as being in control and instructions are followed

5.2 Test runs are conducted as necessary to ensure a safe lift

5.3 Load is hoisted and lowered into position using crane movements in accordance with the appropriate Australian standard
5.4 Danger is anticipated by monitoring of crane and load, and instruction to stop operation given where there are any concerns the lift is not proceeding as planned
5.5 Potential impact of change in one area of operation on the lift as a whole is recognised
5.6 In the event of unanticipated situations, contribution is made to developing alternative operational plan

6 Follow up on job
6.1 Specialised equipment is checked and re-stored in accordance with workplace procedures
6.2 Operation is reviewed in consultation with relevant personnel and contribution is made to recommendations for review of procedures where appropriate
6.3 Need for further after job debriefing or counselling is recognised and appropriate action is taken
6.4 Records are completed promptly in line with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Prioritising and multi-tasking work
- Company work procedures concerning the setting up and rigging of a mobile crane at a work site
- Problems that may arise when planning and supervising a specialised lift using a mobile crane and actions that should be taken to prevent or solve them
- Focus of operation of work systems and equipment
- Relevant agreements, codes of practice or other legislative requirements

Required skills:
- Communicate effectively with others when planning and supervising a specialised lift using a mobile crane
- Read and interpret instructions, procedures, information, technical data, manuals and signs relevant to the planning and supervision of a specialised lift using a mobile crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the planning and supervision of a specialised lift using a mobile crane
- Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when planning and supervising a specialised lift using a mobile crane
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems identified when planning and supervising a specialised lift using a mobile crane in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Develop contingency plans for possible unanticipated situations
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the planning and supervision of a specialised lift using a mobile crane
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Ensure the use of required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• day or night
• in a variety of weather conditions

Environment may include movement of:
• equipment
• goods
• materials
• vehicular traffic

Customers may be:
• internal or external

Mobile crane may be involved in work in a range of industry sectors including:
• construction and demolition
• manufacturing
• waterfront
• mining
• primary industry
• utilities (electricity, gas, water)
• arboricultural
• swimming pool
• quarrying
Specialised lifts may include:

- large surface areas-pools
- tilt-up panels
- drive-in movie screens
- tree removal and replacement
- bridge beams
- multiple crane lifts
- passing loads to other cranes
- tailing out of loads
- turning loads over
- lifting high value goods
- recovery work
- specialised operations-drug lines
- clam shell
- pile driving
- barge work
- work involving work box duties

Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff
Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures
Documentation/records may include:
- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:
- relevant state/territory regulations and licence/permit requirements pertaining to specialised mobile crane operations
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific
- Performance is demonstrated consistently over a period
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
# TLID3307C Operate a vehicle-mounted loading crane

## Unit Descriptor
This unit involves the skills and knowledge required to operate a vehicle-mounted loading crane to shift loads, including positioning and stabilising the crane, operating the vehicle-mounted crane, monitoring lift conditions, packing up the crane after operations, and completing all required job records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

## Employability Skills
This unit contains employability skills.

## Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to vehicle-mounted loading cranes.

Work is performed under general supervision. It involves the application of routine principles and procedures to the operation of a vehicle-mounted loading crane in a variety of operational contexts.

## Competency Field
D – Load Handling

## ELEMENT PERFORMANCE CRITERIA

### ELEMENT
Elements describe the essential outcomes of a unit of competency.

### PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Position and stabilise crane</td>
</tr>
<tr>
<td>1.1</td>
<td>Crane is driven to position as per job plan to ensure safe operation in accordance with applicable Australian standards, codes of practice, manufacturers specifications and, where applicable, regulatory and local government requirements</td>
</tr>
<tr>
<td>1.2</td>
<td>Where appropriate, barriers, fencing, temporary boundaries, signage and the like are used to isolate working area in accordance with safe working practice and lift requirements</td>
</tr>
<tr>
<td>1.3</td>
<td>Ground is checked to ensure it is firm enough to bear the load</td>
</tr>
<tr>
<td>1.4</td>
<td>Appropriate plates or packing are correctly used to adequately distribute the load</td>
</tr>
<tr>
<td>1.5</td>
<td>Any outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturers instructions and the appropriate Australian standard and other relevant statutory regulations or local authority requirements</td>
</tr>
<tr>
<td>1.6</td>
<td>Outrigger packing is checked for adequacy prior to and after load is taken</td>
</tr>
<tr>
<td>2</td>
<td>Operate vehicle-mounted crane</td>
</tr>
<tr>
<td>2.1</td>
<td>Planned hazard control strategies are implemented</td>
</tr>
<tr>
<td>2.2</td>
<td>Required signals are correctly given, interpreted and followed in accordance with appropriate Australian standards</td>
</tr>
<tr>
<td>2.3</td>
<td>Load mass is assessed and correlated with lifting capacity of crane throughout proposed radii of operation</td>
</tr>
</tbody>
</table>
2.4 Appropriate lifting gear is selected and load secured
2.5 Load is hoisted and lowered into position using crane movements in accordance with the appropriate Australian standard
2.6 Crane controls are operated smoothly
2.7 Crane is shut down and secured during periods of non-operation according to manufacturers specifications and workplace procedures

3 Monitor lift conditions
3.1 Load is constantly monitored to ensure load and structural stability
3.2 Conditions which may affect the continuing stability of the crane are identified and monitored
3.3 Unplanned situations are responded to in line with workplace procedures in a manner that minimises risk to personnel and equipment
3.4 Advice is sought from supervisor where there is doubt about correct response to unanticipated conditions, or conflict with customer request
3.5 Supervisor/allocator is advised of any concern about completing the job within timeframe
3.6 Shut-down procedures are implemented in accordance with manufacturers instructions in the event of an emergency
3.7 The relevant motion locks and brakes are applied
3.8 Crane is shut down using the correct sequence of procedures in accordance with manufacturers specifications and workplace procedures
3.9 Routine post-operational equipment checks are carried out in accordance with manufacturers specifications

4 Pack up crane
4.1 All lifting equipment and crane components are checked for any signs of deterioration or damage in accordance with the appropriate Australian standard
4.2 Damaged or worn equipment is segregated and reported to an authorised person for testing/repair/destruction
4.3 Crane equipment is correctly stowed and secured in accordance with manufacturers instructions and the appropriate Australian standard
4.4 Crane is immobilised and secured for travel in accordance with manufacturers instructions, workplace guidelines and regulatory requirements

5 Complete job records
5.1 Customer feedback is sought regarding satisfaction with the completed job and any areas of concern reported according to workplace procedures
5.2 Customer's signature on job completion documentation is obtained
5.3 Required workplace records are updated accurately and promptly and processed according to workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Prioritising and multi-tasking work
- Company work procedures concerning the setting up and rigging of a mobile crane at a work site
- Problems that may arise when operating a vehicle-mounted loading crane and actions that should be taken to prevent or solve them
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements

**Required skills:**
- Communicate effectively with others when operating a vehicle-mounted loading crane
- Read and interpret instructions, procedures, information and signs relevant to the operation of a vehicle-mounted loading crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of a vehicle-mounted loading crane
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a vehicle-mounted loading crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating a vehicle-mounted loading crane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when operating a vehicle-mounted loading crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a vehicle-mounted loading crane
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of crane and its equipment and take appropriate action where required
• Service equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  • day or night
                                 • in a variety of weather conditions

Environment may include movement of:
• equipment
• goods
• materials
• vehicular traffic

Customers may be:
• internal or external

Mobile crane may be involved in work in a range of industry sectors including:
• construction and demolition
• manufacturing
• waterfront
• mining
• primary industry
• utilities (electricity, gas, water)
• arboricultural
• swimming pool
• quarrying
Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Documentation/records may include:

- operations manuals for vehicle-mounted loading cranes
- Safe Working Load (SWL) and Working Load Limit (WLL)
- material safety data sheets
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications for vehicle-mounted loading cranes
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to vehicle-mounted loading cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria.
unit

of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID3407C  Operate a mobile crane up to and including 20 tonnes on a demolition site

Unit Descriptor
This unit involves the skills and knowledge required to operate a slewing mobile crane on a demolition site, including planning and preparing for demolition site operation, and lifting demolition materials and equipment in accordance with regulatory requirements. (Note this unit does not include the use of a ball for demolition work. Reference should be made to relevant competency standards designed for the construction industry for this purpose). Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to the operation of mobile cranes on demolition sites.

Work is performed under general supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the operation of slewing and non-slewing cranes up to 20 tonnes on a demolition site.

Competency Field
D – Load Handling

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan and prepare for demolition site operation

1.1 Access and walking area are surveyed for hazards, including specific demolition site ground hazards, and elimination or control measures are implemented

1.2 Weight of load is estimated through measurement and calculation

1.3 Structural integrity of load to be lifted is assessed and taken into account in planning the operation

1.4 A range of alternatives for slinging the load are considered in consultation with relevant personnel, taking into consideration all probable factors

1.5 Risk management strategy is developed providing adequate safety margins

1.6 Possible implication of load contingencies is considered and plans are developed to deal with each contingency

1.7 Operational plan is developed to include risk management strategies and contingency plans in line with applicable
Australian standards and codes of practice

1.8 Area is cleared of non-required personnel, distractions controlled, and site isolated as necessary

1.9 Risk of operation is explained to customer, liability is explained and indemnity is signed according to workplace procedures

2 Lift equipment and materials

2.1 Load is hoisted and lowered into position using crane movements in accordance with the appropriate Australian Standard

2.2 Detailed information is shared with other crane personnel throughout the lift

2.3 Crane and load are carefully monitored throughout the lift so that problems can be anticipated and contingency plans effectively implemented if necessary

2.4 If load exceeds given weight, alternative methods of freeing the load are considered and agreed in consultation with relevant personnel

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to the use of mobile cranes on demolition sites
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Company work procedures concerning the use of mobile cranes up to 20 tonne capacity on a demolition site
- Hazards of mobile crane operations on a demolition site and action that can be taken to minimise the risks involved
- Problems that may arise when operating a mobile crane up to and including 20 tonnes on a demolition site and actions that should be taken to prevent or solve them
- Operational procedures for crane crews
- Prioritising and multi-tasking work
- Focus of operation of work systems and equipment

Required skills:

- Communicate effectively with others when operating a mobile crane up to and including 20 tonnes on a demolition site
- Read and interpret instructions, procedures, information technical data, manuals and signs relevant to the operation of a mobile crane up to and including 20 tonnes on a demolition site
- Interpret and follow operational instructions and prioritise work
• Complete documentation related to the operation of a mobile crane up to and including 20 tonnes on a demolition site
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when operating a mobile crane up to and including 20 tonnes on a demolition site
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating a mobile crane up to and including 20 tonnes on a demolition site in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when operating a mobile crane up to and including 20 tonnes on a demolition site
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a mobile crane up to and including 20 tonnes on a demolition site
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use equipment, processes and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• day or night
• in a variety of weather conditions

Environment may include movement of:
• equipment
• goods
• materials
• vehicular traffic

Customers may be:
• internal or external
Mobile crane may include:
- any lattice boom slewing and non-slewing mobile crane up to and including 20 tonnes involved in lifting of materials and equipment on a demolition site (however, this unit does not cover mobile cranes of load capacity beyond 20 tonnes)

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is consistent with:
- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Documentation/records may include:

- demolition site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures
Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to use of mobile on demolition sites
- relevant Australian Standards and certification requirements and specifically AS 2550.1 (Sect. 7.20) and AS 26.1
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
through appropriately simulated activities at the registered training organisation, and/or
in an appropriate range of situations in the workplace
TLID3507C  Operate a boom type elevating work platform

Unit Descriptor
This unit involves the skills and knowledge required to operate a boom type elevating work platform, including inspecting and testing the elevating work platform, assessing job requirements and work, planning work and setting up for lift, carrying out the elevation, implementing planned hazard control and strategies, and packing up the work platform after operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to boom type elevating work platform operations.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the operation of a boom type elevating work platform in a variety of operational contexts.

Competency Field
D – Load Handling

ELEMENT
1 Inspect and test elevating work platform

PERFORMANCE CRITERIA
1.1 Work platform is visually inspected prior to operation for any evidence of damage, structural weakness or interference according to pre-operational safety check procedures

1.2 Routine pre-operational equipment checks are carried out in accordance with available checklists

1.3 Work platform log book is checked, service requirements are noted and maintenance personnel advised of any requirements

1.4 Elevating work platform is started in accordance with manufacturers guidelines and start-up procedures for operations and any abnormal noise or movement reported to an authorised person for corrective action

1.5 Start-up checks are conducted according to manufacturers specifications and company procedures to ensure work platform and equipment are operating correctly

1.6 Faults are corrected or are reported to an authorised person for corrective action according to company procedures

1.7 The operating and emergency controls are checked for correct operation in accordance with manufacturers specifications including use of the emergency decent device
1.8 Boom is lowered under simulated emergency conditions to check for operational effectiveness

1.9 Gear and accessories are checked and damaged or worn gear is segregated and reported to an authorised person for testing/repair/destruction

1.10 Results of inspections are recorded and reported according to company procedures

2 Assess job requirements and work

2.1 Briefing, hand-over details, authorisations and clearances are received, interpreted and clarified in accordance with company and site procedures and legislative requirements

2.2 Work area is inspected and potential hazards are identified and appropriate elimination or control measures selected

2.3 Weight of load including personnel and equipment is correctly estimated to ensure job is within limits of work platform capacity

3 Plan work and set up for lift

3.1 A work plan is developed and agreed with relevant workplace personnel to include hazard prevention/control measures and safety and emergency procedures in line with applicable Australian standards

3.2 A suitable firm and level standing is chosen and prepared for the location of the elevating work platform

3.3 Outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturers instructions and appropriate Australian standards

3.4 Appropriate plates or packing are correctly used under the footplates as required to adequately distribute the loading

3.5 Ground is checked before and after packing is installed to ensure it is firm enough to bear the load

3.6 The job plan is developed to include hazard prevention/control measures and safety procedures in line with applicable Australian standards and to equipment manufacturers specifications

3.7 Work platform load chart is located and information on permissible loads, radii and heights taken into account in planning the job

3.8 The job plan takes into account job requirements and workplace rules and procedures

3.9 Job plan is discussed and confirmed with relevant personnel

3.10 Work gear and tools are properly stowed in the elevating work platform in accordance with Australian standards, company procedures and guides

4 Carry out elevation

4.1 Configuration and operation of elevating work platform are
checked as necessary to ensure safe lift

4.2 Operation of work platform is carried out in accordance with the job plan, the appropriate Australian standard and manufacturers specifications

5 Planned hazard control and strategies are implemented

5.1 Load is constantly monitored to ensure safety of personnel, load and structural stability

5.2 Unplanned situations are responded to in line with company procedures in a manner that minimises risk to personnel and equipment

5.3 Required signals are correctly given, interpreted and followed in accordance with appropriate Australian standards

6 Pack up work platform

6.1 The elevating work platform is shut down using the correct sequence of procedures in accordance with manufacturers instructions

6.2 Routine post-operational equipment checks are carried out in accordance with manufacturers instructions and available checklists and defects recorded and reported in line with company procedures

6.3 The elevating work platform is dismantled in accordance with the job plan, manufacturers instructions and relevant statutory regulations

6.4 The outriggers and stabilisers are secured and stowed in accordance with manufacturers instructions

6.5 The elevating work platform is correctly stowed and secured in accordance with manufacturers instructions and company procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant road rules, regulations, permit and licence requirements pertaining to boom type elevating work platform operation

• Relevant OH&S and environmental procedures and regulations

• Boom type elevating work platform applications, capacities, configurations, safety hazards and control mechanisms

• Workplace procedures concerning the operation of a boom type elevating work platform at a worksite

• Problems that may arise when operating a boom type elevating work platform and actions that should be taken to prevent or solve them

• Risks and hazards involved in the operation of a boom type elevating work platform and the associated action that can be taken to eliminate or minimise the risk/hazards concerned

• Focus of operation of work systems and equipment
Required skills:

- Communicate effectively with others when operating a boom type elevating work platform
- Read and interpret instructions, procedures, regulations, codes of practice and manuals relevant to the operation of a boom type elevating work platform
- Interpret and follow operational instructions
- Complete documentation related to the operation of a boom type elevating work platform
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a boom type elevating work platform
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating a boom type elevating work platform in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Prioritise and multi-task work
- Implement contingency plans for unanticipated situations that may arise when operating a boom type elevating work platform
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a boom type elevating work platform
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Identify and correctly use equipment, processes and procedures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night
- in a variety of weather conditions
Environment may include movement of:

- equipment
- goods
- materials
- vehicular traffic

Customers may be:

- internal or external

Boom type elevating work platform may be involved in work in a range of industry sectors including:

- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff
Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Elevating platforms may include:

- mechanically operated equipment
- hydraulically operated equipment
- electrically operated equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures
Documentation/records may include:

- operations manuals
- Safe Working Load (SWL) and Working Load Limit (WLL)
- site plans
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to the operation of boom type elevating work platforms
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID3607C  Lift and move load using mobile crane up to and including 20 tonnes

Unit Descriptor
This unit involves the skills and knowledge required to lift and move a load using a mobile crane up to and including 20 tonnes, including operating mobile crane to complete job requirements, monitoring lift conditions, implementing shut-down procedures, packing up crane after operations, and completing all required job records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to operations of mobile cranes up to and including 20 tonnes.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles, procedures and regulations to lift and move loads using slewing and non-slewing mobile cranes up to and including 20 tonnes in a variety of operational contexts.

Competency Field
D – Load Handling

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Operate mobile crane

1.1 In ascent and descent to/from crane correct use is made of the means provided in accordance with codes of practice and workplace procedures

1.2 Planned hazard control strategies are implemented

1.3 Required signals are correctly given, interpreted and followed in accordance with appropriate Australian standards

1.4 Boom is positioned to ensure load to be lifted is plumbed under hook

1.5 Load is hoisted and lowered into position using crane movements in accordance with the appropriate Australian standard

1.6 Crane controls are operated smoothly

1.7 Where necessary, crane is mobiled according to manufacturers specifications, appropriate Australian standards, workplace procedures

1.8 Crane is shut down and secured during periods of non-operation according to manufacturers specifications and
2 Monitor lift conditions

2.1 Load is constantly monitored to ensure load and structural stability
2.2 Conditions which may affect the continuing stability of the crane are identified and monitored
2.3 Unplanned situations are responded to in line with workplace procedures in a manner that minimises risk to personnel and equipment
2.4 Dogger is advised of any new information which affects the lift
2.5 Any necessary changes to job plan are discussed and confirmed with rest of crew
2.6 Advice is sought from supervisor where there is doubt about correct response to unanticipated conditions, or conflict with customer request
2.7 Supervisor/allocator is advised of any concern about completing the job within timeframe

3 Implement shut-down procedures

3.1 The relevant motion locks and brakes are applied
3.2 Crane is shut down using the correct sequence of procedures in accordance with manufacturers specifications and workplace procedures
3.3 Routine post-operational equipment checks are carried out in accordance with manufacturers specifications

4 Pack up crane

4.1 Crane is de-rigged with other crane personnel in accordance with manufacturers instructions
4.2 All lifting equipment and crane components are checked in consultation with crane personnel for any signs of deterioration or damage in accordance with the appropriate Australian standard
4.3 Damaged or worn equipment is segregated and reported to an authorised person for testing/repair/destruction
4.4 Crane and equipment are correctly stowed and secured in accordance with manufacturers instructions and the appropriate Australian standard

5 Complete job records

5.1 Customer feedback is sought regarding satisfaction with the completed job, and any areas of concern are reported according to workplace procedures
5.2 Customer's signature on job completion documentation is obtained
5.3 Required workplace records are updated accurately and promptly and processed according to workplace procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Risks and hazards involved in mobile crane operation and associated action that can be taken to eliminate or minimise the risk
- Workplace procedures concerning the operation of a mobile crane at a worksite
- Problems that may occur during a lift and associated action that can be taken to address the problems concerned
- Communication systems used during a lift
- Focus of operation of work systems and equipment

Required skills:
- Communicate effectively with others when lifting and moving a load using a mobile crane up to and including 20 tonnes
- Read and interpret instructions, procedures, information and signs relevant to the lifting and moving of a load using a mobile crane up to and including 20 tonnes
- Complete documentation related to the lifting and moving of a load using a mobile crane up to and including 20 tonnes
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when lifting and moving a load using a mobile crane up to and including 20 tonnes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when lifting and moving a load using a mobile crane up to and including 20 tonnes in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when lifting and moving a load using a mobile crane up to and including 20 tonnes
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the lifting and moving of a load using a mobile crane up to and including 20 tonnes
- Plan own work including predicting consequences and identifying improvements
- Prioritise and multi-task work
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

• by day or night
• in a variety of weather conditions

Environment may include movement of:

• equipment
• goods
• materials and vehicular traffic

Customers may be:

• internal or external

Mobile crane may be any slewing and non-slewing crane up to and including 20 tonne capacity and may be involved in work in a range of industry sectors including:

• construction and demolition
• manufacturing
• waterfront
• mining
• primary industry
• utilities (electricity, gas, water)
• arboricultural
• swimming pool
• quarrying

Hazards may include:

• power lines
• noise, light, energy sources
• overhead service lines
• surrounding buildings, structures, facilities
• underground services
• obstructions
• uneven or unstable ground and recently filled trenches
• stationary and moving machinery and equipment
• hazardous or dangerous materials
• traffic hazards and congestion
Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures
Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes up to and including 20 tonnes
- relevant Australian standards and certification requirements
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID4007C  Control lift and movement of crane

Unit Descriptor
This unit involves the skills and knowledge required to direct the movement of a load when the load is out of the crane operator's view, including providing lift instructions to the crane operator using appropriate communication methods, monitoring the lift, and placing and securing load. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to the operation of mobile cranes up to and including 20 tonnes.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles, procedures and regulations to control the lift and movement of a mobile crane in a variety of operational contexts.

Competency Field
D – Load Handling

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Provide lift instructions
1.1 Load movement is performed in accordance with planned hazard prevention and control measures in line with appropriate Australian standards, codes of practice, guides and manufacturers specifications
1.2 Agreed communication and signal methods are used to coordinate the load movement with safety
1.3 Verbal communication and signals are clear, precise and concise so that they can be understood
1.4 Instructions take into account all relevant parameters to ensure safe, stable and smooth lift

2 Monitor lift
2.1 Load is constantly monitored to ensure it remains stable
2.2 Load conditions which may affect the continuing stability are identified and monitored
2.3 Any temporary bracing and/or load support is maintained until continuing stability is ensured
2.4 Unplanned situations are responded to according to workplace procedures in a manner that minimises risk to personnel and equipment
2.5 Site emergency procedures are followed

3 Place and secure load

3.1 Appropriate materials for fixing and anchoring the load are checked and selected in line with manufacturers specifications
3.2 Appropriate fixing methods are used to secure the load in line with manufacturers specifications and guides
3.3 Temporary securing is installed where hazards and weather conditions may vary during the load movement

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Risks and hazards involved in mobile crane operation and associated action that can be taken to eliminate or minimise the risk
- Workplace procedures concerning the controlling of the lift and movement of a mobile crane
- Problems that may occur during a lift and associated action that can be taken to address the problems concerned
- Communication systems used during a lift
- Focus of operation of work systems and equipment

Required skills:
- Communicate effectively with others when directing and controlling the lift and movement of a mobile crane
- Read and interpret instructions, procedures, information, technical data, manuals and signs relevant to the control of the lift and movement of a mobile crane
- Complete documentation related to the lift and movement of a mobile crane
- Operate electronic communication equipment to required protocol
- Work collaboratively with others during the control of the lift and movement of a mobile crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when directing and controlling the lift and movement of a mobile crane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when directing and controlling the lift and movement of a mobile crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the control of the lift and movement of a mobile crane
• Plan own work including predicting consequences and identifying improvements
• Prioritise and multi-task work
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use equipment, processes and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in a variety of weather conditions

Environment may include movement of:
• equipment
• goods
• materials and vehicular traffic

Customers may be:
• internal or external

Mobile crane may be any slewing and non-slewing mobile crane involved in work in a range of industry sectors including:
• construction and demolition
• manufacturing
• waterfront
• mining
• primary industry
• utilities (electricity, gas, water)
• arboricultural
• swimming pool
• quarrying
Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is consistent with:
- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Load movements may include:

- luffing
- slewing
- hoisting
- telescoping boom

Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant Australian standards and certification requirements
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLID407C Load and unload goods/cargo**

**Unit Descriptor**
This unit involves the skills and knowledge required to load and unload goods and cargo, including loading and unloading goods, securing and protecting the load and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant regulations/permit requirements including those of the relevant state/territory roads and traffic authority concerning the loading of goods/cargo.

Work is performed under some supervision generally within a team environment. It involves the application of the basic principles, routine procedures and regulatory/permit requirements to the loading and unloading of goods/cargo.

**Competency Field**
D – Load Handling

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Load and unload goods/cargo

1.1 Load characteristics are identified and taken into account when determining appropriate loading and unloading procedures

1.2 Dangerous or hazardous goods are identified and handled in accordance with the Australian Dangerous Goods (ADG) Code and other relevant regulations/permit requirements

1.3 Load is packed/unpacked to make safe and effective use of available spaces

1.4 Goods/cargo are loaded in accordance with relevant mass and loading regulations and workplace procedures

1.5 Lifting aids and appliances are selected and used to aid loading procedures in compliance with workplace procedures and safety legislation

1.6 Unloading activities are conducted in a safe and efficient manner taking into account suitable locations, stowage, safe use of equipment and the balance of the remaining load

1.7 Goods requiring special handling and/or documentation are identified and appropriate procedures followed

1.8 Relocated material is restacked appropriate for the transport method, safe height, weight loading, size and crushability of the goods
2 Secure and protect load

2.1 The distribution of the load is checked to ensure that it is even, legal and within safe working capacity
2.2 Load is checked to ensure that dangerous goods and hazardous substances are appropriately segregated in accordance with the ADG Code
2.3 Load is secured using the correct load restraint and protection equipment for different loads, carrying and storage conditions
2.4 The load is protected in accordance with legal and workplace safety requirements

3 Complete documentation

3.1 The load is inspected and checked for security to travel in accordance with relevant regulations/permit requirements and the ADG Code where applicable
3.2 All required documentation for the goods is completed in accordance with workplace requirements including the ADG Code where applicable

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant Australian standards and regulations including state/territory mass and loading regulations
- National Load Restraint Guide
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- OH&S procedures and guidelines concerning the lifting and movement of loads
- Risks when loading and unloading goods/cargo and related precautions to control the risk
- Security awareness requirements when loading and unloading vehicles and in particular the recognition, isolation and reporting of suspicious cargo and goods
- Workplace procedures and policies for the loading and unloading of goods/cargo
- Housekeeping standards procedures required in the workplace
- Methods of securing a load
- Site layout and obstacles
- Problems that may arise when loading and unloading goods and cargo and actions that should be taken to prevent or solve them

Required skills:
- Communicate effectively with others when loading and unloading goods and cargo
- Read and interpret instructions, procedures, information, signs and labels relevant to the loading and unloading of goods and cargo
- Identify containers and goods coding, ADG and IMDG markings and, where applicable, emergency information panels and take appropriate action
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the loading and unloading of goods and cargo
• Operate electronic communication equipment to required protocol
• Estimate the size, shape and special requirements of loads and take appropriate action
• Work collaboratively with others when loading and unloading goods and cargo
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when loading and unloading goods and cargo in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected situations that may occur when loading and unloading goods and cargo
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the loading and unloading of goods and cargo
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in cargo and equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  • in a range of work environments
                                 • by day or night
Customers may be:                • internal or external
Workplaces may comprise:         • large, medium or small worksites
Work may be conducted in:        • restricted spaces
                                 • exposed conditions
                                 • controlled or open environments
Goods/cargo to be loaded or unloaded may: • require special precautions
Loads to be shifted may be:
- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled
- palleted or unpalleted

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Communication in the work area may include:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Loading operations may be carried out:
- manually
- with the aid of lifting equipment and/or appliances

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Information/documents may include:

- goods identification numbers and codes, including ADG and IMDG markings and HAZCHEM signs
- manifests, bar codes, goods and container identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the loading and unloading of goods/cargo
- ADG Code and associated regulations
- supplier and/or client instructions
- material safety data sheets
- EPGs and Initial Response Guide (HB76:1998 or equivalent)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
- Load Restraint Guide

Applicable regulations and legislation may include:

- relevant Australian standards and regulations including state/territory mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
unit

o the underpinning knowledge and skills
o relevant legislation and workplace procedures
o other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts

• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLID4107C  Undertake cash-in-transit loading and unloading in an unsecured environment

Unit Descriptor
This unit involves the skills and knowledge required to undertake cash-in-transit loading in an unsecured environment, including selecting an appropriate loading site, undertaking the load transfer, and completing required transfer documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant sections of the regulations of the relevant state/territory authorities concerned with the secure delivery of valuables, secured products, documents and materials.

Work is performed under general or limited supervision. It involves the application of the basic principles, routine procedures and regulatory requirements to the transfer of cash in transit in unsecured environments.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Select loading site
1.1 Plans of site access, exit points and key physical features are identified
1.2 Site for consignment transfer is selected in accordance with security plan and with due regards for own safety, safety of security team, members of the public and consignment
1.3 Loading site(s) is selected in consultation with customer and/or specific loading/unloading requirements are identified and assessed for accessibility and security
1.4 Alternative loading sites are identified in accordance with workplace operating procedures where pre-determined site is assessed as inappropriate
1.5 Proposed changes to loading site(s) are relayed to branch and authorisation sought where required

2 Undertake load transfer
2.1 Permission to enter and exit loading area (where required) is obtained in accordance with workplace procedures
2.2 Security procedures, including positioning of personnel, travelling across public areas, and carrying/loading techniques are undertaken in accordance with operational plan
2.3 Security systems are activated/deactivated as necessary
2.4 Contingency plans are identified and confirmed with other team members
2.5 Security devices are activated at consignment in accordance with procedures
2.6 The environment is constantly monitored to maintain a safe working environment
2.7 Consignment is identified and details are verified and checked for conformity with manifest
2.8 Non-conforming consignments are documented and reported in accordance with workplace procedures
2.9 Load characteristics are identified and considered when determining appropriate loading and unloading procedures
2.10 Load characteristics are identified and considered when determining appropriate loading and unloading procedures
2.11 Load handling demonstrates compliance with (any) loading regulations and workplace safety requirements
2.12 Consignment is delivered, stored and secured in accordance with operational plan and workplace procedures

3 Complete transfer documentation
3.1 Details of consignment delivery are verified by client or client representative
3.2 Transfer documentation is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state/territory permit and licence regulations and requirements
- OH&S procedures and guidelines concerning the lifting and movement of loads
- Requirements for approved work procedures and relevant equipment
- Problems that may arise when undertaking cash-in-transit loading and unloading in an unsecured environment and actions that should be taken to prevent or solve them
- Risks and hazards when transferring cash in transit and related precautions to control the risk
- Operational procedures for identification of security risks
- Contingency planning relating to managing and controlling security risks
- Housekeeping standards procedures required in the workplace

Required skills:
- Communicate effectively with others when undertaking cash-in-transit loading and unloading in an unsecured environment
- Read and interpret instructions, procedures, information and signs relevant to cash-in-transit loading and unloading in an unsecured environment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to cash-in-transit loading and unloading in an unsecured environment
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when undertaking cash-in-transit loading and unloading in an unsecured environment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when undertaking cash-in-transit loading and unloading in an unsecured environment in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during cash-in-transit loading and unloading in an unsecured environment
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use equipment, processes and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Safely use correct manual handling techniques

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments
• weather conditions
• by day or night

Customers may be: • internal or external

Hazards may include: • vehicular and pedestrian traffic
• firearm handling
• persons with felonious intent
• uneven ground, steps, road surfaces
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature
Consultative processes may involve:

- clients
- private security personnel
- public sector security personnel
- police
- security consultants
- other employees and supervisors
- management
- other professional or technical staff

Consignment risk may include:

- staff fidelity
- other theft
- loss through negligence

Communication in the work area may include:

- mobile and fixed phones
- radio
- oral, aural or signed communications

Security systems/devices may include:

- two-key safes
- ATM vaults
- surveillance cameras
- VCRs
- alarm systems
- access control systems
- time-delay devices

Loading and unloading areas may be:

- part of regular deliveries
- one-off arrangements

Security arrangements are varied in line with:

- workplace policies and procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- firearms
- two-way radios
Information/documents may include:

- workplace procedures and policies
- job specifications
- relevant manufacturers specifications
- competency standards and training materials
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory OH&S regulations and legislation, including manual handling regulations
- relevant Australian standards and certification requirements
- relevant state/territory privacy legislation
- relevant state/territory fire arms legislation
- licensing and permits for firearms and security occupations
- licensing requirements for driving and carrying particular classes of goods
- relevant state/territory road rules and traffic acts

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLID4307B Shift loads using gantry equipment**

**Unit Descriptor**
This unit involves the skills and knowledge required to shift loads using gantry equipment in accordance with workplace and regulatory requirements, including planning the work for the prevailing working conditions; using the controls and operating systems to manage the operation of the equipment; locating the load and identifying the load characteristics; safely moving the load; monitoring the controls; and stopping, shutting down and securing the equipment after the completion of operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the shifting of loads using gantry equipment.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements when shifting loads using gantry equipment as part of work activities in the stevedoring, transport, distribution and allied industries.

**Competency Field**
D – Load Handling

### ELEMENT

Elements describe the essential outcomes of a unit of competency.

#### PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Plan work for the prevailing working conditions**
   1.1 Traffic flow, weather and work area conditions are constantly assessed and anticipated to allow safe operation to ensure no injury to people, or damage to equipment, loads or facilities
   1.2 Characteristics of the load are taken into account to ensure that, where applicable, appropriate attachments/gear are used to move the load
   1.3 Any occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel

2. **Use controls and operating systems to manage the operation of the equipment**
   2.1 Equipment is prepared and appropriate attachments fitted (where applicable)
   2.2 Gear and operational levers are checked to ensure that they are in the neutral position prior to inserting ignition key and starting engine
   2.3 Engine is started in accordance with manufacturers guidelines to bring the engine to speed
2.4 Instruments and gauges are monitored during start-up and operations to ensure that operation is within manufacturers specifications and workplace and regulatory safety requirements

2.5 Engine power is managed for efficiency of equipment movement and economy of equipment operations

2.6 Equipment operations are conducted within manufacturers specified torque range

2.7 Any faults or damage to equipment are immediately reported to the appropriate personnel

3 Locate load and identify load characteristics

3.1 Load is located and identified according to instructions

3.2 Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of the gantry equipment are identified

3.3 Load weight and dimensions are checked to ensure they fall within the capacity of the equipment

3.4 Loading and unloading plans are followed to ensure efficiency and safety of operations

3.5 Characteristics of the load are taken into account to ensure that appropriate loading and unloading procedures are followed

3.6 Hazardous cargo is identified and relevant procedures are taken into account when planning and conducting the work

4 Safely move load

4.1 Equipment is operated and positioned using smooth and controlled movements

4.2 Manoeuvres are within the limits of the equipment and in line with manufacturers specifications

4.3 Load is moved ensuring no injury to personnel or damage to equipment or cargo

4.4 Continuous communication is maintained with personnel assisting the operator in the load movement operations using appropriate communications technology and procedures

4.5 In the event of a safety incident or emergency, the equipment is immediately stopped and workplace emergency procedures followed

4.6 Safety incidents and emergencies are reported in accordance with workplace procedures and regulatory requirements

5 Monitor and operate controls

5.1 Equipment controls are monitored and operated in accordance with manufacturers operating instructions

5.2 Control systems are understood and acted upon in accordance with regulatory requirements, manufacturers guidelines and workplace operating procedures

5.3 Control faults are identified and reported in accordance with enterprise guidelines
5.4 Hazards in the work area are identified and appropriate measures are adopted to control the risks in accordance with regulatory requirements and workplace procedures.

6 Stop, shut down and secure equipment

6.1 Equipment is brought to a controlled halt and shut down without injury to personnel or damage to equipment, loads or facilities in accordance with manufacturers guidelines and workplace procedures.

6.2 Equipment is secured in accordance with manufacturers instructions and workplace procedures.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes, regulations, licence/permit requirements relevant to the use of gantry equipment to shift loads.
- Relevant OH&S and environmental protection procedures and guidelines.
- Workplace procedures and policies for the use of gantry equipment to shift loads.
- Focus of operation of work systems, equipment, management and site operating systems for the use of gantry equipment to shift loads.
- Problems that may occur when using gantry equipment to shift loads and appropriate action that can be taken to resolve the problems.
- Relevant safety codes and emergency procedures.
- Types of gantry equipment used to shift loads in terminals/wharves, their applications and procedures and precautions for their use.
- Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of gantry equipment.
- The marking and numbering systems for cargo.
- Relevant bond, quarantine or other legislative requirements.

Required skills:

- Communicate effectively with others when shifting loads using gantry equipment.
- Read and interpret instructions, procedures, information and labels relevant to the shifting of loads using gantry equipment.
- Identify cargo, container and goods, coding, ADG and IMDG markings and where applicable emergency information panels.
- Interpret and follow operational instructions and prioritise work.
- Complete documentation related to the shifting of loads using gantry equipment.
- Receive, acknowledge and send messages with appropriate communications equipment.
- Estimate the size, shape and special requirements of loads.
- Work collaboratively with others when shifting loads using gantry equipment.
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when shifting loads using gantry equipment in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when shifting loads using gantry equipment
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the shifting of loads using gantry equipment
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify, select and use relevant equipment, processes and procedures when using gantry equipment to shift loads
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Apply effective eye-hand coordination to operational tasks
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments
- even or uneven surfaces
- wet or dry surfaces

Cargo/freight may include:
- goods/containers with specialist requirements, including temperature controlled goods and dangerous goods
Range of equipment may include: • various types of bridge and gantry cranes

Hazards in the work area may include exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, goods, materials and vehicular traffic

Personal protective equipment may include:
• gloves
• safety headwear and footwear
• safety glasses
• two-way radios
• protective clothing
• high visibility clothing

Communication in the work area may include:
• phone
• fax
• email
• electronic data transfer (EDI)
• RF systems
• radio
• oral, aural or signed communications

Personnel in work area may include:
• workplace personnel
• site visitors
• contractors
• official representatives

Consultative processes may involve:
• staff members
• management
• union representatives
• industrial relations, OH&S specialists
• other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the shifting of loads using gantry equipment
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the shifting of cargo/containers using gantry equipment
- Australian and international regulations and codes of practice for the handling of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant Australian Standards including AS 1418 and AS 2550
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
o relevant and appropriate materials and/or equipment, and/or
o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLID4407B** Shift loads using cranes

**Unit Descriptor**
This unit involves the skills and knowledge required to shift loads using cranes in accordance with workplace and regulatory requirements, including planning the work for the prevailing working conditions; using the controls and operating systems to manage the operation of the crane; locating the load and identifying load characteristics; safely moving the load; monitoring the controls; and stopping, shutting down and securing the crane after the completion of operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the shifting of loads using cranes.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements when shifting loads using cranes as part of work activities in the stevedoring, transport, distribution and allied industries.

**Competency Field**
D – Load Handling

### ELEMENT | PERFORMANCE CRITERIA
--- | ---
**1  Plan work for the current working conditions**  
1.1 Traffic flow and work area conditions are constantly assessed and anticipated to allow safe operation to ensure no injury to people, or damage to crane, loads or facilities  
1.2 Characteristics of the load are taken into account to ensure that, where applicable, appropriate attachments/gear are used to move the load  
1.3 Any occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel  
**2  Use controls and crane operating systems**  
2.1 Crane is prepared for operation in accordance with manufacturers instructions and workplace procedures  
2.2 Crane is started in accordance with manufacturers guidelines  
2.3 Instruments and gauges are monitored during start-up and operations to ensure that operation is within manufacturers specifications and workplace/regulatory safety requirements  
2.4 Engine power is managed for efficiency of crane movement and economy of crane operations
2.5 Crane operations are conducted within manufacturers specified torque range
2.6 Any faults or damage to crane are immediately reported to the appropriate personnel

3 Locate load and identify load characteristics

3.1 Load is located and identified according to instructions
3.2 Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of the crane are identified
3.3 Load weight and dimensions are checked to ensure they fall within the capacity of the crane
3.4 Loading and unloading plans are followed to ensure efficiency and safety of operations
3.5 Characteristics of the load are taken into account to ensure that appropriate loading and unloading procedures are followed
3.6 Hazardous cargo is identified and relevant procedures are taken into account when planning and conducting the work

4 Safely move load

4.1 Crane is operated using smooth and controlled movements
4.2 Manoeuvres are within the limits of the crane and in line with manufacturers specifications
4.3 Load is moved ensuring no injury to personnel or damage to crane or cargo
4.4 Continuous communication is maintained with personnel assisting the operator in the load movement operations using appropriate communications technology and procedures
4.5 In the event of a safety incident or emergency, the crane is immediately stopped and workplace emergency procedures followed
4.6 Safety incidents and emergencies are reported in accordance with workplace procedures and regulatory requirements

5 Monitor controls

5.1 Crane controls are monitored and operated in accordance with manufacturers operating instructions
5.2 Control systems are understood and acted upon in accordance with regulatory requirements, manufacturers guidelines and workplace procedures
5.3 Control faults are identified and reported in accordance with workplace guidelines

6 Stop, shut down and secure equipment

6.1 Crane is brought to a controlled halt within manufacturers guidelines and shut down without injury to personnel or damage to equipment, loads or facilities in accordance with workplace procedures
6.2 Crane is secured after operations in accordance with manufacturers instructions and workplace procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Australian and international codes and regulations relevant to the use of cranes to shift loads, including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the use of cranes to shift loads
- Focus of operation of work systems, equipment, management and site operating systems for the use of boom cranes to shift loads
- Problems that may occur when using cranes to shift loads and appropriate action that can be taken to resolve the problems
- Relevant safety codes and emergency procedures
- Types of boom cranes used to shift loads in terminals/wharves, their applications and procedures and precautions for their use
- Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of cranes
- Relevant bond, quarantine or other legislative requirements

**Required skills:**
- Communicate effectively with others when shifting loads using cranes
- Read and interpret instructions, procedures, information and labels relevant to the shifting of loads using cranes
- Identify cargo, container and goods, coding, ADG and IMDG markings and, where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the shifting of loads using cranes
- Receive, acknowledge and send messages with appropriate communications equipment
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when shifting loads using cranes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when shifting loads using cranes in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when shifting loads using cranes
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the shifting of loads using cranes
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify, select and use relevant equipment, processes and procedures when using cranes to shift loads
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of crane and its equipment and take appropriate action where required
• Apply effective eye-hand coordination to operational tasks
• Service equipment in terms of maintenance schedule and standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• limited or restricted spaces
• exposed conditions
• controlled or open environments

Cargo/freight may include:
• goods/containers with specialist requirements, including temperature controlled goods and dangerous goods

Cranes may include:
• boom cranes in use at transport, rail or shipping terminals

Hazards in the work area may include exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, goods, materials and vehicular traffic

Personal protective equipment may include:
• gloves
• safety headwear and footwear
• safety glasses
• two-way radios
• protective clothing
• high visibility clothing
Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Personnel in work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Consultative processes may involve:

- staff members
- management
- union representatives
- industrial relations, OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the shifting of loads using cranes
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for the shifting of cargo/containers using cranes
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant Australian Standards, including AS2550
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID4507B Operate specialised light load shifting equipment

Unit Descriptor
This unit involves the skills and knowledge required to operate specialised light load shifting equipment in accordance with workplace requirements and relevant regulatory requirements, including planning work for the current working conditions; using controls and equipment operating systems to manage movement of the unit and accessory operations; locating load and identifying load characteristics; moving materials and loads; monitoring and operating controls; and stopping, parking and securing equipment after operation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with codes, regulations, licence and/or permit and workplace requirements relevant to operation of the specialised light load shifting equipment concerned.

Safety checks and equipment tests are performed under limited supervision.

Work involves the application of regulatory requirements and workplace procedures to the operation of specialised light load shifting equipment in the stevedoring, transport, warehousing, distribution and/or storage industries.

Competency Field
D – Load Handling

ELEMENT

PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan work for the current working conditions

1.1 Traffic flow and work area conditions are constantly assessed and anticipated to allow safe operation to ensure no injury to people, or damage to equipment, loads or facilities

1.2 Characteristics of the load are taken into account to ensure that, where applicable, appropriate attachments are used to transport the load

1.3 Any occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel

2 Use controls and equipment operating systems to manage movement of the unit

2.1 Light load shifting equipment is prepared and any appropriate attachment fitted

2.2 Gear and operational levers are checked to ensure that they are in the neutral position prior to inserting ignition key and
and accessory operations

and not close to doorways, aisles, access-ways or blind corners
and in accordance with securing procedures for the
appropriate equipment

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Regulations relevant to the operation of specialised light load shifting equipment, including,
where relevant, the Australian Dangerous Goods Code and relevant bond, quarantine or other
legislative requirements
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the operation of the specialised light load shifting
equipment
• Focus of operation of work systems, equipment, management and site operating systems for
the operation of the specialised light load shifting equipment
• The purpose, characteristics, capabilities, requirements and limitations of the specialised light
load shifting equipment
• Conveyed materials' potential for toxicity, reactivity, material grade, type and purpose
including information from relevant material safety data sheets and Australian Dangerous
Goods Code documentation (where applicable)
• Problems that may occur when operating the specialised light load shifting equipment and
appropriate action that can be taken to resolve the problems
• Operational safety requirements and precautions for the specialised light load shifting
equipment concerned
• Documentation and record requirements
• Housekeeping standards procedures required in the workplace
• Site layout and obstacles
• Relevant permit and licence requirements

Required skills:
• Communicate effectively with others when operating specialised light load shifting
equipment
• Read and interpret instructions, procedures, information and signs relevant to the operation of
specialised light load shifting equipment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the operation of specialised light load shifting equipment
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when operating specialised light load shifting equipment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour
and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur
when operating specialised light load shifting equipment in accordance with regulatory
requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Implement contingency plans for unanticipated situations that may arise when operating specialised light load shifting equipment
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of specialised light load shifting equipment
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use relevant gear and accessories when operating specialised light load shifting equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of equipment and take appropriate action where required
• Service equipment in terms of maintenance schedule and standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night
Customers may be: • internal or external
Workplaces may comprise: • large, medium or small worksites
Work may be conducted in: • limited or restricted spaces
• holds on ships
• exposed conditions
• controlled or open environments
• even or uneven surfaces
• wet or dry surfaces
Equipment may include: • skid steer loaders
• light internal transfer vehicles
• front-end loaders (up to 10 tonne)
• elevated work platforms
Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- additional gear and equipment
- noise restrictions
- hours of operations
- authorities and permits

Hazards in the work area may include exposure to:

- chemicals and fumes
- dangerous or hazardous substances
- stationary and moving machinery, goods, materials and vehicular traffic
- contamination of, or from, materials being handled
- service lines
- spills, leakages and ruptures
- dust/vapours
- faulty gear/equipment/tools

Consultative processes may involve:

- workplace personnel including supervisors and managers
- equipment manufacturers and suppliers
- site visitors and contractors
- union representatives, industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- phone
- fax
- email
- internet
- electronic data interchange (EDI)
- RF communications
- bar code readers
- oral, aural or signed communications

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- respirators and fume masks
- protective clothing
- high visibility clothing
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace procedures and policies for the operation of the specialised light load shifting equipment concerned
- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- manufacturers specifications for equipment/tools
- equipment identification labels, bar codes and serial numbers
- supplier and/or client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes, regulations and licence/permit requirements pertaining to the operation of the specialised light load shifting equipment concerned including the ADG Code (where applicable)
- state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation.
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace.
**TLID707C**  
**Prepare cargo for transfer with slings**

**Unit Descriptor**  
This unit involves the skills and knowledge required to prepare cargo for transfer with slings in accordance with workplace requirements and relevant regulatory requirements, including preparing for transfer of cargo, calculating Safe Working Load (SWL) or Working Load Limit (WLL) of slings and loads, slinging cargo and unslinging cargo, and strapping and unstrapping goods. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the preparation of cargo for transfer with slings.

Safety checks and equipment tests are performed under limited supervision.

Work involves the application of regulatory requirements and workplace procedures to the preparation of cargo for transfer with slings in the stevedoring, transport, warehousing, distribution and/or storage industries.

| **1 Prepare for transfer of cargo** | **1.1 Working area is prepared and maintained in accordance with national standards and safety codes and site operating procedures**  
**1.2 Unsafe work practices and/or faulty equipment is reported in accordance with enterprise procedures**  
**1.3 Correct protective equipment is identified and worn** |
| **2 Calculate Safe Working Load or Working Load Limit of slings and loads** | **2.1 Safe Working Load (SWL) or Working Load Limit (WLL) is calculated using standardised formulae for different types of lifting cables**  
**2.2 Lifting equipment is checked to determine the safe working load**  
**2.3 Slinging gear is checked for conformity with safety equipment** |
| **3 Sling cargo and unsling cargo** | **3.1 Cargo is slung/unslung in accordance with national standards, safety codes and site operating procedures**  
**3.2 Correct securing devices are identified and used** |
3.3 Load is steadied by tag lines as required
3.4 Damaged cargo is identified and reported in accordance with enterprise procedures
3.5 Slinging attachments are released from load ensuring no injury to personnel or damage to machinery or cargo

4 Strap and unstrap goods

4.1 Cargo is strapped and unstrapped in accordance with national standards, safety codes and site operating procedures
4.2 Mechanical strapping equipment is used in accordance with manufacturers instructions
4.3 Damaged cargo is identified and reported in accordance with enterprise reporting procedures
4.4 Strapping arrangements are secured/released to/from load ensuring no injury to personnel or damage to machinery or cargo

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the transfer of cargo with slings, including, where relevant, the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the transfer of cargo with slings
- Focus of operation of work systems, equipment, management and site operating procedures for the transfer of cargo with slings
- Cargos potential for toxicity, reactivity, material grade, type and purpose including information from relevant material safety data sheets and Australian Dangerous Goods Code documentation (where applicable)
- Gear and equipment used during the transfer of cargo with slings and the precautions and procedures that should be followed in their use
- Problems that may occur when preparing cargo for transfer with slings and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when preparing cargo for transfer with slings
- Read and interpret instructions, procedures, information and signs relevant to the preparation of cargo for transfer with slings
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the preparation of cargo for transfer with slings
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when preparing cargo for transfer with slings
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when preparing cargo for transfer with slings in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unanticipated situations that may arise when preparing cargo for transfer with slings
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the preparation of cargo for transfer with slings
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant gear and equipment when preparing cargo for transfer with slings
- Use balance points and estimate weights in setting up loads to be shifted
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments
- even or uneven surfaces
- wet or dry surfaces
Slinging gear may include:
- fibre ropes
- wire ropes
- chains
- webbing slings

Hazards in the work area may include exposure to:
- chemicals and fumes
- dangerous or hazardous substances
- stationary and moving machinery, goods, materials and vehicular traffic
- contamination of, or from, materials being handled
- service lines
- spills, leakages and ruptures
- dust/vapours
- faulty gear/equipment/tools

Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- additional gear and equipment
- noise restrictions
- hours of operations
- authorities and permits

Consultative processes may involve:
- workplace personnel including supervisors and managers
- equipment manufacturers and suppliers
- site visitors and contractors
- union representatives, industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:
- phone
- fax
- email
- internet
- RF communications
- bar code readers
- oral, aural or signed communications
Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- respirators and fume masks
- protective clothing
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace procedures and policies for the preparation of cargo for transfer with slings
- goods identification numbers and codes
- manifests, bar codes, goods and container identification/serial number
- manufacturers specifications
- equipment identification labels, bar codes and serial numbers
- supplier and/or client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements including Australian Standard on wire rope, chain and webbing slings
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code (where applicable)
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the transfer of cargo with slings
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian standards and certification requirements, including Australian Standard 2359 - Industrial Truck Code
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Monitor crane operations

Unit Descriptor
This unit involves the skills and knowledge required to monitor crane operations in accordance with workplace procedures and regulatory requirements, including monitoring work performance and progress, monitoring personnel working in operational area, solving problems concerning crane operations and making decisions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning crane operations.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements when monitoring crane operations as part of work activities in the stevedoring, transport, distribution and allied industries.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Monitor work performance and progress
1.1 Work is performed in line with workplace requirements and objectives, ensuring safe work practices are maintained in accordance with statutory authority regulations, national and industry safety codes and workplace procedures
1.2 Crane operations and compliance with operational procedures are monitored regularly and refined in consultation with supervisor, crane drivers and other employees
1.3 Work performance rates are maintained with delays being minimised to ensure work program objectives are met
1.4 Safety in the work area is continually monitored during crane operations and required action is taken to identify and control hazards and risks

2 Monitor personnel working in operational area
2.1 Vigilance is maintained when personnel are working in the cranes operational area in accordance with statutory requirements, national standards and safety codes
2.2 Personnel are checked out of operational area before securing operational area/storage location/ships hold after completion of shift and when task is completed, ensuring all personnel are safely out of the area/hold
2.3 Personnel working in the operational area/storage location/ships hold are warned of any danger in accordance with workplace procedures and regulatory requirements

2.4 Personnel working in the operational area/storage location/ships hold are alerted when required and emergency responses are initiated to provide assistance to personnel in hold

3 Solve problems and make decisions

3.1 Problems are solved and decisions are made to ensure optimum efficiency of operations having regard to management and client objectives

3.2 Employees are encouraged to contribute their opinions to facilitate effective decisions and resolution of problems

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to crane operations, including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the monitoring of crane operations
- Focus of operation of work systems, equipment, management and site operating systems for crane operations
- Problems that may occur during crane operations and appropriate action that can be taken to resolve the problems
- Relevant handling and safety codes
- Types of cranes used to transfer loads at transport, rail or shipping terminals or wharves, their applications, and the regulations, procedures and precautions for their operation
- Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of cranes
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

Required skills:
- Communicate effectively with others when monitoring crane operations
- Read and interpret instructions, procedures, information, labels and signs relevant to the monitoring of crane operations
- Identify cargo, container and goods, coding, ADG and IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the monitoring of crane operations
- Receive, acknowledge, send messages and give signals using required communications equipment and protocols while monitoring crane operations
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when monitoring crane operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when monitoring crane operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may arise when monitoring crane operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the monitoring of crane operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use relevant equipment, processes and procedures when monitoring crane operations
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Cargo/freight may include:
- goods with specialist requirements, including temperature controlled goods and dangerous goods

Cranes may include:
- cranes in use at transport, rail or shipping terminals or wharves
Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Personnel in work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to crane operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for crane and associated equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes, regulations, and licence/permit requirements for the operation of relevant categories of cranes
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant Australian Standards, including AS 2550
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLID907C  Direct crane operations

Unit Descriptor
This unit involves the skills and knowledge required to direct crane operations in accordance with workplace and regulatory requirements including performing checks of the work area, performing checks of cargo, receiving and interpreting directions, anticipating cargo transfer sequence, and directing crane operators and transferring loads in accordance with job requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning crane operations.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements when directing crane drivers as part of work activities in the stevedoring, transport, distribution and allied industries.

Competency Field
D – Load Handling

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Perform check of work area
1.1 The work area is checked ensuring that the area is in accordance with relevant safety codes and national standards
1.2 Unsafe work areas are identified and reported to appropriate personnel

2 Perform check of cargo
2.1 Cargo/containers are checked ensuring they are safe to handle in accordance with national standards and industry safety codes
2.2 Unsafe or damaged cargo is identified and reported to appropriate personnel

3 Interpret and provide directions
3.1 Directions are provided using the required communications technology/mode
3.2 Directions are confirmed ensuring any unclear instructions are checked and clarified with the relevant staff

4 Anticipate cargo transfer sequence
4.1 Cargo transfer sequence is anticipated ensuring compliance with operating procedures and safe and efficient transfer operations
4.2 Cargo sequence is anticipated by referral to ships stowage plans/required sheets

5 Direct crane operators and transfer loads

5.1 Crane operators are directed to work locations to ensure that cargo/containers are transferred in accordance with workplace procedures and regulatory requirements

5.2 Crane drivers are immediately alerted to unsafe conditions, safety incidents and emergencies in accordance with workplace procedures and regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to crane operations, including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the direction of crane operations
- Focus of operation of work systems, equipment, management and site operating systems for crane operations
- Problems that may occur during crane operations and appropriate action that can be taken to resolve the problems
- Relevant handling and safety codes
- Types of cranes used to transfer loads at transport, rail or shipping terminals or wharves, their applications, and the regulations, procedures and precautions for their operation
- Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of cranes
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

Required skills:

- Communicate effectively with others when directing crane operations
- Read and interpret instructions, procedures, information, labels and signs relevant to the direction of crane operations
- Identify cargo, container and goods, coding, ADG and IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the direction of crane operations
- Receive, acknowledge, send messages and give signals using required communications equipment and protocols while directing crane operations
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when directing crane operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when directing crane operations in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when directing crane operations
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the direction of crane operations
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify, select and use relevant equipment, processes and procedures when directing crane operations
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: in a range of work environments
• by day or night

Customers may be: internal or external

Workplaces may comprise: large, medium or small worksites

Work may be conducted in: limited or restricted spaces
• exposed conditions
• controlled or open environments

Workplace procedures when directing crane operations include:
• the following of the job plan and prepared work priorities
• specific site operating procedures
• requirements for safe and efficient operations
• effective communications with crane operators ensuring directions are promptly and accurately understood

Cranes may include: cranes in use at transport, rail or shipping terminals or wharves
Account may be taken of the following conditions in relation to operational safety (depending on the context of crane operations concerned):

- organisational and statutory operating requirements
- surface condition of the work area
- stacking area
- degree of visibility
- weather conditions
- other traffic
- obstacles
- site and nature of loads
- ship/vehicle/ rail movements
- tidal movement

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- hand signals
- oral, aural or signed communications

Personnel in work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to crane operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for crane and associated equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes, regulations, and licence/permit requirements for the operation of relevant categories of cranes
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant Australian Standards, including AS 2550
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIE1007C  Estimate furniture removal jobs

Unit Descriptor
This unit involves the skills and knowledge required to estimate furniture removal jobs including estimating requirements of removal jobs, interacting with customers regarding removals, and preparing documentation for removals job. Estimates may include estimates of the volume of a furniture removals job and calculations of expenses, time and resources. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with company procedures, the Operations Furniture Removalist Manual and relevant standards and certification requirements.

Work is normally performed under limited supervision or unsupervised. It involves the application of standard furniture removal procedures when carrying out estimation of furniture removal jobs.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Estimate requirements of removals jobs
1.1 An accurate and complete inventory is taken which records all furniture and effects to be removed
1.2 The type of goods to be moved is accurately defined so that appropriate arrangements for fragile or dangerous good can be made, following workplace procedures and legislative requirements
1.3 The job requirements are estimated in relation to the size of the van, the amount of time required, labour required, hazards involved, and other resources needed to complete the job
1.4 Job costs are calculated on the basis of volume, time and distance

2 Interact with customers regarding removals
2.1 Customer requests and queries are courteously handled both face-to-face and on the telephone
2.2 Customers are appropriately briefed in relation to the organisational details, legal liability, insurance and contractual details of the removals job, following workplace procedures
2.3 Personal contact with the customer is maintained during and following the removal to ensure customer's needs are satisfied and any concerns are addressed
3 Prepare documentation for removals job

3.1 A job quotation is documented and submitted to the customer as required, following workplace procedures

3.2 The removal is scheduled and booking staff are informed as required

3.3 The removal job is audited against the pre-job estimates and recommendations for improvements made if appropriate

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant procedures and duty of care requirements
- Relevant OH&S and environmental protection legislation and policies
- Furniture removal estimation procedures and related codes of practice
- Relevant agreements and legislation applicable to furniture removal
- Customer service requirements including language, courtesy, behaviour and problem solving
- Hazards that may be experienced on a removal job and related hazard control measures
- Items unsuitable for removal and the associated reasons
- Special requirements that may need to be addressed in a removal and the related procedures to be adopted
- Documentation that is completed during an estimation of a removal job

**Required skills:**

- Communicate effectively with others when estimating a furniture removal job
- Read and interpret instructions, procedures and information relevant to estimating a furniture removal job
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to estimating a furniture removal job
- Operate electronic communication equipment to required protocol
- Estimate mass, volume and area and to quantify dimensions
- Carry out calculations required when estimating removal jobs
- Work collaboratively with others when estimating a furniture removal job
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when estimating a furniture removal job in accordance with workplace procedures
- Plan own work, including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify equipment used in removals and understand its application and the procedures involved
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Removal sites may include:
• domestic premises
• industrial premises
• commercial premises
• local suburban, country, interstate, overseas

Customers may be:
• internal and external

Operations may be conducted:
• by day or night
• in a variety of weather conditions

Hazards may include:
• power and telephone lines, trees and landscaping
• driveway length and surface
• parking restrictions
• stairs and steps
• lawn sprinklers on automatic timers
• obstructions
• uneven or unstable ground
• door and passageway widths and tight internal corners
• low hanging light fittings and other fixture obstructions
• unfriendly pets

Requirements for access may include:
• site restrictions and procedures
• personal protective equipment
• authorities and permits
• security arrangements at the site
• hours of operation
• removal duration
• additional gear and equipment
• communications equipment
Consultative processes may involve:
- customers
- other employees and supervisors
- management and other office personnel
- union representatives
- Occupational Health and Safety specialists
- other professional and technical staff and tradespeople

Special requirements may include:
- dismantling of items
- temporary removal of doors and fittings on site
- the use of tradespersons such as electricians, carpenters, cabinet makers, etc.

Communications may include:
- fixed and mobile phones, radio, fax, laptop computer/Internet
- oral/aural communications
- written communications, including completing and signing documents

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Calculations may involve the basic use of a range of technology including:
- manual techniques
- calculator
- computer

Information/documentation may include:
- job estimate
- Operations Furniture Removalist Manual
- job specifications and procedures
- OH&S procedures and regulations
- manufacturers specifications
- workplace operating procedures and policies
- customer instructions
- standards and certification requirements
- quality assurance procedures
- emergency procedures
- job safety analysis
- site plan
Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority vehicle driver licence requirements
- relevant state/territory traffic act and related regulations
- relevant state/territory OH&S legislation and regulations
- relevant state/territory environmental protection legislation and regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIE107C Present routine workplace information

Unit Descriptor
This unit involves the skills and knowledge required to present routine workplace information in accordance with workplace requirements including preparing and presenting routine workplace documents and preparing and delivering oral presentations as part of routine work. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace requirements concerning the preparation and presentation of routine workplace information.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and relevant regulatory requirements when preparing and presenting routine workplace information as part of work activities in the stevedoring, transport, distribution and allied industries.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare and present document
1.1 Purpose of the document is identified
1.2 Sources of information are established
1.3 Information is collated and presented in a logical order
1.4 Document style is selected to match purpose and workplace pro-formas
1.5 Language is clear, concise and conveys appropriate information to target audience
1.6 Document is checked to ensure that it follows workplace requirements
1.7 Completed document is presented to appropriate personnel as required

2 Prepare and deliver oral presentation
2.1 Purpose of oral presentation is established
2.2 Target audience is identified
2.3 Information is gathered and sorted
2.4 Visual, audio and physical support media are identified or developed, if required, in accordance with workplace procedures
2.5 Presentation is trialled and adjusted to suit target audience
2.6 Information is presented in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to workplace activities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for preparing and presenting routine workplace information
- Focus of operation of work systems, equipment, management and site operating systems for the preparation and presentation of routine workplace information
- Documents, forms, and oral presentations required as part of routine workplace activities
- Problems that may occur when preparing and presenting routine workplace information and appropriate action that can be taken to resolve the problems

Required skills:
- Communicate effectively with others when preparing and presenting routine workplace information
- Read and interpret instructions, procedures and information relevant to the preparation and presentation of routine workplace information
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the preparation and presentation of routine workplace information
- Receive, acknowledge and send messages with available communications equipment
- Work collaboratively with others when preparing and presenting routine workplace information
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when preparing and presenting routine workplace information in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Identify, select and use relevant equipment, processes and procedures when preparing and presenting routine workplace information
- Use presentation packages for slides, overhead projector, computer presentations
- Modify activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail
- Operate and adapt to differences in equipment in accordance with standard operating procedures
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments • by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces • exposed conditions • controlled or open environments

Workplace information to be prepared and presented may include: • routine reports, documentation and forms that are required to be completed to instructions, or pro-formas as part of routine job requirements

Reports/forms may be presented: • orally, in writing or via a computer

Hazards in the work area may include exposure to: • chemicals • dangerous or hazardous substances • movements of equipment, goods, materials and vehicular traffic

Personal protective equipment needed in the work area may include: • gloves • safety headwear and footwear • safety glasses • two-way radios • protective clothing • high visibility clothing

Communication in the work area may include: • phone • fax • email • electronic data transfer (EDI) • RF systems • radio • oral, aural or signed communications
Consultative processes may involve

- staff members
- management
- union representatives
- industrial relations, Occupational Health and Safety specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to workplace activities
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances (where applicable)
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the transfer of cargo/freight
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances (where applicable)
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIE1207C  Consolidate manifest documentation

Unit Descriptor
This unit involves the skills and knowledge required to consolidate manifest documentation including the identification of the documentation required and the processing of the information in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant codes of practice and regulations for the carriage of freight.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to efficiently and effectively consolidate manifest documentation.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify required documentation
1.1 Relevant documentation is collated and checked to ensure all appropriate information has been entered
1.2 Omissions/discrepancies are noted and reported in accordance with workplace procedures
1.3 Identification codes, manifest codes, details of dangerous goods declarations and pertinent data are entered into record system in accordance with workplace procedures and, where required, statutory requirements
1.4 Relevant clearances for the movement of goods/freight are checked and, where appropriate, actions to rectify deficiencies are followed in accordance with workplace procedures

2 Process documentation
2.1 Files/system are amended including the appending of all relevant data/information
2.2 Tracking/monitoring processes are completed and documentation is forwarded in accordance with workplace procedures and, where required, statutory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant codes of practice and legislative requirements including Australian Dangerous Goods Code and relevant freight regulations
• Relevant OH&S and environmental procedures and regulations
• Workplace procedures to be followed in the consolidation of manifests
• Operational procedures for document control
• Sources of information/documentation needed when consolidating manifests
• Customer service policies and procedures

Required skills:
• Communicate effectively with others when consolidating manifest documentation
• Read and interpret instructions, procedures, information and labels relevant to the consolidation of manifest documentation
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the consolidation process
• Work collaboratively with others when consolidating manifest documentation
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when consolidating manifest documentation in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when consolidating manifest documentation
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Consolidation of manifest documentation may be undertaken in:
• the bulk handling, dangerous goods and freight forwarding sectors of the transport and distribution industry

Requirements for work may include:
• freight forwarding protocols and procedures
• communications equipment
• workplace operations
• authorities and permits
• hours of operation
• relevant regulations
Documentation may include:

- type, capacity and compatibility of cargo
- weigh bridge tickets
- loading dockets
- orders
- invoices

Consultative processes may involve:

- other employees and supervisors
- agents, suppliers, clients
- relevant authorities and institutions
- management
- OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- operations manuals, job specifications and procedures and induction documentation
- competency standards and training materials
- manufacturers/client specifications, instructions
- workplace operating procedures and policies
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- supplier and/or client instructions
- relevant Australian standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures
Applicable procedures and codes may include:

- regulations relevant to the transport of freight
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation.
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace.
TLIE1307C  Apply workplace statistics

Unit Descriptor
This unit involves the skills and knowledge required to apply statistical data in the workplace including identifying situations where statistics are used in the workplace, collecting numerical data, processing and presenting data, and interpreting trends and patterns from numerical data. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
The application of workplace statistics is carried out as an integral part of work operations in the context of the workplace concerned.

Work is performed under general guidance on progress and outcomes of work. It involves discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within organisational policy and procedures. This includes the application of established statistical principle

A range of opportunities may be used to develop the work area and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field
E – Communication and Calculation

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify situations where statistics are used in the workplace
1.1 Types of statistical representations of data are identified
1.2 Users of statistical data in the workplace are identified
1.3 Statistical data representations are matched for appropriate workplace applications

2 Collect numerical data
2.1 Purpose of data collection is identified
2.2 Sources of information are established
2.3 Data collection methods are used
2.4 Mathematical processes are used to arrange data
2.5 Data collected is checked for accuracy
2.6 Potential for inaccurate results arising from variables is
3 Process and present data

3.1 Data collected is represented in graphs, tables, averages and percentages as required
3.2 Spreadsheets and flowcharts are used to present data

4 Interpret trends and patterns from numerical data

4.1 Non-conforming results outside of the predicted outcome are noted and reasons identified
4.2 Trends or patterns in data are noted
4.3 Possible reasons for trends or patterns are generated
4.4 Potential solutions are identified
4.5 Appropriate techniques are used to encourage participation of team/group members to interpret and use statistical data

5 Apply outcomes of statistical analysis to workplace operations

5.1 Interpreted data is used to identify possible improvements in work processes and organisation
5.2 Appropriate action is initiated to implement identified strategies for the improvement of processes or work organisation in accordance with workplace procedures
5.3 Improvements are statistically monitored and evaluated in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Workplace protocols and procedures for applying workplace statistics within work activities
- Focus of operation of recording, reporting and statistical analysis systems and resources
- Resource availability including the processing capacity of equipment and software systems for statistical analysis of data
- Coaching and mentoring approaches to support team members to develop knowledge and skills in statistical collection, collation and analysis
- Workplace business policies and plans including procedures for reporting performance

Required skills:
- Communicate effectively with others when applying workplace statistics
- Read and interpret instructions, procedures, and technical data relevant to the application of workplace statistics
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to workplace statistics
- Work collaboratively with others when applying workplace statistics
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems related to the application of workplace statistics in accordance with workplace procedures
• Select and appropriately apply technology, information systems and procedures to workplace tasks
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
• single and multi-site location
• large, medium and/or small companies

Services, products, risks, work systems and requirements may potentially:
• vary across different sections of the workplace

Customer and supplier contact and coordination is:
• a requirement of these operations

The key requirement of this unit is to:
• interpret the data and provide appropriate, timely information on the outcomes of data analysis to appropriate personnel

Workplace applications of statistical data representations may include (examples only):
• monitoring work flow
• inventory and stock levels
• customer surveys
• supplier and market analysis
• fleet control

Statistics may be generated from:
• raw data
• machine generated information
• complex, dedicated computerised facilities

Personnel in work area may include:
• other employees and supervisors
• customers and suppliers
• external authorities and agencies
• management and union representatives
• industrial relations, Occupational Health and Safety specialists
• other professional or technical staff, contractors and maintenance personnel
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- workplace procedures, policies and instructions
- guidelines relating to minimising risks to the environment and occupational health and safety requirements
- relevant agreements, codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- reports of accidents and incidents within regulatory requirements and enterprise procedures
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- quality assurance procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLIE1407C**

**Compile and process export documentation**

**Unit Descriptor**

This unit involves the skills and knowledge required to compile and process export documentation including assessing cargo for transport, preparing regulatory and commercial documentation, preparing transport documentation, and coordinating documentation in accordance with requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Work must be carried out in compliance with the relevant codes of practice and regulations for the export of freight.

Work is performed under general supervision. It involves the application of routine principles and procedures to compile and process export documentation.

**Competency Field**

E – Communication and Calculation

**ELEMENT**

Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Assess cargo for transport**

1.1 Cargo for export is assessed in terms of commodity type and size, fair market value, shipping method, classification and conformity to domestic and foreign export/import requirements

1.2 Customer is advised of discrepancies/anomalies and procedures for rectification in accordance with workplace procedures

2 **Prepare regulatory and commercial documentation**

2.1 Export packing lists are prepared from shipper's instructions including information regarding identifying marks and numbers, weights and measurements and package details

2.2 Commercial documents, including invoices, banking and insurance requirements, are processed/prepared in accordance with regulatory and workplace procedures

2.3 Lodgement instructions, where applicable, are prepared for forwarding to banking institutions

2.4 Regulatory requirements are generated as required

3 **Prepare transport documentation**

3.1 Interim receipt/forwarding instructions are processed in accordance with shipping line requirements and workplace procedures

3.2 Bill of lading/airway bills are obtained from shipping agent/company and processed in accordance with workplace
3.3 Additional transport documentation for export is generated/processed as required

4 Coordinate documentation requirements

4.1 Documentation is collated and checked to ensure it is complete and accurate
4.2 Procedures for the lodgement of documents, including destination points and required timeframes, are recorded
4.3 Export documentation is forwarded in accordance with workplace procedures and export schedule
4.4 Documents are filed/stored in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant agreements, codes of practice and legislative requirements including Australian Dangerous Goods Code and local and international freight regulations
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the compilation and processing of export documentation
- Contacts and sources of information/documentation needed when compiling and processing export documentation
- Customer service policies and procedures
- Documentation requirements of banking institutions, governments and insurance companies

Required skills:

- Communicate effectively with others when compiling and processing export documentation
- Read and interpret instructions, procedures, information and labels relevant to the compilation and processing of export documentation
- Identify, read and interpret the various types of export documentation and their appropriate usage
- Interpret and follow operational instructions and prioritise work
- Complete and process export documentation
- Use relevant communications equipment when organising the international transport of freight
- Use relevant computerised systems for communication and document generation
- Work collaboratively with others when compiling and processing export documentation
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when compiling and processing export documentation in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when compiling and processing export documentation
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisational activities may cover:
• movement of equipment, goods, materials and various forms of freight transport
• may be conducted by day or night

Customers may be:
• internal or external

Requirements for work may include:
• site restrictions and procedures
• relevant domestic and international regulations
• specified loading operations
• communications equipment
• hours of operation
• authorities and permits
• incident/accident breakdown procedures

Transport documentation for export may include:
• bill of lading
• airway bills
• export wharfage
• quarantine documentation
• parcel post receipt
• commerce markings

Regulatory requirements may involve:
• export permits and clearances
• goods certificates
• financial duties

Forms of transport may include:
• road
• rail
• sea
• air
• multi-modal
Forms of documentation include:

- packing specifications and lists
- manifests
- invoices
- drafts
- instructions
- letters

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- relevant authorities
- shipping lines
- banking institutions
- other agencies
- management and union representatives
- OH&S specialists
- other maintenance, professional or technical staff

Communications systems may involve:

- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- workplace procedures
- organisational procedures
- established procedures

Documentation/records may include:

- operations manuals, job specifications and procedures and induction documentation
- competency standards and training materials
- manufacturers/client specifications, instructions and labelling advice including material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- OH&S procedures
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- international transport regulations, codes and procedures
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- regulations and codes of practice for the import and export of cargo
- relevant Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- other regulations and legislative requirements pertaining to embargos, tariffs, quotas and prohibited goods

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
TLIE1507C Undertake rigger/dogger and driver communication

Unit Descriptor
This unit involves the skills and knowledge required to enable effective communication between riggers/doggers and drivers during a lift including establishing an agreed communications system and trialing and configuring communication arrangements in accordance with regulatory requirements and codes of practice. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to operations of mobile cranes up to and including 20 tonnes.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles, procedures and regulations to lift and move loads using slewing and non-slewing mobile cranes up to and including 20 tonnes in a variety of operational contexts.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Establishing agreed communications system
1.1 Forms of signals/communication conforming to Australian Standards and codes of practice are identified
1.2 Methods of communication to be used in crane operations are agreed with relevant personnel

2 Trial and configure communications
2.1 Communications are trialed and adjusted and/or confirmed as required to ensure a safe and effective lift
2.2 Communications equipment is checked for correct operation and configured in line with legislative and workplace requirements
2.3 Defective equipment is tagged, rejected and reported to authorised personnel for corrective action
2.4 Signals/communications are given both within sight and out of sight of crane operator

3 Use communication methods during a lift
3.1 Communication methods and systems are used during a lift in accordance with regulatory requirements, manufacturers
instructions and workplace procedures.

3.2 Problems identified during communications are reported and immediate action initiated in accordance with workplace procedures and regulatory requirements.

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Risks and hazards involved in mobile crane operation and associated action that can be taken to eliminate or minimise the risk
- Workplace procedures and statutory regulations concerning the communications between a rigger/dogger and a mobile crane driver before and during a lift
- Problems that may occur in communications during a lift and associated action that can be taken to address the problems concerned
- Methods used to signal movement of the load during a lift
- Communication systems used during a lift

**Required skills:**
- Communicate effectively with others when conducting a lift
- Read and interpret instructions, procedures, regulations, information and signals relevant to communication between the rigger or dogger and the crane driver
- Interpret and follow operational instructions and prioritise work
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting a lift
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise in the course of communication between a crane driver and the rigger or dogger in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur in the course of communication between a crane driver and the rigger or dogger
- Apply precautions and required action to minimise, control or eliminate hazards that may exist in the course of communication between a crane driver and the rigger or dogger
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Prioritise and multi-task work
• Identify and correctly use equipment, processes and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in a variety of weather conditions

Environment may include movement of:
• equipment
• goods
• materials
• vehicular traffic

Customers may be:
• internal or external

Mobile crane may be any slewing and non-slewing crane and may be involved in work in a range of industry sectors including:
• construction and demolition
• manufacturing
• waterfront
• mining
• primary industry
• utilities (electricity, gas, water
• arboricultural
• swimming pool
• quarrying

Agreed signals/communications conforming to Australian Standards and codes of practice for load moving include signals for:
• stop
• raise
• lower
• slew-left or right
• luff-boom up and down
• extend boom
• retract boom
Methods used to signal movement of the load may include:

- verbal
- hand signals in accordance with standards and codes of practice
- whistles/hooters in accordance with standards and codes of practice
- two-way radios/telephones in accordance with standards and codes of practice
- light signals in accordance with standards and codes of practice

Consultative processes may involve:

- driver/rigger
- other employees and supervisors
- other professional or technical staff

Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
Requirements for access and/or lift may include:

- a range of mobile cranes
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures
Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile crane operations including dogging and rigging requirements
- relevant Australian Standards and certification requirements
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at
the registered training organisation, and/or
0 in an appropriate range of situations in the workplace
TLIE1607C Estimate/calculate load shifting requirements for a mobile crane

Unit Descriptor
This unit involves the skills and knowledge required to estimate/calculate load shifting requirements including carrying out required calculations, preparing estimates of loads, and interpreting graphical representations of mathematical information. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to operations of mobile cranes.

Work is performed with limited or minimum supervision. It involves the application of routine principles, procedures and regulations to estimate/calculate load shifting requirements for a mobile crane.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify mathematical information and tools used in the workplace
1.1 Dimensions and/or weights to be measured are identified from work procedures and, where applicable, work order forms
1.2 Units of measurement for allowable load limits (SWL and WLL) for load shifting are identified from crane load chart
1.3 Information presented in mathematical symbols, diagrams and pictorial representations is recognised, interpreted and used to complete workplace tasks
1.4 Measuring equipment, features and/or scales and units of measurement are selected as appropriate for the task and process

2 Estimate and calculate requirements for load shifting
2.1 Appropriate methods are selected to perform calculations required to complete workplace tasks, including addition, subtraction, multiplication, division, fractions, decimals, percentages and mixed numbers
2.2 Quantities of materials and resources required to complete a work task are calculated
2.3 Load balance characteristics are identified
2.4 The time needed to complete a work activity is estimated
2.5 Calculations required for weight, reach, radii, boom and jib configurations are undertaken and checked for conformity
2.6 Load spread is estimated/calculated to ensure safe weighting on pallets, trucks, platforms or other storage or transport systems.

2.7 Measuring instruments are read to the limit of accuracy of the tool.

3 Complete documentation using mathematical information

3.1 Appropriate workplace documentation is completed using recognised symbols and mathematical terms for the work tasks.

3.2 Numerical information is self-checked and corrected for accuracy.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and limitations
- Risks and hazards involved in mobile crane operation and associated action that can be taken to eliminate or minimise the risk
- Workplace procedures concerning the estimation/calculation of load shifting requirements for a mobile crane
- Workplace procedures concerning the estimation/calculation of load shifting requirements for a mobile crane
- Problems that may occur during a lift and associated action that can be taken to address the problems concerned
- Focus of operation of work systems and equipment
- Metric and, where required, imperial measurement systems

**Required skills:**

- Communicate effectively with others when estimating and calculating load shifting requirements for a mobile crane
- Read and interpret mathematical scales, digital readouts, specifications and customer or workplace instructions
- Interpret permit or licence requirements in terms of height, weight and type of lift
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to estimating and calculating load shifting requirements for a mobile crane
- Operate electronic communication equipment to required protocol
- Apply mathematical procedures including addition, subtraction, multiplication, division, percentages and fractions to the estimation of load shifting requirements
• Work collaboratively with others when estimating and calculating load shifting requirements for a mobile crane
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when estimating and calculating load shifting requirements for a mobile crane in accordance with workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify and correctly use equipment, processes and procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  • by day or night
• in a variety of weather conditions

Environment may include movement of:
• equipment
• goods
• materials
• vehicular traffic

Customers may be:
• internal or external

Mobile crane may be any slewing and non-slewing crane up to and including 20 tonne capacity and may be involved in work in a range of industry sectors including:
• construction and demolition
• manufacturing
• waterfront
• mining
• primary industry
• utilities (electricity, gas, water)
• arboricultural
• swimming pool
• quarrying
Calculations and estimations may relate to:
- aspects of the lift as well as weights and dimensions of specific loads, cargo, containers to be shifted, stored or lifted. They may involve units of measurement for weight, linear measurement, number, mass, pressure, speed, volume and/or time.

Calculations may be undertaken with:
- use of calculators, computers or other mathematical aids.

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is consistent with:
- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment.

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff
Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Documentation/records may include:

- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - OH&S procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures
Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant Australian Standards and certification requirements
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
in an appropriate range of situations in the workplace
TLIE1707B  Undertake initial removal survey

Unit Descriptor
This unit involves the skills and knowledge required by removal crew members to undertake initial removal surveys including the correct parking of a removal vehicle, the determination of access arrangements, the identification of potential hazards, the development of an appropriate removal plan prior to uplift, and completion of all relevant records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace procedures, the Operations Furniture Removalist Manual and relevant standards and certification requirements.

Work is normally performed under general supervision. Defined accountability and responsibility for self and others in achieving the required outcomes is involved.

It involves the application of standard furniture removals procedures when carrying out initial removal surveys across a variety of removal contexts.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Park vehicle
1.1 Vehicle is parked with due consideration of critical factors
1.2 Plan for access to vehicle ensures minimisation of traffic wear on gardens and lawns, and avoidance of obstructions
1.3 Potential hazards are identified and appropriate action is planned to minimise risk of injury and/or damage to items and equipment during removal activities

2 Define job requirements
2.1 Customers needs and perception of job are clearly established through appropriate questioning and discussion based on removal consultant appraisal
2.2 Initial inspection of total job is undertaken with customer and an appropriate loading sequence is ascertained
2.3 Potential internal hazards are identified and appropriate action is planned to minimise risk or injury and/or damage to items, equipment or structure
2.4 Special requirements are identified and negotiated with the customer
2.5 Customer is appropriately advised of any pre-damaged or damage-risked items and appropriate documentation is...
2.6 Items unacceptable for removal are identified and the customer is appropriately informed.

3 Complete records

3.1 Required records are updated accurately, legibly and promptly according to company procedures.
3.2 Records are checked to ensure they include all required information relevant to the job.
3.3 Changes to consultants appraisal are confirmed with the office in accordance with company procedures.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant licence and traffic regulations of the relevant state/territory road traffic authority
- Relevant OH&S and environmental protection legislation and policies
- Furniture removal procedures and codes of practice
- Relevant agreements and legislation applicable to furniture removal
- Customer service requirements including language, courtesy, behaviour and problem solving
- Company work procedures
- Hazards that may be experienced on a removal job and related hazard control measures
- Items unsuitable for removal and the associated reasons
- Special requirements that may need to be addressed in a removal and the related procedures to be adopted
- Records and signed agreements that are completed during an initial removal survey and related procedures

Required skills:

- Communicate effectively with others when undertaking an initial removal survey
- Read and interpret instructions, procedures, information and signs relevant to an initial removal survey
- Interpret and follow operational instructions and prioritise work
- Complete documentation required for an initial removal survey
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when undertaking an initial removal survey
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when undertaking an initial removal survey in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when undertaking an initial removal survey
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to furniture or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Removal sites may include:
• domestic premises
• industrial premises
• commercial premises

Customers may be:
• internal and external

Operations may be conducted:
• by day or night
• in a variety of weather conditions

Critical factors when parking a removal vehicle may include:
• parking and traffic restrictions
• obstructions
• suitability of driveway (e.g. to support vehicle weight)

Hazards may include:
• power and telephone lines, trees and landscaping
• driveway length and surface
• parking restrictions
• stairs and steps
• lawn sprinklers on automatic timers
• obstructions
• uneven or unstable ground
• door and passageway widths and tight internal corners
• low hanging light fittings and other fixture obstructions
• unfriendly pets

Requirements for access may include:
• site restrictions and procedures
• personal protective equipment
• authorities and permits
• security arrangements at the site
• hours of operation
• removal duration
• additional gear and equipment
• communications equipment
Consultative processes may involve:

- customers
- other employees and supervisors
- management and other office personnel
- union representatives
- occupational Health and Safety specialists
- other professional and technical staff and tradespeople

Special requirements may include:

- dismantling of items
- temporary removal of doors and fittings on site
- the use of tradespersons such as electricians, carpenters, cabinet makers, etc.

Communications may include:

- fixed and mobile phones, radio, fax, laptop computer/Internet
- oral/aural communications
- written communications, including completing and signing documents

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Calculations may involve the basic use of a range of technology including:

- manual techniques
- calculator
- computer

Documentation may include:

- consultant appraisal report
- Operations Furniture Removalist Manual
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- customer instructions
- standards and certification requirements
- quality assurance procedures
- emergency procedures
- job safety analysis
- site plan
Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority vehicle driver licence requirements
- relevant state/territory traffic act and related regulations
- relevant state/territory OH&S legislation and regulations
- relevant state/territory environmental protection legislation and regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIE1807B Maintain freight records

Unit Descriptor
This unit involves the skills and knowledge required to maintain freight records in accordance with workplace requirements including the recording of all freight receipts and freight despatch documentation in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the maintenance of freight records.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the maintenance of freight records as part of work activities in the transport, distribution and/or allied industries.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Record freight receipt
1.1 Freight is identified and consignment/cartnote details are confirmed
1.2 Documentation is appropriately actioned, following workplace procedures and legislative requirements
1.3 Dangerous goods are identified and appropriate documentation prepared and attached, following workplace procedures and legislative requirements
1.4 Freight information is recorded on workplace freight tracking system
1.5 Freight is directed for loading or storage as indicated by documentation

2 Record freight despatch
2.1 Documentation for freight despatch is checked, verified and forwarded in accordance with workplace procedures
2.2 Loads not cleared due to incorrect documentation are appropriately processed, according to workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian and international codes and regulations relevant to the maintenance of freight records, including the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the international codes and regulations relevant to the maintenance of freight records
• Focus of operation of work systems, equipment, management and site operating systems for the maintenance of freight records
• Problems that may occur when maintaining freight records and appropriate action that can be taken to resolve the problems
• Types of goods and related handling and documentation requirements including dangerous goods and hazardous substances
• Documentation requirements for the maintenance of freight records including workplace freight tracking system
• Housekeeping standards procedures required in the workplace
• Freight transport timetables, yard/terminal facilities, and site layout

Required skills:
• Communicate effectively with others when maintaining freight records
• Read and interpret instructions, procedures, information and labels relevant to the maintenance of freight records
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the maintenance of freight records
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when maintaining freight records
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when maintaining freight records in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the maintenance of freight records
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant computer, communication and office equipment when maintaining freight records
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments • by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces • exposed conditions • controlled or open environments

Freight includes all forms of freight. Some freight may involve: • special handling and storage requirements, including temperature controlled goods, dangerous goods, explosives and hazardous substances

Freight documentation may include a range of data provided on paper and in electronic form relating to freight movement, including:

• cartnotes • delivery noted • internal documentation used for freight tracking • special clearances • consignment notes • dangerous goods certificates and declarations • authorised weighbridge certificates • list of contents

Freight tracking system includes: • manual and computer-based tracking systems

Hazards in the work area may include:

• exposure to chemicals • exposure to dangerous or hazardous substances • movements of equipment, goods, materials and vehicular traffic

Consultative processes may involve:

• other employees and supervisors • suppliers, customers and clients • drivers and agents • relevant authorities and institutions • management and union representatives • industrial relations and OH&S specialists • other maintenance, professional or technical staff
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:
- goods identification numbers and codes
- manifests, cartnotes, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for freight tracking
- codes of practice and regulations relevant to the receiving of goods
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the maintenance of freight records
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- privacy legislation
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIE1907B Work with travel agencies and sales outlets

Unit Descriptor
This unit involves the skills and knowledge required to work with travel agencies and sales outlets in accordance with workplace requirements including establishing and maintaining a network of travel agencies and sales outlets; developing and negotiating the sales of tour packages; monitoring and reporting tour package sales; reviewing and negotiating agency and outlet agreements; and communicating and promoting products and services to agencies and sales outlets. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace requirements and relevant trade practices regulations.

Work is performed individually, and skills are required to work within a team environment. It involves the application of regulatory requirements and workplace procedures when working with travel agencies and sales outlets in the transport and allied industries.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Establish and maintain network of travel agencies and sales outlets
1.1 Agency and outlet requests for the transport system services and tourist information are addressed
1.2 Agency and outlet sales of tickets and services are promoted
1.3 Agency and outlet concerns and complaints are investigated and addressed to achieve a satisfactory resolution

2 Develop and negotiate the sales of tour packages
2.1 Travel industry personnel within the workplace are consulted in the development of tour packages to be distributed through agencies and sales outlets
2.2 Distribution rights are negotiated with wholesale and retail travel industry agencies for tour packages developed

3 Monitor and report tour packages sales
3.1 Travel agency and outlet sales of products are managed and controlled to ensure maximum sales and efficiency
3.2 Tour packages are evaluated for popularity and profitability and appropriate recommendations for change prepared

4 Review and negotiate agency and outlet
4.1 Existing agency and outlet agreements are monitored and reviewed for effectiveness and appropriate new agreements
agreements are recommended where necessary
4.2 Distribution of tour packages is negotiated with wholesalers according to workplace policy and procedures

5 Communicate and promote products and services to agencies and sales outlets
5.1 Products for travel shelf packages are recommended according to workplace product suitability
5.2 Sales outlets and agents are informed of changes to passenger services as quickly as possible
5.3 Travel agency and outlet sales of products are promoted to ensure maximum exposure and sales
5.4 Advertising and promotional activities to develop new businesses are established in accordance with workplace budgets and timeframes
5.5 Promotional material is distributed to travel agencies and outlets

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Regulations and codes of practice relevant when working with travel agencies and sales outlets
• Relevant OH&S procedures and guidelines
• Workplace procedures and policies for working with travel agencies and sales outlets
• Overview of the Australian tourism industry and franchising arrangements
• Australian and international transport industry guidelines relevant to working with travel agencies and sales outlets
• Workplace products and services
• Insurance and public liability relevant to working with travel agencies and sales outlets
• Consumer laws and trade practice requirements relevant to working with travel agencies and sales outlets
• Transport system fare structure and schedules
• Advertising policies relevant to working with travel agencies and sales outlets
• Equipment, and materials used when working with travel agencies and sales outlets, and procedures that should be followed in their use
• Problems that may occur when working with travel agencies and sales outlets and appropriate action that can be taken to resolve the problems
• Documentation and record requirements
• Communication and negotiation requirements when working with travel agencies and sales outlets

Required skills:
• Communicate effectively with others when working with travel agencies and sales outlets
• Read and interpret instructions, procedures and information relevant to work with travel agencies and sales outlets
• Interpret and follow operational instructions and prioritise work
• Complete documentation when working with travel agencies and sales outlets
• Carry out research activities required when working with travel agencies and sales outlets
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when working with travel agencies and sales outlets
• Network with others in travel agencies and sales outlets
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when working with travel agencies and sales outlets in accordance with workplace procedures
• Implement contingency plans for unplanned events
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Market and promote products and services
• Create promotional layouts
• Select and use relevant office and communications equipment and materials when working with travel agencies and sales outlets
• Work systematically with required attention to detail
• Operate and adapt to differences in equipment and service requirements in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments

Travel agencies and sales outlets could include: • individual agencies and outlets
• agency and outlet franchise groups
• agency and outlet networks
• wholesalers
• specific product retailers
• general travel retailers

Office equipment may include: • relevant communications equipment and computer software and hardware
### Information used when working with travel agencies and sales outlets may include:

- market trend information
- customer requirements regarding tour packages
- agency and outlet agreements
- workplace budget and business objectives information

### Agency involvement with products and services may be:

- governed by contractual agreement

### Transport system services can include:

- air
- bus
- ferry
- coach
- tram
- rail

### Contingency processes may involve:

- plans for unforeseen changes to travel arrangements
- providing services and tour packages for passengers with special needs

### Consultative processes may involve:

- other workplace personnel
- supervisors and managers
- representatives of travel agencies and sales outlets
- official representatives

### Communication in the work area may include:

- phone
- fax
- email/internet
- electronic data interchange (EDI)
- radio
- oral, aural or signed communications

### Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- workplace procedures and policies for working with travel agencies and sales outlets
- work instructions, job description and induction materials
- requests directly from agency or sales outlet
- agency, outlet or client concerns or complaints
- information related to advertising and promotional activities within the industry
- agency and outlet agreements
- manufacturers specifications for office and communications equipment and materials
- relevant OH&S requirements and policies
- relevant codes of practice and regulations
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to work with travel agencies and sales outlets, including trade practices requirements
- relevant state/territory OH&S legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIE207C  Estimate/calculate mass, area and quantify dimensions

Unit Descriptor
This unit involves the skills and knowledge required to estimate and calculate mass and area and quantify dimensions of loads as part of work functions in the transport, stevedoring, warehousing, and/or storage sectors. This includes estimating loads to be transported or placed in storage, identifying mass, area and volume limitations of available transport/storage systems and carrying out calculations required to organise load(s) to match identified transport/storage limitations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with workplace requirements and any relevant regulations related to the estimation and/or calculation of mass and area and the quantification of dimensions as part of workplace tasks.

Work is performed under some supervision generally within a team environment. It involves the application of basic mathematical principles and operations to the estimation and/or calculation of mass and area and the quantification of dimensions as part of workplace activities in the transport, stevedoring, warehousing, distributi

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Estimate loads for transport or storage
1.1 Order forms/work orders are read and requirements are noted
1.2 Shape, balance characteristics, dimensions and mass of the load(s) are identified
1.3 Area/volume required for storage is estimated
1.4 Weights and volumes are totalled to calculate load requirements of transport or storage system

2 Estimate load limits of transport and/or storage
2.1 Allowable load limits for storage and/or transport systems are identified in accordance with workplace procedures
2.2 Capacity of transport and storage systems in terms of mass, area and volume are calculated

3 Organise load
3.1 Load(s) is restricted to allowable range(s)
3.2 Load(s) is spread to ensure safe weighting on pallets, trucks, platforms or other storage or transport systems
3.3 Appropriate workplace documentation is completed

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to workplace activities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the estimation and/or calculation of mass, area and volumes of loads and transport and storage facilities including the quantification of dimensions
- Basic mathematical operations required when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities including addition, subtraction, multiplication and division
- Focus of operation of work systems, equipment, management and site operating systems for the transport and/or storage of goods and stock
- Problems that may occur when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities and appropriate action that can be taken to resolve the problems
- Documentation requirements for the workplace activities concerned

Required skills:
- Communicate effectively with others when estimating and/or calculating mass, area and volumes of loads and transport and storage facilities
- Read and interpret instructions, procedures, information and labels relevant to the estimation and/or calculation of mass, area and volumes of loads and transport and storage facilities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when estimating and/or calculating mass, area and volumes of loads and transport and storage facilities in accordance with workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use relevant calculators, computing and office equipment when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
• exposed conditions
• controlled or open environments

Estimating/calculation tasks may include:
• estimating loads to be transported or placed in storage
• identifying mass, area and volume limitations of available transport/storage systems
• carrying out calculations required to organise load(s) to match identified transport/storage limitations
• calculations and estimations of weights and dimensions of cargo and containers to be shifted, stored or lifted

Calculations may include mathematical operations of addition, subtraction, multiplication and division and may be carried out:
• manually
• with the aid of a calculator
• with the aid of a computer
• using appropriate tables and/or charts

Consultative processes may involve:
• other employees and supervisors
• suppliers, customers and clients
• relevant authorities and institutions
• management and union representatives
• industrial relations and OH&S specialists
• other maintenance, professional or technical staff
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- RF systems
- oral, aural or signed communications

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and policies
- operations manuals, job specifications and induction documentation
- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes, goods and container identification/serial number
- Australian and international codes of practice and regulations relevant to workplace activities including mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- manufacturers specifications for equipment
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations relevant to workplace activities
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at
    the registered training organisation, and/or
  - in an appropriate range of situations in the
    workplace
TLIE307C Participate in basic workplace communication

Unit Descriptor
This unit involves the skills and knowledge required to participate effectively in basic workplace communication including communicating information about routine tasks, processes, events or skills, participating in group discussions to achieve appropriate work outcomes, and representing views of a group to others. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Communication is carried out as an integral part of routine work in the context of the workplace concerned.

Work is performed under some supervision, generally within a team environment.

Work involves the application of established communication principles and practice and the use of local technical and colloquial language and vocabulary in day-to-day communications.

Competency Field
E – Communication and Calculation

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Communicate information about routine tasks, processes, events or skills

1.1 An appropriate form of communication is selected and used to meet the purpose required

1.2 Effective listening skills are demonstrated

1.3 Questions are used to gain additional information and to clarify understanding

1.4 Sources of information relevant to the communication are identified

1.5 Information is selected and sequenced correctly

1.6 Verbal and written reporting is undertaken where required

1.7 Communication is undertaken in both familiar and unfamiliar situations and with familiar and unfamiliar individuals and groups

2 Participate in group discussions to achieve appropriate work outcomes

2.1 Responses are sought and provided to others in the group

2.2 Constructive contributions are made in terms of the process involved

2.3 Goals or outcomes are communicated and/or recorded

3 Represent views of the

3.1 Views and opinions of others are interpreted, understood and
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Basic communication techniques including barriers to effective communication and how to overcome them
- Basic principles of effective communication
- Protocols and procedures for communicating with others using relevant workplace technology
- Techniques for communicating effectively with a multilingual persons or persons with a limited ability to speak or understand English
- Typical communication problems and appropriate action and solutions

Required skills:
- Communicate effectively with others when completing basic work activities
- Read and interpret instructions, procedures and information relevant to basic work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to basic work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others in the course of communication
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems in communication in accordance with workplace procedures
- Modify communication activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communication will be that involved in:
- in basic routine work functions
- may occur by day or night
- in a variety of work contexts
Communication modes may include:

- active listening
- group interaction
- questioning to obtain information and/or clarify information and understanding
- routine oral reporting
- routine written reporting
- participation in routine meetings in the workplace
- basic recording of discussions

Communications may involve:

- English-speaking persons
- multilingual staff
- persons with limited ability to communicate in English

Communication problems may include:

- misunderstanding
- limited ability of others to communicate in English
- noisy environments or communication channels
- illegible writing or print
- use of non-standard vocabulary
- incorrect assumption that message has been received and/or correctly understood

Personnel in work area may include:

- managers
- supervisors/team leaders
- workplace personnel
- visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication may involve the basic use of a range of communication technology including:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
Information/documentation may include:

- workplace procedures, checklists and instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant
operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
### TLIE407C Prepare workplace documents

#### Unit Descriptor
This unit involves the skills and knowledge required to prepare workplace documents and forms in accordance with workplace requirements and any applicable regulations/codes including planning and preparing a simple workplace document such as a letter or report, and gathering relevant information enabling the completion of a workplace form. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
Work must be carried out in accordance with the workplace requirements concerning the preparation of workplace documents/forms.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and the basic principles of report writing to the preparation of workplace documents/forms as part of work activities in the transport, stevedoring, warehousing, distribution and/or storage industries.

#### Competency Field
E – Communication and Calculation

---

**ELEMENT PERFORMANCE CRITERIA**

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

#### 1 Plan workplace document
1.1 Purpose and audience for the document are identified
1.2 Appropriate format for the document is established to meet workplace requirements
1.3 Relevant information is identified and selected for inclusion in the document

#### 2 Prepare workplace document
2.1 A draft of the document is prepared in accordance with workplace procedures and conventions for sentence construction, grammar, spelling, style, punctuation and vocabulary that are appropriate for the reader(s)
2.2 Document is edited and presented in a final version appropriate to the task

#### 3 Complete workplace forms
3.1 Work related form(s) is interpreted to identify information required for its completion
3.2 Required information for completion of form is gathered from relevant sources in accordance with workplace procedures
3.3 Form(s) is completed in accordance with workplace policy and procedures and any applicable regulations and codes
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to the documents and/or forms being prepared
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the completion of documents/forms
- Problems that may occur when preparing and completing workplace documents and forms and appropriate action that can be taken to resolve the problems
- Equipment and materials required for the completion of documents and forms and instructions and precautions for their use
- Conventions for sentence construction, grammar, spelling, style and punctuation
- Format and layout of various documents and forms used in workplace activities

Required skills:
- Communicate effectively with others when preparing and completing workplace documents and forms
- Read, write and comprehend simple statements in English
- Read and interpret instructions, procedures, information and labels relevant to the preparation and completion of workplace documents and forms
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Work collaboratively with others when preparing and completing workplace documents and forms
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when preparing and completing workplace documents and forms in accordance with applicable regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail
- Operate and adapt to differences in equipment in accordance with standard operating procedures
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: ● in a range of work environments
                           ● by day or night

Customers may be:        ● internal or external

Workplaces may comprise:  ● large, medium or small worksites

Work may be conducted in: ● limited or restricted spaces
                           ● exposed conditions
                           ● controlled or open environments

Documents and forms may include: ● routine written reports on workplace activities, incidents, meeting outcomes, etc. It may also include the gathering of relevant information and the subsequent completion of the various forms and records falling within the occupational responsibility of the person concerned

Communication in the work area may include: ● written, oral, aural or signed communications
                                             ● phone
                                             ● electronic data interchange (EDI)
                                             ● fax
                                             ● email
                                             ● internet
                                             ● radio

Hazards in the work area may include: ● exposure to chemicals
                                         ● exposure to dangerous or hazardous substances
                                         ● movements of equipment, goods, materials and vehicular traffic

Consultative processes may involve:   ● other employees and supervisors
                                         ● suppliers, customers and clients
                                         ● relevant authorities and institutions
                                         ● management and union representatives
                                         ● industrial relations and OH&S specialists
                                         ● other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: ● company procedures
                                                                                                                                                        ● enterprise procedures
                                                                                                                                                        ● organisational procedures
                                                                                                                                                        ● established procedures
Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- Australian and international codes of practice and regulations relevant to workplace activities
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- codes and regulations relevant to workplace documents/forms being prepared
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances (where applicable)
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria
of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIE5020A Apply knowledge of freight forwarding documentation and permits

Unit Descriptor
This unit covers the competency required to develop, maintain and apply an in-depth understanding of required documentation, forms and permits to advanced freight forwarding activities. This includes the demonstration of the required knowledge of documentation, forms and permits; the consistent interpretation and application of that knowledge to the freight forwarding role and functions; and undertaking sufficient appropriate continuous professional development activities to maintain the currency of the required knowledge and understanding. International freight forwarding covers the importing, exporting and transiting of freight. There are no specific licensing or certification requirements applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for persons applying knowledge of freight forwarding documentation and permits as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Access and interpret information on freight forwarding documentation and permits

1.1 Information on the requirements for freight forwarding documentation and permits is regularly accessed from appropriate sources

1.2 Information on the requirements for freight forwarding documentation and permits is interpreted and applied when working on freight forwarding projects

1.3 Continuous professional development is undertaken to ensure a current knowledge of the requirements for freight forwarding documentation and permits as per industry practice and company standard procedures
2 Demonstrate the required knowledge of freight forwarding documentation and permits

2.1 Knowledge of the requirements for freight forwarding documentation and permits needed to perform effectively as an international freight forwarder is demonstrated through the successful completion of a range of assignments and both real and simulated freight forwarding projects.

3 Apply information knowledge of freight forwarding documentation and permits to the freight forwarding functions

3.1 Current information on the requirements for freight forwarding documentation and permits is consistently applied when carrying out the international freight forwarding role and functions.

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant Australian and international conventions, codes of practice and regulatory requirements for the completion of documentation, forms and permits in international freight forwarding (including those applicable to the importing, exporting and transiting of goods)
- Documents, forms and permits required in freight forwarding
- Procedures and protocols for the preparation and processing of documentation, forms and permits in international freight forwarding
- Responsibilities and liabilities of the freight forwarder in ensuring that all required documentation, forms and permits are accurately and correctly prepared
- Definitions, purpose and use of Incoterms and Combiterms
- International sales contracts - principles, conditions and specifications, consequences of poor preparation or mistakes
- Documentation requirements for billing and accounts
- Systems and processes for the on-line completion of documentation and forms
- Australian Customs and Border Protection requirements including:
  - General information on the Australian Customs administration
  - Australian Customs and Border Protection tariffs
  - Australian Customs and Border Protection procedures
  - International conventions
  - GST (applicable rate and taxable value)
  - Control of import and export consignments
  - Import licences e.g. for certain types of dangerous goods
  - Veterinarian control and live plant control (phytosanitary control)
  - Intellectual property, counterfeit, artifacts, boycott issues
- Sources of information on the documentation, forms and permits required when providing international freight forwarding services
- Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
• Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
• Typical problems that can occur when preparing and processing required documentation, forms and permits in international freight forwarding and related appropriate action that can be taken to prevent or resolve them

Required skills:
• Communicate effectively with others when preparing and processing required documentation, forms and permits, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
• Read and interpret instructions, procedures and other information relevant to the preparation and processing of documentation, forms and permits needed in international freight transport
• Interpret and follow operational instructions and prioritise work
• Complete the preparation and processing of documentation, forms and permits required in international freight-forwarding, including data entry to a computer system
• Operate applicable information and communication technology to required protocol
• Work collaboratively with others when preparing and processing required documentation, forms and permits
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when preparing and processing required documentation, forms and permits in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when preparing and processing required documentation, forms and permits
• Monitor work activities in terms of planned schedule
• Apply relevant national and international codes of practice, regulations and legislative requirements
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply information and communication systems and procedures to complete workplace tasks
• Operate and adapt to differences in information and communication equipment in accordance with standard operating procedures
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

International freight forwarding includes services related to:

- the importing of goods
- the exporting of goods
- the transiting of goods

The range of documentation, forms and permits required for international freight forwarding is dependent upon a variety of factors including:

- the mode of transport
- the nature of the goods
- the routing and country of destination
- the requirements for import quarantine, health and customs controls in applicable countries
- the sales contract
- the terms of documentary credits
- the relationship and arrangements of the seller and buyer
International freight forwarding documentation and permits may include but are not limited to:

- standard FIATA forms and documentation such as:
  - a Negotiable Multimodal Transport Bill of Lading (FB/L)
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
  - a Forwarders Warehouse Receipt (FWR)
  - a Forwarders Forwarding Instructions (FFI)
  - a Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - a Shippers Intermodal Weight Certification (SIWC)
  - an Original Bill of Lading (OB/L)
  - a Master Air Waybill (MAWB)
  - a House Bill of Lading (HBL)
  - a House Air Waybill (HAWB)
  - Multimodal Transport Bill of Lading (MTB/L)
- sales contracts
- bills of lading, waybills or consignment notes
- commercial invoices with an Incoterm and extra details to ensure proper passage and clearance
- packing lists
- origin certificates
- packing declarations regarding wood and other materials of plant origin
- fumigation or other treatment certificates for shipments containing wood or other materials of plant origin
- delivery notes
- container lists
- insurance policies
- insurance certificates
- insurance claim forms
- cargo manifests
- pre-advice and pre-alert documents
- veterinary certificates for materials of biological origin which are for human consumption
- health and phytosanitary certificates
- quality analysis or weight/measurement certificates
- consular documents
- inspection certificates and SGS reports
Information and communication technology systems may include but are not limited to:

- data storage and management systems
- Electronic Freight Forwarding Management Systems (FFMS)
- Electronic Warehouse Management Systems (WMS)
- Electronic Transportation Management System (TMS)
- Internet and web based technology
- Electronic Data Interchange (EDI)
- EDI for Administration of Commerce (EDIFACT)
- Value-added Network (VAN)
- IP-based telecommunications systems
- Local Area Networks (LANS)
- Wireless Area Networks (WANS)
- broadband internet systems including ADSL, dedicated broadband lines and wireless systems
- barcoding systems
- Radio Frequency Identification (RFID) systems used in warehouses and logistics facilities
- E-commerce security systems

Communications systems may involve:

- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail

Consultative processes may involve:

- customers
- a global network of international and domestic agents, regulatory authorities, carriers, suppliers, and other freight forwarding contacts
- relevant regulatory authorities and institutions
- freight forwarding specialists in areas such as dangerous goods, special cargoes etc.
- management
- other employees and supervisors
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Sources of information required to perform international freight forwarding functions may include:

- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

Operational information / documents may include but are not limited to:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- summaries and definitions of Incoterms and Combiterms
- workplace standard operating procedures and policies
- customers' instructions and transport requirements
- applicable standard international freight forwarding forms and documents
- operations manuals, job specifications and procedures and induction documentation
- Australian and international standards, criteria and certification requirements
- data obtained through information and communications technology equipment and oral, aural or signed communications
- freight forwarding competency standards and training materials
- freight forwarder company’s quality assurance standards and procedures
- manifests, bar codes, goods and container identification
- emergency procedures
- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation

Applicable regulations and legislation may include:
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - maintaining a current knowledge of the documentation, forms and permits required in international freight forwarding through appropriate continuous professional development activities
  - interpreting and applying a current knowledge of the required documentation, forms and permits to the international freight forwarding role and functions

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIE507C

**Unit Descriptor**

This unit involves the skills and knowledge required to carry out basic routine workplace calculations, including carrying out required mathematical operations, preparing basic estimates of mass, size and volume, and interpreting basic graphical representations of mathematical information. It includes calculations for routine industry-related tasks using manual and electronic processes. It specifically includes the skills and knowledge needed to estimate/calculate manual load shifting requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Calculations are carried out as an integral part of routine work in the context of the workplace concerned.

Work is performed under some supervision, generally within a team environment.

Work involves the application of established mathematical principles and techniques in day-to-day work activities.

**Competency Field**

E – Communication and Calculation

**ELEMENT PERFORMANCE CRITERIA**

Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Carry out calculations**

1.1 Items are counted singly and in batches and sorted numerically, as required in workplace tasks

1.2 Calculations needed to complete work tasks are performed using the four basic processes of addition, subtraction, multiplication and division

1.3 Calculations involving fractions, percentages and mixed numbers, and using the four basic processes, are performed as required to complete workplace tasks

1.4 The functions of a calculator, numeric keypad or computer are used to perform workplace tasks

1.5 Numerical information is self-checked and corrected for accuracy

2 **Prepare estimates**

2.1 Quantities of materials and resources required to complete a work task are estimated

2.2 The time needed to complete a work activity is estimated

2.3 Accurate estimates for work completion are made
3 Interpret graphical representations of mathematical information

3.1 Information represented in symbols, diagrams and pictorial representations is recognised, interpreted and acted upon in workplace tasks

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Basic mathematical operations and techniques
- Ways of representing basic mathematical information
- Procedures for identifying and using relevant workplace technology when carrying out workplace calculations
- Typical mathematical problems and appropriate action and solutions

Required skills:
- Communicate effectively with others when carrying out basic workplace calculations
- Read and interpret instructions, procedures and information relevant to basic workplace calculations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out basic workplace calculations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when carrying out basic workplace calculations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail
- Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Calculations will be those involved in:
- basic routine work functions
- may occur by day or night and in a variety of work contexts
Calculations may involve:

- money
- volume
- weight
- time
- length and distance
- area
- perimeter

Mathematical operations may include:

- multiplication
- division
- addition
- subtraction
- percentages
- fractions

Consultative processes may include:

- staff members
- management
- union representatives
- industrial relations, Occupational Health and Safety specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Calculations may involve the basic use of a range of technology including:

- manual techniques
- calculator
- computer
Information/documentation may include:

- workplace procedures, checklists and instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIE607D Collect, analyse and present workplace data and information

Unit Descriptor
This unit involves the skills and knowledge required to collect, analyse and present workplace data and information including identifying required information, analysing and preparing information for use, explaining information, and presenting workplace information to others. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Data collection, analysis and presentation is carried out as an integral part of operations in the context of the workplace concerned.

Work is performed under general or limited supervision, generally within a team environment. It involves the application of established principles and practice to the collection, analysis and presentation of information and data as part of workplace operations.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify required information
1.1 Purpose of the information/data collection is identified
1.2 Sources of information are established
1.3 Appropriate information is collected

2 Prepare information for use
2.1 Information is collated and analysed in accordance with workplace procedures
2.2 Processed information is organised and presented in a logical manner
2.3 Checks for accuracy are made

3 Explain information
3.1 Data collection and analysis is explained to others in a way that effectively contributes to the workplace operations
3.2 Outcomes of data/information analysis are presented to others using appropriate presentation modes and resources
3.3 Questions are answered and appropriate clarifications are given

4 Present workplace information
4.1 Processed information is forwarded to appropriate personnel in accordance with workplace procedures
4.2 Processed information is collated and stored in accordance with workplace procedures

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Sources of information and data and procedures for processing the information for workplace use
- Protocols and procedures for the collection, analysis and presentation of workplace information and data using relevant technology
- Presentation and communication techniques including an understanding of barriers to effective communication and how to overcome them
- Basic principles of effective presentation and communication of information
- Techniques for communicating effectively with a multilingual persons or persons with a limited ability to speak or understand English
- Typical presentation and communication problems and appropriate action and solutions

**Required skills:**
- Communicate effectively with others when collecting, analysing and presenting workplace data and information
- Read and interpret instructions and procedures relevant to the collection, analysis and presentation of workplace data and information
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the collection, analysis and presentation of workplace data and information
- Identify and use required communication and presentation technology
- Work collaboratively with others when collecting, analysing and presenting workplace data and information
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when collecting, analysing and presenting workplace data and information in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unanticipated situations that may arise when collecting, analysing and presenting workplace data and information
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Data collection, analysis and presentation will be:
• that required for workplace operations
• may occur by day or night and in a variety of work contexts

Customers may be:
• internal or external

Presentation modes may include:
• written documentation
• oral reports
• group presentations using appropriate technology
• completion of standard forms and checklists
• routine written reporting
• entry of collected/processed information into a computer
• participation in workplace discussions

Presentations/communications may involve:
• English-speaking persons
• multilingual staff
• persons with limited ability to communicate in English

Presentation/communication problems may include:
• misunderstanding
• limited ability of others to communicate in English
• noisy environments or communications channels
• illegible writing or print
• use of non-standard vocabulary
• incorrect assumption that information has been received and/or correctly understood
Depending on workplace context, consultative processes may involve:

- managers
- supervisors/team leaders
- workplace personnel
- clients
- private and/or public sector security personnel
- police
- security consultants
- visitors
- contractors
- official representatives
- union representatives
- industrial relations
- OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Presentation/communication may involve the use of a range of technology, including:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- overhead or computer controlled projector
- plain or electronic white board
- flip charts
- microphone and amplifier
- video player and monitor
Information/documentation may include:

- workplace procedures, checklists and instructions
- operations manuals
- induction documentation
- competency standards and training materials
- job specifications
- manufacturers specifications
- HAZCHEM and dangerous/hazardous goods codes
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory standards and certification requirements
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

- other relevant aspects of the range statement
TLIE707B  Use communication systems

Unit Descriptor
This unit involves the skills and knowledge required to use communication systems including identifying system features, operating a communication system effectively, using appropriate communication protocols when using a system, maintaining equipment, and completing documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work is carried out in accordance with relevant regulations and workplace procedures.

Work is performed under some supervision, generally within a team environment. It involves the application of established communication principles and practice and the use of local technical and colloquial language and vocabulary in day-to-day communications.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify system features
1.1 System features and control functions are identified
1.2 Where relevant, battery and signal levels are monitored
1.3 Mobile equipment is set up to optimise communication
1.4 Where relevant, channels are selected appropriate to the communication

2 Communicate using communications technology
2.1 System checks are carried out to confirm communication system is operational in accordance with manufacturers instructions and workplace procedures
2.2 Communication system is operated safely in accordance with manufacturers instructions, workplace procedures and (any) regulatory requirements
2.3 Telephone and radio security is maintained in accordance with workplace procedures
2.4 Where relevant, channel selection is appropriate for the location and type of communication
2.5 Messages are transmitted clearly and precisely with due observation of ethics and protocols required of users
2.6 Where applicable, PA system is used to communicate with passengers and crew as per standard operating procedures
2.7 Where applicable, incoming messages are received and answered promptly and courteously within operating
2.8 Appropriate protocols and procedures are followed when using communications systems during emergencies
2.9 Received messages are interpreted and recorded, where required, in accordance with workplace procedures
2.10 Vocal communication is clear, unambiguous and uses appropriate procedures, language and codes

3 Maintain communication equipment operational status

3.1 Equipment is checked and maintained in working order in accordance with workplace procedures
3.2 Minor faults in the communications systems are promptly identified, diagnosed, and repaired or reported in accordance with workplace procedures

4 Complete documentation

4.1 Appropriate records of communications are maintained in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Protocols and procedures for communicating with others using relevant communication technology including the use of PA systems on passenger vehicles and trains
- Procedures and protocols for the use of communication systems during an emergency
- Features of various communications systems
- Basic communication techniques including barriers to effective communication and how to overcome them
- Basic principles of effective communication
- Techniques for communicating effectively with a multilingual persons or persons with a limited ability to speak or understand English
- Pre-operational checks for communications systems and equipment
- Minor routine maintenance procedures for communications equipment
- Typical problems that may occur when using communications systems and appropriate action and solutions

Required skills:
- Communicate effectively with others using available communications equipment
- Read and interpret instructions and procedures relevant to the use of communications equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities when using communications equipment
• Identify and use required communication technology
• Work collaboratively with others when using communications equipment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using communications equipment in accordance with workplace procedures
• Implement contingency plans for unanticipated situations that may arise when using communications equipment
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the use of communications equipment
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in communication equipment in accordance with standard operating procedures
• Monitor performance of communication equipment and take appropriate action if required

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Use of communication systems will include that required in routine operations and may occur by day or night and in a variety of work contexts, including:

• in confined spaces, exposed conditions and controlled or open environments
• in a workplace, terminal, warehouse or depot
• in a vehicle
  • on a vessel
  • on a train
  • on a worksite
• at a client's workplace

Communication systems may include:
• fixed phone systems
• mobile phone, both on person or hands-free
• radios including personal, hand-held or vehicle-mounted, CB, UHF, VHF, SSB, marine
• PA systems on passenger vehicles, trains and aircraft

Worksite communication may include:
• active listening
• two-way conversation
• questioning to obtain information and/or clarify information and understanding
• routine oral reporting
Communications may involve:
- English-speaking persons
- multilingual staff
- persons with limited ability to communicate in English

Communication problems may include:
- misunderstanding
- limited ability of others to communicate in English
- noisy environments or communications channels
- illegible writing or print
- use of non-standard vocabulary
- incorrect assumption that message has been received and/or correctly understood
- not following correct communication protocols and procedures

Communication may be with:
- base personnel
- other drivers and workplace personnel
- passengers (where applicable)
- managers
- supervisors/team leaders
- suppliers and clients
- private and/or public sector security personnel
- police and other emergency services personnel
- security consultants
- other professional or technical staff
- local government authorities

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documentation may include:

- workplace communication procedures, protocols, checklists and instructions
- manufacturers specifications for communications equipment
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- communication records
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIE807C  Process workplace documentation

Unit Descriptor
This unit involves the skills and knowledge required to process workplace documentation including planning the documentation to fulfil the identified purpose and completing the documentation in accordance with requirements. Documentation may include forms, logs, diaries and basic hand-written or typed reports. It may also include entry of information into computer-based documents and forms. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Processing of workplace documentation is carried out as an integral part of work operations in the context of the workplace concerned.

Work may be performed in team and autonomous working situations. It involves the application of established procedures in the completion of workplace documentation in the course of day-to-day operations.

Competency Field
E – Communication and Calculation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan documentation
1.1 Purpose of workplace documentation is identified and confirmed
1.2 Information for completion of the workplace documentation is collected, interpreted, analysed and organised as required

2 Complete documentation
2.1 Required documentation is prepared, or forms completed, in accordance with workplace policies and procedures
2.2 Information is entered into computer-based documents, where required
2.3 Logs or diaries are maintained accurately and in a timely manner in accordance with workplace requirements.

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Protocols and procedures for processing workplace documentation using relevant workplace technology
• Requirements for workplace documentation, forms, logs or diaries
• Sources of information for the completion of workplace documentation, forms, logs or diaries
• Purpose of workplace documentation, forms, logs or diaries
• Typical problems in processing of workplace documentation and appropriate action and solutions

Required skills:
• Communicate effectively with others when completing and processing workplace documentation, forms, logs or diaries
• Read, interpret and organise information needed for the completion and processing of workplace documentation, forms, logs or diaries
• Interpret and follow operational instructions and prioritise work
• Complete workplace documentation, forms, logs or diaries
• Write and/or enter information into computer based documentation systems
• Work collaboratively with others when completing and processing workplace documentation, forms, logs or diaries
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when completing and processing workplace documentation, forms, logs or diaries in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the completion and processing of workplace documentation, forms, logs or diaries
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in computing equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Processing of workplace documentation will be that involved in routine work functions and may occur by day or night and in a variety of work contexts, including:
• in confined spaces, exposed conditions and controlled or open environments
• in a workplace, warehouse or depot
• in a vehicle on the road
• at a client's workplace
Types of documentation may include:

- workplace and on-road transport memos
- letters
- diaries
- logs
- checklists
- maintenance schedules
- workplace forms and standard documents

Documentation and reporting systems will be:

- as defined within workplace procedures

Documentation may be received from or sent to:

- managers
- supervisors/team leaders
- other workplace personnel
- clients
- contractors
- union representatives
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation may include:

- hard copy
- computer-based documents and forms
- faxes
- email
Information/documentation may include:

- workplace procedures, forms, checklists and instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace documentation policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant
operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
Use pilot and escort communication

Unit Descriptor
This unit involves the skills and knowledge required to use pilot and escort communication equipment and resources including deploying/operating the equipment to communicate with drivers of oversized/overmassed vehicles during pilot and escort duties and other relevant personnel, and maintaining all required records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory roads and traffic authority pertaining to the piloting and escorting of oversized and overmassed loads.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures using pilot and escort communications in a variety of operational contexts.

Competency Field
E – Communication and Calculation

ELEMENT
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Operate communications equipment and resources

1.1 Communications equipment and resources for use in piloting and escorting duties are deployed/operated in accordance with relevant rules, regulations and manufacturers specifications

1.2 Messages are transmitted and received clearly and precisely with due observation of ethics and protocols required of users

1.3 Backup communication strategies are established and relevant personnel are informed of operating and coordination procedures

1.4 Alternative communication strategies are used to communicate messages in response to communications failures and problems

2 Maintain records

2.1 Records on oversized and overmassed vehicle movements are maintained in accordance with legal and workplace documentation requirements

2.2 Damage and other incidents are reported clearly and legibly to appropriate authorities in accordance with relevant rules and regulations and company policies and procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant road rules, regulations, permit and licence requirements of the relevant state or territory roads and traffic authority pertaining to the piloting and escorting of oversized and overmassed loads
- Relevant OH&S and environmental procedures and regulations
- Types of communication equipment, signage and other communication resources required in escort and piloting operations, and their use
- Procedures for communication during escort and piloting operations
- Procedures to be followed in the event of an escort or piloting emergency
- Available backup communication strategies
- Pre-operational checks required for communication equipment, signage and other communication resources needed in escort and piloting operations, and related action
- Permit and licence requirements applicable when piloting and escorting oversized and overmassed loads
- Documentation requirements for piloting and escorting oversized and overmassed loads

**Required skills:**
- Communicate effectively with others using pilot and escort communication equipment and resources
- Read and interpret instructions, procedures, information and signs relevant to the use of pilot and escort communication equipment and resources
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the use of pilot and escort communication equipment and resources
- Work collaboratively with others when using pilot and escort communication equipment and resources
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using pilot and escort communication equipment and resources in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when using pilot and escort communication equipment and resources
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate communication equipment, signage and other communication resources required during escort and piloting operations
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of communication equipment and resources and take appropriate action where required
• Service communication equipment in terms of maintenance schedule and standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may include:
• all pilot and escort vehicle operations

Pilot and escort operations may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• in confined spaces, exposed conditions and controlled or open environment
• on the open road
• on a private road
• in the workplace, warehouse or depot
• at a client's workplace

Communication equipment may include:
• vehicle signage
• light battens
• white gloves
• directional display boards
• radio
• satellite phone
• flashing lights
• headlights
• hazard lights
Operational hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Personnel to whom communication is directed include:

- driver of overmassed and/or oversized vehicle
- other drivers on the road
- management/supervisors
- base personnel
- emergency services
- regulatory authorities

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory pilot/escort permit/regulatory requirements
- state/territory road rules
- workplace procedures and policies
- workplace communication instructions and procedures
- vehicle manufacturers instructions and specifications
- emergency procedures
- communication log book or record book (where required)
Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to piloting and escort functions
- relevant state/territory road rules
- relevant state/territory oversized and overmassed permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
in an appropriate range of situations in the workplace
TLIF1007C Apply fatigue management strategies

Unit Descriptor
This unit involves the skills and knowledge required to apply fatigue management strategies, including identifying and acting upon signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable Commonwealth and state/territory legislation and relevant regulations covering the management of fatigue in the workplace.

Work is performed under some supervision generally within a team environment.

It involves the application of the relevant regulations, codes and guidelines of the Commonwealth Government and the state/territory authorities concerning fatigue management during work activities and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft.

Competency Field
F – Safety Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and act upon signs of fatigue
1.1 Potential causes of fatigue are monitored and action taken to minimise their effects in accordance with company procedures
1.2 Personal warning signs of fatigue are recognised and necessary steps are taken in accordance with workplace procedures to ensure that effective work capability and alertness are maintained

2 Implement strategies to minimise fatigue
2.1 Routes and schedules are assessed and planned to minimise fatigue
2.2 Factors which increase the risk of fatigue-related accidents and safety incidents are understood and minimised
2.3 Strategies to manage fatigue are implemented in accordance with company policy
2.4 Lifestyle choices are made which promote the effective long-term management of fatigue
2.5 Effective practices in combating fatigue are adopted and applied
2.6 Personal fatigue management strategies are communicated to
other relevant people

2.7 Appropriate counter measures are planned to combat fatigue

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant codes, regulations, permit and licence requirements related to fatigue management
- Relevant OH&S regulations as they relate to fatigue
- Workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents
- Sources of information on fatigue
- The risks and hazards created by fatigue in the workplace
- How fatigue affects workplace performance
- How fatigue contributes to workplace accidents
- Ways of recognising fatigue
- Strategies and ways of managing fatigue
- Causes and effects of fatigue on workers/drivers
- Factors which increase fatigue-related accidents
- Lifestyles which promote the effective long-term management of fatigue

Required skills:
- Communicate effectively with others when applying fatigue management strategies
- Read and interpret instructions, procedures, regulations and signs related to fatigue management and apply them to work activities
- Recognise symptoms of fatigue and take appropriate action in accordance with fatigue management regulations and workplace procedures
- Work collaboratively with others to manage and minimise the effects of fatigue during work activities
- Adjust lifestyle patterns to ensure effective fatigue management during work activities
- Modify activities and take appropriate initiatives to manage fatigue in the workplace depending on differing work contexts, risk situations and environments
- Apply precautions and required action to minimise and control the effects of fatigue when carrying out own work functions
- Adapt to changes in rosters and standard operating procedures as they may relate to fatigue management
- Participate in identifying and meeting own learning needs on matters related to fatigue management
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include:

- any work environment requiring safety critical operational judgements to be made and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft at night

The need for fatigue management in a range of industry situations including:

- operations conducted at all times but particularly at night
- typical weather conditions
- while working and/or driving at a workplace, depot, base or warehouse
- while working and/or driving at a client's workplace or work site
- driving a motor vehicle on the open road
- driving a motor vehicle on a private road
- driving a train, locomotive or motive power unit
- operating a marine vessel in coastal or international waters
- operating an aircraft
- operating load shifting equipment
- operating safety critical industrial plant and equipment

Work-related factors that may contribute to fatigue include:

- work demands such as: workload, work duration, shift pattern, time of day, frequency and duration of breaks and the type of work (e.g. working in isolation, repetitive tasks and boring, monotonous or under-challenging tasks)
- organisational factors such as: work environment (including temperature, ventilation, continual rhythmic vibration from equipment), payment system, trip and work scheduling, and the predictability of work

Worker/operator-related factors that may contribute to fatigue include:

- lifestyle factors such as: sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends
- working multiple jobs
- personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms
Responsibilities of individual for fatigue risk management may include:
• following the organisation's fatigue management policy and procedures
• using time away from work appropriately to rest and recover
• checking and ensuring fitness for work
• reporting symptoms of fatigue
• taking action to minimise risk when symptoms of fatigue are recognised

Depending on the organisation operating procedures may include:
• standard operating procedures
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Information and documents may include:
• Commonwealth and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations
• workplace instructions and procedures on fatigue management
• relevant OH&S regulations and procedures
• work schedules and shift rosters
• emergency procedures
• log book or record book (where required)
• records and reports of fatigue-related errors and safety incidents
• relevant standards and certification requirements
• quality assurance procedures

Applicable legislation, regulations and codes may include:
• relevant regulations and codes of the Commonwealth Government and the state/territory regulatory authorities concerning fatigue management
• relevant state/territory road rules
• relevant rail industry safe working codes and regulations (where applicable)
• relevant state/territory permit regulations and requirements
• relevant state/territory OH&S legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment
• The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF107C Follow OH&S procedures

Unit Descriptor
This unit involves the skills and knowledge required to follow and apply OH&S procedures when carrying out work activities, including identifying and following workplace procedures for hazard identification and risk control, contributing to arrangements for the management of occupational health and safety, and completing occupational health and safety records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant OH&S regulations and procedures.

Work is performed under some supervision generally within a team environment. It involves the application of the established OH&S and hazard minimisation principles and procedures to the conduct of workplace activities.

Competency Field
F – Safety Management

ELEMENT PERFORMANCE CRITERIA
1 Follow workplace procedures for hazard identification and risk control

1.1 Workplace procedures for dealing with accidents, fire and emergencies are known and followed

1.2 Workplace procedures for OH&S and related work instructions for controlling risks in a workplace are accurately followed

1.3 Hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment

1.4 Safety regulations and established workplace safety and hazard control practices and procedures are obtained, interpreted and applied to day-to-day work activities

1.5 Where relevant, procedures and precautions necessary for entry into confined spaces in the workplace are correctly followed

1.6 Personal protection clothing and equipment is correctly used in accordance with established safety practices and procedures

1.7 Established emergency and contingency plans are followed in the event of an emergency

2 Contribute to arrangements for the

2.1 OH&S issues and identified safety hazards are raised with designated personnel in accordance with workplace
management of occupational health and safety

procedures and relevant OH&S legislation

2.2 Contributions to OH&S management in the workplace are made in accordance with workplace procedures and provisions of relevant legislation

2.3 OH&S issues are raised with designated personnel in accordance with workplace procedures and relevant OH&S legislation

2.4 Participative arrangements for OH&S management in the workplace are contributed to within workplace procedures and scope of responsibilities and competencies

3 Complete occupational health and safety records

3.1 OH&S records for self are completed in accordance with workplace requirements

3.2 OH&S records and legal requirements for the maintenance of records of occupational injury and diseases are followed

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant OH&S procedures and guidelines
• Risks when using manually-operated equipment to shift loads and related precautions to control the risk
• Reporting procedures in regard to unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
• Location and use of safety alarms, manifests, emergency shut-off systems, emergency communication systems
• Signs and signals used for OH&S warnings
• Terms used in material safety data sheets (where relevant)
• HAZCHEM symbols and implications for safe work and storage
• Storage and use of hazardous substances
• Handling of broken or damaged equipment
• Manual and mechanically assisted lifting and load shifting procedures
• Transport requirements for goods within workplace
• Emergency and evacuation procedures
• Housekeeping standards and procedures required in the workplace
• Site layout and obstacles

Required skills:

• Communicate effectively with others when following OH&S procedures
• Read and comprehend simple statements in English
• Read and interpret relevant safety-related information including safety labels, instructions for safe work, relevant material safety data sheets, workplace procedures and codes of practice
• Identify containers and goods coding, ADG and IMDG markings and where applicable emergency information panels
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to OH&S in the workplace
• Operate electronic communication equipment to required protocol
• Estimate the size shape and special requirements of loads
• Work collaboratively with others when following OH&S procedures
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when following OH&S procedures in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when following OH&S procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The shifting operations may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments
Workplace hazards may include:
- chemicals and other harmful substances
- movements of equipment, goods, vehicles
- toxic substances
- damaged packing material and containers
- broken and damaged equipment
- inflammable materials and fire hazards
- lifting practices
- waste management and disposal
- extremes in weather conditions
- lighting levels
- floor surfaces
- water hazards
- traffic flows, vehicle and equipment operation
- A range of storage areas

Personnel in the work area may include:
- workplace personnel
- site visitors
- OH&S specialists
- union representatives
- contractors
- official representatives

Participative arrangements may include:
- formal and informal meetings which deal with OH&S issues
- workplace OH&S committees
- other committees, for example, consultative, planning and purchasing
- OH&S representatives
- suggestions, requests, reports and concerns put forward by staff

Communication in the work area may include:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
Designated personnel may include:

- workplace personnel
- supervisors
- team leaders
- management
- occupational health and safety personnel
- other persons authorised or nominated by the organisation

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- OH&S regulations
- workplace OH&S procedures and policies
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- ADG Code and material safety data sheets (where relevant)
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, smoking, work station ergonomics and other critical OH&S issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation and safety codes, including manual handling, noise, confined spaces, smoking, workplace ergonomics, etc.
- general duty of care under OH&S legislation
- workplace relations regulations
- workers compensation regulations
- dangerous goods regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Unit Descriptor
This unit involves the skills and knowledge required to apply safe handling strategies when handling dangerous goods or explosives, including driving the vehicle concerned in a safe manner and consulting with relevant authorities/persons in accordance with regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant Australian and state/territory regulations and codes, including the current Australian Dangerous Goods Code, the Australian Explosives Code, and the Code of Practice for the Safe Transport of Radioactive Substances.

Work is performed under limited or minimum supervision. It involves the application of the basic principles, routine procedures and regulatory requirements to safe handling/transport of dangerous goods/explosives/hazardous substances in a range of operational situations.

Competency Field
F – Safety Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Operate equipment and/or vehicle in a safe manner

1.1 Safety equipment is checked for serviceability and required quantities and types
1.2 Equipment/vehicle is operated safely in accordance with the relevant industry regulations, licence/permit requirements/or standards and as directed by police and/ or competent authority
1.3 Safety guidelines and codes are correctly applied
1.4 Dangerous goods/explosives/hazardous substances are handled/conveyed in accordance with the relevant government regulations and codes
1.5 Relevant emergency procedures are assessed relative to the dangerous goods/explosives/hazardous substances concerned
1.6 Emergency procedures are instigated in accordance with the relevant codes and government regulations to ensure precautions are taken consistent with directions set out in the emergency procedures
1.7 Procedures are implemented to minimise damage to
equipment, facilities and the environment and minimise injury to personnel

2 Consult with relevant authorities/persons

2.1 Dangerous goods occurrences are reported to the competent authority, fire brigade and/or police using appropriate workplace procedures, in specified timeframes in accordance with relevant regulatory requirements

2.2 Assistance is provided to the competent authority as requested

2.3 Other persons within affected emergency area are warned about the hazard in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian and state/territory regulations and codes pertaining to the identification, handling and marking of dangerous goods, explosives or hazardous substances including the current Australian Dangerous Goods Code
- OH&S procedures and guidelines concerning the lifting and movement of loads
- The company's incident reporting system, and the responsibility of the employer to report incidents to the relevant State or Government authority
- Risks and hazards when handling and conveying dangerous goods, explosives or hazardous substances, and related precautions to control the risk
- Workplace procedures and policies for the handling and transport of dangerous goods, explosives or hazardous substances
- Characteristics of various dangerous goods, explosives or hazardous substances and their implications for handling and transport
- Compatibility of various types of dangerous goods, explosives or hazardous substances
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when handling or transporting dangerous goods or explosives
- Read and interpret instructions, procedures, information and signs relevant to the handling or transporting of dangerous goods or explosives
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the handling or transporting of dangerous goods or explosives
- Operate electronic communication equipment to required protocol
- Work collaboratively with others handling or transporting dangerous goods or explosives
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when handling or transporting dangerous or hazardous goods or explosives in accordance with regulatory requirements and workplace procedures

• Implement contingency plans for unanticipated situations that may arise during the handling or transporting of dangerous goods or explosives

• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the handling or transporting of dangerous goods or explosives

• Monitor work activities in terms of planned schedule

• Modify activities depending on differing operational contingencies, risk situations and environments

• Apply fatigue management knowledge and techniques

• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

• Operate and adapt to differences in handling and transportation equipment in accordance with standard operating procedures

• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments and weather conditions
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • internal or external

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments
• a workplace, warehouse or depot
• a vehicle on the road
• client's workplace
• convoy of a group of vehicles

Goods/cargo being handled/conveyed may require: • special precautions for handling, stacking and transport

Classes of dangerous goods/explosives/hazardous substances are: • as defined in the respective Australian Codes
Standard marking and signage for identified explosives and dangerous goods is as required:
- in the respective Australian Codes

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Communication in the work area may include:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Handling operations may be carried out:
- both manually and with the aid of lifting equipment and/or appliances

Load restraint procedures and equipment are:
- as specified in mass and loading regulations and guidelines

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
- protective clothing
Information/documents may include:

- goods/materials identification numbers, codes and signs
- manifests, bar codes, goods and container identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the handling of dangerous goods, explosives and radioactive and other hazardous substances, and incident reporting
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice, including the Australian Dangerous Goods Code, the Australian Explosives Code, the Code of Practice for the Safe Transport of Radioactive Substances, the Industry Safety Code, and National Standards for Manual Handling
- National Load Restraint Guide
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- Australian and state/territory regulations pertaining to the handling of dangerous goods/explosives/hazardous substances
- Australian and international regulations and codes of practice for the handling and transport of explosives, dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
  - Code of Practice for the Safe Transport of Radioactive Substances
  - state/territory legislation covering the safe handling of infectious substances
- relevant state/territory environmental protection legislation
- equal opportunity
- workplace relations regulations
- equal employment opportunity and affirmative action legislation
- relevant state/territory OH&S legislation
**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying characteristics and hazards of the dangerous goods/explosives/hazardous substances being handled
  - interpreting relevant signs, labels and codes
  - locating, interpreting and applying relevant information
  - safely handling/transporting dangerous goods/explosives/hazardous substances in accordance with workplace procedures and regulatory requirements
  - identifying, selecting and using appropriate handling/transport equipment, vehicles, personal protection equipment and related procedures

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the...
workplace
TLIF1307C

Coordinate breakdowns and emergencies

Unit Descriptor
This unit involves the skills and knowledge required to coordinate breakdowns and emergencies, including evaluating the breakdown/emergency situation, consulting with relevant personnel/emergency authorities, coordinating activities at the breakdown/emergency site, and completing all required reports and documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to the coordination of breakdowns and emergencies.

Work is performed with limited or minimum supervision. It involves judgement and discretion in the coordination of breakdowns and emergencies that may occur when driving a commercial vehicle.

Competency Field
F – Safety Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Evaluate breakdown and/or emergency situation
1.1 Causes and effects of breakdown/emergency situation are identified and clarified
1.2 Breakdown/emergency coordination procedures are applied in accordance with workplace policies
1.3 Assistance is rendered to injured persons within the limitations of duty of care and workplace requirements
1.4 Load is identified and the nature of risks and hazards are established and communicated to the relevant authorities
1.5 Appropriate precautions and action are taken where the load is identified as including dangerous goods, explosives or hazardous substances in accordance with the relevant codes, regulations and related procedures

2 Consult with relevant persons and authorities
2.1 Details of causes and effects of breakdown/emergency are reported in accordance with workplace procedures
2.2 Assistance and cooperation is provided to relevant authorities within legal and workplace limitations
2.3 Information about emergency is obtained and/or exchanged in accordance with legal and workplace requirements
3 Coordinate breakdown and/or emergency situation

3.1 Suitable measures are taken to control, warn, stop or divert traffic at breakdown/emergency site
3.2 Personal security precautions are taken in accordance with workplace procedures
3.3 Assistance is requested to minimise the possibility of further damage to persons or property, in accordance with workplace policy and relevant rules and regulations
3.4 Appropriate measures are taken to control and protect the site of breakdown/emergency
3.5 Traffic at the site of a breakdown or emergency is controlled, if necessary, in accordance with regulatory requirements and workplace procedures

4 Complete documentation

4.1 All required documentation and reports on breakdown/emergency are completed in accordance with workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Duty of care requirements in a breakdown and/or emergency situation
- Types of breakdowns and emergencies that can occur when driving a vehicle and appropriate action that can be taken in each case
- Types of emergency equipment, their purpose, and the procedures for their use
- Procedures to be followed in the event of a breakdown and/or emergency
- Risks and hazards that can exist in breakdown/emergency situations and related precautions to control the risks
- Characteristics of various dangerous goods/explosives/hazardous substances and their implications in breakdown/emergency situations

Required skills:
- Communicate effectively with others when coordinating a response to a breakdown or emergency
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures, information and signs relevant to the coordination of a response to a breakdown or emergency
- Identify containers and goods coding, IMDG markings and where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
• Complete documentation related to the coordination of a response to a breakdown or emergency
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when coordinating a response to a breakdown or emergency
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when coordinating a response to a breakdown or emergency in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated events that may occur when coordinating a response to a breakdown or emergency
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Control traffic at the site of a breakdown or emergency
• Identify and correctly use emergency equipment at the site of a breakdown or emergency
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle may include:
• any commercial transport vehicle

Breakdowns and emergencies may occur in a range of road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road
• while at a depot, base or warehouse
• while at a client's workplace or work site
Type of breakdowns/emergencies may include:
- collision
- spillage of fuel or dangerous load
- tyre blow-outs
- fire or explosion
- engine failure
- broken axle
- bogged vehicle
- load shifts
- electrical failure,
- breakdown
- overturned vehicle
- accident involving another vehicle

Emergency equipment may include:
- first aid kit
- fire extinguishers
- warning signs and indicators
- mobile phone or radio

Depending on the type and extent of the breakdown/emergency, the action to be taken to coordinate a breakdown/emergency may include:
- identifying and following established breakdown/emergency procedures
- evaluating the cause and effects of the breakdown/emergency
- coordinating emergency procedures and rendering assistance and first aid if required
- contacting and cooperating with relevant emergency authorities as required
- controlling traffic at the site of a breakdown or emergency
- taking appropriate action to secure the breakdown/emergency situation
- obtaining and recording information about the incident
- reporting on breakdown/emergency situation in accordance with regulatory and workplace requirements

Consultative processes may include:
- workplace personnel and management
- designated breakdown/emergency officers
- emergency services personnel including ambulance, police, fire services, etc.
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information documents may include:

- workplace instructions and procedures concerning breakdowns and emergencies
- state/territory licence and permit requirements as they relate to breakdowns/emergencies
- state/territory road rules
- vehicle manufacturers instructions, specifications and recommended procedures
- goods/materials identification numbers and codes, including IMDG markings and HAZCHEM signs
- manifests, bar codes, goods and container identification
- relevant codes of practice, including the Australian Dangerous Goods Code, the Australian Explosives Code, the Code of Practice for the Safe Transport of Radioactive Substances
- workplace procedures and policies for the handling of dangerous goods, explosives and radioactive and other hazardous substances
- vehicle log book or record book (where required)
- relevant standards and certification requirements
- quality assurance procedures

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to class of vehicle involved
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- Australian Dangerous Goods Code
- Australian Explosives Code
- relevant state/territory environmental protection legislation
- Code of Practice for the Safe Transport of Radioactive Substances
- state/territory legislation covering the safe handling of infectious substances
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF1407C  Develop and maintain a safe workplace

Unit Descriptor
This unit involves the skills and knowledge required to develop and maintain a safe workplace, including providing and informing personnel about OH&S legislation, codes and standards; planning and implementing safety requirements in accordance with regulations; monitoring, adjusting and reporting safety performance; investigating and reporting non-conformance; and evaluating the OH&S system and related policies, procedures and programs. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work involves discretion and judgement in developing and maintaining a safe workplace.

Work is performed under minimum supervision with general guidance on progress and outcomes of work. A range of opportunities may be used to develop awareness and practice of OH&S policies and procedures, to support the development of OH&S and risk management systems, and to encourage the achievement of the organisation's OH&S goals and related key performance objectives.

Work generally involves responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field
F – Safety Management

ELEMENT

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan and implement safety requirements
1.1 Health and safety risk assessments are made as part of all production planning exercises
1.2 Policy and procedures are developed to implement requirements for a safe workplace
1.3 Work practices are planned with colleagues to ensure compliance with workplace and environmental legislation and standards
1.4 Safe operating procedures are documented and communicated
1.5 Work practices are implemented in accordance with requirements specified in legislation and standards for safe workplaces and environments
1.6 Effective induction and supervision is provided to support colleagues in managing their organisational responsibilities
1.7 Purchasing policy for the provision of goods and services is
Inform and train personnel on OH&S legislation, codes and standards

2.1 Legislation, standards and the organisation's policies and practices relevant to the creation and maintenance of a safe workplace and environment are made available to individuals/teams.

2.2 Arrangements are made to provide information in a language, style and format which is understood by colleagues.

2.3 An OH&S training program is developed and implemented to identify and fulfil employees' OH&S training needs as part of the workplace's general training program.

2.4 Individuals/teams know their legal responsibility for maintaining a safe workplace and environment.

2.5 The implications of an unsafe workplace and environment are clear to all within the workplace.

Establish and maintain procedures for assessing and controlling safety risks

3.1 Safety risks presented by identified hazards are correctly assessed in accordance with OH&S legislation and codes of practice.

3.2 Activities are monitored to ensure that this procedure is adopted effectively throughout the area of managerial responsibility.

3.3 Risk assessment is addressed at the planning, design and evaluation stages of any change within the area of managerial responsibility to ensure that the risk from hazards is not increased.

3.4 Measures to control assessed safety risks are developed and implemented in accordance with the hierarchy of control, relevant OH&S legislation, codes of practice and trends identified from the OH&S records system.

3.5 Activities are monitored to ensure that the risk control procedure is adopted effectively throughout the area of managerial responsibility.

3.6 Risk control is addressed at the planning, design and evaluation stages of any change within the area of managerial responsibility to ensure that adequate risk control measures are included.

Monitor, adjust and report safety performance

4.1 Hazards are identified, assessed and prioritised for action.

4.2 Controls are selected to minimise risks to health and safety.

4.3 Waste recycling, reduction and disposal is carried out within legislative and organisational requirements.

4.4 Recommendations for improvements to meet legislation and associated standards are submitted to designated persons/groups.

4.5 Individuals/teams are informed of improvements and.
alterations to occupational health and safety procedures in the workplace

4.6 Systems, records and reporting procedures are maintained according to legislative requirements

5 Evaluate the occupational health and safety system and related policies, procedures and programs

5.1 The effectiveness of the OH&S system and related policies, procedures and programs is assessed according to the workplace's aims with respect to OH&S.

5.2 Improvements to the OH&S system are developed and implemented to ensure more effective achievement of the workplace's organisation's aims with respect to OH&S policies and objectives.

5.3 Inadequacies in existing risk control measures are identified in accordance with the hierarchy of control, and resources enabling implementation of new measures are sought and/or provided according to appropriate procedures

6 Investigate and report non-conformance

6.1 Compliance with OH&S legislation and codes of practice is assessed to ensure that legal OH&S standards are maintained as a minimum

6.2 Non-conformance is investigated and dealt with according to legislative requirements

6.3 Colleagues are supported to acquire and apply competencies to meet legislative requirements and the associated standards

6.4 Changes to operations and practices are implemented to ensure that non-conformance is not repeated

7 Establish and maintain a system for OH&S records

7.1 A system for keeping OH&S records is established and monitored to allow identification of patterns of occupational injury and disease within the area of managerial responsibility, including provision for relevant workplace OH&S reports to be submitted to management

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the management of personal work priorities and professional development
- The systems of risk control recognising the significance of OH&S for effective workplace operation
- Workplace business policies and plans related to OH&S issues
- The significance of other management systems and procedures for OH&S
• Hazards and associated safety risks that exist in the workplace
• The range of control measures available for these safety risks
• Considerations for choosing between different control measures
• How to identify when expert advice is needed
• Elements of an effective OH&S management system
• Principles of risk management
• Appropriate links to other management systems, for example contractors, maintenance and purchasing
• The role of technical information and experts in designing hazard control measures, monitoring systems and health surveillance procedures
• The hierarchy of hazard and risk control measures
• Arrangements for participation and consultation over OH&S
• Incident and accident investigation arrangements
• Training, coaching and mentoring approaches appropriate for use in OH&S training programs
• Typical problems that can occur when managing OH&S systems and related action that can be taken

Required skills:
• Communicate effectively with others when establishing a safe workplace
• Read and interpret instructions, procedures, information, labels and signs relevant to developing and maintaining a safe workplace
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to developing and maintaining a safe workplace
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when developing and maintaining a safe workplace
• Analyse the working environment in order to identify hazards, assess safety risks and design and implement appropriate OH&S management systems
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when developing and maintaining a safe workplace in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan work activities, including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply technology, information systems and procedures to improve OH&S compliance, information systems and reporting requirements
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
• single and multi-site location
• large, medium and/or small companies

Services, products, risks, work systems and requirements may:
• potentially vary across different sections of the workplace

Operations involve:
• internal and external customer/supplier contact and coordination

Work priorities and professional development are:
• directed at maximising achievement of the individual in accordance with the enterprises objectives and strategic plans

Workplace hazards may include but are not restricted to:
• moving heavy loads in an unsafe work environment
• unsecured machinery, components or repaired equipment
• slippery floors
• welding equipment
• sharp tools and implements
• power tools
• moving and rotating machinery
• flammable liquids, vapours and fuel
• faulty machinery, handling equipment and lifting gear
• using equipment beyond safe working limits
• poor housekeeping procedures
• non-compliance with safe working procedures
• electrical wiring and systems, including exposed electrical circuits
• working at heights and in confined spaces
• toxic gases and substances
• chemicals and other harmful substances
• damaged goods, pallets and containers
• dangerous/hazardous goods
Training activities may include:

- attendance at formal education/training programs
- completion of internal short training programs
- attendances at relevant conferences, seminars and workshops
- reading of relevant journals and literature
- coaching/mentoring on the job
- workplace training projects

Consultative processes may involve:

- OH&S specialists
- trainers
- other employees and supervisors
- management
- union representatives
- manufacturers representatives
- supplier representatives
- customers/clients
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures
Information/documentation may include:

- workplace OH&S procedures and policies
- workplace OH&S management system including hazard/safety risk control strategies
- OH&S training notes and materials
- journals and work-related literature concerning OH&S
- competency standards
- customer/client instructions
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, codes of practice including the national standards for services and operations
- manufacturers/suppliers’ specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- legislation, regulations and related documentation relevant to business operations
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- trading regulations relevant to business operations
- relevant Australian and state/territory OH&S legislation including regulations and codes of practice relating to hazards present in the workplace or industry, including:
  - general duty of care under OH&S legislation and common law
  - requirements for the maintenance and confidentiality of records of occupational injury and disease
  - requirements for provision of OH&S information and training
  - provisions relating to health and safety representatives and/or OH&S committees
  - provisions relating to OH&S issue resolution
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF1707B Investigate rail safety incidents

Unit Descriptor
This unit involves the skills and knowledge required to investigate safety incidents in accordance with regulatory and workplace requirements, including planning the investigation, collecting and analysing information, and preparing the safety incident report. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and relevant regulatory and code requirements to the investigation of safety incidents as part of work activities in the rail transport and/or allied industries.

Competency Field
F – Safety Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan the investigation
1.1 Clarification of the objectives of the incident investigation is established in conjunction with relevant personnel, and in accordance with workplace and regulatory requirements
1.2 Timeframes and locations for the investigation are established in conjunction with relevant personnel
1.3 Resources required for the investigation are identified and obtained within workplace guidelines

2 Collect and analyse information
2.1 All relevant available incident information is obtained and collated in order to facilitate a detailed and accurate analysis of the incident
2.2 Interviews are conducted with relevant personnel to establish their recollection of events associated with the incident
2.3 Information is analysed in accordance with the established objectives of the investigation, based on approved conditions, applicable standards and operational guidelines
2.4 Options for action are generated which are consistent with workplace and/or statutory requirements and lead to recommendations which reduce future risk
2.5 Criteria are specified to enable objective evaluation of the
options to be undertaken

3 Prepare report

3.1 Conclusions are drawn and recommendations are made which will enable a satisfactory resolution of the incident issues, and meet workplace and any other statutory requirement.

3.2 Opportunities to enhance operational efficiency and safety procedures are documented in accordance with the standard reporting guidelines.

3.3 Documentation is filed and distributed to all relevant parties for consideration and subsequent action.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.
- Relevant OH&S and environmental protection procedures and guidelines.
- Workplace procedures and policies for the investigation of safety incidents.
- Focus of operation of work systems, equipment, management and site operating systems for the investigation of safety incidents.
- Problems that may occur when investigating safety incidents and appropriate action that can be taken to resolve the problems.
- Data collection and analysis techniques required when investigating safety incidents.
- Documentation and reporting requirements for the investigation of safety incidents.

Required skills:

- Communicate effectively with others when investigating safety incidents.
- Read and interpret instructions, procedures and information relevant to the investigation of safety incidents.
- Interpret and follow operational instructions and prioritise work.
- Conduct interviews and take statements.
- Negotiate, communicate and liaise effectively with others.
- Prepare reports and recommendations.
- Complete documentation related to the investigation of safety incidents.
- Operate electronic communication equipment to required protocol.
- Work collaboratively with others when investigating safety incidents.
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others.
- Promptly report and/or rectify any problems identified when investigating safety incidents in accordance with regulatory requirements and workplace procedures.
- Implement contingency plans for unanticipated situations that may arise when investigating safety incidents.
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the investigation of safety incidents
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant computer, communication and office equipment required when investigating safety incidents
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
• exposed conditions
• controlled or open environments

Resources required for the investigation may include: • personnel time
• access to incident site
• access to equipment including rolling stock and infrastructure
Incident information may be obtained from:

- incident reports
- dangerous goods manifest
- drivers advice (train load)
- safeworking forms
- special train notices
- consist forms
- wagon cards
- out-of-gauge documents
- train journals or train register books transport instructions
- load and weight records
- material safety data sheets
- inspection reports-routine circulars
- interviews with those involved in the incident -f.
- interviews with witnesses

Depending on the context of the safety incident concerned, the applicable regulatory/code requirements may include:

- the relevant state/territory OH&S regulations
- the relevant state/territory codes of practice for safeworking
- the Code of Practice for the Defined Interstate Rail Network

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials, trains and vehicular traffic

Consultative processes may involve:

- other employees, supervisors and managers
- affected customers
- official representatives
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and policies for the investigation of safety incidents
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including the ADG Code and Railways of Australia Code of Practices and Conditions for the Carriage of Dangerous Goods
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Code of Practice for the Defined Interstate Rail Network in situations where safety incidents occur on that network
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- Code of Practice for the Defined Interstate Rail Network in situations where safety incidents occur on that network
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of
practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF1807B Operate firefighting equipment

Unit Descriptor
This unit involves the skills and knowledge required to operate and check firefighting equipment in accordance with manufacturers instructions and workplace emergency procedures, including identifying and selecting the appropriate equipment, using the firefighting equipment to fight a fire, and checking that the firefighting equipment is operational. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant codes of practice, regulations and workplace requirements concerning the operation and checking of firefighting equipment.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the operation and maintenance of firefighting equipment as part of work activities in the transport, distribution and/or allied industries.

Competency Field
F – Safety Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Check firefighting equipment
1.1 Firefighting equipment is checked for serviceability as per manufacturers specifications and regulatory requirements
1.2 Non-functioning equipment or equipment which is past its service date is identified and reported to designated personnel for replacement or service

2 Use firefighting equipment
2.1 Equipment and personal safety equipment used for fighting fires are correctly selected for type of fire in accordance with manufacturers instructions
2.2 Fire is controlled using firefighting equipment according to manufacturers instructions and workplace emergency procedures
2.3 Equipment is stored safely according to manufacturers instructions and workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian codes of practice, regulations and safeworking systems relevant to the use and checking of firefighting equipment
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the use and checking of firefighting equipment
• The chemistry of fire, the effects of different types of material in a fire and the principles underlying the spread of fire and its extinguishment
• The different classes of fire, their characteristics and strategies and equipment needed for their extinguishment
• Types of firefighting appliances, equipment and systems, their identifying features, principles of operation and the procedures for their use and basic checking of serviceability
• Fixed fire prevention and extinguishing installations and their principles of operation
• Firefighting techniques, agents and precautions applicable to different classes of fire
• Typical problems that can occur with firefighting equipment and operations and appropriate action and solutions
• Manufacturers instructions for the checking of firefighting equipment

Required skills:
• Communicate effectively with others when fighting fires using firefighting equipment
• Read and comprehend simple statements in English
• Read and interpret instructions, procedures, regulations, signs and labels relevant to the use of firefighting equipment and apply them to work activities
• Interpret and follow operational instructions and prioritise work
• Work safely and collaboratively with others when fighting fires using firefighting equipment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when using firefighting equipment in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when using firefighting equipment
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify firefighting activities and take appropriate initiatives depending on limits of responsibility, differing workplace contexts, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly select, use and carry out basic checks on firefighting equipment relevant to own work functions
• Operate and adapt to differences in firefighting equipment and emergency procedures in the workplace
• Monitor performance of firefighting equipment and take appropriate action is required
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
• exposed conditions
• controlled or open environments

Types of fires which may occur include:
• Classes A, B, C and F in the standard classification of fires

Firefighting equipment, appliances and systems may include:
• portable fire extinguishers including foam, water, CO2, dry chemical and wet foam
• sprinkler systems
• fire hoses and hydrants
• fire blankets

Hazards in the work area may include exposure to:
• chemicals
• dangerous or hazardous substances
• live electrical circuits
• movements of equipment, goods, materials, trains and vehicular traffic

Consultative processes may involve:
• other employees and supervisors
• current and potential customers
• suppliers, customers and clients
• relevant authorities and institutions
• management and union representatives
• industrial relations and OH&S specialists
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Dependent of the type of organisation concerned and the local terminology used, workplace procedures may include:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Information documents may include:
- workplace fire emergency procedures and policies
- relevant OH&S and environmental protection regulations
- codes of practice and regulations relevant to fire emergencies, including safeworking regulations and local authority regulations and procedures
- Australian regulations and codes of practice for the transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for firefighting equipment
- technical instructions
- electrified territory regulations
- dangerous goods declarations and material safety data sheets (where applicable)
- goods manifest
- award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes, regulations and safeworking systems for the use and checking of firefighting equipment
- the Code of Practice for the Defined Interstate Rail Network in situations where fire emergencies occur on that network
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at
the registered training organisation, and/or
in an appropriate range of situations in the workplace
Ensure a safe on-board passenger and working environment

Unit Descriptor
This unit involves the skills and knowledge required to ensure a safe on-board passenger and working environment in accordance with OH&S regulatory and workplace requirements, including performing checks and inspections; rectifying and reporting work hazards and non-compliances; and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace requirements and relevant OH&S regulations.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures to ensure a safe on-board passenger and working environment during work activities in the transport and allied industries.

Competency Field
F – Safety Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Perform checks and inspections

1.1 All non-compliances are identified in accordance with OH&S procedures and statutory requirements

1.2 Actual and potential hazards are accurately identified

2 Rectify and report work hazards and non-compliances

2.1 Hazards and non-compliances are reported in accordance with workplace instructions

2.2 Appropriate action to minimise or eliminate identified hazards is taken in accordance with workplace procedures and OH&S regulations

3 Complete documentation

3.1 Records, reports and other documentation concerning inspections, identified safety hazards and action taken are completed in accordance with workplace and OH&S regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Regulations and codes of practice relevant to work activities including the Australian Dangerous Goods Code
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies related to ensuring a safe workplace
• The location of safety equipment and procedures for its use
• Manual handling procedures
• Emergency procedures
• First aid procedures
• Personal protective equipment and procedures for its use
• Equipment, and materials used during work activities and precautions and procedures that should be followed in their use
• Hazards that may occur in the workplace and action that can be taken to control and minimise the risks involved
• Communication and negotiation requirements
• Documentation and record requirements

**Required skills:**
• Communicate effectively with others when taking action to ensure a safe on-board passenger and working environment
• Read and interpret instructions, procedures, information and signs relevant to ensuring a safe on-board passenger and working environment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to ensuring a safe on-board passenger and working environment
• Write and prepare safety incident reports and other documents required within workplace activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when taking action to ensure a safe on-board passenger and working environment
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when taking action to ensure a safe on-board passenger and working environment in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when taking action to ensure a safe on-board passenger and working environment
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and safely use relevant equipment and materials during work activities
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Make appropriate judgements regarding the relative urgency of hazard reports
• Use correct manual handling procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  
• in a range of work environments
• by day or night

Work is carried out in accordance with:  
• relevant codes of practice
• OH&S regulatory requirements
• insurance requirements
• workplace policies and procedures

Work may be carried out in an range of long-distance passenger vehicles including:  
• sleeping cars
• sit-up cars
• dining cars
• lounge and/or entertainment cars
• brake vans and staff cars

Hazards may include:  
• slippery floors
• broken glass
• self-closing doors
• hot food and beverages
• faulty equipment
• moving trains and vehicles
• contaminated or spoilt food or beverages
• stairways
• sudden and unexpected movement
• infectious and contagious diseases
• sharp objects
• syringes and drugs
• human and biological waste
Consultative processes may involve:
- customers
- other workplace personnel
- supervisors and managers
- official representatives

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and policies
- work instructions, job description and induction materials
- manufacturers instructions for the use of equipment and materials
- relevant OH&S and environmental protection requirements and policies
- relevant codes of practice and regulations
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant codes and regulations pertaining to workplace activities
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant state/territory health and hygiene legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIF2007B  Manage emergencies**

**Unit Descriptor**
This unit involves the skills and knowledge required to manage emergencies in accordance with regulatory requirements, relevant codes of practice and workplace procedures, including identifying and responding to emergency situations, arranging follow-on support and assistance, and communicating with staff in accordance with workplace procedures and relevant code requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in compliance with the relevant codes, safeworking systems, regulations and workplace requirements concerning the management of emergencies.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the management of emergencies as part of work activities in the transport, distribution and/or allied industries.

**Competency Field**
F – Safety Management

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Respond to emergency situations**
1.1 Emergency and potential emergency situations are promptly identified and assessed and needs are prioritised in accordance with the workplace emergency response plan/procedures
1.2 Situations are handled appropriately following emergency
1.3 Incident reports are completed accurately in accordance with regulatory and workplace procedures

2 **Take required action during an emergency**
2.1 Responsibilities are fulfilled in accordance with the workplace emergency response plan and code/regulatory requirements
2.2 Assistance is provided to other staff in conducting an initial survey of the scene of an emergency
2.3 Assistance is provided in controlling the site both prior to and following arrival of emergency services
2.4 Directions of the controlling emergency authority are followed and all possible assistance is provided in response to those directions

3 **Arrange follow-on support and assistance**
3.1 Medical assistance and support is arranged as required in accordance with workplace procedures
3.2 First aid is provided pending the arrival of medical assistance within limits of responsibility and competence in accordance with workplace procedures

4 Communicate with staff

4.1 Staff and customers are provided with relevant, appropriate and timely advice on emergency situations and instructions to be followed on an ongoing basis
4.2 Evacuation procedures for staff/customers are demonstrated and explained in accordance with workplace procedures
4.3 Customer service and safety needs arising from emergency situations are identified and acted upon in accordance with regulatory and workplace requirements

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian codes of practice, regulations and safeworking systems relevant to the management of emergencies, including the Australian Dangerous Goods Code and any applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the management of emergencies, including the elements of an emergency response plan and first aid procedures where applicable
- Focus of operation of work systems, equipment, management and site operating systems for the management of emergencies
- Problems that may occur when managing emergencies and appropriate action that can be taken to resolve the problems
- Documentation and reporting requirements for the management of emergencies
- Hazards that may occur in transport and allied industries that can lead to emergency situations, and related hazard control strategies, including: handling hot food and equipment; sudden and unexpected movement; infectious and contagious diseases; self-closing doors; sharp objects; syringes and drugs; contact with human and biological waste; fire and explosion; collision; derailment of trains; handling, storage and carriage of dangerous goods and other hazardous substances; and the handling, storage and carriage of explosives
- Data collection and analysis techniques required when managing emergencies

Required skills:

- Communicate effectively with others when managing emergency situations
- Read and interpret instructions, procedures, information and signs relevant to the management of emergency situations
- Interpret and follow operational instructions and prioritise work
- Conduct interviews and take statements
- Complete documentation related to the management of emergency situations
• Prepare reports and recommendations
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when managing emergency situations
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when managing emergency situations in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated developments that may occur when managing emergency situations
• Follow emergency response plan and procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during emergency situations
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant computer/communication/office equipment required when managing emergencies
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  • in a range of work environments
• by day or night

Customers may be:       • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
• exposed conditions
• controlled or open environments
Emergency situations may include:
- chemical spills
- fires
- bomb threats
- derailments
- customer emergency

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Consultative processes may involve:
- other employees, supervisors and managers
- affected customers
- official representatives
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Information/documents may include:

- relevant regulatory and/or code requirements for the management of emergencies
- workplace procedures and policies for the management of emergencies including emergency response plan where applicable
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including the ADG Code and Railways of Australia Code of Practices and Conditions for the Carriage of Dangerous Goods
- operations manuals, job specifications and induction documentation including first aid manual
- manufacturers specifications for equipment
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements for management of emergencies
- the Code of Practice for the Defined Interstate Rail Network in situations where emergencies occur on that network
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- Railways of Australia Code of Practices and Conditions for the Carriage of Dangerous Goods
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF207C Conduct housekeeping activities

Unit Descriptor
This unit involves the skills and knowledge required to conduct housekeeping activities in the workplace, including identifying required housekeeping requirements, procedures and resources for different areas of the workplace, monitoring and maintaining cleanliness and tidiness in the workplace, and completing assigned housekeeping tasks. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace housekeeping procedures.

Work is performed under some supervision generally within a team environment. It involves the application of the basic safety principles to the completion of housekeeping tasks as part of workplace operations.

Competency Field
F – Safety Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify the housekeeping requirements procedures, and resources of different areas of the workplace
1.1 Workplace procedures for housekeeping are identified
1.2 Equipment and consumables are selected in accordance with work area requirements
1.3 Specific requirements for housekeeping activities in different parts of the employees' work area are identified and followed
1.4 Requirements for the minor disassembly/reassembly of storage zones are identified (where applicable)

2 Monitor and maintain cleanliness and tidiness in the workplace
2.1 Initiative is used to continuously monitor the cleanliness and tidiness of the worksites used by the employees
2.2 Housekeeping issues are raised with designated personnel in accordance with workplace procedures
2.3 Housekeeping equipment and supplies are maintained and stored

3 Complete assigned housekeeping duties
3.1 Assigned housekeeping duties are conducted following workplace procedures and ensuring that waste is removed
3.2 Maintenance requirements of any damaged items are notified to appropriate personnel
3.3 Minor disassembly/reassembly of storage zones is conducted within enterprise policies and procedures
3.4 Schedules and records for housekeeping duties are maintained
3.5 Work areas are checked and meet required workplace standards
3.6 Work is carried out following enterprise practices and safe work procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant OH&S procedures and guidelines concerning housekeeping operations
- Workplace procedures and policies for the carrying out housekeeping tasks in the workplace
- Risks when carrying out housekeeping tasks and related precautions to control the risk
- Housekeeping standards required in the workplace
- Site layout and obstacles
- Application of relevant industrial regulations and requirements
- Servicing procedures for housekeeping equipment

Required skills:
- Communicate effectively with others when carrying out housekeeping tasks
- Read and interpret instructions, procedures, information and signs relevant to housekeeping activities in the workplace
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to housekeeping in the workplace
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out housekeeping tasks
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems, faults or malfunctions identified when carrying out housekeeping tasks in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during housekeeping activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Monitor condition and performance of housekeeping tools and equipment
- Service housekeeping tools and equipment in terms of servicing schedule and standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The housekeeping tasks may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- tight or restricted spaces
- exposed conditions
- controlled or open environments

Housekeeping duties may include:
- cleaning
- returning goods or equipment to storage
- repacking
- waste removal
- maintenance

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on workplace context, personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Information/documents may include:

- OH&S and environmental protection regulations
- workplace housekeeping procedures and policies
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, smoking, work station ergonomics and other critical OH&S issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures

Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- dangerous goods and air freight regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
TLIF207C Conduct housekeeping activities

- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF2107B  Respond to train-driving emergencies and abnormal situations

Unit Descriptor
This unit involves the skills and knowledge required to respond to emergencies and abnormal situations when driving a train in accordance with regulatory requirements, relevant codes of practice and workplace procedures, including identifying and responding to emergency situations and abnormal situations; arranging follow-on support and assistance; and communicating with staff in accordance with workplace procedures and relevant safeworking code requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements when responding to train-driving emergencies and abnormal situations as part of work activities in a range of contexts across the Australian rail system.

Competency Field
F – Safety Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Identify emergency or abnormal situation
1.1 Emergency, potential emergency or abnormal train-driving situation is promptly identified and assessed and needs are prioritised in accordance with the workplace emergency response plan/procedures
1.2 Implications of the emergency, potential emergency or abnormal train-driving situation are evaluated in accordance with workplace requirements
1.3 Options for reporting the situation and/or taking action are considered in accordance with workplace procedures and regulatory requirements
1.4 Relevant personnel are alerted to the emergency, potential emergency or abnormal situation as required within workplace operating and emergency procedures and plans
1.5 Communications are maintained with relevant personnel to determine appropriate course of action
2 **Respond to emergency or abnormal situations**

2.1 Response to emergency, potential emergency or abnormal situation is in accordance with workplace procedures, received instructions, regulatory requirements and emergency response plan where relevant

2.2 Safety incidents and emergencies are handled appropriately in accordance with established response plan and within limits of responsibility and duty of care

2.3 Responsibilities are fulfilled in accordance with the workplace emergency response plan and code/regulatory requirements

2.4 Assistance is provided in controlling the site both prior to and following arrival of emergency services

2.5 In the case of an emergency, assistance is provided to other staff and emergency service personnel conducting an initial survey of the scene

2.6 Directions of the controlling emergency authority are followed and all possible assistance is provided in response to those directions

2.7 Incident reports are completed accurately in accordance with regulatory and workplace procedures

3 **Arrange follow-on support and assistance**

3.1 In the case of accidents or illnesses, medical assistance and support is arranged as required in accordance with workplace procedures

3.2 First aid is provided pending the arrival of medical assistance within limits of responsibility and competence in accordance with workplace procedures

4 **Communicate with staff and passengers**

4.1 Staff and passengers are provided with relevant, appropriate and timely advice on abnormal and emergency situations

4.2 Instructions are provided to relevant personnel and/or passengers in accordance with workplace procedures and consistent with the nature of the abnormal situation or emergency

4.3 Where applicable, evacuation procedures for personnel and/or customers are explained and/or demonstrated in accordance with workplace procedures

4.4 Customer service and safety needs arising from abnormal situations and emergency situations are identified and acted upon in accordance with regulatory and workplace requirements

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for identifying and responding to train-driving abnormal situations and emergencies
• Focus of operation of work systems, equipment, management and site operating systems when responding to train-driving abnormal situations and emergencies
• Problems that may occur when responding to train-driving abnormal situations and emergencies and action that can be taken to resolve the problems
• Relevant documentation and reporting requirements
• Hazards that may occur in transport and allied industries that can lead to emergency situations, and related hazard control strategies

**Required skills:**

• Communicate effectively with others when responding to train-driving abnormal situations and emergencies
• Read and interpret instructions, procedures, information and signs relevant to train-driving abnormal situations and emergencies
• Interpret and follow operational instructions and prioritise work
• Complete documentation and reports related to train-driving abnormal situations and emergencies
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when responding to train-driving abnormal situations and emergencies
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions when responding to train-driving abnormal situations and emergencies in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated developments when responding to train-driving abnormal situations and emergencies
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Identify hazards and abnormal situations related to train operations and take appropriate action
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant communications and other equipment required when identifying and responding to train-driving abnormal situations and emergencies
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Provide first aid within limits of responsibility and competence
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Trains may be:
• passenger or freight trains operated over tracks owned and maintained by different organisations

Work may be conducted:
• in a range of work environments
• by day or night

Emergency situations may include but are not limited to:
• suicide on the track
• derailments
• collision
• customer emergency
• chemical spills
• fire and explosion
• bomb threats

Abnormal situations may include but are not limited to:
• technology failure
• wheel slip and uncontrolled slide
• signals in stop mode
• assault on passengers or personnel
• brawls between passengers
• false alarm
• passenger initiated alarm
• track obstructions
• passenger caught in self-closing doors
• pedestrians crossing the track
• illness
• incorrect information or failure in communications
Hazards that may occur in rail transport that can lead to emergency situations may include but are not limited to:

- handling of hot food and equipment
- sudden and unexpected movement
- infectious and contagious diseases
- self-closing doors
- sharp objects
- syringes and drugs
- contact with human and biological waste
- faulty or out of specification track
- faulty rolling stock or motive power units
- handling, storage and carriage of dangerous goods and other hazardous substances
- handling, storage and carriage of explosives

Relevant personnel can include:

- train controllers
- train examiners
- maintenance personnel
- those providing operational assistance
- signals staff
- passengers
- station staff

Consultative processes may involve:

- other employees, supervisors and managers
- emergency services
- affected customers
- official representatives
- relevant authorities and institutions
- union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications
Emergency services may include:
- fire brigade
- police
- ambulance
- medical services
- rescue services
- security services

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and policies for the management of abnormal situations and emergencies, including the relevant emergency response plan where applicable
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including the ADG Code
- operations manuals, job specifications and induction documentation including first aid manual
- emergency procedures
- agent/supplier/customer instructions and advice in the case of freight
- dangerous goods declarations and material safety data sheets (where applicable)
- manifests, goods identification numbers and codes, including ADG and IMDG markings and HAZCHEM signs
- relevant Australian standards and certification requirements
- train timetables and schedules
- quality assurance and customer service standards and procedures including passenger comfort and on-time running standards
- communication equipment procedures and protocols
- equipment operation manuals and maintenance specifications
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where emergencies occur on that network
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- Railways of Australia Code of Practices and Conditions for the Carriage of Dangerous Goods
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF2207C  Implement/monitor procedures when warehousing/storing dangerous goods and/or hazardous substances

Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor OH&S policies, safe work procedures and programs for the warehousing or storage of dangerous goods and or hazardous substances in accordance with regulatory requirements. This includes accessing and providing information; implementing and monitoring procedures for identifying and assessing hazards; and implementing and monitoring procedures for controlling risks. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit covers anyone working in the transport, warehousing, distribution and storage industries who may be involved in storing dangerous goods and/or hazardous substances.

Work must be carried out in compliance with all relevant OH&S regulations concerning the safe handling and storage of dangerous goods and hazardous substances.

Work is performed under general supervision. It involves the application of the codes of practice and established procedures for implementing and monitoring safe procedures when warehousing/storing dangerous goods and or hazardous substances.

Competency Field
F – Safety Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Access/provide information on legislative requirements, workplace policies and procedures

1.1 Legislative requirements for hazardous substances and/or dangerous goods are identified, stored and retrieved as required

1.2 Information on workplace occupational health and safety policies and safe work procedures relating to the storage of hazardous substances and/or dangerous goods is stored in a readily accessible location and manner

1.3 Information on legislative requirements, workplace policies and safe work procedures relating to the storage of hazardous substances and/or dangerous goods is accurately and clearly explained to the work group

1.4 Information on the outcome of hazard identification, risk assessment and application of control measures is accurately
Implement and monitor procedures when warehousing/storing dangerous goods and/or hazardous substances

and clearly explained to the work group

2 Implement and monitor procedures for identifying and assessing hazards

2.1 Dangerous goods and/or hazardous substances are identified from information provided, including class labels, manifests, material safety data sheets and other documentation

2.2 Confirmation is sought from relevant personnel where potentially hazardous substances or dangerous goods do not appear to be appropriately marked

2.3 Risks associated with the storage of identified hazardous substances or dangerous goods are assessed, reported/recorded in accordance with workplace policy

3 Implement and monitor procedures for controlling risks

3.1 Established risk control measures for the safe storage of hazardous substances and/or dangerous goods are implemented, monitored and reviewed in accordance with workplace procedures

3.2 Work procedures to control risks are implemented

3.3 Adherence to risk control procedures by the work group is monitored in accordance with workplace procedures

3.4 Required improvements to existing risk control measures are identified, including required resources for implementation, and reported to appropriate personnel

3.5 Procedures for monitoring and controlling risks provide for a hierarchy of risk control

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulations and codes concerning the storage of dangerous goods and hazardous substances
- Permit and licence requirements
- Workplace procedures for handling and storing dangerous goods and hazardous substances
- Risks when storing dangerous goods and hazardous substances and related precautions to control the risk
- Problems that may occur when storing or warehousing dangerous goods and hazardous substances and action that can be taken to resolve the problems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Housekeeping standards procedures required in the workplace

Required skills:

- Communicate effectively with others when storing or warehousing dangerous goods and hazardous substances
• Read and interpret instructions, procedures, information and signs relevant to the storing or warehousing of dangerous goods and hazardous substances
• Identify containers and goods coding, markings, labels and, where applicable, emergency information panels for the mode of transport/storage selected
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the storing or warehousing of dangerous goods and hazardous substances
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when storing or warehousing dangerous goods and hazardous substances
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when storing or warehousing dangerous goods and hazardous substances in accordance with regulatory requirements and workplace procedures
• Plan own work including predicting consequences and identifying improvements
• Implement contingency plans for unanticipated situations that may occur when storing or warehousing dangerous goods and hazardous substances
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the storing or warehousing of dangerous goods and hazardous substances
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The dangerous goods may be stored in a range of work environments by day or night and may be:
- for short-term storage
- for long-term storage
- in transit

Customers may be:
- internal or external

Workplace environment may include:
- movement of equipment
- movement of goods
- materials and vehicular traffic
Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident/accident procedures
- authorities and permits
- hours of operations
- noise restrictions
- additional gear and equipment
- segmentation procedures
- emergency procedures, including response to spillage/leaks, evacuation and firefighting

Hazards may include:

- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spills, leakages, ruptures
- fire or ignition
- dust/vapours

Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- representatives of regulatory authorities with jurisdiction over OH&S, dangerous goods and hazardous substances
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives
Identification of goods may be:
- from material safety data sheets
- packaging labels
- manifests
- stock lists
- HAZCHEM interpretative advice

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- mask and respirator
- protective clothing
- breathing apparatus

Information/documents may include:
- goods identification numbers and codes
- manifests, stock lists, packaging labels, bar codes
- goods and container identification
- workplace procedures and policies concerning the storage of dangerous goods and hazardous substances
- supplier and/or client instructions
- material safety data sheets
- current Australian Dangerous Goods Code
- HAZCHEM interpretative advice
- relevant legislation, codes, regulations and related documentation concerning the storage of dangerous goods and hazardous substances
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures pertaining to dangerous goods and hazardous substances
Applicable regulations and legislation may include:

- relevant Australian and state/territory regulations relating to the storage of dangerous goods and hazardous substances
- Australian and international regulations and codes of practice for the storage and transport of dangerous goods and hazardous substances, including:
  - current Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - current Australian and International Explosives Codes
- all relevant Australian Standards
- relevant state/territory OH&S legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment and affirmative action legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying dangerous goods/hazardous substances (from labels, IMDG markings, HAZCHEM signs and other relevant identification criteria)
  - safely storing dangerous goods/hazardous substances
  - determining (any) required permits
  - identifying job and site hazards and planning work to minimise risks
  - identifying any special requirements for the dangerous goods/hazardous substances
  - assessing the handling and storage precautions and requirements for dangerous goods/hazardous substances

Context of and specific

- Performance is demonstrated consistently over a period
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF307C  Implement and monitor OH&S procedures

Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor OH&S procedures, including accessing information about OH&S and the workplace policies and procedures, implementing and monitoring procedures for identifying and assessing hazards, implementing and monitoring/auditing procedures for controlling risks, planning and supervising housekeeping arrangements, and implementing and monitoring procedures for dealing with hazardous events. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant OH&S regulations and procedures.

Work is performed under some supervision generally within a team environment. It involves the implementation and monitoring of established OH&S and hazard minimisation policies and procedures in workplace activities.

Competency Field
F – Safety Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Access information about OH&S and the workplace policies and procedures
1.1 Relevant provisions of occupational health and safety legislation and codes of practice are accurately followed
1.2 Information on workplace occupational health and safety policies, procedures and programs is stored in a readily accessible location and manner
1.3 Information is accurately and clearly explained to the work team
1.4 Information about the outcomes of risk identification and control procedures is provided to appropriate personnel

2 Implement and monitor procedures for identifying and assessing hazards
2.1 Existing and potential hazards in the work area are identified and reported
2.2 Identified hazards are assessed in relation to relative risk
2.3 Appropriate action is initiated to minimise and control the risks/hazards

3 Implement and monitor procedures for controlling risks
3.1 Existing risk control measures are implemented, monitored and reviewed
3.2 Work procedures to control risks are implemented and
adherence to them by the work group is monitored

3.3 Required improvements to existing risk control measures are identified, including required resources for implementation, and reported to appropriate personnel

3.4 Procedures for monitoring and controlling risks provide for a hierarchy of control

4 Plan and supervise housekeeping arrangements

4.1 Housekeeping tasks are identified and incorporated in enterprise work roles

4.2 Housekeeping equipment is maintained

4.3 Team members are allocated housekeeping tasks and supervised

4.4 Housekeeping procedures and practices are planned to conform with environmental and occupational health and safety requirements

5 Implement and monitor procedures for dealing with hazardous events

5.1 Workplace procedures for dealing with hazardous events are implemented whenever necessary to ensure that prompt control action is taken

5.2 Hazardous events are investigated to identify causes

5.3 Control measures are implemented to prevent recurrence and minimise risks of hazardous events or issues and are referred to designated personnel for implementation

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S procedures and guidelines
- Risks when using manually-operated equipment to shift loads and related precautions to control the risk
- Reporting procedures in regard to unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- Location and use of safety alarms, manifests, emergency shut-off systems, emergency communication systems
- Signs and signals used for OH&S warnings
- Terms used in material safety data sheets
- HAZCHEM symbols and implications for safe work and storage
- Procedures for the storage and use of hazardous substances
- Procedures for the storage and use of flammable materials
- Manual and mechanically assisted lifting and load shifting procedures
- Transport requirements for goods within workplace
- Emergency and evacuation procedures
• Housekeeping standards and procedures required in the workplace
• Site layout and obstacles

**Required skills:**
• Communicate effectively with others when implementing and monitoring compliance with OH&S procedure and policies
• Read and interpret instructions, procedures, information and signs relevant to the implementation and monitoring of compliance with OH&S procedure and policies
• Identify containers and goods coding, ADG and IMDG markings and, where applicable, emergency information panels
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the implementation and monitoring of compliance with OH&S procedure and policies
• Operate electronic communication equipment to required protocol
• Estimate the size, shape and special requirements of loads
• Work collaboratively with others when implementing and monitoring compliance with OH&S procedure and policies
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when implementing and monitoring compliance with OH&S procedure and policies in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when implementing and monitoring compliance with OH&S procedure and policies
• Ensure that precautions and required action are taken to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Monitor performance of equipment
• Service equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The implementation and monitoring of OH&S within work operations may be conducted:

- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Workplace hazards may include:
- chemicals and other harmful substances
- movements of equipment, goods, vehicles
- toxic substances
- damaged packing material and containers
- broken and damaged equipment
- inflammable materials and fire hazards
- lifting practices
- waste management and disposal
- extremes in weather conditions
- lighting levels
- floor surfaces
- water hazards
- traffic flows, vehicle and equipment operation
- dangerous storage areas
- violent incidents such as armed robberies
Responsibilities in the implementation/monitoring of OH&S may include:

- provision of OH&S information to staff
- consultation and participation in meetings on OH&S matters
- emergency procedures and response
- housekeeping
- identifying and minimising workplace hazards
- assessing and controlling OH&S risks
- OH&S training and assessment
- use of personal protective equipment
- keeping of OH&S records
- reporting of OH&S issues and incidents
- resolution of OH&S issues
- checking work area and/or equipment before and during work
- participation in OH&S audits and workplace inspections

Controlling OH&S risks may include:

- measures to remove the cause of a risk at its source
- consultation with workers and their representatives
- application of the hierarchy of control, namely:
  - elimination of the risk
  - engineering controls
  - administrative controls
  - personal protective equipment

Procedures for dealing with hazardous events may include:

- evacuation
- chemical containment
- first aid
- accident/safety incident reporting and investigation.

OH&S training may include:

- induction training
- specific hazard training
- specific task or equipment training
- emergency and evacuation training
- training as part of broader programs, for example equipment operation
**OH&S records may include:**
- OH&S audits and inspection reports
- health surveillance and workplace environmental monitoring records
- records of instruction and training
- manufacturers and suppliers information, including material safety data sheets and dangerous goods storage lists
- hazardous substances registers
- maintenance and testing reports
- workers compensation and rehabilitation records
- first aid/medical post records.

**Personnel in the work area may include:**
- workplace personnel and management
- site visitors
- OH&S specialists
- union representatives
- contractors
- official OH&S representatives

**Personal protective equipment may include:**
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

**Participative arrangements may include:**
- formal and informal meetings which deal with OH&S issues
- workplace OH&S committees
- other committees, for example, consultative, planning and purchasing
- OH&S representatives
- suggestions, requests, reports and concerns put forward by staff

**Designated personnel may include:**
- workplace personnel
- supervisors
- team leaders
- management
- occupational health and safety personnel
- other persons authorised or nominated by the organisation
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- OH&S regulations, responsibilities and obligations
- workplace OH&S procedures and policies
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, smoking, work station ergonomics and other critical OH&S issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures

Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation and safety codes, including manual handling, noise, confined spaces, smoking, workplace ergonomics, etc.
- general duty of care under OH&S legislation
- workplace relations regulations
- workers compensation regulations
- dangerous goods regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
TLIF307C Implement and monitor OH&S procedures

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLIF407C Organise OH&S procedures in the workplace

#### Unit Descriptor
This unit involves the skills and knowledge required to organise OH&S procedures in the workplace, including interpreting and applying information about OH&S policies and procedures and duty of care responsibilities, identifying and assessing hazards and risks in the workplace, negotiating to control workplace hazards and risks, resolving complaints about OH&S, and instituting appropriate risk management strategies. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
Work must be carried out in accordance with OH&S codes/regulations and workplace requirements.

Safety checks and equipment tests are performed under limited supervision.

Work involves the application of OH&S regulatory requirements and workplace procedures to the organisation of OH&S procedures in the workplace in the stevedoring, transport, warehousing, distribution and/or storage industries.

#### Competency Field
F – Safety Management

#### ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Use information about OH&S policies and procedures | 1.1 Relevant provisions of OH&S legislation and codes of practice are accurately followed  
1.2 Workplace OH&S policies, procedures and programs are promoted to employees in the relevant workgroup  
1.3 Implications of risks and requirements for safe work are accurately and clearly explained to the work group  
1.4 Information about the outcomes of risk identification and control procedures is used in the design/redesign of work procedures |
| 2 Identify and assess hazards | 2.1 Existing and potential hazards in the work area are identified through audit, monitoring of processes, equipment and products used, and in response to employee complaints and questions  
2.2 Identified hazards are assessed in relation to relative risk and impact on workplace operations and employee health, safety and welfare  
2.3 Priorities for hazard resolution are established and reported to appropriate personnel |
### 3 Negotiate to control risks and resolve complaints about OH&S

3.1 Existing risk control measures are implemented, monitored and possible improvements identified

3.2 Required improvements to existing risk control measures are implemented and identified

3.3 Required resources for implementation are established and reported to appropriate personnel

3.4 Negotiations with management and employees to revise work procedures are conducted within workplace issue resolution procedures

### 4 Institute risk management strategies

4.1 Workplace procedures for hazard, accident and incident reporting are used

4.2 Cooperative working relationships with other employees and external authorities involved in OH&S procedures are established and maintained

4.3 Legislative provisions for improvement notices and inspections are followed

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the management of personal work priorities and professional development
- The systems of risk control recognising the significance of OH&S for effective workplace operation
- The significance of other management systems and procedures for OH&S
- Hazards and associated safety risks that exist in the workplace, including: the range of control measures available for safety risks; considerations for choosing between different control measures; and how to identify when expert advice is needed
- Principles and practices of effective OH&S organisation, including: elements of an effective OH&S system; hazard control and risk management; the hierarchy of hazard and risk control measures; arrangements for participation and consultation over OH&S; and incident and accident investigation arrangements
- Training, coaching and mentoring approaches appropriate for use in OH&S training programs
- Typical problems that can occur when organising OH&S procedures and related action that can be taken

**Required skills:**

- Communicate effectively with others when organising OH&S procedures in the workplace
• Read and interpret instructions, procedures, information and signs relevant to the organisation of OH&S procedures in the workplace
• Interpret and follow operational instructions and prioritise work
• Negotiate and resolve issues related to the organisation of OH&S procedures in the workplace
• Complete documentation related to the organisation of OH&S procedures in the workplace
• Provide leadership and work collaboratively with others when organising OH&S procedures in the workplace
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when organising OH&S procedures in the workplace in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when organising OH&S procedures in the workplace
• Develop policies for precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan work activities, including predicting consequences and identifying improvements
• Modify activities depending on differing operational contingencies, risk situations and environments
• Ensure the application of fatigue management knowledge and techniques in the workplace
• Analyse the working environment in order to identify hazards, assess safety risks and design and implement appropriate OH&S management systems
• Select and appropriately apply technology, information systems and policies to organise OH&S compliance and reporting procedures
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Ensure the systematic use of required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites
Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments
- even or uneven surfaces
- wet or dry surfaces

Workplace hazards may include but are not restricted to:
- moving heavy loads in an unsafe work environment
- unsecured machinery, components or repaired equipment
- slippery floors
- welding equipment
- sharp tools and implements
- power tools
- moving and rotating machinery
- flammable liquids, vapours and fuel
- faulty machinery equipment handling equipment and lifting gear
- using equipment beyond safe working limits
- poor housekeeping procedures
- non-compliance with safe working procedures
- electrical wiring and systems, including exposed electrical circuits
- working at heights and in confined spaces
- toxic gases and substances
- chemicals and other harmful substances
- damaged goods, pallets and containers
- dangerous/hazardous goods

Consultative processes may involve:
- OH&S specialists
- trainers
- other employees and supervisors
- management
- union representatives
- manufacturers representatives
- supplier representatives
- customers/clients
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:
- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures
Information/documentation may include:

- workplace OH&S procedures and policies
- workplace OH&S management system including hazard/safety risk control strategies
- OH&S training notes and materials
- journals and work related literature concerning OH&S
- competency standards
- customer/client instructions
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, codes of practice including the national standards for services and operations
- manufacturers/suppliers' specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- hazardous substances and dangerous goods codes
- relevant Australian and state/territory OH&S legislation including regulations and codes of practice relating to hazards present in the workplace or industry, including:
  - general duty of care under OH&S legislation and common law
  - requirements for the maintenance and confidentiality of records of occupational injury and disease
  - requirements for provision of OH&S information and training
  - provisions relating to health and safety representatives and/or OH&S committees
  - provisions relating to OH&S issue resolution
- environmental protection regulations
- relevant Australian standards and certification requirements
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF5807B  Apply safeworking rules and regulations to rail functions

Unit Descriptor
This unit involves the skills and knowledge required to apply applicable safeworking rules and regulations to rail functions carried out on rail networks, including the correct use of communication protocols; interpreting and responding to radio, hand signal and light commands; interpreting and following relevant safeworking rules and protocols; and taking appropriate action in the event of safety incidents, unsafe situations or emergencies. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work is performed under established procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of responsibility of the worker concerned.

It involves the application of the relevant principles, protocols, rules and requirements of the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines to the work activities of the rail occupation concerned.

Competency Field
F – Safety Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Apply safeworking rules and regulations
1.1 Relevant rules for the applicable safeworking system are followed when carrying out activities as part of rail operation
1.2 All work activities are conducted in compliance with the relevant state/territory safeworking regulations pertaining to the activities concerned

2 Apply communication protocols
2.1 Communication protocols are followed in accordance with the applicable safeworking system requirements
2.2 Appropriate records of communications are maintained as required within the applicable safeworking system rules and regulations

3 Use and interpret radio, hand, light and flag commands
3.1 The applicable safeworking system rules and regulations are applied in the use and interpretation of radio, hand, light and flag commands
3.2 Hand signals are only used in conditions of good visibility
3.3 Any command not clearly understood is regarded as a 'STOP' command in accordance with applicable safeworking system rules and regulations

4 Follow safeworking protocols

4.1 Where applicable, relevant protocols are followed as specified in the applicable safeworking system rules and regulations
4.2 Appropriate records and documentation pertinent to safeworking protocols are completed in accordance with the requirements of the applicable safeworking system rules and regulations

5 Take action in the event of unsafe situations or emergencies

5.1 Unsafe situations are identified in accordance with the requirements of the applicable safeworking system rules and regulations
5.2 Where a safety incident or unsafe situation has been identified, appropriate action is taken to report and/or control the incident or situation in accordance with the limits of responsibility of the worker concerned and the requirements of the applicable safeworking system rules and regulations
5.3 In the event of an emergency, appropriate action is taken to report and/or control the emergency in accordance with the limits of responsibility of the worker concerned and the requirements and specifications of the applicable safeworking system rules and regulations
5.4 Appropriate records and documentation of an identified unsafe situation, an emergency, or a safety incident are maintained in accordance with the requirements of the applicable safeworking system rules and regulations

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection legislation and policies
- General understanding of systems and occupancy authorities
- An overview of system requirements
- An understanding of safeworking system types
- An awareness of system limitations
- A basic understanding of the applicable safeworking system
- An understanding of route integrity requirements including: general requirements, position of points and route occupancy requirements
- Communication protocols as they relate to the functions of the occupation concerned
• Safeworking rules and protocols as they relate to the functions of the occupation concerned
• Rail terminology as defined in the applicable safeworking system
• Action to be taken in the event of safety incidents, identified unsafe situations and emergencies within the limits of responsibility the occupation concerned

**Required skills:**

• Communicate effectively with others when applying safeworking rules and regulations to rail functions
• Read and interpret relevant rules, regulations and instructions applicable to the rail operations concerned
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to safeworking requirements applicable to the rail operations concerned
• Operate electronic communication equipment to required protocol
• Work collaboratively with others to fulfil safeworking requirements applicable to the rail operations concerned
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Recognise problems and hazards that may arise during rail operations and take appropriate action
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in motive power units and associated equipment and procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Check compliance between work and safeworking rules and regulations and take appropriate action as per standard operating procedures where non-compliance is identified

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Work may include:**

• rail operations carried out in the state/territory concerned and covered by the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines

**Terminology and related meanings will be:**

• as defined within the applicable safeworking system

**Work may occur:**

• by day or night, in both normal and emergency situations and under any conditions of weather
Where applicable, worksite safety plans will be:

- as defined within the applicable safeworking system

Occupancy authorities will be:

- as defined within the applicable safeworking system

Rules related to the use and operation of track vehicles and equipment will be:

- as defined within applicable safeworking system

Communication protocols will be:

- general safety
- emergency messages
- testing communications equipment
- transmitting and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures

Communications equipment may include:

- hand-held or portable equipment
- fixed equipment
- specialised testing facilities

Radio, hand, light and flag commands will be:

- as defined within the applicable safeworking system

Track work protocols will be:

- as defined within the applicable safeworking system

Safety clothing and equipment may include:

- high visibility clothing
- sunscreen and sunglasses
- insect repellent
- safety glasses, headwear, mask, footwear and gloves
- hearing protection
- safety devices
- lighting including strobe lighting
- hand tools

Where applicable, worksite protection equipment may include:

- joint occupancy rules
- blocking facilities (manual and electronic)
- trackside signs
- audible warning signs
- warning devices, whistles and sirens
- partitioning materials and structures
- barriers, lights and flags
- fixed and mobile communications equipment
Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- instructions of relevant rail authorities concerning rail safety and operations
- workplace procedures, policies and work instructions
- relevant occupancy authorities (where applicable)
- train authorities (where applicable)
- worksite safety plan (where applicable)
- Emergency Response Plan (ER Plan) and emergency procedure manuals
- train running information (TRI)
- train notices
- train register books
- failure reports
- local instructions
- take-off location documents
- level crossing location documents
- track and infrastructure drawings and diagrams
- plant, equipment, track vehicle and communications equipment registers
- operating and maintenance instructions of relevant equipment manufacturers
- repair cards and books
- voice communications log
- safeworking forms

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S regulations
- state, federal or territory environmental protection legislation
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- relevant national and state/territory dangerous goods legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and/or equipment, and/or
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF6007A Control traffic as a pilot vehicle operator

Unit Descriptor
This unit involves the skills and knowledge required by pilot vehicle operators to control traffic in the vicinity of an oversized vehicle, including using prescribed traffic control stop/slow bats and communicating effectively with persons involved. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work involves applying basic principles, routine procedures and regulatory requirements to control traffic as a pilot vehicle operator.

Work is performed under general supervision.

This unit of competency will usually be assessed in conjunction with the unit TDTC1097B Pilot or escort oversized and/or overmassed loads.

Competency Field
F – Safety Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Apply control procedures

1.1 Legislative responsibilities and requirements are identified, interpreted and applied

1.2 Occupational health and safety (OH&S) requirements are identified, interpreted and applied

1.3 Company procedures and requirements are identified, interpreted and applied

1.4 Appropriate personal protective equipment is selected and used in accordance with standard operating procedures

1.5 Traffic control equipment is selected in accordance with the requirements of the task and standard operating procedures

2 Coordinate traffic

2.1 Vehicles and pedestrians are monitored to ensure safety of persons and property

2.2 Adjustments are made for changing conditions and to ensure best traffic flow

2.3 Hand-held signs (bats) are positioned in accordance with standard operating procedures and to provide maximum visibility

2.4 Mishaps or accidents are managed in accordance with standard operating procedures where they exist and relevant legislation
3 Maintain effective communication

3.1 Effective communication is maintained between all parties
3.2 Appropriate language and protocols are used during communication
3.3 Messages are transmitted concisely and in accordance with standard operating procedures where they exist
3.4 Electronic communication power supply is maintained in accordance with the manufacturer's recommendation
3.5 After a period of non-contact, radio or other electronic contact is checked to ensure effective operation in accordance with standard operating procedures

4 Maintain equipment

4.1 Equipment is cleaned, maintained and stored or stowed in accordance with manufacturers specifications and standard operating procedures and to ensure operational effectiveness

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Standard operating procedures for controlling traffic in the course of piloting duties
- Workplace and equipment safety requirements and relevant OH&S legislation
- Verbal and non verbal communication techniques
- Electronic communications operating procedures
- Workplace and equipment safety requirements and relevant OH&S legislation
- Purpose of required personal protective equipment and instructions for its use

Required skills:

- Communicate effectively with others when controlling traffic as a pilot vehicle operator
- Read, interpret and follow instructions and standard operating procedures relevant to the control of traffic as a pilot vehicle operator
- Work safely in accordance with instructions
- Select and correctly use signage
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly rectify and/or report any identified problems when controlling traffic in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Use personal protective clothing as per OH&S requirements
• Work systematically with required attention to detail without injury to self or others, or damage to goods, vehicles or equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• in a range of work environments, spaces and weather conditions
• by day or night

Traffic control applies to:
• safe and efficient movement of all vehicular and pedestrian traffic
• assisting movement of oversized or overmassed (OSOM) vehicle being escorted

Communication methods may include:
• verbal
• electronic
• the use of hand-held (stop/slow bats) signs

Electronic communication may be used by:
• a single operator
• two operators

Documentation/records may include:
• standard operating procedures for controlling traffic in the course of piloting duties
• AS 1742-3 2002 Manual for uniform traffic control devices
• relevant state or territory legislation, manuals and codes of practice
• relevant local government documents

Applicable legislation, regulations and codes may include:
• OH&S legislation and regulations
• relevant state or territory road and rail legislation
• relevant telecommunication legislation and regulations
• relevant local government legislation and regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace
procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIF607C  

Apply accident-emergency procedures

Unit Descriptor
This unit involves the skills and knowledge required to apply accident emergency procedures, including responding to an incident, controlling and assisting at an accident or emergency site, finalising accident-emergency processes, and completing records, reports and other required documentation in accordance with regulatory requirements and workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with OH&S codes/regulations and workplace requirements.

Work is performed under limited supervision. It involves the application of regulatory requirements and workplace procedures when responding to accident/emergencies in the workplace.

Competency Field
F – Safety Management

ELEMENT  

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA  

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Respond to the incident

1.1 Response to the incident or accident is in accordance with workplace emergency procedures and relevant regulatory requirements

1.2 Details of the cause(s) and effects of the incident are identified and reported

1.3 Assistance requirements for accidents and emergencies are clarified and reported immediately to the appropriate parties

1.4 Requests for assistance are made to relevant personnel and emergency services

2  Control and assist at accident or emergency site

2.1 Site is controlled and protected until the arrival of authorised personnel

2.2 Assistance is provided to injured persons, within the limitations of duty of care and workplace procedures

2.3 Relevant authorities at the site are cooperated with and assisted within workplace policies

3  Finalise accident – emergency process and complete records

3.1 Relevant information is exchanged in accordance with state/territory law and workplace procedures

3.2 Documentation and reports are completed and processed in accordance with workplace and relevant regulatory requirements
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulatory and code requirements applicable in accident/emergency situations
- Relevant OH&S and environmental protection policies and procedures
- Workplace procedures for accident-emergency response
- Workplace emergency, fire and accident procedures
- Site layout
- Focus of operation of work systems, equipment or management, site and organisational operating and emergency procedures
- Typical problems that can occur during a safety incident, accident or emergency and related action that can be taken

Required skills:
- Communicate effectively with others when responding to an accident or an emergency
- Read and interpret instructions, procedures and information relevant to a response to an accident or an emergency
- Interpret and follow operational instructions and prioritise work
- Negotiate and resolve issues when responding to an accident or an emergency
- Complete documentation related to a response to an accident or an emergency
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when responding to an accident or an emergency
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when responding to an accident or an emergency
- Analyse the working environment in order to identify hazards, assess safety risks and design and implement appropriate OH&S control procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when responding to an accident or an emergency
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and policies during a safety incident, accident or emergency
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
• exposed conditions
• controlled or open environments
• even or uneven surfaces
• wet or dry surfaces

Workplace hazards may include but are not restricted to: • moving heavy loads in an unsafe work environment
• unsecured machinery, components or repaired equipment
• slippery floors
• welding equipment
• sharp tools and implements
• power tools
• moving and rotating machinery
• flammable liquids, vapours and fuel
• faulty machinery equipment handling equipment and lifting gear
• using equipment beyond safe working limits
• poor housekeeping procedures
• non-compliance with safe working procedures
• electrical wiring and systems, including exposed electrical circuits
• working at heights and in confined spaces
• toxic gases and substances
• chemicals and other harmful substances
• damaged goods, pallets and containers
• dangerous/hazardous goods
Consultative processes may involve:

- OH&S specialists
- trainers
- other employees and supervisors
- management
- union representatives
- manufacturers representatives
- supplier representatives
- customers/clients
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures

Information/documentation may include:

- workplace accident-emergency procedures and policies
- workplace OH&S management system including hazard/safety risk control strategies
- OH&S training notes and materials
- journals and work related literature concerning OH&S
- competency standards
- customer/client instructions
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, codes of practice including the national standards for services and operations
- manufacturers/suppliers' specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- emergency procedures
Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- hazardous substances and dangerous goods codes
- relevant Australian and state/territory OH&S legislation including regulations and codes of practice relating to hazards present in the workplace or industry, including:
  - general duty of care under OH&S legislation and common law
  - requirements for the maintenance and confidentiality of records of occupational injury and disease
  - requirements for provision of OH&S information and training
  - provisions relating to health and safety representatives and/or OH&S committees
  - provisions relating to OH&S issue resolution
- environmental protection regulations
- relevant Australian standards and certification requirements including Australian Standard AS 1885.1

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF6107A  Respond to electric tram-driving emergencies and abnormal situations

**Unit Descriptor**
This unit involves the skills and knowledge required to respond to emergencies and abnormal situations when driving an electric tram in accordance with regulatory requirements and workplace procedures. It includes identifying and responding to emergency and abnormal situations; arranging follow-on support and assistance; and communicating with staff and passengers in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines, as well as relevant road rules and tramway regulatory requirements of the states/territories concerned.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to respond to electric tram-driving emergencies and abnormal situations as part of workplace activities across a variety of operational contexts.

**Competency Field**
F – Safety Management

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Identify emergency or abnormal situation**

   1.1 Emergency, potential emergency or abnormal electric tram-driving situation is promptly identified and assessed and needs are prioritised in accordance with the workplace emergency response plan/procedures

   1.2 Implications of the emergency, potential emergency or abnormal electric tram-driving situation are evaluated in accordance with workplace requirements

   1.3 Options for reporting the situation and/or taking action are considered in accordance with workplace procedures and regulatory requirements

   1.4 Relevant personnel are alerted to the emergency, potential emergency or abnormal situation as required within workplace operating and emergency procedures and plans

   1.5 Communications are maintained with relevant personnel to determine appropriate course of action
2 Respond to emergency or abnormal situations

2.1 Response to emergency, potential emergency or abnormal situation is in accordance with workplace procedures, received instructions, regulatory requirements and emergency response plan where relevant

2.2 Safety incidents and emergencies are handled appropriately in accordance with established response plan and within limits of responsibility and duty of care

2.3 Responsibilities are fulfilled in accordance with the workplace emergency response plan and code/regulatory requirements

2.4 Assistance is provided in controlling the site both prior to and following arrival of emergency services

2.5 In the case of an emergency, assistance is provided to other staff and emergency service personnel conducting an initial survey of the scene

2.6 Directions of the controlling emergency authority are followed and all possible assistance is provided in response to those directions

2.7 Incident reports are completed accurately in accordance with regulatory and workplace procedures

3 Arrange follow-on support and assistance

3.1 In the case of accidents or illnesses, medical assistance and support is arranged as required in accordance with workplace procedures

3.2 First aid is provided pending the arrival of medical assistance within limits of responsibility and competence in accordance with workplace procedures

4 Communicate with staff and passengers

4.1 Staff and passengers are provided with relevant, appropriate and timely advice on abnormal and emergency situations

4.2 Instructions are provided to relevant personnel and/or passengers in accordance with workplace procedures and consistent with the nature of the abnormal situation or emergency

4.3 Where applicable, evacuation procedures for personnel and/or customers are explained and/or demonstrated in accordance with workplace procedures

4.4 Customer service and safety needs arising from abnormal situations and emergency situations are identified and acted upon in accordance with regulatory and workplace requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
• Relevant state/territory roads and traffic authority and tramway operating procedures
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures for responding to electric tram-driving abnormal situations and emergencies
• Focus of operation of work systems, equipment, management and site operating systems when responding to electric tram-driving abnormal situations and emergencies
• Problems that may occur when responding to electric tram-driving abnormal situations and emergencies, and action that can be taken to resolve the problems
• Relevant documentation and reporting requirements
• Hazards that may occur in transport and allied industries that can lead to emergency situations, and related hazard control strategies
• Electric tram knowledge may include: monitoring devices, braking and drive equipment, ancillary systems and signalling systems
• Procedures for operating any electronic communications equipment with required protocol
• Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long-term management of fatigue

Required skills:
• Communicate effectively with others when responding to electric tram-driving emergencies and abnormal situations
• Read and interpret instructions, procedures and information relevant to identifying and responding to electric tram-driving abnormal situations and emergencies
• Identify hazards and abnormal situations related to electric tram operations and take appropriate action
• Complete required documentation and reports
• Work collaboratively with others when responding to electric tram-driving abnormal situations and emergencies
• Modify activities depending on differing workplace contexts, risk situations and environments
• Identify and solve and/or report problems that arise when identifying and responding to electric tram-driving abnormal situations and emergencies
• Follow emergency response plan and procedures
• Provide first aid within limits of responsibility and competence
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Adapt to differences in electric trams and ancillary equipment
• Select and use relevant communications and other equipment required when identifying and responding to electric tram-driving abnormal situations and emergencies
• Apply fatigue management knowledge and techniques
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night in all relevant weather conditions

Electric trams include all electric trams in service within Australian transport systems and may include:
- hand-operated or foot pedal control systems or both

Emergency situations may include:
- collision
- derailments
- customer emergency
- suicide on the track or road
- passenger behavioural issues
- chemical spills
- fire and explosion
- bomb threats

Abnormal situations may include:
- technology failure
- wheel slip and uncontrolled slide
- traffic signals in stop mode
- assault on passengers or personnel
- brawls between passengers
- false alarm
- passenger initiated alarm
- obstructions
- extreme weather conditions (e.g. heat, storm, ice, etc.)
- passenger caught in self-closing doors
- pedestrians crossing the track
- illness
- incorrect information or failure in communications

Hazards that may occur in tramway transport that can lead to emergency situations may include:
- sudden and unexpected movement
- infectious and contagious diseases
- dehydration in extreme weather conditions
- self-closing doors
- sharp objects
- syringes and drugs
- contact with human and biological waste
- faulty or out of specification track
- faulty rolling stock or electric trams
Relevant personnel can include:
- tram controllers
- tram examiners
- maintenance personnel
- those providing operational assistance

Consultative processes may involve:
- other employees, supervisors and managers
- emergency services
- affected customers
- official representatives
- relevant authorities and institutions
- union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:
- phone
- radio
- fax
- email
- internet
- oral, aural or signed communications

Emergency services may include:
- fire brigade
- police
- ambulance
- medical services
- rescue services
- security services

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the organisation concerned workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information and documents may include:

- relevant tramways regulatory requirements applicable to emergencies and abnormal situations that may occur during an electric tram journey
- workplace procedures and policies for the management of electric tram abnormal situations and emergencies, including the relevant emergency response plan where applicable
- operations manuals, job specifications and induction documentation including first aid manual
- emergency procedures
- communication equipment procedures and protocols
- equipment operation manuals and maintenance specifications
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory road rules and tramway codes of practice
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIF6207A**  
**Apply awareness of safeworking rules and regulations**

**Unit Descriptor**
This unit involves the skills and knowledge required to apply a basic awareness of applicable safeworking rules and regulations to work functions in the rail industry. It includes interpreting and applying the applicable safeworking rules and protocols; recognising and reporting unsafe situations; following safeworking instructions and procedures; and taking appropriate safety precautions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under established procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of responsibility of the worker concerned.

It involves the application of a basic awareness of applicable legislated rail safety requirements to the work activities of the rail occupation concerned.

**Competency Field**
F – Safety Management

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Interpret applicable safeworking rules and regulations**
   1.1 Relevant procedures for the applicable safeworking rules and regulations are identified, accessed and interpreted when carrying out basic work activities as part of rail operation

2 **Apply a basic awareness of applicable safeworking rules and regulations**
   2.1 A basic awareness of relevant safeworking regulations is applied to all work activities applicable to the rail functions concerned
   2.2 Communications are conducted in accordance with the applicable safeworking system requirements
   2.3 Appropriate records of communications are maintained as required within the applicable safeworking system rules and regulations

3 **Recognise and report**
   3.1 Unsafe situations are identified consistent with a basic awareness of the applicable safeworking rules and regulations
unsafe situations

3.2 Situations in the work environment identified as unsafe are reported to appropriate personnel as per the applicable safeworking rules and regulations.

4 Follow safeworking instructions and procedures

4.1 Where applicable, relevant protocols are followed as specified in the applicable safeworking system rules and regulations.

4.2 Appropriate records and documentation pertinent to safeworking protocols are completed in accordance with the requirements of the applicable safeworking system rules and regulations.

5 Take appropriate safety precautions

5.1 Appropriate safety precautions are interpreted and followed during work activities as per the applicable safeworking rules and regulations.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- A basic awareness of applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.
- Relevant OH&S and environmental protection legislation and policies.
- A basic understanding of systems and occupancy authorities.
- An overview of system requirements.
- A basic understanding of safeworking system types.
- A basic awareness of system limitations.
- A basic understanding of the applicable safeworking system.
- An understanding of route integrity requirements including: general requirements, position of points and route occupancy requirements.
- Communication protocols as they relate to the functions of the occupation concerned.
- Safeworking rules and protocols as they relate to the functions of the occupation concerned.
- Rail terminology as defined in the applicable safeworking system.
- Action to be taken in the event of identified unsafe situations and emergencies within the limits of responsibility the occupation concerned.

Required skills:

- Communicate effectively with others applicable to the rail operations concerned.
- Read and interpret relevant rules, regulations and instructions applicable to the rail operations concerned.
- Interpret and follow operational instructions and prioritise work.
- Complete documentation related to safeworking requirements applicable to the rail functions concerned.
• Operate electronic communication equipment to required protocol
• Work collaboratively with others to fulfil safeworking requirements applicable to the rail operations concerned
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Recognise problems and hazards that may arise during rail operations and take appropriate action
• Modify activities depending on differing operational contingencies, risk situations and environments
• Adapt to differences in equipment and procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may include: • basic rail operations carried out on the rail network concerned and covered by the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines

Terminology and related meanings will be: • as defined within the applicable safeworking system

Work may occur: • by day or night, in both normal and emergency situations and under any conditions of weather

Where applicable, work site safety plans will be: • as defined within the applicable safeworking system

Occupancy authorities will be: • as defined within the applicable safeworking system

Rules related to the use and operation of track vehicles and equipment will be: • as defined within applicable safeworking system

Communication protocols will be • general safety
as specified within applicable safeworking system and may • emergency messages
include: • testing communications equipment • transmitting and receiving messages • identification • standard radio terms • phonetic alphabet • spoken figures
Communications equipment may include:
- hand-held or portable equipment
- fixed equipment
- specialised testing facilities

Track work protocols will be:
- as defined within the applicable safeworking system

Safety clothing and equipment may include:
- high visibility clothing
- sunscreen and sunglasses
- insect repellent
- safety glasses, headwear, mask, footwear and gloves
- hearing protection
- safety devices
- lighting including strobe lighting
- hand tools

Where applicable, worksite protection equipment may include:
- joint occupancy rules
- blocking facilities (manual and electronic)
- trackside signs
- audible warning signs
- warning devices, whistles and sirens
- partitioning materials and structures
- barriers, lights and flags
- fixed and mobile communications equipment
Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- instructions of relevant rail authorities concerning rail safety and operations
- workplace procedures, policies and work instructions
- relevant occupancy authorities (where applicable)
- train authorities (where applicable)
- worksite safety plan (where applicable)
- Emergency Response Plan (ER Plan) and emergency procedure manuals
- train running information (TRI)
- train notices
- train register books
- failure reports
- local instructions
- operating and maintenance instructions of relevant equipment manufacturers
- voice communications log
- safeworking forms

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S regulations
- state, federal or territory environmental protection legislation
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- relevant national and state/territory dangerous goods legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
the underpinning knowledge and skills
relevant legislation and workplace procedures
other relevant aspects of the range statement

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Resources for assessment include:

- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:

- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:

- through appropriately simulated activities at the registered training organisation, and/or
- in an appropriate range of situations in the workplace
Administer the implementation of fatigue management strategies

Unit Descriptor
This unit involves the skills and knowledge required to administer the implementation of fatigue management strategies, including monitoring the implementation of fatigue management strategies; and recognising breaches of fatigue management policies, procedures and regulations. It also includes developing and assessing staff competence in fatigue management; providing feedback to staff on any shortcomings in their fatigue management skills and knowledge; and reporting to management on the implementation of fatigue management policy. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the requirements of the applicable Commonwealth and state/territory legislation and relevant regulations covering the management of fatigue in the workplace.

Work is performed under limited supervision generally as a team leader or supervisor. It involves the application of relevant regulations and the principles of fatigue management when administering the implementation of an organisation's fatigue management strategies during work operations in a defined workplace.

Competency Field
F – Safety Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Monitor the implementation of fatigue management strategies

1.1 Work activities of employees, subcontractors and suppliers in the supply chain of products and services are monitored in accordance with the organisation's fatigue risk management implementation plan

1.2 Reviews are undertaken of scheduled versus actual hours of work and where a compliance breach is identified, appropriate action is taken to analyse the reasons concerned and to rectify the situation

2 Recognise breaches of fatigue management policies, procedures and regulations

2.1 Signs and symptoms of fatigue in employees are identified in accordance with operational procedures

2.2 Breaches of fatigue management policies, procedures and regulations in the work activities of employees, subcontractors and suppliers are recognised and reported as per standard
<table>
<thead>
<tr>
<th></th>
<th>3 Develop and assess staff competence in fatigue management</th>
<th></th>
<th>4 Provide feedback to employees on any shortcomings in fatigue management skills and knowledge</th>
<th></th>
<th>5 Report on the implementation of fatigue management policy</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>3.1 Appropriate training programs and learning resources are developed and provided to ensure that employees understand the organisation's fatigue management policies and procedures and the risks, causes and consequences of fatigue</td>
<td></td>
<td>4.1 Evidence of any shortcomings in an employee's implementation of fatigue management strategies is obtained and interpreted from observation of signs and symptoms of fatigue in their work activities, periodic evaluations of work performance, and assessments of competence carried out as part of training and learning activities</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>3.2 Employees are assessed to confirm that they are competent in their understanding of the organisation's fatigue management strategies and can apply them to their day-to-day work activities and responsibilities</td>
<td></td>
<td>4.2 Employees are provided with feedback on any identified shortcomings in their implementation of fatigue management strategies and appropriate support and counselling is provided on how they might address these shortcomings</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>3.3 Any deficiencies in the competence of individual employees to apply the organisation's fatigue management strategies to their work activities are identified, and appropriate learning opportunities are provided to the employee to enable her or him to achieve the competence required</td>
<td></td>
<td>4.3 Where appropriate, further learning opportunities and information are provided to the employees to assist them in implementation of organisation's fatigue management strategies in their area of work activity</td>
<td></td>
</tr>
</tbody>
</table>

2.3 Errors and incidents traceable to non-compliance with fatigue management procedures and regulations are investigated and reported in accordance with operational procedures

2.4 Appropriate action is taken in conjunction with employees, subcontractors or suppliers concerned to ensure ongoing and future compliance with the organisation's fatigue management policy and procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant codes, regulations, permit and licence requirements related to fatigue management
- Relevant OH&S regulations as they relate to fatigue
- Organisation's fatigue risk management system as it relates to the operational areas being administered
- Organisation's fatigue risk management system and the workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents
- Responsibilities of both the organisation and individual employees for the implementation of fatigue management regulations and policies in an organisation including suppliers and subcontractors in the supply chain of the organisation's services and products
- Procedures for the auditing and review of an organisation's fatigue risk management system and related policy and procedures, and for reporting the outcomes of audits
- The risks and hazards created by fatigue in the workplace
- Causes and consequences of fatigue on both employees and an organisation
- How fatigue affects workplace performance
- How fatigue contributes to workplace accidents
- Ways of recognising fatigue
- Strategies and ways of managing fatigue
- Factors which increase fatigue-related accidents
- Lifestyles which promote the effective long-term management of fatigue
- Ways of assisting individuals to assess their own sleep patterns and to evaluate their own fitness for work. This may include information on identifying sleep disorders and obtaining appropriate treatment
- Options and resources for providing training and learning opportunities for employees on fatigue management and the implementation of an organisation's fatigue risk management system, including initial induction training, in-depth training on fatigue and fatigue management techniques, remedial training where existing competence is assessed as being insufficient, and refresher training on fatigue management
- Processes and resources for assessing employees' competence in fatigue management
- Ways of providing feedback to employees on any identified deficiencies in their competence to implement fatigue management strategies

**Required skills:**
- Communicate effectively with others when implementing the organisation's fatigue risk management system
- Read and interpret documentation on an organisation's fatigue risk management system and related policy, instructions, procedures and regulations related to fatigue management and apply them to supervisory activities
• Recognise breaches of fatigue management strategies and regulations and take appropriate action in accordance with organisation's fatigue risk management system
• Work collaboratively with employees and other management staff others to implement the organisation's fatigue risk management system
• Plan and organise training and learning opportunities for employees on fatigue management and the implementation of an organisation's fatigue risk management system
• Plan and carry out audits and reviews of an organisation's fatigue risk management system
• Modify activities and take appropriate initiatives to administer the implementation of an organisation's fatigue risk management system depending on differing contexts, risk situations and environments
• Adapt to any changes in regulations policies and procedures as they may relate to fatigue management
• Assist employees to identify their own learning needs on matters related to fatigue management

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include: any work environment requiring safety critical operational judgements to be made and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft at night

Components of a fatigue risk management system include:
• risk management policy documents
• risk management procedures
• risk management competence assessment processes
• risk management training and learning opportunities
• hazard control system

The need for fatigue management in a range of industry situations including:
• operations conducted at all times but particularly at night
• typical weather conditions
• while working and/or driving at a workplace, depot, base or warehouse
• while working and/or driving at a client's workplace or work site
• driving a motor vehicle on the open road
• driving a motor vehicle on a private road
• driving a train, locomotive or motive power unit
• operating a marine vessel in coastal or international waters
• operating an aircraft
• operating load shifting equipment
• operating safety critical industrial plant and equipment
| **Work-related factors that may contribute to fatigue include:** | • work demands such as: workload, work duration, shift pattern, time of day, frequency and duration of breaks and the type of work (e.g. working in isolation, repetitive tasks and boring, monotonous or under-challenging tasks)  
• organisational factors such as: work environment (including temperature, ventilation, continual rhythmic vibration from equipment), payment system, trip and work scheduling, and the predictability of work |
| **Worker/operator-related factors that may contribute to fatigue include:** | • lifestyle factors such as: sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends  
• working multiple jobs  
• personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms |
| **Responsibilities of organisation for fatigue risk management may include:** | • providing support such as: complying with fatigue management regulations, developing and implementing appropriate policy and procedures, providing assessment, training and learning opportunities, and establishing and implementing error and incident reporting systems  
• ensuring work schedules provide adequate opportunity for rest and recovery between shifts  
• assessing work tasks for fatigue related risk and redesigning if necessary  
• managing fatigued employees |
| **Responsibilities of individual for fatigue risk management may include:** | • following the organisation's fatigue management policy and procedures  
• using time away from work appropriately to rest and recover  
• checking and ensuring fitness for work  
• reporting symptoms of fatigue |
| **Fatigue management competency-based training may include:** | • initial induction training (incorporating a basic fatigue management component)  
• fatigue management awareness training  
• in-depth training on fatigue and fatigue management techniques  
• remedial training where existing competence is assessed as being insufficient  
• refresher training on fatigue management |
Depending on the organisation operating procedures may include:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:

- Commonwealth and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations
- fatigue risk management system documents
- workplace instructions and procedures on fatigue management
- reports of audits of fatigue risk management system
- error and safety incident reports
- relevant OH&S regulations and procedures
- relevant standards and certification requirements
- quality assurance procedures

Applicable legislation, regulations and codes may include:

- relevant regulations and codes of the Commonwealth Government and the state/territory roads and traffic authorities concerning fatigue management
- relevant state/territory road rules
- relevant rail industry safe working codes and regulations (where applicable)
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIF6407A Manage fatigue management policy and procedures

Unit Descriptor

This unit involves the skills and knowledge required to manage fatigue management policy and procedures in an organisation, including identifying legal requirements, liabilities and responsibilities; establishing and/or improving fatigue management implementation plan and related policy and procedures; and acting appropriately upon reports on the implementation of fatigue management policy and any identified breaches of fatigue management regulations. It also includes ensuring that the operation's systems are compliant with fatigue management regulations and policy; planning and organising adequate resources and operational systems; and facilitating the training and assessment of staff on their responsibilities and fatigue management techniques. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable Commonwealth and state/territory legislation and relevant regulations covering the management of fatigue in the workplace.

Work is performed under minimum supervision generally as a manager. It involves the application of relevant regulations and the principles of fatigue management to the management of an organisation's fatigue management policies and procedures.

Competency Field

F – Safety Management

ELEMENT  PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify or confirm fatigue management legal requirements and responsibilities

1.1 Current legal requirements, liabilities and responsibilities for effective fatigue management within the organisation are identified and interpreted

1.2 Any existing fatigue management plans, policies and procedures are obtained and reviewed

1.3 Internal risks concerning the potential effects of fatigue are identified or confirmed and reviewed

1.4 External risks within the supply chain of the organisation's services and/or products concerning the potential effects of fatigue are identified or confirmed and reviewed in accordance with regulations on fatigue management and the related chain of responsibility
<table>
<thead>
<tr>

<td></td>
</tr>
<tr>
<td>3.3</td>
<td>Information provided in the reports indicating that fatigue management policy and procedures are not being correctly implemented is analysed and an appropriate managerial response and related action is initiated</td>
<td></td>
</tr>
<tr>
<td>3.4</td>
<td>Opportunities for improvements to the organisation's fatigue risk management system implementation plan and its related policy and procedures are identified and appropriate action is taken to make the necessary adjustments</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th>Act upon identified breaches of fatigue management regulations</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>4.1</td>
<td>Identified or reported breaches of fatigue management policy are investigated in accordance with organisational procedures and regulatory requirements</td>
<td></td>
</tr>
<tr>
<td>4.2</td>
<td>Action is taken to ensure that internal and/or external personnel who may have contributed to any breach of fatigue management policy are provided with appropriate feedback and information to avoid any recurrence of the breakdown in planned fatigue management processes</td>
<td></td>
</tr>
<tr>
<td>4.3</td>
<td>Where organisational procedures or culture is found to have contributed to a breach in fatigue management policy, appropriate action is taken to improve the procedures or address the culture in ways that aim to avoid any recurrence of the breakdown in planned fatigue management processes</td>
<td></td>
</tr>
</tbody>
</table>
4.4 A report on any breaches of fatigue management policy is prepared and submitted to designated personnel as per organisational procedures together with details of action taken to prevent a recurrence.

5 Ensure that operations systems are compliant with fatigue management regulations and policy

5.1 All operations systems and standard operating procedures are reviewed in terms of their compliance with the organisation's fatigue management regulations and policy.

5.2 Where necessary, changes are made to operations systems and standard operating procedures to ensure that they are compliant.

5.3 In accordance with the principles of 'chain of responsibility', appropriate discussions are held with relevant personnel in supplier or subcontractor companies in the organisation's supply chain to ensure their operation's systems and standard operating procedures are compliant with the fatigue management regulations and policy.

6 Plan and organise adequate resources and operational systems

6.1 Organisational budgets and resource allocation strategies are planned to provide adequate resources for the implementation of the organisation's fatigue risk management system.

6.2 Periodic reviews are undertaken of budgetary and resource allocation arrangements as they relate to the implementation of the organisation's fatigue risk management systems and appropriate improvements are made if required.

7 Facilitate the training and assessment of staff on fatigue management policy and procedures

7.1 Organisational training systems are planned to provide competency-based on the job and off the job training and assessment opportunities as detailed in the organisation's strategic plan.

7.2 Team leaders and supervisory and training staff are provided with adequate opportunities to develop the required expertise to contribute to the organisation's fatigue management training and assessment activities.

7.3 Periodic reviews are undertaken of fatigue management training systems and appropriate improvements are made if required.

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant legislation, regulations, permit and licence requirements related to fatigue management
- Relevant OH&S regulations as they relate to fatigue
• Components of a fatigue risk management system and policies and procedures related to fatigue management, and the control of factors that can contribute to fatigue and fatigue-related accidents

• Responsibilities of both an organisation and individual employees for the implementation of fatigue management regulations and policies, including requirements agreed with suppliers and sub-contractors in the supply chain of the organisation's services and products

• Procedures for the auditing and review of an organisation's fatigue risk management system and related policy and procedures, and for the reporting of the outcomes of audits

• Budgetary and resource requirements for the implementation of an organisation's fatigue risk management system

• Processes and resources for assessing employees' competence in fatigue management

• Systems for auditing of the effectiveness and efficacy of an organisation's fatigue risk management strategies, policies and procedures

• Strategies for ensuring that the investigation and analysis of errors, safety incidents and accidents identify the extent to which fatigue is a contributing factor

• Options and resources for providing training and learning opportunities for employees on fatigue management and the implementation of an organisation's fatigue risk management system, including initial induction training, in-depth training on fatigue and fatigue management techniques, remedial training where existing competence is assessed as being insufficient, and refresher training on fatigue management

• Sources of information on fatigue

• The risks and hazards created by fatigue in the workplace

• How fatigue affects workplace performance

• How fatigue contributes to workplace accidents

• Ways of recognising fatigue

• Fatigue reduction and proofing strategies available to an organisation that can minimise the risk of errors and safety incidents due to fatigue such as assigning low risk tasks to periods when fatigue risk is higher

• Causes and effects of fatigue on employees

• Strategies and ways to manage fatigue

• Factors which increase fatigue-related errors and accidents

• Lifestyles which promote the effective long-term management of fatigue

**Required skills:**

• Communicate effectively with others when implementing the organisation's fatigue risk management system

• Read and interpret documentation on fatigue management legislation and the organisation's fatigue risk management system and apply them to management activities

• Recognise breaches of fatigue management strategies and regulations and take appropriate action in accordance with organisation's fatigue risk management system

• Work collaboratively with employees and other management staff others to implement the organisation's fatigue risk management system
- Plan and organise budgetary requirements and resource allocation for the implementation of an organisation's fatigue risk management system
- Organise audits and reviews of an organisation's fatigue risk management system
- Modify activities and take appropriate initiatives to manage the implementation of an organisation's fatigue risk management system depending on differing contexts, risk situations and environments
- Adapt to any changes in legislation and regulations as they may relate to fatigue management
- Facilitate systems that assist employees to identify their own learning needs on matters related to fatigue management

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Workplace may include:**

- any work environment requiring safety critical operational judgements to be made and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft at night

**Components of a fatigue risk management system include:**

- risk management policy documents
- risk management procedures
- risk management competence assessment processes
- risk management training and learning opportunities
- hazard control system

**The need for fatigue management in a range of industry situations including:**

- operations conducted at all times but particularly at night
- typical weather conditions
- while working and/or driving at a workplace, depot, base or warehouse
- while working and/or driving at a client's workplace or work site
- driving a motor vehicle on the open road
- driving a motor vehicle on a private road
- driving a train, locomotive or motive power unit
- operating a marine vessel in coastal or international waters
- operating an aircraft
- operating load shifting equipment
- operating safety critical industrial plant and equipment
Work-related factors that may contribute to fatigue include:

- work demands such as: workload, work duration, shift pattern, time of day, frequency and duration of breaks and the type of work (e.g. working in isolation, repetitive tasks and boring, monotonous or under-challenging tasks)
- organisational factors such as: work environment (including temperature, ventilation, continual rhythmic vibration from equipment), payment system, trip and work scheduling, and the predictability of work

Worker/operator-related factors that may contribute to fatigue include:

- lifestyle factors such as: sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends
- working multiple jobs
- personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms

Responsibilities of organisation for fatigue risk management may include:

- providing support such as: complying with fatigue management regulations, developing and implementing appropriate policy and procedures, providing assessment, training and learning opportunities, and establishing and implementing error and incident reporting systems
- ensuring work schedules provide adequate opportunity for rest and recovery between shifts
- assessing work tasks for fatigue related risk and redesigning if necessary
- managing fatigued employees

Responsibilities of individual for fatigue risk management may include:

- following the organisation's fatigue management policy and procedures
- using time away from work appropriately to rest and recover
- checking and ensuring fitness for work
- reporting symptoms of fatigue

Fatigue management competency-based training may include:

- initial induction training (incorporating a basic fatigue management component)
- fatigue management awareness training
- in-depth training on fatigue and fatigue management techniques
- remedial training where existing competence is assessed as being insufficient
- refresher training on fatigue management
Depending on the organisation, operating procedures may include:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:

- Commonwealth and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations
- fatigue risk management system documents
- workplace instructions and procedures on fatigue management
- reports of audits of fatigue risk management system
- error and safety incident reports
- relevant OH&S regulations and procedures
- relevant standards and certification requirements
- quality assurance procedures

Applicable legislation, regulations and codes may include:

- relevant regulations and codes of the Commonwealth Government and the state/territory regulatory authorities concerning fatigue management
- relevant state/territory road rules
- relevant rail industry safe working codes and regulations (where applicable)
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
  • relevant and appropriate materials and/or equipment, and/or
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

• Practical assessment must occur:
  • through appropriately simulated activities at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace
TLIF6507B  Ensure compliance with Australian Dangerous Goods Code

Unit Descriptor
This unit involves the skills and knowledge required to ensure compliance with the current Australian Dangerous Goods Code (ADG code). It includes ensuring responsibilities for the handling and transport of dangerous goods are defined; managing performance and controlling risks; maintaining records; and evaluating effectiveness. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Competency Field
F – Safety Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Ensure responsibilities for handling dangerous goods are defined
   1.1 Responsibilities and duties for the transport and handling of dangerous goods are clearly defined, and allocated and included in job descriptions and duty statements for all relevant positions
   1.2 Any relevant licensing requirements for employees are confirmed

2 Manage performance and control risks
   2.1 Ongoing system for the control of risks, based on a hierarchy of control is developed and integrated within general work procedures
   2.2 Measures to control assessed risks and monitor conformance are developed and implemented, in accordance with relevant dangerous goods transport regulations, code of practice and priorities identified in the workplace
   2.3 Non-conformance is investigated and procedures for rectification instituted
   2.4 Inadequacies in dangerous goods transport procedures are identified and measures are implemented to improve workplace practice

3 Maintain records
   3.1 A dangerous goods records system is established in
accordance with relevant legislative framework

3.2 Accurate and legible records for operation within the workplace are completed in accordance with dangerous goods transport enterprise policies and legislative requirements

4 Evaluate effectiveness

4.1 Feedback about the effectiveness of the dangerous goods transport policies, procedures and programs is collected from the workgroup and provided to senior management

4.2 Improvements to dangerous goods transport procedures are proposed to senior management

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice, including detailed knowledge and understanding of the Australian Dangerous Goods Code, the conditions and the employees to whom it applies
- Relevant OH&S and environmental procedures and regulations particularly as they overlap with the current ADG Code
- Operational procedures for safe transfer and storage of dangerous goods and hazardous materials
- Requirements for completing relevant documentation in line with requirements of the current ADG Code
- Code of practice for working collaboratively with others
- Procedures to be followed in the event of an emergency
- Procedures for managing and controlling hazardous situations when carrying out work activities

Required skills:

- Communicate effectively with others when completing work activities, particularly in order to ensure their understanding of the current ADG Code and their responsibilities in relation to it
- Read and interpret the current ADG Code, related documents and procedures, and information materials provided as guidance notes
- Complete documentation related to work activities
- Work collaboratively with others to ensure compliance and safety
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unplanned events, particularly to deal with any potential breaches of the current ADG Code
- Recognise hazards and apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities and engage others in the process
- Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor work activities of team members in terms of planned schedule
• Select and use required personal protective clothing and equipment conforming to industry and OH&S standards

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Licensing requirements may include:
• specific licences to deal with named dangerous goods
• specific licences or permits required by states, territories or regions to transport dangerous goods into or through their jurisdiction

Documentation and records may include:
• regulations and codes of practice relevant to the current ADG code, including safeworking and local authority regulations and procedures
• relevant OH&S and environmental protection regulations
• workplace policies and procedures related to the current ADG code
• quality assurance procedures
• emergency procedures
• operations manuals, job specifications and induction documentation
• technical instructions
• dangerous goods declarations and material safety data sheets, where applicable
• goods manifest
• relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:
• Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, specifically the ADG Code
• relevant state/territory OH&S and environmental protection legislation
• workplace relations regulations
• equal opportunity legislation
• equal employment opportunity and affirmative action legislation

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to**
• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
demonstrate competency in this unit

requirements of the elements and performance criteria of this unit and include demonstration of:

- complying with the applicable regulations and the current ADG Code
- complying with the relevant and current documentation for compliance of the current ADG Code
- demonstrating an understanding of the hierarchy of control
- demonstrating the using of effective communication techniques to give clear and accurate information in a form which is preferred and understood by the receiver

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIF6607A Implement and supervise transport regulations compliance systems**

**Unit Descriptor**

This unit involves the skills and knowledge required to implement and supervise transport regulations compliance systems. It includes identifying and interpreting relevant regulations; carrying out operations in a compliant manner; and reviewing operations in line with transport regulations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

**Competency Field**

F – Safety Management

**ELEMENT**

**PERFORMANCE CRITERIA**

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Identify and interpret relevant regulations**

1.1 Types of goods to be transported are correctly identified in accordance with workplace procedures and regulatory requirements

1.2 Sources of relevant state/territories transport regulations are identified

1.3 Information is accessed regarding state/territories transport regulations

1.4 Information is accurately interpreted

1.5 Responsibilities and duties according to state/territories regulations of the transport of goods are clearly identified

2 **Carry out operations complying to transport regulations**

2.1 Procedures for the transportation of goods are carried out in accordance with requirements for the type of goods

2.2 Activities are carried out according to industry regulations/guidelines, and OH&S, environmental and enterprise legislation, policies/procedures

2.3 Accurate and legible records for operation within the workplace are completed in accordance with transport regulations and enterprise policies and legislative requirements

2.4 Compliance with transport regulations and codes of practice are assessed to ensure legal requirements are maintained as a
minimum and exceeded where possible

3 Review operations according to transport regulations

3.1 Improvements to transport procedures are identified
3.2 Improvements to the effectiveness of the transport regulations, policies, procedures and programs are suggested
3.3 Compliance with transport regulations is assessed and modifications made if required

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of transport regulations as they apply to the enterprise, including state or territory and national regulations
- Relevant OH&S and environmental procedures and regulations
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Code of practice for working collaboratively with others
- Typical defects that can occur and related action that should be taken
- Procedures for identifying equipment defects and assessing for appropriate action
- Steps involved in planning the work activities
- Procedures to be followed in the event of an emergency
- Procedures for managing and controlling hazardous situations when carrying out work activities

Required skills:
- Communicate effectively with others when completing work activities
- Read and interpret instructions, procedures, information and signs relevant to work activities, including the relevant parts of transport regulations, or related implementation materials
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events, particularly any breaches, or threatened breaches of the relevant transport regulations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor work activities in terms of planned schedule
• Operate equipment in accordance with standard operating procedures
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
• Monitor performance of equipment in terms of its potential effect on compliance

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Goods may include:
• livestock
• perishables
• dangerous goods
• liquid
• solids
• non-perishable materials

Depending on the organisation concerned, workplace procedures may be called:
• standard operating procedures (SOPs)
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Communication in the work area may include:
• phone
• electronic data interchange (EDI)
• fax
• email
• internet
• RF systems
• oral, aural or signed communications

Consultative processes may involve:
• other employees and supervisors
• relevant authorities and institutions
• management and union representatives
• industrial relations and OH&S specialists
Documentation and records may include:

- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- relevant OH&S and environmental protection regulations
- workplace policies and procedures related to transport regulations
- quality assurance procedures
- emergency procedures
- electrified territory regulations
- dangerous goods declarations and material safety data sheets, where applicable
- goods manifest
- relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:

- relevant transport regulations for the enterprise, including Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or
equipment, and/or
  o applicable documentation including
    workplace procedures, regulations, codes of
    practice and operation manuals

Method of assessment

  • Assessment of this unit must be undertaken by a
    registered training organisation
  • As a minimum, assessment of knowledge must be
    conducted through appropriate written/oral tests
  • Practical assessment must occur:
    o through appropriately simulated activities at
      the registered training organisation, and/or
    o in an appropriate range of situations in the
      workplace
## TLIF6707A Implement safety stock systems

### Unit Descriptor
This unit involves the skills and knowledge required to implement safety stock systems. It includes planning and preparing safety stock levels; maintaining safety stock levels; and reviewing the safety stock system. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

### Employability Skills
This unit contains employability skills.

### Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry but has particular application in a storage facility such as a warehouse.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

### Competency Field
F – Safety Management

### ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

#### 1 Plan and prepare safety stock levels
1.1 Determined optimum safety stock levels are maintained to ensure constant productivity
1.2 Purchase, receipt, storage and issue of stock is undertaken when required
1.3 Safety stock is valued using the nominated valuation method, if required
1.4 Safety stock rotation procedures are implemented

#### 2 Maintain safety stock levels
2.1 Records are checked against stock and continuously adjusted and updated when required
2.2 Safety stock levels are maintained according to organisation policy and procedures and safety stock plan
2.3 Records are stored for future access
2.4 Safety stock levels are reconciled with paperwork and any discrepancies are rectified or reported to nominated person/section within designated timelines

#### 3 Review safety stock system
3.1 Safety stock records are reviewed for discrepancies regarding target outcomes
3.2 Improvements of safety stock system reviewed with all variables affecting discrepancies identified
3.3 Required improvements are reported according to organisation's policy and procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Definitions of commonly used terminology such as lead time, lead time demand, forecast, demand history, order cycle
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation including commonly used methods to estimate required safety stock levels
- Code of practice for working collaboratively with others
- Typical problems that can occur and related action that should be taken
- Procedures for identifying any problems with the safety stock system in use
- Principles, purpose and location of controls, monitoring devices, and systems
- Steps involved in planning the work activities

Required skills:
- Communicate effectively with others when completing work activities
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rectifying discrepancies may include:
- updating records to show correct amount
- adjusting financial accounting records
- adjusting stock records
- informing supervisor or appropriate person
Stock discrepancies may include:

- theft or pilferage
- breakage or other damage
- deterioration of the product
- error in recording
- failure to check incoming stock against delivery docket
- obsolescence resulting in stock having to be discarded

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- suppliers of storage equipment
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:

- relevant regulations and codes of practice, including ADG code and safeworking and local authority regulations and procedures
- relevant OH&S and environmental protection regulations
- workplace policies and procedures related safety stock systems
- quality assurance procedures
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- technical instructions
- dangerous goods declarations and material safety data sheets, where applicable
- stock records
- relevant Australian Standards and certification requirements
Applicable legislation and regulations may include:
- Australian and international regulations and codes of practice for the storage and or transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF6808A  Work at height in the stevedoring industry

Unit Descriptor
This unit covers the skills and knowledge required to work at height in the stevedoring industry under the relevant regulatory requirements, including using site safe work instructions and procedures for working at height. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work at height in a stevedoring environment involves the application of workplace safe work instructions and procedures and regulatory requirements as part of work activities. It also includes an understanding of the risk management procedures for working at height.

Working at height tasks are performed by a minimum two-person team under some supervision.

Competency Field
F – Safety Management

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Apply working at height regulations and procedures

1.1 Standards and regulations relevant to working at height are interpreted and applied

1.2 Relevant safe work instructions, procedures and risk assessment policies and procedures are interpreted and applied

2 Select and inspect equipment for working at height

2.1 Appropriate 'working at height equipment' required when working at height in the stevedoring industry is identified and selected as per regulatory requirements and standard operating procedures

2.2 'Working at height equipment' is inspected as per regulatory requirements and standard operating procedures

3 Use 'working at height equipment' in the stevedoring industry

3.1 Safety requirements when working at height in the stevedoring industry are interpreted and implemented, and required action is taken to ensure a safe work area as per regulatory requirements and standard operating procedures

3.2 Correct manual handling techniques are interpreted and used when working at height

3.3 Appropriate action is taken to ensure compliance with site safe work instructions and standard operating procedures for working at height

3.4 'Working at height equipment' is used as per regulatory requirements and standard operating procedures
3.5 'Working at height equipment' is used from a workcage as per regulatory requirements and standard operating procedures
3.6 Anchorage points are identified and used as per regulatory requirements and standard operating procedures
3.7 Working at height emergency procedures are interpreted and implemented when required
3.8 Working at height rescue kit is inspected and appropriate action is taken to rectify or replace defective components
3.9 Working at height rescue kit is used as per regulatory requirements and standard operating procedures
3.10 Working at height procedures are followed during a rescue operation

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Australian Standards, codes and regulations relevant to 'working at height'
• Relevant sections of Marine Orders Part 32 - Cargo Handling Equipment (as promulgated by AMSA)
• Relevant OH&S procedures and guidelines
• Working at height safe work instructions and procedures
• Risk assessment policies and procedures
• Working at height equipment checklist
• Working at height rescue procedures
• Procedures for using portable ladders when working at height
• Risks and hazards of working at height and related precautions to control these risks and hazards
• Manual handling methods for working at height

Required skills:
• Communicate effectively with others when working at height
• Read and interpret information relevant to working at height including instructions for safe work at height, workplace procedures, and applicable standards and codes of practice
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to working at height
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when working at height
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when working at height in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when working at height
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when working at height
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify, select and use relevant 'working at height equipment'
• Inspect 'working at height equipment'
• Use ancillary 'working at height equipment'
• Work from a workcage when working at height
• Employ correct manual handling techniques
• Assist in the conduct of a Vessel Exception Risk Assessment (VERA) and ensure vessel inspection checklist has been completed prior to commencing work on a vessel
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operational context may include:

- by day or night
- in a range of work environments
- in ships' holds
- on top of containers
- in limited or restricted spaces
- in all weather conditions
- in a workbox or workcage
'Working at height equipment' may include:
- full body harness
- self retracting lanyard
- fall arrestor
- vertical safety line
- horizontal safety line
- double lanyards
- corner anchor posts
- beam clamps
- rescue equipment (gotcha kit)
- karabiner
- scaffold hook
- portable ladder
- foot step
- workcage

Hazards in the work area may include but are not limited to:
- dangerous or hazardous substances
- movements of equipment, and/or cargo
- inadequate lighting
- vessel movement

Use of 'working at height equipment' may include:
- correctly fitting a full body harness
- correctly wearing a full body harness
- selecting a suitable anchorage point
- setting up and using vertical and horizontal static lines
- setting up and using container anchor posts
- setting up and using beam clamps

Communication in the work area may include:
- radio
- oral, aural or signed communications

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing
- full arrest safety harness

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- OH&S regulations
- relevant sections of Marine Orders Part 32 - Cargo Handling Equipment (as promulgated by AMSA)
- workplace OH&S procedures and policies
- policies and procedures for working at height
- manufacturers instructions concerning the use and servicing of equipment
- emergency procedures
- goods identification numbers and codes
- relevant legislation, regulations and related documentation

Applicable regulations and legislation may include:

- relevant sections of Marine Orders Part 32 - Cargo Handling Equipment (as promulgated by AMSA)
- relevant state/territory OH&S legislation and safety codes, including manual handling and working at height requirements
- dangerous goods regulations
- relevant sections of AS/NZS Standard 1891 parts 1 to 4
- OH&S Prevention of Falls Regulation 2003
- OH&S manual handling guidelines
- relevant state/territory equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workplace relations regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - complying with applicable legislative and procedural requirements while working at height
  - identifying risk factors which might impact on working at height and implementing appropriate response measures
  - selecting and using appropriate equipment to enable safe and efficient work

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIF6909A  Monitor and respond to traffic flow

Unit Descriptor
This unit involves the skills and knowledge required to monitor and respond to traffic flow when operating in a road tunnel control room. It includes monitoring and maintaining traffic flow in a tunnel, and implementing changes to traffic flow as required. Legislative, regulatory or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit involves the application of workplace safe work instructions and procedures and regulatory requirements as part of work activities. It also includes an understanding of the risk management procedures for monitoring and responding to traffic flow.

Tasks are performed individually within a controlled environment. The role may at times be required to work within a team environment.

Competency Field
F – Safety Management

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Road law applicable to state or territory
• Relevant environmental protection regulations
• Relevant OH&S procedures and guidelines
• Workplace procedures and guidelines for monitoring and responding to traffic flow when operating a road tunnel control room
• Relevant electronic communication equipment used in a road tunnel control room and related operational procedures, including multi-monitor displays, CCTV, message boards and traffic management systems
• Risk assessment policies and procedures

Required skills:
• Communicate effectively with others when monitoring and responding to traffic flow within a road tunnel control room
• Read and interpret information relevant to monitoring and responding to traffic flow within a road tunnel control room including instructions for traffic flow, workplace procedures, and applicable standards and codes of practice
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to monitoring and responding to traffic flow within a road tunnel control room
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when responding to and monitoring traffic flow within a road tunnel control room
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when monitoring and responding to traffic flow with a road tunnel in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for anticipated and unanticipated situations that may occur when monitoring and responding to traffic flow with a road tunnel
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operational context may include:
• by day or night
• in a range of work environments

Customers may be:
• internal or external
• motorists
• clients
• energy services
• emergency services

Workplaces may comprise:
• large, medium or small worksites
• high intensity worksites
• indoors
• outdoors within a tunnel

Personnel in the work area may include:
• workplace personnel
• site visitors
• contractors
• official representatives
• emergency workers

Environment may include:
• tunnel
• freeway/tolling roads
• confined space
• complex interchanges

Equipment/vehicles may include:
• motor vehicles, trucks and motorcycles
• computers
• keyboards
• communication equipment
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing
- hearing protection

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Applicable regulations and legislation may include:
- relevant state/territory OH&S road law and safety codes
- dangerous goods regulations
- relevant state/territory equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workplace relations regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  o maintaining traffic flow in a road tunnel
  o operating equipment required to complete the job role
  o operating the traffic management system
  o identifying changes to traffic flow, including abnormal traffic flow

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or
equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF7009A Operate fire and life safety system within a road tunnel

Unit Descriptor
This unit involves the skills and knowledge required to operate fire and life safety systems within a road tunnel control room. It includes operating and maintaining fire and life safety systems, and activating system procedures. Legislative, regulatory or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit involves the application of workplace safe work instructions and procedures and regulatory requirements as part of work activities. It also includes an understanding of the risk management procedures for operating fire and life safety systems as part of a road tunnel.

Tasks are performed individually within a control environment. The role may at times be required to work within a team environment.

Competency Field
F – Safety Management

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Operate fire and life safety systems
1.1 Fire and life safety systems are operated on control panels in accordance with workplace procedures
1.2 Electrical distribution systems are identified and operated in accordance with workplace procedures
1.3 Pumps and drainage systems are identified and operated in accordance with workplace procedures
1.4 Relevant information is processed to establish priorities and responses for dealing with issues or incidents
1.5 Traffic management (closed tunnel) is coordinated to ensure safety of all traffic

2 Maintain fire and life safety systems
2.1 Fire and life safety systems are maintained according to workplace procedures
2.2 Actions undertaken are clearly documented and filed

3 Activate fire and life safety system procedures
3.1 Ventilation and/or deluge systems are operated in accordance with workplace procedures
3.2 Lighting levels are maintained according to workplace procedures
3.3 Liaison is initiated and maintained with
organisations/individuals affected by changed operational activities

3.4 Evacuation of tunnel is conducted in accordance with workplace procedures

3.5 Systems are monitored and reactivated in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant Australian standards, codes and regulations
• Relevant OH&S procedures and guidelines
• Workplace procedures and guidelines for operation of fire and life safety systems within a road tunnel
• Purpose and operations of fire and safety systems used in a road tunnel, including electrical distribution system, pumps and drainage system, ventilation system
• Emergency procedures
• Emergency services liaison
• Emergency vehicle access to tunnel
• Site layout including familiarisation

Required skills:

• Communicate effectively and calmly with others when operating within a road tunnel control room environment
• Read and interpret instructions, procedures and information relevant to the operation of fire and life safety systems within a road tunnel
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the operation of fire and life safety systems within a road tunnel
• Operate electronic communication equipment to required protocol
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when operating fire and life safety systems within a road tunnel in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when operating fire and life safety systems within a road tunnel
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify and correctly use equipment and vehicles in accordance with environmental protection regulations and guidelines
• Accurately brief emergency services of tunnel layout, and available equipment and its use

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operation of fire and life safety systems within a road tunnel may be conducted:**
- by day or night
- in a range of work environments
- on top of containers
- in limited or restricted spaces
- in all weather conditions

**Customers may be:**
- internal or external

**Environment may include:**
- control room
- tunnel
- vehicle tunnel
- ventilation chambers
- roadway

**Equipment/vehicles may include:**
- motor vehicles
- trucks
- motorcycles
- livestock
- hazardous/dangerous goods

**Personnel in the work area may include:**
- workplace personnel
- tunnel users
- pedestrians
- site visitors
- contractors
- official representatives
- emergency services
Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing
- full arrest safety harness
- hearing protection

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation and safety codes
- dangerous goods regulations
- OH&S manual handling guidelines
- relevant state/territory equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workplace relations regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - activating the fire and life safety system as it applies to the workplace and within the job role
  - evacuating a tunnel
  - understanding ventilation and deluge system as it applies to the workplace and the job role
  - understanding electrical distribution system as it applies to the workplace and job role
  - knowledge of fire and life safety system as it applies in the workplace
  - identifying the maintenance requirements of fire and life safety systems according to workplace procedures
  - identifying tunnel layout
  - identifying all relevant liaisons that apply
when required to activate the fire and life safety systems of a tunnel

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
## TLIF707C Implement and coordinate accident-emergency procedures

### Unit Descriptor
This unit involves the skills and knowledge required to implement and coordinate accident-emergency procedures, including responding to the incident, conducting on-site activities, and completing follow-up actions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

### Employability Skills
This unit contains employability skills.

### Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace procedures concerning action to be taken in the event of an emergency, fire or accident.

Work is performed under some supervision generally within a team environment. It involves the application of the basic emergency response principles to the implementation of accident-emergency procedures including the provision of assistance ranging from simple injuries to the application of life support systems.

### Competency Field
F – Safety Management

### ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Respond to the incident            | 1.1 Details of incidents, accidents and emergencies are received, analysed and confirmed  
                                        | 1.2 Immediate coordination requirements are identified and actioned in accordance with organisation procedures  
                                        | 1.3 Travel to the incident site is by the shortest, fastest, legal means and routes                                                                                                                                    |
| 2 Coordinate on-site activities      | 2.1 Control of site activities is assumed on arrival and the operator and other authorities present are informed of this action  
                                        | 2.2 Assistance is provided to clients and operators within the limitations of duty of care and organisation requirements  
                                        | 2.3 Details of personnel, including names and nature of injuries, are notified to relevant personnel, following enterprise procedures  
                                        | 2.4 Assistance is provided to relevant authorities within legal and policy limitations                                                                                                                                   |
| 3 Complete follow-up actions         | 3.1 Details of affected personnel, including names, nature of injuries and follow-up treatments are notified to next-of-kin in accordance with organisation procedures                                                                 |
3.2 Incidents resulting in a near miss, accident or emergency are investigated and a report, including recommendations, is completed in accordance with enterprise policies and procedures.

3.3 Accident procedures and emergency plans are reviewed for effectiveness and recommendations for changes are prepared and submitted to appropriate persons.

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant OH&S and other regulatory codes, procedures and guidelines concerning response to accidents and emergencies.
• Risks and hazards in the workplace and related precautions to control the risk.
• Workplace procedures and policies for responding to accident/emergency situations.
• Types of accidents and emergencies that can occur in a workplace and the appropriate action to be taken in each case.
• Types of emergency equipment in the workplace and instructions for its use.
• Site layout and obstacles.
• Means to control and organise the accident scene, provide practical assistance and cooperate with others at the scene.
• Focus of operation of work systems, equipment, management and site operating systems.

Required skills:
• Communicate effectively with others when implementing and coordinating accident and emergency procedures.
• Read and interpret instructions, procedures, information and signs relevant to the implementation and coordination of accident and emergency procedures.
• Identify containers and goods coding, ADG and IMDG markings and where applicable emergency information panels.
• Interpret and follow operational instructions and prioritise work.
• Complete documentation related to the implementation and coordination of accident and emergency procedures.
• Operate electronic communication equipment to required protocol.
• Work collaboratively with others when implementing and coordinating accident and emergency procedures.
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others.
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when implementing and coordinating accident and emergency procedures in accordance with regulatory requirements and workplace procedures.
• Implement contingency plans for unplanned events that may occur when implementing and coordinating accident and emergency procedures.
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify, select and use emergency equipment, processes and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments and weather conditions
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Action to be taken in the event of an accident-emergency may include:
• identifying and following established emergency procedures
• assessing the nature and extent of the emergency
• rendering assistance and first aid
• isolating and coordinating safety of the scene
• alerting relevant organisational personnel and emergency services
• recording relevant information and reporting on accident/emergency situation in accordance with regulatory and workplace requirements

Emergency equipment may include:
• first aid kit
• fire extinguishers
• fire hose
• fire blanket
• resuscitation equipment
Hazards in the work area may include:

- exposure to chemicals
- exposure to dangerous or hazardous substances
- movements of equipment, goods and materials
- accidents involving chemicals, toxic substances and other harmful substances
- accidents involving equipment and vehicles
- explosion and/or fire
- personal accidents including lifting injuries
- waste management and disposal
- violent incidents such as armed robberies

Consultative processes may include:

- workplace personnel and management
- designated workplace emergency officers
- emergency services personnel including ambulance, police, fire services, etc.
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
- site visitors
- contractors
- official representatives

Communication in the work area may include:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
- breathing apparatus

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- workplace emergency/fire/accident procedures
- workplace procedures for the use of emergency equipment and personal protection equipment
- first aid instructions and procedures
- manufacturers instructions concerning the use and servicing of equipment
- manifests, bar codes, goods and container identification numbers and codes
- material safety data sheets
- codes of practice including the Dangerous Goods Code
- IMDG code markings, HAZCHEM codes and where applicable emergency information panels
- relevant legislation, regulations and related documentation related to emergency response situations
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- supplier and/or client advice on the hazards involved with goods or cargo

Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- emergency procedures regulations
- dangerous goods and hazardous goods regulations
- relevant Australian standards and certification including Australian Standard AS 2865 - Safe Working in a Confined Space Code
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIF7209A  Comply with safety and security procedures

Unit Descriptor
This unit involves the skills and knowledge required to follow and apply occupational health and safety (OH&S) procedures when carrying out taxi work activities. It includes identifying and following workplace procedures for safety/security and accident/emergency situations; and identifying, minimising and managing fatigue. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant OH&S regulations and procedures.

Work is performed under some supervision, generally within a team environment. It involves the application of the established OH&S and hazard minimisation principles and procedures to the conduct of workplace activities.

This unit involves the development of basic skills and knowledge to work safely in the taxi industry.

Competency Field
F – Safety Management

ELEMENT

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

PERFORMANCE CRITERIA

1 Follow procedures for safety and security

1.1 Procedures for OH&S and security are identified and followed

1.2 Safe work practices are identified and followed

1.3 Breaches of safety and security are identified and appropriate action is taken to minimise or eliminate risk to self, others, vehicle and vehicle equipment

1.4 The features and functions of the taxi security system are identified

2 Follow procedures for accident/emergency situations

2.1 Emergency and potential emergency situations are recognised promptly and required actions are determined and/or taken within the scope of individual responsibility

2.2 Procedures for dealing with accidents, fire and emergencies are identified and followed

2.3 Assistance from taxi network and/or other authorities is sought where appropriate

2.4 Details of emergency situations are reported in accordance with workplace, industry and regulatory policies and procedures

2.5 Support services are identified following an incident or
accident

3 Deal with threats of physical violence

3.1 Security equipment is operated within legal and workplace parameters (if required by state/territory regulators)
3.2 Potential circumstances for difficult customer or other road user behaviour are accurately assessed and conflict resolution strategies used
3.3 Procedures are followed to minimise escalation of conflict, manage the situation and ensure personal safety
3.4 Assistance is sought from others including external support staff where necessary
3.5 Incidents are reported using the appropriate document format in accordance with workplace policies and procedures
3.6 Any follow-up action is implemented according to the appropriate workplace rules, regulations and guidelines

4 Identify and implement strategies to minimise and manage fatigue

4.1 Potential causes of fatigue and its effects on driver and family are identified
4.2 Personal warning signs of fatigue are recognised and steps are identified to manage fatigue

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant codes of practice and legislative requirements
- Relevant OH&S procedures and guidelines
- Procedures and protocols for safety and security procedures
- Sources of information and documentation needed when complying with safety and security procedures
- Typical problems that can occur when complying with safety and security procedures and related appropriate action that can be taken to prevent or solve them
- Safe work practices relevant to individual work roles
- Location and use of safety alarms, emergency shutoff systems, and emergency communication systems
- Potentially difficult situations, such as poorly lit pick-up areas, fare evasion, intoxication, over crowding
- Cultural sensitivities that lead to angry responses
- Culturally appropriate responses to potential problem situations
- Emergency response procedures
- Appropriate reporting procedures including emergency, fire and accident procedures
- Codes and systems for breaches of security
- Manual lifting and manual assisted lifting
• The risks and hazards created by fatigue
• How fatigue affects workplace performance
• How fatigue contributes to workplace accidents
• Ways of recognising fatigue
• Ways of managing fatigue
• Causes and effects of fatigue on drivers
• Lifestyles which promote the effective long-term management of fatigue

**Required skills:**

• Communicate effectively with others when following safety and security procedures
• Read and comprehend simple statements in English
• Work collaboratively with others when driving a taxicab
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to safety and security in the workplace
• Operate electronic communication equipment to required protocol
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when following safety and security procedures in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when following safety and security procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Procedures may cover:
- operation of security cameras and other on-board security devices
- safe posture for sitting, standing and bending
- manual handling including lifting, transferring
- safe handling of vehicle fuels including petrol and LPG
- emergencies, fires and accidents
- security of cash, documents and equipment
- duress alarm and mobile phone
- OH&S regulations
- GPS operations
- emergency procedures
- industry standard publications
- incident reporting forms
- documentation relating to rest time and other contributing factors to fatigue

Applicable regulations and legislation may include:
- relevant national/state/territory legislation, standards, codes of practice including manual handling, noise, smoking, fatigue management
- relevant national/state/territory OH&S legislation, workplace instructions, industry and regulatory procedures on safety, security, accidents and emergencies and fatigue management
- industry information from the regulator/industry associations

Communication method may include:
- phone
- radio
- on-board communication system

Emergency situations may include:
- road accidents
- passenger illness
- arguments and verbal abuse
- drunken behaviour
- vehicle fuels e.g. petrol and LPG
- road rage
- manual handling
- extremes of weather conditions
- deployment of vehicle SRS air bags if not wearing a seatbelt
Threats of physical violence may include:

- verbal threats
- menacing physical behaviour
- threats with a weapon
- intimidation by a group of people
- road rage from the drivers of other vehicles
- threats from pedestrians
- fare evasion leading to confrontation
- needles and syringes/body fluids

Security equipment may include:

- computer dispatch
- vehicle mounted radio
- duress alarm (if required by state/territory regulators)
- security camera (if required by state/territory regulators)
- driver security shields (if required by state/territory regulators)

The methods used to minimise escalation of incidents may include:

- using colloquial or culturally appropriate language and actions
- negotiation
- explaining the operation of the safety equipment on board the taxicab
- seeking assistance from external support services

External support staff may include:

- other taxicab drivers
- police
- fire brigade personnel
- ambulance personnel

Levels of fatigue can be affected by:

- night driving
- frequency and duration of breaks
- work duration
- type of work
- lifestyle factors
- alcohol and drug abuse
- quantity and timing of food and drinks
- sleep patterns
- opportunities for relaxation with family and friends
- personal biological factors
- state of mental and/or physical health
- circadian rhythms
- diet
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - locating and interpreting workplace information
  - following established procedures for occupational health and safety, security, hazard identification and risk controls
  - applying information about accident-emergency policies and procedures and duty of care responsibilities
  - demonstrating safe work practices
  - monitoring passenger and road user behaviour
  - recognising and adapting to cultural differences including modes of behaviour and communication
  - identifying difficult customer or road user situations and applying conflict resolution or avoidance behaviour
  - using effective communication skills
  - diffusing threats of physical violence
  - selecting and using self protective behaviour
  - seeking assistance, as required, from external emergency support services
  - following correct fatigue management precautions and procedures
  - completing OH&S and accident-emergency records/reports as required
  - demonstrating the correct use of a duress alarm (if required by state/territory regulators)
  - demonstrating how to conduct a security camera check to ensure it is operational (if required by state/territory regulators)
  - completing security camera download request (if required by state/territory regulators)

Context of and specific

- Performance is demonstrated consistently over a period
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

- Assessment of duress alarm and security cameras is to be conducted on actual equipment used in the taxi industry
**TLIF907C**

**Conduct cleaning operations in enclosed spaces**

**Unit Descriptor**
This unit involves the skills and knowledge required to conduct cleaning operations in enclosed spaces, including identifying cleaning risks, planning cleaning operations, and cleaning the required enclosed space in accordance with operational requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in accordance with regulations and procedures for conducting cleaning operations in enclosed spaces.

Work is performed under some supervision generally within a team environment. It involves the application of established safety procedures and regulatory requirements to the conduct of cleaning operations in enclosed spaces.

**Competency Field**
F – Safety Management

---

**ELEMENT**

Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Identify risks and plan operation**
   - 1.1 Requirements for the cleaning operation are assessed
   - 1.2 Potential risks or hazards to self, the environment or others are identified
   - 1.3 Relevant information including workplace procedures and safety codes are identified and read
   - 1.4 Cleaning and personal protective equipment and consumables are identified
   - 1.5 Requirements are assembled in accordance with national standards, safety codes and workplace procedures
   - 1.6 Work is planned identifying critical parameters of the work

2. **Clean required enclosed space**
   - 2.1 Unauthorised persons are removed from the work area
   - 2.2 Engineering and personal safety equipment is used
   - 2.3 Unwanted labels are removed
   - 2.4 Cleaning products, where used, are mixed in accordance with manufacturers and workplace instructions
   - 2.5 Containers are swept out and washed so that mud, grime and any residue from products stored in the containers are removed
   - 2.6 Security of chemicals and equipment is maintained
   - 2.7 Run-off is contained and wastes are disposed of in accordance with local laws and workplace procedures
2.8 Relevant documentation is completed
2.9 Equipment used for the process is checked and stored
2.10 Worksite is checked and returned to operational status

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant OH&S regulations, codes and guidelines concerning cleaning operations in enclosed spaces including Australian Standard AS 2865 - Safe Working in a Confined Space Code
- Workplace procedures and policies for carrying out cleaning operations in enclosed spaces
- Risks when carrying out cleaning operations in enclosed spaces and related precautions to control the risk
- Procedures for carrying out tests for contaminant gases in enclosed spaces prior to performing cleaning operations
- Site layout and obstacles
- Application of relevant industrial regulations and requirements
- Maintenance procedures for cleaning equipment

Required skills:
- Communicate effectively with others when conducting cleaning procedures in enclosed spaces
- Read and interpret instructions, procedures, information and signs relevant to cleaning procedures in enclosed spaces
- Identify container and goods coding, ADG and IMDG markings and where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to cleaning procedures in enclosed spaces
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting cleaning procedures in enclosed spaces
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when conducting cleaning procedures in enclosed spaces in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may arise when conducting cleaning procedures in enclosed spaces
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during cleaning procedures in enclosed spaces
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use equipment, cleaning materials, processes and procedures for carrying out cleaning operations in enclosed spaces
• Identify, select and use emergency equipment, processes and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Follow routine servicing procedures for cleaning tools and equipment
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The housekeeping tasks may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted:
• in confined restricted enclosed spaces

Focus of cleaning operations may include:
• containers
• tanks
• other enclosed spaces

Hazards in the work area may include exposure to:
• chemicals
• dangerous or hazardous substances
• toxic gas
• movements of equipment, goods and materials

Critical parameters for cleaning operations in enclosed spaces include:
• workplace personnel
• sequence of operations
• precautions for self, others and work area
• relevant workplace procedures to be followed
• emergency precautions, tests and procedures
• evacuation and rescue procedures

Personnel in the work area may include:
• other workplace personnel and managers
• site visitors
• contractors
• official representatives including OH&S specialists
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on workplace context, personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
- breathing apparatus

Information documents may include:

- workplace procedures and policies for cleaning operations including those in confined spaces
- OH&S and environmental protection regulations
- relevant codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements, specifically Australian Standard AS 2865 – Safe Working in a Confined Space
- quality assurance procedures
Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation and regulations pertaining to cleaning operations and working in confined spaces
- relevant state/territory environmental protection legislation
- relevant Australian standards and certification including Australian Standard AS 2865 – Safe Working in a Confined Space Code
- workplace relations regulations
- dangerous and hazardous goods regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
**TLIG107C Work effectively with others**

**Unit Descriptor**
This unit involves the basic skills and knowledge required to work effectively with others in a workplace including contributing to determination of appropriate work roles, contributing to the planning of activities, and working with others to complete the activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work is carried out in accordance with workplace procedures and relevant regulatory requirements.

Work is performed under some supervision, generally within a team environment.

Work involves the application of established procedures and appropriate interpersonal skills when working with others to complete workplace tasks.

**Competency Field**
G – Teamwork

| 1 Contribute to determination of appropriate work roles | 1.1 Work roles of each group member are identified based on information and instructions about objectives, performance requirements and procedures  
1.2 Contributions are made to assist in the determination of the appropriate roles and responsibilities for the successful completion of the activity |
| 2 Contribute to the planning of the activity | 2.1 Suggestions and information are provided as appropriate to contribute to the planning of the activity and the associated procedures |
| 3 Work with others | 3.1 Forms of communication appropriate to the activity are used  
3.2 Assistance in the completion of the activities is requested where appropriate  
3.3 Contributions to the achievement of a required outcome are made  
3.4 Work is undertaken in accordance with specified procedures on an individual and shared basis as appropriate  
3.5 Problems are discussed and resolved where possible through agreed and accepted processes  
3.6 Suggestions for improvements to processes are made and |
discussed within the team

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant workplace standards and procedures and duty of care requirements
• Relevant OH&S and environmental protection procedures and responsibilities
• Workplace structures and the roles and responsibilities of team/group members
• Basic principles of teamwork
• Typical misunderstandings and problems that can occur in the workplace and appropriate ways of dealing with them
• Focus of operation of work systems, equipment or management, site and organisational operating procedures

Required skills:
• Communicate effectively with others when completing work activities
• Read and interpret instructions, procedures, information and signs relevant to working with others as a team
• Interpret and follow operational instructions and prioritise work within the team
• Operate electronic communication equipment to required protocol when communicating with others in the workplace
• Work collaboratively with others
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified misunderstandings and problems that can occur in the workplace and appropriate ways of dealing with them in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when working with others in a work environment
• Monitor team activities in terms of planned schedule
• Modify team activities depending on differing operational contingencies, risk situations and environments
• Adapt to any differences in language and culture in accordance with standard operating procedures
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work:
- involves basic routine work operations carried out in collaboration with others
- may occur by day or night
- may be in a variety of work contexts

Customers may be:
- internal or external

Enterprises may comprise:
- large, medium or small worksites

Work colleagues may include:
- English-speaking persons
- multilingual staff
- persons with limited ability to communicate in English
- persons from a range of cultural backgrounds

Personnel in work area may include:
- managers
- supervisors/team leaders
- workplace personnel
- visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication may involve the basic use of a range of communication technology including:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
Information/documentation may include:

- workplace procedures, checklists and instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant
operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIG207C  Lead a work team or group

Unit Descriptor
This unit involves the skills and knowledge required to lead a work team or group including participating in team/group planning, managing and developing team/group performance, participating in and facilitating the work team/group in its achievement of workplace tasks, and documenting and reviewing work team/group performance. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work is carried out in accordance with workplace procedures and relevant regulations.

Work is performed under some supervision, generally within a team environment.

Work involves the application of established procedures to the provision of leadership within a work team or group.

Competency Field
G – Teamwork

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Participate in team/group planning

1.1 Requirements of a team/group task are identified and clarified in conjunction with other team or group members to ensure appropriate interpretation of specifications and in accordance with enterprise requirements

1.2 Task is interpreted and relevant steps are identified in conjunction with other team/group members to ensure efficient conduct of work to meet specifications and enterprise requirements

1.3 Steps are planned in conjunction with the work of other personnel to allow achievement of practical outcomes according to enterprise and/or manufacturers procedures

2 Manage and develop team/group performance

2.1 Task activities are assigned to team/group members based on their areas of competence and expertise and their availability

2.2 Team/group members are advised on symptoms and effects of fatigue, drugs and alcohol, safe lifting techniques and other Occupational Health and Safety policies

2.3 Performance measures and requirements are agreed upon between team/group members in accordance with enterprise procedures

3 Participate in and

3.1 Work activity is organised and carried out with other involved
facilitate the work team/group

Team/group members and personnel using relevant communication processes to ensure safe, unambiguous and appropriate sequencing of tasks

3.2 Individuals and teams/groups are actively encouraged to take individual and joint responsibility

4 Document and review work team/group tasks

4.1 All necessary documentation related to job planning and progress is completed and recorded in accordance with statutory, manufacturers and enterprise requirements

4.2 The outcomes of the team's/group's task activities are compared with the planned objectives, task instructions and specifications to ensure all requirements have been met

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for leading work teams
- Techniques to encourage appropriate participation of team/group members
- Coaching and mentoring approaches
- Workplace policies and plans including procedures for training and development
- Principles, duty of care and obligations within the chains of responsibility in the transport industry
- Strategies to implement continuous improvement processes
- Typical problems that can occur when leading a work team and related appropriate action that can be taken

Required skills:

- Communicate effectively with others when leading a work team
- Read and interpret instructions, procedures and information relevant to team leadership and team activities
- Negotiate and work effectively with team members
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to team leadership and team activities
- Operate electronic communication equipment to required protocol
- Provide leadership and encouragement to team members
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when leading a work team in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when leading a work team
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during team activities
• Plan team activities, including predicting consequences and identifying improvements
• Monitor team activities in terms of planned schedule
• Modify team activities depending on differing operational contingencies, risk situations and environments
• Ensure application of fatigue management knowledge and techniques
• Operate and adapt to any differences in language and culture amongst team members
• Identify and recommend improvements to services, resource allocation and use
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work involves: • completion of workplace activities as a leader of a work team

Work may occur: • by day or night
• in a variety of work contexts

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Team members may include: • English-speaking persons
• multilingual staff
• persons with limited ability to communicate in English
• persons from a range of cultural backgrounds
• permanent, part-time and/or casual staff

Consultative processes may include: • other members of the team
• supervisors/team leaders
• workplace personnel
• visitors
• contractors
• official representatives
• union representatives
• industrial relations and OH&S specialists
• other professional or technical staff
• managers
Communication may involve the basic use of a range of communication technology including:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:
- workplace procedures, checklists and instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit:**

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria.
of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIG507C Organise transport workload

Unit Descriptor
This unit involves the skills and knowledge required to organise transport workload, including organising and accepting responsibility for own workload, participating in identifying and meeting own learning needs, and planning and organising a personal daily routine. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations for the transport of articles for courier delivery.

Work is performed under generally indirect supervision. It involves the application of the basic principles and routine procedures to organise own transport workload as part of courier/delivery operations.

Competency Field
G – Teamwork

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Organise and accept responsibility for own workload

1.1 Priorities and deadlines are established in consultation with others (as appropriate) and recorded

1.2 Work activities are planned and progress of work is communicated to others whose personal work plans and timelines may be affected

1.3 Work is completed to the standard expected in the workplace and in accordance with any guidelines, directions or instructions

1.4 Variations and difficulties affecting work requirements are identified through regular reviews, and action is taken to report these issues to supervisory staff

1.5 Additional support to improve work is communicated clearly to appropriate personnel

2 Participate in identifying and meeting own learning needs

2.1 Operations of the workplace, workplace equipment and focus of endeavour are identified

2.2 Organisational structure, career paths and training opportunities appropriate to the enterprise are identified

2.3 Steps are taken, in consultation with appropriate personnel, to identify own learning needs through assessment and planning for future work requirements

2.4 Appropriate opportunities to learn and develop required competencies are undertaken including establishing networks
and working relationships with others

3 Plan and organise a personal daily routine

3.1 Daily routine is planned to take into account rosters, industrial agreements and workplace procedures
3.2 Clarification of requirements of tasks is sought when appropriate
3.3 Achievable time and other performance measures are agreed
3.4 Tasks are completed with variations to plan identified and reported
3.5 Inability to complete operations are relayed to appropriate personnel in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state/territory mass and loading regulations and permit requirements
- OH&S procedures and guidelines relevant to courier and delivery operations
- Risks in courier and delivery operations and related precautions to control the risk
- Workplace procedures and policies for organising transport loads in courier and delivery operations
- Principles, duty of care and obligations within the chains of responsibility in the transport industry
- Typical issues and problems that can occur when organising a transport workload and appropriate ways of dealing with them
- Housekeeping standards and procedures required in the workplace
- Requirements of courier work systems and operations and relevant equipment
- Methods and strategies for organising transport loads in courier and delivery operations

Required skills:
- Communicate effectively with others when organising a transport workload
- Read and interpret instructions, procedures and information relevant to organising a transport workload
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to organising a transport workload
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special delivery requirements of cargo, mail and courier items
- Work collaboratively with others when organising a transport workload
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified issues or problems that may occur when organising a transport workload in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when organising a transport workload
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when organising a transport workload
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Identify and correctly use equipment required when organising loads
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments and weather conditions
  • by day or night

Customers may be: • internal or external

Operations may be: • undertaken on- or off-base site

Work activities may be: • routine or adopted for purposes involving courier deliveries, related clerical, packing and or load shifting activities
  • activities associated with the planning of work

Hazards may include:
  • vehicular traffic and pedestrians
  • uneven ground, steps, road surfaces
  • dust and vapours
  • hazardous or dangerous materials
  • humidity, air temperature and radiant heat
  • light including UV
  • noise

Consultative processes may involve:
  • clients
  • other employees and supervisors
  • management
  • union representatives
  • industrial relations, Occupational Health and Safety specialists
  • other professional or technical staff
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- fixed phone
- mobile phone
- fax
- email
- internet
- radio
- oral, aural or signed communications

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunglasses and UV protection
- two-way radios
- high visibility clothing

Information/documents may include:

- operations manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications for relevant equipment
- Dangerous Goods Code, Explosives Code, HAZCHEM codes and other regulations pertaining to the delivery of mail/courier items
- workplace procedures and policies for courier/delivery operations
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- state/territory roads and traffic authority road rule and licence requirements
- Australian Dangerous Goods Code, Explosives Code, HAZCHEM codes, and other relevant regulations pertaining to the delivery of mail
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIG607C Facilitate work teams

Unit Descriptor
This unit involves the skills and knowledge required to lead and facilitate work teams, including participating and providing leadership in team planning, developing team commitment and cooperation, managing and developing team performance, and participating in and facilitating the work of work teams/groups. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work is performed under minimum supervision with general guidance on progress and outcomes of work. It involves discretion and judgement for self and others in the facilitation of work teams or groups.

A range of opportunities may be used to develop the workplace and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisations' goals and key performance objectives.

Work involves responsibility for facilitating and encouraging the work of work teams/groups and the provision of leadership to others in the establishment and achievement of team objectives.

Competency Field
G – Teamwork

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Participate in team planning

1.1 The team establishes clearly defined goals, purpose, roles, responsibilities and accountabilities within the organisation's goals and objectives

1.2 The team performance plan contributes to the organisation's business plan, policies and practices

1.3 The team agrees to processes to monitor and adjust its performance within the organisation's continuous improvement policies

1.4 The team includes in its plans ways in which it can benefit from the diversity of its membership

2 Develop team commitment and cooperation

2.1 The team uses open communication processes to obtain and share information

2.2 The team encourages and exploits innovation and initiative

2.3 Support is provided to the team to develop mutual concern and camaraderie
### Manage and develop team performance

3.1 The team is supported in making decisions within agreed roles and responsibilities

3.2 The results achieved by the team contribute positively to the organisation's business plans

3.3 Team and individual competencies are monitored regularly to confirm that the team is able to achieve goals

3.4 Mentoring and coaching supports team members to enhance personal and collective knowledge and skills

3.5 Delegates' performance is monitored to confirm that they have completed the relevant delegation(s)/assignment(s)

### Encourage and facilitate the work of teams

4.1 Team effectiveness is encouraged and enhanced through active participation in team activities and communication processes

4.2 Individuals and teams are actively encouraged to take individual and joint responsibility for actions

4.3 The team receives support to identify and resolve problems which impede performance

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

#### Required knowledge:

- Relevant and regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the facilitation of work teams
- Mechanisms to encourage team decision making, and reward and support team achievement
- Coaching and mentoring approaches to support team members to share knowledge and skills
- Workplace policies and plans including procedures for training and assessment
- Strategies to implement continuous improvement processes
- Typical problems that can occur when facilitating work teams, and related appropriate action that can be taken
- Principles, duty of care and obligations within the chains of responsibility in the transport industry

#### Required skills:

- Communicate effectively with others when facilitating the operation of work teams
- Read and interpret instructions, procedures, information and signs relevant to work team functions and management
- Interpret and follow operational instructions and prioritise work
- Negotiate and work effectively with others
- Complete documentation related to team activities and organisation
- Operate electronic communication equipment to required protocol
- Lead and encourage others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when facilitating the operation of work teams in accordance with workplace procedures
- Ensure implementation of contingency plans for unplanned events that may occur during team activities
- Identify improvements to services, resource allocation and use
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Ensure implementation of fatigue management policies and procedures
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
- single and multi site location
- large, medium and/or small organisations

Services, products, risks, work systems and requirements may:
- potentially vary across different sections of the workplace

Operations involve:
- internal and external customer contact and coordination

Teams may be:
- new or long established
- within a functional area
- drawn from across the organisation

Team membership may be:
- changing on a regular basis
- evolving within the overall context of change within the enterprise

Team members/leaders may include:
- English-speaking persons
- multilingual staff
- persons with limited ability to communicate in English
- persons from a range of cultural backgrounds
Consultative processes may involve:
- members and leaders of work teams
- other employees and supervisors
- customers/clients
- manufacturers and suppliers
- relevant authorities
- management
- union representatives
- OH&S specialists,
- other maintenance, professional or technical staff

Communications systems may involve:
- face-to-face discussions or group meetings
- telephone
- fax
- email
- mail

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:
- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures

Information/documentation may include:
- workplace policies and procedures
- customer/client instructions and requirements
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, regulations and codes of practice, including the Australian standards relevant to services and operations
- manufacturers/suppliers specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- emergency procedures
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- relevant Australian and state/territory OH&S legislation
- regulations on equal opportunity, equal employment opportunity and affirmative action
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
TLIG707B Work in a socially diverse environment

Unit Descriptor
This unit involves the skills and knowledge required to work in a socially diverse environment, including the development and application of the cultural awareness that is required by all people working in the transport and distribution industries. It includes the cultural awareness required for serving customers and working with colleagues from diverse backgrounds. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace procedures and relevant anti-discrimination and equal employment opportunity regulations.

Work is performed with limited or minimum supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of communication principles and problem-solving techniques to facilitate work in a socially diverse environment.

Competency Field
G – Teamwork

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

ELEMENT PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Communicate with customers and colleagues from diverse backgrounds

1.1 Customers and colleagues from all cultural groups are valued and treated with respect and sensitivity

1.2 Verbal and non-verbal communication takes account of cultural differences

1.3 Where language barriers exist, efforts are made to communicate through use of gestures or simple words in the other person's language

1.4 Assistance from colleagues, reference books or outside organisations is obtained when required

2 Deal with cross-cultural misunderstandings

2.1 Issues which may cause conflict or misunderstanding in the workplace are identified

2.2 Difficulties are addressed with the appropriate people and assistance is sought from team leaders

2.3 When difficulties or misunderstandings occur, possible cultural differences are considered

2.4 Efforts are made to resolve the misunderstanding, taking account of cultural considerations

2.5 Issues and problems are referred to the appropriate team leader/supervisor for follow-up
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to individual employees
- Recognition of the different cultural groups in Australian society
- Basic knowledge of the culture of Australia's indigenous and non-indigenous peoples
- Recognition of various international customer groups (as appropriate to the sector and individual workplace)
- Principles that underpin cultural awareness
- Knowledge of what it means to be 'culturally aware'
- Typical cross-cultural misunderstandings and problems that can occur in the workplace and appropriate ways of dealing with them

Required skills:
- Communicate effectively with others when working in a socially diverse environment
- Read and interpret instructions, procedures, information and signs relevant to working in a socially diverse environment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to working in a socially diverse environment
- Work collaboratively with others in a socially diverse environment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when working in a socially diverse environment in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Cultural differences may include but are not limited to those of the following nature (examples only):
- race
- language
- special needs
- disabilities
- family-structure
- age
- sexual preference

Possible cultural differences may include but are not limited to:
- language spoken
- forms of address
- levels of formality/informality
- non-verbal behaviour
- work ethics
- personal grooming
- family obligations
- recognised holidays
- special needs
- product preferences

Attempts to overcome language barriers may be made to:
- meet and greet/farewell customers
- give simple directions
- give simple instructions
- answer simple enquiries
- prepare for, serve and assist customers
- describe goods and services

Outside organisations may include but are not limited to:
- interpretative services
- diplomatic services
- local cultural organisations
- appropriate government agencies
- educational institutions

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:
- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures
Information/documents may include:

- workplace procedures
- guideline documents on cultural differences and how to deal with them
- documents that provide information on equal employment opportunity principles and obligations and anti-discrimination regulations

Applicable legislation may include:

- Australian and state/territory anti-discrimination legislation
- Australian and state/territory equal opportunity legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at
the registered training organisation, and/or

in an appropriate range of situations in the workplace
TLIH107D Interpret road maps and navigate pre-determined routes

Unit Descriptor
This unit involves the skills and knowledge required to interpret road maps and navigate routes as part of transport operations including identifying and determining the most appropriate route, and completing required route documentation in accordance with operational requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations of the relevant state/territory roads and traffic authorities.

Work is performed under general or limited supervision. It involves the application of the basic map reading principles and procedures when interpreting street directories and road maps and following pre-determined routes as part of transport operations.

Competency Field
H – Route Planning and Navigation

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and determine the pre-planned route
1.1 Documentation on the pre-determined route is accessed and interpreted
1.2 Relevant street directory and/or road maps are identified and accessed
1.3 Street directory and road map symbols are recognised and interpreted
1.4 Points of departure and destination are identified in a directory index and the information used to locate designated places on the appropriate map
1.5 Directions for a pre-determined route are interpreted and the route traced using a street directory and road map
1.6 Key intersections and other landmarks along the route are identified for use in following the planned route
1.7 Alternative routes are identified for possible contingency situations such as emergencies or traffic delays
1.8 Pre-determined route is correctly followed

2 Complete necessary documentation
2.1 Required route documentation is completed in accordance with purpose of transportation and with workplace requirements
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant state and territory permit and licence regulations and requirements
• Operational procedures for interpreting road maps, using GPS devices and navigating routes
• Road conditions for various routes, including sections undergoing road works
• Height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
• Traffic conditions at various times of the day along specific routes
• Security hazards and issues (where relevant)
• Current information on accidents or emergencies that might close or restrict traffic on a particular route
• Location of service stations/rest stops where relevant
• Typical problems that may arise concerning the interpretation of road maps, the use of GPS devices and the navigation of predetermined routes and appropriate action that should be taken
• Workplace requirements for recording and documenting route information

Required skills:
• Communicate effectively with others when interpreting road maps, using GPS devices and navigating predetermined routes
• Read and interpret instructions, procedures, information and signs relevant to route navigation
• Identify and correctly use maps and other route documentation, including: identification of town and suburb locations; identification of roads and intersections; reading and interpretation of map symbols; and estimation of route distances using map information
• Where applicable, use GPS devices to navigate predetermined routes
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to route navigation
• Operate electronic communication equipment to required protocol
• Where applicable work collaboratively with others (such as fleet managers, sales team etc.) when interpreting road maps, using GPS devices and navigating predetermined routes
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when interpreting road maps, using GPS devices and navigating predetermined routes in accordance with workplace procedures
• Plan for alternative routes in the event of contingencies such as road works, emergencies or delays
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

This unit covers:

• work of transport and distribution personnel involved in the delivery of a range of possible goods and materials including valuables, secured products and documents and materials

Operations may be conducted:

• in a range of work environments and weather conditions
• by day or night

Customers may be:

• internal or external

Routes will be pre-determined but may include:

• alternative routes to accommodate contingency situations

Map areas may include:

• metropolitan areas
• country and regional areas
• interstate locations

Depending on the type of transport service being provided, consultative processes may involve:

• clients
• other employees and supervisors
• management
• other professional or technical staff
• private security personnel
• public sector security personnel
• police and other emergency services
• security consultants

Communication in the work area may include:

• mobile and fixed phones
• radio
• oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Information/documents may include:

- workplace procedures and policies
- route specifications
- maps and street directories
- published information on route hazards such as height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
- competency standards and training materials
- supplier and/or client route documentation
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory road rules and traffic acts
- regulations and codes related to the transport of dangerous goods, explosives and hazardous materials

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIH207D Plan and navigate routes

Unit Descriptor
This unit involves the skills and knowledge required to plan and navigate routes as part of transport operations, including interpreting information from a road map, street directory and a GPS (Global Positioning System) device, planning the most appropriate route taking into account pertinent factors, and completing required trip documentation in accordance with operational requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulations of the relevant state/territory roads and traffic authorities.

Work is performed under general or limited supervision. It involves the application of map reading principles and procedures to the planning and navigation of routes as part of transport operations route.

Competency Field
H – Route Planning and Navigation

ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Interpret street maps</td>
<td>1.1 Symbols in a street directory and road map are recognised and interpreted</td>
</tr>
<tr>
<td></td>
<td>1.2 Places are identified in a directory index and the information used to locate the places on the appropriate map</td>
</tr>
<tr>
<td>2 Use GPS systems</td>
<td>2.1 Where applicable, information is entered into the GPS system concerning destination and areas to be avoided</td>
</tr>
<tr>
<td></td>
<td>2.2 Information provided through the GPS device is read and listened to, interpreted and applied to route planning and navigation</td>
</tr>
<tr>
<td></td>
<td>2.3 Where necessary, information on height, width and load limits of road infrastructure and other restrictions on thoroughfares is accessed, interpreted and used when selecting the most appropriate route with the aid of the GPS device</td>
</tr>
<tr>
<td>3 Plan routes</td>
<td>3.1 Given a location and a destination, the most direct and alternative routes between two points are identified using a map</td>
</tr>
<tr>
<td></td>
<td>3.2 Where necessary, information on height, width and load limits of road infrastructure and other restrictions on thoroughfares is accessed and interpreted and taken into account when</td>
</tr>
</tbody>
</table>
planning a route for a journey

3.3 A suitable route is selected to ensure the most efficient, safe, secure and legal transport operation taking into account relevant criteria for the transport operation concerned

4 Follow planned route

4.1 Planned route is correctly followed with the aid of a street directory, road map and/or GPS system
4.2 Where relevant, geographic regions, tourism features and other places of interest are identified
4.3 Required route documentation is completed in accordance with purpose of transportation and enterprise requirements
4.4 Parking procedures are observed in accordance with enterprise procedures and relevant legislative requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state and territory permit and licence regulations and requirements
- Operational procedures for planning and navigating transport routes
- Features and contents of maps and street directories and techniques for their use in transport navigation
- Features and operating instructions for GPS systems
- Road conditions for various routes, including sections undergoing road works
- Physical hazards such as height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
- Known traffic conditions at various times of the day along specific routes
- Security hazards and issues (where relevant)
- Current information on accidents or emergencies that might close or restrict traffic on particular routes
- Location of service stations and rest stops where relevant
- Workplace requirements for recording and documenting route information

Required skills:

- Communicate effectively with others when planning and navigating routes
- Read and interpret instructions, procedures, information and signs relevant to the planning and navigation of routes, including: identification of town and suburb locations; identification of roads and intersections; reading and interpretation of map symbols; and estimation of route distances using map information
- Access and interpret information required when planning and navigating transport routes and developing contingency routes (including road restrictions, traffic conditions, service stations/rest stops, etc.)
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the planning and navigation of routes
- Operate electronic communication equipment to required protocol
- Where applicable, work collaboratively with others when planning routes (such as fleet managers, sales team etc.)
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when planning and navigating routes in accordance with workplace procedures
- Plan for alternative routes in the event of contingencies such as road works, emergencies or delays
- Implement contingency arrangements for unanticipated situations that may be identified when planning and navigating routes
- Apply precautions and required action to minimise, control or eliminate hazards that may be identified during the planning and navigation of routes
- Plan for transport routes to meet workplace requirements
- Monitor work activities in terms of planned schedule
- Modify route planning activities depending on differing operational contingencies, risk situations and environments
- Apply an understanding of fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to changes in vehicle navigation technology, maps and street directories as they relate to route planning
- Operate and adapt to differences in vehicles, loads and equipment in accordance with standard operating procedures
- Select and use relevant route planning and navigation technology including GPS devices
- Adapt to changes and difference in vehicle navigation technology, maps and street directories as they relate to route planning

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

This unit covers:  
- work of transport and distribution personnel involved in passenger services and/or the delivery of a range of possible goods and materials including valuables, secured products and documents and materials

Operations may be conducted:  
- in a range of work environments and weather conditions
- by day or night

Customers may be:  
- internal or external
Routes will be planned in accordance with:

- workplace guidelines with the development where required of alternative routes to accommodate contingency situations

Resources used in route planning and navigation may include:

- maps
- street directories
- Global Positioning Systems (GPS) systems
- booklets and other information on road restrictions, traffic patterns, etc.
- broadcast information concerning traffic conditions, accidents, emergencies, weather, flooding, etc.

Transport areas may include:

- metropolitan areas
- country and regional areas
- interstate locations

Route criteria may include:

- potential hazards
- potential road conditions
- traffic conditions and flow
- workplace operating procedures and requirements
- the class of vehicle involved
- the type of load being carried
- the availability of rest stops along the way

Potential hazards may include:

- height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
- accidents and emergencies
- extreme weather conditions
- security risks

Depending on the type of transport service being provided, consultative processes may involve:

- clients
- other employees and supervisors
- management
- other professional or technical staff
- private security personnel
- public sector security personnel
- police and other emergency services
- security consultants

Communication in the work area may include:

- mobile and fixed phones
- radio
- oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace procedures and policies
- route specifications
- maps and street directories
- published information on route hazards such as height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
- instructions for the use of in-vehicle GPS systems
- competency standards and training materials
- supplier and/or client route documentation
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory road rules and traffic acts
- regulations and codes related to the transport of dangerous goods, explosives and hazardous materials

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or
equipment, and/or
  o applicable documentation including
    workplace procedures, regulations, codes of
    practice and operation manuals

Method of assessment

  • Assessment of this unit must be undertaken by a
    registered training organisation
  • As a minimum, assessment of knowledge must be
    conducted through appropriate written/oral tests
  • Practical assessment must occur:
    o through appropriately simulated activities at
      the registered training organisation, and/or
    o in an appropriate range of situations in the
      workplace
TLIH307C Prioritise courier/delivery operations

Unit Descriptor
This unit involves the skills and knowledge required to coordinate and prioritise courier/delivery operations including identifying work requirements, planning and preparing for work, undertaking work operations, adjusting to changing work priorities, and completing work activities to operational requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations for the transport of articles for courier delivery.

Work is performed under generally indirect supervision. It involves the application of the basic principles and routine procedures to the prioritisation of courier/delivery operations.

Competency Field
H – Route Planning and Navigation

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify work requirements
1.1 Work requirements and specific customer requirements interpreted and, where necessary, clarified
1.2 Pick-up and delivery points are located
1.3 Size, weight and configuration of materials to be couriered are identified
1.4 Equipment required to facilitate pick-up and delivery is identified

2 Plan and prepare for work
2.1 Work is planned based on an analysis of distance, travel times, customer requirements, resource implications and known priorities
2.2 Planned steps and outcomes are checked to ensure conformity with instructions and work requirements
2.3 Work sequence is identified and, where necessary, relayed to base
2.4 Required resources are selected

3 Undertake work operations
3.1 Work operations are undertaken in accordance with plan and quality requirements and within operating capacity of the equipment and operator
3.2 Difficulties/uncertainties occurring during operations are identified and alternative strategies determined
3.3 Pick-up and delivery of materials is undertaken in accordance with workplace quality procedures

4 Adjust to changing work priorities

4.1 Work plan or route is adjusted/modified to meet changing priorities and circumstances
4.2 Changes to work plan are relayed to base

5 Complete work operations

5.1 Work operations are reviewed to ensure outcomes have met customer requirements and quality outcomes
5.2 Workplace documentation is completed
5.3 Operational capacity of equipment is checked and returned to storage area (where applicable)
5.4 Security of goods is maintained in accordance with enterprise procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant state and territory mass and loading regulations
• National Load Restraint Guide
• OH&S procedures and guidelines relevant to courier and cargo delivery operations
• Risks in courier and delivery operations and related precautions to control the risk
• Workplace procedures and policies for the coordination and prioritisation of courier/delivery operations
• Typical problems that may arise when prioritising courier and cargo delivery operations and appropriate action that should be taken
• Security policies and procedures
• Housekeeping standards and procedures required in the workplace
• Requirements of cargo delivery and courier work systems and operations and relevant equipment
• Methods and strategies for the prioritisation of courier and cargo delivery operations

Required skills:
• Communicate effectively with others when prioritising courier and cargo delivery operations
• Read and interpret instructions, procedures, information and labels relevant to courier and cargo delivery operations
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to prioritising courier and cargo delivery operations
• Operate electronic communication equipment to required protocol
• Estimate the size, shape and special delivery requirements of mail articles
• Work collaboratively with others when prioritising courier and cargo delivery operations
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when prioritising courier and cargo delivery operations in accordance with workplace procedures
• Implement contingency plans for unexpected developments and security situations that may be identified when prioritising courier and cargo delivery operations
• Apply precautions and required action to minimise, control or eliminate hazards that may be identified when prioritising courier and cargo delivery operations
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply an understanding of fatigue management policies and regulations when prioritising courier and cargo delivery operations
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use equipment required when coordinating courier and cargo delivery operations
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• in a range of work environments and weather conditions
• by day or night

Customers may be:
• internal or external

Operations may be:
• undertaken on- or off-base site

Equipment required to facilitate pick-up and delivery may include:
• trolleys
• lifting devices
• rollers
• tarpaulins
• packing materials
• ropes
• securing devices

Difficulties/uncertainties may include:
• road and traffic conditions
• changing weather conditions
• time of travel
• load requirements
• changes in delivery and pick-up instructions
Hazards may include:

- vehicular traffic and pedestrians
- uneven ground, steps, road surfaces
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature and radiant heat
- light including UV
- noise

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Consultative processes may involve:

- clients
- other employees and supervisors
- management
- union representatives
- industrial relations, Occupational Health and Safety specialists
- other professional or technical staff

Communication in the work area may include:

- fixed phone
- mobile phone
- fax
- email
- internet
- radio
- oral, aural or signed communications

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunglasses and UV protection
- two-way radios
- high visibility clothing
Information/documents may include:

- operations manuals
- induction documentation
- competency standards and training materials
- manufacturers specifications for relevant equipment
- Dangerous Goods Code, Explosives Code, HAZCHEM codes and other regulations pertaining to the delivery of mail/courier items
- workplace procedures and policies for the prioritisation of courier/delivery operations
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory roads and traffic authority road rule and licence requirements
- Australian Dangerous Goods Code, Explosives Code, HAZCHEM codes, and other relevant regulations pertaining to the delivery of mail
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant
In both real and simulated environments, access is required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIH407B  Identify major roads, services and attractions

Unit Descriptor
This unit involves the skills and knowledge required to identify, and describe major roads, services and attractions as part of transport operations including the local geographical details and features of major roads, transport interchanges, suburbs, landmarks, public services and facilities, tourist attractions and central business districts. It covers the knowledge and skills required by taxi drivers, bus/coach drivers and other transport operators to locate roads, services and attractions both on a map and, where required, physically. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with the relevant transport regulations and workplace procedures.

Work is performed under general or limited supervision. It involves the application of basic research and map reading principles and procedures to the location of roads, services and attractions both on a map and, where required, physically.

In the case of taxi drivers if the original context of this unit changes i.e. moving from State to State or Territory then the unit may be reassessed.

Competency Field
H – Route Planning and Navigation

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Locate all major roads, highways and suburbs in a metropolitan area

1.1 Major roads are identified and located on a map and/or physically
1.2 Suburbs along, and at the end of, major roads are identified and located on a map and/or physically
1.3 Suburbs accessed by on- and off-freeway ramps are identified and located on a map and/or physically
1.4 The main suburbs, with relation to geographical sectors (east, west, north and south) are identified in order of closest proximity to the central business district
1.5 Bus/taxi lanes into and out of the central business district are located on a map and/or physically

2 Locate transport interchanges, jetties, ports, stations and terminals

2.1 Major transport interchanges, jetties, ports, terminals and stations are located on a map and/or physically
2.2 Major connecting roads entering and exiting main transport interchanges, terminals, jetties, ports and rail stations are
identified and located on a map and/or physically

2.3 Established taxi ranks at main transport interchanges, jetties, ports, terminals and stations are located on a map and/or physically

2.4 Special transport, safety, taxi and/or financial requirements for entering and exiting main transport interchanges, jetties, ports, terminals and stations are observed

3 Identify main public services and facilities

3.1 Maps and other geographical and tourist information are identified and accessed in accordance with workplace procedures

3.2 Key tourist locations are located both on a map and/or physically, and their features described

3.3 Key public services are located on a map and/or physically and described

3.4 Main scenic routes, places and landmarks of interest to tourists are able to be determined and features described in an appropriate manner

4 Locate key features in a central business district

4.1 Streets, major buildings and traffic flow directions of the central business district and city centre are identified and located both on a map and/or physically

4.2 City hotels are identified and located both on a map and/or physically

4.3 Exit and entry points to the city are determined in relation to a final destination

4.4 Transport interchanges and main taxi ranks in the city centre and central business district are identified and located both on a map and/or physically

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state and territory regulations and road laws
- Workplace procedures for identifying and locating roads, services and attractions
- Information that may be required when locating roads, services and attractions, including: main arterial roads; entry and access points to major road systems; location of metropolitan suburbs; most appropriate routes for entering and exiting a city centre; roads and suburbs connecting with freeways and transport interchanges, terminals, jetties, ports and stations; location of main hotels, motels and tourist attractions in a specified area; location of city centre streets and major buildings and traffic flows; bus and emergency lane usage; restrictions to traffic movement at major intersections; traffic patterns and densities; and road signs and route markers
- Typical problems that may arise when identifying and locating roads, services and attractions and appropriate action that should be taken
Required skills:

- Communicate effectively with others when identifying and locating major roads, services and attractions
- Read and interpret instructions, procedures, information and signs relevant to the identification and location of major roads, services and attractions
- Identify and correctly use maps and other information about the location and features of roads, services and attractions
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when identifying and locating major roads, services and attractions
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when identifying and locating major roads, services and attractions in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Apply precautions and required action to minimise, control or eliminate hazards that may be identified when identifying and locating major roads, services and attractions
- Physically locate identified roads, services and attractions (i.e. driving to the location)
- Monitor and anticipate traffic hazards
- Select approved and most economic routes
- Modify activities depending on differing operational contingencies, risk situations and environments

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

This unit covers:

- work of transport personnel who need to locate roads, services and attractions as part of transport operations. It includes all road transport passenger-carrying vehicles. It is specifically suited to the drivers of taxicabs, small charter vehicles, coaches, limousines and private charter vehicles involving the transport of passengers, including tourists

Operations may be conducted in a range of work environments including:

- operations conducted day or night
- in the vehicle, on the road, both stationary and mobile
- travel service within a metropolitan or regional district
- in a range of typical weather conditions
- transport of fare-paying passengers including tourists
Road conditions and traffic flows might include:
- wet or stormy weather
- fog and/or low lying cloud resulting in poor visibility
- peak-hour traffic congestion
- road-accidents and obstructions impeding traffic flow
- road works

Map areas may include:
- metropolitan areas
- country and regional areas
- interstate locations

Tourist locations may include:
- sporting, entertainment and recreational venues such as horse racing venues, sporting venues and stadiums, theatres, entertainment centres, ballrooms, cinemas, casinos and gaming venues, river and coastal entertainment and recreational locations, main golf courses, show grounds, adventure and marine parks
- tourist centres and major hotels/motels
- main tourist attractions in specified areas
- significant cultural and arts centres and venues such as cultural centres, museums, art galleries, state library, concert halls, theatres
- significant historical buildings in specified areas
- vineyard districts (where relevant)
- main coastal attractions and landmarks (where relevant) such as bays, beaches, buildings, restaurants, look-out points, marinas and boat harbours

Public service locations may include:
- public/secondary schools and tertiary education institutions
- all main public hospitals, emergency entrances (and existing taxi ranks servicing the hospitals)
- main police, ambulance and fire stations
- major suburban shopping centres
- main public parks and reserves such as botanical gardens, public parks and gardens, wetland areas, and nature reserves

Transport interchanges may include:
- domestic and international airports and terminals for private and commercial airplanes
- sea and river ports, jetties and terminals
- bus station interchanges
- commuter and long distance railway stations
Communication in the work area may include:
- mobile and fixed phones
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace protocols, procedures and policies
- route specifications
- maps and street directories
- tourism information
- published information on roads, services and attractions
- relevant state/territory road rules and traffic acts
- competency standards and training materials
- customer requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant state/territory regulations, road rules and traffic acts
- relevant state/territory OH&S regulations and procedures

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying the following:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - all major roads are identified and located on a map and/or physically
  - all key tourist locations are located both on a map and/or physically, and their features described
  - major sporting facilities are located on a map and/or physically and there entry points described
  - airports are identified on a map and/or
physically and the major roads leading to them are identified
- all major hospitals are identified on a map and/or physically and the major roads leading to them are identified
- bus/taxi lanes into and out of the central business district are located on a map and/or physically and the rules for their use are demonstrated

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLII1007A Provide travel information to customers

Unit Descriptor
This unit covers the skills and knowledge required to identify and locate major destinations, public services, attractions and facilities as part of the provision of public transport advice. It covers responding appropriately to customer enquiries with respect to destinations, related services and facilities and ticketing. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work involves the duties and tasks applicable to personnel working on public trams, trains and buses who may through their duties have contact with the public.

Work is performed under general supervision.

Competency Field
I – Customer Service

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan a journey using public transport

1.1 Sources of current, accurate and relevant public transport information are identified and accessed to respond to customer needs
1.2 Modes, connections, interchanges and tickets to complete a journey are identified for the planned customer destination
1.3 Major destinations, attractions and public facilities and their proximity to public transport are identified and located in relation to customer needs or requests
1.4 Information and/or advice provided to customers are reviewed regularly to ensure currency and accessibility

2 Provide information and advice to customers

2.1 The specific information and advice needs of customers are accurately identified and clarified in accordance with the circumstance
2.2 Information provided to customers is appropriate, complete and effectively covers their needs
2.3 Information and/or advice are presented in a respectful format, manner and style
2.4 The information and/or advice are regularly reviewed to ensure customers acknowledge that the information given satisfies their enquiry
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Ticket and ticket structures including points and methods of purchase
- Concessional privileges
- Travel zones
- Major public transport connections, interchanges, stations, tram and bus terminals
- Major destinations, attractions and public facilities
- Standard operating hours
- 'Out of hours' services
- Vehicle types and capacity
- Modes of public transport
- Location of on-line information services
- Factors that can influence verbal communication
- Procedures for reviewing information and advice
- Strategies for clarifying and confirming customer needs
- Operational procedures

Required skills:
- Communicate effectively when providing travel information to customers
- Access, read, interpret and apply instructions, timetables and standard operating procedures relevant to the provision of travel information to customers
- Research relevant data when providing travel information to customers
- Interact with customers
- Work collaboratively with others in a team
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly solve and/or report any identified problems when responding to customer enquiries and/or travel concerns
- Monitor work activities in terms of planned schedule
- Work in accordance with instructions
- Review customer needs and confirm they are being addressed
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail
- Maintain currency on all operational procedures
- Select and utilise ticket validating equipment and communication technology
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Public transport information may include:
- timetables
- brochures and travel guides
- transport maps
- internet
- tickets
- ticket manual
- concessions
- hours of operation
- lost property
- emergency procedures
- interchanges and connections

Mode of travel may include:
- rail
- bus
- tram
- taxi

Destination may include:
- public facilities
- attractions
- venues
- metropolitan

Documentation/records may include:
- standard operating procedures for the provision of travel information to customers
- timetables
- brochures
- relevant local government documents

Applicable legislation, regulations and codes may include:
- relevant state or territory transport legislation and regulations
- relevant trade practices legislation and regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills

© Commonwealth of Australia 2009
TLI07 Transport and Logistics Training Package (Version 3)
To be reviewed by 2010
o relevant legislation and workplace procedures
o other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLII107D | Coordinate quality customer service

Unit Descriptor | This unit involves the skills and knowledge required to coordinate quality customer service in operations including planning to meet internal and external customer requirements, ensuring delivery of quality service, and monitoring, adjusting and reporting customer service. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills | This unit contains employability skills.

Application of the Unit | Work must be carried out in compliance with the relevant regulations.

Work is performed under general supervision. It involves the application of the routine procedures to the coordination of quality customer service.

Competency Field | I – Customer Service

ELEMENT | PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan to meet internal and external customer requirements

1.1 The needs of customers are researched, understood and assessed, and taken into account in the planning of the company's products and services

1.2 Provision is made in plans to achieve the quality, time and costs specifications agreed with customers

2 Ensure delivery of quality service

2.1 Individual/team performance consistently meets quality, safety, resource and delivery standards

2.2 Coaching and mentoring assists colleagues overcome difficulty in meeting customer service standards

2.3 Delivery of services and products is coordinated and managed to ensure it effectively and efficiently meets agreed quality standards

3 Monitor, adjust and report customer service

3.1 Company's systems are used to monitor progress in achieving product/service targets and standards

3.2 Customer feedback is sought and used to improve the provision of products/services

3.3 Decisions to overcome identified problems with products/services are made in consultation with relevant individuals/groups

3.4 Adjustments/recommendations (as required) are made to products/services

3.5 Those who have a role in products/services planning and
delivery are informed of changes
3.6 Records, reports and recommendations are managed within
the company's systems and processes

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant Australian and state and territory standards, regulations and codes of practice
• OH&S procedures and guidelines relevant to workplace operations
• Risks involved in workplace operations and related precautions to control the risk
• Workplace procedures and policies for the coordination of quality customer service in
  workplace operations
• Customer and market characteristics
• The role of customer service in company profitability
• Requirements of workplace systems and operations and relevant equipment

Required skills:
• Communicate effectively with others when coordinating quality customer service
• Read and interpret instructions, procedures, information and signs relevant to the coordination
  of quality customer service
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the coordination of quality customer service
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when coordinating quality customer service
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour
  and interactions with others
• Promptly report and/or rectify any identified problems that may arise when coordinating
  quality customer service in accordance with regulatory requirements and workplace
  procedures
• Implement contingency plans for unanticipated situations that may occur when coordinating
  quality customer service
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and
  environments
• Apply relevant agreements, codes of practice or other legislative requirements to work
  processes
• Identify and correctly use equipment, processes and procedures
• Work systematically with required attention to detail without injury to self or others, or
  damage to goods or equipment
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Customers may be:
- internal or external

Operations may be undertaken:
- on- or off-base site or workplace

Coordination of workplace policies for the provision of customer service may include:
- level of service provision
- scheduling of operations
- delivery of services

Consultative processes may involve:
- clients
- other employees and supervisors
- management
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
- local government authorities

Hazards may include:
- vehicular traffic and pedestrians
- uneven ground, steps, road surfaces
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature and radiant heat
- light including UV
- noise

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:
- fixed phone
- mobile phone
- fax
- email
- internet
- radio
- oral, aural or signed communications
Information/documents may include:

- operations manuals
- induction documentation
- competency standards and training materials
- manufacturers specifications for relevant equipment
- Dangerous Goods Code, Explosives Code, HAZCHEM codes and other regulations pertaining to the delivery of mail
- workplace procedures and policies for the preparation of mail for delivery
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- customer service and quality assurance standards and procedures
- emergency procedures

Applicable regulations and legislation may include:

- state/territory roads and traffic authority road rule and licence requirements
- Australian Dangerous Goods Code, Explosives Code, HAZCHEM codes, and other relevant regulations pertaining to the delivery of mail
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLII1507B Operate the on-train buffet car

Unit Descriptor
This unit involves the skills and knowledge required to operate the on-train buffet car in accordance with regulatory and workplace requirements including preparing and providing take-away food and beverages; maintaining and controlling stock; serving customers; and carrying out required financial control procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures when operating an on-train buffet car as part of workplace activities in the rail transport and allied industries.

Competency Field
I – Customer Service

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare and provide take-away food and beverages

1.1 Food and beverage items are prepared and presented to passengers in a form consistent with workplace procedures and equipment manufacturers instructions

1.2 Stock is checked for spoilage and expiry dates on a regular basis following workplace procedures

1.3 Out-of-date stock is disposed of in accordance with workplace procedures

2 Maintain and control stock

2.1 All stock is stored in accordance with workplace procedures and relevant health regulations

2.2 Stock is rotated on a regular basis in line with workplace procedures and food regulations and guidelines

2.3 Food which does not meet health requirements is disposed of workplace procedures and regulatory requirements

3 Serve customers

3.1 Customer requirements are ascertained using appropriate inquiries in a courteous manner

3.2 Correct product and pricing information is clearly displayed
3.3 Specials are promoted and sales opportunities are identified and optimised

4 Carry out financial control procedures

4.1 Financial transactions are accurately carried out in accordance with regulatory requirements and workplace procedures
4.2 Financial reconciliation is carried out as required
4.3 Cash is securely handled and stored in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for operating an on-train buffet car
• Workplace knowledge requirements relevant to operating an on-train buffet car, including: relevant product knowledge, pricing structures, consumer laws and trade practice requirements, and health and hygiene regulations
• Equipment, and materials used when operating an on-train buffet car, and precautions and procedures that should be followed in their use
• Problems that may occur when operating an on-train buffet car and appropriate action that can be taken to resolve the problems
• Documentation and record requirements
• Communication and negotiation requirements when operating an on-train buffet car

Required skills:

• Communicate and negotiate effectively with others when operating an on-train buffet car
• Read and interpret instructions, procedures, information and labels relevant to the operation of an on-train buffet car
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the operation of an on-train buffet car
• Operate electronic communication equipment to required protocol
• Carry out relevant calculations and cash transactions
• Work collaboratively with others when operating an on-train buffet car
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating an on-train buffet car in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations when operating an on-train buffet car
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of an on-train buffet car
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Serve customers
• Select and use relevant equipment and food stock when operating an on-train buffet car
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Monitor performance of buffet equipment and take appropriate action if required
• Maintain and control stock
• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

- by day or night
- in a range of work environments
- in restricted spaces
- in exposed conditions

Work may involve:

- exposure to chemicals, dangerous or hazardous substances and movements of equipment, goods and vehicles

Equipment may include:

- cash register
- refrigeration equipment
- cooking equipment
- microwave
- kitchen utensils
- bain-marie
- coffee machines

Food may include:

- sandwiches
- pies
- sausage rolls
- snack food
- soft drinks
- confectionery
Consultative processes may involve:
- customers
- other workplace personnel
- supervisors and managers
- official representatives

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- work instructions, job description and induction materials
- manufacturers specifications for equipment
- relevant OH&S and environmental protection requirements and policies
- relevant codes of practice and regulations including health and hygiene requirements
- stock control and audit requirements
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLII1607C  Service freight customers

Unit Descriptor
This unit involves the skills and knowledge required to service freight customers in accordance with regulatory and workplace requirements including confirming freight customer needs; providing quotations; calculating freight charges; modifying products and services in response to identified customer needs; and promoting existing freight services. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning freight services.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the servicing of freight customers as part of work activities in the transport, distribution and/or allied industries.

Competency Field
I – Customer Service

ELEMENT

PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Confirm freight customer needs

1.1 Initial inquiries for freight service are handled promptly and courteously

1.2 Nature of freight service required is established with the customer

1.3 Ongoing customer liaison activities are maintained, where applicable, to establish future requirements

1.4 Unusual or special requests for freight service are referred to appropriate personnel for resolution

1.5 Support services required to meet customers' freight needs are established

1.6 Corporate or key account customers' freight needs are continuously monitored to ensure customer satisfaction

2 Provide quotations

2.1 Costs and conditions of the freight service(s) offered are provided to the customer

2.2 Customer queries relating to quotations are answered promptly in accordance with workplaces guidelines

2.3 Key account or potential key account quotations are handled in accordance with workplaces policies and procedures
3 Calculate freight charges

3.1 Confirmation is obtained that freight is weighed and/or measured using relevant mass or cubic calculation procedures
3.2 Details relevant to charges are accurately recorded to ensure charge calculations can be verified
3.3 Freight charges are accurately calculated and checked using relevant charge structures
3.4 Method of freight calculation applicable to the service and commodity is established in accordance with workplace policies and procedures
3.5 Freight charge discrepancies are recorded on relevant documentation for adjustment purposes

4 Modify products and services

4.1 Freight needs of assigned customers are assessed against current products and services offered by the workplace
4.2 Freight services offered by other providers including state, national and overseas providers are continuously reviewed
4.3 Requests for freight services not currently offered by the workplace are referred to appropriate personnel

5 Promote existing freight service

5.1 Existing freight services provided by the workplace are monitored
5.2 Promotional activities, including information seminars, are participated in and responses are followed up
5.3 Potential new account customers are identified and details of existing freight services are explained
5.4 Advertising programs promoting existing freight services are promoted to customers
5.5 Advantages of existing freight services are explained to potential customers

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Australian and international codes and regulations relevant to the maintenance of freight records, including the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the servicing of freight customers
- Focus of operation of work systems, equipment, management and site operating systems for the servicing of freight customers
- Problems that may occur when servicing freight customers and appropriate action that can be taken to resolve the problems
- Freight services offered by the workplace
• Freight management systems
• Workplace costing structures and rates
• Workplace public relations policies and procedures
• Profiles and details of all customers
• Workplace rail service advertising services and procedures
• Services provided by other freight service organisations
• Types of goods and related handling and documentation requirements including dangerous goods and hazardous substances
• Documentation requirements for freight forwarding including workplace freight tracking system
• Housekeeping standards procedures required in the workplace
• Freight transport timetables, yard and terminal facilities, and site layout

Required skills:
• Communicate effectively with others when servicing freight customers
• Read and interpret instructions, procedures, information and labels relevant to the servicing of freight customers
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the servicing of freight customers
• Present information using appropriate media and technology
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when servicing freight customers
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when servicing freight customers in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when servicing freight customers
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the servicing of freight customers
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant computer, communication and office equipment when servicing freight customers
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces
• exposed conditions
• controlled or open environments

Freight services covers: • the application of all products and services offered by the workplace

Promotional activities may include: • public relations activities
• press releases
• open days
• in-house newsletters
• publications
• advertising programs
• seminars
• promotional briefings

Support services can include: • loading/unloading requirements
• load security/protection
• receipt personnel
• special vehicle access/parking

Hazards in the work area may include: • exposure to chemicals
• exposure to dangerous or hazardous substances
• movements of equipment, goods, materials and vehicular traffic

Consultative processes may involve: • other employees and supervisors
• suppliers, customers and clients
• drivers and agents
• relevant authorities and institutions
• management and union representatives
• industrial relations and OH&S specialists
• other maintenance, professional or technical staff
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:
- goods identification numbers and codes
- manifests, cartnotes, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for freight tracking
- codes of practice and regulations relevant to the servicing of freight customers
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian Standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for freight forwarding
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- privacy legislation
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying and confirming freight customer needs
  - providing accurate quotations to meet customer needs
  - communicating and negotiating with customers
  - promoting existing freight services
  - calculating freight charges accurately

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge
assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLII1707C  Develop freight customers

Unit Descriptor
This unit involves the skills and knowledge required to develop freight customers in accordance with workplace requirements including identifying and evaluating potential freight business; developing proposals for new products or services; and negotiating products and services with customers. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the provision of freight services.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the development of freight customers as part of work activities in the transport, distribution and/or allied industries.

Competency Field
I – Customer Service

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify potential freight business
1.1 The nature of potential customers freight needs is established with the customer
1.2 Customers freight needs are analysed against existing services to identify variances against normal services
1.3 Potential new customers are kept informed during review process

2 Evaluate potential business
2.1 Potential new business is analysed against existing freight services offered by the workplace
2.2 Special transportation requirements are identified and discussed with the customer
2.3 Cost effectiveness of potential new business is established using workplace guidelines

3 Develop proposals for new products or services
3.1 Potential new business is costed against new product or service
3.2 Proposed new product or service is documented and presented for further consideration
3.3 Decision regarding new product or service is conveyed promptly to the potential customer for follow-up action
4 Negotiate products and services with customers

4.1 Techniques for minimising potential damage to freight are identified and negotiated with customers
4.2 New products or services required to meet or improve customer services are implemented as approved

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to freight services, including the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the international codes and regulations relevant to the development of freight customers
- Focus of operation of work systems, equipment, management and site operating systems for the development of freight customers
- Problems that may occur when developing freight customers and appropriate action that can be taken to resolve the problems
- Freight services offered by the workplace
- Freight management systems
- Workplace costing structures and rates
- Workplace public relations policies and procedures
- Profiles and details of all customers
- Workplace freight service advertising policies and procedures
- Services provided by other freight service organisations
- Documentation requirements for the development of freight customers
- Freight transport timetables, yard and terminal facilities, and site layout

Required skills:

- Negotiate, communicate and liaise effectively with others when developing freight customers
- Read and interpret instructions, procedures and information relevant to the development of freight customers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the development of freight customers
- Operate electronic communication equipment to required protocol
- Undertake financial calculations involving cost analysis
- Prepare and present quotations
- Work collaboratively with others when developing freight customers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when developing freight customers in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the development of freight customers
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant computer, communication and office equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  • in a range of work environments by day or night
                        • by day or night
Customers may be:        • internal or external
Workplaces may comprise:  • large, medium or small worksites
Work may be conducted in: • limited or restricted spaces
                        • exposed conditions
                        • controlled or open environments
Potential customers include:  • all other rail and freight authorities
                        • private businesses
                        • government bodies
                        • members of the public
                        • internal customers
Promotional activities may include:
- public relations activities
- press releases
- open days
- in-house newsletters
- publications
- advertising programs
- seminars
- promotional briefings
- corporate sponsorship
- development of promotional materials

Servicing requirements may be obtained from:
- customer requests
- works orders
- freight requirements
- organisation personnel

Hazards in the work area may include:
- exposure to chemicals
- exposure to dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Consultative processes may involve:
- other employees and supervisors
- current and potential customers
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- market knowledge about competitors who are providing rail freight and those providing alternative transport systems
- customer requests and works orders
- workplace procedures and policies
- codes of practice and regulations relevant to freight services
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- internal documentation used for freight services
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian Standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations for the provision of freight services
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- privacy legislation
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying and cultivating potential freight business
  - developing proposals for new products and services
  - negotiating with customers regarding products and services

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
• access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

• Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLII1807B**  
**Manage customer service**

**Unit Descriptor**  
This unit involves the skills and knowledge required to manage customer service. It includes planning to meet internal and external customer requirements; ensuring delivery of quality products/services; and monitoring, adjusting and reporting customer service. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

**Competency Field**  
I – Customer Service

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Plan to meet internal and external customer requirements** | 1.1 The needs of customers are researched, understood and assessed, and included in the planning process  
1.2 Provision is made in plans to achieve the quality, time and cost specifications agreed with customers |
| **2 Ensure delivery of quality products/services** | 2.1 Products/services are delivered to customer specifications within the team's/organisation's business plan  
2.2 Individual/team performance consistently meets quality, safety, resource and delivery standards  
2.3 Coaching and mentoring assist colleagues to overcome difficulty in meeting customer service standards  
2.4 Resources are used effectively and efficiently to provide quality products/services to customers |
| **3 Monitor, adjust and report customer service** | 3.1 The organisation's systems and technology are used to monitor progress in achieving product/service targets and standards  
3.2 Customer feedback is sought and used to improve the provision of products/services  
3.3 Decisions to overcome problems and make improvements to products/services are taken in consultation with designated individuals/groups  
3.4 Adjustments are made to products/services, and those who have a role in their planning and delivery are informed of |
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of national and state or territory regulatory requirements and codes of practice such as consumer protection legislation
- Relevant OH&S and environmental procedures and regulations
- Organisational policies, principles, codes and performance standards
- Risk management as it relates to dealings with customers, and managing potential fall-out from poor customer service
- Performance management systems used in the organisation
- Quality management systems
- Requirements for completing relevant documentation such as reports of customer complaints and resolutions
- Steps involved in planning the work activities

Required skills:
- Communicate and consult with others to ensure excellent customer service is modelled to staff and that customer issues are resolved
- Prepare reports to develop and disseminate information on customer service performance
- Interpret and follow operational instructions and prioritise work
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Deal effectively with unplanned events such as a change in the volume of customer enquiries
- Monitor work activities in terms of planned schedule, particularly in line with agreed time and quality standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Appropriate systems may include:
- quality management
- customer feedback/response

Customer service standards and plans may include:
- response times/delivery times
- protocols to which staff are trained to provide consistent quality service
- quality specifications
Documentation and records may include:
- quality assurance procedures
- emergency procedures
- customer surveys, lists of complaints, reports from staff in relation to customers

Applicable legislation and regulations may include:
- Australian legislation, regulations and codes of practice, including consumer protection legislation
- workplace relations regulations

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

**Context of and specific resources for assessment**
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLII1909A**

**Provide taxicab customer service**

**Unit Descriptor**
This unit involves the skills and knowledge required to provide customer service to passengers in taxicabs. It includes establishing effective communication, identifying and assessing the needs and expectations of different customers, meeting the identified customer requirements, and dealing with difficult customer situations. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
This unit applies to work carried out in accordance with taxi industry regulations and relevant legislative requirements, including those relating to equal opportunity/anti-discrimination.

Work is performed under general supervision. It involves the application of routine procedures for providing customer service to passengers in taxicabs.

**Competency Field**
I – Customer Service

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Establish contact with customers**

1.1 A welcoming customer environment is created and maintained
1.2 Customers are acknowledged and greeted courteously and politely according to workplace policies and procedures
1.3 Communication with customers is clear, concise and courteous
1.4 Appropriate communication channels are used
1.5 An effective service environment is created through verbal and non-verbal presentation according to workplace policies and procedures
1.6 Cultural diversity and discrimination issues are recognised and applied
1.7 Acceptable and respectful behaviour towards customers is applied

2 **Present a positive organisational/professional image**

2.1 Dress code and personal grooming are maintained to a professional standard in accordance with regulator and workplace requirements
2.2 Vehicle cleanliness and tidiness is monitored and maintained
2.3 All actions taken are in keeping with established requirements and workplace procedures and legislation
3 Identify the needs and expectations of different customers

3.1 Individual customer preferences, needs and expectations are clarified
3.2 Customers with limited mobility are identified, and appropriate attention is given to ensure that their requirements are satisfied
3.3 Communication suited to the situation is used
3.4 Limitations to service provision are identified, communicated to customers, and checked for understanding

4 Meet the identified customer needs and expectations

4.1 Reasonable requests of customers are met in a courteous and timely manner
4.2 Customer dissatisfaction is promptly recognised and appropriate steps are taken to restore satisfaction
4.3 Anticipated problems are correctly identified and monitored and action is taken to minimise their effects on customer satisfaction
4.4 Opportunities to enhance the quality of service are taken whenever possible
4.5 Information regarding both anticipated and unanticipated problems and delays is promptly communicated to customers

5 Deal with difficult customer situations

5.1 Potentially difficult customer situations are identified
5.2 Conflict situations are dealt with using effective communication skills according to industry and regulatory policies and procedures and customer service protocols
5.3 Incidents are reported to the appropriate personnel according to workplace policies and procedures

6 Apply ethical behaviour

6.1 Ethical behaviour that avoids any form of sexual harassment, or physical or mental abuse, or intimidation towards passengers and other road users is applied

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant Australian and state/territory transport and taxi regulations, standards and codes of practice
- Relevant OH&S, equal opportunity and anti-discrimination procedures and guidelines
- Procedures and protocols for the provision of taxicab services to customers
- Requirements of workplace systems and operations and relevant equipment
- Risks involved in workplace operations and related precautions to control the risk
- Industry and workplace policies and procedures for the coordination of quality customer service in the taxi industry
• Sources of information and documentation needed when providing taxicab services to customers
• Effective customer service techniques that may include:
  o giving customers full attention
  o active listening
  o maintaining eye contact (for face-to-face interactions)
  o open and/or closed questions
  o speaking clearly and concisely
  o appropriate language style and tone of voice
  o culturally appropriate communication
  o conversing with people with disabilities
  o writing legibly
• Personal presentation requirements
• The taxi driver’s role in presenting a positive image to the public and delivering customer service
• The role of customer service in company profitability
• Typical problems that can occur when providing taxicab services to customers and related appropriate action that can be taken to prevent or solve them
• Relevant taxi transport subsidy scheme for the state or territory
• Services for customers with disabilities
• Security and emergency procedures
• Fare structures

**Required skills:**
• Communicate effectively with others when providing taxicab customer service to customers
• Read and interpret instructions, procedures, information and signs relevant to providing taxicab customer service to customers
• Read and interpret instructions, procedures, information and signs relevant to the provision of taxicab services to customers
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to customer service in the taxi industry
• Work collaboratively with others when applying customer service
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when providing taxicab service to customers, in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when providing taxicab service to customers
• Identify and correctly use equipment, processes and procedures
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Apply relevant codes of practice and legislative requirements
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Customer contact:

• is typically a single encounter on a one-to-one basis
• includes all points of customer contact before, during and after the journey

Customers may include:

• regular and new customers
• customers with routine and special requests
• people from a range of social, cultural or ethnic backgrounds
• people with varying physical and intellectual abilities, including those with sight and hearing impairments
• people who may be unwell, drug affected and emotionally distressed

Customers with special needs may include:

• international visitors
• pregnant women/nursing mothers
• the elderly
• people with physical and/or intellectual disabilities
• children travelling alone or under supervision
• people with specific cultural or language needs
• parents with young children

Customers with special needs may require transport within the taxicab of:

• guide dog
• walking frame
• walking stick
• foldaway wheel chair
• pram/pusher
• crutches
Difficult customer situations may include:

- abusive, racist or sexual encounters
- lack of ability to speak English by passengers
- aggressive customers
- fare evaders
- drug affected/intoxicated customers
- lack of compliance with no smoking signs
- graffiti in taxi cab by customer

Requirements for dress code and personal grooming may include:

- conforming to company and regulatory requirements for driver appearance and presentation
- wearing a uniform or a standard of dress approved by the company
- maintaining personal grooming and hygiene at a standard that is acceptable to customers within the context of work

Workplace policies and procedures may include:

- customer service standards and procedures, including dealing with customer requests
- quality assurance procedures
- security and emergency procedures
- industry, regulatory and company procedures for dealing with difficult customer situations
- security and emergency procedures codes
- lost property procedures

Regulatory policies and procedures may include:

- relevant national/state/territory transport and taxi regulations
- relevant national/state/territory OH&S regulations and legislation
- relevant national/state/territory equal opportunity and anti-discrimination legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - communicating effectively with a range of customers
identifying the needs of customers
selecting and using appropriate workplace
colloquial and technical language and
communication technologies
adopting ethical behaviour that avoids any
form of sexual harassment, or physical or
mental abuse, or intimidation towards
passengers and other road users
recognising and adapting appropriately to
cultural differences in customers
meeting customer needs
dealing with common customer complaints
and taking steps to avoid them
identifying difficult customer situations and
applying problem solving techniques and
conflict resolution skills where necessary
working effectively with others
maintaining workplace records
maintaining personal appearance
following taxi housekeeping procedures

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies
    and other simulated practical and knowledge
    assessment, and/or
  o access to an appropriate range of relevant
    operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or
    equipment, and/or
  o applicable documentation including
    workplace procedures, regulations, codes of
    practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a
  registered training organisation
• As a minimum, assessment of knowledge must be
  conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at
    the registered training organisation, and/or
  o in an appropriate range of situations in the
    workplace
**TLI207D**

**Apply customer service skills**

**Unit Descriptor**

This unit involves the skills and knowledge required to apply routine customer service skills to relevant workplace operations including dealing with customer inquiries, monitoring customer satisfaction and taking appropriate action to satisfy customer needs. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Work must be carried out in accordance with workplace standards and procedures for the provision of customer service.

Work is performed under supervision. It involves the application of established routine customer service principles and procedures to day-to-day interactions with internal and external customers during workplace operations.

**Competency Field**

I – Customer Service

---

**ELEMENT**

Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

**1 Deal with customer inquiries**

1.1 Customer inquiries are dealt with courteously and efficiently both by phone and face to face

1.2 Questions are used to clarify the customer's needs or concerns

1.3 Assistance from other staff is sought when a customer's inquiry cannot be fully answered

1.4 Knowledge of products, services and/or operations is used to answer customer queries or to respond to customers' needs

1.5 Customer inquiries and associated action are recorded and reported in accordance with workplace procedures

**2 Monitor customer satisfaction**

2.1 Customer is greeted cordially in accordance with workplace procedures

2.2 Customer requirements are dealt with according to workplace procedures

2.3 Special needs are addressed within workplace policies

2.4 Appropriate feedback is provided to managers and internal and/or external customers

---

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant duty of care responsibilities
• Relevant OH&S and environmental procedures and regulations
• Workplace procedures relevant to work activities
• Customer service policies and procedures
• Products and/or services provided by the workplace concerned
• Types of operations carried out in the workplace concerned
• Sources of information and documentation needed for workplace operations

**Required skills:**
• Communicate effectively with others when providing customer service, including the use of telephone techniques
• Effectively use interpersonal skills
• Effectively handle customer queries and complaints
• Read and interpret instructions, procedures, information and labels relevant to the provision of customer service
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the provision of customer service
• Write simple reports and records of inquiries
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when providing customer service
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when providing customer service in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies and environments
• Work systematically with required attention to detail
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Customer service is provided:
• in all areas of transport, distribution and storage including the provision of a range of services and/or the collection, movement, storage and delivery of equipment, goods, materials and various forms of freight

Workplace activities may be conducted:
• by day or night
• in any weather conditions

Customers may be:
• internal or external
Requirements for work may include:

- site restrictions and procedures
- relevant domestic and international regulations
- security procedures
- communications equipment
- hours of operation
- authorities and permits
- use of safety and personal protective equipment

Consultative processes may involve:

- existing and potential customers/clients
- other employees and supervisors
- suppliers
- manufacturers
- relevant authorities
- management
- union representatives
- OH&S specialists
- other maintenance, professional or technical staff

Communications systems may involve:

- face-to-face conversation
- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- workplace procedures
- organisational procedures
- established procedures
Documentation/records may include:

- workplace procedures and customer service standards
- job specifications
- operations manuals and instructions
- induction documentation
- competency standards and training materials
- manufacturers specifications, instructions and advice including material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- relevant Australian and international regulations, codes, standards and certification requirements
- OH&S procedures
- quality assurance procedures
- emergency procedures
- customer service manuals

Applicable regulations and legislation may include:

- relevant state/territory and international regulations, codes and procedures
- relevant Australian and international standards and certification requirements
- dangerous goods and hazardous substances codes and regulations
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant anti-discrimination legislation
- relevant privacy and confidentiality legislation
- relevant freedom of information requirements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
Resources for assessment include:
- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLII307C  Provide customer service in transport vehicles/vessels

Unit Descriptor
This unit involves the skills and knowledge required to provide customer service for local and overseas passengers in transport vehicles/vessels. This includes monitoring and addressing passenger needs, preparing and delivering commentaries, resolving problems and conflicts involving customers, and liaising with the suppliers of tourism products to ensure appropriate materials and services are obtained and made available to service customer needs. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Customer service will be carried out in accordance with tourism and transport industries codes of practice and/or company procedures.

Work will be undertaken with limited or minimum supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Customer service involves the application of routine service principles and procedures to fulfil the information, comfort and other needs of both local and overseas tourism customers travelling in transport vehicles/vessels.

Competency Field
I – Customer Service

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

ELEMENT

1 Monitor and address passenger needs

1.1 Circumstances affecting passengers' needs and comfort are monitored and action taken in accordance with company procedures

1.2 Needs of all types of passengers are acknowledged and appropriate assistance provided

1.3 Passengers are advised on the operation of internal vehicle/vessel facilities and the benefits of wearing seat belts, where relevant

1.4 Risks to passenger safety are identified and appropriate action initiated to minimise the risk

1.5 Passengers are suitably advised of any safety risk and the action being taken

1.6 Tact, courtesy, friendliness and patience are demonstrated at all times when dealing with passengers

1.7 Passenger inquiries and requests are received and resolved
1.8 Passenger inquiries and associated action are recorded and reported in accordance with company procedures

2 Prepare and deliver commentaries
2.1 Comprehensive briefings are delivered clearly and precisely
2.2 Commentary presentations are well researched and delivered clearly and at precise timings
2.3 Additional information is provided in response to questions
2.4 Audiovisual equipment is correctly and safely operated, where installed

3 Implement conflict resolution strategies
3.1 Conflict and difficult situations are recognised and fair solutions are negotiated equitably
3.2 Conflicts which are unable to be resolved are referred to a higher authority
3.3 Opportunities to enhance the quality of the service are taken, particularly in conflict situations

4 Communicate with suppliers
4.1 Liaison is maintained with suppliers of tourism products and/or information to obtain accurate and comprehensive information on products available to meet customer needs
4.2 Needs for tourism products and/or information are appropriately communicated to relevant company personnel

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory regulations and industry codes of practice concerning tourism and transport operations as they relate to customer service and safety in tourism vehicles/vessels
- Relevant OH&S and environmental procedures and regulations
- Company customer service policies and procedures
- Relevant tourism products, services and/or operations
- Route information
- Local knowledge of features, history, landmarks and other items of interest to tourist passengers
- Special needs of persons with disabilities
- Special needs of different community sectors/cultures
- Procedures for the use of audiovisual equipment
- Procedures for the use of communications equipment
- Procedures for the handling of customer questions, complaints and conflicts

Required skills:
• Communicate effectively with others when providing customer service in transport vessels and vehicles
• Interact effectively with passengers
• Read and interpret instructions, procedures, information and signs relevant to the provision of customer service in transport vessels and vehicles
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the provision of customer service in transport vessels and vehicles
• Operate electronic communication equipment to required protocol
• Conduct presentations to tourist passengers
• Provide leadership in the provision of customer service to tourism passengers
• Work collaboratively with others when providing customer service in transport vessels and vehicles
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when providing customer service in transport vessels and vehicles in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when providing customer service in transport vessels and vehicles
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the provision of customer service in transport vessels and vehicles
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle/vessel may include:

• all transport vehicles/vessels providing services to local and overseas customers that may involve commentaries, answers to questions, and resolution of problems and conflict situations, including coaches, buses, taxis, hire cars, trams, trains, and tourism vessels and ferries on both short or long journeys/voyages, as required
Equipment may include:
- public address audio
- video players and videotapes
- audiotape/CD players and tapes/CDs
- interactive computer/video equipment

Information/documents may include:
- tourism industry codes of practice or recommended procedures
- company instructions and customer service procedures
- tourism information including pamphlets, brochures and booklets
- video and audio cassettes and CDs

Applicable procedures and codes may include:
- relevant state/territory regulations concerning tourism and transport operations as they relate to customer service and safety in tourism vehicles/vessels
- relevant state/territory OH&S legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a
registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLII407C Manage camping procedures for coaches and buses

Unit Descriptor
This unit involves the skills and knowledge required to manage camping procedures for tour operations including preparing for a camping tour, overseeing the establishment of a camp site, and supervising the vacation of the campsite in accordance with regulations and workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and permit requirements pertaining to camping activities conducted as part of tour operations.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Work involves the application of routine procedures to manage camping activities across a variety of tour operation contexts.

Competency Field
I – Customer Service

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for camping tour
1.1 Camping equipment requirements are identified and obtained
1.2 All equipment is checked for serviceability and damage prior to commencement of tour
1.3 Damaged items are repaired or replaced in accordance with workplace policy
1.4 All consumables required for the tour are determined and obtained in accordance with workplace procedures prior to commencement of tour

2 Oversee the establishment of the camp site
2.1 A suitable, level campsite is selected
2.2 Unloading of equipment and erection and commissioning of camping equipment is supervised
2.3 Appropriate arrangements are made with the host/cook for meals and other services during camping activity
2.4 Participants are advised of health and safety requirements and precautions including the safe use of fires

3 Vacate the campsite
3.1 The procedures for the vacation of the campsite are supervised in accordance with workplace procedures
3.2 The campsite is inspected for cleanliness and misplaced equipment in accordance with regulations and workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulations and permit requirements pertaining to camping activities
- Relevant OH&S and environmental procedures and regulations
- Workplace camping procedures
- Relevant camping equipment and instructions for its use
- Customer service policies and procedures
- Special needs of persons with disabilities
- Special needs of different community sectors and cultures
- Local knowledge including camping areas and facilities
- Typical problems that may arise during the management of camping activities for coaches and buses and action that should be taken
- Procedures to be followed in the event of a camping emergency

Required skills:
- Communicate effectively with others when managing camping activities for coaches and buses
- Handle complaints and conflicts that may arise during the management of camping activities for coaches and buses
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing camping activities for coaches and buses
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise during the management of camping activities for coaches and buses in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Implement contingency plans for unanticipated situations that may occur during the management of camping activities for coaches and buses
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Provide customer service during camping operations
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify and correctly use camping equipment
• Monitor condition and performance of camping equipment and take appropriate action if required
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Camping operations are those carried out as part of:
• tour operations, including coaches, buses and other relevant tourism vehicles

Campsite operations may be carried out:
• in any transport environment, including operations conducted at day or night and typical weather conditions

Procedures for the vacation of a campsite may include:
• dismantling of equipment
• cleaning of the equipment and site
• loading of coach/vehicle/trailer
• extinguishing of fires

Camping hazards may include (examples only):
• fire or explosion
• flood
• animals
• poisonous insects, spiders and snakes
• damaged or faulty equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Documentation/records may include:
• relevant state/territory regulations and permit requirements pertaining to camping activities
• workplace camping instructions and procedures
• equipment manufacturers instructions, specifications and recommended procedures, including pre-operational checks of equipment
• emergency procedures
• camping tour log book or record book (where required)
Applicable procedures and codes may include:

- relevant state/territory regulations and requirements pertaining to camping operations
- relevant state/territory OH&S legislation
- relevant state/territory food and health regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLII507C  Market services and products to clients

Unit Descriptor
This unit involves the skills and knowledge required to market services and products to clients including recognising and acting upon opportunities to promote products and services, establishing and maintaining contact with clients, and negotiating and closing sales in accordance with statutory retail practice and workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work involves discretion and judgement for self and others in marketing services and products to clients. It is performed under minimum supervision with general guidance on progress and outcomes of work.

A range of opportunities may be used to develop the workplace and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives.

Work involves responsibility for marketing services and products to clients and the provision of leadership of others either individually or in teams.

Competency Field
I – Customer Service

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Recognise opportunities to promote products and services
1.1 Products and services available for on-selling from the enterprise are identified
1.2 Technical specifications and application(s) of products and services are identified
1.3 Applicability of products and or services are matched to particular clients or client groups
1.4 Features of products and services (including technical specifications) are explained in relation to customer requirements or potential requirements
1.5 Where appropriate, clients are referred to expert personnel or services

2 Establish and maintain contact with clients
2.1 Communication with clients is established and maintained to develop a professional relationship
2.2 Clients are informed of the full range of business products
2.3 Follow-up contacts with clients are made on client request and
3 Negotiate sales

3.1 Potential sales opportunities are recognised and acted upon
3.2 Negotiations with clients maintain enterprise professional standards and client satisfaction

4 Close sales

4.1 Documentation of the agreement is completed in accordance with enterprise policy, incorporating any special requirements
4.2 Contact with customers is maintained until sale is completed
4.3 After-sales service is provided in accordance with enterprise procedures and statutory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulatory requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the marketing of services and products to clients
- Relevant workplace business marketing policies and practices, including requirements for the maintenance of security and confidentiality
- Strategies to implement continuous improvement processes
- Focus of operation of marketing systems and resources
- Typical problems that can occur when marketing services and products to clients and related appropriate action that can be taken

Required skills:
- Communicate effectively with others when marketing services and products to clients
- Negotiate and work effectively with others
- Read and interpret instructions, procedures and information relevant to the marketing of services and products to clients
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the marketing of services and products to clients
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when marketing services and products to clients
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when marketing services and products to clients in accordance with regulatory requirements and workplace procedures
- Plan work activities, including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
• Identify improvements to services, resource allocation and use
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
• single and multi-site locations
• large, medium and/or small companies

Services, products, risks, work systems and requirements may:
• potentially vary across different sections of the workplace

Operations involve:
• internal and external customer contact and coordination

Products may be:
• existing or potential

Consultative processes may involve:
• existing and potential customers/clients
• other employees and supervisors
• suppliers
• manufacturers
• relevant authorities
• management
• union representatives
• OH&S specialists
• other maintenance, professional or technical staff

Communications systems may involve:
• face-to-face conversation
• telephone
• fax
• email
• electronic data transfer of information (EDI)
• mail
Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures

Information/documentation may include:

- workplace procedures for the marketing of services and products
- current and potential customer/client instructions and assessed requirements
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, codes of practice including the national standards for services and operations
- manufacturers/suppliers specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- legislation, regulations and related documentation relevant to business operations
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- trading regulations relevant to business operations
- relevant Australian and state/territory OH&S legislation
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts.
- Resources for assessment include:
  - A range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant operational situations in the workplace.
- In both real and simulated environments, access is required to:
  - Relevant and appropriate materials and/or equipment, and/or
  - Applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation.
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.
- Practical assessment must occur:
  - Through appropriately simulated activities at the registered training organisation, and/or
  - In an appropriate range of situations in the workplace.
TLII607D  Provide freight forwarding services to customers

Unit Descriptor
This unit involves the skills and knowledge required to provide freight forwarding services to customers, including dealing with customer freight forwarding inquiries and explaining the processes and parameters of freight forwarding services. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant codes of practice and regulations for the carriage of freight.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the provision of freight forwarding services to customers.

Competency Field
I – Customer Service

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Deal with customer freight forwarding inquiries
1.1 Customer inquiries are dealt with courteously and efficiently
1.2 Questions are used to clarify customer requirements, needs or concerns
1.3 Information is accurately conveyed to the customer in a manner consistent with their level of understanding
1.4 Areas not effectively dealt with are forwarded to other workplace personnel or external individuals/authorities in accordance with workplace procedures
1.5 Follow-up procedures are undertaken in accordance with workplace procedures

2 Explain the process of freight forwarding
2.1 The freight forwarding chain of operations is explained to customers
2.2 Parameters of freight forwarding services relevant to customer requirements are explained in accordance with company procedures
2.3 Documentation concerning service provision is forwarded to the customer in accordance with workplace procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant codes of practice and legislative requirements including local and international freight regulations
- Relevant OH&S and environmental procedures and regulations
- Procedures and protocols for the provision of freight forwarding services to customers
- Sources of information and documentation needed when providing freight forwarding services to customers
- Customer service policies and procedures
- Typical problems that can occur when providing freight forwarding services to customers and related appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate effectively with others when providing freight forwarding services to customers
- Read and interpret instructions, procedures, information and signs relevant to the provision of freight forwarding services to customers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of freight forwarding services to customers including data entry to a computer
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing freight forwarding services to customers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when providing freight forwarding services to customers in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when providing freight forwarding services to customers
- Monitor work activities in terms of planned schedule
- Apply relevant codes of practice and legislative requirements including local and international freight
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
- Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Customer information may include:

• business structure
• general freight forwarding requirements
• legislative requirements
• information on export clearances
• documentation services
• freight charges

Workplace activities may be conducted:

• by day or night
• in any weather conditions

Customers may be:

• internal or external

Environment may include movement of:

• equipment
• goods
• materials
• vehicular traffic

Requirements for work may include:

• freight forwarding protocols and procedures
• communications equipment
• workplace operations
• authorities and permits
• hours of operation
• relevant regulations

Parameters of freight forwarding services relevant to customer requirements may include:

• procedures for forwarding freight
• type of transport modes
• various consignment methods
• relevant legislative requirements
• required import/export documentation and requirements
• insurance requirements
• service costs
• payment requirements and procedures
• fiduciary and legal responsibilities of either party
Communications systems may involve:
- face-to-face conversation
- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

Consultative processes may involve:
- other employees and supervisors
- international and domestic agents, suppliers, clients
- relevant authorities and institutions
- management
- OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- operations manuals, job specifications and procedures and induction documentation
- competency standards and training materials
- manufacturers/client specifications, instructions
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures
Applicable procedures and codes may include:

- regulations and codes of practice for the local and international transport of freight
- relevant regulations for the import and export of cargo
- Australian and International Standards and certification requirements
- relevant state/territory OH&S legislation
- relevant regulations pertaining to trading and financial transactions
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - providing information to customers on freight forwarding operations
  - advising on procedures and protocols for forwarding various cargo to different destinations
  - maintaining enterprise records and documentation
  - advising on relevant export regulations and required documentation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including
workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLII707E Provide freight forwarding information to customers

Unit Descriptor
This unit involves the skills and knowledge required to provide freight forwarding information to customers in accordance with regulatory and workplace requirements, including dealing with customer freight forwarding inquiries and explaining the process of freight forwarding upon request. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning freight forwarding.

Work is performed under some supervision generally within a team environment.

This unit is normally packaged at AQF III or above.

Competency Field
I – Customer Service

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Deal with customer freight forwarding inquiries

1.1 Customer inquiries are dealt with courteously and efficiently
1.2 Questions are used to clarify customer requirements, needs or concerns
1.3 Information is accurately conveyed to the customer in a manner consistent with their level of understanding
1.4 Areas not effectively dealt with are forwarded to other enterprise personnel or external individuals/authorities in accordance with enterprise procedures
1.5 Follow-up procedures are undertaken in accordance with enterprise procedures

2 Explain the process of freight forwarding

2.1 The freight forwarding chain of operations is explained to customers
2.2 Parameters of service relevant to customer requirements are explained in accordance with workplace procedures
2.3 Handling and documentation requirements for various types of goods are explained to customers including dangerous goods and hazardous substances
2.4 Documentation concerning service provision is forwarded to the customer in accordance with enterprise procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to freight forwarding, including the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies relevant to the provision of freight handling information to customers
- Focus of operation of work systems, equipment, management and site operating systems for the provision of freight handling information to customers
- Problems that may occur when providing freight handling information and appropriate action that can be taken to prevent or resolve the problems
- Types of transport used in international trade and knowledge of the most economical modes of transport for different situations
- Types of goods and related handling and documentation requirements including dangerous goods and hazardous substances
- Documentation requirements for the freight handling services including workplace freight tracking system
- Freight transport timetables, yard and terminal facilities, and site layout
- Housekeeping standards procedures required in the workplace

Required skills:

- Communicate effectively with others when providing freight forwarding information
- Read and interpret instructions, procedures, information and labels relevant to the provision of freight forwarding information
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of freight forwarding information
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing freight forwarding information
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when providing freight handling information in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when providing freight forwarding information
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant computer, communication and office equipment when providing freight handling information
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- Work may be conducted: in a range of work environments
  - by day or night
- Customers may be: internal or external
- Workplaces may comprise: large, medium or small worksites
- Work may be conducted in: limited or restricted spaces
  - exposed conditions
  - controlled or open environments
- Freight may include: all forms of freight. Some freight may involve special handling and storage requirements, including temperature controlled goods, dangerous goods, explosives and hazardous substances
- Parameters of freight forwarding service that may be explained to customers include:
  - procedures for forwarding freight
  - type of transport modes
  - various consignment methods
  - relevant legislative requirements
  - required import/export documentation and requirements
  - insurance requirements
  - service costs
  - payment requirements and procedures
  - fiduciary and legal responsibilities of either party
- Customer information may include:
  - business structure
  - general freight forwarding requirements
  - legislative requirements
  - information on export clearances
  - documentation services
  - freight charges
| Hazards in the work area may include: | • exposure to chemicals  
• exposure to dangerous or hazardous substances  
• movements of equipment, goods, materials and vehicular traffic |
| Consultative processes may involve: | • other employees and supervisors  
• suppliers, customers and clients  
• drivers and agents  
• relevant authorities and institutions  
• management and union representatives  
• industrial relations and OH&S specialists  
• other maintenance, professional or technical staff |
| Communication in the work area may include: | • phone  
• electronic data interchange (EDI)  
• fax  
• email  
• internet  
• RF systems  
• oral, aural or signed communications |
| Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: | • company procedures  
• enterprise procedures  
• organisational procedures  
• established procedures |
| Personal protective equipment may include: | • gloves  
• safety headwear and footwear  
• safety glasses  
• two-way radios  
• high visibility clothing |
Information/documents may include:

- goods identification numbers and codes
- manifests, cartnotes, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for freight tracking
- codes of practice and regulations relevant to the transport of goods
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian Standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant sections of Customs legislation, regulations and codes for the transport of freight
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and international Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and international explosives codes
- privacy legislation
- water and road use and license arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - reading and interpreting freight documentation
  - providing information to customers on freight forwarding operations
  - maintaining enterprise records and documentation
  - advising on relevant export regulations and required documentation
  - advise on procedures and protocols for forwarding various cargo to different destinations

Context of and specific

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLII807C**  
**Monitor transport activities at interchanges**

**Unit Descriptor**  
This unit involves the skills and knowledge required to monitor transport activities at interchanges including monitoring transport and passenger movements, identifying and attending to coordination problems, and informing customers of irregularities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Work must be carried out in accordance with relevant workplace procedures.

Work is performed under some supervision, generally within a team environment.

Work involves the application of routine procedures and regulatory requirements to the monitoring of transport activities at interchanges.

**Competency Field**  
I – Customer Service

| **1** Monitor transport and passenger movements | 1.1 Passenger and vehicle movements are monitored and recorded following workplace procedures  
1.2 Passenger and vehicle movement irregularities are identified and recorded and possible solutions are provided  
1.3 Timetables are monitored to identify variations and recommend where action is required  
1.4 Documentation is completed in accordance with workplace requirements to maintain transport movement records |
| **2** Identify coordination problems | 2.1 Problems with services coordination are reported promptly and possible solutions are submitted to the relevant authority  
2.2 Irregularities with internal systems are reported promptly according to organisation procedures |
| **3** Inform customers of irregularities | 3.1 Communications systems and equipment are operated in accordance with workplace policies and procedures to make necessary announcements  
3.2 Passengers are informed of irregularities and service changes promptly, clearly and courteously  
3.3 Transport service adjustments are conveyed to transport system staff |
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory regulations and requirements pertaining to revenue protection
- Relevant OH&S and environmental protection procedures and guidelines
- Risks and hazards when monitoring transport activities at interchanges and related precautions to control the risk
- Organisation's transport services
- Complementary transport services
- Fare structures
- Concessional privileges
- Timetables
- Organisational policies and procedures
- Customer service requirements
- Typical problems that can occur monitoring transport activities at interchanges and related appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate effectively with others when monitoring transport activities at interchanges
- Handle and resolve conflict situations
- Read and interpret instructions, procedures, information and signs relevant to the monitoring of transport activities at interchanges
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the monitoring of transport activities at interchanges
- Operate electronic communication equipment to required protocol, including radio systems
- Calculate fares
- Work collaboratively with others when monitoring transport activities at interchanges
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when monitoring transport activities at interchanges in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when monitoring transport activities at interchanges
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the monitoring of transport activities at interchanges
- Organise staff deployment
- Manage stress when monitoring transport activities at interchanges
- Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Manage barrier operation
• Validate tickets
• Use basic mechanical skills required when monitoring transport activities at interchanges
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• in a range of work environments and weather conditions
• by day or night

Interchange operation embraces facilities used by:
• the organisation for the transfer of customers from one type of transport service to another or between services

Equipment may include:
• communication equipment
• video/audio equipment
• computer and related office equipment
• timetables and service information

Timetable variation refers to:
• services falling outside the boundaries used by the transport system in monitoring the compliance to scheduled services

Communications systems used can include:
• public address system
• telephone
• two-way radio

Internal systems include:
• timetables
• electronic equipment
• communications equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Information/documents may include:

- workplace policies, standards and procedures
- information from observation of passenger and vehicle movement
- transport timetables
- transport service information
- communication with other personnel
- relevant regulations concerning transport operations
- competency standards and training materials
- quality assurance procedures
- security and emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and legislation concerned with revenue protection within transport systems
- relevant state/territory OH&S regulations and legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of
practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLII907C  Provide on-board services to customers

Unit Descriptor
This unit involves the skills and knowledge required to provide on-board services to customers including establishing effective communication with customers, identifying and assessing the needs and expectations of different customers, and providing for the identified customer requirements in accordance with company procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work is performed individually, and guidance or advice is available where necessary.

Work involves the application of routine workplace procedures to the provision of on-board services to customers on transport vehicles/vessels.

Competency Field
I – Customer Service

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Establish effective communication with customers
1.1 All customers are greeted in a polite and friendly manner, and formal and informal communication styles are applied as appropriate
1.2 All communications with customers are conducted in a manner which is consistent with organisation's policy

2 Identify and assess the needs and expectations of different customers
2.1 Individual customer needs and expectations are identified so that appropriate products and services may be provided
2.2 Customers with special needs are identified and appropriate attention is given to ensure that their requirements are satisfied
2.3 Limitations to service provision are identified, communicated to customers, and checked for understanding

3 Provide the identified customer requirement
3.1 All needs and reasonable requests of customers are met in a consistent and timely manner
3.2 Customer dissatisfaction is promptly recognised and appropriate steps are taken to restore goodwill
3.3 Anticipated problems are correctly identified and monitored and action is taken to minimise their effects on customer satisfaction
3.4 Opportunities to enhance the quality of service are taken whenever possible
3.5 Information regarding both anticipated and unanticipated
problems and delays is promptly communicated to customers

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory regulations and requirements pertaining to revenue protection
- Relevant OH&S and environmental protection procedures and guidelines
- Details of on-board services provided to customers
- Organisation's transport services
- Procedures for the use of communications equipment
- Fare structures
- Concessional privileges
- Timetables
- Organisational policies and procedures
- Customer service requirements
- Services for customers with disabilities
- Typical problems that can occur when providing on-board services to customers and related appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate effectively with others when providing on-board services to customers
- Handle and resolve conflict and grievance situations that may arise during the provision of on-board services to customers
- Read and interpret instructions, procedures, information and signs relevant to the provision of on-board services to customers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of on-board services to customers
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing on-board services to customers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when providing on-board services to customers in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when providing on-board services to customers
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the provision of on-board services to customers
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Complete transactions and revenue protection activities during the provision of on-board services to customers
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• in restricted spaces or exposed conditions or controlled or open environments
• in a range of weather conditions
• by day or night

Equipment may include:
• use in restricted spaces or exposed conditions or controlled or open environments
• office equipment
• communication equipment
• computer software

On-board service applies to:
• all long distance rail/coach/bus trips
• all points of customer contact before, during and after the journey
• all internal, external and potential customers

Customers with special needs include:
• international visitors
• pregnant women
• the elderly
• physically and/or mentally disabled persons
• children travelling alone or under supervision

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Information/documents may include:  
- workplace policies and procedures  
- customer requests  
- customer service standards and procedures  
- competency standards and training materials  
- quality assurance procedures  
- security and emergency procedures

Applicable regulations and legislation may include:  
- relevant state/territory transport regulations  
- relevant state/territory OH&S regulations and legislation  
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:  
  o the underpinning knowledge and skills  
  o relevant legislation and workplace procedures  
  o other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts  
- Resources for assessment include:  
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or  
  o access to an appropriate range of relevant operational situations in the workplace  
- In both real and simulated environments, access is required to:  
  o relevant and appropriate materials and/or equipment, and/or  
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation  
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests  
- Practical assessment must occur:
Provide on-board services to customers

- through appropriately simulated activities at the registered training organisation, and/or
- in an appropriate range of situations in the workplace
TLIJ107C  Apply quality procedures

Unit Descriptor
This unit involves the skills and knowledge required to apply quality procedures within work activities including applying quality concepts to work, planning and trialing improvements in work processes and implementing improvements confirmed through the trials. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with the relevant regulations and workplace quality standards.

Work is performed under limited or minimum supervision, generally within a team environment. It involves the application of established routine procedures to ensure the quality of products and services in the transport and distribution industry.

Competency Field
J – Quality

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Apply quality concepts
1.1 Responsibility is taken for quality of own work when providing services or products to meet external and internal customer needs
1.2 Work is completed in accordance with workplace standards as defined in enterprise policies and procedures
1.3 Basic quality concepts are applied to work activities

2 Trial improvements
2.1 Improvements to work processes are planned and trialled
2.2 Trials of improvements to work processes are checked for improvement outcomes and compliance with workplace requirements

3 Implement improvements
3.1 Improvement initiatives trialled and confirmed as successful are implemented in accordance with enterprise procedures
3.2 Work is completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Workplace quality assurance and improvement principles and procedures
- Relevant OH&S procedures and guidelines
• Housekeeping standards and procedures required in the workplace
• Workplace or site layout
• Focus of operation of work systems, equipment or management, site and organisational operating procedures
• Typical quality-related problems that may arise in work operations and products, and related options for action and solutions
• Impact of job on enterprise and individual performance

**Required skills:**
• Communicate effectively with others when applying quality procedures and standards
• Read and interpret instructions and information relevant to quality procedures and standards
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to quality procedures and standards
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when applying quality procedures and standards
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified quality-related problems in accordance with workplace procedures
• Monitor work activities in terms of quality procedures and standards and take appropriate action where required
• Modify quality assurance activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and use equipment, processes and procedures required within the context of the job concerned

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:
• in a range of work environments
• by day or night
• in a range of typical weather conditions

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites
Work may be conducted in a range of work contexts and may include:

- restricted spaces
- exposed conditions
- controlled or open environments
- exposure to chemicals, dangerous or hazardous substances and movements of equipment, goods and vehicles

Consultative processes may involve:

- other workplace personnel
- management
- union representatives
- industrial relations personnel
- OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- quality assurance procedures and standards
- relevant codes of practice and regulatory requirements
- relevant Australian standards and certification requirements
- workplace procedures and policies
- manufacturers instructions concerning the use of equipment and/or materials
- supplier and/or client instructions
- material safety data sheets
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- OH&S policy and procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes of practice and regulatory requirements
- relevant Australian standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- Dangerous Goods Code and regulations
- water and road use and licence arrangements
- relevant patent or copyright arrangements
- dangerous goods and air freight regulations
- relevant export/import/quarantine/bond requirements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIJ207C  Apply quality systems

Unit Descriptor
This unit involves the skills and knowledge required to apply quality systems in workplace operations including working within a quality improvement system and using quality improvement systems, tools and techniques in accordance with enterprise procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with the relevant regulations and workplace quality standards.

Work is performed under some supervision, generally within a team environment.

It involves the application of quality assurance principles and procedures to implement quality systems and quality improvement initiatives within workplace activities.

Competency Field
J – Quality

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Work within a quality improvement system
1.1 Instructions are followed and duties are performed either individually or as a member of a work team within a quality improvement system
1.2 Work is completed either individually or as a member of a work team in accordance with standards as defined in workplace policies and procedures

2 Use quality improvement systems, tools and techniques
2.1 Variations in the quality of services and/or products from required standards are detected and reported in accordance with workplace procedures
2.2 Quality of operations/service is monitored and adjusted as required to ensure the satisfaction of both internal and external customers
2.3 Quality improvement tools and techniques are used both individually and as part of a work team to systematically improve the quality of work and services

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Workplace quality assurance and improvement principles and procedures
• Quality improvement tools and methods
• Relevant OH&S procedures and guidelines
• Housekeeping standards and procedures required in the workplace
• Workplace or site layout
• Focus of operation of work systems, equipment or management, site and organisational operating procedures
• Typical quality-related problems that may arise in work operations and products and related options for action and solutions
• Impact of job on enterprise and individual performance

**Required skills:**
• Communicate effectively with others when applying and implementing quality systems
• Read and interpret instructions, procedures and information relevant to the application and implementation of quality systems
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the application and implementation of quality systems
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when applying and implementing quality systems
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when applying and implementing quality systems in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur during the application and implementation of quality systems
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the application and implementation of quality systems
• Monitor work activities in terms of standards and processes of the quality system concerned
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use quality improvement tools and methods
• Identify and use equipment, processes and procedures required within the context of the job concerned
• Operate and adapt to differences in equipment in accordance with standard operating procedures
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:
- in a range of work environments
- by day or night
- in a range of typical weather conditions

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in a range of work contexts and may include:
- restricted spaces
- exposed conditions
- controlled or open environments
- exposure to chemicals, dangerous or hazardous substances and movements of equipment, goods and vehicles

Quality improvement tools may include a range of techniques including:
- product sampling and testing
- monitoring of operational performance
- fault/problem analysis
- client surveys
- trials of quality improvement initiatives

Consultative processes may involve:
- other workplace personnel
- management
- union representatives
- industrial relations personnel
- OH&S specialists
- other professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- quality assurance procedures and standards
- relevant codes of practice and regulatory requirements
- relevant Australian standards and certification requirements
- workplace procedures and policies
- manufacturers instructions concerning the use of equipment and/or materials
- manifests, bar codes, goods and container information/serial number
- supplier and/or client instructions
- material safety data sheets
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- OH&S policy and procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes of practice and regulatory requirements
- relevant Australian standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- Dangerous Goods Code and associated regulations
- water and road use and licence arrangements
- relevant patent or copyright arrangements
- dangerous goods and air freight regulations
- relevant export/import/quarantine/bond requirements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIJ307C  Apply grain protection measures

Unit Descriptor
This unit involves the skills and knowledge required to apply grain protection procedures within grain storage facilities in accordance with workplace procedures including identifying required pest control measures, preparing for application of pest control measures, monitoring application of pest control measures, ventilating fumigated storages, and maintaining records in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to grain storage operations.

Work is performed under some supervision, generally within a team/group environment. It involves the application of regulatory requirements and workplace procedures when applying grain protection measures as part of grain storage operations in the transport, warehousing, distribution and/or storage industries.

Competency Field
J – Quality

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare for application of pest control measures

1.1 Legal and workplace requirements for fumigation are followed in accordance with work order
1.2 Fumigation/spray application requirements are followed using silo and grain storage information in accordance with manufacturers instructions
1.3 Written records are confirmed by site measurements and observations
1.4 Access and site specific safety requirements to meet legislation and workplace instructions are determined
1.5 Equipment is checked for conformance to workplace requirements and manufacturers specifications
1.6 Where applicable, storage is checked for gas-proofing in accordance with manufacturers and workplace instructions prior to fumigation

2 Apply pest control measures

2.1 Personal protective equipment and engineering controls are used as instructed
2.2 Fumigant and spray applications are applied in accordance with manufacturers and workplace instructions
2.3 Warning signs are placed in accordance with legislative and
workplace requirements
2.4 Application is monitored to ensure effectiveness of operation
2.5 Empty fumigant containers are returned to the manufacturer, retailer or disposed of in accordance with legislative and workplace requirements
2.6 Baits are prepared in accordance with legislation and manufacturers instructions
2.7 Baits are placed in accordance with site requirements and manufacturers instructions

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the application of grain protection measures in grain storage facilities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the application of grain protection measures
- Problems that may occur when applying grain protection measures and appropriate action that can be taken to resolve the problems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Characteristics of commodity types, varieties and grades, and their identification
- Emergency response procedures
- Storage and safe handling procedures for fumigants, chemicals and other grain protection materials
- Procedures for environmental control and disposal activities
- Site layout and obstacles

Required skills:
- Communicate effectively with others when applying grain protection measures
- Read and interpret instructions, procedures information and labels relevant to the application of grain protection measures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the application of grain protection measures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when applying grain protection measures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when applying grain protection measures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when applying grain protection measures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the application of grain protection measures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Set up and maintain grain protection equipment
- Identify, select and efficiently and effectively use equipment needed when applying grain protection measures
- Identify pests that infest grain in grain storage facilities
- Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Workplace environment may include movement of:
- equipment
- goods
- products
- materials
- vehicular traffic

Work is carried out in accordance with:
- required OH&S procedures
- hazard control strategies, including the use of personal protective equipment
- manufacturers instructions and labels for the use of fumigants and pest control chemicals

Pest control activities may include:
- spraying
- baiting
- use of controlled fumigants

Fumigation inert gas may be for the purposes of:
- treating identified pests
- for meeting grain quality standards
Pest control agents: must be used in accordance with relevant Commonwealth, state or territory legislation

Hazards in the work area may include exposure to:
- chemicals and pesticides
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- respirators and fume/dust masks
- high visibility clothing

Requirements for work may include:
- site restrictions and procedures
- licensing requirements
- use of safety and personal protective equipment
- communications/recording equipment
- authorities and permits
- emergency procedures

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- existing and potential customers/clients
- manufacturers of pesticides
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- maintenance, professional or technical staff
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- workplace procedures
- organisational procedures
- established or standard procedures

Information/documents may include:

- operations manuals, job specifications and procedures
- induction documentation
- competency standards and training materials
- manufacturers specifications, labels and instructions for fumigants, chemicals and equipment
- material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, workplace bargaining agreement, other industrial arrangements
- OH&S procedures
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to grain storage
- legislation regarding the use of fumigants/poisons
- ADG Code and regulations pertaining to the storage and handling of dangerous and hazardous goods
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian and international standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment**

- The evidence required to demonstrate competency in
this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIJ407C Implement grain monitoring measures

Unit Descriptor
This unit involves the skills and knowledge required to implement grain monitoring measures within grain storage facilities in accordance with workplace procedures, including installing and checking grain quality control equipment, and monitoring the quality of stored commodities in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to grain storage operations.

Work is performed under some supervision, generally within a team/group environment. It involves the application of regulatory requirements and workplace procedures when implementing grain monitoring measures as part of grain storage operations in the transport, warehousing, distribution and/or storage industries.

Competency Field
J – Quality

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Install grain quality control equipment
1.1 Procedures for maintaining the quality of stored grain are identified from work plans and considering climatic conditions, types of storage and general environment
1.2 Aeration equipment (where required) is installed to workplace and site requirements to maintain appropriate grain temperature and moisture content
1.3 Inspection/sampling equipment and procedures are confirmed and implemented in accordance with workplace procedures
1.4 Equipment is checked to ensure correct set-up and operation
1.5 Equipment is maintained in accordance with workplace requirements and manufacturers instructions
1.6 Rectification of faults in equipment is undertaken in accordance with workplace procedures

2 Monitor the quality of stored commodities
2.1 Stored commodities and associated facilities are inspected for signs of damage or potential for damage
2.2 Required repairs to facilities are reported to appropriate personnel for action
2.3 Monitoring for pest infestations and climatic contamination/damage to grain is regularly completed in accordance with workplace sampling/inspection procedures
2.4 Results of sampling/inspections are recorded and reported in accordance with workplace procedures
2.5 Follow-up action to protect grain quality is undertaken in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to the implementation of grain monitoring measures in grain storage facilities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the implementation of grain monitoring measures
- Problems that may occur when implementing grain monitoring measures and appropriate action that can be taken to resolve the problems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Classification procedures
- Emergency response procedures
- Storage and safe handling procedures
- Procedures for environmental control and disposal activities
- Site layout and obstacles

Required skills:
- Communicate effectively with others when implementing grain monitoring measures
- Read and interpret instructions, procedures, information and labels relevant to the implementation of grain monitoring measures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the implementation of grain monitoring measures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when implementing grain monitoring measures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when implementing grain monitoring measures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when implementing grain monitoring measures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the implementation of grain monitoring measures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Set up and maintain grain protection equipment
• Identify, select and efficiently and effectively use equipment needed when implementing grain monitoring measures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Workplace environment may include movement of:
• equipment
• goods
• products
• materials
• vehicular traffic

Inspection/sampling processes may include:
• turning
• visual inspection
• hand sampling
• grain sieves
• robes and spears
• trapping

Problems identified in commodities and facilities may include:
• presence of water or water damage
• presence and activity of pests
• dead vertebrate pests in stored grain
• damage or deterioration of storage facility
• storm damage
• inappropriate grain temperature and moisture levels
Types of storage and environment may include:

- permanent and/or temporary storage
- fixed and/or portable commodity handling equipment
- site buildings
- haulage vehicles
- rail loops
- walkways and access points in buildings and facilities
- site surroundings

Grain aeration involves:

- set-up, maintenance, operational control and dismantling of equipment

Hazards in the work area may include exposure to:

- chemicals and pesticides
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- respirators and fume/dust masks
- high visibility clothing

Requirements for work may include:

- site restrictions and procedures
- licensing requirements
- use of safety and personal protective equipment
- communications/recording equipment
- authorities and permits
- emergency procedures

Communication in the work area may include:

- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications
Consultative processes may involve:

- workplace personnel
- supervisors and managers
- existing and potential customers/clients
- manufacturers of pesticides
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- workplace procedures
- organisational procedures
- established or standard procedures

Information/documents may include:

- operations manuals, job specifications and procedures
- induction documentation
- competency standards and training materials
- manufacturers specifications and instructions
- material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, workplace bargaining agreement, other industrial arrangements
- OH&S procedures
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:
- relevant codes and regulations pertaining to grain storage
- legislation regarding the use of fumigants/poisons
- ADG Code and regulations pertaining to the storage and handling of dangerous and hazardous goods
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian and international standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIJ507C  Sample, inspect and test products to specifications

Unit Descriptor
This unit involves the skills and knowledge required to sample, inspect and test products to specification including establishing specifications and test procedures, selecting evidence, conducting and interpreting tests, and reporting findings. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with the relevant regulations, codes of practice, Australian standards and workplace quality standards.

Work is performed under limited or minimum supervision, generally within a team environment. Discretion and judgement are exercised in planning and using resources, services and processes to achieve required outcomes within organisational policy and procedures.

Work involves the application of quality assurance principles and procedures to the sampling, inspection and testing of products as part of operations in the warehousing, storage, transport and distribution industries.

Competency Field
J – Quality

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Establish specifications and test procedures
1.1 Product quality specifications and required outcomes are read, drawings interpreted and test parameters are identified
1.2 Test methods for each required test parameter are identified and the most efficient test method is noted
1.3 Requirements for testing by personnel external to the work area are identified and appropriate permission is obtained
1.4 Sampling, inspection and testing are conducted in accordance with hazardous substances regulations

2 Select evidence
2.1 Appropriate conforming and/or non-conforming products, materials and/or waste are selected for testing
2.2 Observations of operators and copies of procedures are collected

3 Conduct and interpret
3.1 Tests are conducted following workplace procedures,
Tests including quality assurance procedures, and the results are documented as required

3.2 Emergency procedures are identified and engaged in the event of an incident

3.3 Comparisons of all data collected are made

3.4 Any recommendations are noted and considered for feasibility

3.5 Equipment is maintained in accordance with workplace and manufacturers requirements

4 Report findings

4.1 Findings of tests are documented in accordance with workplace procedures

4.2 Potential or existing problems and appropriate recommendations are proposed and reported either orally and/or in writing

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulations, codes of practice and Australian standards
- Workplace quality assurance principles and procedures
- Relevant OH&S procedures and guidelines
- Workplace quality procedures for the sampling, inspection and testing of products
- Quality standards and test/inspection criteria for the products concerned
- Workplace or site layout
- Focus of operation of work systems, equipment or management, site and organisational operating procedures
- Typical sampling/testing problems that may arise in work operations and products and related options for action and solutions
- Impact of job on enterprise and individual performance
- Housekeeping standards and procedures required in the workplace

Required skills:

- Communicate effectively with others when sampling, inspecting and testing products to specifications
- Read and interpret instructions, procedures, information and signs relevant to the sampling, inspecting and testing of products to specifications
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the sampling, inspecting and testing of products to specifications
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when sampling, inspecting and testing products to specifications
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems that are identified when sampling, inspecting and testing products to specifications in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when sampling, inspecting and testing products to specifications
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the sampling, inspecting and testing of products to specifications
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and use equipment, processes and procedures required within the context of the job concerned
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:

• in a range of work environments
• by day or night
• in a range of typical weather conditions

Customers may be:

• internal or external

Workplaces may comprise:

• large, medium or small worksites

Sampling/testing operations may be conducted in a range of work contexts and may include:

• restricted spaces
• exposed conditions
• controlled or open environments
• exposure to chemicals, dangerous or hazardous substances and movements of equipment, goods and vehicles
Consultative processes may involve:

- other workplace personnel
- management
- union representatives
- industrial relations personnel
- OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- quality assurance procedures and standards
- relevant codes of practice and regulatory requirements
- relevant Australian standards and certification requirements
- workplace procedures and policies
- manufacturers instructions concerning the use of equipment and/or materials
- supplier and/or client instructions
- material safety data sheets
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- OH&S policy and procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes of practice and regulatory requirements
- relevant Australian standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- Dangerous Goods Code and regulations
- water and road use and relevant licence arrangements
- relevant patent or copyright arrangements
- dangerous goods and air freight regulations
- relevant export/import/quarantine/bond requirements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
conducted through appropriate written/oral tests

- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
**TLIJ607C**  
**Unit Descriptor**  
This unit involves the skills and knowledge required to implement grain protection procedures within grain storage facilities in accordance with workplace procedures including identifying required pest control measures, preparing for application of pest control measures, monitoring application of pest control measures, ventilating fumigated storages, and maintaining records in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Work must be carried out in accordance with regulations and workplace requirements relevant to grain storage operations.

Work is performed under some supervision, generally within a team/group environment. It involves the application of regulatory requirements and workplace procedures when implementing grain protection measures as part of grain storage operations in the transport, warehousing, distribution and/or storage industries.

**Competency Field**  
J – Quality

---

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Identify required pest control measures**  
   1.1 Stored grain is checked for live or dead pests in accordance with workplace procedures
   1.2 Pest infestation information, including prevalence, type and location, is gleaned from observation
   1.3 Actual and potential damage to stored grain is assessed and documented
   1.4 Pests causing or likely to cause damage are identified
   1.5 Appropriate form of protection and/or pest control is determined in accordance with workplace procedures
   1.6 Pest control measures are arranged and/or implemented in accordance with workplace requirements

2. **Plan and prepare for application of pest control measures**  
   2.1 Spray application and inert atmosphere/fumigation requirements and application procedures are confirmed in accordance with legislative, workplace and customer requirements
   2.2 Quantity and form of gas/liquid required and exposure period is determined from silo and grain storage information and matched to manufacturers instructions
   2.3 Method of application is determined based on the type of pest
to be controlled and site arrangements
2.4 Exposure period is determined from pest(s) to be controlled and storage specifications
2.5 Written records of site are confirmed by site measurements and observations
2.6 Access and site specific safety requirements, including appropriate signage, are coordinated to meet legislation and workplace procedures
2.7 Equipment and personnel appropriate to the task are organised
2.8 Storage is sealed in accordance with manufacturers and workplace instructions and appropriately tested as required

3 Monitor application of pest control measures
3.1 Application is undertaken in accordance with manufacturers instructions, workplace procedures and regulatory framework
3.2 Suitable emergency equipment and personnel are coordinated on site during fumigation in accordance with workplace instructions
3.3 Selected process is monitored for effectiveness in accordance with manufacturers and workplace instructions
3.4 Tests are made to determine leakage of gas, and corrective action taken where this exceeds workplace limits

4 Ventilate fumigated storages
4.1 Where used, pressure equipment and/or generation equipment are shut down when requested in accordance with workplace procedures
4.2 Ventilation procedures appropriate for the storage type are implemented in accordance with workplace procedures
4.3 Tests to legislative and workplace instructions are made to ensure gas has been dispersed before personnel are allowed to enter the storage
4.4 Warning signs and emergency equipment are removed when gas has dispersed to safe levels
4.5 Stored grain is checked for evidence of live and dead pests in accordance with workplace requirements
4.6 Empty gas/fumigant containers are returned to the manufacturer, retailer or disposed of in accordance with legislative and workplace requirements

5 Maintain records
5.1 Records of pest control activities are made and stored in accordance with legislative and workplace requirements
5.2 Pest control operations and results are reported in accordance with workplace requirements
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Regulations relevant to the implementation of grain protection measures in grain storage facilities
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the implementation of grain protection measures
• Problems that may occur when implementing grain protection measures and appropriate action that can be taken to resolve the problems
• Equipment applications, capacities, configurations, safety hazards and control mechanisms
• Procedures and precautions when preparing grain protection agents
• Classification procedures
• Emergency response procedures
• Storage and safe handling procedures for fumigants, chemicals and other grain protection materials
• Procedures for environmental control and disposal activities
• Site layout and obstacles

Required skills:
• Communicate effectively with others when implementing grain protection procedures
• Read and interpret instructions, information and labels relevant to grain protection procedures
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when implementing grain protection procedures
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when implementing grain protection procedures in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when implementing grain protection procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Set-up and maintain grain protection equipment
• Identify, select and efficiently and effectively use equipment needed when implementing grain protection measures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Identify pests that infest grain in grain storage facilities
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Workplace environment may include: • movement of equipment, goods, products, materials and vehicular traffic

Work is carried out: • in accordance with required OH&S procedures and hazard control strategies, including the use of personal protective equipment and manufacturers instructions and labels for the use of fumigants and pest control chemicals

Pest control activities may include: • spraying
• baiting
• use of controlled and generally available substances
• fumigation
• inert atmosphere operations

Fumigation inert gas may be: • for the purposes of treating identified pests or for meeting grain quality standards. Application of fumigant inert gas includes the calculation of volumes and weight of stored grain

Pest control agents must be used: • in accordance with relevant Commonwealth, state or territory legislation
Hazards in the work area may include exposure to:

- chemicals and pesticides
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- respirators and fume/dust masks
- high visibility clothing

Requirements for work may include:

- site restrictions and procedures
- licensing requirements
- use of safety and personal protective equipment
- communications/recording equipment
- authorities and permits
- emergency procedures

Communication in the work area may include:

- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- existing and potential customers/clients
- manufacturers of pesticides
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- maintenance, professional or technical staff
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- workplace procedures
- organisational procedures
- established or standard procedures

Information/documents may include:

- operations manuals, job specifications and procedures
- induction documentation
- competency standards and training materials
- manufacturers specifications, labels and instructions for fumigants, chemicals and equipment
- material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, workplace bargaining agreement, other industrial arrangements
- OH&S procedures
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to grain storage
- legislation regarding the use of fumigants/poisons
- ADG Code and regulations pertaining to the storage and handling of dangerous and hazardous goods
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian and international standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment

- The evidence required to demonstrate competency in
This unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLI707C**

**Conduct internal quality audits**

**Unit Descriptor**

This unit involves the skills and knowledge required to conduct internal quality audits in accordance with relevant regulatory requirements and workplace procedures including preparing for internal audit, scheduling internal audit, conducting audit and documenting findings, and reporting audit results in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Work must be carried out in compliance with the relevant regulations, standards and codes of practice, including the ADG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

**Competency Field**

J – Quality

**ELEMENT**

Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Prepare for internal audit**

1.1 Benchmarks for the quality audit are established/identified

1.2 Procedures required to be audited are identified and implications of non-conformance estimated

1.3 Technical and/or calibration requirements for audits are noted and (where necessary) appropriate support personnel are identified

1.4 Production schedules are examined to identify appropriate schedule for audit

2. **Schedule internal audit**

2.1 Audit timings are planned to ensure that relevant procedures are conducted within workplace agreed time intervals and timeframes
2.2 Audit frequency is adjusted based on importance of activities to the business unit, process or workplace changes or customer feedback.

2.3 Contact is made with appropriate personnel and relevant appointments for the audit are made.

3 Conduct audit and document findings

3.1 Methods for the conduct of the audit are established and confirmed.

3.2 Observations and interviews are conducted with (any) required approved third party.

3.3 Documentation of observations and interview responses is completed.

4 Report audit results

4.1 Audit results are discussed with personnel associated with the procedures or standards audit.

4.2 Audit reports indicate compliances noted.

4.3 Non-compliance reports indicate location, relevant standard or procedure, and supporting evidence.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulations, codes of practice and legislative requirements including the Australian Dangerous Goods Code where applicable.
- Relevant OH&S and environmental protection procedures and regulations.
- Workplace procedures for the conduct of internal quality audits.
- Problems that may occur during the conduct of internal quality audits and action that can be taken to resolve or report the problems.
- Risks and hazards related to the conduct of internal quality audits and ways of controlling the risks involved.
- Focus of operation of work systems, resources, management and workplace operating systems.
- Equipment applications, capacities, configurations, safety hazards and control mechanisms.
- Enterprise business policies and plans including procedures for identification of non-compliance and best practice.
- Application of relevant Australian Standards and certification requirements.
- Quality procedures and implementation strategies.
- Resource availability including the competencies of individuals in the team/group.
- Understanding and knowledge of the application of current competencies within functional activity.
- Coaching and mentoring approaches to support team members to share knowledge and skills.
- Relevant workplace documentation procedures.
Required skills:

- Communicate effectively with others when conducting internal quality audits
- Read and interpret instructions, procedures, information and signs relevant to the conduct of internal quality audits
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the conduct of internal quality audits
- Operate electronic communication equipment to required protocol
- Provide leadership to others
- Work collaboratively with others when conducting internal quality audits
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems, faults or malfunctions that may be identified when conducting internal quality audits in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when conducting internal quality audits
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of internal quality audits
- Plan and organise activities
- Monitor work activities in terms of planned schedule
- Modify activities to cater for variations in workplace contexts and environment
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and apply appropriate application of technology, information systems and procedures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken:  
- in various work environments in the sections of the warehousing, storage, transport and distribution industries

Customers may be:  
- internal or external

Operations may be conducted:  
- by day or night

The workplace environment may involve:  
- twenty-four hour operation
  - single and multi-site location
  - large, medium and small workplaces
Audits may cover: • aspects of services, products, risks, work systems and workplace

Quality audits may be conducted: • as part of enterprise, site or licence requirements

Audits may be conducted: • alone or in conjunction with other staff from the enterprise
   • using external personnel

Hazards may include: • confined spaces
   • hazardous or dangerous materials/goods
   • contamination of, or from, goods/materials being transported/stored
   • fire/explosions
   • noise, light, energy sources
   • stationary and moving machinery, parts or components
   • moving vehicles

Communication in the work area may include: • phone
   • electronic data interchange (EDI)
   • fax
   • email
   • internet
   • RF communications
   • barcode readers
   • oral, aural or signed communications

Requirements for work may include: • site restrictions and procedures
   • use of safety and personal protective equipment
   • systems and facilities for controlling storage environments
   • specialised lifting and/or handling equipment
   • incident/accident breakdown procedures
   • additional gear and equipment
   • noise restrictions
   • hours of operations
   • authorities and permits
   • communications equipment

Hazard management is consistent with: • the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- relevant authorities and institutions
- government instrumentalities and
- emergency services
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- Australian and international codes of practice and regulations relevant to workplace activities, including the ADG Code where applicable
- workplace operating procedures and policies
- supplier and/or client instructions
- operations manuals, job specifications and procedures and induction documentation
- manufacturers specifications for equipment and environmental control systems
- suppliers handling and storage advice
- quality and customer service standards and procedures
- material safety data sheets
- Safe Working Limits (SWL) and Working Load Limits (WLL) of load shifting equipment and storage facilities
- relevant Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- relevant codes and regulations including ADG Code where applicable
- relevant Australian and international standards and certification requirements
- relevant state/territory OH&S and environmental protection legislation in terms of duties of employers, employees, suppliers and contractors
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
Practical assessment must occur:
- through appropriately simulated activities at the registered training organisation, and/or
- in an appropriate range of situations in the workplace
TLIJ807A Implement and monitor inbound QA systems

Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor inbound quality assurance systems. It includes planning for inbound quality assurance; and performing and evaluating inbound quality assurance procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and logistics industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Competency Field
J – Quality

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan for inbound quality assurance
1.1 Inbound product/s for quality audit are identified alongside resources required to perform the quality audit efficiently and effectively
1.2 Quality audit objectives are determined and discussed with those responsible for carrying them out
1.3 Proposed methods and techniques to be applied are clearly understood and implemented

2 Perform inbound quality assurance procedures
2.1 Resources required to perform the quality audit efficiently and effectively are accessed
2.2 The quality of the product is checked as prescribed in work instructions
2.3 Problems that affect or could potentially affect quality are reported to relevant person
2.4 Records are kept according to enterprise quality assurance policy

3 Evaluate inbound quality assurance procedures
3.1 Outcomes of implementing quality assurance procedures are assessed against quality assurance target levels
3.2 Suggestions for improvements of quality assurance procedures are made according to organisation policy and procedures
3.3 Outcomes of the quality assurance is discussed with client and all other relevant parties
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant sections of national and state or territory regulatory requirements and codes of practice
• Relevant OH&S and environmental procedures and regulations
• Various approaches to quality assurance, such as Total Quality Management, and the strengths and limitations of each when applied in this context
• Requirements for completing relevant documentation such as checklists, schedules and internal audit reports
• Code of practice for working collaboratively with others
• Typical defects that can occur and related action that should be taken
• Steps involved in planning the work activities
• Procedures to be followed in the event of an emergency

Required skills:
• Communicate effectively with others when completing work activities
• Read and interpret instructions, procedures, information and signs relevant to work activities
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Implement contingency plans for unplanned events
• Modify activities depending on differing operational contingencies, risk situations and environments without compromising quality

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Quality assurance methods and techniques may include:
• analysis
• sampling
• scanning
• evaluating the effectiveness of system controls
• questioning
• tracing
• trend analysis
Assessment objectives may include:

- evaluation of level of compliance with existing contract
- compliance with contractual and/or legislative requirements
- measuring performance in achieving quality objectives and confirming the effectiveness of the implemented quality system in meeting specified objectives
- identifying areas of potential improvement

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Consultative processes may involve:

- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:

- relevant OH&S and environmental protection regulations
- quality assurance procedures
- relevant Australian Standards and certification requirements
- outcomes or reports of quality audits or assessments

Applicable legislation and regulations may include:

- Relevant sections of national and state or territory regulatory requirements and codes of practice
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIK107C  Use infotechnology devices and computer applications in the workplace

Unit Descriptor
This unit involves the skills and knowledge required to use infotechnology devices and computer applications in the workplace including identifying computer equipment and systems, setting up and shutting down equipment for use, and inputting, retrieving and presenting files/data in accordance with work requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with the relevant OH&S regulations and workplace procedures concerning the use of computer equipment in the workplace.

Work is performed under some supervision, generally within a team environment.

Work involves the application of routine procedures for the use of computers for information management in the transport and distribution industry.

Competency Field
K – Computers and Technology

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify infotechnology/computer equipment and systems
1.1 Types of computerised equipment used in the work area are identified
1.2 Functions of equipment, component parts and accessories are identified
1.3 Applications for workplace activities of the different infotechnology systems and related software are interpreted
1.4 Routine faults in operating systems, software applications and operator errors are identified
1.5 Sources of information on rectifying faults and operating equipment, systems and application are identified

2 Set up and shut down equipment for use
2.1 Work station equipment is adjusted to meet ergonomic requirements and appropriate posture is used
2.2 Computer is booted, logged on and checked where required for viruses
2.3 Equipment is set up for work requirements in accordance with workplace procedures and manufacturers guidelines
2.4 Operating manuals and/or help screens for infotechnology
equipment and software are used to inform work practices
2.5 Software packages and accessories for required application are selected and accessed
2.6 Required file and/or data to be accessed is identified
2.7 Files/data are saved prior to shut-down
2.8 Shut-down procedures for files, applications and equipment are followed

3 Input, store, retrieve and present files/data
3.1 Data is entered using appropriate equipment, keyboard/mouse, bar code reader or other system
3.2 Accurate input is confirmed
3.3 Files are created and/or saved in accordance with workplace procedures
3.4 Data is manipulated to suit work requirements and checked for accuracy
3.5 Appropriate printers are accessed and print-preview facilities used
3.6 Files are transferred from drive to drive within workplace policies and guidelines
3.7 Saved files are accessed through relevant directories
3.8 Information and disk(s) are stored where appropriate
3.9 Information is presented using computerised projection facilities where required

4 Implement workplace procedures for management and security of data
4.1 Security procedures are followed as required
4.2 Information systems are managed in accordance with workplace procedures and manufacturers guidelines
4.3 Precautions against the loss or corruption of data are followed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant OH&S procedures and guidelines concerning the use of computer equipment in the workplace
- OH&S risks and hazards when using computer equipment for work tasks, and ways of controlling the risks/hazards
- Workplace procedures for the use of computer equipment and application software appropriate for work role
- Typical problems that can occur when using infotechnology devices and computer applications in the workplace and related appropriate action that can be taken to prevent or solve them
- Housekeeping standards and procedures required in the workplace
• Workplace or site layout

**Required skills:**

• Communicate effectively with others when using infotechnology devices and computer applications in the workplace
• Read and interpret instructions, procedures, information and manuals relevant to the use of infotechnology devices and computer applications in the workplace
• Interpret and follow operational instructions and prioritise work
• Complete electronic documentation through the use of infotechnology devices and computer applications in the workplace
• Identify and use computer equipment, software, processes and procedures required within the context of the job
• Work collaboratively with others when using infotechnology devices and computer applications in the workplace
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when using infotechnology devices and computer applications in the workplace in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when using infotechnology devices and computer applications in the workplace including the use of security and backup software and procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when using infotechnology devices and computer applications in the workplace
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Adapt to differences in software and equipment in accordance with standard operating procedures
• Maintain eye-hand coordination

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:

• in a range of work environments
• by day or night
• in a range of typical weather conditions

Customers may be:

• internal or external

Workplaces may comprise:

• large, medium or small worksites
Use infotechnology devices and computer applications in the workplace

Work may be conducted:
- in a range of work contexts

Infotechnology/computer equipment may include:
- keyboards
- monitors
- bar code readers
- printers
- central processors
- networks (including intranet and internet)
- CD-ROM drives
- floppy disk drives
- radio frequency devices
- computer driven projectors

Computer applications may include:
- word processors
- inventory control and stock management systems
- electronic data interchange (EDI) systems
- information databases and storage systems
- invoicing and payment systems
- manifests control systems
- work organisation systems
- internet browsers
- computerised presentation software

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, goods and container identification/serial number
- manufacturers instructions concerning the use computing equipment
- workplace procedures and policies for the use of computer equipment
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- Dangerous Goods Code and regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant
operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIK307C  Apply keyboard skills

Unit Descriptor
This unit involves the skills and knowledge required to enter data into an infotechnology device using a keyboard including the application of OH&S principles to keyboard operations and the accurate entry of the data. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employmability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with the relevant OH&S regulations and workplace procedures concerning the use of computer equipment in the workplace.

Work is performed under some supervision, generally within a team environment.

Work involves the application of the routine procedures for the use of computers for information management in the transport and distribution industry.

Competency Field
K – Computers and Technology

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Apply occupational health and safety principles
1.1 Information on OH&S requirements when using keyboard/keypad devices is accessed and interpreted
1.2 Posture and ergonomic settings of chair and workstation are adjusted following OH&S guidelines
1.3 OH&S guidelines on the use of periods of rest and exercise are followed when using computer keyboards, calculators or other data entry devices using keyboards or keypads

2 Enter data
2.1 Text and numeric data are entered into a computer, calculator or other data entry device using a keyboard or keypad as part of workplace tasks
2.2 Entered information is checked and corrected using a keyboard or keypad

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant OH&S procedures and guidelines concerning the use of computer equipment in the workplace, including recommended posture, ergonomic settings of chair and work station, and the use of periods of rest and exercise
• OH&S risks and hazards when using computer equipment for work tasks, and ways of controlling the risks/hazards
• Procedures for the use of keyboards and computer equipment in the workplace
• Typical problems that can occur when using keyboards to enter data and related appropriate action that can be taken to prevent or solve them
• Housekeeping standards and procedures required in the workplace
• Site layout

Required skills:
• Read and interpret instructions, procedures, information and manuals relevant to the use of keyboards to enter data
• Interpret and follow operational instructions and prioritise work
• Operate electronic infotechnology and computer equipment to required protocol
• Work collaboratively with others when using keyboards to enter data
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using keyboards to enter data in accordance with workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that exist when using keyboards to enter data
• Work systematically with required attention to detail without injury to self
• Apply fatigue management knowledge and techniques
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Operate and adapt to differences in keyboards, software and computer equipment in accordance with standard operating procedures
• Maintain eye-hand coordination

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:

• in a range of work environments
• by day or night
• in a range of typical weather conditions

Customers may be:

• internal or external

Workplaces may comprise:

• large, medium or small worksites
Keyboards/keypads may be used in a range of work contexts, including:
- in the workplace, warehouse or depot
- in the business office
- in a vehicle on the road
- at a client's workplace

Keyboards/keypads may be used on a range of infotechnology equipment, including:
- computers
- cash registers
- calculators
- electronic typewriters
- various forms of data entry devices

Keyboard skills may be required to enter data via a range of work-based computer applications including:
- word processors
- inventory control and stock management systems
- electronic data interchange (EDI) systems
- information databases and storage systems
- invoicing and payment systems
- manifests control systems
- work organisation systems
- internet browsers
- computerised presentation software

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, goods and container identification/serial number
- manufacturers instructions concerning the use of keyboards/keypads
- workplace procedures and policies for the use of computer equipment
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures

Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation
- workplace relations regulations
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or
equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIK5009A Apply knowledge of ICT to international freight forwarding activities**

**Unit Descriptor**
This unit involves the skills and knowledge required to develop, update and apply an understanding of current relevant ICT (information and communication technology) to advanced freight forwarding activities. This includes the demonstration of the required knowledge of applicable ICT; the consistent interpretation and application of that knowledge to the freight forwarding role and functions; and undertaking sufficient appropriate continuous professional development activities to maintain the currency of the required knowledge and understanding. International freight forwarding covers the importing, exporting and transiting of freight. There are no specific licensing or certification requirements applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
This unit was developed for persons applying knowledge of ICT as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

**Competency Field**
K – Computers and Technology

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Access and interpret data on applicable ICT**
   1.1 Data on ICT applicable to international freight forwarding is regularly accessed from appropriate sources
   1.2 Information on applicable ICT is interpreted and applied when working on freight forwarding projects
   1.3 Continuous professional development is undertaken to ensure a current knowledge of applicable ICT as per industry practice and company standard procedures

2 **Demonstrate the required knowledge of applicable ICT**
   2.1 Knowledge of applicable ICT required to perform effectively as an international freight forwarder is demonstrated through the successful completion of a range of assignments and both
real and simulated freight forwarding projects

3 Apply knowledge of ICT to the freight forwarding functions

3.1 Current information on applicable ICT is consistently applied when carrying out the international freight forwarding role and functions

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Procedures and protocols when using ICT
- Relevant OH&S and environmental procedures and regulations
- Principles of data storage and management systems used in international freight forwarding
- Internet and web based technology used in international freight forwarding
- Principles of Electronic Data Interchange (EDI) and procedures for its use
- Principles of Value-added Network (VAN) and procedures for its use
- IP-based telecommunications systems and their application in international freight forwarding
- Email protocols and procedures
- Principles of barcoding and its use in logistics and freight forwarding
- Principles of 3PL and 4PL logistics etc. as they apply to the freight forwarder including the applications and benefits of using Radio Frequency Identification (RFID) systems in the supply chain
- Basic e-commerce data security principles, systems, precautions and procedures
- Principles of electronic transactions
- Sources of information and documentation needed when using ICT in international freight forwarding functions
- Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
- Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
- Typical problems that can occur when using ICT and related appropriate action that can be taken to prevent or resolve them

Required skills:

- Communicate effectively with others when using ICT in freight forwarding activities, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
- Read and interpret instructions, procedures and other information relevant to the use of current ICT in freight forwarding activities
- Interpret and follow operational instructions and prioritise work
• Complete documentation related to the provision of freight forwarding services to customers including data entry to a computer
• Retrieve and enter data within applicable information technology systems
• Operate ICT to required protocol
• Work collaboratively with others when using ICT
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when using ICT in accordance with workplace procedures
• Implement contingency plans for unanticipated situations that may occur when using ICT
• Apply relevant codes of practice and legislative requirements including local and international freight
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply ICT systems and procedures to complete workplace tasks
• Operate and adapt to differences in information and communication equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

International freight forwarding includes services related to:

• the importing of goods
• the exporting of goods
• the transiting of goods
Information and communication technology (ICT) systems may include but are not limited to:

- data storage and management systems
- Electronic Freight Forwarding Management Systems (FFMS)
- Electronic Warehouse Management Systems (WMS)
- Electronic Transportation Management System (TMS)
- Internet and web based technology
- Electronic Data Interchange (EDI)
- EDI for Administration of Commerce (EDIFACT)
- Value-added Network (VAN)
- IP-based telecommunications systems
- Local Area Networks (LAN)
- Wireless Area Networks (WAN)
- broadband internet systems including ADSL, dedicated broadband lines and wireless systems
- barcoding systems
- Radio Frequency Identification (RFID) systems used in warehouses and logistics facilities
- E-commerce security systems

Sources of information required to perform international freight forwarding functions may include:

- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

Communications systems may involve:

- face-to-face conversation
- electronic data interchange (EDI)
- telephone including fixed, mobile and IP phones
- fax
- email
- mail
Consultative processes may involve:

- customers
- other employees and supervisors
- global network of international and domestic agents, suppliers, clients
- relevant regulatory authorities and institutions
- management
- information and communication technology specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include but are not limited to:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- workplace standard operating procedures and policies for the use of ICT in international freight forwarding functions
- customers' instructions and transport requirements
- standard FIATA forms and documentation such as:
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
  - a Forwarders Warehouse Receipt (FWR)
  - a Forwarders Forwarding Instructions (FFI)
  - a Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - a Shippers Intermodal Weight Certification (SIWC)
  - an Original Bill of Lading (OB/L)
  - a Master Air Waybill (MAWB)
  - a House Bill of Lading (HBL)
  - a House Air Waybill (HAWB)
  - a Multimodal Transport Bill of Lading (MTB/L)
- cargo manifests
- pre-advice and pre-alert documents
- operations manuals, job specifications and procedures and induction documentation
- Australian and international standards, criteria and certification requirements
- data obtained through information and communications technology equipment and oral, aural or signed communications
- freight forwarding competency standards and training materials
- freight forwarder company’s quality assurance standards and procedures
- emergency procedures
Applicable regulations and legislation may include:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- relevant regulations for the use of ICT systems in freight forwarding activities
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - maintaining a knowledge of current information and communication technology as they relate to international freight forwarding functions through appropriate continuous professional development activities
  - interpreting and applying the required knowledge of applicable current information and communication technology to the international freight forwarding role and functions

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation.
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace.

- Applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
TLIK607C Evaluate software requirements and hardware enhancements

Unit Descriptor
This unit involves the skills and knowledge required to evaluate software requirements and hardware enhancements in accordance with workplace procedures including analysing requirements for improved computer applications, evaluating relevant software, investigating appropriate hardware enhancements, implementing system improvements, and measuring systemic improvement. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations, standards and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field
K – Computers and Technology

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Analyse requirements for improved computer applications
1.1 Current aspects of business operations requiring improved computer technology are identified
1.2 Purpose and requirements of improved computer management systems are identified
1.3 Personnel are consulted for expert advice for potential matches of computer applications to required improvements in site operations

2 Evaluate software
2.1 Potential software programs are evaluated to meet workplace requirements
2.2 Software applications are investigated for effectiveness to own operation including degree of flexibility, customisation and integration potential
2.3 Selected option is circulated to appropriate personnel for verification
2.4 Level of technical support is assessed
2.5 Software application selection is made

3 Investigate hardware enhancements
3.1 Hardware systems are evaluated for compatibility with selected software and workplace operations
3.2 Potential immediate and long-term risks/problems with hardware are identified and assessed
3.3 Recommendations are drafted and circulated for comment
3.4 Final recommendations on suitable hardware are made

4 Implement system improvement
4.1 Selected hardware and software enhancements are implemented
4.2 Training is provided to potential users of the technology
4.3 Implementation of hardware and software is monitored

5 Measure systemic improvement
5.1 Methods of measuring system performance are identified
5.2 Software and hardware performance is evaluated
5.3 (Any) refinements or improvements to the system are implemented
5.4 System performance is documented and reported to appropriate personnel

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulations, codes of practice and legislative requirements relevant to the evaluation of software requirements and hardware enhancements
- Relevant OH&S and environmental protection procedures and regulations
- Workplace procedures for the evaluation of software requirements and hardware enhancements
- Problems that may occur during the evaluation of software requirements and hardware enhancements and action that can be taken to resolve or report the problems
- Risks and hazards related to the evaluation of software requirements and hardware enhancements and ways of controlling the risks involved
- Focus of operation of computing systems, software and hardware resources, management and workplace operating systems
- Computer equipment and software applications, capacities and configurations
• Application of relevant Australian Standards
• Resource availability including the competencies of individuals in the team or group
• The application of current competencies within functional activity
• Relevant workplace documentation procedures

**Required skills:**

• Communicate effectively with others when evaluating software requirements and hardware enhancements
• Read and interpret instructions, procedures, specifications, technical data and manuals relevant to the evaluation of software requirements and hardware enhancements
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the evaluation of software requirements and hardware enhancements
• Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when evaluating software requirements and hardware enhancements
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when evaluating software requirements and hardware enhancements in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when evaluating software requirements and hardware enhancements
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan and organise activities
• Monitor work activities in terms of planned schedule
• Modify activities to cater for variations in workplace contexts and environment
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and apply appropriate software, technology, information systems and procedures
• Measure operational performance improvements resulting from changes to computer technology
• Operate and adapt to differences in equipment in accordance with standard operating procedures
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: • in various work environments in the sections of the warehousing, storage, transport and distribution industries involved in the evaluation of computer software requirements and hardware enhancements

Customers may be: • internal or external

Operations may be: • by day or night

The workplace environment may involve: • twenty-four hour operation • single and multi-site location • large, medium and small workplaces

Services, products, risks, work systems and requirements: • potentially vary in different sections of the enterprise

Customer and supplier contact and coordination: • is a requirement of these operations

Computer systems may be used for but are not limited to: • stock management • information storage • invoicing • payments • manifests • on board systems • work organisation

Communication in the work area may include: • phone • electronic data interchange (EDI) • fax • email • internet • RF communications • barcode readers • oral, aural or signed communications
Consultative processes may involve:

- other employees and supervisors
- suppliers and clients
- computer specialists
- software and hardware companies and distributors
- users of similar systems/technology
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- codes of practice and regulations relevant to the evaluation of computer software requirements and hardware enhancements
- workplace operating procedures and policies
- supplier and/or client instructions
- operations manuals, job specifications and procedures and induction documentation
- manufacturers specifications and instructions for computer equipment, and software
- relevant Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- relevant codes and regulations for evaluation of computer software requirements and hardware enhancements
- relevant Australian and international standards
- relevant state/territory OH&S and environmental protection legislation in terms of duties of employers, employees, suppliers and contractors
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
o through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
TLIK707C  Perform electronic data interchange (EDI) to transmit shipping documentation

Unit Descriptor
This unit involves the skills and knowledge required to perform electronic data interchange (EDI) to transmit shipping documentation including identifying and establishing document purpose and information sources, compiling data files, and transmitting and receiving documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with the relevant regulations and workplace procedures concerning the use of electronic data interchange (EDI) to transmit shipping documentation.

Work is performed under general supervision. It involves the application of routine procedures to perform electronic data interchange (EDI) to transmit shipping documentation in the transport and distribution industry.

Competency Field
K – Computers and Technology

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and establish document purpose and information sources

1.1 Purpose of task is identified and appropriate document template(s) accessed
1.2 Manual and computerised sources of data are accessed in accordance with the requirements of the task
1.3 Existing files and data required to be updated are identified
1.4 Stored data regarding applicable regulations, client instructions, protocols and procedures are selected and combined correctly for the task

2 Compile data files

2.1 Files are created/updated according to required format and layout
2.2 Data are accurately entered following regulatory and workplace requirements and are consistent with required purpose
2.3 All relevant sections of the documentation are checked for accuracy and completeness
2.4 Discrepancies in documentation are identified and action undertaken in accordance with workplace procedures
2.5 Files created or updated are saved and stored in accordance with workplace and regulatory requirements
3 Transmit documentation

3.1 Document destination(s) are correctly identified and selected
3.2 Destinations are checked for readiness to receive transmission
3.3 Security arrangements for data exchange are undertaken in accordance with workplace procedures
3.4 Documents are transmitted ensuring componentry is used according to workplace procedures and that all information is correctly downloaded
3.5 Action is undertaken within scope of authority to rectify transmission faults
3.6 Print out of documents are made and filed/stored/forwarded in accordance with workplace procedures

4 Receive documentation

4.1 Infotechnology devices are checked for readiness to receive downloaded documentation
4.2 Received documentation is printed and/or checked for accuracy and legibility
4.3 Action is undertaken within scope of authority to rectify transmission faults
4.4 Print-out of documents is made and filed/stored/forwarded in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant agreements, codes of practice or other legislative requirements including local and international freight regulations
- Relevant OH&S procedures and guidelines concerning the use of computer equipment in the workplace
- OH&S risks and hazards when using computer equipment for work tasks, and ways of controlling the risks/hazards
- Workplace procedures for the transfer and storage of electronic data and the use of related computer equipment and application software
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Typical problems that can occur when performing electronic data interchange (EDI) to transmit shipping documentation and related action that can be taken to prevent or solve them
- Housekeeping standards and procedures required in the workplace
- Workplace or site layout

Required skills:

- Communicate effectively with others when performing electronic data interchange (EDI) to transmit shipping documentation
• Read and interpret instructions, procedures, information and manuals relevant to the use of electronic data interchange (EDI) to transmit shipping documentation
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Use electronic data interchange (EDI) to transmit shipping documentation to required protocol
• Work collaboratively with when performing electronic data interchange (EDI) to transmit shipping documentation
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when performing electronic data interchange (EDI) to transmit shipping documentation in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and use computer equipment, software, processes and procedures relevant to the context of the job
• Adapt to differences in EDI equipment in accordance with standard operating procedures
• Maintain eye-hand coordination

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted: • in a range of work environments • by day or night • in a range of typical weather conditions

Customers may be: • internal or external

Work environment may include movement of: • equipment • goods • materials • vehicular traffic

The electronic transfer medium may include: • email, • bulletin boards • computer faxes
Security procedures may include:

• encryption of data
• controlled access
• regulated transmission times

Transfer of data may include:

• interfaces between agents
• authorities
• brokers
• clients
• outposts

Requirements for work may include:

• data protocols and procedures
• communications equipment
• security clearances
• incident/accident breakdown procedures
• authorities and permits
• hours of operations
• relevant regulations

Consultative processes may involve:

• other employees and supervisors
• international and domestic agents, suppliers, potential customers and existing clients
• relevant authorities and institutions
• management
• OH&S specialists,
• other maintenance, professional or technical staff

Communication in the work area may include:

• phone
• electronic data interchange (EDI)
• fax
• email
• internet
• radio
• oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

• company procedures
• enterprise procedures
• organisational procedures
• established procedures
Information/documents may include:

- workplace procedures and policies for the use of computer equipment and software required for electronic data interchange (EDI)
- manufacturers instructions concerning the use required computing equipment and software
- goods identification numbers and codes
- manifests, bar codes, goods and container identification/serial numbers
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- local and international freight regulations
- relevant Australian standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- Dangerous Goods Code and regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
Resources for assessment include:
- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIK807A  Implement and monitor network security

Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor network security. It involves identifying all security threats to the network and implementing approved controls to maintain network security integrity. This unit is derived from ICAITS123A Manage network security Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Competency Field
K – Computers and Technology

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify threats
1.1 Implement risk analysis of security threats faced by organisation network
1.2 Evaluate and identify internal and external threats to network such as hackers, eavesdropping and viruses

2 Identify appropriate controls
2.1 Plans for cost effective improvements to network security are presented to management for approval and authorisation
2.2 External or intra network security devices and controls such as firewalls are presented to management for approval
2.3 Controls to add to the network to manage elements such as user access or hackers, eavesdropping and viruses are identified

3 Implement security
3.1 Approved equipment and controls are installed and configured to provide required levels of security
3.2 Recommendations are made for additional equipment and updates to maintain security integrity

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant sections of national and state or territory regulatory requirements and codes of practice
• Current industry accepted hardware and software products with broad knowledge of general features and capabilities
• Broad general knowledge of the client business domain, business function and organisation
• Networking technologies, with broad knowledge of general features and capabilities incorporating substantial depth in some areas
• Risk analysis, with broad knowledge of general features incorporating substantial depth in some areas
• Specific security technology, with broad knowledge of general features incorporating substantial depth in some areas
• Procedures for operating electronic communications equipment
• Requirements for completing relevant documentation
• Code of practice for working collaboratively with others
• Typical defects that can occur and related action that should be taken
• Procedures for identifying equipment defects and assessing for appropriate action
• Principles, purpose and location of controls, monitoring devices, and systems
• Steps involved in planning the work activities
• Procedures for adjusting controls to optimise the operation of the equipment
• Sources of information on differences in equipment and related standard operating and servicing procedures

Required skills:
• Use plain English literacy and communication skills in relation to analysis, evaluation and presentation of information
• Use questioning and active listening skills
• Read and interpret instructions, procedures, information and signs relevant to work activities
• Write reports for business requiring depth in some areas, analysis and evaluation of information in a defined range of areas
• Complete documentation related to work activities
• Operate electronic communication and other equipment to required protocol
• Work collaboratively with others
• Solve problems for a defined range of unpredictable problems involving participation in the development of strategic initiatives
• Use research to identify, analyse and evaluate broad features of a particular business domain and best practice in network security methodologies and technologies
• Project plan in relation to scope, time, cost, quality, communications and risk management
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Monitor work activities in terms of planned schedule
• Monitor performance of equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Software most likely to be:
• packaged software
• supplied from many varying vendors
• security, audit, virus checking and encryption modules

Depending on the organisation concerned, workplace procedures may be called:
• standard operating procedures (SOPs)
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Communication in the work area may include:
• phone
• electronic data interchange (EDI)
• fax
• email
• internet
• intranet
• RF systems
• oral, aural or signed communications

Consultative processes may involve:
• other employees and supervisors
• suppliers of network security equipment
• relevant authorities and institutions
• management

Documentation and records may include:
• quality assurance procedures
• emergency procedures
• operations manuals
• manufacturers specifications for network equipment
• technical instructions
• relevant Australian Standards and certification requirements

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment
• The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Assess and confirm customer transport requirements

Unit Descriptor
This unit involves the skills and knowledge required to assess and confirm customer freight transport requirements, including assessing the goods/stock to be transported, determining the transit needs and any special requirements, confirming requirements with the customer and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work involves discretion and judgement for self and others in assessing and confirming customer freight transport requirements. It is performed under minimum supervision with general guidance on progress and outcomes of work.

A range of opportunities may be used to develop the workplace and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives.

Work involves responsibility for the assessing and confirming customer freight transport requirements and the provision of leadership of others either individually or in teams.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Assess goods/stock to be transported
1.1 Customer service parameters are followed in accordance with workplace procedures
1.2 In consultation with customer key characteristics of the goods/stock to be transported are determined
1.3 Regulatory and/or specific requirements for load shipment are identified
1.4 Specific load handling characteristics/requirements are identified
1.5 Task requirements are matched to workplace capability and operational focus

2 Determine transit requirements
2.1 Applicable transportation modes are matched for customers geographic location, load packaging characteristics, quantity of goods to be transported and any special requirements
2.2 Required pick-up and destination point(s) are identified and assessed for safe access and operation
2.3 Specified transit times and routes are identified and agreed with customer
2.4 Transportation mode(s) are determined with customer with regard to load characteristics, transit requirements and cost-effectiveness
2.5 Risk assessment of transport service is undertaken in accordance with workplace policy and procedures

3 Complete documentation
3.1 Decisions for proceeding with task are undertaken or referred in accordance with workplace procedures and within scope of authority
3.2 Parameters of service requirements for the workplace and customer are documented
3.3 Quotations for services/specifications are itemised and documented
3.4 Legislative, insurance or specific conditions for load transport are recorded

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant and regulatory and code requirements including mass and load regulations
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the assessing and confirming customer transport requirements
- Strategies to implement continuous improvement processes
- Focus of operation of customer service and quotation/specification systems and resources
- Typical problems that can occur when assessing and confirming customer transport requirements and related appropriate action that can be taken

Required skills:
- Communicate effectively with others when assessing and confirming customer transport requirements
- Negotiate with others when assessing and confirming customer transport requirements
- Read and interpret instructions, procedures, information and signs relevant to the assessment and confirmation of customer transport requirements
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the assessment and confirmation of customer transport requirements
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Work collaboratively with others when assessing and confirming customer transport requirements
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when assessing and confirming customer transport requirements in accordance with regulatory requirements and workplace procedures
• Plan work activities, including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
• single and multi-site locations
• large, medium and small companies

Services, products, risks, work systems and requirements may:
• potentially vary across different sections of the workplace

Operations involve:
• internal and external customer contact and coordination

Consignments may be:
• single and multi-site locations
• palletised
• containerised
• packaged or loose
• in gas, liquid or solid form

Special freight transport requirements may involve:
• single and multi-site locations
• temperature controlled stock
• live stock
• dangerous goods
• hazardous substances
• specific security arrangements
• oversized/overmassed loads

Decision to provide service to customer is:
• undertaken within scope of authority
Decisions should reflect:

- the scope of the organisation to undertake the task
- and/or to outsource some or all of the task

Key characteristics of the goods/stock to be transported may include the:

- type of goods to be transported
- load characteristics including perishability, spoilage, fragility, compatibility
- packing and stowing requirements for load
- aggregate size and capacity of load to be transported

Consultative processes may involve:

- existing and potential customers/clients
- other employees and supervisors
- suppliers
- manufacturers
- relevant authorities
- management
- union representatives
- OH&S specialists
- other maintenance, professional or technical staff

Communications systems may involve:

- face-to-face conversation
- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures
Information/documentation may include:

- workplace procedures and policies
- customer service standards and procedures
- supplier and/or client instructions
- workplace products and services information
- quality assurance standards and procedures
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- manufacturers/suppliers specifications, advice, recommended procedures, policies and instructions
- Dangerous Goods Codes and related regulations and documentation including material safety data sheets
- relevant agreements, codes of practice including the national standards for services and operations
- reports of accidents and incidents
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- legislation, regulations and related documentation relevant to workplace operations

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- trading regulations relevant to business operations
- relevant Australian and state/territory OH&S legislation
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIL107C**  
Complete workplace orientation/induction procedures

**Unit Descriptor**  
This unit involves the skills and knowledge required to complete workplace orientation and induction procedures when commencing a new work role, including identifying major areas of the workplace in terms of functions, organisational structures and occupations, and organising and accepting responsibility for own workload. It also includes the application of ethical practices in work activities, receiving and acting constructively on personal feedback, participating in the identification and meeting of one’s own learning needs, and planning and organising a personal daily routine. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**  
This unit contains employability skills.

**Application of the Unit**  
Workplace orientation/induction is completed to enable a worker to enter and participate in the work activities of a workplace. Orientation and induction activities will be in accordance with the regulatory requirements and operational policies and procedures for the workplace concerned.

Work is performed under some supervision, generally within a team environment.

Work involves the development of the basic skills and knowledge to participate safely and effectively in workplace activities.

**Competency Field**  
L – Resource Management

**ELEMENT**  
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**  
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1. **Identify major areas of the workplace in terms of functions, organisational structures and occupations**

   1.1 The layout of the workplace, the flow of materials and goods where relevant and the work activities conducted in each work area are identified

   1.2 Organisational structure of the workplace and the relationship of structure to each occupation and classification grouping is outlined

   1.3 The types of facilities in the workplace, their purpose and (any) risk factors attached to them are identified

   1.4 Equipment and technology used in the workplace are outlined in terms of function and physical characteristics

   1.5 Individual responsibilities under industrial agreements are identified and acted on in the conduct of assigned duties

   1.6 Key internal and external customers and the workplace areas that serve them are identified
1.7 Workplace hazards are identified and related hazard minimisation procedures followed
1.8 Relevant personal protective equipment (PPE) is identified and correctly used in accordance with regulations and workplace requirements
1.9 Workplace emergency procedures are identified and followed in real and simulated emergency situations

2 Organise and accept responsibility for own workload

2.1 Priorities and deadlines are established in consultation with others (as appropriate) and recorded
2.2 Work activities are planned and progress of work is communicated to others whose personal work plans and timelines may be affected
2.3 Work is completed to the standard expected in the workplace and in accordance with any guidelines, directions or instructions
2.4 Variations and difficulties affecting work requirements are identified through regular reviews and action is taken to report these issues to supervisory staff
2.5 Additional support to improve work is communicated clearly to appropriate personnel

3 Apply ethical practices

3.1 Workplace procedures, regulations and legislation appropriate to the position are identified and followed
3.2 Commitments and undertakings to clients, colleagues and supervisors are met
3.3 Required confidentiality is maintained
3.4 Appropriate codes of acceptable and ethical work practices are applied
3.5 Workplace security policies are identified including the relationship to personal job role

4 Receive and act constructively on personal feedback

4.1 Suggestions on ways to improve work are sought regularly from appropriate personnel
4.2 Feedback is acted upon as required to improve work performance

5 Participate in identifying and meeting own learning needs

5.1 Operations of the workplace, workplace equipment and focus of endeavour are identified
5.2 Organisational structure, career paths and training opportunities appropriate to the enterprise are identified
5.3 Steps are taken, in consultation with appropriate personnel, to identify own learning needs through assessment and planning for future work requirements
5.4 Appropriate opportunities to learn and develop required
competencies are undertaken including establishing networks and working relationships with others

6 Plan and organise a personal daily routine

6.1 Daily routine is planned to take into account rosters, industrial agreements and workplace procedures
6.2 Clarification of requirements of tasks is sought when appropriate
6.3 Achievable time and other performance measures are agreed
6.4 Tasks are completed with variations to plan identified and reported

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Workplace procedures and standards and duty of care requirements including OH&S and environmental protection responsibilities
- Conditions of service including: employer and employee obligations under award, employment contract, OH&S and other regulations in relation to engagement, working times and conditions, and dismissal and discipline arrangements
- Workplace structures and the roles and responsibilities of team/group members
- Site or workplace layout
- Emergency procedures
- Basic workplace documentation and record keeping procedures and requirements
- Customer service standards and procedures
- Workplace hazards and related hazard minimisation procedures
- Personal protective equipment and instructions for its use

Required skills:
- Communicate effectively with others when completing workplace orientation and induction procedures
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when completing workplace orientation and induction procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule

© Commonwealth of Australia 2009
TLI07 Transport and Logistics Training Package (Version 3)
To be reviewed by 2010
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify workplace products and services and their features
• Identify and correctly use equipment, processes and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work will involve: • basic routine work functions in a variety of relevant work contexts

Customers may be: • internal or external

Operations may be conducted: • by day or night
• in enclosed spaces
• in exposed conditions
• in controlled or open environments

Hazards may include: • vehicular traffic and pedestrians
• uneven ground, steps, road surfaces
• dust and vapours
• hazardous or dangerous materials
• humidity, air temperature and radiant heat
• light including UV
• noise
Consultative processes may involve:

- clients
- managers
- supervisors/team leaders
- workplace personnel
- visitors
- contractors
- official representatives
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
- local government authorities

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication may involve the basic use of a range of communication technology including:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
Information/documentation may include:

- workplace procedures, checklists and instructions
- operations manuals
- induction/orientation documentation
- competency standards and training materials
- job specification, site/workplace map and details of organisation structure
- conditions of service, relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- relevant codes of practice including the national standards for manual handling and the industry safety code
- supplier and/or client instructions
- manifests, bar codes, goods and container identification
- goods identification numbers and codes
- manufacturers specifications
- material safety data sheets
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice, including the Australian standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations
- licensing requirements for driving and carrying particular classes of goods
- workplace relations legislation
- workers compensation legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

- relevant legislation and workplace procedures
- other relevant aspects of the range statement
TLIL1907C Implement and monitor transport logistics

Unit Descriptor

This unit involves the skills and knowledge required to implement and monitor transport logistics in accordance with relevant regulatory requirements and workplace procedures, including mobilising resources, coordinating multi-modal transport activities, monitoring consignment(s) tracking, and implementing a contingency management strategy. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills

This unit contains employability skills.

Application of the Unit

Work must be carried out in compliance with the relevant regulations, standards and codes of practice, including the ADG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field

L – Resource Management

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Mobilise resources

1.1 Optimal resource level is acquired to meet the requirements of the operational schedule

1.2 Relevant regulatory and insurance requirements are determined and implemented

1.3 Allocated resources are assessed and monitored to ensure operational effectiveness and efficiency

1.4 Changes to resource allocation are undertaken (in accordance with enterprise procedures) where deficiencies or over-supply are apparent

2 Coordinate multi-modal transport

2.1 Facilities, personnel and equipment are made ready to accommodate interchange functions
### activities

2.2 Security arrangements are invoked as required
2.3 Loading and unloading operations are conducted in accordance with operation schedule and applicable statutory requirements, codes of practice and enterprise procedures
2.4 Relevant documentation is completed/updated to accord with operational schedule and reporting requirements

### 3 Monitor consignment(s) tracking

3.1 Consignment tracking systems are monitored against workplace quality standards
3.2 Variations from workplace quality standards are identified and appropriate action is initiated to rectify the identified problems or to institute any required improvements

### 4 Implement contingency management strategy

4.1 Operational schedule is continually reviewed in light of information updates, reports and feedback
4.2 The nature, extent and impact of any issues or incidents are identified and assessed against contingency management strategy
4.3 Relevant information is processed to establish priorities and responses for dealing with issues or incidents
4.4 Operations are redirected and controlled to meet changes in transport environment and tasks in accordance with enterprise procedures
4.5 Liaison is initiated and maintained with organisations/individuals affected by changed operational schedules
4.6 Actions undertaken are clearly documented and filed

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant regulations, codes of practice and legislative requirements including local and international regulations relevant to transport logistics
- Relevant OH&S and environmental protection procedures and regulations
- Workplace procedures for the implementation and monitoring of transport logistics
- Problems that may occur during the implementation and monitoring of transport logistics and action that can be taken to resolve or report the problems
- Risks and hazards related to the implementation and monitoring of transport logistics and ways of controlling the risks involved
- Focus of operation of transport logistic systems, resources, management and workplace operating systems
- Transport and equipment applications, capacities, configurations, safety hazards and control mechanisms
• Code, regulatory, permit and licence requirements relevant to transport logistics
• Application of relevant Australian standards and associated certification requirements
• Business policies and plans including procedures for outsourcing components of operations and engaging additional resources
• Workplace policies including issue resolution and grievance procedures
• Resource availability including the competencies of individuals in the team/group
• The application of current competencies within functional activity
• Relevant workplace documentation procedures

**Required skills:**
• Communicate effectively with others when implementing and monitoring transport logistics
• Read and interpret transport schedules, regulatory requirements, customer instructions, workplace procedures and manuals relevant to the implementation and monitoring of transport logistics
• Prioritise work and coordinate self and others in relation to transport logistics activities
• Complete documentation related to the implementation and monitoring of transport logistics
• Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when implementing and monitoring transport logistics
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems identified when implementing and monitoring transport logistics in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise during the implementation and monitoring of transport logistics
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and apply appropriate application of technology, information systems and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: ● in various work environments in the sections of the warehousing, storage, transport and distribution industries involved in transport logistics

Customers may be: ● internal or external

Operations may be conducted: ● by day or night

The workplace environment may involve: ● twenty-four hour operation
  ● single and multi-site locations
  ● large, medium and small workplaces

Critical parameters for the evaluation of consignment loads may include but are not limited to:
  ● type, capacity, compatibility and capability of load
  ● agreed delivery times and destination
  ● pick-up and drop-off points
  ● waiting, loading and unloading times

Key requirements for the planning of transport logistics may include but are not limited to:
  ● collection and distribution destination
  ● transport duration times
  ● type and compatibility of load
  ● transport mode(s) and capacity
  ● return freight
  ● fatigue management
  ● use of designated routes

Strategies to address identified deficiencies in operational capability and availability may include but are not limited to:
  ● re-negotiation of collection and/or delivery times
  ● alternate transport mode(s)
  ● outsourcing components of operation

Consignments may be:
  ● palletised
  ● containerised
  ● packages or loose
  ● and in gas, liquid or solid form

Transport may be:
  ● single or multi-modal

Modes of transport may include:
  ● road
  ● rail
  ● air
  ● sea
Calculation of transport duration times includes:

- travelling
- loading
- unloading
- change-over
- standing times
- with due regard to varying transit condition and environments (i.e. road conditions, traffic flows, weather, local government by-laws)

Transport may involve:

- the use of designated routes

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- systems and facilities for transport logistics
- specialised lifting and/or handling equipment
- incident/accident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits
- communications equipment

Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- relevant authorities and institutions
- relevant government instrumentalities
- emergency services
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF communications
- bar code readers
- oral, aural or signed communications

Personal protective equipment may include but is not limited to:
- gloves
- safety headwear and footwear
- safety clothing
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documentation may include:

- Australian and international codes of practice and regulations relevant transport logistics including the ADG Code where applicable
- workplace operating procedures and policies
- supplier and/or client instructions
- operations manuals, job specifications and procedures and induction documentation
- transport routes and timetables
- manufacturers specifications for equipment and goods
- suppliers advice
- material safety data sheets
- dangerous goods documentation where applicable including dangerous goods declarations
- Safe Working Limits (SWL) and Working Load Limits (WLL) of load shifting equipment and storage facilities
- communications technology equipment, oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- relevant Australian and international standards, criteria and certification requirements
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- codes and regulations relevant to transport logistics
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances,
- relevant Australian and international standards and certification requirements
- licence, patent or copyright arrangements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL2007C  Develop and maintain operational procedures for transport and distribution enterprises

Unit Descriptor
This unit involves the skills and knowledge required to develop and maintain operational procedures for transport and distribution enterprises in accordance with relevant regulatory requirements and workplace procedures, including planning and developing operational procedures, monitoring the implementation of the operational procedure(s), and evaluating the implementation of operational procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations, standards and codes of practice, including the ADG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan and develop operational procedures

1.1 Processes requiring development/modification of operational procedures are identified and confirmed with relevant personnel and business units
1.2 The scope, focus and extent of the operational procedure(s) are discussed and validated with effected personal
1.3 Current procedures are evaluated to ensure development is not unnecessarily duplicating previous work
1.4 Factors likely to impact upon the development process are identified and techniques adopted for their incorporation into the procedure(s)
1.5 The proposed operational procedures are researched from a range of sources and include provision for user input.

1.6 Operational procedures are developed, documented and verified with relevant internal/external personnel and/or organisations in accordance with workplace procedures.

1.7 Where required, trialing of new operational procedures is undertaken with a target group.

1.8 Performance indicators are developed to measure the effectiveness of the operational procedure(s).

2 Monitor the implementation of the operational procedure(s)

2.1 The introduction of the operational procedure(s) to selected units/job functions is planned with affected personnel to ensure understanding and the need for compliance.

2.2 Effective induction and supervision is provided to support personnel in implementing the new procedure(s).

2.3 Performance of personnel is monitored to ensure adherence to the operational procedure(s) and to assess the requirement for modification to the process.

2.4 Solicited feedback is actively sought from personnel implementing the operational procedure(s).

3 Evaluate the implementation of operational procedures

3.1 An assessment of the effectiveness of the operational procedure(s) is undertaken against developed performance indicators.

3.2 Where required, the operational procedure(s) are modified/deleted in accordance with evaluation mechanism and enterprise requirements.

3.3 Relevant personnel are kept informed of the evaluation process and advised of subsequent changes to operational procedure(s).

3.4 Records, reports and recommendations for improvement are managed within the workplace information systems and processes.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, codes of practice and legislative requirements including local and international regulations relevant to transport and distribution operations and the Australian Dangerous Goods Code where applicable.
- Relevant OH&S and environmental protection procedures and regulations.
- Workplace procedures for the development and maintenance of operational procedures for transport and distribution enterprises.
- Problems that may occur during the development and maintenance of operational procedures for transport and distribution enterprises and action that can be taken to resolve or report the problems
- Risks and hazards related to the development and maintenance of operational procedures and ways of controlling the risks involved
- Focus of operation of transport and distribution systems, resources, management and workplace operating systems
- Transport and equipment applications, capacities, configurations, safety hazards and control mechanisms
- Licence and permit requirements relevant to transport and distribution operations
- Application of relevant Australian standards and associated certification requirements
- Business policies and plans including procedures for outsourcing components of operations and engaging additional resources
- Workplace policies including issue resolution and grievance procedures
- Resource availability including the competencies of individuals in the team/group
- The application of current competencies within functional activity
- Relevant workplace documentation procedures

**Required skills:**
- Communicate effectively with others when developing and maintaining operational procedures for transport and distribution enterprises
- Read and interpret transport and distribution schedules, inventories, regulatory requirements, customer instructions, workplace procedures and manuals relevant to the development and maintenance of operational procedures for transport and distribution enterprises
- Prioritise work and coordinate self and others in relation to transport and distribution operations
- Complete documentation related to the development and maintenance of operational procedures for transport and distribution enterprises
- Operate electronic communication equipment to required protocol
- Provide leadership and work collaboratively with others when developing and maintaining operational procedures for transport and distribution enterprises
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems identified when developing and maintaining operational procedures for transport and distribution enterprises in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when developing and maintaining operational procedures for transport and distribution enterprises
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan and organise activities
- Monitor work activities in terms of planned schedule
- Modify activities to cater for variations in workplace contexts and environment
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and apply appropriate application of technology, information systems and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken: • in various work environments in warehousing, storage, transport and distribution industries

Customers may be: • internal or external

Operations may be: • by day or night

The workplace environment may involve:
• twenty-four hour operation
• single and multi-site locations
• large, medium and small workplaces

Factors impacting upon the development of operational procedures may include:
• legislative requirements
• changes to technology
• domestic and international market variability, political constraints
• culture of the workplace
• the principal services, products and competitive advantages of the organisation

Development of operational procedures may be:
• internally and/or externally initiated

Transport may be: • single or multi-modal

Modes of domestic transport may include:
• road
• rail
• air
• sea

Transport may involve: • the use of designated routes
Hazards may include:
- confined spaces
- hazardous or dangerous materials
- contamination of, or from, materials being handled
- fire/explosions
- noise, light, energy sources
- stationary and moving machinery, parts or components
- moving vehicles

Hazard management is consistent with:
- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- systems and facilities for transport and distribution systems
- specialised lifting and/or handling equipment
- incident/accident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits
- communications equipment

Consultative processes may involve:
- other employees and supervisors
- suppliers, potential customers and existing clients
- relevant authorities and institutions
- relevant government instrumentalities
- emergency services
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF communications
- bar code readers
- oral, aural or signed communications
Personal protective equipment may include but is not limited to:
- gloves
- safety headwear and footwear
- safety clothing
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:
- Australian and international codes of practice and regulations relevant to transport and distribution operations including the ADG Code where applicable
- workplace operating procedures and policies
- supplier and/or client instructions
- operations manuals, job specifications and procedures and induction documentation
- manufacturers specifications for equipment and goods
- suppliers advice for the handling, transport and storage of goods and materials
- material safety data sheets
- dangerous goods documentation where applicable including dangerous goods declarations
- Safe Working Limits (SWL) and Working Load Limits (WLL) of load shifting equipment and storage facilities
- relevant Australian and international standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- codes and regulations relevant to transport and distribution operations including the ADG Code where applicable
- relevant Australian and international standards and certification requirements
- relevant state/territory OH&S and environmental protection legislation in terms of duties of employers, employees, suppliers and contractors
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIL207C  Undertake employee payroll activities

Unit Descriptor
This unit involves the skills and knowledge required to undertake employee payroll activities in accordance with workplace requirements, including compiling and verifying payroll data, recording payroll data, and organising the payment of wages and salaries. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace requirements concerning the completion of employee payroll requirements.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and relevant regulatory requirements to employee payroll activities in the stevedoring, transport, distribution and/or allied industries.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Compile and verify payroll data
1.1 Pay sheets are compiled and checked for accuracy and compliance with organisational requirements
1.2 All earnings are authorised and calculated in accordance with defined remuneration polices and workplace procedures
1.3 Records of leave entitlements, leave taken, loadings and allowances are maintained

2 Record payroll data
2.1 Gross pay and deductions are accurately calculated from information contained in relevant documents
2.2 Payments due to employees are calculated within workplace timelines
2.3 Details of pay identifying gross and net amounts, deductions and other details are prepared for employees
2.4 Tax is calculated in accordance with Australian Taxation Office (ATO) procedures
2.5 Periodic deductions are forwarded to nominated creditors within designated timelines

3 Organise payment of wages and salaries
3.1 Methods of payment are arranged in accordance with workplace policies and procedures
3.2 Wages are prepared and issued within designated timelines
3.3 Records are kept and maintained in accordance with statutory requirements
3.4 Security procedures are followed and confidentiality and security of information are maintained

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations relevant to payroll activities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for carrying out employee payroll activities
- Focus of operation of work systems, equipment, management and site operating systems for payroll activities
- Documentation requirements when carrying out employee payroll activities
- Problems that may occur when carrying out employee payroll activities and appropriate action that can be taken to resolve the problems
- Relationship of loading/unloading plans and sequence sheets and pay records of individuals
- Workplace grading systems
- Workplace leave and roster systems

Required skills:
- Communicate effectively with others when completing employee payroll activities
- Read and interpret instructions, procedures, information and employee records relevant to employee payroll activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when completing employee payroll activities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when completing employee payroll activities in accordance with regulatory requirements and workplace procedures
- Apply legislative and regulatory requirements relevant to employee payroll activities
- Monitor work activities in terms of planned schedule
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use relevant equipment, processes and procedures when carrying out employee payroll activities
- Adapt to differences in equipment in accordance with standard operating procedures
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments  
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces  
• exposed conditions  
• controlled or open environments

Payroll activities may include the processing of information on:
• attendance
• payment details
• overtime allowances
• loadings
• leave records
• tax
• superannuation

Payroll and other details may be: • manually or computer generated

Hazards in the work area may include exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, goods, materials and vehicular traffic

Personal protective equipment needed in the work area may include:
• gloves
• safety headwear and footwear
• safety glasses
• two-way radios
• protective clothing
• high visibility clothing

Communication in the work area may include:
• phone
• fax
• email
• electronic data transfer (EDI)
• RF systems
• radio
• oral, aural or signed communications
Consultative processes may involve:
- staff members
- management
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and policies for payroll activities
- employees work records
- award, enterprise bargaining agreement, and/or other industrial arrangements
- workers conditions of service
- workers compensation and superannuation regulations
- operations manuals, job specifications and induction documentation
- Australian and international codes of practice and regulations relevant to workplace activities
- manufacturers specifications for relevant office and computer equipment
- relevant Australian standards and certification requirements
- OH&S procedures and policies
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant codes and regulations for the payroll operations
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- privacy legislation

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**
The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria.
unit of this unit and include demonstration of applying:
ο the underpinning knowledge and skills
ο relevant legislation and workplace procedures
ο other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIL2107C Coordinate the erection and dismantling of temporary storage facilities

Unit Descriptor
This unit involves the skills and knowledge required to coordinate the erection and dismantling of temporary storage facilities in accordance with workplace procedures, including planning for the erection of temporary storage facilities, erecting temporary storage facilities as planned, and dismantling the temporary storage facilities after outloading. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to the erection and dismantling of temporary grain storage facilities.

Work is performed under some supervision, generally within a team/group environment. It involves the application of regulatory requirements and workplace procedures when coordinating the erection and dismantling of temporary storage facilities as part of grain storage operations in the transport, warehousing, distribution and/or storage industries.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Plan for erection of temporary storage facility

1.1 Plans, storage specifications, assembly details and erection sequence are obtained and examined for accuracy to meet intended storage requirements

1.2 Engineering drawings, computations and instructions are obtained from qualified persons where required

1.3 Local and state authority approvals for the construction of the storage facility are obtained

1.4 Labour and equipment requirements for the construction of the storage facility are organised and scheduled in accordance with erection sequence

2 Erect temporary storage facility

2.1 Foundations and earth-works for temporary storage are prepared to workplace instructions and specification

2.2 Structural and storage components are assembled and placed to workplace instructions and specifications

2.3 Protective sheeting (floor and wall) is placed and sealed/sewn to workplace specifications

2.4 Material is placed into the temporary storage facility to
specification and in accordance with site procedures

2.5 Grain protection measures are implemented in accordance with workplace requirements

2.6 Labour and equipment is coordinated for timely and efficient completion of work

3 Dismantle temporary storage facility after outloading

3.1 Procedures for the dismantling of temporary storage facility, including sequencing of process, are confirmed with qualified personnel

3.2 Labour and equipment requirements for the dismantling of the temporary storage facility is organised and scheduled

3.3 Material is removed from storage to workplace procedures

3.4 Protective sheeting (floor and wall) is dismantled and folded for future use or disposed of in accordance with workplace procedures

3.5 Structural components are disassembled, transported and stacked to workplace instructions

3.6 Labour and equipment is coordinated for timely and efficient completion of work

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Regulations relevant to the erection and dismantling of temporary grain storage facilities

• Relevant OH&S and environmental protection procedures and guidelines

• Workplace procedures and policies for the coordination of the erection and dismantling of temporary grain storage facilities

• Problems that may occur when coordinating the erection and dismantling of temporary grain storage facilities and appropriate action that can be taken to resolve the problems

• Equipment applications, capacities, configurations, safety hazards and control mechanisms

• The range of construction methods used in the erection of temporary storage facilities

• Identifying characteristics of commodity types, varieties and grades

• Grain protection measures

• Emergency response procedures

• Storage and safe handling procedures

• Procedures for environmental control and disposal activities

• Site layout and obstacles

Required skills:

• Communicate effectively with others when coordinating the erection and dismantling of temporary grain storage facilities
• Read and interpret instructions, procedures, information and plans relevant to the erection and dismantling of temporary grain storage facilities
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when coordinating the erection and dismantling of temporary grain storage facilities
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems, faults or malfunctions that may be identified when coordinating the erection and dismantling of temporary grain storage facilities in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when coordinating the erection and dismantling of temporary grain storage facilities
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the erection and dismantling of temporary grain storage facilities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify, select and efficiently and effectively use equipment needed when coordinating the erection and dismantling of temporary grain storage facilities
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
                     • by day or night

Customers may be:     • internal or external

Workplaces may comprise: • large, medium or small worksites
Workplace environment may include movement of:
- equipment
- goods
- products
- materials
- vehicular traffic

Work involves:
- individuals coordinating and organising the construction and dismantling of temporary storage facilities from working drawings and erection specifications

Types of temporary storage facilities may include:
- concrete side wall sites
- earth wall sites
- two-way sites
- timber and/or steel prefabricated wall sites
- concrete floors
- compacted earth or fill floors
- sites segregated for different commodities

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- existing and potential customers/clients
- manufacturers of pesticides
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- maintenance, professional or technical staff

Requirements for work may include:
- site restrictions and procedures
- licensing requirements
- use of safety and personal protective equipment
- communications/recording equipment
- authorities and permits
- emergency procedures

Hazards in the work area may include:
- chemicals and pesticides
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty equipment
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- respirators and fume/dust masks
- high visibility clothing

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- workplace procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- operations manuals, job specifications and procedures
- induction documentation
- competency standards and training materials
- manufacturers specifications and instructions
- materials safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, workplace bargaining agreement, other industrial arrangements
- OH&S procedures
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to grain storage
- legislation regarding the use of fumigants/poisons
- ADG Code and regulations pertaining to the storage and handling of dangerous and hazardous goods
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian and international standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL2607B  Manage export logistics

Unit Descriptor
This unit involves the skills and knowledge required to manage export logistics in accordance with relevant regulatory requirements and workplace procedures, including planning efficient export logistics operations, developing appropriate contingency management strategies, producing the required operation schedules for export logistics, and monitoring and coordinating the required systems for export logistics. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations, standards and codes of practice, including Australian and International Dangerous Goods Codes.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field
L – Resource Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Plan efficient export logistics

1.1 Australian and international codes and regulations and workplace policies for export logistics are identified

1.2 Consignment loads are evaluated in terms of critical parameters and customer instructions

1.3 Capacity and capability of different local and overseas transport modes available to the organisation are assessed against proposed logistics tasks

1.4 Preliminary schedules are matched against operational capacity and capability of available transport systems, equipment and staff
1.5 Export logistics are planned for efficient and effective delivery and load handling in accordance with relevant regulatory and workplace procedures, taking into account key requirements.

1.6 Strategies to address identified deficiencies in operational capability and availability are undertaken in accordance with workplace procedures.

2 Develop contingency management strategy

2.1 Quality standards and procedures for export logistics processes are confirmed and/or updated in accordance with workplace procedures.

2.2 The nature, extent and impact of potential issues or incidents in the planned export logistics are assessed.

2.3 Contingency management strategies for identified issues/incidents are established and evaluated including reference to previous scenarios of similar nature.

2.4 Implementation procedures, including resource and infrastructure support, are documented and continually upgraded in regard to established quality standards and any changes in both the Australian and the international operating environments.

3 Produce operation schedules for export logistics

3.1 Local and overseas transportation modes, times and routes are established to maximise effective and efficient operations.

3.2 Resources are arranged in association with relevant Australian and overseas personnel to meet the operational schedules.

3.3 Australian and international regulatory requirements, codes of practice and workplace procedures are identified and accounted for in operational schedule.

3.4 Tracking procedures are applied to consignment(s) using relevant technology and systems in accordance with workplace procedures.

3.5 Schedule is consolidated and forwarded to appropriate personnel.

3.6 Schedule is stored in accordance with workplace procedures.

4 Monitor and coordinate systems for export logistics

4.1 Export logistics are monitored against identified quality standards, planned processes, and compliance with Australian and international regulatory requirements.

4.2 Non-compliance with quality standards, planned processes or regulatory requirements is identified and appropriate action is initiated to report and rectify any identified problems.

4.3 Customer satisfaction with export logistics operations is monitored using appropriate methods.

4.4 Customer concerns and suggestions for service improvements are acted upon in accordance with workplace procedures.
4.5 Reports and other required documentation related to export logistics are completed and referred to relevant personnel in accordance with workplace procedures

4.6 Any changes in Australian and international regulations and codes of practice relevant to export logistics are monitored, identified and appropriate action is initiated to ensure ongoing compliance of export logistics processes and systems

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant OH&S and environmental protection procedures and regulations
• Workplace procedures for the planning and management of export logistics
• Problems that may occur during the planning and management of export logistics and action that can be taken to resolve or report the problems
• Focus of operation of export logistics systems, resources, management and workplace operating systems
• Local and overseas transport and equipment applications, capacities, configurations, safety hazards and control mechanisms
• Australian and international regulatory, permit and licence requirements relevant to export logistics
• Application of relevant Australian and international standards and associated certification requirements
• Business policies and plans including procedures for outsourcing components of operations and engaging additional resources
• Workplace policies including issue resolution and grievance procedures
• Resource availability including the competencies of individuals in the team/group
• Workplace documentation procedures relevant to export logistics

Required skills:
• Communicate effectively with others when planning and managing export logistics
• Read and interpret instructions, procedures, information and signs relevant to the planning and management of export logistics
• Prioritise work and coordinate self and others in relation to export logistics activities
• Complete documentation related to the planning and management of export logistics
• Provide leadership and work collaboratively with others when planning and managing export logistics
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Implement contingency plans for unanticipated situations that may arise when planning and managing export logistics
• Monitor work activities in terms of planned schedule
• Modify activities to cater for variations in workplace contexts and environment
• Select and apply appropriate application of technology, information and communication systems and procedures
• Adapt to differences in systems and equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken:
- in various work environments in the sections of the warehousing, storage, transport and distribution industries involved in export logistics

Customers may be:
- internal or external

The workplace environment may involve:
- twenty-four hour operation
- single and multi-site locations
- large, medium and small workplaces

Critical parameters for the evaluation of consignment loads may include but are not limited to:
- type, capacity, compatibility and capability of load
- agreed delivery times and destination
- pick-up and drop-off points
- waiting, loading and unloading times
- agreed cost structure

Key requirements for the planning of transport logistics may include but are not limited to:
- collection and distribution destination
- transport duration times
- type and compatibility of load
- transport mode(s) and capacity
- bond and customs requirements
- return freight
- fatigue management
- use of designated routes

Strategies to address identified deficiencies in operational capability and availability may include but are not limited to:
- re-negotiation of collection and/or delivery times
- alternate transport mode(s)
- outsourcing components of operation

Consignments may be:
- palletised
- containerised
- packaged or loose
- in gas, liquid or solid form

Transport may be:
- single or multi-modal
Modes of transport for export may include:  
- road and rail locally as well as either air or sea, and both local and overseas couriers

Calculation of transport duration times includes:  
- travelling, loading, unloading, change-over and standing times and with due regard to varying transit condition and environments (i.e. local and overseas road, sea and weather conditions, traffic flows, government regulations)

Transport may involve:  
- the use of designated routes

Requirements for work may include:  
- site restrictions and procedures
- use of safety and personal protective equipment
- systems and facilities for export logistics
- specialised lifting and/or handling equipment
- incident/accident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation Australian and overseas contacts
- authorities and permits
- communications/computing equipment

Hazard management is:  
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:  
- employees, supervisors and managers
- international and domestic agents, suppliers and current or potential clients
- relevant authorities, government departments and institutions
- representatives of other enterprises and organisations involved in export logistics
- industrial relations and OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:  
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF communications
- bar code readers
- oral, aural or signed communications

Information/documentation may include:

- Australian and international codes of practice and regulations relevant to export logistics including bond and customs requirements
- Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including the ADG and IDG Code
- workplace operating procedures and policies relevant to export logistics
- supplier and/or client instructions
- agents advice on available transport options, timetables, schedules and issues
- manufacturers specifications for equipment and goods
- suppliers advice for the handling, transport and storage of goods and materials
- material safety data sheets
- dangerous goods documentation where applicable including dangerous goods declarations
- relevant Australian and international standards, criteria and certification requirements
- information accessed through communications/computer technology and equipment, and verbal or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:

- Australian and international codes and regulations relevant to export logistics
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant Australian and international standards and certification requirements
- licence, patent or copyright arrangements
- transport licence/permit requirements
- export/import/quarantine/bond requirements
- Marine/Aviation Orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIL3007B Control a furniture warehouse

Unit Descriptor
This unit involves the skills and knowledge required to control a furniture warehouse in accordance with workplace requirements, including determining site functions and operations, receiving and despatching furniture, maintaining warehouse inventory, maintaining warehouse security, monitoring storage operations, and completing required records and documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the control of a furniture warehouse.

Work is performed under limited supervision. It involves the application of discretion and judgement and an understanding of relevant regulatory requirements and workplace procedures to the control of a furniture warehouse.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine site functions and operations
1.1 Layout of furniture storage facilities, work flow and activities undertaken in each zone are identified
1.2 Type of storage facilities, their purpose and (any) associated risk factors are identified
1.3 Inventory lists are accessed through record management system
1.4 Storage separations and co-storage applications are identified

2 Receive and despatch furniture
2.1 Furniture for storage is received and transferred to allocated storage space in accordance with workplace procedures
2.2 Furniture and effects are transferred from storage area to the loading dock and despatched in accordance with workplace procedures and customer requirements
2.3 Records of received and despatched furniture and effects are completed in accordance with workplace procedures

3 Maintain inventory
3.1 Inventory is updated through entry of data on furniture movements into, out of, and within storage areas
3.2 Inventory data is confirmed to match furniture and effects for available storage and applicable storage requirements
3.3 Audits and stocktakes of storage areas are used to verify inventory records

4 Maintain warehouse security

4.1 Security of warehouse and storage areas is maintained in accordance with workplace procedures in conjunction with security personnel and with the aid of appropriate security technology

4.2 Appropriate action(s) is taken in response to breaches of operational and security procedures or to an emergency/incident

4.3 Operational actions and investigative outcomes are documented in accordance with workplace procedures

5 Monitor storage operations

5.1 Storage areas are supervised to ensure movement of personnel and furniture items are in accordance with workplace procedures

5.2 Storage facilities are checked to ensure appropriate operational capacity

5.3 Integrity of furniture and effects is monitored to ensure appropriate condition is maintained

5.4 Any deterioration in condition of furniture and effects is recorded, investigated and reported for appropriate action

5.5 Discrepancies/changes to storage requirements and/or inventory lists are noted and appropriate action is initiated in accordance with workplace procedures

6 Complete records

6.1 Records of warehouse operations are completed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian codes and regulations/permit/licence requirements relevant to the workplace activities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies relevant to the control of a furniture warehouse
- Focus of operation of work systems, equipment, management and site operating systems
- Information on various categories or groups of furniture and effects including their key characteristics and hazards and the special handling, stacking and storage requirements for each
- Types of storage areas and related equipment appropriate for different types of furniture and effects
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
• Documentation requirements, including reports and records related to damaged furniture and effects, emergencies and security breaches
• Problems that may occur when controlling a furniture warehouse and appropriate action that can be taken
• Site layout
• Housekeeping standards procedures required in the workplace

**Required skills:**
• Communicate effectively with others when controlling a furniture warehouse
• Read and interpret instructions, procedures, information and signs relevant to the control of a furniture warehouse
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the control of a furniture warehouse
• Operate electronic communication equipment to required protocol
• Provide leadership and work collaboratively with others when controlling a furniture warehouse
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when controlling a furniture warehouse in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when controlling a furniture warehouse
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan own work including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities dependant on differing workplace contexts, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant communications, computing and office equipment when controlling a furniture warehouse
• Use inventory information to determine, plan and organise the control of a furniture warehouse
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  • in a range of work environments  • by day or night

Customers may be:  • internal or external

Workplaces may comprise:  • large, medium or small worksites

Requirements for work may include:  • restricted spaces  • site restrictions and procedures  • use of safety and personal protective equipment  • communications equipment  • specialised lifting and/or handling equipment  • incident/accident/breakdown procedures  • additional gear and equipment  • noise restrictions  • hours of operations  • authorities and permits

Work may be conducted in:  • limited or restricted spaces  • exposed conditions  • controlled or open environments  • environments involving the movement of equipment, goods, materials and/or vehicular traffic

Furniture and effects may require:  • special handling  • location  • storage and/or  • packaging requirements

Modes of transfer may be:  • manual or motorised

Storage types may include but are not limited to:  • marked floor space  • containers  • racks and racking systems  • block/stacks  • pallets
Inventory systems may be:
- automated
- manual
- paper-based
- computerised
- microfiche

Stored furniture and effects may include but are not limited to:
- fridges, freezers and washing machines
- bed-ends, mattresses and bases
- lamps and lamp shades
- pendulum clocks
- carpets, tables and chairs
- television sets, stereo and audio equipment
- computing and office equipment and furniture
- upright pianos, organs and grand pianos
- lounges and armchairs
- tools and equipment

Consultative processes may involve:
- other employees and supervisors
- customers
- relevant authorities and institutions
- management
- union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Labelling systems may include but are not limited to:
- bar code
- identification numbering systems
- serial numbers
- labels
Hazards in the work area may include:
- heavy and/or awkward furniture and loads
- noise, light, energy sources
- stationary and moving machinery, parts or components
- dust/vapours
- a fire or explosion
- damaged furniture or pallets
- broken glass/mirrors
- debris on floor
- faulty racking
- poorly stacked pallets/furniture
- faulty equipment
- oil or water on floor

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing
Information/documents may include:

- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- client instructions
- identification numbers, codes and labels
- manifests, furniture transfers, bar codes, and container identification/serial number
- insurance documentation
- codes of practice and regulations relevant to workplace operations
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
- security and safety incident procedures and reporting requirements
- inventory listings

Applicable regulations and legislation may include:

- codes and regulations relevant to the storage of furniture and effects
- Australian and international regulations and codes of practice for the storage of dangerous goods and hazardous substances
- insurance legislation and regulations
- relevant state/territory OH&S and environmental protection legislation
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL307C  Conduct induction process

Unit Descriptor
This unit involves the skills and knowledge required to conduct an induction process to introduce a new employee to a workplace, including outlining the relationship between the employee and the company, establishing and explaining the requirements of position, and completing relevant workplace documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work involves the planning, coordination and conduct of an induction program to prepare workers to enter and participate in the work activities of a workplace. Orientation/induction activities are in accordance with relevant regulatory requirements and operational policies and procedures for the workplace concerned.

Work is performed under some supervision, generally within a team environment.

Work involves the application of basic routine coaching and instruction principles and procedures to conduct an induction program for new workers and trainees commencing employment in the workplace.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Outline the relationship between employee and the company

1.1 Employee is greeted and introduced to key personnel and areas in the workplace
1.2 Workplace objectives, operating systems and workplace structures are explained
1.3 The relationship between the employee's position and the workplace structure and objectives is identified
1.4 Required OH&S, workplace procedures and employment conditions are described
1.5 Sources of information and assistance for the employee are identified
1.6 Emergency procedures are explained

2 Establish requirements of position

2.1 Job role, responsibilities and reporting relationships are explained
2.2 Immediate work colleagues are introduced
2.3 Workplace facilities and layout are shown to the employee and
flow of work/materials/goods and functions carried out in the areas are explained

2.4 Initial training in relevant OH&S, equipment and work systems is provided in accordance with workplace procedures

2.5 Employee rights and responsibilities in terms of equal employment opportunity, sexual harassment and anti-discrimination are explained

2.6 Training opportunities are organised for the development of the individuals job role

2.7 Workplace expectations of work functions and outputs are clarified

2.8 Opportunities for the employee to clarify concerns and ask questions are provided

3. Complete relevant workplace documentation

3.1 Workplace personnel records are completed in accordance with workplace requirements

3.2 Tax declaration and other relevant documentation are checked for compliance with requirements

3.3 Employee is requested to provide any additional information needed and notes are taken of any additional actions required

3.4 Workplace-specific documentation (if applicable) is submitted to appropriate personnel in accordance with workplace requirements

3.5 Requirements of Territory/State/Commonwealth legislation on equal employment opportunity, sexual harassment and anti-discrimination are fulfilled

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Workplace induction procedures and documentation requirements
- Instructional methods and resources required to conduct an induction program
- Conditions of service of employees
- Workplace structures and the roles and responsibilities of employees
- Site or workplace layout
- Emergency procedures and related equipment
- Workplace documentation and record keeping procedures and requirements
- Customer service standards and procedures
- Workplace hazards and related hazard minimisation procedures
- Personal protective equipment and instructions for its use

Required skills:
• Communicate effectively with others when conducting an induction process for relevant personnel
• Read and interpret instructions, procedures, information and signs relevant to the conduct of an induction process for relevant personnel
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the conduct of an induction process
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when conducting an induction process for relevant personnel
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when conducting an induction process for employees and contractors in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of an induction process
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify and correctly use instruction equipment, processes and procedures
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work will involve:
• basic routine induction training in a variety of relevant work contexts

Customers may be:
• internal or external

Operations may be conducted:
• by day or night
• in enclosed spaces
• in exposed conditions
• in controlled or open environments
Instruction methods may include:

- explanation
- demonstration
- guided site/workplace inspection
- provision of program notes and materials
- presentation using an overhead slide projector, computer-driven projector or video player/monitor
- written and practical assignments and exercises

Hazards may include:

- vehicular traffic and pedestrians
- uneven ground, steps, road surfaces
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature and radiant heat
- light including UV
- noise

Consultative processes may involve:

- clients
- managers
- supervisors/team leaders
- workplace personnel
- visitors
- contractors
- official representatives
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
- local government authorities

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication may involve the basic use of a range of communication technology including:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Information/documentation may include:
- workplace induction procedures and related instruction materials
- operations manuals
- induction/orientation documentation
- competency standards and training materials
- job specification, site/workplace map and details of organisation structure
- conditions of service, relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- relevant codes of practice including the national standards for manual handling and the industry safety code
- supplier and/or client instructions
- manifests, bar codes, goods and container identification
- goods identification numbers and codes
- manufacturers specifications
- material safety data sheets
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant regulations, standards and codes of practice, including the Australian standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations
- licensing requirements for driving and carrying particular classes of goods
- workplace relations legislation
- workers compensation legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLIL3107B

#### Monitor and process attendance records

**Unit Descriptor**

This unit involves the skills and knowledge required to monitor and process attendance records in accordance with regulatory and workplace requirements, including monitoring attendance records and checking and processing attendance information. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Work must be carried out in compliance with the codes of practice and workplace requirements relevant to the monitoring and processing of attendance records.

Work is performed individually, but the ability to work within a team environment may be required.

Work involves the application of workplace procedures and relevant regulatory and code requirements to the monitoring and processing of attendance records as part of work activities in the rail transport and/or allied industries.

**Competency Field**

L – Resource Management

---

#### ELEMENT

Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Monitor attendance records**

   1.1 Hours worked, as recorded for each employee, are accessed, checked and documented on a prescribed time basis

   1.2 Employee record cards or other daily time records showing hours absent are followed up to ensure authorised absences are accurately recorded

   1.3 Employee daily time records showing additional hours worked are followed up to determine whether additional payments are authorised

   1.4 Unauthorised absences are notified to appropriate personnel on a timely basis to ensure follow-up action is initiated

   1.5 Employee attendance sheets are received, checked and processed to ensure accurate employee records are maintained

2 **Process attendance records**

   2.1 Unexplained absences are identified, confirmed and appropriate personnel are notified for follow-up action

   2.2 Timesheets, or equivalent, are checked and forwarded to payroll department for costing purposes

   2.3 Employee record cards or other identification system requirements are checked and redistributed on a timely basis
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Regulations and codes of practice relevant to the monitoring and processing of attendance records
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the monitoring and processing of attendance records
- Focus of operation of work systems, equipment, management and site operating systems for the monitoring and processing of attendance records
- Elements of human resources systems relevant to the monitoring and processing of attendance records, including: workplace's timekeeping practices, conditions of employment, labour/costing practices, industrial agreements and awards, auditing requirements, payroll practices and procedures, personnel records requirements, and computer based personnel recording systems
- Problems that may occur when monitoring and processing attendance records and appropriate action that can be taken to resolve the problems
- Documentation and reporting requirements for the monitoring and processing of attendance records including computer based personnel recording systems

**Required skills:**

- Communicate effectively with others when monitoring and processing attendance records
- Read and interpret instructions, procedures and information relevant to work activities
- Interpret conditions of employment and industrial agreements and awards
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Conduct simple calculations required when monitoring and processing attendance records
- Work collaboratively with others when monitoring and processing attendance records
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems identified when monitoring and processing attendance records in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use relevant computer, communication and office equipment required when monitoring and processing attendance records
- Select and use required personal protective equipment conforming to industry and OH&S standards
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Employees include:
- all personnel whose attendance is recorded for timekeeping purposes

Workplaces may comprise:
- large, medium or small worksites

Timekeeping records and systems may include, but are not limited to:
- clock cards/identification numbers
- swipe cards/physical recognition systems
- manual clocking systems
- integrated attendance sheet systems
- maternity/paternity leave
- jury leave
- rest breaks between shifts/overtime

Information on attendance records may be obtained from:
- timesheets
- absentee records
- payroll department
- record cards
- identification system requirements

Consultative processes may involve:
- other employees, supervisors and managers
- affected customers
- official representatives
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- regulatory and/or code requirements relevant to the maintenance of attendance records
- workplace procedures and policies for the monitoring and processing of attendance records
- employees timesheets, absentee records, record cards or computer files
- operations manuals, job specifications and induction documentation
- manufacturers specifications for office equipment
- conditions of service, award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- federal and state/territory award legislation
- relevant state/territory regulations and codes of practice relevant to the monitoring and processing of attendance records
- relevant state/territory privacy legislation
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment**
- The evidence required to demonstrate competency in
and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL3207B Implement equal employment equity strategies

Unit Descriptor
This unit involves the skills and knowledge required to implement equal employment equity strategies in accordance with regulatory and workplace requirements, including identifying and communicating agreed employment equity direction, responding to enquiries regarding employment equity, implementing employment equity strategies, contributing to policy development, and evaluating and reporting on the implementation of equal employment opportunity strategies in the workplace. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in compliance with the regulatory and workplace requirements relevant to the implementation of equal employment equity strategies in the workplace.

Work is performed individually, but the ability to work within a team environment may be required.

Work involves the application of workplace procedures and relevant regulatory requirements to the implementation of equal employment equity strategies as part of work activities in the rail transport and/or allied industries.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and communicate agreed employment equity direction

1.1 Employment equity information and policy requirements are identified for the workplace

1.2 Employment equity information is disseminated to ensure relevant requirements are considered in decisions made within the workplace

1.3 Advice is provided to assist with consistent interpretation of employment equity information

1.4 Negotiations are undertaken with management to ensure equity principles are incorporated throughout the workplace

1.5 Interpretation and advice are provided on legislative requirements, workplace objectives and constraints, and human resource management practices

2 Respond to enquiries regarding employment equity

2.1 Arrangements are made to ensure advise on employment equity can be provided to personnel within necessary timeframes
2.2 Enquiries are analysed to identify necessary information required to respond sufficiently
2.3 Sources of information are identified and accessed to formulate response
2.4 Responses are communicated clearly and appropriately and understanding of the response is checked

3 Implement employment equity strategies
3.1 Strategies are developed to implement policies and objectives
3.2 Measures are identified which reflect the success of strategies developed and suitable data collected

4 Contribute to policy development
4.1 Consultation is regularly undertaken with stakeholders on policy development
4.2 Advice is provided concerning the employment equity implications of policy

5 Evaluate and report
5.1 Data used to measure employment equity policy performance is collected and statistically analysed
5.2 Annual and other reports are produced on employment equity policy performance
5.3 Results of employment equity strategies and performances are conveyed in a timely and appropriate way to relevant individuals and groups

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Regulations relevant to equal employment equity
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for the implementation of equal employment equity strategies
• Focus of operation of work systems, equipment, management and site operating systems for the implementation of equal employment equity strategies
• Elements of workplace operations relevant to the implementation of equal employment equity strategies, including: training and social justice policies and procedures, workplace organisational structure, workplace human resource policies and practices, job description and specifications, referral processes, workplace standards and delegations, quality management, work area business plans, and industrial awards and enterprise agreements
• Problems that may occur when implementing equal employment equity strategies and appropriate action that can be taken to resolve the problems
• Documentation and reporting requirements for the implementation of equal employment equity strategies
Required skills:

- Communicate effectively with others when implementing equal employment equity strategies
- Counsel and negotiate with employees on employment equity matters
- Read and interpret instructions, procedures, employment equity policies, conditions of employment and industrial agreements and awards relevant the implementation of equal employment equity strategies
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the implementation of equal employment equity strategies
- Work collaboratively with others when implementing equal employment equity strategies
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems identified when implementing equal employment equity strategies in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail
- Select and use relevant computer, communication and office equipment required when implementing equal employment equity strategies
- Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

- in a range of work environments
- by day or night

Workplaces may comprise:

- large, medium or small worksites

Recording mechanisms/systems may include:

- paper-based systems
- electronic systems

Work organisation procedures and practices may include:

- security procedures
- payroll systems
- industrial relations policies and agreements
- superannuation procedures
- dispatching and collecting procedures
- employment policies
Consultative processes may involve:
- employees
- supervisors and managers
- official representatives
- relevant authorities and institutions
- union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- regulatory requirements relevant to employment equity
- workplace procedures and policies for the implementation of equal employment equity strategies
- operations manuals, job specifications and induction documentation
- manufacturers specifications for office equipment
- conditions of service, award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures

Applicable regulations and legislation may include:
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- relevant state/territory privacy legislation
- freedom of information legislation
- relevant state/territory OH&S and environmental protection legislation
## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

### Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts.

Resources for assessment include:

- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:

- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL3307B  Promote effective workplace practice

Unit Descriptor
This unit involves the skills and knowledge required to promote effective workplace practice, including contributing positively to the work team environment, observing and promoting work safety procedures, maintaining and promoting the well being of workplace team(s), and participating in competency development activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with the regulatory and workplace requirements relevant to the promotion of effective workplace practice.

Work is performed individually, but the ability to work within a team environment may be required. It involves the application of workplace procedures and relevant regulatory and code requirements to the promotion of effective workplace practice as part of work activities in the rail transport and/or allied industries.

Competency Field
L – Resource Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Contribute positively to the work team environment
1.1 Workplace objectives are identified, interpreted and positively promoted to associated personnel and/or work team members
1.2 Communications with associated personnel and/or work team members are effectively established
1.3 Disputes are resolved through effective negotiation with the relevant individuals or groups
1.4 Quality assurance measures are maintained, systems improvement suggestions are encouraged, and proposals submitted to relevant authorities

2 Observe and promote work safety procedures
2.1 Relevant statutory and workplace requirements for Occupational Health and Safety are communicated to all personnel and implemented at all worksites
2.2 Accidents and injuries are reported and investigated in accordance with workplace policy
2.3 Potential hazards and safety risks are identified, investigated and recommendations for preventative action referred to appropriate authorities
2.4 Training in programs of Occupational Health and Safety and First Aid are implemented
3  Maintain and promote well being of team

3.1 Prescribed medical and physical fitness criteria are promoted and maintained within the work environment

3.2 Situations threatening safety arising from physical/psychological incompatibility with the work environment are identified and resolved

4  Participate in competency development

4.1 Competencies required for work are identified, attained and maintained

4.2 Personal development and other competency development programs are accessed and undertaken

4.3 Competency deficiencies in personnel are identified and remedial action, including counselling, is initiated where necessary

4.4 Workplace trainer and assessor requirements are identified and satisfied

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Regulations and codes of practice relevant to the workplace practices
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the promotion of effective work practices
- Focus of operation of work systems, equipment, management and site operating systems
- Elements of workplace operations relevant to effective work practice, including: workplace corporate plans, goals and objectives and industrial relations, communication and negotiation techniques and the benefits, advantages and disadvantages associated with them, group work practices and group dynamics, corporate customer service objectives, workplace procedures related to recording of customer enquiries and actions, dispute settlement processes, workplace OH&S and physical fitness requirements and related first-aid policies, and competencies and skills required for workplace career path levels,
- Problems that may occur during work activities and appropriate action that can be taken to resolve the problems,
- Documentation and reporting requirements in the workplace

Required skills:
- Communicate effectively with customers, associated personnel and all work team members when completing work activities
- Read and interpret instructions, procedures, information and workplace publications relevant to work activities
- Interpret statistics related to workloads and quality assurance measures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Lead and coordinate the activities of multi-disciplinary work teams or specialist work groups
• Apply principles of time management
• Counsel personnel on work related issues
• Settle disputes through face-to-face and group-based negotiation
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Coordinate the promotion of safe work practices, competency enhancement and work practice improvements throughout the work groups
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Work at heights or in confined spaces as required by the job
• Maintain the required level of physical fitness in team members
• Check and replenish fluids and carry out lubrication processes in the course of work activities

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
• in a range of work environments
• by day or night

Workplaces may comprise:
• large, medium or small worksites

Work environment may be:
• in a depot, a worksite or a store, either as an individual, a team leader or a coordinator

Work may involve exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, goods and vehicular traffic
Equipment may include:

- customer information
- workplace procedures
- quality assurance policy
- relevant OH&S guidelines
- relevant competency guidelines

Consultative processes may involve:

- employees, supervisors and managers
- customers
- suppliers and contractors
- industrial relations and OH&S specialists

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- regulatory and/or code requirements relevant to workplace activities
- workplace procedures and policies
- workplace objectives
- customer enquiries, responses and records
- quality assurance measures relevant to workplace activities
- training materials
- competency guidelines
- operations manuals, job specifications and induction documentation
- manufacturers specifications for workplace equipment
- conditions of service, award, enterprise bargaining agreement, and other industrial arrangements
- Australian standards and certification requirements relevant to workplace activities
- emergency procedures

Applicable regulations and legislation may include:

- federal and state/territory regulations and codes of practice relevant to workplace activities
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge
assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIL3407B  Arrange alternative passenger transport

Unit Descriptor
This unit involves the skills and knowledge required to arrange alternative passenger transport in accordance with workplace requirements, including identifying and confirming transport requirements, arranging alternative transport, and monitoring and updating transport arrangements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed individually, and skills are required to work within a team environment.

Work involves the application of regulatory and code requirements and workplace procedures when arranging alternative passenger transport as part of workplace activities in the rail transport and allied industries.

Competency Field
L – Resource Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify and confirm transport requirements

1.1 Need for alternative passenger transport is identified with minimal actual disruption to services
1.2 Period for which alternative transport is required is determined from situation and services
1.3 Timetables, passenger loadings and luggage quantities are determined from workplace information systems
1.4 Requirements to cater for disabled passengers or others with special needs are determined

2 Arrange alternative transport

2.1 Type and number of transport units required is determined to provide cost effective movement within workplace guidelines for minimal disruption
2.2 Alternative transport is arranged within workplace policies and procedures to meet anticipated need
2.3 Arrangements are made to provide assistance for passengers with special needs
2.4 Relevant OH&S requirements are identified and included in transport planning considerations
3 Monitor and update transport arrangements

3.1 Passengers are informed of alterations to services as quickly as possible

3.2 Relevant details of incidents are collected and recorded in accordance with workplace policies and procedures for future reference, analysis and investigation purposes

3.3 Irregularities outside own area of responsibility are referred to nominated person or section

3.4 Alternative transport arrangements and related financial transactions are documented to meet operational requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S procedures and guidelines
- Workplace procedures and policies for arranging alternative passenger transport
- Contact arrangements for other transport organisations available to provide alternative transportation
- Protocols for contacting other transport organisations
- Train timetables
- Alternative transport options
- Road transport service planning processes
- Equipment, and materials used when arranging alternative passenger transport, and procedures that should be followed in their use
- Problems that may occur when arranging alternative passenger transport and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication and negotiation requirements when arranging alternative passenger transport

Required skills:
- Communicate and negotiate effectively with others when arranging alternative passenger transport
- Read and interpret instructions, procedures, information and signs relevant to the arrangement of alternative passenger transport
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the arrangement of alternative passenger transport
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when arranging alternative passenger transport
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when arranging alternative passenger transport in accordance with workplace procedures
• Implement contingency plans for unanticipated situations that may arise when arranging alternative passenger transport
• Analyse contingency situations for their impact on services
• Schedule and monitor work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the arrangement of alternative passenger transport
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant office and communications equipment and materials when arranging alternative passenger transport
• Adapt to differences in transport situations in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:
• a range of work environments
• by night or day

Situations creating a need for alternative transport may include:
• planned track shut down
• unplanned track shut down
• out-of-schedule running which affects connecting services

Types of alternative transport can include:
• buses
• taxis
• air services

Train timetables considered in planning arrangements include:
• all services offered by the organisation potentially affected by the contingency situation

Alternative transport may include:
• buses
• trams
• taxis
• hire cars
• ferries
Alternative transport information requirements may be obtained from:

- timetables
- passenger loading information
- workplace instructions and guidelines
- plans incorporating track shutdowns
- relevant staff and management providing information on unplanned track shutdowns
- incident details

Consultative processes may involve:

- customers
- other workplace personnel
- supervisors and managers
- representatives of other transport organisations
- official representatives

Communication in the work area may include:

- phone
- fax
- email/internet
- electronic data interchange (EDI)
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- work instructions, job description and induction materials
- workplace plans incorporating track shutdowns
- timetables
- passenger loading information
- contingency incident details and/or information on unplanned track shutdowns
- manufacturers specifications for office and communications equipment and materials
- relevant OH&S and environmental protection requirements and policies
- relevant codes of practice and regulations
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIL3507B  Allocate motive power

Unit Descriptor
This unit involves the skills and knowledge required to allocate motive power in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes identifying train operating requirements, establishing motive power requirements and availability, allocating individual motive power units, and adjusting motive power allocation in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed individually and skills are required to work within a team environment. It involves the application of routine operational principles and procedures to allocate motive power across a variety of operational contexts in the Australian rail systems.

Competency Field
L – Resource Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify train operating requirements
1.1 Train timetables, shunting requirements and track conditions for each line or service are identified and records kept up to date
1.2 Tonnage of individual trains is identified to enable planning of suitable motive power
1.3 Routine usage of motive power units is established to provide an initial allocation framework
1.4 Contingency plans covering operational problems are developed and their impact on motive power requirements taken into account

2 Establish motive power requirements and availability
2.1 Availability of all motive power units is determined including location, operational status, special and routine maintenance requirements
2.2 Motive power required to haul tonnage is determined for each train/service and support activity consistent with track geography, gauge, train weight and conditions is identified
3 Allocate individual motive power units

3.1 Motive power units, including railcar and locomotive types, are allocated to ensure train and support activities are serviced.

3.2 Allocations are documented and communicated to operations personnel and feedback sought to ensure suitability of units planned.

3.3 Relevant OH&S requirements are identified and included in the allocation considerations.

3.4 Documentation authorising the use of allocated motive power for the train service is completed and processed.

4 Monitor and adjust motive power allocation

4.1 Use and requirements for motive power are monitored and possible allocation changes determined to maintain efficient use of resources.

4.2 Contingency plans for unexpected non-availability of specific motive power units or operational non-performance are implemented.

4.3 Changes to allocation are negotiated with operational personnel and motive power maintenance personnel to achieve suitable outcomes.

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice
- Workplace procedures and policies for allocating motive power
- Motive power units and specifications, capabilities and capacity
- Crew requirements and working patterns
- Allocation and maintenance schedules of motive power units
- Track specifications and limitations
- Gauges, distance, gradients and tonnages for relevant track area
- Communication requirements
- Load types
- Timetables and train details
- Emergency procedures
- Relevant industrial awards and agreements
- Equipment, and materials used when allocating motive power, and procedures that should be followed in their use
- Problems that may occur when allocating motive power and appropriate action that can be taken to resolve the problems
• Communication and negotiation requirements when allocating motive power
• Documentation and record requirements

**Required skills:**
• Communicate and negotiate effectively with others when allocating motive power
• Read and interpret instructions, procedures and information relevant to the allocation of motive power
• Read and interpret train graphs and diagrams
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the allocation of motive power
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when allocating motive power
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems, faults or malfunctions that are identified when allocating motive power in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when allocating motive power
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant computing and communications equipment and materials when allocating motive power
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be:  
- conducted by day or night  
- in all relevant weather conditions

Motive power allocated may include:  
- locomotives and self propelled railcars  
- steam locomotives  
- diesel and electric types
Resources may include:

- timetables
- track and shunting requirements
- motive power units
- relevant workplace policy
- authorisation documentation

Trains/services for which allocations are made may include:

- short distance freight
- long distance passenger service
- work trains
- special trains
- long distance freight
- urban passenger service
- train service motive power requirements
- support activities such as shunting

Establishing motive power requirements and availability may take into consideration:

- operating policies
- track specifications and limitations
- distances
- communication requirements
- tonnages
- double ended locomotives
- coupling requirements
- available motive power units
- gauges
- crew requirements
- gradients
- load types
- configuration

Contingency processes may involve:

- non-availability of specified motive power
- equipment failure
- operational breakdowns
- communications difficulties

Consultative processes may involve:

- workplace personnel including supervisors and managers
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where marshalling operations are carried out on that network
- workplace rules and operating procedures
- train graphs
- timetables
- printouts from office machines
- displays on computer monitors
- hard copy documentation
- computer based data systems
- verbal and written information from relevant staff and management
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where marshalling operations are carried out on that network
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIL3607B**  Develop rosters

**Unit Descriptor**
This unit involves the skills and knowledge required to develop rosters in accordance with regulatory and workplace requirements, including identifying operating requirements, identifying tasks and responsibilities and work requirements, and establishing and finalising work rosters. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in accordance with the regulations, codes of practice and workplace requirements relevant to the development of rosters.

Work is under minimal supervision, generally within a team environment. It involves the application of workplace procedures and relevant regulatory and code requirements to the development of rosters as part of work activities in the rail transport and/or allied industries.

**Competency Field**
L – Resource Management

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

### 1 Identify operating requirements

1.1 Transport timetables and running times for each line or service are identified and kept updated within roster operations

1.2 Transport running times are identified for each line or service to ensure all crewing requirements are planned

1.3 Set working or work tasks to be performed are identified for each transport service

1.4 Contingency plans covering operational problems are identified and impact on crewing needs analysed

### 2 Identify tasks and responsibilities and work requirements

2.1 Support activities, where required to facilitate transport arrival and activities, are identified to ensure all crewing requirements are planned

2.2 Set workings or required work tasks in support activities are identified

### 3 Establish work rosters

3.1 Rosters are developed to cover all work requirements with regard to relevant industrial/workplace conditions, absenteeism levels and planned leave

3.2 Rosters are arranged to allow sufficient flexibility to allow contingency plans to be implemented

3.3 Rosters are circulated in accordance with workplace policies
and procedures for review by affected personnel

3.4 Relevant OH&S requirements are identified and addressed in the rosters developed

3.5 Relevant safeworking systems and requirements are identified and addressed in the rosters developed

4 Finalise work rosters

4.1 Feedback from personnel associated with rosters is addressed and acceptable modifications agreed

4.2 Final rosters are documented and distributed to ensure work requirements are accurately communicated

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Regulations, safeworking systems and codes of practice relevant to the development of rosters
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for development of rosters
• Focus of operation of work systems, equipment, management and site operating systems for the development of rosters
• Elements of operations relevant to the development of rosters, including: embarkation and disembarkation requirements; equipment capacities and limitations; passenger service needs; personnel capabilities; requirements for absentee coverage; safeworking systems and requirements; station, interchange and terminal operations; support services; and transport services offered by the organisation
• Problems that may occur when developing rosters and appropriate action that can be taken to resolve the problems
• Documentation and reporting requirements for the developing of rosters, including computer-based systems

Required skills:

• Communicate effectively with others when developing rosters
• Read and interpret instructions, procedures and information relevant to the development of rosters
• Interpret set workings and combined set workings
• Interpret transport timetables and service details
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the development of rosters
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when developing rosters
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when developing rosters in accordance with workplace procedures
• Interpret conditions of employment and industrial agreements and awards
• Prepare roster documentation in line with workplace format
• Allocate suitably qualified personnel to tasks
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant computer/communication/office equipment required when developing rosters
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:  
• in a range of work environments
• by day or night

Work rosters may cover:  
• long distance passenger services
• urban passenger services
• long distance freight services
• short distance freight services
• maintenance vehicle operations
Staff covered by work rosters may include:

- driving and driving support crews
- shunting and marshalling crews
- terminal personnel
- freight handling personnel
- station personnel
- interchange personnel
- transit officers
- security officers
- revenue collection officers
- passenger assist/customer service personnel
- yard support personnel
- crew transport personnel
- transport control centre personnel
- traffic officers

Changes to planned services may include:

- changes in demand
- response to emergencies

Real time issues may include:

- absenteeism
- additional support services due to injury
- emergencies

Support activities may include:

- shunting and marshalling
- freight loading and unloading
- luggage loading and unloading
- vehicle loading and unloading
- station support activities
- interchange support activities
- crew transport
- training personnel
- revenue processing
- operations control

Contingency plans may include:

- non-availability of rolling stock
- additional services
- non-availability of personnel
- non-availability of material handling equipment
- non-availability of freight handling equipment
- late arrival or cancellation of services
Work outcomes or set workings may apply to:

- transport crews
- personnel required for support activities
- transport control personnel
- transport planning personnel

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- regulatory and/or code requirements relevant to the development of rosters
- workplace procedures and policies for the development of rosters
- work rosters
- transport graphs
- hard copy documentation
- safe working forms
- dangerous goods manifest
- operations manuals, job specifications and induction documentation
- manufacturers specifications for office equipment
- conditions of service, award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

© Commonwealth of Australia 2009
TLI07 Transport and Logistics Training Package (Version 3)
To be reviewed by 2010
Applicable regulations and legislation may include:

- relevant state/territory regulations, safeworking systems and codes of practice relevant to the development of rosters, including the ADG Code and the Code of Practice for the Defined Interstate Rail Network in situations where the trains are operating on that network
- relevant state/territory privacy legislation
- relevant state/territory OH&S and environmental protection legislation
- state, federal or Territory award legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
o through appropriately simulated activities at the registered training organisation, and/or
o in an appropriate range of situations in the workplace
TLIL3707B  Apply and amend rosters

Unit Descriptor
This unit involves the skills and knowledge required to apply and amend rosters in accordance with regulatory and workplace requirements, including identifying changes to timetables, planned activities and support activities; confirming changes to planned activities; confirming personnel availability; re-allocating personnel; and amending rosters. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with the regulations, codes of practice and workplace requirements relevant to the application and amendment of rosters.

Work is under minimal supervision, generally within a team environment. It involves the application of workplace procedures and relevant regulatory and code requirements to the application and amendment of rosters as part of work activities in the rail transport and/or allied industries.

Competency Field
L – Resource Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify changes to timetables, planned activities and support activities
1.1 Changes to transport timetables are identified and their effect on operation and support areas is assessed
1.2 New work requirements or revised set workings are identified and communicated to appropriate personnel
1.3 Difficulties relating to new work requirements are resolved with central roster operations and the appropriate work areas
1.4 Difficulties in achieving changes to work outcomes are resolved with those initiating change within workplace policies and procedures

2 Confirm changes to planned activities
2.1 Changes to planned services are identified and confirmed and impact on support activities is assessed
2.2 Support activities required to achieve amended service are assessed and necessary resources are identified and allocated
2.3 Revised work outcomes or set workings are conveyed to relevant support work area(s) for implementation

3 Confirm personnel availability
3.1 Amended rosters and work requirements are confirmed and distributed to appropriate work areas
3.2 Personnel on amended rosters who are required to achieve
new work outcomes are notified of changes

3.3 Difficulties associated with compliance with amended roster(s) or work outcomes are resolved within the work area to the satisfaction of all involved within workplace policies and procedures

3.4 Agreed work area changes to rostered work or amended work outcomes are communicated to central roster operations and the appropriate personnel records area

4 Re-allocate personnel and amend rosters

4.1 Agreed changes to rosters are confirmed with appropriate personnel

4.2 Appropriate arrangements are made for the implementation of amended rosters

4.3 Personnel are re-allocated to achieve agreed work outcomes or amended set workings

4.4 Final amendments to rosters are made to achieve agreed work outcomes or set workings

4.5 Appropriate documents are updated to reflect changes made and ensure their recognition

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Regulations, safeworking systems and codes of practice relevant to the application and amendment of rosters

• Relevant OH&S and environmental protection procedures and guidelines

• Workplace procedures and policies for application and amendment of rosters

• Focus of operation of work systems, equipment, management and site operating systems for the application and amendment of rosters

• Embarkation and disembarkation requirements

• Equipment capacities and limitations

• Passenger service needs

• Personnel capabilities

• Requirements for absentee coverage

• Safeworking systems and requirements

• Station, interchange and terminal operations

• Support activities

• Transport services offered by the organisation

• Problems that may occur when amending rosters and appropriate action that can be taken to resolve the problems

• Documentation and reporting requirements for the amending rosters, including computer-based systems
Required skills:

- Communicate effectively with others when applying and amending rosters
- Read and interpret instructions, procedures and information and signs relevant to the application and amendment of rosters
- Interpret set workings and combined set workings
- Interpret conditions of employment and industrial agreements and awards
- Interpret transport timetables and service details
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the application and amendment of rosters
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when applying and amending rosters
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when applying and amending rosters in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when applying and amending rosters
- Allocate suitably qualified personnel to tasks
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant computer/communication/office equipment required when applying and amending rosters
- Adapt to differences in roster requirements in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:

- in a range of work environments
- by day or night
Staff covered by work rosters may include:

- driving and driving support crews
- shunting and marshalling crews
- terminal personnel
- freight handling personnel
- station personnel
- interchange personnel
- transit officers
- security officers
- revenue collection officers
- passenger assist/customer service personnel
- yard support personnel
- crew transport personnel
- transport control centre personnel
- traffic officers

Changes to planned services may include:

- changes in demand
- response to emergencies

Real time issues may include:

- absenteeism
- additional support services due to injury
- emergencies

Work outcomes or set workings may apply to:

- transport crews
- personnel required for support activities
- transport control personnel
- transport planning personnel

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- regulatory and/or code requirements relevant to the application and amendment of rosters
- workplace procedures and policies for the application and amendment of rosters
- work rosters
- transport graphs
- hard copy documentation
- safe working forms
- dangerous goods manifest
- operations manuals, job specifications and induction documentation
- manufacturers specifications for office equipment
- conditions of service, award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations, safeworking systems and codes of practice relevant to the application and amendment of rosters, including the ADG Code and the Code of Practice for the Defined Interstate Rail Network in situations where the trains are operating on that network
- relevant state/territory privacy legislation
- relevant state/territory OH&S and environmental protection legislation
- state, federal or territory award legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
### demonstrate competency in this unit

requirements of the elements and performance criteria of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

### Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

### TLIL3807B Organise marshalling and shunting operations

**Unit Descriptor**

This unit involves the skills and knowledge required to organise marshalling and shunting operations in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes identifying marshalling and shunting requirements, identifying required rolling stock movements, and planning rolling stock movements in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to marshalling and shunting operations across a variety of operational workplace contexts within the Australian rail system.

**Competency Field**

L – Resource Management

#### ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Identify marshalling and shunting requirements** | 1.1 Track and siding requirements are established, based on customer needs and safe work practices  
1.2 Dangerous goods or other special transportation requirements are established  
1.3 Destinations, arrival times and departure times are established that are consistent with timetable requirements  
1.4 Relevant safe working systems are identified |
| **2 Identify required rolling stock movements** | 2.1 Rolling stock types required are determined from available documentation  
2.2 Rolling stock locations are identified and track and siding availabilities are established to facilitate the marshalling and shunting operation  
2.3 Rolling stock priorities and sequences are sorted in accordance with workplace procedures |
3 Plan rolling stock movements

3.1 Marshalling strategy is identified to achieve safe and efficient loading and unloading
3.2 Resources required to carry out the marshalling strategy are identified
3.3 Appropriate motive power is determined to enable completion of shunting operations
3.4 Track and siding access and options for wagon movements are identified from the marshalling strategy
3.5 Contingency strategy for unplanned events is identified or prepared
3.6 Shunting and marshalling plan and train consist is documented, filed, and distributed in accordance with operational requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Dangerous Goods Codes and regulations
- Marshalling plan and instructions
- Procedures for loading and unloading rolling stock
- Procedures for getting on and off rolling stock in an appropriate manner
- Procedures for coupling and uncoupling rolling stock
- Procedures for operating points and signals
- Procedures for managing hazardous situations
- Radio communication protocol
- Rostering procedures
- Characteristics and features of wagons and other rolling stock
- Loading and unloading facilities
- Yard features and operation
- Principles of operation of protective devices, air brakes, handbrakes, derailleurs
- Location of signals and points
- Local track and signal layouts
- Draw gear capacities and related operating procedures
- Safeworking systems and requirements
- Shunting signals and commands and communication systems
- Timetables and destination information
- Relevant documentation requirements
Required skills:

- Communicate and negotiate effectively with others when organising marshalling and shunting operations
- Read and interpret instructions, procedures and information relevant to the organisation of marshalling and shunting operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the organisation of marshalling and shunting operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when organising marshalling and shunting operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when organising marshalling and shunting operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when organising marshalling and shunting operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during marshalling and shunting operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant computing and communications and other relevant equipment and materials when organising marshalling and shunting operations
- Adapt to differences in rolling stock and equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- all relevant weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments
Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

Resources may include:
- motor vehicles
- fixed signals
- draw gear motive power units
- rail tractors rolling stock
- communication equipment
- switching equipment
- freight handling equipment
- turntables

Safety requirements may include:
- high visibility clothing
- sunscreen
- insect repellent
- safety mask
- portable radios
- gloves
- sun glasses
- safety headwear
- safety footwear
- hearing protection

Unplanned events may involve:
- derailments
- breakdowns
- injuries and fatalities
- hazardous materials, spills, fires and leaks
- track damage
- powerline damage

Consultative processes may involve:
- workplace personnel including supervisors and managers
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where marshalling operations are carried out on that network
- order books
- cards/deck sheets
- noticeboards
- special train notices
- yard orders
- periodical circulars
- transport authority rules and operating procedures
- computer-based data systems
- timetables
- train consist
- incident reports
- drivers advice
- train register book
- safeworking forms
- dangerous goods manifests/declarations
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where marshalling/shunting operations are carried out on that network
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria
unit of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

  • Performance is demonstrated consistently over a period of time and in a suitable range of contexts

  • Resources for assessment include:
    o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
    o access to an appropriate range of relevant operational situations in the workplace

  • In both real and simulated environments, access is required to:
    o relevant and appropriate materials and/or equipment, and/or
    o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

  • Assessment of this unit must be undertaken by a registered training organisation

  • As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

  • Practical assessment must occur:
    o through appropriately simulated activities at the registered training organisation, and/or
    o in an appropriate range of situations in the workplace
TLIL3907B Assist with train operations

Unit Descriptor
This unit involves the skills and knowledge required to assist with train operations in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes assisting with preparations for train operation, assisting with the operation of the train, assisting with loading and unloading operations, and handing over or stabling the train in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the assisting with train operations across a variety of operational workplace contexts within the Australian rail system.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Assist with preparing for train operation
1.1 Planning documentation is accessed and interpreted to determine the purpose of the journey, constraints, loading information and characteristics and is confirmed with the driver.
1.2 Visual inspections of equipment is carried out and defects are appropriately notified following workplace procedures and manufacturers specifications.
1.3 Assistance is provided with pre-operational checks are carried out on equipment in accordance with workplace polices and procedures.

2 Assist with train operation
2.1 Motive power unit is monitored in conjunction with the driver, and identified faults, defects and deficiencies are reported following workplace procedures.
2.2 Guidance is provided to the driver while stopping and starting to ensure safety of personnel and equipment.
2.3 Train running schedules are monitored and recorded to assist with 'on-time' running.
2.4 Performance of equipment and rolling stock is monitored en route to identify faults or defects and appropriate action is taken as required following workplace procedures.

2.5 Security of loading is monitored en route and appropriate action is taken in accordance with workplace procedures.

2.6 Signals and track/road is monitored en route and appropriate action taken to rectify faults and defects in accordance with workplace procedures.

3 **Hand over or stable train**

3.1 Train is stabled following safeworking systems and requirements to comply with operational instructions.

3.2 Safety devices are activated or put in position to ensure the safety of personnel and equipment.

3.3 Documentation relevant to the train and activities undertaken en route is updated, provided to relief crew and/or forwarded to appropriate personnel in accordance with workplace policies and procedures.

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling.

- Procedures for assisting a driver in monitoring train operations and performance.

- Procedures for fixed and hand signalling and voice communication.

- Procedures for coupling and uncoupling motive power units/rolling stock.

- Loading and unloading procedures.

- Protocols for use of electronic communications equipment.

- Procedures for completing required documentation.

- Train characteristics.

- Track or road characteristics.

- Route knowledge.

- Motive power unit and rolling stock systems.

- Safeworking systems and requirements.

- Documentation required during and following train operations.

- Procedures to be followed in the event of emergencies.

- Procedures for identifying equipment defects and assessing for appropriate action.

- Local procedures and operating requirements.

- Problems that can occur when assisting with train operations and action that should be taken.
Required skills:

- Communicate effectively with others when assisting with train operations
- Read and interpret instructions, procedures and information relevant to train operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to train operations
- Document train journey and incidents
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when assisting with train operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems, faults or malfunctions that may be identified when assisting with train operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when assisting with train operations
- Monitor and anticipate operational hazards and take appropriate action
- Monitor journey schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Assist driver in monitoring train performance and security of load
- Select and use relevant equipment and materials when assisting in train operations
- Assist in stabling and securing train
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments
Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

Equipment tests may include:
- brake testing
- air continuity test
- ancillary equipment
- stretch tests

Stabling procedure can include:
- arranging for refuelling and servicing
- securing motive power unit
- positioning motive power unit
- securing train

Safety devices can include:
- power, hand brakes and lock-out equipment to prevent motive power unit/train from moving

Relevant personnel who may be consulted may include:
- train controllers
- maintenance personnel
- yard and other operational personnel
- train examiners
- other members of train crew
- signal controllers
- other train crews

Visual inspections include:
- wheels and braking equipment for signs of wear or damage
- flexible connections and fittings for signs of wear or damage
- couplings for signs of wear or damage
- fuel, oil and water
- air leakage
- motive power unit equipment end of train monitoring device
- rolling stock for defects

Constraints can include:
- availability of fuel and water
- gradients and curves
- motive power unit/train performance specification
- rail gauge limitations
- track condition
- environmental conditions
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and job specification
- induction and training materials
- motive power unit log book
- maintenance notices and records
- train running sheets
- requests
- train consist forms
- loading information
- train register books
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIL4007B Plan and control daily train operations

Unit Descriptor
This unit involves the skills and knowledge required to plan and control daily train operations in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes developing a daily train plan, implementing daily train movements, monitoring the daily train plan, and maintaining all required documentation and workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the planning and control of daily train operations across a variety of operational workplace contexts within the Australian rail system.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Develop daily train plan

<table>
<thead>
<tr>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1 The status of current daily train plan is established based on the proposed track movements, and possessions</td>
</tr>
<tr>
<td>1.2 The current plan is amended if appropriate, to accommodate planned transportation movements priorities</td>
</tr>
<tr>
<td>1.3 Contingency plans are developed to cater for unplanned events following company procedures</td>
</tr>
<tr>
<td>1.4 Information relating to transportation movement within the area of movement is collated and analysed</td>
</tr>
<tr>
<td>1.5 Safeworking standards, circulars, faxes and special train notices are checked for application according to workplace procedures</td>
</tr>
<tr>
<td>1.6 Resource availability to accommodate planned transportation movements in daily plan and contingency plan is identified and resources are allocated according to workplace procedures</td>
</tr>
<tr>
<td>1.7 Workplaces operational management system information is reviewed against observed status stock in accordance with workplace procedures</td>
</tr>
</tbody>
</table>
2 Implement daily train movements

2.1 Required authorities and instructions are prepared and issued in accordance with plan

2.2 Traffic movements are directed to ensure optimum running according to train plan and workplace procedures

2.3 Resource movements are coordinated according to train plan and workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Workplace procedures for the planning and control of train operations, including: office and customer service, rostering, radio communication, completing relevant documentation, and procedures to be followed in the event of an emergency
- Train control diagrams and graphing
- Timetabling principles
- System limitations
- Safeworking systems and requirements
- Rail system geography
- Yards, depots and station workings
- Restrictions relating to loads and conditions
- Draw gear capacities
- Operations coordination system
- Track characteristics and limitations
- Train journey requirements
- Relevant documentation requirements

Required skills:
- Communicate effectively with others when planning and controlling daily train operations
- Read and interpret instructions, procedures, information and signs relevant to the planning and control of daily train operations
- Interpret and follow operational instructions and prioritise work
- Document train operations and incidents
- Complete documentation or enter data related to the planning and control of daily train operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when planning and controlling daily train operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when planning and controlling daily train operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when planning and controlling daily train operations
- Implement safeworking systems when controlling train operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor journey schedule
- Monitor work activities in terms of planned schedule
- Monitor and anticipate operational hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant equipment and diagrams when planning and controlling daily train operations
- Meet agreed workplace tolerances for train operations
- Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all relevant weather conditions

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to: • chemicals
• dangerous or hazardous substances
• movements of equipment, goods and vehicles

The control of train operations within the defined rail network of the workplace embraces:
• the movement of trains
• related operating personnel
• track machines
• alternate transport arrangements
Unplanned events may include:

- derailment
- rail damage
- illness
- dangerous goods spillage
- major equipment failure
- fire
- injury and fatality
- earthworks
- collisions
- bomb threat
- accidents
- acts of nature
- overhead line damage
- out-of-course running
- energy disruptions
- flood
- obstructions
- bridge damage
- explosions

Resources may include:

- motive power units
- train crews
- alternative forms of transport
- rolling stock
- fueling and servicing locations

Internal customers may include:

- train crews
- resource controllers
- area controllers/signallers
- workplace's emergency services
- yard and station staff
- crew transport service
- engineering groups
- train crewing personnel
- adjacent control areas
- business groups within the workplace
External customers may include:
- business groups
- private rail operators
- contracted companies
- general public
- public emergency services
- interstate rail groups.

Communication forms may include:
- telephones
- radio network
- designated software and computer systems
- facsimile
- written notices
- oral and signed communications and forms

Authorisations may include:
- safe working and track possession authorities

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and job specification
- induction and training materials
- daily running records
- incident reports
- track possession information
- electronic management systems
- two-way radio operation procedures
- local instructions
- emergency procedures manual
- equipment operations manuals
- isolation and lock out procedures
- track speed, length and load limitations information
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- relevant Australian Standards
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Monitor and record rolling stock locations

Unit Descriptor
This unit involves the skills and knowledge required to monitor and record rolling stock locations in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes identifying rolling stock, identifying planned movements, and verifying and recording movements in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the monitoring and recording of rolling stock locations as part or workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify rolling stock
1.1 Current location and operational status of rolling stock are identified
1.2 Capacity, type and operational specification of rolling stock are identified
1.3 Current train consist information is obtained and interpreted
1.4 Operational management system is reviewed against observed status in accordance with workplace procedures

2 Identify planned movements
2.1 Proposed rolling stock movements are identified
2.2 Status of current train movement plan is confirmed
2.3 Changes to planned train movements are checked and confirmed in accordance with workplace procedures

3 Verify and record movement
3.1 Location and operational status of rolling stock are confirmed
3.2 Information on location of rolling stock is provided where appropriate
3.3 Operational management system is updated with information on location of rolling stock in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the monitoring and recording of rolling stock locations, including: the operation of computer programs for rolling stock tracking, load calculation and allocation requirements, monitoring shunting and marshalling operations, communication protocols, and completing relevant documentation
- Systems and computer programs for rolling stock tracking
- Type, specifications, capacity, characteristics and features of rolling stock
- Track restrictions
- Track specifications
- Load handling equipment use and capacities
- Safeworking systems and requirements
- Relevant documentation requirements
- Procedures to be followed in the event of an emergency
- Problems that may occur when monitoring and recording rolling stock locations and related action that should be taken
- Workplace hazards that may exist when monitoring and recording rolling stock locations and ways in which the risks involved may be eliminated or controlled

Required skills:

- Communicate effectively with others when monitoring and recording rolling stock locations
- Read and interpret instructions, procedures, information and signs relevant to the monitoring and recording of rolling stock locations
- Complete documentation related to the monitoring and recording of rolling stock locations
- Document and record rolling stock locations
- Update workplaces information system
- Interpret and follow operational instructions and prioritise work
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when monitoring and recording rolling stock locations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems, faults or malfunctions identified when monitoring and recording rolling stock locations in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when monitoring and recording rolling stock locations
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the monitoring and recording of rolling stock locations
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant office equipment and resources when monitoring and recording rolling stock locations
• Gather information on train movements
• Operate systems and computer programs to track rolling stock movements
• Implement safeworking systems when monitoring and recording rolling stock locations
• Select and use required personal protective equipment conforming to industry and OH&S standards
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all relevant weather conditions

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to: • chemicals
• dangerous or hazardous substances
• movements of equipment, goods and vehicles

Operational management systems include: • both the manual and computerised components for conveying, verifying and recording information and instructions between internal and external customers including other workplaces or individuals to whom a service is provided
Locations may include:
- tracks and sidings within the workplace's network
- other rail authorities' network
- customer depots, sidings and yards
- maintenance and servicing sites
- yards within the workplace's network

Rolling stock includes:
- all types of wagons and carriages
- electric locomotives
- multiple units including electric multiple units
- rail tractors
- diesel locomotives
- railcars
- steam locomotives
- track maintenance vehicle

Proposed rolling stock movements include those originating from:
- scheduled services
- implementation of contingency plans
- adjusted services

Contingency plans and contingencies may involve:
- emergency procedures manuals
- ADG Code
- safeworking systems and requirements

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and job specification
- induction and training materials
- train movement plans
- train schedules
- rolling stock specifications
- rolling stock records
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related regulatory requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**TLIL4207B**

**Control rail traffic movement**

**Unit Descriptor**
This unit involves the skills and knowledge required to control rail traffic movement in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes monitoring the status of the current train area plan; implementing the daily working timetable; controlling rail traffic movement; implementing contingency plans for system faults and failures and for planned events; and updating traffic movement documentation in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the controlling of rail traffic movement as part of workplace activities across a variety of operational contexts within the Australian rail industry.

**Competency Field**
L – Resource Management

**ELEMENT**
Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 **Monitor status of current train area plan**

   - 1.1 Actual train movements and associated activities are analysed to establish current situation
   - 1.2 Proposed train movements and associated activities are identified to establish status of area plan in accordance with workplace procedures and policies
   - 1.3 Circulars, telegrams and special train notices are checked for accuracy and adjustments made as required
   - 1.4 Operational management system information is reviewed against observed status and inconsistencies corrected

2 **Implement the daily working timetable**

   - 2.1 Train movements are prioritised and directed in accordance with authorisations to ensure optimum and consistent running to timetable
   - 2.2 Relevant information is communicated to internal and external customers to minimise the effect of changes
2.3 Planned train movements, circulars and special train notices are implemented using safeworking systems and requirements to ensure safety

3 Control rail traffic movement

3.1 Layout, characteristics and condition of track section of responsibility is assessed for its effect on train running

3.2 Train movements are coordinated with other relevant personnel in accordance with safeworking systems and requirements and workplace policies and practices

3.3 Surveillance and alarm systems are monitored to identify emergency situations

3.4 Signalling system is operated to ensure track section of responsibility is open or closed to train pathways as required

3.5 Signalling systems are operated and monitored to ensure safe movement of traffic

4 Implement contingency plans for system faults and failures, and for planned events

4.1 Contingency plan to suit the event or system failure or fault is identified and reviewed as necessary

4.2 Resources to cover the contingency are deployed in coordination with relevant personnel

4.3 Communications with event site are established

4.4 Train plan is adjusted in accordance with safeworking systems and requirements and in coordination with relevant personnel to minimise interruptions and provide alternative services

4.5 Arrangements are made to maintain communications with internal and external customers where possible

4.6 Operational management system information is updated to reflect changes resulting from plan implementation

5 Update traffic movement documentation

5.1 Traffic movement documentation is receipted, compiled and recorded to provide accurate basis for train movement

5.2 Traffic movement documentation is endorsed at the completion of shift in accordance with workplace requirements to ensure accurate hand-over

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
• Workplace procedures for the planning and control of train operations, including: workplace management, train movement documentation, radio communication protocol, completing relevant documentation, and procedures to be followed in the event of an emergency

• Train movement principles

• Timetabling principles

• Signalling and control systems and operations

• Track layout, characteristics and conditions

• Track maintenance and work procedures

• Restrictions relating to loads and conditions

• Draw gear capacities

• Communication systems

• Surveillance and alarm systems

• Problems that may occur when controlling rail traffic and related action that should be taken

• Relevant documentation requirements

**Required skills:**

• Communicate effectively with others when controlling rail traffic

• Give clear instructions relevant to the control of rail traffic

• Read and interpret instructions, procedures and information relevant to the control of rail traffic

• Interpret and follow operational instructions and prioritise work

• Complete documentation and enter data related to the control of rail traffic

• Document train movements and incidents

• Operate electronic communication equipment to required protocol

• Work both individually and collaboratively with others when controlling rail traffic

• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

• Monitor and anticipate operational problems and hazards and take appropriate action

• Promptly report and/or rectify any problems, faults or malfunctions identified when controlling rail traffic in accordance with regulatory requirements and workplace procedures

• Apply safeworking practices and regulations

• Implement contingency plans for unanticipated situations that may occur when controlling rail traffic

• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities

• Monitor work activities in terms of planned schedule

• Meet agreed workplace tolerances for train operations

• Modify activities depending on differing operational contingencies, risk situations and environments

• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant equipment and materials when planning and controlling daily train operations
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all relevant weather conditions

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to: • chemicals
• dangerous or hazardous substances
• movements of equipment, goods and vehicles

Control of rail traffic movements may require: • the use of automated and manual signalling combined with centralised train control

Associated activities are those that may affect the movement of trains and include: • track maintenance
• signal maintenance
• electrical wiring
• diversion/alternative routing of trains
• track inspection
• construction
• environmental work
• special events

Events triggering the need for implementing contingency plans may include: • breakdowns
• hazardous materials spills
• track damage
• washaways
• collisions
• injuries and fatalities
• fires and leaks
• powerline damage
• derailments
Communication systems may include but are not limited to:

- radios
- telephones
- faxes
- computers
- email
- internet

Customers can be both internal and external, including:

- other members of a work group or team, crew, section or division of the workplace to whom a service is provided
- other work groups or teams, crews, sections or divisions of the workplace to whom a service is provided

Traffic movement documentation can include:

- train timetables
- track possessions notices
- unplanned event reports
- on-track movement

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and job specification
- induction and training materials
- protocols for dealing with internal and external customers
- electronic management systems
- information on visual display monitors
- train movement graphs and charts
- two-way radio operation procedures
- emergency procedures manual
- ADG Code
- incident reports
- traffic control equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- ADG Code and regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL4307B Allocate freight

Unit Descriptor
This unit involves the skills and knowledge required to allocate freight in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes confirming a train consist, reviewing the freight load plan, and allocating freight to wagons in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when allocating freight as part of workplace activities across a variety of operational contexts within the Australian rail system.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Confirm train consist
1.1 Train consist is checked against original planned consist and any variations are recorded for load planning purposes
1.2 Rolling stock on train is confirmed as available and suitable for loading
1.3 Further modifications to train consist are organised to achieve load plan following workplace procedures

2 Review freight load plan
2.1 Freight load plan is reviewed to identify variations to contribute to development of revised load plan
2.2 Priorities for freight are identified and accounted for in load plan
2.3 New load plan is developed to ensure maximum efficiency for loading/unloading operations
2.4 Freight classed as dangerous goods is identified and planned loading and movement is in accordance with required code of practice
3 Allocate freight to wagons

3.1 Freight load plan is confirmed and freight is identified for loading on selected wagons
3.2 Out-of-gauge freight is allocated to appropriate wagon and recorded on freight load plan
3.3 Non-compatible loads are separated to avoid damage or contamination
3.4 Unplanned restrictions relating to freight allocation are managed within the workplaces contingency plan
3.5 Unresolved freight allocation difficulties/problems are referred to operations planning or other appropriate personnel
3.6 Freight load plan documentation is completed and distributed to appropriate personnel

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Workplace procedures for the allocation of freight, including: identifying rolling stock, interpreting load specifications and carrying out load calculations, radio communication protocol, completing relevant documentation, and procedures to be followed in the event of an emergency
- Types, characteristics, identification features and specifications of rolling stock
- Types of freight and any special loading or transport requirements
- Train consist documentation
- Load specifications and calculations
- Australian Dangerous Goods Code and associated regulations
- Out-of-gauge requirements
- Rolling stock identification and specifications
- Freight handling capacities
- Freight load plan system and documentation
- Typical problems that can occur when allocating freight and appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate effectively with others when allocating freight
- Read and interpret instructions, procedures, information and signs relevant to the allocation of freight
- Interpret and follow operational instructions and prioritise work
- Complete documentation and data entry related to the allocation of freight
• Document freight allocation and incidents
• Operate electronic communication equipment to required protocol
• Calculate loads
• Work both individually and collaboratively with others when allocating freight
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems, faults or malfunctions identified when allocating freight in accordance with regulatory requirements and workplace procedures
• Apply safeworking practices and regulations
• Monitor and anticipate operational problems and hazards and take appropriate action
• Implement contingency plans for unanticipated situations that may arise when allocating freight
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the allocation of freight
• Plan and organise activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant equipment and materials when allocating freight
• Adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
• by day or night
• in all relevant weather conditions

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to:
• chemicals
• dangerous or hazardous substances
• movements of equipment, goods and vehicles

Freight may include:
• all forms of freight as confirmed on freight booking system

Rolling stock may include:
• all forms of freight carrying rolling stock in any configuration used by the workplace
Out-of-gauge freight includes:  
- all designated as not complying with the gauge template for the specified track

OH&S requirements are those necessary to meet applicable workplace, state/territory and national policies and procedures and may include the use of:  
- gloves
- sunscreen, sunglasses and safety glasses
- hearing protection
- insect repellent
- safety headwear and footwear
- portable radios
- high visibility clothing

Consultative processes may involve:  
- other employees and supervisors
- customers
- management
- other maintenance, professional or technical staff

Communication in the work area may include:  
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:  
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and job specification
- induction and training materials
- protocols for dealing with internal and external customers
- manifests, bar codes, goods and freight identification
- all forms of freight/train documentation used within a workplace
- statutory forms required for movement of specified freight including dangerous goods declarations where applicable
- ADG Code
- two-way radio operation procedures
- emergency procedures manual
- incident reports
- freight operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- ADG Code and regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or

o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
Unit Descriptor
This unit involves the skills and knowledge required to organise freight yard movement in accordance with regulatory and workplace requirements, including identifying loading/unloading requirements and priorities, and coordinating freight yard movement activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed individually, but the ability to work within a team environment may be required. It involves the application of workplace procedures and relevant regulatory and code requirements to the organising of freight yard movement as part of work activities in the rail transport and/or allied industries.

Competency Field
L – Resource Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify loading/unloading requirements and priorities
1.1 Freight movement requirements are identified using the freight load plan
1.2 Freight movement priorities are established in accordance with freight movement documentation, workplace policies and procedures
1.3 Freight movement timings and the availability of loading/unloading equipment are established using appropriate freight movement documentation and train schedules

2 Coordinate freight yard movement activities
2.1 Yard freight handling equipment is allocated to loading/unloading operations in line with identified priorities
2.2 Marshalling of rolling stock and movement of freight are coordinated to minimise time and potential damage in the freight transfer
2.3 Freight for delivery or collection is appropriately and clearly marked and placed in freight holding area according to workplace procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the organisation of freight yard movement
- Focus of operation of work systems, equipment, management and site operating systems for the organisation of freight yard movement
- Train consist documentation
- Load details and specifications
- Capacity of materials handling equipment
- Australian Dangerous Goods Code
- Workplace's freight tracking system
- Workplace operating policies and procedures
- Train timetables
- Yard operating procedures for rail movements
- Marshalling constraints affecting loading/unloading
- Problems that may occur when organising freight yard movement and appropriate action that can be taken to resolve the problems
- Documentation and reporting requirements for the organisation of freight yard movement including computer based personnel recording systems

Required skills:
- Communicate effectively with others when organising freight yard movement
- Read and interpret instructions, procedures, information and signs relevant to the organisation of freight yard movement
- Interpret train consist documentation
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the organisation of freight yard movement
- Operate electronic communication equipment to required protocol
- Provide leadership when coordinating and controlling work teams
- Work collaboratively with others when organising freight yard movement
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when organising freight yard movement in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when organising freight yard movement
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the organisation of freight yard movement
- Plan freight yard movement
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant computer/communication/equipment required when organising freight yard movement
- Operate a freight tracking system
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  
- in a range of work environments
- by day or night

Work conducted in:  
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:  
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicular traffic

Freight handling equipment may include:  
- all forms of freight handling equipment used by a rail organisation for the loading/unloading, lifting, moving or storage of freight, including mechanical lifting devices, forklifts and pallets

Freight may include:  
- packages
- luggage
- bicycles
- animals

Consultative processes may involve:  
- other employees, supervisors and managers
- customers and agents
- official representatives
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and policies for the organisation of freight yard movements
- freight documentation including cartnotes, delivery notes, special clearances, consignment notes, dangerous goods certificates, authorised weighbridge certificates, list of contents
- operations manuals, job specifications and induction documentation
- manufacturers specifications and instructions for equipment use
- conditions of service, award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL4507B   Organise services for special events

Unit Descriptor
This unit involves the skills and knowledge required to organise services for special events in accordance with workplace requirements, including determining the transport requirements, planning and preparing for the special event, and implementing the established transport plan. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work must be carried out in accordance with workplace requirements and relevant regulations.

Work is performed individually, and skills are required to work within a team environment. It involves the application of regulatory requirements and workplace procedures when organising services for special events as part of workplace activities in the transport and allied industries.

Competency Field
L – Resource Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Determine transport requirements
1.1 Information about the event is gathered from the relevant people and the impact of the special event on the transport system is analysed and defined
1.2 Resources required to maintain the required level of service during the special event are estimated
1.3 Costs to provide additional resources are calculated and a quotation provided and submitted for approval, if required, according to workplace policies and procedures

2 Plan and prepare for the special event
2.1 The availability of transport units are checked and the necessary permits are obtained to ensure that the planning parameters are realistic
2.2 Transport units are planned to meet service demand, restrictions and anticipated traffic
2.3 Hiring agreements are prepared in accordance with workplace policies and procedures to provide service requirements
2.4 Personnel are rostered to ensure that staff requirements are met
2.5 Workplace details about the service are communicated to relevant people in an appropriate format

3 Implement transport
3.1 Correct signage is organised at the interchange points for
plan

special event departure/arrival points

3.2 Modifications to transport plan are made to accommodate conditions impacting on the special event

3.3 Special announcements are made to communicate details of the services provided

3.4 The success of the plan is monitored and evaluated and reported in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations and codes of practice relevant when organising services for special events
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for organising services for special events
- Overview of the local transport industry
- Workplace products and services
- Relevant insurance and public liability
- Relevant consumer law and trade practice requirements
- Transport system fare structure
- Transport system schedules
- Health regulations
- Bookings, reservation and cancellation processes
- Data file systems
- Quotation processes
- Amendment penalties
- Equipment, and materials used when organising services for special events, and procedures that should be followed in their use
- Problems that may occur when organising services for special events and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication and negotiation requirements when organising services for special events

Required skills:

- Communicate and negotiate effectively with others when organising services for special events
- Read and interpret instructions, procedures, information and signs relevant to the organisation of services for special events
- Interpret and follow operational instructions and prioritise work
- Complete documentation and enter data related to the organisation of services for special events
- Operate electronic communication equipment to required protocol
• Research and analyse information relevant to organising services for special events
• Provide leadership and work collaboratively with others when organising services for special events
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may occur when organising services for special events in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when organising services for special events
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant office and communications equipment and materials when organising services for special events
• Adapt to differences in equipment in accordance with standard operating procedures

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments
• by night or day

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to: • chemicals
• dangerous or hazardous substances
• movements of equipment, goods and vehicles
Special events can include:
- accidents
- derailments
- special community events/need
- dangerous goods spillage
- act of nature
- group hire
- sporting events
- commercial activity
- advertising campaigns
- other disruptions to services

Equipment may include:
- computers
- signage
- public address systems

Resources may include:
- staff
- transport units
- consumables
- transport units including rolling stock and carriages

Consultative processes may involve:
- internal and external customers
- staff
- community representatives
- other workplace personnel
- supervisors and managers
- representatives of other transport organisations

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- radio
- face-to-face discussions and memos
- signed communications and forms

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures
Information/documents may include:

- workplace procedures and policies for organising services for special events
- work instructions, job description and induction materials
- itineraries
- staff instructions
- schedules
- public notices
- manufacturers specifications for office and communications equipment and materials
- relevant OH&S requirements and policies
- relevant codes of practice and regulations
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the organising of services for special events
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
• access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  • relevant and appropriate materials and/or equipment, and/or
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  • through appropriately simulated activities at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace
TLIL4607B Handle customer luggage/property

Unit Descriptor
This unit involves the skills and knowledge required to handle customer luggage and property in accordance with workplace requirements, including handling customer enquiries; identifying and labelling luggage/property; organising conveyance and transfer; returning luggage/property to customers; and processing lost luggage/property. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures when handling customer luggage and/or property as part of workplace activities in the transport and allied industries.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Handle customer luggage/property

1.1 Customer enquiries are handled in a courteous manner and accurate advice and information is provided

1.2 Customer luggage/property is identified and labelled for correct destination and a receipt is issued in accordance with workplace policies and procedures and legislation

1.3 Luggage/property conveyance is arranged taking into account correct handling procedures for different categories of luggage

1.4 Luggage is issued on presentation of customer receipt or in accordance with workplace requirements

1.5 Appropriate action is taken to ensure the transfer of luggage to other transport networks, following workplace procedures

2 Process lost luggage/property

2.1 Lost luggage/property status is substantiated using appropriate enquiries

2.2 Lost luggage/property is investigated and traced in accordance with workplace policies and procedures

2.3 Lost luggage/property records are maintained in accordance with workplace policies and procedures
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
• Relevant OH&S and environmental protection procedures and guidelines
• Workplace procedures and policies for handling customer luggage and/or property
• Workplace customer service policies
• OH&S manual handling procedures
• Transport system
• Luggage forwarding procedures
• Insurance and public liability
• Consumer laws and trade practice requirements
• Transport system timetables
• Labelling and coding systems
• Procedures for dealing with dangerous goods
• Equipment and materials used when handling customer luggage and/or property, and precautions and procedures that should be followed in their use
• Problems that may occur when handling customer luggage and/or property and appropriate action that can be taken to resolve the problems
• Documentation and record requirements applicable when handling customer luggage and/or property
• Communication and negotiation requirements when handling customer luggage and/or property

Required skills:

• Communicate effectively with others when handling customer luggage and/or property
• Read and interpret instructions, procedures, information and signs relevant to the handling of customer luggage and/or property
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the handling of customer luggage and/or property
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when handling customer luggage and/or property
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when handling customer luggage and/or property in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant office and communications equipment and materials when handling customer luggage and/or property
- Adapt to differences in equipment in accordance with standard operating procedures
- Secure stored items
- Handle heavy items correctly
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Operations may be conducted:**
- by day or night
- in a range of work environments

**Work may be conducted:**
- in restricted spaces
- in exposed conditions
- in controlled or open environments

**Work may involve exposure to:**
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

**Luggage/property can be any article carried or forwarded by the customer using the transport system including:**
- bags
- sporting goods
- bicycles
- motorcycles
- animals
- household items
- prams and strollers

**Luggage conveyance can include:**
- lifting
- carrying
- mechanical lifting and carrying
- packing
- storage
Lost property may be dealt with by:
- forwarding to the owner
- forwarding to authorities
- forwarding to storage unit
- forwarding to sale

Other transport networks may include:
- bus
- coach
- taxi
- ship
- airlines

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- face-to-face discussions and memos
- oral, aural or signed communications

Consultative processes may involve:
- customers
- other workplace personnel
- supervisors and managers

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- work instructions, job description and induction materials
- labels
- relevant forms and documentation for the transfer of luggage and/or property
- manufacturers specifications for office and communications equipment and materials
- relevant OH&S and environmental protection requirements and policies
- relevant codes of practice and regulations, including the ADG Code
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies
  and other simulated practical and knowledge
  assessment, and/or
  o access to an appropriate range of relevant
  operational situations in the workplace
• In both real and simulated environments, access is
  required to:
  o relevant and appropriate materials and/or
  equipment, and/or
  o applicable documentation including
  workplace procedures, regulations, codes of
  practice and operation manuals

**Method of assessment**
• Assessment of this unit must be undertaken by a
  registered training organisation
• As a minimum, assessment of knowledge must be
  conducted through appropriate written/oral tests
• Practical assessment must occur:
  o through appropriately simulated activities at
  the registered training organisation, and/or
  o in an appropriate range of situations in the
    workplace
TLIL4707B  Coordinate train movement activities

Unit Descriptor
This unit involves the skills and knowledge required to coordinate train movement activities in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes maintaining communications with drivers, communicating with staff and customers, and overseeing train disablement in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the coordination of train movement activities as part of workplace activities across a variety of operational contexts within the Australian rail industry.

Competency Field
L – Resource Management

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Communicate with drivers
1.1 Communication with train drivers is undertaken to ensure they are informed of train movements, train arrival, position and departure in accordance with workplace policies and procedures
1.2 Appropriate communication techniques are employed in the case of radio malfunction

2 Communicate with staff and customers
2.1 Communication with relevant railway personnel is undertaken to ensure that they are informed of train movements in accordance with workplace's policies and procedures
2.2 Customers are informed of train movement details using appropriate communication technologies and following company procedures

3 Oversee train disablement
3.1 Disabled trains are secured and protected in accordance with company policies and procedures
3.2 Full details about disablement process are communicated to staff and train control using appropriate communication technologies
3.3 Customers are informed of progress of disablement process and, when required, evacuation procedures are clearly communicated to passengers
3.4 Train disablement documentation is completed accurately in the required format

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Workplace procedures for the coordination of train movement activities, including: train movement procedures, train movement documentation, train disablement process, communication methods and protocol, completing relevant documentation, and procedures to be followed in the event of an emergency, including evacuation procedures
- Train movement principles
- Timetabling principles
- Communication systems and equipment
- Relevant documentation requirements
- Problems that may occur when coordinating train movement activities and action that should be taken to resolve the problems

Required skills:
- Communicate effectively with others when coordinating train movement activities
- Read and interpret instructions, procedures and information relevant to the coordination of train movement activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation and enter data related to the coordination of train movement activities
- Operate electronic communication equipment to required protocol
- Work both individually and collaboratively with others when coordinating train movement activities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when coordinating train movement activities in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when coordinating train movement activities
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when coordinating train movement activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and use relevant equipment and materials when coordinating train movement activities
• Adapt to differences in equipment in accordance with standard operating procedures
• Meet agreed workplace tolerances for train operations
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all relevant weather conditions

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Work may involve exposure to: • chemicals
• dangerous or hazardous substances
• movements of equipment, goods and vehicles

Train movements may include: • departures
• arrivals
• disablements
• shunting

Communication methods may include: • signals
• hand signals and lamps
• loud speaker systems
• flags
• telephone
• public address
Consultative processes may involve:
- other employees and supervisors
- customers
- other professional and technical personnel

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where train movements occur out on that network
- workplace procedures and job specification
- induction and training materials
- protocols for dealing with internal and external customers
- electronic information systems
- information on visual display monitors
- verbally communicated train movement information
- schedules
- timetables
- operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:
- relevant state/territory codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where train movements are carried out on that network
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to**
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
demonstrate competency in this unit
requirements of the elements and performance criteria of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL4807B Prepare for train departure

Unit Descriptor
This unit involves the skills and knowledge required to prepare for train departure in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. This covers both freight and passenger trains. For freight trains, it includes the checking of rolling stock, equipment and related documentation. For passenger trains, it includes the checking of passenger facilities, assessing stock levels, checking for any planned variations from normal routines, and inspecting train equipment in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the preparations for train departure as part of work activities across a variety of operational contexts within the Australian rail system.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Check train equipment
1.1 Train equipment is checked for effective operation
1.2 Problem areas are identified and remedial action is organised following established procedures

2 Check for any planned variations from normal routines
2.1 Planned variations and special instructions pertaining to the train are noted and accommodated according to workplace procedures

3 Check passenger facilities (where relevant)
3.1 Passenger facilities are checked to ensure that they are clean and operating as required
3.2 Passenger convenience items are checked to ensure that they meet the recommended levels
3.3 Variations from established standards are rectified, following workplace procedures and manufacturers specifications
3.4 Major faults are reported to the appropriate person, following workplace procedures

4 Check stock levels (where relevant)

4.1 Stock levels are checked to ensure required amounts are present
4.2 Adjustments to stock levels are made, following workplace procedures

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Workplace procedures for preparing a train for departure, including: the replenishment of consumable items, obtaining assistance from maintenance staff, lost property procedures, communication methods and protocols, and completing relevant documentation
- Structure of the train consist
- Types of rolling stock and passenger cars and their features
- Rolling stock and car sequence and relevant labelling requirements
- Relevant documentation requirements
- Problems that may occur when preparing a train for departure and action that should be taken to resolve the problems
- Normal level of use of consumable items such as food and beverages
- Position and number of fire extinguishers
- Location and content of emergency equipment
- Location and content of First Aid box
- Essential equipment, supplies and materials required for trip
- Customer service and cleanliness standards
- Variations to normal routines as they apply to VIPs and special guests

Required skills:
- Communicate effectively with others when preparing a train for departure
- Read and interpret instructions, procedures and information relevant to the preparation of a train for departure
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the preparation of a train for departure
- Operate electronic communication equipment to required protocol
- Work both individually and work collaboratively with others when preparing a train for departure
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems, faults or malfunctions that may be identified when preparing a train for departure in accordance with regulatory requirements and workplace procedures
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the preparation of a train for departure
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify, select and use relevant equipment and materials
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  • by day or night
                                           • in all relevant weather conditions

Work may be conducted in:   • restricted spaces
                                       • exposed conditions
                                       • controlled or open environments

Work may involve exposure to:  • chemicals
                                            • dangerous or hazardous substances
                                            • movements of equipment, goods and vehicles

Trains may include:  • both freight and passenger trains and the resources to be checked may include all required on-board equipment, stocks and supplies relevant to the train concerned

Major faults may include:  • breakdowns
                                      • breakages
                                      • defective or non-functioning equipment

Passenger facilities may include:  • toilets
                                            • carriages
                                            • buffet cars
                                            • fire extinguishers
                                            • First Aid box
Passenger convenience items may include:

- consumables
- tissues
- foods
- plastic cups
- toilet paper
- paper towels
- cooking utensils
- eating utensils

Communication methods may include:

- telephone
- fax
- signed forms
- oral and signed communications

Consultative processes may involve:

- other employees and supervisors
- customers
- other professional and technical personnel

Protective clothing may include:

- gloves
- safety boots
- protective clothing
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where train movements occur out on that network
- workplace procedures and job specifications
- induction and training materials
- protocols for dealing with internal and external customers
- equipment, supplies and materials checklists
- manufacturers specifications and instructions for equipment
- verbally communicated information and instructions
- operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where train movements occur on that network
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies
and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIL4907B Develop train plans and schedules

Unit Descriptor
This unit involves the skills and knowledge required to develop train plans and schedules in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes analysing train requirements, establishing train specifications, establishing train section run times, and monitoring and updating train requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of regulatory requirements and operational principles and procedures to develop train plans and schedules as part of work activities across a variety of operational workplace contexts within the Australian rail system.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Analyse train requirements
1.1 The customer is consulted to establish their rail service requirements
1.2 Rail service provision is negotiated with the client, recorded and forwarded to operations control as per workplace procedures
1.3 Resource requirements are identified, noting special requirements for dangerous goods

2 Establish train specifications
2.1 Train consist is established to ensure efficient movement of freight or passengers
2.2 Train configuration is established to provide for the efficient loading and unloading of freight and/or passengers, taking into account freight /passengers with special loading/unloading requirements
2.3 The train specifications are checked to ensure that they meet special operating requirements and restrictions
3 Establish train section run times

3.1 Train section run times are confirmed for normal operations
3.2 Train section run times for specific trains are established and graphed on the appropriate train timetables
3.3 Train section run times are negotiated with the appropriate rail authorities where required
3.4 Alterations/cancellations affecting train running times are promptly communicated to the appropriate rail authorities as required

4 Monitor and update train requirements

4.1 Additional requirements are identified and incorporated into existing trains where possible
4.2 Additional requirements not able to be incorporated into existing trains are allocated to alternative trains
4.3 Detailed information relating to updated trains and dangerous goods requirements are conveyed to appropriate personnel as required by the workplace

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for developing train plans and schedules, including: office and customer service procedures, communication protocols, and procedures for completing relevant records and documentation
- Rail services provided by the organisation
- Freight handling equipment used by the organisation
- Customer service policies and guidelines
- Details of wagons, carriages and locomotives used by the organisation
- Timetables
- Safe working systems and requirements
- Relevant external rail authorities' operating requirements
- Contractual arrangements with account customers
- Typical problems that can occur when developing train plans and schedules and appropriate action that can be taken to prevent or solve them
- Relevant documentation requirements

Required skills:

- Communicate and negotiate effectively with others when developing train plans and schedules
- Read and interpret instructions, procedures, information and signs relevant to the development of train plans and schedules
- Interpret train graphs and diagrams
- Interpret and follow operational instructions and prioritise work
- Complete documentation and enter data related to the development of train plans and schedules
- Operate electronic communication equipment to required protocol
- Carry out calculations related to loads and train data
- Work collaboratively with others when developing train plans and schedules
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when developing train plans and schedules in accordance with regulatory requirements and workplace procedures
- Plan train consists
- Implement safeworking systems when developing train plans and schedules
- Implement contingency plans for unanticipated situations that may arise when developing train plans and schedules
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate electronic computing equipment
- Adapt to differences in equipment in accordance with standard operating procedures

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night
- in all relevant weather conditions

Work may be conducted in:  
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:  
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

Equipment may include:  
- all trains used within the rail system

Customers and passengers include:  
- all current national, key and local account customers as well as all potential customers and internal customers
Rail services include:
- the rail services currently provided by the workplace as well as approved rail services for future operations

Commercial and financial arrangements include:
- all rates and fares appropriate to the range of rail services and customers/clients (including potential customers/clients) covered by workplace operations

Workplace policies and procedures include:
- all relevant documentation appropriate to dealing with customers/clients

Operations control includes:
- the planning functions across a workplace not necessarily located in one location

Resources include motive power for all forms of:
- locomotive or railcar power units
- wagons/carriages and personnel

Special operating requirements and restrictions include:
- train length and gauge limits
- track condition
- specific loading and unloading requirements for passengers or freight

 Dangerous goods may include:
- all freight or cargo covered by ADG Code

Train timetables include:
- all published documentation applicable to the workplace's rail services provided

Rail authorities include:
- all authorities authorised to control section(s) of track within specified boundaries

Internal customers may include:
- train crews
- resource controllers
- area controllers/signallers
- workplace's emergency services
- yard and station staff
- crew transport service
- engineering groups
- train crewing personnel
- adjacent control areas
- business groups within the workplace

External customers may include:
- business groups
- private rail operators
- contracted companies
- general public
- public emergency services
- interstate rail groups
Communication forms may include:

- telephones
- radio network
- computer systems, email and internet
- fax
- written notices and memos
- oral and signed communications and forms

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and job specification
- induction and training materials
- train timetables
- electronic management systems
- two-way radio operation procedures
- emergency procedures manual
- manufacturers specifications and instructions for equipment
- verbally communicated information and instructions
- operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements
- ADG Code and associated regulations
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to:

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
demonstrate competency in this unit

requirements of the elements and performance criteria of this unit and include demonstration of applying:
ο the underpinning knowledge and skills
ο relevant legislation and workplace procedures
ο other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  ο a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  ο access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  ο relevant and appropriate materials and/or equipment, and/or
  ο applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  ο through appropriately simulated activities at the registered training organisation, and/or
  ο in an appropriate range of situations in the workplace
TLIL5007B  Allocate rolling stock

Unit Descriptor
This unit involves the skills and knowledge required to allocate rolling stock in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes identifying train consists and passenger and/or freight requirements, establishing available rolling stock, allocating rolling stock to trains, and monitoring and amending rolling stock allocation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed individually and skills are required to work within a team environment. It involves the application of regulatory requirements and operational principles and procedures to allocate rolling stock as part of work activities across a variety of operational workplace contexts within the Australian rail system.

Competency Field
L – Resource Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify train consists and passenger and/or freight requirements

1.1 Details of train consist and passenger numbers acquired from train planning are evaluated against available resources in accordance with workplace procedures

1.2 Train running times and train details are identified to confirm timings in accordance with workplace procedures

1.3 Initial estimate of required rolling stock by numbers and types for each rail service is made

2 Establish available rolling stock

2.1 Passenger numbers and class of travel to be catered for with a passenger train are identified to ensure suitable carriages are provided

2.2 Types of freight train rolling stock required for the established freight loads and track dimensions are identified in accordance with workplace procedures

2.3 Passenger or freight train rolling stock locations are established using available tracking systems and procedures

2.4 Serviceability of the required rolling stock is confirmed using
appropriate workplace procedures

2.5 Support rolling stock for passenger trains (such as dining cars) is located and assigned for each rail service

2.6 Rolling stock committed for the rail service is recorded as being required for use prior to positioning for service/loading operations

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice
- Workplace procedures and policies for allocating rolling stock
- Rolling stock and specifications, capabilities and capacity
- Allocation and maintenance schedules of rolling stock
- Track specifications and restrictions
- Gauges, distance, gradients and tonnages for relevant track area
- Communication requirements
- Load types
- Load calculation and allocation requirements
- Load handling equipment use and capacities
- Shunting and marshalling requirements
- Equipment and materials used when allocating rolling stock, and procedures that should be followed in their use
- Problems that may occur when allocating rolling stock and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication and negotiation requirements when allocating rolling stock

Required skills:
- Communicate effectively with others when allocating rolling stock
- Read and interpret instructions, procedures and information relevant to the allocation of rolling stock
- Interpret train movement graphs and diagrams
- Interpret and follow operational instructions and prioritise work
- Complete documentation and enter data related to the allocation of rolling stock
- Operate electronic communication equipment to required protocol
- Calculate load requirements
- Work collaboratively with others when allocating rolling stock
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any problems, faults or malfunctions that may be identified when allocating rolling stock in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when allocating rolling stock
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the allocation of rolling stock
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be: • by day or night
• in all relevant weather conditions

Support rolling stock may include:
• dining cars
• lounge cars
• observation decks
• conference cars
• bar cars

Rolling stock tracking systems may include:
• manual tracking systems
• computer-based tracking systems

Trains/services for which allocations are made may include:
• long distance passenger service
• urban passenger service
• short distance freight service
• long distance freight service
• work trains
• special freight trains
Factors involved in establishing rolling stock requirements and availability may include:

- operating policies
- available rolling stock
- track specifications and limitations
- gauges
- distances
- communication requirements
- tonnages (for freight trains)
- load types (for freight trains)
- configuration
- coupling requirements

Contingency plans may include:

- non-availability of specified rolling stock
- operational breakdowns
- equipment failure
- communications difficulties

Consultative processes may involve:

- workplace personnel including supervisors and managers
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace rules and operating procedures
- print-outs from office machines
- displays on computer monitors
- hard copy documentation
- computer-based data systems
- verbal and written information from relevant staff and management
Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant codes and regulations pertaining to the carriage of dangerous and hazardous goods including the ADG Code
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the
workplace
TLIL5061A  Apply knowledge of the international freight forwarding industry

Unit Descriptor
This unit involves the skills and knowledge required to develop, update and apply an in-depth understanding of the international freight forwarding industry to advanced freight forwarding activities. This includes the demonstration of the required industry knowledge; the consistent interpretation and application of that knowledge to the freight forwarding role and functions; and undertaking sufficient appropriate continuous professional development activities to maintain the currency of the required knowledge and understanding. International freight forwarding covers the importing, exporting and transiting of freight. There are no specific licensing or certification requirements applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for persons applying knowledge of the international freight forwarding industry as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Access and interpret information on the international freight forwarding industry

1.1 Information on the international freight forwarding industry is regularly accessed from appropriate sources

1.2 Information on the international freight forwarding industry is interpreted and applied when working on freight forwarding projects

1.3 Continuous professional development is undertaken to ensure a current knowledge of the freight forwarding industry as per industry practice and company standard procedures

2 Demonstrate the required knowledge of

2.1 The knowledge of the international freight forwarding industry required to perform effectively as an international freight forwarding industry.
the international freight forwarding industry

forwarder is demonstrated through the successful completion of a range of assignments and both real and simulated freight forwarding projects

3 Apply industry information to the freight forwarding role and functions

3.1 Current information on the international freight forwarding industry is consistently applied when carrying out the international freight forwarding role and functions

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Overview of the international freight forwarding industry including the business aspects of freight forwarding and the key activities of freight forwarding companies
- Overview of Australian and international regulations, conventions and codes of practice applicable to international freight forwarding (including the importing, exporting and transiting of goods)
- Legalities and liabilities in international transport and freight forwarding
- Ethical responsibilities in freight forwarding
- Relevant OH&S and environmental procedures and regulations
- The typical organisational structure of an international freight forwarding company
- The role and functions of an international freight forwarder
- Australian and international regulatory authorities in international freight forwarding and trade include but are not limited to:
  - Australian Customs and Border Protection Service
  - AMSA (Australian Maritime Safety Authority)
  - AQIS (Australian Quarantine and Inspection Service)
  - CASA (Australian Civil Aviation Authority)
  - IATA (International Air Transport Association)
  - ICAO (International Civil Aviation Organization)
  - IMO (International Maritime Organization)
  - government agencies responsible for transport security
- Other Australian and international organisations in forwarding and trade (professional associations, industry associations, unions etc.). Examples include but are not limited to:
  - ATC (Australian Transport Council)
  - ARA (Australasian Railway Association)
  - BIPAR (La Federation Europeenne des Intermedaires d'Assurances, The European Federation of Insurance Intermediaries)
  - ECSA (European Community of Shipowners' Associations)
  - CSG (Consultative Shipping Group, London)
  - FIATA (Fédération Internationale des Associations de Transitaires et Assimilés, International Federation of Freight Forwarders Associations)
  - OTIF (Intergovernmental Organisation for International Carriage by Rail)
  - TIACA (The International Air Cargo Association)
o UIC (International Railway Union)
o UIRR (International Union of Combined Road-Rail Transport Companies)

• The basics of international trade and commerce
• Definitions, purpose and use of Incoterms and Combiters
• An in-depth and up-to-date knowledge of global freight forwarding geography
• An understanding of the geopolitical aspects of international freight transport
• Modes of international transport including sea, air, road, rail and multimodal
• Freight forwarding equipment, processes and systems for the various modes of international freight transport
• The use of containers and containerisation in international freight transport
• Parameters of freight forwarding services relevant to customer requirements
• Special transport services including consolidation, special cargoes and special forwarding projects
• An overview of risk management and the typical problems that can occur when providing international freight forwarding services to customers, and related appropriate action that can be taken to prevent or solve them
• An overview of the transport and liability insurance requirements for international freight forwarding
• Overview of the information and documentation required when providing international freight forwarding services
• Sources of information on the international freight forwarding industry
• Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
• Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry

**Required skills:**

• Communicate effectively with others when providing international freight forwarding services, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
• Read and interpret instructions, procedures, and other information relevant to the provision of international freight forwarding services
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the provision of international freight forwarding services, including data entry to a computer system
• Operate information and communication technology equipment to required protocol
• Work collaboratively with others when providing international freight forwarding services
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when providing international freight forwarding services in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when providing international freight forwarding services
• Monitor work activities in terms of planned schedule and deadlines
• Apply relevant Australian and international codes of practice and legislative requirements
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment as per standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

International freight forwarding includes services related to:
• the importing of goods
• the exporting of goods
• the transiting of goods
The role and functions of an international freight forwarder include:

- advising customers on and planning suitable modes of transport and the routing of international freight transport including booking space with carriers and making arrangements for pick up, carriage and delivery of the goods
- applying an in-depth understanding of worldwide transport geography to international freight forwarding
- liaising with a global network of related companies and agents and contacts in all major ports and cities on international freight forwarding matters
- organising for the transport of special cargoes, special freight forwarding projects and dangerous goods
- recognising, inspecting and following applicable regulatory requirements when any dangerous goods are offered for shipment
- organising the consolidation of shipments
- managing risk in international freight forwarding and for international freight transport including finding alternative routing in the event of contingencies
- assisting in the organisation of suitable insurance arrangements
- managing the documentation requirements for international freight and obtaining any unique certificates necessary to import and export goods
- negotiating rates and contracts and ensuring that the sales contract negotiated between the international buyer and the seller is executed smoothly and efficiently
- ensuring maintenance of billings, and accounts
- applying a knowledge of the legalities and liabilities of key parties involved in international freight transportation and complying with the ethical standards of international freight forwarding
- completing all calculations required in international freight forwarding
- advising on and organising for the packaging, packing, labelling, documenting, loading stowage and storage of international freight
- assisting in the clearance and release of international freight from customs or other detention
- promoting and marketing the international freight forwarding business of the organisation concerned
- tracking and tracing international freight shipments from door to door
- providing quality customer service
- communicating regularly with customers

© Commonwealth of Australia 2009
TLI07 Transport and Logistics Training Package (Version 3)
To be reviewed by 2010
Knowledge of global transportation and freight forwarding geography includes:

- regulatory frameworks as they relate to the import and export of goods and related aspects of both international and domestic freight transport
- regions, continents and the most important trading countries
- the main flows of freight traffic world-wide, including sea, air, road, rail, inland waterways and multimodal transport
- an understanding of key transport terminals, sea ports, airports etc.
- physical and climatic conditions of international transport routes and destinations
- times and time zones
- geopolitical aspects of international freight transport
- economic and trading situations and agreements

Knowledge of global transportation and freight forwarding geography covers regions such as:

- Australasia
- Southeast Asia
- South Pacific
- North America
- Central America/West Indies
- South America
- Europe (Northern and Mediterranean)
- Central Asia
- East Asia/Indian Sub-Continent
- The Middle East
- Africa

Requirements for work may include:

- freight forwarding protocols and procedures
- compliance with relevant regulations
- information and communication systems and equipment
- workplace organisation
- sales contracts
- hours of operation
- authorities and permits
Parameters of freight forwarding services relevant to customer requirements may include:

- standard procedures for the international forwarding of freight
- type of transport modes
- various consignment methods
- relevant regulations and legislative requirements
- required import/export documentation and requirements
- transport security requirements
- insurance requirements
- service costs
- payment requirements and procedures
- fiduciary and legal responsibilities of either party

Sources of information required to perform international freight forwarding functions may include:

- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

Consultative processes may involve:

- customers
- a global network of international and domestic agents, regulatory authorities, carriers, suppliers, and other freight forwarding contacts
- other employees and supervisors
- freight forwarding specialists in areas such as dangerous goods, special cargoes etc.
- management
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communications systems may involve:

- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail
Information/documents may include but are not limited to:

- Australian and international regulations and conventions relevant to the international transfer of freight
- Summaries and definitions of Incoterms and Combiters
- Customers' instructions and transport requirements
- Workplace standard operating procedures and policies
- Operations manuals, job specifications and procedures and induction documentation
- Agents advice on available transport options, timetables, schedules and issues
- Standard FIATA forms and documentation such as:
  - A Negotiable Multimodal Transport Bill of Lading (FB/L)
  - A Non-negotiable Multimodal Transport Waybill (FWB)
  - A Forwarders Certificate of Receipt (FCR)
  - A Forwarders Certificate of Transport (FCT)
  - A Forwarders Warehouse Receipt (FWR)
  - A Forwarders Forwarding Instructions (FFI)
  - A Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - A Shippers Intermodal Weight Certification (SIWC)
  - An Original Bill of Lading (OB/L)
  - A Master Air Waybill (MAWB)
  - A House Bill of Lading (HBL)
  - A House Air Waybill (HAWB)
  - Multimodal Transport Bill of Lading (MTB/L)
- Cargo manifests
- Pre-advice and pre-alert documents
- Operations manuals, job specifications and procedures and induction documentation
- Relevant Australian and international standards, criteria and certification requirements
- Data obtained through communications technology equipment and oral, aural or signed communications
- Freight forwarder company’s quality assurance standards and procedures
- Emergency procedures
Applicable regulations and legislation may include:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - maintaining a current knowledge of the international freight forwarding industry through appropriate continuous professional development activities
  - interpreting and applying the required industry knowledge to the international freight forwarding role and functions

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
Practical assessment must occur:
  o through activities in an appropriately simulated environment at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIL5062A  

Apply knowledge of logistics, storage and distribution to international freight forwarding

Unit Descriptor
This unit involves the skills and knowledge required to develop, update and apply knowledge of logistics, warehousing, storage and distribution when performing advanced international freight forwarding activities. This includes the demonstration of the required knowledge of logistics, warehousing, storage and distribution; the consistent interpretation and application of that knowledge to the freight forwarding role and functions; and undertaking sufficient appropriate continuous professional development activities to maintain the currency of the required knowledge and understanding. International freight forwarding covers the importing, exporting and transiting of freight. There are no specific licensing or certification requirements applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for persons applying knowledge of logistics, storage and distribution as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Competency Field
L – Resource Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Access and interpret information on logistics, warehousing, storage and distribution

1.1 Information on logistics, warehousing, storage and distribution aspects of international freight forwarding is regularly accessed from appropriate sources

1.2 Information on logistics, warehousing, storage and distribution is interpreted and applied when working on freight forwarding projects

1.3 Continuous professional development is undertaken to ensure a current knowledge of logistics, warehousing, storage and distribution aspects of international freight forwarding as per
2 Demonstrated the required knowledge of logistics, warehousing, storage and distribution

2.1 Quality standards and procedures for export logistics processes are confirmed and/or updated in accordance with workplace procedures

3 Apply information knowledge of logistics, warehousing, storage and distribution to the freight forwarding functions

3.1 Current information on logistics, warehousing, storage and distribution aspects of international freight forwarding is consistently applied when carrying out the international freight forwarding role and functions

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian and international regulations, conventions, codes of practice and legislative requirements (including those applicable to the importing, exporting and transiting of goods)
- Definition and an understanding of the origins of logistics systems
- The main steps in logistics projects
- Basic understanding of logistics terms such as JIT, ‘pull systems’, physical distribution systems, supply chain management, tailor made services etc.
- The role of the forwarder in logistics activities
- The forwarder’s functions in the supply chain processes
- Basic understanding of the role of logistics providers and related physical distribution systems
- The procedures of warehousing as they relate to freight forwarding
- Types of warehouses
- Financial aspects of storage
- Rights and duties of the warehouse operator and the customer
- Warehouse charges and rent
- Documentation and information and communication technology systems used in warehouses
- Sources of information required to perform international freight forwarding functions
- Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
- Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry

Required skills:
• Communicate effectively with others when applying a knowledge of logistics, warehousing, storage and distribution to international freight forwarding functions, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)

• Read and interpret instructions, procedures, information and regulations relevant to logistics, warehousing, storage and distribution aspects of international freight forwarding

• Interpret and follow operational instructions and prioritise work

• Complete documentation related to the provision of international freight forwarding services, including data entry to a computer

• Operate electronic communication equipment to required protocol

• Work collaboratively with others when providing international freight forwarding services

• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

• Promptly report and/or rectify any identified problems that may arise when providing international freight forwarding services in accordance with regulatory requirements and workplace procedures

• Implement contingency plans for unanticipated situations that may occur when providing international freight forwarding services

• Monitor work activities in terms of planned schedule

• Modify activities depending on differing operational contingencies, risk situations and environments

• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

• Select and appropriately apply technology, information systems and procedures to complete workplace tasks

• Operate and adapt to differences in equipment in accordance with standard operating procedures

• Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

*International freight forwarding includes services related to:*  
  - the importing of goods  
  - the exporting of goods  
  - the transiting of goods

*Logistics encompasses:*  
  - the process of planning, implementing, and controlling the efficient, effective flow and storage of goods, services, and related information from point of origin to point of consumption for the purpose of conforming to customer requirements
Supply chain management encompasses:

- the planning and management of all activities involved in sourcing and procurement, conversion, and all logistics management activities. It also includes coordination and collaboration with suppliers, intermediaries, third-party service providers, and customers.

Types of warehouses include:

- private warehouses
- bonded warehouses
- public warehouses

Warehouse equipment and systems include:

- racking and layout systems
- lift trucks and VNA (very narrow aisle) trucks
- automated conveyor lines
- order picking equipment
- fully automated warehouse systems

Warehouse charges may include:

- storage charges
- warehouse rent
- warehouse insurance
- warehouse handling fees
- ancillary charges
- IT based invoicing

Distribution systems encompass:

- the procedures, methods, equipment, and facilities, designed and interconnected to facilitate and monitor the flow of goods or services from the source to the end user.

Distribution centres are:

- warehousing facilities located throughout a supply chain in which goods are sorted, assembled, staged or stored temporarily

Sources of information required to perform international freight forwarding functions may include:

- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.
Consultative processes may involve:
- customers
- logistics, warehousing and distribution contacts and specialists
- other employees and supervisors
- relevant regulatory authorities and institutions
- management
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communications systems may involve:
- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail
Information/documents may include but are not limited to:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- customers' instructions and transport requirements
- workplace standard operating procedures and policies
- warehousing forms and documentation such as:
  - a FIATA forwarder’s warehouse receipt (FWR)
  - private warehouse receipt
  - a warrant warehouse receipt
- cargo manifests
- operations manuals, job specifications and procedures and induction documentation
- freight forwarding competency standards and training materials
- Australian and international standards, criteria and certification requirements
- data obtained through communications technology equipment and oral, aural or signed communications
- freight forwarder company’s quality assurance standards and procedures
- information accessed through communications/computer technology and equipment, and verbal or signed communications
- freight forwarder company’s quality assurance standards and procedures
- emergency procedures

Applicable regulations and legislation may include:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - maintaining a current knowledge of the logistics, warehousing, storage and distribution issues as they relate to the international freight forwarding industry through appropriate continuous professional development activities
  - interpreting and applying the required knowledge of logistics, warehousing, storage and distribution to the international freight forwarding role and functions
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL5063A  Review contracts, insurance, risk and liability in the international freight forwarding context

Unit Descriptor
This unit involves the skills and knowledge required to review contracts, insurance, risk and liability in the international freight forwarding context. This includes examining an international freight forwarding sales contract; examining an international freight forwarding service contract; managing risk in international freight forwarding; assisting in organising transport insurance requirements; confirming or organising liability insurance requirements; assisting a customer to make a claim on a transport insurance policy; and making a claim on a liability insurance policy. International freight forwarding covers the importing, exporting and transiting of freight. There are no specific licensing or certification requirements applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for persons involved in reviewing contracts, insurance, risk and liability as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Examine an international freight forwarding sales contract

1.1 The sales contract (or evidence of the sales contract) is reviewed and the relevant Incoterm and other factors relevant to the forwarder are confirmed and used as the basis for the apportionment of costs throughout the forwarding activities

1.2 The sales contract is used to determine project deadlines as well as the respective responsibilities, rights and liabilities between the buyer and seller in any given transaction

2 Examine an international freight forwarding service

2.1 The service contract and supporting documents are reviewed and confirmed

2.2 The service contract and supporting documents are interpreted
## TLIL5063A Review contracts, insurance, risk and liability in the international freight forwarding context

### Contract

and the required action is taken

### Manage risk in international freight forwarding

3.1 The risks associated with a planned international freight forwarding activity are assessed using appropriate risk analysis techniques  
3.2 Suitable strategies for controlling the identified risks are established in consultation with the customer  
3.3 Risk factors are identified and monitored throughout the freight forwarding project  
3.4 Alternative routing and other risk control measures are implemented where justified in the event of critical contingencies that arise before or during the freight transport  
3.5 Checks are made that all conventions for international freight transport are fulfilled

### Assist in organising insurance requirements for international freight forwarding

4.1 Insurance requirements for the international freight transport are evaluated as per standard procedures taking into account the critical risk factors in the project  
4.2 Assistance is provided in organising an appropriate policy providing the required cover for the project where required  
4.3 In the event of loss or damage, assistance is provided to the customer to make a claim on the insurance as per the policy requirements and standard procedures  
4.4 All documentation to support an insurance claim is lodged with the insurer as per policy requirements

### Manage legal liability in an international freight forwarding project

5.1 Risks of legal liabilities towards customers and third parties as a direct result of an internal mistake or negligence on the part of the forwarder are evaluated using appropriate risk analysis techniques  
5.2 Appropriate liability insurance is confirmed or organised that provides the required cover for the risks involved  
5.3 In the event of loss or damage directly attributable to a forwarder’s mistake or an act of negligence, a claim is made on the insurance as per the policy requirements and standard procedures  
5.4 All documentation to support an insurance claim is lodged with the insurer as per policy requirements

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Legal principles and liabilities in international freight transport
- Relevant security, safety and environmental procedures, regulations and conventions (including those applicable to the importing, exporting and transiting of goods)
- Procedures and protocols for the provision of international freight forwarding services (including those applicable to the importing, exporting and transiting of goods)
- Ways of managing legal liability in international freight transport
- Basic principles that govern the discipline of law
- Law of Contracts as it applies to international freight transport
- Definitions, purpose and use of Incoterms and Combiterms
- Processes for ensuring compliance with legal requirements
- Conventions in international freight transport
- Standard trading conditions in international freight transport
- Principles of risk management as it applies to international freight forwarding
- Ways of managing risk in international freight transport
- Ways of managing contingencies in international freight transport including consideration of alternative transport options and anticipation of the ‘unexpected’
- General elements and principles of insurance policy in international freight transport
- Procedures and policies for organising and managing insurance requirements for various types of international freight forwarding projects
- Types of liability insurance - their purpose and processes for their organisation, including an understanding of the liability of different parties involved in international freight transport
- Types of transport insurance coverage - their purpose and processes and documentation for their organisation
- The use of the ‘general average’ in insurance policy and practice
- Duties of the freight forwarder in the event of damage to goods in transit
- Processes for making insurance claims
- Sources of information and documentation needed when providing freight forwarding services
- Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
- Typical problems that can occur when organising transport or liability insurance, and related appropriate action that can be taken to prevent or resolve them
- Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry

**Required skills:**

- Communicate effectively with others when reviewing international freight forwarding contracts, insurance, risk and legal liability, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
- Read and interpret instructions, procedures, and other information relevant to sales contracts, insurance, risk and legal liability
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to contracts, insurance, risk and legal liability, including data entry to a computer system
• Operate information and communication technology to required protocol
• Work collaboratively with others when reviewing international freight forwarding contracts, insurance, risk and legal liability
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when reviewing international freight forwarding contracts, insurance, risk and legal liability in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may occur when reviewing international freight forwarding contracts, insurance, risk and legal liability
• Monitor work activities in terms of planned schedule
• Apply relevant codes of practice and legislative requirements
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

International freight forwarding includes services related to:

• the importing of goods
• the exporting of goods
• the transiting of goods
Provisions and stipulations that should be in a sales contract include:

- detailed description of the goods
- precise quantity of the goods and tolerances where appropriate
- exact price of the goods
- final date for shipment with schedules for continuing contracts
- the seller’s delivery point
- transport mode
- discharge port, airport or transport terminal and the final destination
- the correct Incoterm for the transaction
- special packaging, load restraint and stowing requirements for the cargo
- documents required and responsibility for their preparation and provision
- Force Majeure clause
- arbitration clause
- law and jurisdiction clause
- payment terms
- buyer requires pre-shipment inspection of the cargo by surveyors

Supporting documents to a service contract may include but are not limited to:

- Shipper’s Letter of Instruction (SLI)
- invoice
- insurance certificate
- regulatory requirements (including permit issuing requirements) in both importing and exporting countries
Risks that may occur during international freight forwarding activities include but are not limited to:

- damage to the cargo
- transport accident
- breaches of security
- theft and fraud
- terrorism
- revolution
- war
- political instability
- strikes
- lockouts
- work slowdowns
- natural disasters
- climate
- port congestion
- overbooked carrier

Ways of controlling risks that may occur during an international freight forwarding project include but are not limited to:

- keeping up to date with geopolitical and industrial developments
- ensuring there are no regulatory restrictions or prohibitions on the export, import or transit of the cargo
- monitoring weather conditions
- being aware of the impact of impending or current natural disasters on freight transport routes
- making provision for suitable alternative routes
- ensuring packaging, packing and stowage is appropriate for the mode(s) of transport
- ensuring that security arrangements are adequate
- ensuring that insurance cover is sufficient for the risks involved

Types of cargo insurance policies may include:

- single shipment policy
- annual policy
- open policy

Sources of information required to perform international freight forwarding functions may include:

- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.
Parameters of freight forwarding services relevant to customer requirements may include:

- standard procedures for the international forwarding of freight
- type of transport modes
- various consignment methods
- relevant legislative requirements
- required import/export documentation and requirements
- transport security requirements
- insurance requirements
- service costs
- payment requirements and procedures
- fiduciary and legal responsibilities of either party

Consultative processes may involve:

- customers
- international and domestic agents and suppliers,
- insurance brokers
- representatives of insurance companies
- relevant regulatory authorities and institutions
- other employees and supervisors
- management
- freight forwarding specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communications systems may involve:

- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail
Information/documents may include but are not limited to:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- summaries and definitions of Incoterms and Combiterms
- customers' instructions and transport requirements
- workplace standard operating procedures and policies
- sales contracts
- standard FIATA forms and documentation such as:
  - a Negotiable Multimodal Transport Bill of Lading (FB/L)
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
  - a Forwarders Warehouse Receipt (FWR)
  - a Forwarders Forwarding Instructions (FFI)
  - a Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - a Shippers Intermodal Weight Certification (SIWC)
  - an Original Bill of Lading (OB/L)
  - a Master Air Waybill (MAWB)
  - a House Bill of Lading (HBL)
  - a House Air Waybill (HAWB)
  - Multimodal Transport Bill of Lading (MTB/L)
- insurance policies
- insurance certificates
- insurance claim forms
- cargo manifests
- pre-advice and pre-alert documents
- suppliers advice for the handling, transport and storage of goods and materials
- operations manuals, job specifications and procedures and induction documentation
- freight forwarding competency standards and training materials
- Australian and international standards, criteria and certification requirements
- data obtained through communications technology equipment and oral, aural or signed communications
- freight forwarder company’s quality assurance standards and procedures
- emergency procedures
Applicable regulations and legislation may include:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - examining an international freight forwarding sales contract
  - examining an international freight forwarding service contract
  - managing risk in an international freight forwarding project
  - assisting in organising transport insurance requirements
  - confirming or organising liability insurance requirements
  - making a claim on a transport or liability insurance policy

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including
workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL5064A  Manage international special freight transport services including dangerous goods and special cargo

Unit Descriptor
This unit involves the skills and knowledge required to manage special international freight transport services, including (1) the forwarding of dangerous goods, (2) the international forwarding of special cargoes such as classified goods, perishables, flowers and plants, livestock, artworks, high value goods, and heavy-weight and out-of-gauge cargo etc., and (3) special forwarding projects (such as international freight logistics for sporting or diplomatic events, business conventions and exhibitions etc.). It also includes the monitoring and tracking of the international transport of special cargoes and dangerous goods, and ensuring that all required forms and documentation are completed and/or required data entered into the applicable information technology systems. International freight forwarding (involving special freight transport services) covers the importing, exporting and transiting of freight. There are no specific licensing or certification requirements applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit was developed for persons involved in managing international special freight transport services (including dangerous goods and special cargo) as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Competency Field
L – Resource Management

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1  Manage the provision of special freight transport services

1.1 Requirements for special international freight transport services are confirmed and clarified with the customer.

1.2 Pre-transport issues for the type(s) of special cargo involved are identified and addressed in accordance with standard procedures and regulations.
1.3 Sale contract is prepared
1.4 Suitable transport mode and routing are determined for the special cargo(es) involved
1.5 Requirements for packaging of the special cargo(es) are determined and organised
1.6 Suitable container type(s) are stipulated and their transport worthiness are confirmed and documented
1.7 All required cargo insurance for the entire transit is determined and organised
1.8 Documentation requirements for the special freight transport services are completed as per procedures and regulations
1.9 Letter of credit is checked and any identified problems addressed and rectified
1.10 Appropriate packaging for the freight involved is organised as per regulatory requirements
1.11 Appropriate warehousing, storage and stowage for the types of freight involved are organised as per requirements
1.12 Delivery arrangements to/from docks, airports or terminal are organised and costed
1.13 All requirements for customs, quarantine and health clearance are checked as being fulfilled
1.14 Suitable instructions are provided to all parties involved in the transport of the special cargo(es)

2. Manage and organise special international freight forwarding projects

2.1 Requirements for the special forwarding project are confirmed and clarified with the customer
2.2 Critical logistics aspects of the freight transport for the special project are determined and are taken into account in planning the freight forwarding solution(s)
2.3 Pre-transport issues for the freight involved are identified and addressed in accordance with standard operating procedures and regulations
2.4 Appropriate packaging for the freight involved is organised as per standard operating procedures and regulatory requirements
2.5 Appropriate warehousing, storage and stowage for the types of freight involved are organised as per project requirements
2.6 All required cargo insurance for the entire transit is determined and organised
2.7 Documentation requirements for the special freight transport services are completed as per procedures and regulations
2.8 Letter of credit is checked and any identified problems addressed and rectified
2.9 Delivery arrangements for the freight to/from docks, airports or terminals are organised and costed as per project requirements
2.10 All requirements for customs, and other regulatory authorities are checked as being fulfilled
2.11 Suitable instructions are provided to all parties involved in the transport of the freight concerned

3 Manage and organise the forwarding of dangerous goods

3.1 Requirements for the international freight forwarding of the dangerous goods are confirmed and clarified with the customer
3.2 Class(es) of dangerous goods involved are determined and the transport risks involved are identified and managed as per applicable regulatory requirements
3.3 Pre-transport issues for the class(es) of dangerous goods involved are identified and addressed in accordance with standard procedures and regulations
3.4 Appropriate packaging for the dangerous goods is organised as per regulatory requirements
3.5 Delivery arrangements for the dangerous goods to/from docks, airports or terminal are organised and costed
3.6 All requirements for customs and other regulatory authorities are checked as being fulfilled
3.7 Suitable instructions are provided to all parties involved in the transport of the dangerous goods concerned

4 Monitor and track the international forwarding of special cargoes and dangerous goods

4.1 The transit of the special cargoes and dangerous goods is monitored and tracked using the available tracking systems
4.2 Problems in the progress of the transport of the special cargoes or dangerous goods are promptly identified and appropriate action initiated to resolve the problems concerned
4.3 Appropriate personnel and the customer are kept informed of the progress of the transport of special cargoes and dangerous goods and any action taken to resolve problems that may have arisen

5 Complete all required forms and documentation

5.1 All required forms and other documentation are completed as per procedures and regulatory requirements
5.2 Data is entered into information technology systems as per applicable procedures and regulatory requirements
5.3 Reports on problems that have arisen and related action taken are completed as per procedures and regulatory requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Procedures, regulations and conventions applicable to the provision of special international
freight transport services (including those applicable to the importing, exporting and
transiting of goods)
• Procedures and Australian and international codes, conventions and regulations for the
international transport of dangerous goods
• Special international freight transport services - definition
• Definitions, purpose and use of Incoterms and Combiterms
• Issues and solutions for the forwarding of special cargoes, including classified goods,
perishables, flowers and plants, livestock, artworks, high value goods, and heavy-weight and
out-of-gauge cargo
• Issues and solutions for special forwarding projects such as international freight logistics for
sporting or diplomatic events, conventions and exhibitions, the development of major industry
facilities (e.g. mine, manufacturing plant, oil or gas pipeline or refinery) etc.
• Definition and procedures/costs for the use of various types of carnets in the provision of
special international freight transport services, including ATA carnets and FIA/AIT carnets
• Services for the consolidation and groupage of international freight
• Dangerous goods - definition and the regulations applicable for their carriage on the various
modes of international transport available
• National and international requirements for the classification and labelling of dangerous
goods
• Training requirements for the safe packaging, labelling, documentation, handling and
transport of dangerous goods
• Requirements for dangerous goods documentation
• Procedures and protocols for the provision of special international freight transport services
and the organisation of the forwarding of dangerous goods
• Sources of information and documentation needed when providing special international
freight transport services and organising the forwarding of dangerous goods
• Principles and techniques of closed-loop communication in which checks are made to confirm
that messages and responses being given or received are unambiguous and are correctly and
clearly understood
• Understanding of the principles of quality assurance and customer service standards, policies
and procedures as they apply in the international freight forwarding industry
• Typical problems and issues that need to be resolved when providing special international
freight transport services and organising the forwarding of dangerous goods, and related
appropriate action that can be taken

Required skills:
• Communicate effectively with others when providing international freight forwarding
services, including unambiguous closed-loop communication in which checks are made to confirm
that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
• Read and interpret instructions, procedures, information and labels relevant to the management of special international freight transport services and the planning and organisation of the international forwarding of dangerous goods
• Interpret and follow operational instructions and procedures and prioritise work
• Complete documentation related to the provision of special international freight transport services, including data entry to an information technology system
• Operate information and communication technology equipment to required protocol
• Work collaboratively with others when providing special international freight transport services and when organising the international transport of dangerous goods
• Adapt appropriately to cultural differences, including modes of behaviour and interactions with others
• Promptly identify, report and/or rectify any identified problems and issues that may arise when providing special international freight transport services in accordance with regulatory requirements and workplace procedures
• Apply risk management strategies and implement contingency plans for unanticipated situations that may occur when providing special international freight transport services and organising the international transport of dangerous goods
• Monitor work activities in terms of planned schedule and transport deadlines
• Apply relevant codes of practice and legislative requirements including applicable to special international freight transport services and the international transport of dangerous goods
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply technology, information and communication systems and procedures to complete workplace tasks
• Operate and adapt to differences in equipment and systems in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards, where applicable

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

International freight forwarding includes services related to:
• the importing of goods
• the exporting of goods
• the transiting of goods
Special freight transport services may include but are not limited to:

- transport of classified goods
- transport of dangerous goods
- transport of perishable goods
- transport of flowers and plants
- transport of livestock
- transport of artworks
- transport of high value goods
- transport of diplomatic and consular cargo
- transport of human remains
- transport of heavy-weight and out-of-gauge cargo
- special transport projects such as the provision of international freight logistics for sporting or diplomatic events, conventions and exhibitions, the development of major industry facilities (e.g. mine, manufacturing plant, oil or gas pipeline or refinery) etc.

Perishable goods may include:

- meat, fish, dairy products, vegetables, fruit, chocolates and other foods requiring temperature control
- animals
- fresh flowers
- blood and tissue samples, embryos, organ transplants and other genetic and biological material
- cross-contamination and incompatible substances

Pre-transport issues in the transport of perishable goods may include:

- handling and hygiene
- pre-cooling of equipment
- control of temperature
- packaging
- stacking and stowing
- cross-contamination and incompatible substances

Pre-transport issues in the transport of artworks and high value goods may include:

- adequacy of insurance
- adequacy of packaging
- adequacy of moisture control
- planning for security, proper stowage and handling in transit
- advice to carriers of special needs and processes for ensuring that advice is followed
- planning for clearance, delivery and receive during transit and at destination
Pre-transport issues in the transport of dangerous goods may include:

- adequacy of training for the personnel involved in identification, classification, packing, marking, labelling and placarding of the dangerous goods being transported
- adequacy of packaging, labelling and documentation for the class of dangerous goods concerned
- adequacy of special environmental considerations
- adequacy of insurance for the class of dangerous goods concerned
- planning for security, proper stowage and handling of dangerous goods in transit
- advice to carriers of special requirements for the handling and stowage dangerous goods concerned and processes for ensuring that advice is followed
- planning for clearance, delivery and receival during transit and at destination

Requirements for work may include:

- Australian and international regulations and conventions relevant to special freight transport services and the transport of dangerous goods
- Australian and international freight forwarding codes, conventions, protocols and procedures for special freight transport services and the transport of dangerous goods
- authorities and permits relevant to special freight transport services and the transport of dangerous goods
- workplace standard operating procedures
- information and communications technology and related systems
- global time zones and hours of operation
Parameters of special freight transport services and the transport of dangerous goods relevant to customer requirements may include:

- procedures for forwarding of applicable types of special international freight and dangerous goods
- type of transport modes
- transport routing
- in gas, liquid or solid form
- various consignment methods
- packaging, packing, stowage and storage options
- relevant legislative requirements
- required import/export documentation, labelling and requirements
- transport security checks
- insurance requirements
- service costs
- contract arrangements
- payment requirements and procedures
- fiduciary and legal responsibilities of either party

Modes of transport may include:

- sea
- air
- road
- rail
- inland waterway
- multimodal

Australian and international codes and regulations for the international transport of dangerous may include:

- for air transport: CASA (Civil Aviation Safety Authority) regulations, CASA training requirements for employees who pack, mark, label and document air cargo, and IATA (International Air Transport Authority) Dangerous Goods Regulations
- for road and rail transport: ADG Code (Australian Dangerous Goods Code)

Sources of information required to perform international freight forwarding functions may include:

- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.
Consultative processes may involve:

- customers
- employees, supervisors and managers
- global network of international and domestic agents and suppliers
- relevant regulatory authorities and institutions
- other employees and supervisors
- special freight transport specialists (e.g. perishable goods, dangerous goods, artworks, high value goods, heavy-weight goods etc.)
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communications systems may involve:

- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail
Information/documents may include but are not limited to:

- Australian and international regulations, conventions and codes of practice for the international transport of special freight and dangerous goods
- summaries and definitions of Incoterms and Combiters
- customers' instructions and transport requirements
- workplace standard operating procedures and policies
- standard FIATA forms and documentation such as:
  - a Negotiable Multimodal Transport Bill of Lading (FB/L)
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
  - a Forwarders Warehouse Receipt (FFI)
  - a Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - a Shippers Intermodal Weight Certification (SIWC)
  - an Original Bill of Lading (OB/L)
  - a Master Air Waybill (MAWB)
  - a House Bill of Lading (HBL)
  - a House Air Waybill (HAWB)
  - a Multimodal Transport Bill of Lading (MTB/L)
- cargo manifests
- pre-advice and pre-alert documents
- operations manuals, job specifications and procedures and induction documentation
- competency standards and training materials
- dangerous goods documentation where applicable including dangerous goods declarations
- relevant Australian and international standards, criteria and certification requirements
- data obtained through information and communications technology systems and oral, aural or signed communications
- freight forwarder company’s quality assurance and customer service standards and procedures
- emergency procedures
Applicable regulations and legislation may include:

- Australian and international regulations, conventions and codes of practice for the international transport of special freight and dangerous goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant regulations for the import and export of special freight and dangerous goods including customs, quarantine and bond requirements
- relevant Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - managing and organising special international freight transport services
  - managing and organising special international freight forwarding projects
  - managing and organising the international forwarding of dangerous and hazardous goods
  - monitoring and tracking the international forwarding of special cargoes and dangerous goods
  - completing and processing all required documentation

Context of and specific

- Performance is demonstrated consistently over a period
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
## TLIL507D

**Apply conflict/grievance resolution strategies**

### Unit Descriptor
This unit involves the skills and knowledge required to apply conflict resolution strategies to resolve grievances that may occur in the course of work, including identifying potential conflict situations, implementing appropriate conflict resolution strategies, and using effective interpersonal skills. Grievances and conflict situations may include those between employees in the workplace, between employees and managers, as well as grievances that might be raised by customers. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

### Employability Skills
This unit contains employability skills.

### Application of the Unit
Work involves discretion and judgement for self and others in management and resolution of conflicts and grievances both internal and external to the workplace.

Work is performed under minimum supervision with general guidance on progress and outcomes of work. It involves application of conflict/grievance resolution strategies in conflict situations that may arise amongst personnel both internal to and external to the workplace.

### Competency Field
L – Resource Management

### ELEMENT
Elements describe the essential outcomes of a unit of competency.

### PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1 Identify potential conflict situations</strong></td>
<td>1.1 Signs, stages and possible causes of conflict/grievance are identified</td>
</tr>
</tbody>
</table>
| **2 Implement conflict resolution strategies** | 2.1 Factors and issues relevant to conflict/grievance are clarified  
2.2 Strategies for dealing with conflict/grievance situations are developed  
2.3 Options for resolution of the conflict/grievance are identified which allow for constructive responses to be negotiated and enable established relationships to continue  
2.4 Strategies are implemented for the resolution of the source of conflict  
2.5 Outcomes of the process are monitored to ensure objectives continue to be met |
| **3 Use effective interpersonal skills** | 3.1 Effective verbal and non-verbal communication is used during negotiations, including body language, questioning, language style, active listening and reflection  
3.2 Feedback is given assertively and received non-defensively |
during negotiations

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant and regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the identification and resolution of conflicts/grievances
- Relevant workplace business marketing policies and practices, including requirements for the maintenance of security and confidentiality
- Signs, stages and possible causes of conflict in the workplace
- Options for constructive responses to typical conflict/grievance situations
- Typical problems that can occur when applying conflict/grievance resolution strategies and related appropriate action that can be taken

Required skills:
- Communicate effectively with others when applying conflict and grievance resolution strategies
- Negotiate effectively with others when applying conflict and grievance resolution strategies
- Read and interpret instructions, procedures, information and signs relevant to the application of conflict and grievance resolution strategies
- Interpret and follow operational instructions and prioritise work
- Gather, record and convey simple and routine work-related information
- Complete documentation related to the application of conflict and grievance resolution strategies
- Operate electronic communication equipment to required protocol
- Identify existing and potential conflicts/grievances
- Participate in small informal work groups
- Apply interpersonal skills
- Work collaboratively with others when applying conflict and grievance resolution strategies
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when applying conflict and grievance resolution strategies in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
- Work systematically with required attention to detail

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
- single and multi-site locations
- large, medium and small companies

Services, products, risks, work systems and requirements may:
- potentially vary across different sections of the workplace

Operations involve:
- internal and external customer contact and coordination

Conflicts/grievances may arise at all levels of the organisation in a range of possible situations including:
- amongst internal personnel
- between internal personnel and external personnel such as customers, suppliers, contractors, equipment manufacturers, etc.
- between external personnel and the organisation
- between internal personnel and management

Consultative processes may involve:
- other employees and supervisors
- management
- customers/clients
- suppliers of goods/materials
- manufacturers of equipment
- contractors
- relevant authorities
- union representatives
- OH&S specialists
- other maintenance, professional or technical staff

Communications systems may involve:
- face-to-face conversations and meetings
- telephone
- fax
- email
- mail

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:
- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures
Information/documentation may include:

- workplace procedures for the resolution of conflicts/grievances
- records of action to resolve conflicts/grievances and documentation of agreements reached
- job specifications
- conditions of service, relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, workers compensation, and other industrial arrangements
- relevant codes of practice including the national standards for manual handling and the industry safety code
- supplier and/or client instructions
- manifests, bar codes, goods and container identification
- goods identification numbers and codes
- manufacturers specifications
- material safety data sheets
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- trading regulations relevant to business operations
- relevant Australian and state/territory OH&S legislation
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific**

- Performance is demonstrated consistently over a period
resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL5207A  Plan urban passenger train consists

Unit Descriptor
This unit involves the skills and knowledge required to plan urban passenger train consists in accordance with regulatory and workplace requirements, including identifying passenger requirements and resources; planning connections with other passenger services; and planning consists for urban passenger trains. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under general supervision. It involves applying basic principles, routine procedures and regulatory requirements to plan urban passenger train consists.

Competency Field
L – Resource Management

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Identify urban passenger requirements and resources
1.1 Passenger usage patterns, specific bookings and external events likely to influence passenger numbers are monitored and applied to urban passenger train consist planning
1.2 Requirements for carriages and motive power units for urban passenger trains are adjusted in light of passenger demand
1.3 Train crewing needs and/or constraints are identified to ensure consists are compatible with available resources
1.4 Passenger usage patterns are monitored and train configurations are adjusted in accordance with workplace procedures
1.5 Shunting and marshalling requirements are identified for planned consists in accordance with timetable requirements

2 Plan connections with other passenger services
2.1 Train timetables are compared with timetables from other passenger services for coordination purposes
2.2 Passenger flow patterns for related services are checked to ensure smooth flow patterns
2.3 Modifications to existing timetables are made to ensure mutually supporting passenger services are achieved where possible
2.4 Plan identifies and includes suitable passenger transit holding
areas between services

2.5 Timetable reviews and passenger flow issues are discussed with the appropriate external passenger service providers

3 Plan consists for urban passenger trains

3.1 Consists are planned, taking into account the need to move passengers efficiently within constraints of carriage availability, motive power availability, personnel availability, track layout, track condition, gauge and weight

3.2 Details of urban train consists are forwarded to yard and terminal operations for planning purposes

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the planning of urban passenger train consists
- Focus of operation of work systems, equipment, management and site operating systems for the planning of urban passenger train consists
- Appropriate urban passenger train consists and types of passenger trains
- Platform and station details
- Signalling equipment used at the stations or platforms
- Shunting and marshalling requirements
- Maximum urban passenger train lengths
- Problems that may occur when planning urban passenger train consists and appropriate action that can be taken to resolve the problems
- Documentation and reporting requirements for the planning of urban passenger train consists

Required skills:
- Read and interpret instructions, procedures and information relevant to the planning of urban passenger train consists
- Interpret timetables, and time graphs and diagrams
- Complete documentation related to the planning of urban passenger train consists
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when planning urban passenger train consists
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when planning urban passenger train consists in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when planning urban passenger train consists
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan passenger support services including transit arrangements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select the most cost effective motive power units and carriages to provide required urban passenger train services
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments, spaces and weather conditions • by day or night.

Passenger resources may include: • resources required at embarkation • resources required at disembarkation • resources required during transit

Urban passenger train stopping and loading patterns may include: • urban trains frequently stopping at urban stations and for short duration • express urban trains stopping infrequently and only at specific stations

Other passenger services may include: • those provided by own organisation • other private and public transport providers using train, tram, bus, ferry, ship, air or road vehicular travel services

Train details include: • running times of urban trains • factors affecting passenger load capacity for all relevant urban train services provided

Consultative processes may involve: • other employees • supervisors and managers • customers
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines relevant to urban passenger train movements
- workplace procedures and policies related to the planning of urban passenger train consists
- all forms of documentation used by the workplace for planning train support activities, including passenger booking and follow-up documentation
- operations manuals, job specifications and induction documentation
- conditions of service, award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable legislation, regulations and codes may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL5307A Plan rural passenger train consists

Unit Descriptor
This unit involves the skills and knowledge required to plan rural passenger train consists in accordance with regulatory and workplace requirements, including identifying passenger requirements and resources; planning connections with other passenger services; and planning consists for rural passenger trains. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under general supervision. It involves applying basic principles, routine procedures and regulatory requirements to plan rural passenger train consists.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify passenger requirements and resources
1.1 Passenger usage patterns, specific bookings and external events likely to influence passenger numbers are monitored and applied to rural passenger train consist planning
1.2 Requirements for carriages and motive power units for rural passenger trains are adjusted in light of passenger demand
1.3 Train crewing needs and/or constraints are identified to ensure consists are compatible with available resources
1.4 Passenger usage patterns are monitored and train configurations are adjusted in accordance with workplace procedures
1.5 Shunting and marshalling requirements are identified for planned rural passenger train consists in accordance with timetable requirements

2 Plan connections with other passenger services
2.1 Rural passenger train timetables are compared with timetables from other passenger services for coordination purposes
2.2 Passenger flow patterns for related services are checked to ensure smooth flow patterns
2.3 Modifications to existing timetables are planned to ensure mutually supporting passenger services are achieved where possible
2.4 Plan identifies and includes suitable passenger transit holding areas between services
2.5 Timetable reviews and passenger flow issues are discussed with the appropriate external passenger service providers

3 Plan consists for rural passenger trains

3.1 Consists are planned, taking into account the need to move passengers efficiently within constraints of carriage availability, motive power availability, personnel availability, track layout, track condition, gauge and weight
3.2 Details of rural passenger train consists are forwarded to yard and terminal operations for planning purposes

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the planning of rural passenger train consists
- Focus of operation of work systems, equipment, management and site operating systems for the planning of rural passenger train consists
- Appropriate rural passenger train consists and types of rural passenger trains
- Platform and station details
- Signalling equipment used at the stations or platforms
- Shunting and marshalling requirements
- Track knowledge including speeds and maximum rural passenger train lengths for all sections of track to be used for the rail service offered by the organisation
- Problems that may occur when planning rural passenger train consists and appropriate action that can be taken to resolve the problems
- Documentation and reporting requirements for the planning of rural passenger train consists

Required skills:

- Read and interpret instructions, procedures and information relevant to the planning of rural passenger train consists
- Interpret timetables, and time graphs and diagrams
- Complete documentation related to the planning of rural passenger train consists
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when planning rural passenger train consists
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems that may arise when planning rural passenger train consists in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unanticipated situations that may arise when planning rural passenger train consists
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan passenger support services including transit arrangements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select the most cost effective motive power units or locomotive(s) and carriages to provide required rural passenger train services
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments, spaces and weather conditions
• by day or night

Passenger resources may include: • resources required at embarkation
• resources required at disembarkation
• resources required during transit

Other passenger services may include: • those provided by own organisation
• other private and public transport providers using train, tram, bus, ferry, ship, air or road vehicular travel services

Train details include: • running times
• factors affecting passenger load capacity for all relevant train services provide

Consultative processes may involve: • other employees
• supervisors and managers
• customers
Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines relevant to rural passenger train movements
- workplace procedures and policies related to the planning of rural passenger train consists
- all forms of documentation used by the workplace for planning train support activities, including passenger booking and follow-up documentation
- operations manuals, job specifications and induction documentation
- conditions of service, award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable legislation, regulations and codes may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLIL5407A Plan freight train consists

**Unit Descriptor**

This unit involves the skills and knowledge required to plan freight train consists in accordance with regulatory and workplace requirements, including identifying freight requirements and resources; and planning consists and loads for freight trains. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under general supervision. It involves applying basic principles, routine procedures and regulatory requirements to plan freight train consists.

**Competency Field**

L – Resource Management

---

### ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify freight requirements and resources

1.1 Regular bookings for account customers for normal rail services are confirmed and details are forwarded to operations control

1.2 Additional bookings for non-account customers are clarified with the customer and confirmation of bookings and freight train details are provided to the customer

1.3 Details of regular and additional rail services, including planned running times, rolling stock and capacities, are confirmed

1.4 After a period of non-contact, radio or other electronic contact is checked to ensure effective operation in accordance with standard operating procedures

2 Plan consists and loads for freight trains

2.1 Consists are planned, taking into account the need to move freight efficiently within constraints of wagon availability, motive power availability, personnel availability, track layout, track condition, gauge and weight

2.2 Confirmed loads are allocated to suitable wagons and located within freight train consist to suit priorities

2.3 Dangerous goods are identified for labelling and are located within the freight train consist as required under appropriate legislation and operational requirements
2.4 Consists are planned to meet all requirements during planned movement of freight within and across the boundaries controlled by other organisations

2.5 Details of freight train consists are forwarded to yard/terminal operations for freight loading planning purposes

2.6 Maximum tonnage and freight train is identified and details forwarded for motive power allocation

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the planning of freight train consists
- Focus of operation of work systems, equipment, management and site operating systems for the planning of freight train consists
- Appropriate freight train consists and classes of freight trains
- Platform and station details
- Signalling equipment used at the stations or platforms
- Shunting and marshalling requirements
- Track knowledge including gradients, speeds, maximum freight train lengths, height and width, for all sections of track to be used for the rail service offered by the organisation
- Capacities of motive power units to haul loads
- Problems that may occur when planning freight train consists and appropriate action that can be taken to resolve the problems
- Documentation and reporting requirements for the planning of freight train consists

Required skills:
- Read and interpret instructions, procedures and information relevant to planning freight train consists
- Interpret timetables, and time graphs and diagrams
- Complete documentation related to the planning of freight train consists
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when planning freight train consists
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when planning freight train consists in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when planning freight train consists
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
• Plan freight support services including transit arrangements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select the most cost effective motive power units or locomotive(s) and wagons to provide required freight train services
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments, spaces and weather conditions
- by day or night.

Freight rail services include:
- normal or standard rail freight services
- special freight services offered to key account customers
- rail freight services integrated with other freight handling and delivery services

Freight train details include:
- running times
- factors affecting load capacity for all relevant freight train services provided

Consultative processes may involve:
- other employees
- supervisors and managers
- customers

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications
Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines relevant to freight train movements
- workplace procedures and policies related to the planning of freight train consists
- all forms of documentation used by the workplace for planning freight train support activities, including freight booking and follow-up documentation
- operations manuals, job specifications and induction documentation
- conditions of service, award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
other relevant aspects of the range statement

**Context of and specific resources for assessment**
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL5507A Manage a supply chain

Unit Descriptor
This unit involves the skills and knowledge required to manage a supply chain, including the relationships between an organisation and its supply and demand partners along the chain. It covers implementing a demand-driven supply chain management strategy, managing the supply chain, and evaluating and improving supply chain effectiveness. This unit has been derived from BSBPUR504A Manage a supply chain. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Implement demand-driven supply chain management strategy

1.1 Responsibility for supply chain management within the organisation is assigned in accordance with supply chain management strategy

1.2 Technology and software for implementation of the supply chain management system is accessed and operationalised within the requirements of the strategy and budgetary allocation

1.3 Policies and procedures are designed to guide business relations and operations in accordance with the strategy

1.4 Supporting business processes are designed or re-designed to support implementation of the strategy

1.5 Support is provided to staff, customers and supply chain to assist in implementation of the supply chain management strategy

2 Manage supply chain

2.1 Communication and information exchange with strategic partners and suppliers is managed in accordance with the supply chain management strategy

2.2 Collaboration with supply chain organisations is facilitated to determine demand at each level of the supply chain in accordance with the supply chain management strategy
2.3 Sales and payments are managed in accordance with supply chain and risk management strategies, and legal and ethical requirements

2.4 Actions to build trust and foster a supply chain culture are implemented in accordance with the supply chain management strategy

2.5 Opportunities are identified to adjust policies and procedures to respond to the changing needs of customers, supply chain and the organisation

3 Evaluate and improve supply chain effectiveness

3.1 Demand chain management and supply chain management are monitored in accordance with the supply chain management strategy

3.2 The effectiveness of the supply chain is reviewed with each level of the supply chain, including staff and customers and areas identified for improvement

3.3 Business data and reports are used to compare outcomes, budgets, timelines and forecasts to actual performance

3.4 Technology performance is reviewed and recommendations are made for improvements to hardware, software and/or their use in accordance with strategy and budget

3.5 Feedback and evaluation results are used to plan and improve future supply chain management strategies

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislation, codes of practice and national and international standards, for example Trade Practices Act, Sale of Goods Act and contract law
- Specific OH&S issues relevant to goods and services purchased
- Legislation related to importation of commodities, if relevant
- Organisation policies and procedures related to supply chain management, purchasing, and contracting and tendering
- Business terms and conditions for purchasing, tendering and contracting
- Ethical behaviour
- Product knowledge related to goods and services required by the organisation
- Ways to build trust and collaboration as opposed to competition
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation

Required skills:

- Negotiate and liaise with suppliers and relevant stakeholders using verbal skills
- Use policy development and implementation support skills
• Use appropriate technology, including software
• Work with attention to detail and thoroughness
• Focus on the customer
• Work collaboratively with others
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Implement contingency plans for unplanned events such as problems arising during the implementation and management of the supply chain

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Improvements in the supply chain may include:
• the role of 'middlemen' or other middle supply chain elements being reduced or made redundant as newer, more efficient supply chain methodologies and technologies are implemented
• new value being created between producers and consumers

Demand chain management is:
• a collaborative process that involves determining how much product needs to be produced at each level of the supply chain through to the end consumer

Support to staff and others may include:
• policies, procedures and guidelines
• intranet site information
• workshops, briefings and training programs
• written documentation in the form of manuals, help books, protocols
• provision of a help-desk or contact persons
• mentoring and coaching arrangements

Supporting business processes may include:
• data input
• administration
• ordering
• delivering and receiving
• accounting
• payments

Supply chain management is:
• management of the entire cycle from raw materials to producers, component suppliers, manufacturers, wholesalers, third party service providers, retailers, customers and recyclers, plus freight, distribution and cash flow
Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation and records may include:

- relevant OH&S and environmental protection regulations
- quality assurance procedures
- documentation of policies and procedures associated with managing the supply chain strategy within the organisation
- dangerous goods declarations and material safety data sheets, where applicable
- goods manifest
- relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:

- relevant industry codes of practice
- relevant Australian and state/territory regulations and codes of practice
- workplace relations regulations
- Sale of Goods Act, Trade Practices Act
- relevant legislation related to the importation of commodities, if relevant

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant
operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL5707A  Maintain, monitor and improve transport operations systems

Unit Descriptor
This unit involves the skills and knowledge required to maintain, monitor and improve an enterprise's transport operations systems. It includes identifying systems involved with operations; overseeing safe and effective operations systems; and reviewing the overall efficiency of those systems. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and logistics industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify systems involved with operation

1.1 Identify systems involved with enterprise transport operations
1.2 Identify relevant safety and efficiency issues regarding operations systems

2 Oversee conditions required for safe and effective operations systems

2.1 Implement procedures for improvement of enterprise operations systems
2.2 Communicate changes caused by improvements in operation systems to relevant personnel
2.3 Allocate supervision according to the skill level and job role of the team member
2.4 Utilise appropriate management systems to oversee operating systems

3 Review overall efficiency of transport operation systems

3.1 Review procedures for improvement of enterprise operations systems and take appropriate action where necessary
3.2 Provide team members with regular feedback on their work output in accordance with organisational requirements

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant sections of national and state or territory regulatory requirements and codes of practice
• Relevant OH&S and environmental procedures and regulations
• Requirements for completing relevant documentation
• Code of practice for working collaboratively with others
• Principles, purpose and location of controls, monitoring devices, and systems
• Steps involved in planning the work activities
• Procedures for adjusting controls to optimise the operation of the equipment
• Procedures to be followed in the event of an emergency

**Required skills:**

• Communicate effectively with others when maintaining, monitoring and improving transport operations systems
• Read and interpret instructions, procedures, information and signs relevant to work activities
• Complete documentation related to work activities
• Operate electronic communication equipment to required protocol
• Work collaboratively with others
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Implement contingency plans for unplanned events
• Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor work activities in terms of planned schedule
• Apply fatigue management knowledge and techniques
• Adapt to differences in equipment and related standard operating and servicing procedures

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications
Consultative processes may involve:
- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:
- records of transport operations, including those in relation to time, quality or cost
- relevant OH&S and environmental protection regulations
- reports of transport activities
- emergency procedures
- relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:
- workplace relations regulations
- transport regulations, particularly as they apply to the monitoring of operations systems

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a
registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL5807A Plan a career in logistics

Unit Descriptor
This unit involves the skills and knowledge required to undertake planning related to one's own career. It includes conducting self-assessment of skills and abilities; investigating possible career opportunities; developing and implementing a career plan; and monitoring progress against the plan. In practice, career planning may overlap with a range of other generalist or specialist work activities, such as gathering and analysing information, developing work plans, composing documents and so on. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work may be undertaken in various contexts within the transport and logistics industry.

The unit generally applies to individuals who wish to develop their own career paths, at whatever level, within the industry.

This unit is normally packaged at AQF IV or above.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Conduct self-assessment
1.1 Life and work experiences, current and potential abilities are identified and ranked in order of importance
1.2 Personal values and preferences relating to future careers are explored
1.3 A personal profile is prepared that identifies career related characteristics

2 Identify possible career opportunities
2.1 Careers are researched to identify those with continuing longevity, and their requirements are identified
2.2 Information sources are identified and explored for indicators, trends and information on potential career opportunities
2.3 Existing and emerging careers are assessed and their skill/qualification/experience requirements are identified
2.4 The nature of the workforce, future trends and opportunities are analysed and associated skill needs are identified

3 Develop and implement career plan
3.1 Preferred future career and associated skill requirements are identified and compared with current strengths
3.2 Gap analysis is undertaken to identify those skills that are
common to both preferred future career and the organisation's requirements

3.3 Career goals are established and a career plan is developed that identifies immediate priorities as well as a longer-term strategy for gaining experience and skills development

3.4 Career development activities are initiated in accordance with the career plan and organisational legislation, policy and procedures

4 Monitor progress

4.1 Acquisition of skills and experience is monitored and feedback is obtained on achievement of performance requirements

4.2 Feedback is considered and integrated as necessary into the career plan

4.3 The organisation's requirements are monitored and the career plan is adjusted to take account of new information, environment/culture

4.4 Preferred career requirements and progress towards career goals are monitored and adjusted as required

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislation, policies and procedures relating to career development including occupational health and safety and environment
- Strategic approach to career planning
- Methods of self-assessment used to identify values, preferences, etc.
- Performance management principles and strategies
- Career development options
- Succession planning principles, approaches and strategies
- Changing demographics and workforce skill needs and trends
- Organisational planning for human resources at a strategic level
- Principles of equal employment opportunity and diversity
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Code of practice for working collaboratively with others

Required skills:

- Analyse strengths, weaknesses, opportunities, threats (SWOT)
- Undertake appropriate research and questioning related to career planning
- Reflect on own competencies and performance
- Develop strategies for the management of one's own career
• Manage personal change and planning
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to work activities
• Work collaboratively with others
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Career development activities may include:
• accredited courses/other courses
• action learning
• career counselling
• coaching
• competency development processes
• education and training programs
• higher duties
• industry experience
• mentoring
• networking

Career plan may include:
• long-term goals
• objectives
• strategies
• timeframes
• job search tools/methods
• skills development in finding, applying for and winning positions
• skills development to meet particular job/career requirements
Sources of career information may include:

- social and political information
- workshops
- notice of vacancies
- Internet sites
- local, national and international publications
- statistical workforce data
- career expos
- personal networks
- word-of-mouth
- job search/personnel placement agencies
- graduate career counselling organisations
- media

Characteristics may include:

- strengths
- preferences
- gaps
- desires
- weaknesses
- the need to develop skills in job search, resume preparation/presentation, networking, and impression management

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation and records may include:

- career planning proformas
- data on workforce trends in transport and logistics industry, and wider

Applicable legislation and regulations may include:

- relevant state/territory regulations and codes of practice
- workplace relations regulations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### TLIL5907A Implement asset management systems

#### Unit Descriptor
This unit involves the skills and knowledge required to implement asset management systems. It includes determining management control processes; implementing existing practices, procedures and systems; and reviewing service levels. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
Work may be undertaken in various contexts within the transport and logistics industry.

The unit generally applies to those who provide leadership of others individually or in teams and have responsibility for the implementation and monitoring of asset management systems.

This unit is normally packaged at AQF IV or above.

#### Competency Field
L – Resource Management

### ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Determine management control process</td>
<td>1.1 Roles and responsibilities of business units or departments are clarified to ensure effective management of assets in line with organisation policy and procedures&lt;br&gt;1.2 Specific reporting and monitoring standards required by enterprise requirements are understood and complied with&lt;br&gt;1.3 Information systems that provide the information necessary for effective and efficient asset management for all levels within the organisation are maintained&lt;br&gt;1.4 Regular audits are arranged, where appropriate to the organisation, to establish a continuous improvement cycle</td>
</tr>
<tr>
<td>2 Implement existing practices, procedures and systems</td>
<td>2.1 Assessments of current status of asset management activities within business units or departments are conducted regularly in accordance with asset management plan&lt;br&gt;2.2 Milestones and targets are adhered to by the groups responsible&lt;br&gt;2.3 Areas of difficulty are identified and strategies are followed to overcome these difficulties</td>
</tr>
<tr>
<td>3 Review service levels</td>
<td>3.1 Current levels of service provided by asset stock are critically examined&lt;br&gt;3.2 Areas of possible improvement in the effectiveness and efficiencies of owning and operating assets are identified in</td>
</tr>
</tbody>
</table>
consultation with relevant personnel
3.3 Appropriate benchmarking is undertaken to enable continuous improvement in asset management strategies and practices

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Code of practice for working collaboratively with others particularly with those involved in inputting data into asset management systems
- Requirements for completing relevant documentation including asset management reports
- Benchmarking practices
- Quality management principles and procedures
- Organisational and industry functions
- Detail of different approaches to asset management, including theoretical knowledge
- Characteristics of different types of information systems used to provide and assist in asset management
- Procedures for operating electronic communications equipment
- Procedures for identifying equipment defects and assessing for appropriate action

Required skills:
- Communicate effectively with others when implementing asset management systems
- Consult and liaise as required when working with a team of staff
- Manage team and encourage team participation
- Use critical analysis in order to determine the best approach to asset management for the enterprise
- Use lateral thinking in order to solve problems as they arise, or to generate ideas
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities and convey reports to senior management
- Operate electronic communication equipment to required protocol
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Asset management activities may include:
- introduction of information systems
- data capture program
- studies
Areas of possible improvement may include:

- spot checks
- number of assets
- complexity of assets, including their sophistication and issues involved
- age of the asset base
- quality of the assets constructed
- levels of service provided or demanded

Regular audits may include:

- internal
- external

Assets may include:

- equipment
- buildings
- employees
- enterprise relationships

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:

- reports of assets held and their status
- relevant OH&S and environmental protection regulations
- quality assurance procedures
- emergency procedures
- technical instructions
- relevant Australian Standards and certification requirements
Applicable legislation and regulations may include:

- relevant national, state/territory legislation, including OH&S and environmental protection requirements
- workplace relations regulations

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  o a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  o access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  o relevant and appropriate materials and/or equipment, and/or
  o applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  o through appropriately simulated activities at the registered training organisation, and/or
  o in an appropriate range of situations in the workplace
TLIL6009A Complete induction to the transport industry

Unit Descriptor
This unit involves the skills and knowledge required to complete workplace induction procedures when commencing work in the transport industry. It includes identifying major areas of the industry in terms of functions, organisational structures and occupations; applying legislation, regulations and codes of practice; and identifying key industrial relations elements. Licensing, legislative, regulatory or certification requirements are applicable.

Employability Skills
This unit contains employability skills.

Application of the Unit
This unit applies to all employees wishing to enter the transport and logistics industry, however is predominantly aimed taxicab to multi-combination drivers. It can also be used within the warehousing and logistics sectors of the industry.

The unit is to enable a driver to enter and participate in the activities typical of a workplace. Introduction activities will be in accordance with the regulatory requirements and operational policies and procedures of the transport industry. In the case of taxi drivers, if the original context of this unit changes i.e. moving from one state or territory to another, then the unit may be re-assessed.

Work involves the development of the basic skills and knowledge to participate safely and effectively in workplace activities.

Work is performed under some supervision, generally within a team environment.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify major areas of the transport industry in terms of organisational structures, functions and occupations
1.1 Organisational structure of the industry and the relationship of structure to each occupation and classification grouping are outlined
1.2 Equipment and technology used in the workplace are identified in terms of basic features and functions

2 Apply legislation, regulations and codes of practice governing the transport industry
2.1 Individual driver responsibilities under the current legislation are identified and acted on in the conduct of duties
2.2 Individual responsibilities under workplace policies and procedures are identified and acted on in the conduct of duties
2.3 Individual responsibilities under licence conditions applicable to the operation of vehicles and conditions attached to vehicle
drivers are identified and acted upon in the conduct of duties

3 Identify key elements of industrial relations environment in which the driver works

3.1 Key elements of industrial relations environment in which the driver works are identified
3.2 Rights and responsibilities of drivers under contracts are identified

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant legislation and regulations, including OH&S and road safety legislation
• Relevant OH&S and environmental procedures and regulations
• Key elements of industrial relations relevant to the transport industry
• Workplace procedures, codes of practice, standards and duty of care requirements as they apply to the transport industry
• Sources of information and documentation needed in the transport industry
• Workplace structures including roles and responsibilities
• Depot/company locations
• Emergency procedures
• Basic workplace documentation and record keeping procedures and requirements
• Customer service standards and procedures
• Workplace hazards and related minimisation procedures
• Personal protective equipment and instructions for its use

Required skills:
• Communicate effectively with others when completing workplace orientation and induction procedures
• Read and interpret instructions, procedures, information and signs relevant to the job role
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to job role
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when completing job role activities
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or address any identified problems that may occur when completing induction to the transport industry
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Identify workplace products and services and their features
• Identify and correctly use equipment, processes and procedures
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisational structures may include:
• peak bodies/professional associations
• depots, their locations and typical operating procedures
• regulatory and licensing bodies
• owner status and relationships
• operator status and relationships

Equipment and technology may include:
• small, medium, large semi-trailers in differing configurations
• taxicab and associated equipment
• GPS and other electronic devices that are part of the day-to-day operations of the job role
• street directory
• mobile phone

Operations may be conducted:
• by day or night
• in enclosed spaces
• in exposed conditions
• in controlled or open environments
Legislative and regulatory requirements may include:

- Transport Act and transport regulations, and specific regulations applicable to some types of transport (i.e. taxicabs)
- road safety legislation and regulations
- OH&S legislation and regulations
- equal opportunity/anti-discrimination legislation and requirements
- fatigue management requirements
- state WorkCover requirements
- various contract arrangements
- ABN, GST and BAS requirements
- obligations of a driver as part of the public transport system or the wider community

Policies and procedures may include:

- workplace procedures, checklists and instructions
- relevant guidelines relating to the use of equipment
- operations manuals
- induction documentation
- competency standards and training materials
- relevant legislation, regulations and related documentation
- emergency procedures

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - locating, interpreting and applying relevant information
  - identifying workplace structures, roles and responsibilities of the individual’s authority system, and contacts
  - explaining the workplace procedures and ethical requirements relevant to the job role
  - explaining workplace operating principles, products and services relating to the job role
  - explaining the purpose and requirements of the customers’ needs and the impact of that relationship to industry
  - using workplace colloquial and technical language, and communication technologies
in the workplace context
- conveying information in written and oral form
- maintaining basic workplace documentation and records
- explaining the contract arrangements for different job roles
- showing evidence of application of relevant legislation as it applies to the job role
- showing evidence of application of relevant guidelines relating to the use of equipment as it applies to the job role
- showing evidence of application of emergency procedures as it applies to the job role
- identifying processes to report any workplace incidents and/or problems in accordance with regulations

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLIL707D  Coordinate fleet control logistics

Unit Descriptor
This unit involves the skills and knowledge required to coordinate fleet control logistics, including carrying out fleet control functions, preparing for contingencies, communicating with customers and drivers, coordinating scheduling of operational tasks, and completing documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work involves discretion and judgement for self and others in coordinating fleet control logistics. It is performed under minimum supervision with general guidance on progress and outcomes of work.

A range of opportunities may be used to develop the workplace and to support the development of fleet control systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisations goals and key performance objectives.

Work involves the application of logistics principles and procedures to coordination of fleet control in transport, warehousing, distribution and/or storage organisations.

Competency Field
L – Resource Management

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Carry out fleet control functions

1.1 Equipment and drivers are allocated following workplace procedures and in consideration of pick-up and delivery requirements

1.2 The movement of documentation is tracked in accordance with workplace procedures

1.3 Opportunities for improvement of fleet control logistics are identified and appropriate action is taken to recommend or implement the identified initiatives

2 Prepare for contingencies

2.1 Contingency plans are implemented in accordance with workplace procedures and scope of authority

2.2 Routine problems are identified, clarified and appropriately resolved following workplace procedures

3 Communicate with customers and drivers

3.1 Customer and driver enquiries are answered appropriately and following workplace procedures

3.2 Communication systems are accessed and used to
communicate with drivers and customers in the completion of fleet management tasks

4 Coordinate scheduling of operational tasks

4.1 Computerised scheduling system is accessed and used for processing the delivery of freight in accordance with workplace procedures

4.2 Critical transport factors are taken into account when planning and implementing delivery schedules in accordance with relevant regulations, workplace policy and procedures and operational plans

5 Complete documentation

5.1 Fleet management information is recorded either in hard copy or on computer in accordance with workplace requirements

5.2 Completed documentation is despatched, processed and/or filed in accordance with workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant regulatory and code requirements
• Relevant OH&S and environmental protection policies and procedures
• Workplace protocols and procedures for the coordination of fleet control logistics
• Computerised fleet management and scheduling system(s) and guidelines for their use
• Factors affecting scheduling in the road transport industry
• Focus of operation of transport logistic systems, resources, management and workplace operating systems
• Problems that may occur when coordinating fleet control logistics and appropriate action that can be taken to minimise or respond to them
• Focus of operation of marketing systems and resources

Required skills:

• Communicate and negotiate effectively with others when coordinating fleet control logistics
• Read and interpret instructions, procedures and information relevant to the coordination of fleet control logistics
• Interpret and respond to customer requirements
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the coordination of fleet control logistics
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when coordinating fleet control logistics
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when coordinating fleet control logistics in accordance with workplace procedures
• Implement contingency plans for unanticipated situations that may arise when coordinating fleet control logistics
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during the coordination of fleet control logistics
• Apply relevant statutory requirements, codes of practice and local government by-laws
• Plan work activities, including predicting consequences and identifying improvements
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Ensure the application of fatigue management knowledge and techniques by drivers
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Select and appropriately apply technology, information systems and procedures to complete workplace tasks
• Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:

- single and multi-site locations
- large, medium and small companies

Services, products, risks, work systems and requirements may:

- potentially vary across different sections of the workplace

Operations involve:

- internal and external customer contact and coordination

Consignments may be:

- palletised
- containerised
- packaged or loose
- in gas, liquid or solid form

Transport may be:

- single or multi-modal

Modes of domestic transport may include:

- road
- rail
- air
- sea
Critical transport factors when scheduling fleet operations may include:

- driver fatigue
- customer requirement
- road and weather conditions
- OH&S requirements
- industrial award conditions
- government regulations

Communication equipment may include:

- radio
- mobile phone (portable or in the cabin)
- paging devices
- satellite tracking systems
- on-board computer

Consultative processes may involve:

- customers/clients
- other employees and supervisors
- suppliers
- manufacturers
- relevant authorities
- management
- union representatives
- OH&S specialists
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures
Information/documentation may include:

- workplace fleet control procedures and policies
- information on equipment allocation, driver allocation, pick-up and delivery requirements
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- supplier and/or client instructions
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- material safety data sheets
- relevant agreements, codes of practice including the national standards for services and operations
- manufacturers/suppliers specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- legislation, regulations and related documentation relevant to workplace operations

Applicable regulations and legislation may include:

- regulations, standards and codes of practice relevant to workplace operations
- relevant Australian and state/territory OH&S legislation
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  o a range of relevant exercises, case studies
    and other simulated practical and knowledge
    assessment, and/or
  o access to an appropriate range of relevant
    operational situations in the workplace

• In both real and simulated environments, access is
  required to:
  o relevant and appropriate materials and/or
    equipment, and/or
  o applicable documentation including
    workplace procedures, regulations, codes of
    practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a
  registered training organisation

• As a minimum, assessment of knowledge must be
  conducted through appropriate written/oral tests

• Practical assessment must occur:
  o through appropriately simulated activities at
    the registered training organisation, and/or
  o in an appropriate range of situations in the
    workplace
**TLIL807C Complete routine administrative tasks**

**Unit Descriptor**
This unit involves the skills and knowledge required to complete routine administrative activities in a transport, warehousing, distribution and/or storage workplace, including receiving and distributing incoming mail, receiving and despatching outgoing mail, filing documents, and receiving and relaying written and oral messages. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Work must be carried out in accordance with the relevant regulations and workplace procedures.

Work is performed under supervision. It involves the application of the basic principles and routine procedures to complete routine administrative tasks in a transport, warehousing, distribution and/or storage organisation.

**Competency Field**
L – Resource Management

**ELEMENT PERFORMANCE CRITERIA**
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Receive and distribute incoming mail</td>
<td>1.1 Incoming mail is checked and registered to ensure accuracy of records</td>
</tr>
<tr>
<td></td>
<td>1.2 Urgent and confidential mail is identified and distributed to the addressee promptly</td>
</tr>
<tr>
<td></td>
<td>1.3 Mail is sorted and despatched to nominated person/location</td>
</tr>
<tr>
<td></td>
<td>1.4 Damaged, suspicious or missing items are recorded and where necessary reported in accordance with workplace procedures</td>
</tr>
<tr>
<td>2 Receive and despatch outgoing mail</td>
<td>2.1 Outgoing mail is collected from required sections of the organisation, checked and sorted to ensure all items are correctly prepared for despatch</td>
</tr>
<tr>
<td></td>
<td>2.2 Mail items are collated, recorded in the register (where applicable) and correctly despatched to meet designated timelines</td>
</tr>
<tr>
<td>3 File documents</td>
<td>3.1 Documents are classified, sorted and filed in accordance with workplace procedures</td>
</tr>
<tr>
<td></td>
<td>3.2 Classification uncertainties are referred to other personnel in accordance with workplace procedures</td>
</tr>
<tr>
<td></td>
<td>3.3 Documents are identified and retrieved</td>
</tr>
<tr>
<td></td>
<td>3.4 Specified files/records are located within designated timelines</td>
</tr>
</tbody>
</table>
3.5 Located files are extracted from system and despatched to the nominated person
3.6 Security and confidentiality procedures are followed

4 Receive and relay written and oral messages

4.1 Messages are received and accurately recorded
4.2 Areas of uncertainty are clarified with conveyer of the message
4.3 Messages are relayed to the nominated person within designated timelines

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory regulations
- OH&S procedures and guidelines relevant to administrative operations
- Hazards in routine administrative operations in the workplace and related precautions to control the risk
- Workplace procedures and policies for the completion of routine administrative tasks
- Housekeeping standards and procedures required in the workplace
- Requirements of work systems operations and relevant equipment
- Typical problems that can occur when completing routine administrative tasks and appropriate action that can be taken to prevent or solve them
- Equipment, methods and strategies used in the routine administration operations

Required skills:
- Communicate effectively with others when completing routine administrative tasks
- Read and interpret simple instructions, procedures and information relevant to the completion of routine administrative tasks
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to routine administrative tasks
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when completing routine administrative tasks
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when completing routine administrative tasks in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
• in a range of work environments and weather conditions  
• by day or night

Customers may be:  
• internal or external

Mail items may include:  
• company procedures  
• bulk quantities  
• single items  
• letters  
• facsimiles  
• emails

Receival and despatch processes  
for internal and external  
mail/documents/messages follow:

Requirements for work may include:  
• workplace processes and procedures  
• workplace procedures  
• site restrictions and procedures  
• use of safety and personal protective equipment  
• communications equipment  
• hours of operations  
• security procedures  
• relevant regulations

Consultative processes may involve:  
• potential customers and existing clients  
• other employees and supervisors  
• management  
• union representatives  
• industrial relations, Occupational Health and Safety specialists  
• other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:  
• company procedures  
• enterprise procedures  
• organisational procedures  
• established procedures
Communication in the work area may include:

- fixed phone
- mobile phone
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on workplace context, personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunglasses and UV protection
- two-way radios
- high visibility clothing

Information documents may include:

- workplace procedures and policies for the completion of routine administrative tasks associated with courier and delivery operations
- operations manuals
- job specifications
- induction documentation
- competency standards and training materials
- manufacturers clients specifications, instructions and labelling advice including material safety data sheets
- Dangerous Goods Code, Explosives Code, HAZCHEM codes and other regulations pertaining to the delivery of mail courier items
- supplier and/or client instructions
- international transport regulations, codes and procedures
- Australian and international standards, criteria and certification requirements
- award, enterprise bargaining agreement, other industrial arrangements
- quality assurance procedures
- emergency procedures
Applicable regulations and legislation may include:

- state/territory roads and traffic authority road rule and licence requirements
- Australian Dangerous Goods Code, Explosives Code, HAZCHEM codes, and other relevant regulations pertaining to the delivery of mail courier operations
- relevant Australian and international standards, criteria and certification requirements
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
in an appropriate range of situations in the workplace
TLIL907C  Manage personal work priorities and professional development

Unit Descriptor
This unit involves the skills and knowledge required to manage personal work priorities and own professional development, including managing own qualities, goals, plans and performance; setting and meeting own work priorities; and developing and maintaining own professional competence. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Work is performed under minimum supervision with general guidance on progress and outcomes of work. It involves discretion and judgement in managing personal work priorities and professional development.

A range of opportunities may be used to develop the workplace and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives.

Work generally involves responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Competency Field
L – Resource Management

ELEMENT  PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Manage self
1.1 Personal qualities and performance serve as a role model in the workplace
1.2 Personal goals and plans reflect the organisation's plans and personal roles, responsibilities and accountabilities
1.3 Action is taken to achieve and extend personal goals beyond those planned
1.4 Consistent personal performance is maintained in varying work conditions and work contexts

2 Set and meet own work priorities
2.1 Competing demands are prioritised to achieve personal, team and the organisation's goals and objectives
2.2 Technology is used efficiently and effectively to manage work priorities and commitments

3 Develop and maintain
3.1 Personal knowledge and skills are assessed against
professional competence

3.2 Feedback from clients and colleagues is used to identify and develop ways to improve competence
3.3 Management development opportunities suitable to personal learning style(s) are selected and used to develop competence
3.4 Participation in professional networks and associations enhances personal knowledge, skills and relationships
3.5 New skills are identified and developed to achieve and maintain a competitive edge

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant regulatory and code requirements
• Relevant OH&S and environmental protection policies and procedures
• Workplace protocols and procedures for the management of personal work priorities and professional development
• Competencies required to increase participation in the planning and development of the organisation
• Appropriate learning methods to maintain current competence or develop new competencies
• Resource availability including the competencies of individuals in the team/group
• Coaching and mentoring approaches to support team members to share knowledge and skills
• Workplace business policies and plans including procedures for undertaking professional development
• Typical problems that can occur when managing personal work priorities and professional development and related action that can be taken

Required skills:
• Communicate effectively with others when managing personal work priorities and professional development
• Read and interpret instructions, procedures, information and signs relevant to the management of personal work priorities and professional development
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the management of personal work priorities and professional development
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when managing personal work priorities and professional development
• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when managing personal work priorities and professional development in accordance with workplace procedures
- Plan work activities, including predicting consequences and identifying improvements
- Take advantage of learning opportunities both in the workplace and within training programs and workshops
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- The workplace environment may involve twenty-four hour operation and may include:
  - single and multi-site locations
  - large, medium and small companies
- Services, products, risks, work systems and requirements may:
  - potentially vary across different sections of the workplace
- Operations involve:
  - internal and external customer/supplier contact and coordination
- Work priorities and professional development are:
  - directed at maximising achievement of the individual in accordance with the enterprise's objectives and strategic plans
- Professional development activities may include:
  - attendance at formal education/training programs
  - completion of internal short training programs
  - attendance at relevant conferences, seminars and workshops
  - reading of relevant journals and literature
  - networking with other technical, managerial and professional staff
  - coaching/mentoring on the job
  - workplace training projects
Consultative processes may involve:
- customers/clients
- other employees and supervisors
- supplier representatives
- manufacturers representatives
- trainers
- management
- union representatives
- OH&S specialists
- other maintenance, professional or technical staff

Communications systems may involve:
- face-to-face conversation, meetings and workshops
- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:
- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures
Information/documentation may include:

- workplace procedures and policies
- job specifications
- training notes and materials
- journals and work-related literature
- competency standards
- customer/client instructions
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, codes of practice including the national standards for services and operations
- manufacturers/suppliers specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- legislation, regulations and related documentation relevant to business operations
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- trading regulations relevant to business operations
- relevant Australian and state/territory OH&S legislation
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
TLILIC1309A Prepare and transport dangerous goods by road

Unit Descriptor
This unit addresses the skills and knowledge requirements for a driver to obtain a licence for the transport of dangerous goods by road.

Employability Skills
This unit contains employability skills.

Application of the Unit
The unit covers preparing to comply with regulatory requirements and does not address all the skills for the transportation of dangerous goods. Upon achieving this unit and obtaining a licence, further industry specific training will be required to satisfy legislative requirements for the transportation of dangerous goods.

Licensing/Legislative Requirements
The primary legislative requirements applicable to this unit of competency are State/Territory legislation in relation to the Current in print Transport of Dangerous Goods, Australian Code of for the Transport Dangerous Goods by Road and Rail (ADG Code), relevant Australian Standards (AS) and relevant Occupational Health and Safety (OHS) legislation including licensing and assessment requirements.

Competency Field
IC – Licencing Units

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Identify individual organisations and systems for the transport of dangerous goods
1.1 Responsibilities and duties for the transport of dangerous goods are clearly defined, and allocated and included in job descriptions and duty statements for all relevant positions
1.2 Systems, organisations, and other persons that effect the transport of Dangerous goods are identified

2 Identify UN Numbers, UN classes and UN Divisions of Dangerous Goods including Packaging Groups
2.1 Proper shipping names and other relevant information from Dangerous Goods List are identified
2.2 UN class and UN division labels for dangerous goods are determined in accordance with the current ADG Code and regulatory requirements
2.3 Packing Groups for dangerous goods are identified and assessed for their significance
2.4 The Dangerous Goods List is evaluated in relation to its special provisions and other instructions

3 Check vehicle
3.1 The suitability of a transport vehicle to carry dangerous goods
is assessed including roadworthiness, fittings and accessories, are checked for the test date tags, knowledge of operation of control systems, awareness of mass, configuration, and other relevant requirements for the intended load.

3.2 The requirements for driver and vehicle licensing and how to check vehicle for licence and registration labels, and conformity with the current ADG Code and other regulatory requirements are identified.

3.3 Determine that the transport vehicle has the correct placarding for the class or division of the intended load.

4 Assess suitability of transport mode for intended load

4.1 The suitability of dangerous goods packaging, is assessed to ensure that they are suitable for purpose, free from obvious defects and residue.

4.2 Ullage in large compartments is identified and assessed for compliance with the current ADG code and regulatory requirements.

4.3 Transport documentation is checked to ensure that dangerous goods markings & vehicle placards are consistent with load being carried and are legible and clearly visible.

4.4 Dangerous goods loads are checked for compatibility and segregation in accordance with regulatory requirements.

5 Follow emergency procedures

5.1 Hazchem Codes are understood and appropriately applied in emergency response situations.

5.2 Hazchem Codes for a mixed load of dangerous goods is identified.

5.3 Emergency information required for the dangerous goods being transported is appropriately identified.

5.4 Driver’s role and obligations in an emergency situation, are identified in accordance with a Transport Emergency Response Plan.

5.5 Appropriate communication to notify relevant personnel and emergency services is identified and applied.

5.6 Safety equipment is used for containment, clean up or recovery as appropriate.

6 Check safety equipment and its use

6.1 Safety equipment is determined according to the type of dangerous goods being transported in accordance with current ADG code and regulatory requirements.

6.2 The suitability and compliance of personal protective equipment required is assessed.

6.3 Personal protective equipment and safety equipment is used in accordance with workplace and regulatory requirements.

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Understanding of the current ADG Code and relevant State/Territory dangerous goods regulations as they apply to vehicles transporting dangerous goods by road
- Understanding of procedures and guidelines concerning the transport of dangerous goods
- Risks associated with the transporting of dangerous goods by road and related precautions to control those risks
- Housekeeping standards procedures required in the workplace
- Assess suitability of transport vehicles intending to carry dangerous goods
- Ability to read and interpret information on transport documentation including consignment/manifest sheets
- Plan appropriate transport routes and appropriate rest stops
- Methods of securing a vehicle following loading and unloading of dangerous goods including bulk transfer of dangerous goods
- Relevant permit and/or licence requirements
- Ability to complete/amend appropriate documentation

**Required skills:**
- Ability to identify and correctly use equipment required for the bulk load/transfer of dangerous goods
- Ability to modify activities depending on differing workplace contexts, risk situations and environments
- Ability to read and comprehend simple statements in English
- Ability to identify dangerous goods labelling, placarding such as emergency information panels
- Ability to select and place appropriate placarding on vehicle/s transporting dangerous goods by road
- Ability to understand mass, volume and special requirements of a load
- Ability to identify and follow emergency procedures in the event of accident/incident
- Ability to use personal protection and safety equipment including eye wash kit
- Ability to identify/demonstrate appropriate load restraint methods

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted
- in a range of work environments and weather conditions
- by day or night
Customers may be  • internal or external

Workplaces may comprise  • large, medium or small worksites

Work may be conducted in  • restricted spaces
  • exposed conditions
  • controlled or open environments

Vehicle refers to  • all applicable transportation modes

Hazards in the work area may include exposure to  • hazardous or dangerous materials
  • contamination of, or from, materials being handled
  • noise, light, energy sources
  • stationary and moving machinery, parts or components
  • service lines
  • spills, leakages, ruptures
  • dust/vapours

Hazard management is  • consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include  • gloves
  • safety headwear and footwear
  • safety glasses
  • mask or respirator
  • breathing apparatus
  • high visibility clothing

Load restraint systems are  • as detailed in the National Load Restraint Guide

Preparation of packaged dangerous goods for transport may  • require special precautions as specified by the manufacturer

Transport documentation may include  • Transport Emergency Response Plan
  • Emergency Procedure Guide
  • Material Safety Data Sheet (MSDS)
  • descriptions for dangerous goods (i.e. proper shipping name, class and division number, packing group, subsidiary risk(s) if any)
  • UN or ID number
Requirements for work may include

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits

Consultative processes may involve

- other employees and supervisors
- suppliers, potential customers and existing clients
- management and union representatives
- industrial relations, OH&S specialists, and other maintenance, professional or technical staff

Communication in the work area may include

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Safety equipment on vehicle may include

- fire extinguishers
- portable warning devices
- eye wash kit
Information/documents may include

- current Australian Dangerous Goods Code, relevant Australian Standards and International Standards
- manifests, bar codes, goods and product identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the preparation and Transport of Dangerous Goods
- goods identification numbers, codes and signs
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures
- manufacturers specifications, instructions and labelling advice for the Transport of Dangerous Goods, including material safety data sheets

Applicable regulations and legislation may include

- state/territory mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including current Australian and International Dangerous Goods Codes, Australian Marine Orders and the International Maritime Dangerous Goods Code and International Air Transport Association (IATA) Dangerous Goods by Air regulations
- Australian and state/territory regulations related to the Transport of dangerous goods by road
- relevant Australian and International Standards
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- identify UN classes, UN Division, packing group, class and subsidiary risk labels for dangerous goods
- compliance with ADG and relevant dangerous goods legislation
- determine Proper Shipping names for UN numbers
- identify the level of risk within particular dangerous goods classes/divisions
- identify other persons, organisations, systems involved
in the transport of dangerous goods by road

- identify the required information on a transport document for the transport of dangerous goods
- identify emergency information document and its storage location
- apply segregation methods to incompatible dangerous goods
- demonstrate the ability to appropriately placard dangerous goods vehicles
- identify required information on an emergency information panel
- assess operational suitability of equipment and vehicles pertinent to dangerous goods transportation
- select appropriate equipment and work systems to enable safe, efficient work
- identify hazards and plan work to minimise risks when transporting dangerous goods
- determine (if any) required permits
- use appropriate communication strategies and equipment
- locate, interpret and apply relevant information
- maintain workplace records and documentation including completing dangerous goods declarations
- identify and safely handle equipment and goods
- apply hierarchy of hazard control

**Context**

- Assessment of this unit must be undertaken by a Registered Training Organisation:
  - As a minimum, assessment of knowledge must be conducted through appropriate oral and/or written questioning
  - Appropriate practical assessment must occur at the Registered Training Organisation, and/or in an appropriate work situation or realistic simulated work environment

- Assessment is to comply with relevant regulatory requirements and correspond with the Current Australian Dangerous Goods Code and relevant Australian Standards in relation to the transport of dangerous goods by road.

**Method of assessment**

- Assessment must be conducted using the endorsed Assessment Instrument. This instrument provides advice on their application. This assessment tool is available from state competent authorities
- Assessment must include questioning (verbal and/or...
written

• Assessment may be in conjunction with the assessment of other units of competency.

Specific Resource

• Access is required to opportunities to:
  o participate in a range of exercises, case studies and other real and/or 3 dimensional simulated practical and knowledge assessments that demonstrate the skills and knowledge to prepare for the transport of dangerous goods, and/or
  o prepare for the transport of dangerous goods by road in an appropriate range of operational situations

• For the purpose of training and assessment all applicants must be provided or have direct access to a copy of the current Australian Dangerous Goods Code and relevant dangerous goods legislation for their state/territory.

Access and equity considerations

• All workers in the transport industry should be aware of access and equity issues in relation to their own area of work
• All workers should develop their ability to work in a culturally diverse environment
• Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on Aboriginal and/or Torres Strait Islander transport drivers and communities

Consistency of performance

• Applies underpinning knowledge and skills when:
  o assessing operational suitability of equipment and vehicles pertinent to the transport of dangerous goods by road
  o identifying class and subsidiary risk labels for dangerous goods
  o estimating weight and dimensions of load and any special requirements
  o selecting appropriate equipment and work systems to enable safe, efficient work
  o identifying hazards and planning work to minimise risks when transporting dangerous goods by road
  o determining required permits, approvals or licences to transport dangerous goods by road
  o using appropriate communication strategies and equipment
  o locating, interpreting and applying relevant
information
○ maintaining transport documentation, driving records and any other workplace records
○ identifying and safely handling equipment and goods
○ applying hierarchy of hazard control

• Shows evidence of application of relevant transport procedures including:
  ○ Current State/Territory dangerous goods regulations and procedures
  ○ Current Australian Dangerous Goods Code and associated Australian Standards
  ○ Current OHS regulations and hazard prevention policies and procedures
  ○ Current workplace procedures and work instructions concerning the preparation and transport of dangerous goods by road
  ○ Relevant and current guidelines relating to the use of loading equipment
  ○ Current housekeeping procedures
  ○ Current environmental protection procedures when transporting dangerous goods by road

• Action is taken promptly to report any accidents, incidents or potential difficulties in the preparation and transport of dangerous goods by road in accordance with regulations and workplace procedures

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts

• Work is completed systematically with required attention to detail without damage to goods, equipment or personnel

Guidance information for assessment

• Further information about endorsed assessment instrument may be obtained from the Competent Authority in each State/Territory.
TLILIC1409A  Licence to drive light rigid vehicle

Unit Descriptor
This unit involves the skills and knowledge required to obtain a licence to drive a light rigid vehicle. It includes systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance and effective management of hazardous situations. Assessment of this unit will be undertaken within a licensing examination (Final Competency Assessment) conducted by, or under the authority of, the relevant Heavy Vehicle Driver Licensing Authority.

Employability Skills
This unit contains employability skills.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to light rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a light rigid vehicle across a variety of driving contexts.

Licensing/Legislative Requirements
The primary legislative requirements applicable to this unit of competency are State/Territory legislation in relation to road use and driver licensing.

This unit addresses the underlying knowledge and skills necessary for the granting of a Light Rigid Driver Licence. Drivers may require additional training to drive particular vehicles of the class or in particular contexts.

Obtaining this competency is a necessary requirement for obtaining a Light Rigid Driver Licence. However, it is only one of several criteria for obtaining the licence. Prospective licence applicants should check with the State/Territory driver licensing authority for other criteria (for example: licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Competency Field
IC – Licencing Units

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Drive the light rigid
1.1 The light rigid vehicle is started, steered, manoeuvred,
vehicle positioned and stopped in accordance with traffic regulations and manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage

1.3 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.4 The light rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning

1.5 The light rigid vehicle is parked, shut down and secured in accordance with traffic regulations, safe & secure.

1.6 Appropriate procedures are followed in the event of a driving emergency

2 Monitor traffic and road conditions

2.1 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities

2.2 Interaction with other road users is conducted courteously and in accordance with road rules to ensure safe and efficient traffic flow

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle

3.2 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations

3.3 Performance and efficiency of vehicle operation is monitored during use

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Light rigid vehicle controls, instruments and indicators and their use
- Light rigid vehicle handling procedures
- Driving hazards and related defensive driving techniques
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Fatigue management strategies including on-road techniques

**Required skills:**
- Communicate effectively with others when driving a light rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to the driving of a light rigid vehicle
- Complete documentation related to the driving of a light rigid vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a light rigid vehicle
- Apply fatigue management knowledge and techniques
- Monitor and anticipate traffic hazards and take appropriate action
- Carry out pre-operational checks on the vehicle

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:  
- all light rigid vehicles including trucks and buses greater than 4.5 tonnes or seating more than 12 adults including the driver

Driving may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Driving must be carried out in typical road transport situations, including:
- negotiating hills
- negotiating a range of more complex traffic infrastructure (for example; roundabouts, traffic lights, stalemate intersections, level crossings of railways)
Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.
Documentation/records may include:
- state/territory light rigid vehicle driving licence requirements
- vehicle log book or record book (where required)

Applicable procedures and codes may include:
- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to light rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment of competency for this unit must be subject to the successful completion of the mandatory Final Competency Assessment process approved by the Licensing Authority.

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including regulations, codes of practice and operation manuals
The mandatory assessment tool provided by the Licensing Authority must be used to conduct the Final Competency Assessment.

The Licensing Authority may prescribe approved routes which must be used for the conduct of the Final Competency Assessment.

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
- The assessor must use the mandatory assessment tool provided by the Licensing Authority to conduct the assessment for this unit in accordance with Licensing Authority requirements
Licence to drive medium rigid vehicle

Unit Descriptor
This unit involves the skills and knowledge required to obtain a licence to drive a medium rigid vehicle. It includes systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance and effective management of hazardous situations. Assessment of this unit will be undertaken within a licensing examination (Final Competency Assessment) conducted by, or under the authority of, the relevant Heavy Vehicle Driver Licensing Authority.

Employability Skills
This unit contains employability skills.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to medium rigid vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a medium rigid vehicle across a variety of driving contexts.

Licensing/Legislative Requirements
The primary legislative requirements applicable to this unit of competency are State/Territory legislation in relation to road use and driver licensing.

This unit addresses the underlying knowledge and skills necessary for the granting of a Medium Rigid Driver Licence. Drivers may require additional training to drive particular vehicles of the class or in particular contexts.

Obtaining this competency is a necessary pre-requisite for obtaining a Medium Rigid Driver Licence. However, it is only one of several criteria for obtaining the licence. Prospective licence applicants should check with the State/Territory driver licensing authority for other criteria (for example: licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Competency Field
IC – Licencing Units

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Drive the medium

1.1 The medium rigid vehicle is started, steered, manoeuvred,
rigid vehicle

1.1 Vehicle is appropriately positioned and stopped in accordance with traffic regulations and manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage

1.3 Braking system of medium rigid vehicle is managed and operated to ensure effective control of the vehicle under all conditions

1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.5 The medium rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning

1.6 The medium rigid vehicle is parked, shut down and secured in accordance with traffic regulations, safe & secure.

1.7 Load is safely and effectively restrained

1.8 Where required, overwidth and overweight permit applications are undertaken in accordance with relevant regulatory requirements

1.9 Appropriate procedures are followed in the event of a driving emergency

2 Monitor traffic and road conditions

2.1 An appropriate route of travel is observed taking into account prescribed routes.

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities

2.3 Interaction with other road users is conducted courteously and in accordance with road rules to ensure safe and efficient traffic flow

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle

3.2 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations

3.3 Performance and efficiency of vehicle operation is monitored during use

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Medium rigid vehicle controls, instruments and indicators and their use
• Medium rigid vehicle handling procedures
• Procedures to be followed in the event of a driving emergency
• Engine power management and safe driving strategies
• Efficient driving techniques
• Driving hazards and related defensive driving techniques
• Pre-operational checks carried out on vehicle and related action
• Differences between transmission types
• Principles of operation of air brakes and procedures for their use
• Principles of stress management when driving a vehicle
• Map reading and navigation of the vehicle and related action (including prescribed routes)
• Factors which may cause traffic delays and diversions and related action that can be taken by a driver
• Causes and effects of fatigue on drivers
• Fatigue management strategies including on-road techniques

Required skills:
• Communicate effectively with others when driving a medium rigid vehicle
• Read and interpret instructions, procedures, information and signs relevant to the driving of a medium rigid vehicle
• Complete documentation related to the driving of a medium rigid vehicle
• Apply fatigue management knowledge and techniques
• Monitor performance of equipment
• Monitor and anticipate traffic hazards and take appropriate action
• Carry out pre-operational checks on a medium rigid vehicle

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:
• all medium rigid vehicles, for example any 2-axle rigid vehicle, including truck and bus greater than 8 tonnes GVM

Driving may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road
• while at a depot, base or warehouse
• while at a client's workplace or work site
Driving must be carried out in typical road transport situations, including:

- negotiating hills
- negotiating a range of more complex traffic infrastructure (for example; roundabouts, traffic lights, stalemate intersections, level crossings of railways)

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
Factors that can cause traffic delays and diversions may include:

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Documentation/records may include:

- state/territory medium rigid vehicle driving licence requirements
- vehicle log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to medium rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  o the underpinning knowledge and skills
  o relevant legislation and workplace procedures
  o other relevant aspects of the range statement

- Assessment of competency for this unit must be subject to the successful completion of the mandatory Final Competency Assessment process approved by the Licensing Authority.
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- The mandatory assessment tool provided by the Licensing Authority must be used to conduct the Final Competency Assessment.
- The Licensing Authority may prescribe approved routes which must be used for the conduct of the Final Competency Assessment.

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
- The assessor must use the mandatory assessment tool provided by the Licensing Authority to conduct the assessment for this unit in accordance with Licensing Authority requirements
TLILIC1609A Licence to drive heavy rigid vehicle

Unit Descriptor
This unit involves the skills and knowledge required to obtain a licence to drive a heavy rigid vehicle. It includes systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance and effective management of hazardous situations. Assessment of this unit will be undertaken within a licensing examination (Final Competency Assessment) conducted by, or under the authority of, the relevant Heavy Vehicle Driver Licensing Authority.

Employability Skills
This unit contains employability skills.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to heavy rigid vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a heavy rigid vehicle across a variety of driving contexts.

Licensing/Legislative Requirements
The primary legislative requirements applicable to this unit of competency are State/Territory legislation in relation to road use and driver licensing.

This unit addresses the underlying knowledge and skills necessary for the granting of a Heavy Rigid Driver Licence. Drivers may require additional training to drive particular vehicles of the class or in particular contexts.

Obtaining this competency is a necessary pre-requisite for obtaining a Heavy Rigid Driver Licence. However, it is only one of several criteria for obtaining the licence. Prospective licence applicants should check with the State/Territory driver licensing authority for other criteria (for example: licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Competency Field
IC – Licencing Units

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Drive the heavy rigid
1.1 The heavy rigid vehicle is started, steered, manoeuvred,
vehicle positioned and stopped in accordance with traffic regulations and manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage

1.3 Braking system of heavy rigid vehicle is managed and operated to ensure effective control of the vehicle under all conditions

1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.5 The heavy rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning.

1.6 The heavy rigid vehicle is parked, shut down and secured in accordance with traffic regulations, safe and secure

1.7 Load is safely and effectively restrained

1.8 Where required, overwidth and overweight permit applications are undertaken in accordance with relevant regulatory requirements

1.9 Appropriate procedures are followed in the event of a driving emergency

2 Monitor traffic and road conditions

2.1 An appropriate route of travel is observed taking into account prescribed routes.

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment loads and facilities

2.3 Interaction with other road users is conducted courteously and in accordance with road rules to ensure safe and efficient traffic flow

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle

3.2 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations

3.3 Performance and efficiency of vehicle operation is monitored during use

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Heavy rigid vehicle controls, instruments and indicators and their use
• Heavy rigid vehicle handling procedures
• Procedures to be followed in the event of a driving emergency
• Engine power management and safe driving strategies
• Efficient driving techniques
• Pre-operational checks carried out on heavy rigid vehicle and related action
• Differences between transmission types
• Principles of operation of air brakes and procedures for their use
• Map reading and navigation of the vehicle and related action (including prescribed routes)
• Driving hazards and related defensive driving techniques
• Principles of stress management when driving a vehicle
• Factors which may cause traffic delays and diversions and related action that can be taken by a driver
• Causes and effects of fatigue on drivers
• Fatigue management strategies and on-road techniques

Required skills:
• Communicate effectively with others when driving a heavy rigid vehicle
• Read and interpret instructions, procedures, information and signs relevant to when the driving of a heavy rigid vehicle
• Complete documentation related to the driving of a heavy rigid vehicle
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a heavy rigid vehicle
• Monitor and anticipate traffic hazards and take appropriate action
• Apply fatigue management knowledge and techniques
• Monitor performance of the vehicle and its equipment and take appropriate action where required
• Carry out pre-operational checks

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes: all heavy rigid vehicles, for example any rigid vehicle with 3 or more axles, including trucks or buses, greater than 8 tonnes GVM

Driving may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road
• while at a depot, base or warehouse
• while at a client's workplace or work site
Driving must be carried out in typical road transport situations, including:

- negotiating hills
- negotiating a range of more complex traffic infrastructure (for example; roundabouts, traffic lights, stalemate intersections, level crossings of railways)

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
Factors that can cause traffic delays and diversions may include:

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Documentation/records may include:

- state/territory heavy rigid vehicle driving licence and permit requirements
- vehicle log book or record book (where required)
- relevant standards and certification requirements

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to heavy rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - the underpinning knowledge and skills
  - the underpinning knowledge and skills
- Assessment of competency for this unit must be subject to the successful completion of the mandatory Final Competency Assessment process approved by the Licensing Authority.
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- The mandatory assessment tool provided by the Licensing Authority must be used to conduct the Final Competency Assessment.
- The Licensing Authority may prescribe approved routes which must be used for the conduct of the Final Competency Assessment

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
- The assessor must use the mandatory assessment tool provided by the Licensing Authority to conduct the assessment for this unit in accordance with Licensing Authority requirements
TLILIC1709A  Licence to drive heavy combination vehicle

Unit Descriptor
This unit involves the skills and knowledge required to obtain a licence to drive a heavy combination vehicle. It includes systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance, coupling and uncoupling of trailer, and effective management of hazardous situations. Assessment of this unit will be undertaken within a licensing examination (Final Competency Assessment) conducted by, or under the authority of, the relevant Heavy Vehicle Driver Licensing Authority.

Employability Skills
This unit contains employability skills.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to heavy combination vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a heavy combination vehicle across a variety of driving contexts.

Licensing/Legislative Requirements
The primary legislative requirements applicable to this unit of competency are State/Territory legislation in relation to road use and driver licensing.

This unit addresses the underlying knowledge and skills necessary for the granting of a Heavy Combination Driver Licence. Drivers may require additional training to drive particular vehicles of the class or in particular contexts.

Obtaining this competency is a necessary pre-requisite for obtaining a Heavy Combination Driver Licence. However, it is only one of several criteria for obtaining the licence. Prospective licence applicants should check with the State/Territory driver licensing authority for other criteria (for example: licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Competency Field
IC – Licencing Units

ELEMENT
PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Drive the heavy
1.1 The heavy combination vehicle is started, steered,
combination vehicle

1.1 Combination vehicle is manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage

1.3 Braking system of heavy combination vehicle is managed and operated to ensure effective control of the vehicle under all conditions

1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving

1.5 The heavy combination vehicle is driven in reverse, maintaining visibility and achieving accurate positioning

1.6 The heavy combination vehicle is parked, uncoupled, shut down and secured in accordance with traffic regulations, safe and secure

1.7 Load is safely and effectively restrained

1.8 Where required, overwidth and overweight permit applications are undertaken in accordance with relevant regulatory requirements

1.9 Appropriate procedures are followed in the event of a driving emergency

2 Monitor traffic and road conditions

2.1 An appropriate route of travel is observed taking into account prescribed routes.

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment loads and facilities

2.3 Interaction with other road users is conducted courteously and in accordance with road rules to ensure safe and efficient traffic flow

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle

3.2 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations

3.3 Prime mover and trailer are correctly aligned and coupled

3.4 Coupled vehicle is checked and tested to ensure it is correctly secured and to confirm that it is fully operational

3.5 Performance and efficiency of vehicle operation is monitored during use

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
• Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
• Relevant OH&S and environmental procedures and regulations
• Heavy combination vehicle controls, instruments and indicators and their use
• Heavy combination vehicle handling procedures
• Procedures to be followed in the event of a driving emergency
• Engine power management and safe driving strategies
• Efficient driving techniques
• Pre-operational checks carried out on heavy combination vehicle and related action
• Differences between transmission types
• Principles of operation of air brakes and procedures for their use
• Driving hazards and related defensive driving techniques
• Map reading and navigation of the vehicle and related action (including prescribed routes)
• Factors which may cause traffic delays and diversions and related action that can be taken by a driver
• Principles of stress management when driving a vehicle
• Causes and effects of fatigue on drivers
• Fatigue management strategies including on-road techniques

Required skills:
• Communicate effectively with others when driving a heavy combination vehicle
• Read and interpret instructions, procedures, information and signs relevant to the driving of a heavy combination vehicle
• Complete documentation related to the driving of a heavy combination vehicle
• Monitor and anticipate traffic hazards and take appropriate action
• Modify activities depending on differing operational contingencies, risk situations and environments
• Apply fatigue management knowledge and techniques
• Apply map reading and road navigation techniques to the operation of a heavy combination vehicle
• Monitor performance of vehicle, its trailers and its equipment and take appropriate action where required

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes: • all heavy combination vehicles that may be driven on public and private roads and work sites
Driving may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Driving must be carried out in typical road transport situations, including:

- negotiating hills
- negotiating a range of more complex traffic infrastructure (for example; roundabouts, traffic lights, stalemate intersections, level crossings of railways)

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes
- checks of coupling equipment

Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Documentation/records may include:

- state/territory heavy combination vehicle driving licence/permit requirements
- vehicle log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to heavy combination vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment of competency for this unit must be subject to the successful completion of the mandatory Final Competency Assessment process approved by the Licensing Authority.
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- The mandatory assessment tool provided by the Licensing Authority must be used to conduct the Final Competency Assessment.
- The Licensing Authority may prescribe approved routes which must be used for the conduct of the Final Competency Assessment.

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
- The assessor must use the mandatory assessment tool provided by the Licensing Authority to conduct the assessment for this unit in accordance with Licensing Authority requirements
TLILIC1809A  Licence to operate multi-combination vehicle

Unit Descriptor
This unit involves the skills and knowledge required to obtain a licence to operate a multi-combination vehicle. It includes systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance, coupling and uncoupling of dollies, and effective management of hazardous situations. Assessment of this unit will be undertaken within a licensing examination (Final Competency Assessment) conducted by, or under the authority of, the relevant Heavy Vehicle Driver Licensing Authority.

Employability Skills
The required outcomes described in this unit of competency contain applicable facets of employability skills. The employability skills summary of the qualification in which this competency is packaged will assist in identifying employability skill requirements.

Application of the Unit
Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a multi-combination vehicle across a variety of driving contexts.

Licensing/Legislative Requirements
The primary legislative requirements applicable to this unit of competency in relation to road use and driver licensing are based on the individual State/Territory legislation.

This unit addresses the underlying knowledge and skills necessary for the granting of a Multi-Combination Drivers Licence. Drivers may require additional training to drive particular vehicles of the class or in particular contexts.

Obtaining this competency is a necessary pre-requisite for obtaining a Multi-Combination Driver Licence. However, it is only one of several criteria for obtaining the licence. Prospective licence applicants should check with the State/Territory driver licensing authority for other criteria (for example: licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Competency Field
LIC – Licencing Units
ELEMENT  PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency.

1 Drive the multi-combination vehicle

1.1 The multi-combination vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations.

1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage.

1.3 Braking system of multi-combination vehicle is managed and operated to ensure effective control of the vehicle under all conditions.

1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving.

1.5 The multi-combination vehicle is driven in reverse, maintaining visibility and achieving accurate positioning.

1.6 The multi-combination vehicle is parked, shut down, uncoupled and secured according to traffic regulations, safe and secure.

1.7 Where required, overwidth and overweight permit applications are undertaken in accordance with relevant regulatory requirements.

1.8 Load is safely and effectively restrained.

1.9 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations.

1.10 Appropriate procedures are followed in the event of a driving emergency.

2 Monitor traffic and road conditions

2.1 An appropriate route of travel is observed taking into account prescribed routes.

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment loads and facilities.

2.3 Interaction with other road users is conducted courteously and in accordance with road rules to ensure safe and efficient traffic flow.

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle.

3.2 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations.

3.3 Prime mover, dollies and trailer are aligned and coupled in proper sequence, safe and secure.
3.4 Coupled vehicle is checked and tested to ensure it is correctly secured and to confirm that it is fully operational
3.5 Performance and efficiency of vehicle operation is monitored during use

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Multi-combination vehicle controls, instruments and indicators and their use
- Multi-combination vehicle handling procedures
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on multi-combination vehicle and related action
- Differences between transmission types
- Principles of operation of air brakes and procedures for their use
- Driving hazards and related defensive driving techniques
- Map reading and road navigation techniques (including prescribed routes)
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Fatigue management strategies including on-road techniques

Required skills:
- Communicate effectively with others when driving a multi-combination vehicle
- Read and interpret instructions, procedures, information and signs relevant to the driving of a multi-combination vehicle
- Complete documentation related to the driving of a multi-combination vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a multi-combination vehicle
- Monitor and anticipate traffic hazards and take appropriate action
- Apply fatigue management knowledge and techniques
- Monitor performance of vehicle, its trailers and its equipment and take appropriate action where required
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes: • any vehicle that may be driven by the holder of Multi-Combination Vehicle Driver Licence

Driving may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road
• while at a depot, base or warehouse
• while at a client's workplace or work site

Driving must be carried out in typical road transport situations, including:
• negotiating hills
• negotiating a range of more complex traffic infrastructure (for example; roundabouts, traffic lights, stalemate intersections, level crossings of railways)

Vehicle handling procedures may include:
• starting a vehicle
• steering and manoeuvring a vehicle
• accelerating and braking
• positioning and stopping a vehicle
• reversing a vehicle
• operating vehicle controls, instruments and indicators
• using air brakes
• using defensive driving techniques
• managing engine performance

Pre-operational checks may include:
• visual check of vehicle
• checking and topping up of fluid levels
• checks of tyre pressures
• checks of operation of vehicle lights and indicators
• checks of brakes
• checks of coupling equipment
Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Documentation/records may include:

- state/territory multi-combination vehicle driving licence/permit requirements
- state/territory road rules
- specifications and recommended driving procedures including preoperational checks of vehicle
- vehicle log book or record book (where required)

Applicable procedures and codes may include

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to multi-combination vehicles
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation
  - other relevant aspects of the range statement
- Assessment of competency for this unit must be subject to the successful completion of the mandatory Final Competency Assessment process approved by the Licensing Authority

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- The mandatory assessment tool provided by the Licensing Authority must be used to conduct the Final Competency Assessment.
- The Licensing Authority may prescribe approved routes which must be used for the conduct of the Final Competency Assessment.

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
The assessor must use the mandatory assessment tool provided by the Licensing Authority to conduct the assessment for this unit in accordance with Licensing Authority requirements.
### TLILIC1008A – Licence to operate a slewing mobile crane (up to 100 tonnes)

#### Unit Descriptor
This unit specifies the outcomes required to operate a slewing mobile crane (up to 100 tonnes) for licensing purposes. It encompasses the requirement for the up to 60 tonnes licence.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads and shut down and secure the crane.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

#### ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency</td>
<td>Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>

1. **Plan work**
   1.1 Potential workplace hazards are identified
   1.2 **Hazard control measures** are identified consistent with **appropriate standards** to ensure the safety of personnel and equipment
   1.3 The weight of the load is identified and estimated in consultation with **associated personnel**
   1.4 **Crane** is **appropriate** to the load/s and workplace conditions
   1.5 Appropriate paths for the movement of loads in the work area are inspected and determined
   1.6 Appropriate **communication methods** are identified with **associated personnel**

2. **Conduct routine checks**
   2.1 **Crane** is visually checked for any damage or defects
   2.2 **Crane** is accessed in a safe manner
   2.3 All **signage and labels** are visible and legible according to the **appropriate standard**
   2.4 Routine pre-operational crane checks are carried out according to **procedures**
   2.5 All **controls** are located and identified
<p>| | | |</p>

---

### REQUIRED SKILLS AND KNOWLEDGE

*This describes the essential skills and knowledge and their level required for this unit.*

#### Required skills:

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- Operate a slewing mobile crane (61t up to 100t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)
- Use and interpret crane manufacturer’s specifications and data, including load charts, to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures
Required knowledge:

- Appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Level of literacy to be able to read and comprehend manufacturer’s instructions, procedures and safety signs
- Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads
- Mobile slewing crane operating techniques
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Rated capacity and working load limits (including use of crane load charts)
- Typical routine problems encountered in the process and with equipment and adjustments required for correction

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

Hazard: May include:

- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. powerlines, service pipes)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms, etc.)
- other specific hazards (e.g. dangerous materials)
### Hazard control measures

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

1. elimination
2. substitution
3. isolation
4. engineering control measures
5. using safe work practices
6. personal protective equipment.

### Appropriate standard

Appropriate standards may include:
- codes of practice (mobile crane)
- legislation
- Australian standards
- manufacturer’s specifications
- industry standards (where applicable)

### Associated personnel

May include but not limited to:
- riggers
- doggers

### Appropriate

May include but not limited to:
- crane capabilities
- environmental conditions (e.g. wind, lightning, storms, etc.)

### Crane

May include a boom or jib, which is capable of being slewed (up to 100 tonnes capacity). The slewing mobile crane up to 100 tonnes classification encompasses the requirements for the slewing mobile crane up to 60 tonnes classification.

### Communication method

May include but not limited to:
- verbal and non-verbal language
- written instructions
- signage
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol
| **Signage and labels** | May include but not limited to:  
| cranes data plates/labels  
| load charts  
| crane decals  
| control labels |
| **Procedures** | May include but not limited to:  
| manufacturer’s guidelines (instructions, specifications or checklists)  
| industry operating procedures  
| workplace procedures (work instructions, operating procedures, checklists) |
| **Controls** | May include but not limited to:  
| luffing levers  
| hoisting and lowering levers  
| slewing levers including brake  
| boom extension levers (where fitted) |
| **Service logbook** | May include but not limited to:  
| any logbook  
| service book  
| history record system where the service and maintenance history is kept |
| **Crane safety devices** | May include but not limited to:  
| horns/sirens  
| audible and visual reversing devices  
| operator restraint devices  
| lights |
| **Communication equipment** | May include but not limited to:  
| two-way radios  
| whistles  
| bells  
<p>| buzzers |
| NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane |</p>
<table>

</tr>
<tr>
<td></td>
<td>• all crane equipment is functioning properly</td>
</tr>
<tr>
<td></td>
<td>• adjustments to the slinging can be made in a safe manner</td>
</tr>
</tbody>
</table>
### Relevant crane movements

May include but not limited to:
- telescope in and out
- boom/jib up and down
- slew boom/jib
- operation of outriggers/stabilisers
- raise and lower hoist
- travel

### Communication signals

May include but not limited to:
- stop – hand
- stop – whistle
- hoist up – hand
- hoist up – whistle
- hoist down – hand
- hoist down – whistle
- luff boom down – hand
- luff boom down – whistle
- luff boom up – hand
- luff boom up – whistle
- telescope out – hand
- telescope out – whistle
- telescope in – hand
- telescope in – whistle
- slew left – hand
- slew left – whistle
- slew right – hand
- slew right – whistle
- travel – hand

### Unplanned and/or unsafe situations

May include but not limited to:
- failure/loss of control (e.g. brakes and steering)
- failure of equipment (e.g. hydraulic system)
- environmental conditions (e.g. wind, lightning, storms, etc.)

### Planned route

May include but not limited to:
- unusual or difficult terrains
- obstacles or obstruction
### Best mobile practice

May include:
- minimum speed
- gentle acceleration and braking (to minimise load swing)
- minimum boom/jib length
- carrying the load near to the ground surface
- boom/jib in line with the crane
- boom/jib as low as possible
- load faces uphill
- use of handheld taglines

### Shut down

May include but not limited to:
- retracting boom/jib
- retracting hoist rope and hook block
- positioning/securing boom/jib for transport
- retracting outriggers/stabilisers
- idling engine to stabilise temperature
- turning off engine (where applicable)
- removing key from ignition (where applicable)
- locking and securing cabin (where applicable)
- securing crane for travel

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

### Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Effectively communicate and work safely with others in the work area.
- Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).
- Effectively complete the pre-operational check, positioning, stabilising, set up, operation, post-
operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 100 tonne capacity in conjunction with associated personnel.

- Appropriate mathematical procedures for estimation of loads.

### Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant appropriate standard requirements.
- Applicants must have access to:
  - Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
  - appropriate slewing mobile crane (61 tonne up to 100 tonne) and associated equipment in safe condition
  - suitable loads as specified by the endorsed assessment instrument
  - communication equipment (e.g. two-way radios, whistles, etc.)
  - other associated personnel to sling and direct the loads

### Method of assessment

- Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.
- The use of ‘simulators’ in the assessment of this unit of competency is **not acceptable**.
- Assessment may be in conjunction with the assessment of other units of competency.
- Assessment methods must confirm consistency and accuracy of performance together with
<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>• Further information about endorsed Assessment Instruments may be obtained from state/territory OH&amp;S regulators.</th>
</tr>
</thead>
<tbody>
<tr>
<td>application of underpinning knowledge.</td>
<td>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</td>
</tr>
</tbody>
</table>
**TLILIC108A - Licence to operate a forklift truck**

<table>
<thead>
<tr>
<th><strong>Unit Descriptor</strong></th>
<th>This unit specifies the outcomes required for the operation of a powered industrial truck equipped with a mast and an elevating load carriage to which is attached a pair of fork arms or other attachment, for licensing purposes. This definition also includes a truck on which the operator is raised with the attachment for order-picking.</th>
</tr>
</thead>
</table>

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

This unit requires the operator to be able plan the work, conduct routine checks on the forklift, shift loads in a safe manner, and shut down and secure the equipment after the completion of operations.

This unit is based on the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

---

**ELEMENT**

Elements describe the essential outcomes of a unit of competency.

**PERFORMANCE CRITERIA**

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

1. **Plan work**

   1.1 Potential workplace *hazards* are identified

   1.2 *Hazard control measures* are identified consistent with *appropriate standards* to ensure the safety of personnel and equipment

   1.3 Appropriate *forklift* truck is selected according to the load and workplace conditions

   1.4 Working area is inspected to determine appropriate path of movement for loads and forklift truck

   1.5 *Communication methods* are identified according to *procedures*

2. **Conduct routine checks**

   2.1 Forklift is visually checked for any damage or defects

   2.2 All *signage and labels* are visible and legible according to the *appropriate standard*

   2.3 All controls are located and identified

   2.4 *Pre-start operational checks* are carried out according to *procedures*

   2.5 *Forklift* is started according to *procedures* and checked for any abnormal noise
2.6 **Post-start operational checks** are carried out according to *procedures*
2.7 All forklift functions and safety devices are tested to their maximum according to *procedures*
2.8 Defects and damage are reported and recorded according to *procedures*, and appropriate action is taken

### 3. Shift load

3.1 The weight of load is assessed to ensure compliance with *forklift* truck data plate specifications
3.2 Appropriate *hazard prevention/control measures* are implemented and communicated with personnel in the work area
3.3 *Forklift* is operated at a safe speed and according to *procedures*
3.4 Loads are moved and placed to ensure stability of material and avoidance of hazards
3.5 Load movement is monitored constantly ensuring safety to personnel and load, and structural stability
3.6 *Unplanned and/or unsafe situations* are responded to in line with *procedures*

### 4. Shut down and secure forklift truck

4.1 *Forklift* truck is parked to avoid hazards
4.2 Forklift is *shut down* according to *procedures*
4.3 Routine post-operational forklift checks are carried out according to *procedures*
4.4 Forklift is secured to prevent unauthorised access/use
4.5 All defects and damage are reported and recorded according to *procedures*, and appropriate action is taken

### REQUIRED SKILLS AND KNOWLEDGE

*This describes the essential skills and knowledge and their level required for this unit.*

**Required skills:**

- Accurately interpret information relating to conducting forklift truck operations (e.g. procedures)
- Safely conduct forklift truck operations including all functions to the maximum height and load capacity
- Identify hazards associated with the operation of the forklift truck, assess risks and put into place effective hazard prevention/control measures for those hazards identified
- Use communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)
• Drive forklift with load in forward and reverse, maintaining visibility
• Verify problems and equipment faults and demonstrate appropriate response procedures

**Required knowledge:**

• Methodology of determining the weight of a load
• Commonwealth, state or territory OH&S legislation, standards relevant to the safe operation for the forklift trucks
• Understanding of forklift characteristics and capabilities (including use of load data plates)
• Understanding of the hierarchy of hazard identification and control
• Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
• Procedures for the recording, reporting and maintenance of workplace records and information
• Forklift truck operations and safe operating techniques
• Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

**RANGE STATEMENT**

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.*

<table>
<thead>
<tr>
<th>Hazards</th>

</tbody>
</table>
| Hazard control measures | Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:  
1. elimination  
2. substitution  
3. isolation  
4. engineering control measures  
5. using safe work practices  
6. personal protective equipment |
|---|---|
| Appropriate standards | May include but not limited to:  
- legislation  
- Australian standards  
- manufacturer’s specifications  
- industry standards (where applicable) |
| Forklift truck | May include but not be limited to:  
- counterbalanced  
- reach trucks  
- rough terrain  
- internal combustion petrol, diesel, gas  
- electric |
| Communications methods | May include but not limited to:  
- verbal and non-verbal language  
- written instructions  
- signage  
- hand signals  
- listening  
- questioning to confirm understanding  
- appropriate worksite protocol |
| Procedures | May include but not limited to:  
- manufacturer’s guidelines (instructions, specifications or checklists)  
- industry operating procedures  
- workplace procedures (work instructions, operating procedures, checklists) |
### Pre-start operational checks

May include but not limited to:
- safety devices fitted where appropriate
- forklift data plate fitted and interpreted
- logbook, handbook or operating manuals available
- external visual check including, evidence of damage, leaks, visual evidence of structural weaknesses (including paint separation or stressed welds) is carried out
- forklift attachment is checked for security
- approved modifications and/or attachments fitted to manufacturer’s specifications (e.g. as per forklift or attachment data plate) are identified
- checks for adaptations or modifications outside manufacturer’s specifications (e.g. not listed on the forklift or attachment data plate) are carried out
- maintenance logbook/records checked

### Post-start operational checks

May include checks of the forklift truck and equipment after start-up to ensure:
- hazard warning systems (for example lights and horns), are functional
- attachment movements and control functions are smooth and comply with operating requirements
- steering, transmission and brake functions comply with operating requirements

### Hazard prevention/control measures

May include but not limited to:
- barricades and traffic control
- safety tags on electrical switches/isolators
- insulated powerlines
- safety observer used inside exclusion zone
- disconnected power
- pedestrian control (barricades, signs, etc.)
- excavation safeguards
- movement of obstructions
- personal protective equipment
- adequate illumination
| Unplanned and/or unsafe situations | May include but not limited:  
- failure/loss of control (e.g. brakes and steering)  
- failure of equipment (e.g. hydraulic system)  
- environmental condition  
| Shut down | May include, but is not limited to:  
- parking in a suitable location away from dangerous areas  
- fork arms are correctly positioned (tips down, tilted forward, lowered to ground)  
- appropriate transmission/gear is selected for parking (relevant to transmission type)  
- hand/parking brake is applied  
- engine power is turned off  
- ignition key is removed (if applicable)  
- LPG gas cylinder valve is shut off (where fitted)  
- securing equipment against unauthorised operation  
- securing the site  
- ensuring access ways are clear  
- identifying and segregating defective equipment and reporting to authorised personnel  
- batteries are connected to the charger (if applicable) |

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

**Overview of assessment**

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.
### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Identify hazards associated with the operation of the forklift truck and put in place effective hazard controls for those hazards identified.
- Conduct pre-start-up, operational, moving loads and shut down and secure checks of the forklift truck according to procedures.
- Operate the forklift truck and move loads safely, including driving and manoeuvring, picking up and placing of loads at various stack heights.
- Drive forklift truck with load in forward and reverse, maintaining visibility.

### Context of and specific resources for assessment

- Assessment of the safe application of knowledge and skills to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Applicants must have access to:
  - Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
  - associated equipment appropriate to forklift truck operations
  - suitable loads as described by the endorsed Assessment Instrument
  - manufacturers specifications
  - appropriate forklift truck in a safe condition.

### Method of assessment

- Assessment must be conducted using the endorsed Assessment Instrument. These Instruments provide instruction on their application.
- The use of ‘simulators’ in the assessment of this unit of competency is not acceptable.
- Assessment may be in conjunction with the assessment of other units of competency.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

</tbody>
</table>

| Conduct routine checks | |
| 2.1 | Crane is visually checked for any damage or defects |
| 2.2 | Crane is accessed in a safe manner |
| 2.3 | All signage and labels are visible and legible according to the appropriate standard |
| 2.4 | Routine pre-operational crane checks are carried out according to procedures |
| 2.5 | All controls are located and identified |
| 2.6 | Crane service logbook is checked for compliance |
2.7 *Crane* is started according to *procedures* and checked for any abnormal noises.
2.8 All *crane safety devices* are tested according to *procedures*.
2.9 Post-start operational checks are carried out according to *procedures*.
2.10 All *communication equipment* is checked for serviceability.
2.11 All damage and defects are reported and recorded according to *procedures*, and appropriate action is taken.

| 3. Set up crane | 3.1 *Ground suitability* is checked.
|                | 3.2 *Crane* is driven to the work area according to *procedures*.
|                | 3.3 *Crane* is positioned for work application and *stability* according to *procedures*.
|                | 3.4 Appropriate *crane configuration* for work task is determined according to *procedures* (where applicable).
|                | 3.5 Boom/jib and counterweight configuration data is input into the crane computer (as required).
|                | 3.6 Appropriate *hazard prevention/control measures* are applied to the work area according to *procedures*.
|                | 3.7 All *communications equipment* is tested for functionality.

| 4. Transfer load | 4.1 Lifts are determined within the capacity of the crane.
|                 | 4.2 Boom/jib and hoist block is positioned over load following directions from *associated personnel*.
|                 | 4.3 *Test lift* is carried out according to *procedures*.
|                 | 4.4 Loads are transferred using all *relevant crane movements* according to *procedures* and the appropriate standard.
|                 | 4.5 All required *communication signals* are correctly interpreted according to *procedures* and the appropriate standard.
|                 | 4.6 *Crane* is operated according to *procedures*.
|                 | 4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability.
|                 | 4.8 *Unplanned and/or unsafe* situations are responded to in line with *procedures*. |
5. Mobile load

5.1 Suitability of planned route is checked for the crane according to procedures
5.2 Crane is configured to mobile load according to procedures
5.3 Load is moved using best mobile practice according to the appropriate standard

6. Shut down and secure crane

6.1 Crane boom/jib and equipment are stowed and secured where appropriate according to procedures and the appropriate standard
6.2 Relevant motion locks and brakes are applied (where applicable)
6.3 Outriggers/stabilisers are stowed and secured according to procedures
6.4 Crane is shut down according to procedures
6.5 Plates or packing are stowed and secured
6.6 Routine post-operational crane checks are carried out according to procedures
6.7 All damage and defects are reported and recorded according to procedures, and appropriate action is taken

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- Operate a slewing mobile crane (over 100 tonnes capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)
- Use and interpret crane manufacturer’s specifications and data, including load charts, to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures
**Required knowledge:**

- Appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Level of literacy to be able to read and comprehend manufacturer’s instructions, procedures and safety signs
- Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads
- Mobile slewing crane operating techniques
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Rated capacity and working load limits (including use of crane load charts)
- Typical routine problems encountered in the process and with equipment and adjustments required for correction

**RANGE STATEMENT**

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.*

<table>
<thead>
<tr>
<th>Hazards</th>
<th>May include but not limited to:</th>
</tr>

**EVIDENCE GUIDE**

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.*

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>• Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• State/territory OH&amp;S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&amp;S matters.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>• Compliance with OH&amp;S licensing legislation.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Effectively communicate and work safely with others in the work area.</td>
</tr>
<tr>
<td></td>
<td>• Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).</td>
</tr>
<tr>
<td></td>
<td>• Effectively complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane over 100 tonne capacity in conjunction with other associated personnel.</td>
</tr>
<tr>
<td></td>
<td>• Appropriate mathematical procedures for estimation of loads.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>• Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.</td>
</tr>
</tbody>
</table>
• Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
• Assessment is to comply with relevant appropriate standard requirements.
• Applicants must have access to:
  o Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
  o appropriate slewing mobile crane (over 100 tonne) and associated equipment in safe condition
  o suitable loads as specified by the endorsed Assessment Instrument
  o communication equipment (e.g. two-way radios, whistles, etc.)
  o other associated personnel to sling and direct the loads.

**Method of assessment**
• Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.
• The use of ‘simulators’ in the assessment of this unit of competency is **not acceptable**.
• Assessment may be in conjunction with the assessment of other units of competency.
• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

**Guidance information for assessment**
• Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.
**Unit Descriptor**

This unit specifies the outcomes required to operate a vehicle loading crane with a capacity of 10 metre tonnes or more, mounted on a vehicle for the principle purpose of loading and unloading such a vehicle, including the application of load estimation and slinging techniques to move a load, for licensing purposes.

**Employability Skills**

This unit contains employability skills.

**Application of the Unit**

This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads and shut down and secure crane.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

<table>

4.5 Loads are transferred using all relevant crane movements according to procedures and the appropriate standard
4.6 All required communication signals are correctly interpreted according to procedures and the appropriate standard
4.7 The load is landed ensuring stability and security from movement
4.8 Lifting equipment is removed or disconnected from load and/or lifting hook according to procedures (where applicable)
4.9 Crane is operated according to procedures
4.10 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability
4.11 Unplanned and/or unsafe situations are responded to in line with procedures

5. Shut down and secure crane

5.1 Crane boom/jib and equipment are stowed and secured according to procedures and the appropriate standard
5.2 Relevant motion locks and brakes are applied (where applicable)
5.3 Outriggers/stabilisers are stowed and secured according to procedures
5.4 Plates or packing are stowed and secured.
5.5 Crane is shut down according to procedures
5.6 Routine post-operational crane checks are carried out according to procedures
5.7 Lifting equipment is stored according to procedures and the appropriate standards
5.8 All damage and defects are reported and recorded according to procedures, and appropriate action is taken

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including hand signals, whistles and two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Operate crane including all functions to their maximum extension in the loading and unloading of loads to the safe working rated capacity of the crane, in conjunction with other associated personnel
• Use of lifting equipment and basic slinging techniques suitable for the loads to be loaded/unloaded as defined by workplace procedures
• Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the vehicle loading crane (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions and vehicle tipping)
• Use and interpret crane manufacturer’s specifications and data, including load charts to enable the vehicle loading crane to be configured for the load
• Verify problems and equipment faults and demonstrate appropriate response procedures

### Required knowledge:

- Appropriate mathematical procedures for estimation of loads
- Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate the crane
- Awareness of the boom/jib movements and particularly the safe positioning of the operator for any lift
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Use of lifting equipment and basic slinging techniques suitable for the loads to be loaded/unloaded as defined by workplace procedures
- Understanding of the hierarchy of hazard identification and control
- Level of literacy to be able to read and comprehend manufacturer’s instructions, procedures and safety signs
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Typical routine problems encountered in the process and with equipment and adjustments required for correction
- Crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads
## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

### Hazards

May include but not limited to:
- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. powerlines, service pipes)
- traffic (e.g. pedestrians, vehicles, other plant)
- Insufficient lighting
- environmental conditions (e.g. wind, lightning, storms, etc.)
- positioning of crane operator
- other specific hazards (e.g. dangerous materials)

### Hazard control measures

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:
1. elimination
2. substitution
3. isolation
4. engineering control measures
5. using safe work practices
6. personal protective equipment

### Appropriate standards

May include but not limited to:
- codes of practice
- legislation
- Australian standards especially AS2550.1 – 2002 (6.5)
- manufacturer’s specifications
- industry standards

### Associated personnel

May include but not limited to:
- doggers
- riggers

### Lifting equipment

May include but not be limited to:
- chain slings
- wire and synthetic slings
- shackles
- eyebolts
<table>

  - crane capabilities  
  - environmental conditions (e.g. wind, lightning, storms, etc.) |
| Communication method | May include but not limited to:  
  - verbal and non-verbal language  
  - written instructions  
  - signage  
  - hand signals  
  - listening  
  - questioning to confirm understanding  
  - appropriate worksite protocol |
| Signage and labels | May include but not limited to:  
  - crane data plates/labels  
  - load charts  
  - crane decals  
  - control labels |
| Procedures | May include but not limited to:  
  - manufacturer’s guidelines (instructions, specifications or checklists)  
  - industry operating procedures  
  - workplace procedures (work instructions, operating procedures, checklists) |
| Controls | May include but not limited to:  
  - luffing levers  
  - knuckling levers  
  - hoisting and lowering levers  
  - slewing levers including brake  
  - boom extension levers (where fitted) |
| Service logbook | May include but not limited to:  
  - any logbook  
  - service book  
  - history record system where the service and maintenance history is kept |

### Test lift

The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:

- near capacity loads do not overload the crane
- loads of unusual shape or weight distribution are correctly slung
- load measuring equipment can be used to verify the calculated weight of the load
- all equipment is functioning properly
- adjustments to the slinging can be made in a safe manner

### Relevant crane movements

May include but not limited to:

- luffing
- slewing
- knuckling
- telescoping
- raise and lower hoist

### Communication signals

May include but not limited to:

- stop – hand
- stop – whistle
- hoist up – hand
- hoist up – whistle
- hoist down – hand
- hoist down – whistle
- luff boom down – hand
- luff boom down – whistle
- luff boom up – hand
- luff boom up – whistle
- telescope out – hand
- telescope out – whistle
- telescope in – hand
- telescope in – whistle

### Unplanned and/or unsafe situations

May include but not limited to:

- failure/loss of control (e.g. brakes and steering)
- failure of equipment (e.g. hydraulic system)
- environmental conditions (e.g. wind, lightning, storms, etc.)
### Shut down
May include but not limited to:
- retracting boom/jib (where applicable)
- retracting hoist rope and hook block
- folding boom/jib into the transport position
- retracting outriggers/stabilisers
- idling engine to stabilise temperature
- turning off engine (where applicable)
- removing key from ignition (where applicable)
- locking and securing cabin (where applicable)
- securing crane for travel

### EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

#### Overview of assessment
- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate the vehicle loading crane.
- Risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the vehicle loading crane (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, wind, pedestrians and tipping).
- Set up, position stabilise and operate a vehicle loading crane including all functions to their maximum extension in the loading and unloading of loads to the safe working rated capacity.
- Move loads from the vehicle to the ground and/or ground to the vehicle as described in the endorsed assessment tool.
- Appropriate mathematical procedures for estimation of loads.
- Use of lifting equipment and basic slinging techniques suitable for the loads to be
| Context of and specific resources for assessment | loaded/unloaded as defined in the workplace procedures.  
• Awareness of the boom/jib movements and particularly the safe positioning of the operator for any lift. |
|---|---|
| **Context of and specific resources for assessment** | • Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.  
• Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.  
• Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.  
• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.  
• Assessment is to comply with appropriate standard requirements.  
• Applicants must have access to:  
  o Personal Protective Equipment (PPE) for the purpose of the Performance Assessment  
  o appropriate vehicle loading crane (10 metre tonne or more) and associated equipment in safe condition  
  o appropriate lifting gear in safe condition  
  o Suitable loads as specified by the endorsed Assessment Instrument  
  o communication equipment (e.g. two-way radios, whistles, etc.)  
  o other associated personnel to sling and direct the loads. |
| **Method of assessment** | • Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.  
• The use of ‘simulators’ in the assessment of this unit of competency is **not acceptable.**  
• Assessment may be in conjunction with the assessment of other units of competency.  
• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. |
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

| **Guidance information for assessment** | - Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators. |

TLI07 Transport and Logistics Training Package (Version 2.0)  
To be reviewed June 2010
### TLILIC208A Licence to operate an order picking forklift truck

#### Unit Descriptor
This unit specifies the outcomes required to operate a powered industrial truck of a type where the operator’s control arrangement is incorporated with the load carriage/lifting media, and elevates with it, for licensing purposes.

#### Employability Skills
This unit contains employability skills.

#### Application of the Unit
This unit requires the operator to be able plan the work, conduct routine checks, shift loads and shut down and secure forklift.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

#### ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td><strong>Elements describe the essential outcomes of a unit of competency</strong></td>
<td>Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
<tr>
<td><strong>1. Plan work</strong></td>
<td>1.1 Potential workplace <em>hazards</em> are identified</td>
</tr>
<tr>
<td></td>
<td>1.2 <em>Hazard control measures</em> are identified consistent with <em>appropriate standards</em> to ensure the safety of personnel and equipment</td>
</tr>
<tr>
<td></td>
<td>1.3 <em>Safety equipment</em> is identified for workplace conditions</td>
</tr>
<tr>
<td></td>
<td>1.4 <em>Forklift</em> is appropriate to the load and workplace conditions</td>
</tr>
<tr>
<td></td>
<td>1.5 Appropriate paths for movement of loads are determined for the workplace conditions</td>
</tr>
<tr>
<td></td>
<td>1.6 Appropriate <em>communication methods</em> are identified according to <em>procedures</em></td>
</tr>
<tr>
<td><strong>2. Conduct routine checks</strong></td>
<td>2.1 <em>Forklift</em> is visually checked for any damage or defects</td>
</tr>
<tr>
<td></td>
<td>2.2 All <em>signage and labels</em> are visible and legible according to the <em>appropriate standard</em></td>
</tr>
<tr>
<td></td>
<td>2.3 All controls are located and identified</td>
</tr>
<tr>
<td></td>
<td>2.4 <em>Pre-start operational checks</em> are carried out according to <em>procedures</em></td>
</tr>
</tbody>
</table>
2.5 Forklift is started according to procedures and checked for any abnormal noises

2.6 Post-start operational checks are carried out according to procedures

2.7 All forklift safety devices are tested according to procedures

2.8 All defects and damage are reported and recorded according to procedures, and appropriate action is taken

3. Shift load

3.1 Appropriate hazard prevention/control measures are implemented and communicated with personnel in the work area

3.2 The weight of load is assessed to ensure compliance with forklift data plate

3.3 Forklift is operated at a safe speed and according to procedures

3.4 Work is conducted safely at heights including safe and efficient use of safety equipment. (where applicable)

3.5 Materials are placed on the pallet to ensure safety and stability and avoidance of hazards

3.6 Load movement is monitored constantly ensuring safety to personnel and load, and forklift stability

3.7 Unplanned and/or unsafe situations are responded to in line with procedures

4. Shut down and secure forklift

4.1 Forklift is parked to avoid hazards

4.2 Forklift is shut down according to procedures

4.3 Routine post-operational forklift checks are carried out according to procedures

4.4 Forklift is secured to prevent unauthorised access/use

4.5 All defects and damage are reported and recorded according to procedures, and appropriate action is taken

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level required for this unit.

Required skills:

• Effectively operate an order picking forklift truck including all functions to the maximum height and load capacity

• Use hazard identification skills, including identifying those associated with the operation of the order picking forklift truck risk assessment and putting into place effective hazard prevention/control measures for those hazards
• Use interpersonal communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)

• Interpret and accurately record information relating to conducting order picking forklift truck operations (e.g. operating instructions, procedures and service logbook)

• Use problem solving skills to verify problems and equipment faults and demonstrate appropriate response procedures

• Use interpersonal communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)

**Required knowledge:**

• Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the order picking forklift truck

• Rated capacity and working load limits identification

• Estimation or determination of load weight from labels, markings or load paperwork

• Order picking forklift truck capabilities, limitations and gear

• Order picking forklift truck operations and operating techniques

• Organisational and workplace standards, requirements, policies and procedures for conducting operations for the order picking forklift truck

• Procedures for the recording, reporting and maintenance of workplace records and information

• Typical routine problems encountered in the process and with equipment and adjustments required for correction

**RANGE STATEMENT**

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.*

<table>
<thead>
<tr>
<th>Hazards</th>
<th>May include:</th>

<td>other specific hazards (e.g. falling from platform, dangerous materials)</td>
</tr>
</tbody>
</table>
| Hazard control measures | Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:  
1. elimination  
2. substitution  
3. isolation  
4. engineering control measures  
5. using safe work practices  
6. personal protective equipment |
|---|---|
| Appropriate standards | Appropriate standards may include:  
• codes of practice  
• legislation  
• Australian standards  
• manufacturer’s specifications |
| Forklift | Powered industrial truck of a type where the operator’s control arrangement is incorporated with the load carriage/lifting media, and elevates with it |
| Communication method | May include but not limited to:  
• verbal and non-verbal language  
• written instructions  
• signage  
• hand signals  
• listening  
• questioning to confirm understanding, and appropriate worksite protocol |
| Procedures | May include but not limited to:  
• manufacturer’s guidelines (instructions, specifications or checklists)  
• industry operating procedures  
• workplace procedures (work instructions, operating procedures, checklists) |
| Signage and labels | May include but not limited to:  
• forklift data plates/labels  
• forklift warning decals  
• control labels |
### Pre-start up checks

May include, but are not limited to ensuring that:

- safety equipment checks
- safety devices/alarms are fitted and operational
- order picking forklift data plate is fitted and interpreted
- logbook, handbook or operating manuals are available
- fluid checks
- battery charge checks
- evidence of damage, leaks, visual evidence of structural weaknesses (including paint separation or stressed welds) is sought through an external visual check
- approved modifications and/or attachments are fitted to manufacturer’s specifications (e.g. as per order picking forklift data plate)
- checks for adaptations or modifications outside manufacturer’s specifications (e.g. not listed on the order picking forklift data plate) are made
- records are updated as required

### Post-start operational checks

May include checks of the order picking forklift truck and equipment to ensure:

- hazard warning systems (for example lights and horns) are functional
- control functions are smooth and comply with operating requirements
- start-up is to procedures

### Safety devices

May include but not limited to:

- safety gates and interlocks
- reversing beepers
- flashing lights
- emergency descent device (hydraulic)
- deadman switch
**Hazard prevention/control measures**

May include:
- safety tags on electrical switches/isolators
- insulated powerlines
- safety observer used inside exclusion zone
- disconnected power
- traffic barricades and control
- pedestrian barricades
- bridging plates
- movement of obstructions
- personal protective equipment
- adequate illumination

**Safety equipment**

May include but not limited to:
- harnesses
- lanyard
- appropriate attachment point

**Unplanned and/or unsafe situations**

May include but not limited to:
- failure/loss of control (e.g. brakes and steering)
  - failure of equipment (e.g. hydraulic system)
  - environmental conditions (e.g. wind, lightning, storms, etc.)

**Shut down**

May include, but is not limited to:
- forks are lowered to the ground
- brakes and motion locks are applied (where applicable)
- motor power is turned off
- order picking forklift is secured against unauthorized movement
- ignition key is removed (if applicable)
- batteries are connected to the charger (if applicable)

---

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

**Overview of assessment**

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which
have been endorsed by the national body responsible for OH&S matters.

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | Compliance with OH&S licensing legislation.  
|                                                                                       | Effectively communicate and work safely with others in the work area.  
|                                                                                       | Identify hazards associated with the operation of the order picking forklift truck and put in place effective hazard prevention/controls for those hazards.  
|                                                                                       | Effectively conduct pre-start, post-start operational checks and shut down checks of the order picking forklift truck.  
|                                                                                       | Effectively operate the forklift, pick and place loads safely at various heights, including driving and manoeuvring and placing loads in a safe manner. |

| Context of and specific resources for assessment | Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.  
|                                                | Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace.  
|                                                | Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.  
|                                                | Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.  
|                                                | Assessment is to comply with relevant appropriate standard requirements.  
|                                                | Applicants must have access to:  
|                                                | o Personal Protective Equipment (PPE) for the purpose of the Performance Assessment.  
|                                                | o safety equipment in safe condition as appropriate  
|                                                | o associated equipment appropriate to order picking forklift truck operations  
|                                                | o suitable loads as described by the endorsed Assessment Instrument  
|                                                | o appropriate forklift in a safe condition. |
**Method of assessment**

- Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.
- The use of ‘simulators’ in the assessment of this unit of competency is **not acceptable**.
- Assessment may be in conjunction with the assessment of other units of competency.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

**Guidance information for assessment**

- Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.
**Unit Descriptor**
This unit specifies the outcomes required to operate a bridge and gantry crane. It does not cover the types that are controlled from a location remote to a permanent cabin/control station on the crane and that have three or less powered operations, that is hoist/raise and lower is one operation, for licensing purposes.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
This unit requires the operator to plan the work, conduct routine checks, transfer loads, and shut down and secure crane.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

# REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

## Required skills:

- Accurately record and maintain information relating to bridge and gantry crane operations
- Use communication techniques in the workplace including hand signals, whistles and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Operate a bridge and gantry crane including all functions to their maximum for the lifting and moving of loads to the maximum rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, access to cabin, vehicles and clear access whilst travelling)
- Use and interpret crane manufacturer’s specifications and data, including maximum load to ensure the crane is not overloaded
- Verify problems and equipment faults and demonstrate appropriate response procedures

## Required knowledge:

- Appropriate mathematical procedures for estimation of loads
- Bridge and gantry crane characteristics
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Emergency procedures including escape routes
- Level of literacy to be able to read and comprehend manufacturer’s instructions, procedures and safety signs
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

| **Test lift means** | The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:  
|                    | • near capacity loads do not overload the crane  
|                    | • loads of unusual shape or weight distribution are correctly slung  
|                    | • load measuring equipment can be used to verify the calculated weight of the load  
|                    | • all crane equipment is functioning properly  
|                    | • adjustments to the slinging can be made in a safe manner  

| **Relevant crane movements** | May include but not limited to:  
|                             | • hoisting (raise and lower)  
|                             | • traversing (moving hoisting mechanisms along bridge)  
|                             | • travelling (at minimum speed, gentle acceleration and braking, to minimise load swing)  

### Communication signals

May include but not limited to:
- stop – hand
- stop – whistle
- hoist up – hand
- hoist up – whistle
- hoist down – hand
- hoist down – whistle
- traverse – hand
- travel – hand
- creep – hand

### Unplanned and/or unsafe situations

May include but not limited to:
- failure/loss of control (e.g. brakes and steering)
- failure of equipment (e.g. hydraulic system)
- environmental conditions (e.g. wind, lightning, storms, etc.)

### Shut down

May include but not limited to:
- retracting hoist rope and hook block
- travelling crane to park position
- removing key from control panel (where applicable)
- locking and securing cabin (where applicable)
- isolating power to crane

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

### Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, access to cabin, other vehicles and clear access whilst

<td></td>
</tr>
<tr>
<td>o appropriate bridge and gantry crane and associated equipment in safe condition</td>
<td></td>
</tr>
<tr>
<td>o suitable loads as specified by the endorsed Assessment Instrument</td>
<td></td>
</tr>
<tr>
<td>o communication equipment (e.g. two-way radios, whistles etc.</td>
<td></td>
</tr>
<tr>
<td>o other associated personnel to sling and direct the loads.</td>
<td></td>
</tr>
</tbody>
</table>

- Conduct of pre- and post-operational checks of the bridge and gantry crane.
- Operation of a bridge and gantry crane including all functions to their maximum capacity in the lifting and moving of loads to the maximum rated capacity in conjunction with other associated personnel.
- Appropriate mathematical procedures for estimation of loads.
• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

| Guidance information for assessment | • Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators. |
**TLILIC408A**  |  Licence to operate a derrick crane  
---|---
**Unit Descriptor**  |  This unit specifies the outcomes required to operate a slewing strut-boom crane with its boom pivoted at the base of a mast which is either guyed (guy-derrick) or held by backstays (stiff-legged derrick) and which is capable of luffing under load for licensing purposes.

**Employability Skills**  |  This unit contains employability skills.

**Application of the Unit**  |  This unit requires the operator to plan the work, conduct routine checks, transfer loads, and shut down and secure the derrick crane.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

**ELEMENT**  |  **PERFORMANCE CRITERIA**

### REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

#### Required skills:

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Operate a derrick crane for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables and other personnel or vehicles)
- Use and interpret crane manufacturer’s specifications and data, or engineers specifications, assessments or designs, including load charts, or load limits at various radii, to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures

#### Required knowledge:

- Appropriate mathematical procedures for estimation of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Derrick crane characteristics and capabilities to allow for the operation of the crane to suit the range of loads
- Level of literacy to be able to read and comprehend manufacturer’s instructions, procedures and safety signs
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Derrick crane operating techniques
- Understanding of the hierarchy of hazard identification and control
- Procedures for the recording, reporting and maintenance of workplace records and information
- Rated capacity and working load limits (including use of crane load charts)
- Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction
<table>
<thead>
<tr>
<th>RANGE STATEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.</strong></td>
</tr>
</tbody>
</table>

**Hazards**

- ground stability (e.g. ground condition or slopes for load placement)
- overhead hazards (e.g. powerlines, service pipes)
- insufficient lighting
- traffic (e.g. pedestrians, vehicles, plant)
- environmental conditions (e.g. wind, lightning, storms)
- other specific hazards (e.g. dangerous materials)

**Hazard control measures**

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

1. elimination
2. substitution
3. isolation
4. engineering control measures
5. using safe work practices
6. personal protective equipment

**Appropriate standards**

- codes of practice
- legislation
- Australian standards
- manufacturer’s instructions
- industry standards (where applicable)

**Associated personnel**

- riggers
- doggers

**Crane**

Includes derrick cranes comprising a strut-boom crane with its boom pivoted at the base of a mast which is either guyed (guy-derrick) or held by backstays (stiff-leg derrick) and which is capable of luffing under load

**Appropriate**

- crane capabilities
- environmental conditions (e.g. wind, lightning, storms etc.)
| **Communication method** | May include but not limited to:  
| | • verbal and non-verbal language  
| | • written instructions  
| | • signage  
| | • hand signals  
| | • listening  
| | • questioning to confirm understanding  
| | • appropriate worksite protocol |
| **Ground stability** | May include but not limited to:  
| | • environmental conditions (e.g. wind, lightning, storms, etc.) |
| **Signage and labels** | May include but not limited to:  
| | • crane data plates/labels  
| | • load charts  
| | • crane decals  
| | • control labels |
| **Crane configuration** | May include but not be limited to:  
| | • boom/jib  
| | • backstays and counterweights

**EVIDENCE GUIDE**

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.*

**Overview of assessment**

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.
### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Effectively communicate and work safely with others in the work area.
- Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).
- Operation of a derrick crane for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel.
- Appropriate mathematical procedures for the estimation of loads.

### Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant appropriate standard requirements.
- Applicants must have access to:
  - Personal Protective Equipment (PPE) for the purpose of the Performance Assessment.
  - Appropriate derrick crane and associated equipment in safe condition specified by the endorsed Assessment Instrument.
  - Suitable loads as specified by the endorsed Assessment Instrument.
  - Communication equipment (e.g. two-way radios, whistles, etc.).
  - Other associated personnel to sling and direct the loads.

### Method of assessment

- Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.
- The use of ‘simulators’ in the assessment of this

### TLILIC508A
**Licence to operate a boom-type elevating work platform (boom length 11 metres or more)**

### Unit Descriptor
This unit specifies the outcomes required to operate a boom-type elevating work platform (boom length 11 metres or more) for licensing purposes, and involves the operation of a telescoping device, hinged device, or articulated device or any combination of these used to support a platform on which personnel, equipment and materials may be elevated to perform work. The 11 metre boom length shall be taken to mean the greater of the following:

(a) The vertical distance from the floor of the platform to the surface supporting the elevating work platform with the platform at its maximum height; or

(b) The nominal reach, measured horizontally from the centre point of rotation to the outer edge of the platform in its most extended position.

### Employability Skills
This unit contains employability skills.

### Application of the Unit
This unit requires the operator to plan the work, conduct routine checks, set up elevating work platform, operate elevating work platform and shut down and secure elevating work platform.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

### ELEMENT
**PERFORMANCE CRITERIA**

*Elements describe the essential outcomes of a unit of competency*

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

5.9 All defects and damage are reported and recorded according to procedures, and appropriate action is taken

**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

**Required skills:**

- Accurately record and maintain information relating to elevating work platform operations
- Assess ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to extend and travel the elevating work platform
- Complete the positioning, stabilising, set up of elevating work platforms, including the use of outriggers/stabilisers and packing
- Operate mobile elevating work platform using best mobile practice
- Use communication skills at a level sufficient to communicate with other site personnel
- Operate and control an elevating work platform including all functions to their maximum extension within the safe working (rated) capacity
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the elevating work platform (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, wind, pedestrians and tipping)
- Use and interpret manufacturer’s specifications and data
- Identify problems and equipment faults and where practicable demonstrate appropriate response procedures

**Required knowledge:**

- Appropriate mathematical procedures for estimation of loads, to ensure that the elevating work platform is not overloaded
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for conducting elevating work platform operations
- Ability to read and comprehend manufacturer’s instructions, procedures and safety signs
- Understanding of elevating work platform operations and operating techniques
- Emergency procedures and safety equipment, including the use of safety harness, energy absorber, lanyard and anchor points
- Understanding of organisational and workplace standards, requirements, policies and procedures for conducting elevating work platform operations
- Understanding of the hierarchy of hazard identification and control
- Procedures for the recording, reporting and maintenance of workplace records and information, including the use of the service logbook
- Typical routine problems encountered in the process and with equipment and adjustments required for correction

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the Performance Criteria, is detailed below.

<table>
<thead>
<tr>
<th>Hazards</th>

### Elevating work platform

The operation of a telescoping device, hinged device, or articulated device or any combination of these used to support a platform on which personnel, equipment and materials may be elevated to perform work. Excluded from this definition are platforms of less than 11 metres boom length.

The 11 metre boom length shall be taken to mean the greater of the following:

(a) The vertical distance from the floor of the platform to the surface supporting the elevating work platform with the platform at its maximum height; or

(b) The nominal reach, measured horizontally from the centre point of rotation to the outer edge of the platform in its most extended position.

### Communication method

May include but not limited to:

- verbal and non-verbal language
- written instructions
- signage
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol

### Service logbook

May include but not limited to:

- any logbook
- service book
- history record system where the service and maintenance history is kept

### Procedures

May include but not limited to:

- manufacturer’s guidelines (instructions, specifications, operators manual or checklists)
- industry operating procedures
- workplace procedures (work instructions, operating procedures, checklists)

### Safety equipment

May include but not limited to:

- safety harness
- energy absorber
- lanyard
- anchor points
<table>

</tr>
</tbody>
</table>
Relevant plant movements

May include but not limited to:
- raising boom
- lowering boom
- slewing
- hinging
- articulating
- telescoping

Best mobile practice

May include but not limited to:
- minimum speed
- gentle acceleration and braking
- minimum boom/jib length
- avoiding ground depressions

Unplanned and/or unsafe situations

May include but not be limited to:
- loss of power
- failure of controls
- contact with overhead electrical conductors
- damage caused by contact with obstructions
- illness of personnel

Shut down

May include but not limited to:
- retracting boom/jib (where applicable)
- folding boom/jib into the transport position
- retracting outriggers/stabilisers
- idling engine to stabilise temperature
- turning off engine (where applicable)
- removing key from ignition (where applicable)

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Emergency procedures and safety equipment, including the use of safety harnesses, energy absorbers, lanyard and anchor points.
- Assessment of ground conditions to confirm that the
<table>
<thead>
<tr>
<th><strong>Context of and specific resources for assessment</strong></th>
<th><strong>Method of assessment</strong></th>
</tr>
</thead>
</table>
| • Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.  
• Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace.  
• Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.  
• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.  
• Assessment is to comply with relevant appropriate standard requirements.  
• Applicants must have access to:  
  o Personal Protective Equipment (PPE) for the purpose of the Performance Assessment  
  o appropriate safety equipment in safe condition  
  o appropriate elevated working platform and associated equipment in safe condition  
  o communication equipment (e.g. two-way radios, mobile phones etc.) where applicable. | • Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.  
• The use of ‘simulators’ in the assessment of this unit of competency is **not acceptable**.  
• Assessment may be in conjunction with the assessment of other units of competency. |

- site is suitable (e.g. firm, level and safe) to extend and travel the elevating work platform.
- Risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the elevating work platform (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, wind, pedestrians and tipping).
- Appropriate procedures for estimation of loads, to ensure that the elevating work platform is not overloaded.
- Positioning and operation of the elevating work platform to ensure that the safest lift is performed.
<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Further information about endorsed Assessment Instruments may be obtained from state/territory OH&amp;S regulators.</th>
</tr>
</thead>
</table>

- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

5. Mobile load
5.1 Suitability of planned route is checked for the crane according to procedures
5.2 Crane is configured to mobile load according to procedures
5.3 Load is moved using best mobile practice according to the appropriate standard

6 Shut down and secure crane
6.1 Crane boom/jib and equipment is stowed and secured, where appropriate, according to procedures and the appropriate standard
6.2 Relevant motion locks and brakes are applied (where applicable)
6.3 Outriggers/stabilisers are stowed and secured according to procedures (where applicable)
6.4 Crane is shut down according to procedures
6.5 Routine post-operational crane checks are carried out according to procedures
6.6 Plates or packing are stowed and secured (where applicable)
6.7 All damage and defects are recorded and reported according to procedures, and appropriate action is taken

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.

Required skills:
- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use communication skills at a level sufficient to communicate with other site personnel
- Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate crane
- Operate crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Mobile loads using best mobile practice
• Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites)
• Use and interpret crane manufacturer’s specifications and data, including load charts to enable the crane to be configured for the load
• Verify problems and equipment faults and demonstrate appropriate response procedures

**Required knowledge:**

• Appropriate mathematical procedures for estimation and measurement of loads
• Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
• Ability to read and comprehend manufacturer’s instructions, procedures and safety signs
• Understanding of crane characteristics and capabilities (including use of load charts) to allow the configuration of the crane to suit the range of loads
• Understanding of the hierarchy of hazard identification and control
• Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
• Procedures for the recording, reporting and maintenance of workplace records and information
• Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

<table>
<thead>
<tr>
<th>Hazards</th>
<th>May include but not limited to:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• ground stability (e.g. ground condition, recently filled trenches, slopes)</td>
</tr>
<tr>
<td></td>
<td>• overhead hazards (e.g. powerlines, service pipes)</td>
</tr>
<tr>
<td></td>
<td>• insufficient lighting</td>
</tr>
<tr>

</tr>
<tr>
<td></td>
<td>• environmental conditions (e.g. wind, lightning, storms, etc.)</td>
</tr>
<tr>
<td></td>
<td>• other specific hazards (e.g. dangerous materials)</td>
</tr>
</tbody>
</table>
### Hazard control measures

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

1. elimination
2. substitution
3. isolation
4. engineering control measures
5. using safe work practices
6. personal protective equipment

### Appropriate standards

May include but not limited to:
- codes of practice
- legislation
- Australian standards
- manufacturer’s specifications
- industry standards (where applicable)

### Associated personnel

May include but not limited to:
- doggers
- riggers

### Appropriate

May include but not limited to:
- crane capabilities
- environmental conditions (e.g. wind, lightning, storms, etc.)

### Crane

May include:
- a crane (greater than 3 tonnes capacity) which meets the requirements of AS1418
- articulated type mobile cranes
- locomotive cranes
Does not include vehicle tow truck operations

### Communication method

May include but not limited to:
- verbal and non-verbal language
- written instructions
- signage
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

### Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work. State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping, other vehicles and personnel).
- Operation of a non-slewing mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of non-slewing mobile cranes (over 3t capacity) in conjunction with other associated personnel.
- Appropriate mathematical procedures for estimation of loads.

### Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant appropriate standard requirements.
- Applicants must have access to:
  - Personal Protective Equipment (PPE) for the
<table>
<thead>
<tr>
<th>Purpose of the Performance Assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>o appropriate non-slewing crane (greater than 3 tonnes) and associated equipment in safe condition</td>
<td></td>
</tr>
<tr>
<td>o suitable loads as specified by endorsed assessment instrument</td>
<td></td>
</tr>
<tr>
<td>o communication equipment (e.g. two-way radios, whistles, etc.)</td>
<td></td>
</tr>
<tr>
<td>o other associated personnel to sling and direct the loads.</td>
<td></td>
</tr>
</tbody>
</table>

### Method of assessment

- Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.
- The use of ‘simulators’ in the assessment of this unit of competency is **not acceptable**.
- Assessment may be in conjunction with the assessment of other units of competency.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

### Guidance information for assessment

- Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.
## TLILIC708A Licence to operate a portal boom crane

### Unit Descriptor
This unit specifies the outcomes required to operate a portal boom crane mounted on a portal frame, which is supported on runways along which the crane may travel, for licensing purposes.

### Employability Skills
This unit contains employability skills.

### Application of the Unit
This unit requires the operator to plan the work, conduct routine checks, transfer loads, mobile load and shut down and secure the crane.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

### ELEMENT PERFORMANCE CRITERIA

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

## REQUIRED SKILLS AND KNOWLEDGE

*This describes the essential skills and knowledge and their level required for this unit.*

### Required skills:

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- Operate a portal boom crane including all functions to their maximum for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, access to cabin, other vehicles and clear access whilst travelling)
- Use and interpret crane manufacturer’s specifications and data, including load charts to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures

### Required knowledge:

- Appropriate mathematical procedures for estimation of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Understanding of the hierarchy of hazard identification and control
- Level of literacy to be able to read and comprehend manufacturer’s instructions, procedures and safety signs
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Portal boom crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads
- Portal boom crane operating techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Rated capacity and working load limits (including use of crane load charts)
- Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction
## RANGE STATEMENT

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.*

<table>

- load charts
- crane decals
- control labels

### Procedures
May include but not limited to:
- manufacturer’s guidelines (instructions, specifications or checklists)
- industry operating procedures
- workplace procedures (work instructions, operating procedures, checklists)

### Controls
May include but not limited to:
- luffing levers
- hoisting and lowering levers
- slewing levers including brake

### Service logbook
May include but not limited to:
- any logbook
- service book
- history record system where the service and maintenance history is kept

### Crane safety devices
May include but not limited to:
- audible and visual warning devices
- lights
- function limits

### Communication equipment
May include but is not limited to:
- fixed channel two-way radios
- whistles
- bells
- buzzers

NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane.
| Hazard prevention/control measures | May include but not limited to:  
- safety tags on electrical switches/isolators  
- insulated powerlines  
- safety observer used inside exclusion zone  
- disconnected power  
- traffic barricades and control/s  
- pedestrian controls  
- trench covers  
- movement of obstructions  
- personal protective equipment  
- adequate illumination |
|-----------------------------------|--------------------------------------------------|
| Test lift                         | The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:  
- near capacity loads do not overload the crane  
- loads of unusual shape or weight distribution are correctly slung  
- load measuring equipment can be used to verify the calculated weight of the load  
- all crane equipment is functioning properly  
- adjustments to the slinging can be made in a safe manner |
| Relevant crane movements          | May include but not limited to:  
- luffing  
- slewing  
- hoisting  
- mobiling |
| Communication signals            | May include but is not limited to:  
- stop – hand  
- stop – whistle  
- hoist up – hand  
- hoist up – whistle  
- hoist down – hand  
- hoist down – whistle  
- luff boom down – hand  
- luff boom down – whistle  
- luff boom up – hand  
- luff boom up – whistle  
- slew left – hand  
- slew left – whistle |
| **Best mobile practice** | May include but not limited to:  
• minimum speed  
• gentle acceleration and braking (to minimise load swing)  
• minimum boom/jib radius  
• carrying the load near to the ground surface (where practical)  
• use of handheld taglines (where appropriate) |
|-------------------------|-----------------------------------------------------------------------------------|
| **Unplanned and/or unsafe situations** | May include but not limited to:  
• failure/loss of control (e.g. slew brakes, hoist drum)  
• failure of equipment (e.g. hydraulic system)  
• environmental conditions (e.g. wind, lightning, storms, etc.) |
| **Shut down** | May include but not limited to:  
• raising boom/jib to clear buildings, structures and vessels (where applicable)  
• retracting hoist rope and hook block  
• idling engine to stabilise temperature  
• applying weather vain mode (where applicable)  
• applying motion locks and brakes are applied  
• turning off engine  
• removing key from ignition  
• locking and securing cabin (where applicable) |
| **EVIDENCE GUIDE** | The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package. |

6.7 All damage and defects are reported and recorded according to procedures, and appropriate action is taken

**REQUIRED SKILLS AND KNOWLEDGE**

*This describes the essential skills and knowledge and their level required for this unit.*

**Required skills:**

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- Operate a slewing mobile crane (up to 20t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness
of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)

- Use and interpret crane manufacturer’s specifications and data, including load charts, to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures

**Required knowledge:**

- Appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Level of literacy to be able to read and comprehend manufacturer’s instructions, procedures and safety signs
- Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads
- Mobile slewing crane operating techniques
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Rated capacity and working load limits (including use of crane load charts)
- Typical routine problems encountered in the process and with equipment and adjustments required for correction

**RANGE STATEMENT**

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.*

<table>
<thead>
<tr>

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

**Overview of assessment**

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.
### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).
- Complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 20 tonne capacity in conjunction with other associated personnel.
- Appropriate mathematical procedures for estimation of loads.

### Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant appropriate standard requirements.
- Applicants must have access to:
  - Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
  - appropriate slewing mobile crane (up to 20 tonne) and associated equipment in safe condition
  - suitable loads as specified by the endorsed Assessment Instrument
  - communication equipment (e.g. two-way radios, whistles, etc.)
  - other associated personnel to sling and direct the loads
### Method of assessment

- Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

- Assessment may be in conjunction with the assessment of other units of competency.

- The use of ‘simulators’ in the assessment of this unit of competency is **not acceptable**.

- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

### Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

### ELEMENT PERFORMANCE CRITERIA

*Elements describe the essential outcomes of a unit of competency.*

*Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.*

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Plan work</strong></td>
<td>1.1 Potential workplace hazards are identified 1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment 1.3 The weight of the load is identified and estimated in consultation with associated personnel 1.4 The crane is appropriate to the load/s and workplace conditions 1.5 Appropriate paths for the movement of loads in the work area are inspected and determined 1.6 Appropriate communication methods are identified with associated personnel</td>
</tr>
<tr>
<td><strong>Conduct routine checks</strong></td>
<td>2.1 Crane is visually checked for any damage or defects 2.2 Crane is accessed in a safe manner 2.3 All signage and labels are visible and legible according to the appropriate standard 2.4 Routine pre-operational crane checks are carried out according to procedures 2.5 All controls are located and identified 2.6 Crane service logbook is checked for compliance</td>
</tr>
<tr>
<td>2.7</td>
<td>Crane is started according to <strong>procedures</strong> and checked for any abnormal noises</td>
</tr>
<tr>
<td>2.8</td>
<td>All <strong>crane safety devices</strong> are tested according to <strong>procedures</strong></td>

### REQUIRED SKILLS AND KNOWLEDGE

*This describes the essential skills and knowledge and their level required for this unit.*

**Required skills:**

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- Operate a slewing mobile crane (21t up to 60t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)
- Use and interpret crane manufacturer’s specifications and data, including load charts, to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures
**Required knowledge:**

- Appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Level of literacy to be able to read and comprehend manufacturer’s instructions, procedures and safety signs
- Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads
- Mobile slewing crane operating techniques
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Rated capacity and working load limits (including use of crane load charts)
- Typical routine problems encountered in the process and with equipment and adjustments required for correction

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

<table>
<thead>
<tr>
<th>Hazards</th>
<th>May include but not limited to:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• ground stability (e.g. ground condition, recently filled trenches, slopes)</td>
</tr>
<tr>
<td></td>
<td>• overhead hazards (e.g. powerlines, service pipes)</td>
</tr>
<tr>
<td></td>
<td>• traffic (e.g. pedestrians, vehicles, other plant)</td>
</tr>
<tr>
<td></td>
<td>• insufficient lighting</td>
</tr>
<tr>
<td></td>
<td>• environmental conditions (e.g. wind, lightning, storms, etc.)</td>
</tr>
<tr>
<td></td>
<td>• other specific hazards (e.g. dangerous materials)</td>
</tr>
</tbody>
</table>
| **Hazard control measures** | Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:  
1. elimination  
2. substitution  
3. isolation  
4. engineering control measures  
5. using safe work practices  
6. personal protective equipment |
|-----------------------------|-------------------------------------------------------------------------------------------------|
| **Appropriate standard**    | May include:  
• codes of practice (mobile crane)  
• legislation  
• Australian standards  
• manufacturer’s specifications  
• industry standards (where applicable) |
| **Associated personnel**    | May include but not limited to:  
• riggers  
• doggers |
| **Appropriate**             | May include but not limited to:  
• crane capabilities  
• environmental conditions (e.g. wind, lightning, storms, etc.) |
| **Crane**                   | May include a boom or jib, which is capable of being slewed (up to 60 tonnes capacity). The slewing mobile crane up to 60 tonnes classification encompasses the requirements for the up to 20 tonnes classification |
| **Communication method**    | May include but not limited to:  
• verbal and non-verbal language  
• written instructions  
• signage  
• hand signals  
• listening  
• questioning to confirm understanding  
• appropriate worksite protocol |
| **Signage and labels** | May include but not limited to:  
| | • crane data plates/labels  
| | • load charts  
| | • crane decals  
| | • control labels  

| **Procedures** | May include but not limited to:  
| | • manufacturer’s guidelines (instructions, specifications or checklists)  
| | • industry operating procedures  
| | • workplace procedures (work instructions, operating procedures, checklists)  

| **Controls** | May include but not limited to:  
| | • luffing levers  
| | • hoisting and lowering levers  
| | • slewing levers including brake  
| | • boom extension levers (where fitted)  

| **Service logbook** | May include but not limited to:  
| | • any logbook  
| | • service book  
| | • history record system where the service and maintenance history is kept  

| **Crane safety devices** | May include but not limited to:  
| | • horns/sirens  
| | • audible and visual reversing devices  
| | • operator restraint devices  
| | • lights  

| **Communication equipment** | May include but not limited to:  
| | • fixed channel two-way radios  
| | • whistles  
| | • bells  
| | • buzzers  

**NB:** where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane.

### Best mobile practice

May include but not limited to:
- minimum speed
- gentle acceleration and braking (to minimise load swing)
- minimum boom/jib length
- carrying the load near to the ground surface
- boom/jib in line with the crane
- boom/jib as low as possible
- load faces uphill
- use of handheld taglines

### Shut down

May include but not limited to:
- retracting boom/jib
- retracting hoist rope and hook block
- positioning/securing boom/jib
- retracting outriggers/stabilisers
- idling engine to stabilise temperature
- turning off engine (where applicable)
- removing key from ignition (where applicable)
- locking and securing cabin (where applicable)

**Guidance information for assessment**

- Further information about endorsed Assessment Instruments may be obtained from State/territory OH&S regulators.
**TLIM107B Develop safe car driving behaviours in others**

**Unit Descriptor**
This unit involves the skills and knowledge required by car driving instructors to teach clients from diverse backgrounds how to develop and maintain safe car driving strategies. These strategies include recognising and dealing with behavioural barriers to learning, developing vehicle control skills, interpreting and applying regulatory requirements and road laws, developing critical higher order skills such as hazard perception and responding appropriately, exercising risk management strategies that contribute to safe car driving techniques, and meeting community expectations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Employability Skills**
This unit contains employability skills.

**Application of the Unit**
Instructional activities must be carried out in compliance with the relevant road transport law.

Work is performed without supervision. It involves the application of training competence and experience, professional car driver expertise, navigation skills, road law expertise, routine procedures and regulatory requirements to the development of safe car driving behaviour in others across a range of operational situations.

The development of safe car driving behaviours in others involves the application of adult learning principles, instructional methods and high-level safe car driving expertise to maintain the safe operation of an instructional vehicle across a variety of driving contexts.

Definition of a vehicle (car class C) in this context is a 'vehicle equal to or less than 4.5 tonnes GVM and seating up to 12 adults, including the driver'.

**Competency Field**
M – Training

**ELEMENT PERFORMANCE CRITERIA**
Elements describe the essential outcomes of a unit of competency.

1 **Deliver training on safe car driving principles**

1.1 Training objectives and methods are planned and documented
1.2 Training is conducted in a safe and accessible environment
1.3 Specific needs for training are identified and confirmed through observation and assessment of client’s capabilities
1.4 Information on safe car driving principles is made available and made clear to client
1.5 Principles behind low-risk driving are made clear to client, including specific factors that constitute an actual risk of a collision, factors contributing to the formation of opinions and
beliefs about driving risks, road safety issues, and human psychological and physiological aspects

2 Demonstrate low-risk car driving strategies to clients

2.1 Proactive driving techniques that keep the car driver at a low-risk level are demonstrated

2.2 Low-risk driving behaviours are demonstrated consistently, including the ability to control a vehicle at different speeds and under variable road and weather conditions; and the ability to judge time and space in a range of traffic situations to accommodate other road users

2.3 Skills and knowledge needed to consciously make choices that will minimise risks are explained and demonstrated to client

3 Demonstrate applicable safe car driving rules and regulations to clients

3.1 Relevant rules and regulations for each car driving task are identified and clarified when driving with a client, including purpose of road rules, road signs, signals and markings

3.2 Road rules applicable to timing and space in traffic situations are explained and demonstrated to client

4 Monitor and maintain safe car driving behaviours of clients

4.1 Unsafe driving behaviours are identified and constructive feedback is provided to client in relation to hazard perception, anticipation, correct decision making in response, multi-tasking, and other higher order skills necessary for driving safely

4.2 Legal ramifications of driving offences are made clear to client

4.3 Importance of continuous effort and practice of low-risk driving is conveyed

4.4 Learner driver’s safe car driving competence is reviewed and adjusted, including behaviour while driving, response to other road users and ability to manage risks

4.5 Various methods for encouraging learning are implemented to provide diverse approaches to meet the individual needs of client

5 Evaluate clients on their safe car driving competence

5.1 Sufficient evidence requirements are specified to show consistent achievement of client’s safe car driving competence

5.2 Evaluation methods, processes and procedures are communicated clearly to client and applied consistently with the licence requirements of the state or territory regulatory authority

5.3 Learner driver’s safe driving competence is evaluated, including ability to consistently deal with and adjust to diverse driving environments, obey road rules, perceive hazards, make correct judgements in response, anticipate and avoid collisions, and make safe decisions in stressful situations
5.4 Learner’s demonstration of safe car driving behaviours is recorded according to workplace process and procedures

6 Review evaluation of client's safe car driving competence

6.1 Process to review evaluation of the client’s safe car driving competence is established and followed by the enterprise, industry or registered training organisation

6.2 Review activities are documented, findings are validated and review approach is evaluated

6.3 Feedback is provided to client in relation to evaluation outcomes

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Barriers to learning, including motivation, attitude, cognitive behaviours, positive and negative outcomes of prior learning, language and other special needs
- Causes and effects of unsafe car driving practices
- Cognitive skills, motivation and attitudes related to safe car driving behaviours
- Causal attribution theory as it relates to driving vehicles
- Causes of single vehicle crashes
- Low-risk driving strategies (six positions in which a crash involving two or more vehicles can occur and the appropriate defences)
- Low-risk driving strategies for six types of driving conditions (i.e. light, weather, road, traffic, vehicle and driver)
- Definition of safe car driving behaviours
- Driving hazards and hazard perception testing
- Effects of drugs, medication and alcohol on safe car driving ability
- Effects of stress and fatigue on safe car driving ability
- Factors and consequences of vehicle crashes and collisions
- Factors that increase potential accidents
- Hazard recognition as it relates to driving vehicles
- Humans factors and impacts on driving environments
- Importance of observation and attention as they relate to driving vehicles
- Low-risk driving techniques
- Management processes and recording procedure for vehicle collisions
- Motivation and attitudinal issues as they relate to driving vehicles
- Proactive and responsible driving behaviours
- Procedures for space and time management to avoid collisions
- Procedures to be followed in the event of a driving emergency
- Processes for hazard identification and response
- Principles of risk management as they relate to driving vehicles
• Principles of road safety
• Relevant OH&S and environmental procedures and regulations
• Road signs, signals and markings and their meanings
• Road transport law (state or territory road rules and traffic safety legislation, e.g. driver licensing, vehicle registration, alcohol and drugs, and vehicle standards)
• Rules of braking
• Rules of observation
• Rules of steering
• Safe driving strategies (safe method of driving)
• Slow speed manoeuvres
• Values and beliefs related to driving
• Vehicle controls, safety devices, instruments and indicators and their use
• Vehicle handling procedures
• Vision - understanding importance of vision to the safe and effective driving of vehicles

**Required skills:**

• Adapt appropriately to cultural differences in the car driver instruction environment, including modes of behaviour and interactions with others
• Apply basic and specific traffic skills while developing safe car driving behaviours in others
• Apply basic road skills and vehicle operation skills while developing safe car driving behaviours in others
• Apply multi-skills, e.g. monitoring driving environment, anticipating traffic hazards and instructing clients to take appropriate action
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when developing safe car driving behaviours in others
• Apply skills for crash avoidance and management while developing safe car driving behaviours in others
• Assess risks
• Communicate effectively with others from diverse cultural backgrounds when driving a vehicle, including different modes of behaviour
• Communicate effectively with people of all ages, educational backgrounds and life experiences
• Conduct observations and plan required activities when developing safe car driving behaviours in others
• Deliver information on instructions, procedures, information and signs relevant to the driving of a vehicle
• Demonstrate higher order driving skills while developing safe car driving behaviours in others
• Demonstrate higher order thinking skills, including optimism bias, causal attribution and cognitive dissonance needed by instructors when developing safe car driving behaviours in others
• Demonstrate traffic management skills
• Demonstrate vehicle control skills
• Documentation skills related to the driving of a vehicle by others
• Guide and control a vehicle in the course of the development of safe car driving behaviours in others
• Implement contingency plans for unexpected events that may occur when clients are driving a vehicle
• Interpret and follow operational instructions while developing safe car driving behaviours in others
• Make correct decisions while developing safe car driving behaviours in others
• Manage a range of adverse conditions while developing safe car driving behaviours in others
• Manage and motivate behavioural change of clients
• Manage conflict as a trainer and as a business person
• Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor performance of clients in applying knowledge and techniques on safe car driving
• Monitor performance of vehicle and take appropriate action where required
• Negotiate complex traffic and road conditions
• Observe and interpret the driving behaviour of others
• Operate mono and dual vehicle controls
• Perceive hazards and control vehicle while developing safe car driving behaviours in others
• Read and interpret instructions, procedures, information and signs relevant to the analysis of safe car driving behaviours
• Report promptly and/or rectify identified problems, faults or malfunctions that may arise while developing safe car driving behaviours in others
• Road positioning skills
• Speed management skills
• Teach, facilitate learning and demonstrate skills in the development of safe car driving behaviours, with learner-centred approach
• Work collaboratively with other road users when driving a vehicle
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Applicable regulations and legislation may include:
- road transport law, for example:
  - legislation and related regulations applicable to driving and using motor vehicles in relevant state or territory
  - motor vehicle driver learner permit, driver licence requirements and issue procedures applicable in relevant state or territory
  - occupational health and safety legislation in relevant state or territory
  - equal opportunity legislation in relevant state or territory
  - workplace relations legislation in relevant state or territory

Safe driving principles include:
- requirements of safe driving
- abiding by the road laws
- importance of cooperation with other road users
- importance of motivation to driving safely, which includes values, emotions and personal needs
- safe driving policies
- correct driving position
- appropriate navigational skills, including ability to plan a trip
- road safety issues
- management of fatigue, alcohol, drugs and medication
- rules and regulations applicable to safe driving
- implications of unsafe driving behaviours

Principles behind low-risk driving include:
- specific factors that constitute an actual risk of a collision
- factors contributing to the formation of opinions
- beliefs about low-risk driving
- road safety issues
- human psychological and physiological aspects
Characteristics of clients may include information in relation to:

- gender
- age (within regulatory guidelines)
- driving experience, including learner driver, mature age driver being re-tested, overseas driver and experienced driver being rehabilitated after an accident
- educational background and general knowledge
- social and economic background with diverse attitudes
- effects of prior and current learning
- individual learning styles
- novice driver’s beliefs about capacity for learning to drive, i.e. their self-efficacy
- client motivation
- client’s capacity to self-monitor own learning and driving

Communication may include:

- oral, aural or signed communication
- written communication

Factors that affect client’s progress may include:

- level of confidence
- effects of previous and current learning
- decision making skills in a range of driving situations
- self-esteem and peer pressure on client
- external expectations of client performance, e.g. parents/guardians
- optimism bias (tendency to view negative incidents such as road accidents as unlikely to happen to them; overestimation of driving ability; and underestimation of accident risk)
- causal attribution (explains that a driver's actions often depend upon their interpretation of the cause of events, limiting the ability to make objective risk assessments and resulting in a tendency to blame external causes)

Resources may include:

- training materials and publications
- location
- personnel
- dual control vehicle
- OH&S and other workplace resource requirements
- enterprise/industry standard operating procedures
- funding for training facilities, resources and staff

Road users may include:

- pedestrians
- cyclists
- drivers or riders of trams and trains, and motor vehicles, including motorcycles, light vehicles and heavy vehicles
Specific needs may relate to:

- age (within regulatory guidelines)
- disability (within regulatory guidelines)
- language, literacy and numeracy needs
- those requiring refresher training

Training delivery and driving may be undertaken in/at:

- a range of vehicle types
- restricted spaces
- open roads, e.g. freeways, main and busy roads, country roads and suburban roads
- controlled or open environments
- a simulated environment
- a range of weather conditions
- day or night

Training delivery methods and practice may include:

- facilitation of small group discussions
- demonstrations
- explanations
- problem solving
- mentoring
- coaching while driving
- instructor promotion of forms of self-awareness, i.e. self-efficacy and self-monitoring by novice driver
- commentary driving
- combination of the above

Training sessions may include:

- one-to-one demonstration
- small group demonstration (2 to 6 persons)

Training assessment may include:

- affective, e.g. satisfaction with the program
- cognitive, e.g. knowledge and skills gain
- psychomotor skills, e.g. ability to change gear smoothly
- modification of techniques based on client feedback, e.g. by use of client feedback sheets

Training support may include:

- language and literacy specialists
- training and assessment partners
- trainers, teachers and assessors

Variables for achieving competency may include:

- participant characteristics
- resources, e.g. time, location, space, people and costs
Workplace documents and procedures may include:

- company/enterprise/organisational procedures and policies
- record of clients’ driving skills, knowledge and abilities
- standards and certification requirements
- quality assurance procedures and checklists
- emergency procedures

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - compliance with appropriate legislative, regulatory and procedural requirements relating to safe car driving
  - identification of hazards and human factors that may impact on driving situations and implementation of responsive safe car driving practices
  - recognition of road signs and signals, and implementation of pertinent action to enable safe car driving

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment
  - access to an appropriate range of driving environments and situations
- In both real and simulated environments, access is required to:
  - relevant and appropriate resources and/or vehicles
  - applicable documentation, including driving procedures, legislation, regulations and safe driving policies
- Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed
- Access to assessment support must be provided when required
**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation.

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests, including how to:
  - explain
  - describe
  - interpret
  - convey understanding

- Practical assessment should occur:
  - through direct observation of performance, driving tasks and/or simulation exercises
  - in an appropriate range of situations in a variety of driving environments
  - in adverse driving conditions

- In all cases where practical assessment is used, it will be combined with targeted questioning to assess the underpinning knowledge.

- Assessment method may include consideration of third-party reports and authenticated prior achievements.
TLIM208A Develop safe heavy vehicle driving behaviours in others

Unit Descriptor
This unit involves the skills and knowledge required by heavy vehicle driving instructors to teach clients from diverse backgrounds how to develop and maintain safe heavy vehicle driving strategies. These strategies include recognising and dealing with behavioural barriers to learning, developing heavy vehicle control skills, interpreting and applying regulatory requirements and road laws, developing critical higher order skills such as hazard perception and responding appropriately, exercising risk management strategies that contribute to safe heavy vehicle driving techniques, and meeting community expectations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Instructional activities must be carried out in compliance with the relevant road transport law.

Work is performed without supervision. It involves the application of training competence and experience, professional heavy vehicle driver expertise, navigation skills, road law expertise, routine procedures and regulatory requirements to the development of safe heavy vehicle driving behaviour in others across a range of operational situations.

The development of safe heavy vehicle driving behaviours in others involves the application of adult learning principles, instructional methods and high-level safe heavy vehicle driving expertise to maintain the safe operation of an instructional vehicle across a variety of driving contexts.

Definition of a heavy vehicle (class LR, MR, HR, HC and MC) in this context is a 'vehicle greater than 4.5 tonnes GVM and also includes a vehicle seating more than 12 adults, including the driver'.

Competency Field
M – Training

ELEMENT
Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Deliver training on safe heavy vehicle driving principles

1.1 Training objectives and methods are planned and documented
1.2 Training is conducted in a safe and accessible environment
1.3 Specific needs for training are identified and confirmed through observation and assessment of client’s capabilities
1.4 Information on safe heavy vehicle driving principles is made
available and made clear to client

1.5 Principles behind low-risk driving are made clear to client, including specific factors that constitute an actual risk of a collision, factors contributing to the formation of opinions and beliefs about driving risks, road safety issues, and human psychological and physiological aspects

2 Demonstrate low-risk driving strategies to clients

2.1 Proactive driving techniques that keep the heavy vehicle driver at a low-risk level are demonstrated

2.2 Low-risk driving behaviours are demonstrated consistently, including the ability to control a vehicle at different speeds and under variable road and weather conditions; and the ability to judge time and space in a range of traffic situations to accommodate other road users

2.3 Skills and knowledge needed to consciously make choices that will minimise risks are explained and demonstrated to client

2.4 Load placement and load restraints are explained and demonstrated to client

3 Demonstrate applicable safe heavy vehicle driving rules and regulations to clients

3.1 Relevant rules and regulations for each heavy vehicle driving task are identified and clarified when driving with a client, including purpose of road rules, road signs, signals and markings

3.2 Road rules applicable to timing and space in traffic situations are explained and demonstrated to client

4 Monitor and maintain safe heavy vehicle driving behaviours of clients

4.1 Unsafe driving behaviours are identified and constructive feedback is provided to client in relation to hazard perception, anticipation, correct decision making in response, multi-tasking, and other higher order skills necessary for driving safely

4.2 Legal ramifications of driving offences are made clear to client

4.3 Importance of continuous effort and practice of low-risk driving is conveyed

4.4 Learner driver’s safe heavy vehicle driving competence is reviewed and adjusted, including behaviour while driving, response to other road users and ability to manage risks

4.5 Various methods for encouraging learning are implemented to provide diverse approaches to meet the individual needs of client

5 Evaluate clients on their safe heavy vehicle driving competence

5.1 Sufficient evidence requirements are specified to show consistent achievement of client’s safe heavy vehicle driving competence

5.2 Evaluation methods, processes and procedures are
communicated clearly to client and applied consistently with the licence requirements of the state or territory regulatory authority

5.3 Learner driver’s safe heavy vehicle driving competence is evaluated, including ability to consistently deal with and adjust to diverse driving environments, obey road rules, perceive hazards, make correct judgements in response, anticipate and avoid collisions, and make safe decisions in stressful situations

5.4 Learner’s demonstration of safe heavy vehicle driving behaviours is recorded according to workplace process and procedures

6 Review evaluation of client’s safe heavy vehicle driving competence

6.1 Process to review evaluation of the client’s safe heavy vehicle driving competence is established and followed by the enterprise, industry or registered training organisation

6.2 Review activities are documented, findings are validated and review approach is evaluated

6.3 Feedback is provided to client in relation to evaluation outcomes

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Barriers to learning, including motivation, attitude, cognitive behaviours, positive and negative outcomes of prior learning, language and other special needs
• Causes and effects of unsafe heavy vehicle driving practices
• Cognitive skills, motivation and attitudes related to safe heavy vehicle driving behaviours
• Causal attribution theory as it relates to driving vehicles
• Causes of single vehicle crashes
• Low-risk driving strategies (six positions in which a crash involving two or more vehicles, where at least one is a heavy vehicle, can occur and the appropriate defences)
• Low-risk driving strategies for six types of driving conditions (i.e. light, weather, road, traffic, vehicle and driver)
• Definition of safe heavy vehicle driving behaviours
• Driving hazards and hazard perception testing
• Effects of drugs, medication and alcohol on safe heavy vehicle driving ability
• Effects of stress and fatigue on safe heavy vehicle driving ability
• Factors and consequences of vehicle crashes and collisions
• Factors that increase potential accidents
• Hazard recognition as it relates to driving vehicles
• Humans factors and impacts on driving environments
• Importance of observation and attention as they relate to driving vehicles
• Low-risk driving techniques
• Management processes and recording procedure for vehicle collisions
• Motivation and attitudinal issues as they relate to driving vehicles
• Proactive and responsible driving behaviours
• Procedures for space and time management to avoid collisions
• Procedures to be followed in the event of a driving emergency
• Processes for hazard identification and response
• Principles of risk management as they relate to driving vehicles
• Principles of road safety
• Relevant OH&S and environmental procedures and regulations
• Road signs, signals and markings and their meanings
• Road transport law (state or territory road rules and traffic safety legislation, e.g. driver licensing, vehicle registration, alcohol and drugs, and vehicle standards)
• Rules of braking
• Rules of observation
• Rules of steering
• Safe driving strategies (safe method of driving)
• Slow speed manoeuvres
• Values and beliefs related to driving
• Vehicle controls, safety devices, instruments and indicators and their use
• Vehicle handling procedures
• Vision - understanding importance of vision to the safe and effective driving of vehicles

**Required skills:**
• Adapt appropriately to cultural differences in the heavy vehicle driver instruction environment, including modes of behaviour and interactions with others
• Apply basic and specific traffic skills while developing safe heavy vehicle driving behaviours in others
• Apply basic road skills and vehicle operation skills while developing safe heavy vehicle driving behaviours in others
• Apply multi-skills, e.g. monitoring heavy vehicle internal operational systems and monitoring driving environment, anticipating traffic hazards and instructing clients to take appropriate action
• Apply precautions and required action to minimise, control or eliminate hazards that may exist when developing safe heavy vehicle driving behaviours in others
• Apply skills for crash avoidance and management while developing safe heavy vehicle driving behaviours in others
• Assess risks
• Communicate effectively with others from diverse cultural backgrounds when driving a vehicle, including different modes of behaviour
• Communicate effectively with people of all ages, educational backgrounds and life experiences
• Conduct observations and plan required activities when developing safe heavy vehicle driving behaviours in others
• Deliver information on instructions, procedures, information and signs relevant to the driving of a vehicle
• Demonstrate higher order driving skills while developing safe heavy vehicle driving behaviours in others
• Demonstrate higher order thinking skills, including optimism bias, causal attribution and cognitive dissonance needed by instructors when developing safe heavy vehicle driving behaviours in others
• Demonstrate traffic management skills
• Demonstrate vehicle control skills
• Documentation skills related to the driving of a vehicle by others
• Guide and control a vehicle in the course of the development of safe heavy vehicle driving behaviours in others
• Implement contingency plans for unexpected events that may occur when clients are driving a vehicle
• Interpret and follow operational instructions while developing safe heavy vehicle driving behaviours in others
• Make correct decisions while developing safe heavy vehicle driving behaviours in others
• Manage a range of adverse conditions while developing safe heavy vehicle driving behaviours in others
• Manage and motivate behavioural change of clients
• Manage conflict as a trainer and as a business person
• Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor performance of clients in applying knowledge and techniques on safe heavy vehicle driving
• Monitor performance of vehicle and take appropriate action where required
• Negotiate complex traffic and road conditions
• Observe and interpret the driving behaviour of others
• Operate mono and dual vehicle controls as applicable
• Perceive hazards and control vehicle while developing safe heavy vehicle driving behaviours in others
• Read and interpret instructions, procedures, information and signs relevant to the analysis of safe heavy vehicle driving behaviours
• Report promptly and/or rectify identified problems, faults or malfunctions that may arise while developing safe heavy vehicle driving behaviours in others
• Road positioning skills
• Speed management skills
• Teach, facilitate learning and demonstrate skills in the development of safe heavy vehicle driving behaviours, with learner-centred approach
• Work collaboratively with other road users when driving a vehicle
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Applicable regulations and legislation may include:

• Road transport law, for example:
  o legislation and related regulations applicable to driving and using heavy vehicles in relevant state or territory
  o heavy vehicle driver learner permit, driver licence requirements and issue procedures applicable in relevant state or territory
  o occupational health and safety legislation in relevant state or territory
  o equal opportunity legislation in relevant state or territory
  o workplace relations legislation in relevant state or territory

Safe driving principles include:

• requirements of safe driving
• abiding by the road laws
• importance of cooperation with other road users
• importance of motivation to driving safely, which includes values, emotions and personal needs
• safe driving policies
• correct driving position
• appropriate navigational skills, including ability to plan a trip
• road safety issues
• management of fatigue, alcohol, drugs and medication
• rules and regulations applicable to safe driving
• implications of unsafe driving behaviours

Principles behind low-risk driving include:

• specific factors that constitute an actual risk of a collision
• factors contributing to the formation of opinions
• beliefs about low-risk driving
• road safety issues
• human psychological and physiological aspects
Characteristics of clients may include information in relation to:

- gender
- age (within regulatory guidelines)
- driving experience, including learner driver, mature age driver being re-tested, overseas driver and experienced driver being rehabilitated after an accident
- educational background and general knowledge
- social and economic background with diverse attitude
- effects of prior and current learning
- individual learning styles
- novice driver’s beliefs about capacity for learning to drive, i.e. their self-efficacy
- client motivation
- client’s capacity to self-monitor own learning and driving

Communication may include:

- oral, aural or signed communication
- written communication

Factors that affect client’s progress may include:

- level of confidence
- effects of previous and current learning
- decision making skills in a range of driving situations
- self-esteem and peer pressure on client
- external expectations of client performance, e.g. parents/guardians
- optimism bias (tendency to view negative incidents such as road accidents as unlikely to happen to them; overestimation of driving ability; and underestimation of accident risk)
- causal attribution (explains that a driver's actions often depend upon their interpretation of the cause of events, limiting the ability to make objective risk assessments and resulting in a tendency to blame external causes)

Resources may include:

- training materials and publications
- location
- personnel
- dual control vehicle
- OH&S and other workplace resource requirements
- enterprise/industry standard operating procedures
- funding for training facilities, resources and staff

Road users may include:

- pedestrians
- cyclists
- drivers or riders of trams and trains, and motor vehicles, including motorcycles, light vehicles and heavy vehicles
Specific needs may relate to:
- age (within regulatory guidelines)
- disability (within regulatory guidelines)
- language, literacy and numeracy needs
- those requiring refresher training.

Training delivery and driving may be undertaken in/at:
- a range of vehicle types
- restricted spaces
- open roads, e.g. freeways, main and busy roads, country roads and suburban roads
- controlled or open environments
- a simulated environment
- a range of weather conditions
- day or night

Training delivery methods and practice may include:
- facilitation of small group discussions
- demonstrations
- explanations
- problem solving
- mentoring
- coaching while driving
- instructor promotion of forms of self-awareness, i.e. self-efficacy and self-monitoring by novice driver
- commentary driving
- combination of the above

Training sessions may include:
- one-to-one demonstration
- small group demonstration (2 to 6 persons)

Training assessment may include:
- affective, e.g. satisfaction with the program
- cognitive, e.g. knowledge and skills gain
- psychomotor skills, e.g. ability to change gear smoothly
- modification of techniques based on client feedback, e.g. by use of client feedback sheets

Training support may include:
- language and literacy specialists
- training and assessment partners
- trainers, teachers and assessors

Variables for achieving competency may include:
- participant characteristics
- resources, e.g. time, location, space, people and costs
Workplace documents and procedures may include:

- company/enterprise/organisational procedures and policies
- record of clients’ driving skills, knowledge and abilities
- standards and certification requirements
- quality assurance procedures and checklists
- emergency procedures

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - compliance with appropriate legislative, regulatory and procedural requirements relating to safe heavy vehicle driving
  - identification of hazards and human factors that may impact on driving situations and implementation of responsive safe heavy vehicle driving practices
  - recognition of road signs and signals, and implementation of pertinent action to enable safe heavy vehicle driving

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment
  - access to an appropriate range of heavy vehicle driving environments and situations
- In both real and simulated environments, access is required to:
  - relevant and appropriate resources and/or heavy vehicles
  - applicable documentation, including heavy vehicle driving procedures, legislation, regulations and safe heavy vehicle driving policies
- Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed
- Access to assessment support must be provided when
Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests, including how to:
  - explain
  - describe
  - interpret
  - convey understanding
- Practical assessment should occur:
  - through direct observation of performance, heavy vehicle driving tasks and/or simulation exercises
  - in an appropriate range of situations in a variety of driving environments
  - in adverse driving conditions
- In all cases where practical assessment is used, it will be combined with targeted questioning to assess the underpinning knowledge
- Assessment method may include consideration of third-party reports and authenticated prior achievements
TLIM308A  Develop safe motorcycle riding behaviours in others

Unit Descriptor
This unit involves the skills and knowledge required by motorcycle riding instructors to teach clients from diverse backgrounds how to develop and maintain safe motorcycle riding strategies. These strategies include recognising and dealing with behavioural barriers to learning, developing motorcycle control skills, interpreting and applying regulatory requirements and road laws, developing critical higher order skills such as hazard perception and responding appropriately, exercising risk management strategies that contribute to safe motorcycle riding techniques, and meeting community expectations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Employability Skills
This unit contains employability skills.

Application of the Unit
Instructional activities must be carried out in compliance with the relevant road transport law.

Work is performed without supervision. It involves the application of training competence and experience, professional motorcycle rider expertise, navigation skills, road law expertise, routine procedures and regulatory requirements to the development of safe motorcycle riding behaviour in others across a range of operational situations.

The development of safe motorcycle riding behaviours in others involves the application of adult learning principles, instructional methods and high-level safe motorcycle riding expertise to maintain the safe operation of an instructional motorcycle across a variety of riding contexts.

Definition of a motorcycle (class R) in this context is a 'two or three wheel motorcycle/motorbike'.

Competency Field
M – Training

ELEMENT PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.

1 Deliver training on safe motorcycle riding principles

PERFORMANCE CRITERIA
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1.1 Training objectives and methods are planned and documented
1.2 Training is conducted in a safe and accessible environment
1.3 Specific needs for training are identified and confirmed through observation and assessment of client’s capabilities
1.4 Information on safe motorcycle riding principles is made available and made clear to client
1.5 Principles behind low-risk riding are made clear to client, including specific factors that constitute an actual risk of a collision, factors contributing to the formation of opinions and beliefs about riding risks, road safety issues, and human psychological and physiological aspects

2 Demonstrate low-risk riding strategies to clients

2.1 Proactive riding techniques that keep the motorcycle rider at a low-risk level are demonstrated

2.2 Low-risk riding behaviours are demonstrated consistently, including the ability to control a motorcycle at different speeds and under variable road and weather conditions; and the ability to judge time and space in a range of traffic situations to accommodate other road users

2.3 Skills and knowledge needed to consciously make choices that will minimise risks are explained and demonstrated to client

2.4 Features and benefits of protective clothing are explained and demonstrated to client

3 Demonstrate applicable safe motorcycle riding rules and regulations to clients

3.1 Relevant rules and regulations for each motorcycle riding task are identified and clarified when riding with a client, including purpose of road rules, road signs, signals and markings

3.2 Road rules applicable to timing and space in traffic situations are explained and demonstrated to client

4 Monitor and maintain safe motorcycle riding behaviours of clients

4.1 Unsafe riding behaviours are identified and constructive feedback is provided to client in relation to hazard perception, anticipation, correct decision making in response, multitasking, and other higher order skills necessary for riding safely

4.2 Legal ramifications of riding offences are made clear to client

4.3 Importance of continuous effort and practice of low-risk riding is conveyed

4.4 Learner rider’s safe motorcycle riding competence is reviewed and adjusted, including behaviour while riding, response to other road users and ability to manage risks

4.5 Various methods for encouraging learning are implemented to provide diverse approaches to meet the individual needs of client

5 Evaluate clients on their safe motorcycle riding competence

5.1 Sufficient evidence requirements are specified to show consistent achievement of client’s safe motorcycle riding competence

5.2 Evaluation methods, processes and procedures are communicated clearly to client and applied consistently with the licence requirements of the state or territory regulatory authority
5.3 Learner rider’s safe motorcycle riding competence is evaluated, including ability to consistently deal with and adjust to diverse riding environments, obey road rules, perceive hazards, make correct judgements in response, anticipate and avoid collisions, and make safe decisions in stressful situations

5.4 Learner’s demonstration of safe motorcycle riding behaviours is recorded according to workplace process and procedures

6. Review evaluation of client's safe motorcycle riding competence

6.1 Process to review evaluation of the client’s safe motorcycle riding competence is established and followed by the enterprise, industry or registered training organisation

6.2 Review activities are documented, findings are validated and review approach is evaluated

6.3 Feedback is provided to client in relation to evaluation outcomes

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Barriers to learning, including motivation, attitude, cognitive behaviours, positive and negative outcomes of prior learning, language and other special needs
- Causes and effects of unsafe motorcycle riding practices
- Cognitive skills, motivation and attitudes related to safe motorcycle riding behaviours
- Causal attribution theory as it relates to riding motorcycles
- Causes of single motorcycle crashes
- Low-risk riding strategies for a range of crash situations (i.e. same, adjacent, and opposite direction crashes)
- Low-risk riding strategies for a range of riding conditions (i.e. light, weather, road, traffic, motorcycle, and rider)
- Definition of safe motorcycle riding behaviours
- Riding hazards and hazard perception testing
- Effects of drugs, medication and alcohol on safe motorcycle riding ability
- Effects of stress and fatigue on safe motorcycle riding ability
- Factors and consequences of motorcycle crashes and collisions
- Factors that increase potential accidents
- Hazard recognition as it relates to riding motorcycles
- Humans factors and impacts on riding environments
- Importance of observation and attention as they relate to riding motorcycles
- Low-risk riding techniques
- Management processes and recording procedure for motorcycle collisions
- Motivation and attitudinal issues as they relate to riding motorcycles
- Proactive and responsible riding behaviours
- Procedures for space and time management to avoid collisions
- Procedures to be followed in the event of a riding emergency
- Processes for hazard identification and response
- Principles of risk management as they relate to riding motorcycles
- Principles of road safety
- Relevant OH&S and environmental procedures and regulations
- Road signs, signals and markings and their meanings
- Road transport law (state or territory road rules and traffic safety legislation, e.g. rider licensing, motorcycle registration, alcohol and drugs, and motorcycle standards)
- Rules of braking
- Rules of observation
- Rules of steering and counter-steering
- Safe riding strategies (safe method of riding)
- Rules of body weight transfer
- Slow speed manoeuvres
- Values and beliefs related to riding
- Motorcycle controls, safety devices, instruments and indicators and their use
- Features and benefits of protective riding apparel
- Legal requirements of protective riding apparel
- Motorcycle handling procedures
- Vision - understanding importance of vision to the safe and effective riding of motorcycles

**Required skills:**
- Adapt appropriately to cultural differences in the motorcycle rider instruction environment, including modes of behaviour and interactions with others
- Apply basic and specific traffic skills while developing safe motorcycle riding behaviours in others
- Apply basic road skills and motorcycle operation skills while developing safe motorcycle riding behaviours in others
- Apply multi-skills, e.g. monitoring riding environment, anticipating traffic hazards and instructing clients to take appropriate action
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when developing safe motorcycle riding behaviours in others
- Apply skills for crash avoidance and management while developing safe motorcycle riding behaviours in others
- Assess risks
- Communicate effectively with others from diverse cultural backgrounds when riding a motorcycle, including different modes of behaviour
- Communicate effectively with people of all ages, educational backgrounds and life experiences
• Conduct observations and plan required activities when developing safe motorcycle riding behaviours in others
• Deliver information on instructions, procedures, information and signs relevant to the riding of a motorcycle
• Demonstrate higher order riding skills while developing safe motorcycle riding behaviours in others
• Demonstrate higher order thinking skills, including optimism bias, causal attribution and cognitive dissonance needed by instructors when developing safe motorcycle riding behaviours in others
• Demonstrate traffic management skills
• Demonstrate motorcycle control skills
• Documentation skills related to the riding of a motorcycle by others
• Guide and control a motorcycle in the course of the development of safe motorcycle riding behaviours in others
• Implement contingency plans for unexpected events that may occur when clients are riding a motorcycle
• Interpret and follow operational instructions while developing safe motorcycle riding behaviours in others
• Make correct decisions while developing safe motorcycle riding behaviours in others
• Manage a range of adverse conditions while developing safe motorcycle riding behaviours in others
• Manage and motivate behavioural change of clients
• Manage conflict as a trainer and as a business person
• Manage a group of novice riders in a range of traffic environments
• Manage a group of novice riders in an off-street training situation
• Modify activities depending on differing operational contingencies, risk situations and environments
• Monitor performance of clients in applying knowledge and techniques on safe motorcycle riding
• Monitor performance of motorcycle and take appropriate action where required
• Negotiate complex traffic and road conditions
• Observe and interpret the riding behaviour of others
• Perceive hazards and control motorcycles while developing safe motorcycle riding behaviours in others
• Read and interpret instructions, procedures, information and signs relevant to the analysis of safe motorcycle riding behaviours
• Report promptly and/or rectify identified problems, faults or malfunctions that may arise while developing safe motorcycle riding behaviours in others
• Road positioning skills
• Speed management skills
• Teach, facilitate learning and demonstrate skills in the development of safe motorcycle riding behaviours, with learner-centred approach
• Work collaboratively with other road users when riding a motorcycle
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

RANGE STATEMENT
